FOR as much as the Spleen (as is said) is the true receptacle of the black and melancholick blood; therefore reason requireth that we should write of what nature the same is, whereby other things may also be discerned which be incident to the Milt. First we have in the first part, the 12. chapter and 8. §. described many kinds of causes of Melancholy, and in other places more, especially in the beginning of the former §. and taught of the Milt, of her beginning, causes, and what hurt might proceed thereof: to wit, if the same got the mastery, that there may follow not onely heavinesse of the mind, frightening, and such like: but also it might deprive the whole body of his lively colour, and cause all black ulcers, leproy, the canker, quartain Agues, and such like: and lastly, all manner of distraction of the mind, raging madnesse, and inhumane beastlinesse. Therefore because this booke every where maketh mention of them, it is not needful to discourse more at large thereof at this present. But we will onely describe certain remedies which be fit for it.

Wherefore it is first to be noted, that all preparative and purgative things are to be used, that the matter may be avoided through going to stoole and not through vomiting, by reason that these melancholy humors are very ponderous and heavy, and will not be expelled but onely downwards.

Before we then come to any particular remedies, we will first discover what simples there be that do prepare these melancholy humors, and whereby the same may be expelled, viz. Burrage, Buglosse, *Thymus*, *Epithymus*, Capers roots, *Tamariscus*, Harts tongue, good wine, bathing in sweet water, Licorice, Currans, Polipody roots, grasse, *Chamedryos*,

Cuscuta, *Asarabacca*, *Gentian*, *Lupines*, *Fumitory*, *Calamus*, *Spicanardi*, *Agnus castus*, bitter Almonds, *Cicorie*, *Rosemary*, *Radish seed*, *Burnet*, *Sea Crabs*, and above all a chearful courage or light heart.

The compounded medicines are *Oxymel* of Squils, hony of Roses, Syrup of Vinegar, *Syrupus acetosus*, *compositus de Fumo terræ*, and other more. But chiefly this following is to be prepared for it: Take *Cicory*, *Rosemary*, *Burnet*, *Hops*, *Cincoile*, *Endive* with the roots, *Fumitory*, the roots of *Buglosse*, *Burrage* flowers, *Liverwort*, *Chamedryos*, field *Cipres*, *Capers* roots, *Tamariscus* roots, and *Harts tongue* with the roots, of each two ounces, *Prunes*, and *Sebestes*, of each twenty or five and twenty, *Sene* leaves, *Cuscuta*, *Thymus*, wilde *Thyme*, and *Fennel*, of each half an ounce, *Licorice*, *Raisins*, *Stechas* of each two ounces: Seethe them all together in three pints of water even unto the half: adde to this decoction (being strained) *Buglosse*, and the juyce of *Prunes*, of each eighteen ounces, *Sugar* four and twenty ounces, *Hony of Roses* six ounces; let them seethe to a syrup.

These things following are reputed for such as expel Melancholy and do purge, viz. *Epithymus*, *Myrobalani Indi*, *Chebuli*: *Polypody* roots, prepared *Eselus*, *Bolus*, mountain *Mints*, *Cassie*, *Sene* leaves, *Fumitory*, *Hony suckles*, *Hops*, black *Neefewort*, *Indy salt*, wild *Saffron* seed, *Sal gemma*. The compounded medicaments are *Diasena*, *Hiera Ruffi*, *Hiera Logodion*, and such like. Item, take *Sene* leaves *Thymus*, *Epithymus*, *Cuscuta*, and *Burrage* flowers, of each one ounce, *Annis*, *Fennel*, and *Smallage* seed, of each half an ounce, *Harts tongue*, *Maidenhair*, *Chamedryos*, and *Agrimony*, of each one handful: let them all seethe well, and take thereof four ounces: steepe therein *Myrobalani Indi*, half an ounce, and *Chebuli* three drachmes all the night: afterwards strain it well out, and temper therewith *Diasena*, three drachmes, *Cassia* one ounce, washt *Azure stone* two scruples: give the same unto him in the morning, and there may lesse thereof be given at once. When as melancholy appeareth, then is the Liver vein to be opened; for that surpasseth all other things: and the same is to be done more then once, and that alwayes according to the ability and strength of the patient. Item, care must be taken to open the piles, be it with rubbing with the Launcer, or Lastly with Leaches.

For this it is also very needful that this Patient be often purged: but he must first alwayes use some kind of syrup as is herebefore expressed. Also he must use, according as the cause requireth, the syrup of *Burrage*, of *Buglosse*, *Apples*, de *Epithymo* and *Diarrodion*, of *Cicorie*, *Wormwood*, of *Roses*, hony of *Roses*, *Oxymel* and syrup of *Vinegar*.

And for to purge, he must take *Mirobalani Indi*, *Chebuli*, *Citrini*, of each half an ounce: the outward rinds of the black *Neefewort* three drachmes pould them together very small, and seethe them in sufficient water: strain it, and put into this decoction *Epithymum*, *Thyme*, *Polipody* roots, and *Sene* leaves, of each three quarters of an ounce, the seeds of *Citrons* one quarter of an ounce: then seeth them again unto the half, and so let it stand all a night: afterwards strain it out, and wring it hard, and put as much *Sugar* unto it as you think meet. This being done, seeth it again, and clarify it with the white of an egge. Lastly temper amongst it the syrup of *Citron* pills one ounce, and drink four or five ounces of it early in the morning.

But this is here to be noted, that if this syrup be given to any body that is infected with the Pox, the same party is first to be purged with the confection called *Lenitiva*, mixing with it three drachmes *Confectionis Hamech*. Afterwards give unto him this Syrup following and then the decoction of *Guaicum*, whereof we shall write hereafter more at large.

This Patient must often before meat take *Cassia*, for it cleanseth the blood, and taketh away the sharpnesse of it.

For this, are meet also the *Pilula Inde*, *Aggregativa*, and *De Lapide Lazuli*.

Item, *Sene* leaves steeped in Henbroth, strewed with a little *Cinamom*: or *Sene* leaves steeped in Whay. Item, the same boyled with the flowers of *Burrage*, of *Buglosse*, of *Balme*, and with the roots of *Parfly*.

The *Sene* leaves may also be steeped in *Wormwood* and with *Wine*: and it is good during the space of a whole moneth alwayes every other day, to drink two or three ounces of the decoction or infusion of *Sene* leaves, both which are described in the eleventh Chapter, the 20. §. and temper amongst it two ounces of the laxative sirup of *Roses*; the decoction of *Sene* leaves as much; use this fasting. You have also herebefore

before a powder for to purge melancholy, and two kinds of confections, *Diarrhodon cum Rhabarbaro*.

Item, whay wherein *Epithymus* hath been infused, or Polipody roots have been decocted, doth more prepare to purge.

How the melancholick blood is to be purged. §. 6.

AMongst all these medicines, there be divers which do cleanse the blood. And the drift of all Physitians in this sickesse is, that all the heavy, black and unclean blood might be purged, diminished, and corrected. Howbeit, there is somewhat else which is here to be signified: to wit, for this doth Venus or Maidenhair first serve, that educeth all bad humours and slime out of the Liver, maketh good colour, lengtheneth the breath, cleanseth the stomach, the Liver, and the Milt, and also breaketh the stone.

Item, take the whay of Goats milk, steep Fumitory in it, or mix the juice of the herbe amongst it, and drink of it certain daies ensuing other at each time a good draught: or in the stead thereof, take the Sirupe or Conserve of the same herb, for both of them be very good. Also, make pills of powdered Mastick, and the juice of Wormwood.

There be also certain Wines for the cleansing of the blood prepared, as hereafter ensueth: Take Currans three common pounds, Maidenhair five ounces and one quarter of an ounce, black prepared Hellebore two ounces and a half, and one drach. of Polipody, and Hermodactili, of each four ounces, prepared Coriander, and Sene leaves, of each five ounces and one drachme and a half, Pockwood six pounds, rinds of the same eighteen ounces. These being all well beaten together, then pour thereon two almes of Must, and half an alme of Well water; then let them stand and work together at the fire about six dayes space, stirring it well every day about. When it is settled the space of three daies, and fallen down, then strain it out clear, and keep it until occasion serve to use it. Of this foresaid wine must the Patient drink at meals in stead of other wine the space of two moneths, or at the least every other day. This openeth the body very easily, and therewith expelleth all grosse humours and *Cholera* out of the body. And if this wine cannot be brooked by it self, then may the same be tempered with other common wine drunken moderately. It expelleth melancholy, and all heavinesse of mind: it maketh merry, and of good cheer.

In like manner of all herb wines these are highly commended for this sicknesse: viz. wine of Burrage, Buglosse, and of Harts tongue, and of Tamarisk: which not onely take away melancholick humors, but do withstand the quartain Ague which is caused by them.

Of Confections you may use *Diarrhodon Abbatis*, *Aromaticum Rosatum*, and *Dianthos*. Likewise Conserve of Violets, of Roses, of Buglosse, and of Rosemary. Treacle and Mithridate, taken the waight of one drach. is very commodious for this: for that they do both diminish melancholy, and take away the heavinesse of the mind, fear and such like, that may proceed of Melancholy.

The Confected Citron pills do repugne all melancholick accidents, Confected Nutmegs do make fresh blood. For meats in stead of other sauce, Sugar is to be used.

We have before discovered, that bathing in sweet water is very profitable. So are also boxing cups set unpickt, upon the sides, whereby to extract all windinesse.

You are also to use the grosse powder, which in the first Part. the 12. Chapter, and §. 5. is described, which is ordained for the memory.

The fifteenth Chapter.

Of the Bowels or Guts.

LIke as we hitherto described the Stomack, the Liver, the Gall, and the Spleen, and made full declaration thereof: so will we now discourse of the next adjacent parts, before that we come to the Kidneyes: to wit, of the bowels or guts, and all that concerneth them. We affirm then that beneath the stomach the bowels have their beginning, which are parted in six parts.

The first three and uppermost are very subtile and thin; for which cause they be called in Latine *Gracilia intestina*, into the which one part of the digested meats are conveyed. The other three sorts of the bowels be the undermost, which are more thick and fleshier than the three uppermost, whereby the sharpnesse and hardnesse of the *Stercora* should the lesse bruise them. And these six sorts of bowels have their name given them by reason of their greatnesse, and property of their operations, and not for that they be six several things: for they hold fast one upon another, so that they may rightly be taken for one Gut, which is placed in the belly after a wonderful manner with many kinds of crooks and windings about, and reacheth from the stomach even to the fundament. And to speak particularly thereof, the first which beginneth at the stomach, is called of the Latinists *Duodenum*, and that for this cause, because it is twelve fingers breadth long.

The second (which *Galenus* calleth the first) they do name *Jejunum* which is the empty gut, because it is alwayes empty. This gut hath some crooks and turnings: afterwards, it doth reach forth straight out even to the Liver.

The third is by the Grecians called *Ileon*, and by the Latinists *Volvulus*, which is the winding gut; not onely for that by his length it twisteth and windeth about, but also for this cause (as the learned write) because there be ingendred in this gut great Cholick and gripings, which do draw hither and thitherwards through their great pains, as now in one, and then in another place they be most violently perceived. Thus are these three (as is said) thin and subtile of substance, differing onely herein, that *Ileon* is not found alwayes empty, like as the two former.

The fourth gut which they do call *Cæcum*, that is, the blind, and *Monoculum*, being the annexed gut, which they do call *Cæcum*, for that it seemeth that it hath but one going out or issuing: whereas notwithstanding the Anatomists do attribute twain unto it; we will call it also the bag, for that it is like to a fat stomach: yet somewhat lesse, and better to receive all that must be avoided through going to stool.

The fifth is *Colon*, and by the Latinists called *Crassum intestinum*. This gut is fleshier then any of all the rest: also of a reasonable length and crookednesse, in the which, and especially in the end of it, the meat is converted to dung: which (before and ere that it be digested) the learned do call *Chylum*. In this foresaid gut doth the Cholick properly ingender.

The last gut is *Intestinum rectum*, which is the Arsegut, that is called *Longanum*, for that it doth not crook, and stretcheth to the end of the fundament. These are now the lower guts, and they be otherwhiles called the lower belly. But what each sort of these bowels have for a nature, property, power, vertue, and operation, were here too long, and contrary to our purpose, to decipher, because we do not here think to discourse of any thing, but onely the cures of the diseases that the bowels or guts are subject unto.

Of the pain and griping of the guts in General. §. 1.

IN both these sorts of the guts come great outward gripings, stitches, and pain, whereof there be two sorts: the one *Iliaca*, the other *Cholica*. *Iliaca* is in the uppermost small guts, and *Cholica* in the undermost bowels; which sorts of pains or stitches receive their names of the bowels, or the bowels of these foresaid gripings or sicknesse. And because that in both these sorts of pains of the bowels the remedies are alike, whereas in other diseases they be greatly differing, therefore we will treat of both these severally.

Afterwards we will also determine of the Worms in the bowels, of all other diseases which are to be ascribed to the bowels, as of all the scourings, of bloody flux, and obstructions, &c. whereof we have heretofore discoursed, &c. where be many kinds of things to be found for the pain of the guts.

Of the uppermost Pain and griping of the Guts *Iliaca Passio*, which doth drive the common man calleth Cholical. §. 2.

Ileos, or *Iliaca Passio*, are gripings or stitches in the uppermost small guts, which be caused of some obstruction or swellings of the guts: whereby the congested filth or corruption cannot fall down into the great guts: whereby such great intollerable pain, sicknesse, and gripings do ensue, that the guts seem to be bored through with a bodkin, and that commonly with a continual vomiting and parbraking: yet not all Patients.

Therefore, if so be that this pain, pricking, and obstruction do get the mastery; then doth there follow it a stinking belching, yea a parbraking of all filthinesse and of ordure through the mouth, and that by reason the stopping beneath is so great, that neither ordure nor wind can evacuate beneath; neither can it be opened through Clusters, whereby it must needs follow, that all the belchings do draw the wind and filth upwards, and must lastly be avoided through the mouth.

Certain learned men do dispute of these causes, and that not without reason: for some do think, that it is not the right ordure which is ejected by the mouth, but that it should be onely a certain filthy and corrupted meat which lyeth stinking in the stomach, because the same cannot be expelled: but be it how it will, this sicknesse is neverthelesse so terrible and painful, that certain ancient Physicians do call the same *Domine miserere*. Lord have mercy upon me. And it is a grievous sicknesse indeed: for besides all that is said, if it come with a great heat, then it doth commonly cause an impostume in the bowels, whereby cometh the cramp, and the contracture of the sinews, so that the sick person thereby doth lose his senses and runneth mad. These and other signs which shall hereafter follow, are so deadly, that scarcely ever any one recovereth his health againe.

The common people which have no understanding of natural things which pertain to mans body, do call this *Iliaca* the Mother in men, like as the common people in *Italy* do call it *Paron*, which is, Father; whereas notwithstanding men have no mother in them. The causes of this *Iliaca Passio*, are inward and outward; the outward may be through fals, thrusts or strokes on these places: or through drinking of much cold water, through much binding, grosse meats, as hard Cheese, Cow beef, or any other hard flesh which is not well sodden or roasted, salt Pork, and principally of ill boyled wood Pigeons, or meats which be swallowed down not well chewd. Item, there be more things which be hurtful for this sicknesse; as Pease, Beans, Medlars, Quinces, Services, Pears, Sloes, and such like binding fruits. For this pain of the belly is commonly more rife in harvest, when fruits are found most abundant, than at any other time of the year. These sicknesses may also be caused of cold and piercing winds, as the Northern winds; as also to the contrary, out of great heat and great labour: and lastly, through venim taken. The inward causes commonly proceed from other parts: as if there be any impostume present, whether it be in the Bowels or in the Liver, or in the sucking veins called *Vena Mesaraica*, in the Kidneyes, or in the Bladder, or when the Bowels through some vapour fall down into the privities. If so be that the cause be in the bowels, thereof there be six: to wit, if the gut *Ileon* or *Colon* be too hot or too cold, or be fraughted with any cold tough matter, or through wind, or obstructed with some hard corruption, or when the bowels be full of wreathed worms: lastly, this disease may also be caused through faintnesse of the expulsive, or strength of the retentive vertue.

Concerning the signs, they may be demanded of the sick persons or standers by. But if there be any impostume in any other parts, it may be known by the place affected where the impostume is. The hot impostumes of the guts are discerned by the continual agues, thirst, and panting or beating of the same part; whereas to the contrary the cold impostumes be without great pain and without agues, but onely with a kind of heavinesse and tumour: and these commonly assail a man that is accustomed to use much cold and moist meats, as milk, fish, and such like. If this sicknesse be caused through the obdurate corruption of the bowels, then is there with it an extreame pain, so that it seemeth to the patient that his bowels are cut up, and that chiefly if he have taken before any such things as may cause these bindings, and harden the filth or corruption, as inward or outward heat, and through use of dry things. Or if this disease come through wind, then

doth the pain depart from one place unto another, with a kind of rumbling, and that with such stitches, as if the bowels were prickt through with auls. And if the same be caused of cold slime, then be cold rheumes felt, and such like in the bowels and that chiefly through certain meats taken, which do increase *Phlegma*.

Of the pain or griping of the guts, which is called Cholick. §. 3.

Cholick or *Cholica Passio*, is a pain of the bowels, to wit, (as is before discoursed) of the *Crathmost* guts, which is caused, when the superfluity which nature is enured, naturally to avoid and cast from her, is stopt and hindered, and if the corruption, winds, or worms be not expelled, as they were wont to be. But the pain of the cholick cometh commonly by fits, ceasing otherwhiles; and then immediately returning with great intolerable pain; with heavy breath, with shivering, shaking and sweating. The causes of this cholick are for the most part the same with *Hicor Passio*: for both of these sorts of pains in the guts be matched so near together, that they may well be called sisters. But there is onely this difference between them both, that the *Crathmost* bowels be fat by nature, and therefore may gather fatnesse unto them, that by that means the guts are made so narrow, that the hard ordure cannot passe through them, but is utterly hindered.

The signs of the Cholick be these: when the ordure and winds are daily shut up and hindered. And although the stool be furthered through Clusters, or some other means, yet is the ordure neverthelesse hard and burnt, as Sheeps dung, or Goats dung, whereby the natural appetite doth abate from day to day, until it be utterly lost. Thence followeth then so great pain and gripings about the Navel, that it seemeth that the guts be knit or haled together with strings, or pluckt asunder, and bored through with bodkins. As often as one stirreth him, or turneth from one side to the other, then doth the pain increase vehemently in this sicknesse; the Patient is alwaies greedy of sower and sharp things, and hath a loathing of all that is fat.

Each humour whereof this pain is caused, is known by these signs following: If it be caused of *Phlegma*, then is the same with pain, heavinesse, and desire of all warmth. The pain is to be known by the feeling. Old folks, and such as be flegmatick by nature, are most of all subject to this passion. Also the winter, eating of much fish, of much fruit, and of much milk, excessive rioting, and great quietnes much going into the water, and such like, be to this sicknesse a great cause. If in case that this sicknesse be caused through heat, then is there a great inflammation, and with it drought of the tongue, great thirst, itch, and great heat in the urine. Chiefly if the person be young, and in the Summer time, if he be cholericke by nature, if he have used much about the fire, or much spice. Or if this pain of the bowels be caused through obstruction, it may be known by the going to the stool, and pain of the guts, to wit, as if the same were torn asunder, and struck through. And if the Patient would go to the stool with great forcement, then is it all to be avoided very like to clay, the which may be caused through long use of any old meat, through the Patients drie complexion, and through long continuing labour, and with much sweating in the hot aire.

Or if this Colick proceed through wind, then is heard much rumbling in the bowels and puffing up of the belly, his excrements do swim upon the water because they be full of wind: and so much the more may one be ascertained thereof, if one knew that the Patient had eaten before much Pease, Beans, Chestnuts, Rapes, Figs, Must, and such like windy meats or drinks, much water, or much watered wine.

Or when this pain of the bowels is caused of any hot impostumes, then doth the patient feel hot stitches; he hath thirst and great pain, and that alwaies in one place; he hath also a red face, exturbation of the eyes, and restraint of the urine.

But if this grief be caused through a cold impostume, for it be all these things before-mentioned much feeblar: being caused of superfluous meats, of much fish, of much cold and moist herbs, fruits, Swines flesh, and such like: also the stools be full of *Phlegma*.

Of the difference of these pains in the Guts. §. 4.

Above all those which before are discovered, be these two sorts of pains in the bowels disagreeing in this: to wit, that in the pain of the uppermost guts, the extremity is much greater, and can kill a body much sooner; for that these uppermost tender and small guts are much more sensible than the nethermost great guts: Secondly, because that *Iliaca* is unstedfast (as it is said before) and removeth from one place into another: Thirdly, because this *Iliaca* is higher then the navel. And when this pain setteth there and about the reins, then it is the general opinion of all the learned, that in no wise, neither through medicines, neither through any other means this sharp matter or wind which hath no vent, lying shut up in the crooked out *Ilion*, and there making this pain, may be made to avoid neither yet expelled, and that there will follow of it the Dropsie *Tympania*, wherein the wind doth after spread it self abroad between the skin and the flesh behind over the whole body, as hath been said more at large before in the twelfth Chapter and sixteenth §. The fourth difference is, that the uppermost pains of the guts or *Iliaca* are to be holpen through medicines from above, and the undermost pain *Cholica*, through Clifters; for that the Clifters be very commodious for the *Cholera*, and very little for *Iliaca*, or nothing at all: Fifthly, if there appear other accident with it, as swooning, trembling of the heart, short breath, much waking, or cold of the outward parts; they be then alwaies the more grievous in *Iliaca* then in *Cholica*: because that it is nearer to the heart, and therefore the more perillous.

Now to come to the remedies, we will (according to the custome of the ancient Physicians) distinguish these pains of the bowels by five several causes, whereof the first is obstruction or binding of the body: the second *Phlegma*: the third winds: the fourth impostumes: the fifth *Cholera* and heat. But we will here declare for the first certain things that be generally convenient for both these griefs: the remedies which be ordained and used in both these pains of the bowels, are also very meet for either of them; onely (as it is said) the Clifters for *Iliaca passio*, do seldom do any good: not that the same be therefore altogether forborn, for both must alwaies be first indevoured to open the passages of the guts, and as soon as one perceiveth the pain, to be presently in hand with Clifters, and also to make somewhat ready which may be laid upon the belly to warm the same therewith, like as with these things following: to wit, Pellitory of the wall, Mugwort, Southernwood, Fennel, Elecampane leaves, Wormwood, white Mints and Marjoram: of these herbs take as many and which you will, put them in a bag, and let them see the in Wine: afterwards wring them out, and so lay them warm upon the place of the pain.

Item, take Millet or Oates, mix them with Salt, and a little Annis, Fennel, Dill, and with Linseed: parch them, and lay them on the pain: You may also make and use after the same manner a bag with Cammomil, Venus hair with Stechas. Item, take *Althea* Butter, Barrows grease, Hens and Ducks grease, ana. ʒ. ʒ. oyl of Cammomil, ʒ. 1. anoint the place of the pain with it; what is particularly to be used besides for either of these pains in the guts, shall be distinctly shewed hereafter.

Of the pain in the guts through obstruction or binding of the body. §. 5.

IN the beginning of this description of the pain in the bowels, when it cometh chiefly through the binding of the body, it is to be cured with Clifters, which hereafter be described against winds, and with the purgative medicines, whereof divers be set down in the eleventh Chapter, 20. §. And both these are to be used so often, and so long, until that the body be thoroughly opened.

In like manner, this Patient must endeavour himself to eat all soluble meats and herbs, viz. Mallows, and herb Mercury drest with fresh broths, with Butter and Sallad oyl, which for this disease is not onely needful, but also much commended.

Lay also outwardly upon it this plaister following: Take Mallows, Hollihock roots, and Bearfoot, of each one handful, Fenegreek meal, and Linseed meal, of each six ounces, oyl of Violets, Hens grease, Barrows grease, and fresh Butter, of each

two ounces, four white Lilly roots roasted. All the herbs are to be sodden, and afterwards stamped, and you are afterwards to temper the rest amongst them over the fire, and then to apply them warm upon it. For this is also very good the sirupe of Violets drunken with some broth wherein Damask Prunes, Raisons and Figs have been decocted, and wherewith some Cassie is tempered. He may also use the herbs and other things stamped, whereof the Clusters be boyled, and make a plaister thereof with Butter, or oyl of Violets, and with Barrows grease, and lay it over all the belly. He must also eschue cold ayr, and must keep him alwaies warm, continuing this so long, until that ye have his body very open.

Of the pain in the guts through slime and Phlegma. S. 6.

The other former discovered cause is *Phlegma*, which (as is sufficiently shewed before) doth shew it self apparantly, if with a tolerable pain there be no great heat nor thirst adjoynd. And if there be any salt matter (which the Patient shall perceive in his mouth) or any obstruction of the body, stinking, belching, and great faintnesse with it; then must preparative medicines be ministred to the Patient, and such as may procure no wambling, and so begin with Sirupes following: viz. the sirupe of white Mints, of Wormwood, and all sorts of *Oxymel*, or any such like. Afterwards is much commended by the ancient Physitians the confection *De Gallia* for to purge, which followeth hereafter: Take Mastick, Cloves, Ginger, Pepper, long Pepper, Cinamom, Nutmegs, *Gallia Muscata*, and *Diagridion*, of each a like quantity: afterwards wring out the juice of fower Quinces, and put as much hony as juice unto it: then take of both these one ounce and a half, and put half an ounce of powder unto it which is made of the foresaid things: but let this juice and hony see the before to the thicknesse of a sirupe, and afterwards temper the other things amongst it, whereof you are to give at once one quarter of an ounce or two drach. and a half. Also the purging confections of Quinces, which be described in the eight Part, are very meet for this purpose, and in like sort the *Electuarium Indicum*.

A purging Confection: Take Turbith one quarter of an ounce, Ginger one scruple, Mastick half a scruple, Sugar three drach. temper them well together, and then take it with what you will. But if so be that the sick body be not addicted to vomit, and that the same be not feared, then are these Pils following to be exhibited unto him, called *Illicida*. Take Coloquint, and *Sagapenum*, of each ten drach. *Diagridion*, three drach. and one scruple; then make pils of it with wine, and give thereof one drach. at once, they ease very speedily the pain. For this is also very good *Benedicta Laxativa*, or *Hiera Picra* one ounce, *Hiera Picra magna* half a drach. Turbith, and Ginger, of each one scruple: then mix them together with a good draught of wine. But in case that in this cholick the purging medicines will not help, and the sicknesse still increaseth, then make these suppositories following: and if so be that these suppositories will not sufficiently relax, then are clisters to be used; which are the very best and safest remedies for the cholick which one can devise, therefore we will here rehearse some of them, and begin first with the mildest. But note alwaies (which is good in all clisters that are to be used for the cholick) that the herbs, and all that is to be used with them, are to be decocted in such broths wherein Calves heads, Lambs heads and feet be boyled: for these broths be very requisite for all obstructions of the body.

Take Cammomil, Hollihocks, and Mallows, of each one handful, Fennel, Annis, Caraway, of each one quarter of an ounce: seethe them all together in Wine or water. Take 15. or 16. ounces of this decoction, and dissolve therein fresh Butter, and Sallat-oyl, of each two ounces and a half, or three ounces with the yolk of an Egg; temper them well, and minister it warm. Item, take one pound of Linseed oyl, and use it very warm for a Clister: Or take Mallows, Hollihocks, Beets, Mercury, Fenegreek and Linseed, of each one handful, 5. or 6. Figs cut, Annis, Fennel, of each one quarter of an ounce, Bran one handful: seeth them all together in sufficient water. Of this decoction you are to take 15. or 16. ounces, and then temper amongst it *Hiera Picra*, and Cassie, ana. 3. i. oyl of Rne. 3. 3. and then make a Clister thereof.

Another: Take Mallows, Hollihocks, Mercury, and Bearfoot, of each one handful, ten or twelve fat Figs, powdered Fenegreek, and Linseed, of each one ounce and a half, Dill seed one ounce, Bran half a handful, oyl of *Sesamum*, and Hony, of each one ounce and a half, *Sal gemma* one drach. Cassie and *Hiera Picra*, of each three quarters of an ounce

ounce, temper them all together in sixteen ounces or more of the foresaid decoction unto a Clister. You have before in the eleventh Chapter, and the 21. §. a Clister of Malmsey, which is also convenient for this use.

Item, take the juice of Parietarie, and the juice of Wormwood, of each six ounces, one Nutmeg, Peach kernels beaten very small half adrachm make them all together warm, and minister three of these Clisters in one day.

Another. Take Annis, and the seeds of Pellitory, of each one quarter of an ounce, Pellitory leaves one handful: seethe them all together in wine, and take thereof 15. or 16. ounces: melt Butter therein, and Linseed, of each two ounces, then temper them together. When the patient hath avoyded this Clister, then let him afterwards drink five or six ounces of the Oyl of sweet Almonds, and that tempered with Sugar.

Item, take the oyl of Rue twelve ounces, five or six Leeks heads, stamp them and seethe them in the oyl; then strain it through a cloth, and use the oyl for a Clister.

Item, take Pellitory, Centory, Marjoram, and field mints, of each one handful, Annis, Comin, and peeled wild Saffron seed, of each one drach. polipody roots, Turbith, and Radish seed, of each half an ounce. *Sul gemma* one drach, temper all this into a Clister, as is above said.

You are also to observe here, that these and such like Clisters shal be ministred but onely when other remedies will not avail.

Item, oyl of Camomil is more precious then common oyl: but if Camomil cannot be gotten, then is the oyl of Linseed to be used in the stead of it: Also hereafter do follow sundry remedies against all pain of the guts, which serve also very well for the *Phlegma*.

Certain Potions for the cold Phlegma.

TAK the roots of Smallage, Fennel, and Parsly roots, of each two ounces, Annis, Fennel, Caraway, Parsly and Smallage seeds, of each one ounce, Radish two ounces: make a decoction of this, and drink thereof adayes oftentimes as warm as you can suffer it.

Also once or twice a day drink a spoonful or twain of Rose Hony tempered together with the foresaid Potion.

Item, seethe an old Cock until the bones fall from the flesh, and in this broth seethe Polipody roots, the seeds of Dill, and of Annis, and drink otherwhiles a good draught of it. Also you may oftentimes with the waters and seeds of the foresaid roots, toment the place where the pain is, and afterwards anoint the place with oyl of Rue wherein Annis seeds are boyled.

Some do highly commend the oyl of Sulphur. viz. to drink in the Winter one drop or twain with Muscadel Wine, or with vital water. It will marvellously help and expel all gripings in the guts of a cold occasion.

Item, the confected Elecampane roots, and confected Pimpernel roots, do assuage all pains of the bowels which proceed of cold. In like manner the confected Ginger doth warm and strengthen all inward parts, and so doth also the roots of *Eringus*, when it is confected.

Amongst other Conserves, there be also meer and commodious the conserves of Piony, and Rosemary, of Hyssop, of Spikenard and after purging, the Confections of *Trion pipereon*, *Diacalamintba*, and such like.

Of the pain in the guts through wind. §. 7.

THE third cause of these pains in the bowels are winds. If then this pain do come of no obstruction, and yet neverthelesse one feel rumbling in the belly, and heareth the pain run up and down in the belly, and if the pain do come by fits, and there abateth again: against this be those remedies to be used that do expel wind. For which, the Confection of Bayberries is so highly commended, that it is thought that her like cannot be found. At the Apothecaries they call this *Electuarium de Baccis Lauri*, and it is thus prepared: Take dry Rue one drachme, Ameos, Comin, Nardus seed, Louage seed, Marjoram, Caraway, bitter Almonds, long Pepper, *Daucus* seed, white Mints, Pepper, Calamus, Bayberries, and Bevercod, of each one quarter of an ounce *Sagapenum*, half an ounce, *Opopanaxum* one drach. all these being powaded together and molten, then make a confection

confection of it with clarified hony, and give the patient thereof the quantity of an hessel nut with a draught of wine. Marmalade with spices is also very meet for this purpose.

Item, in like sort be both the sorts of Treacle and Mithridate, for that they do waite wind, and be good for all cold diseases of the intrails. Item, there is also fit for this use the confection of the Horseradish, which shall hereafter be expressed.

These confections following are also very commodious: viz. *De Cumino*, *Diatrion Piperion*, *Diagalanga*, *Dianisum*, *Diacalaminta*, *Diaplis*, *Aromaticum Rosatum*, and after them a good draught of Wine.

If you desire to make a powder, then prepare this following: Take Ginger half an 3. Annis one quarter of an 3. prepared Coriander one 3. & ʒ. Mace, Galangal, Cucubes and Nutmegs, of each one 3: This being beaten all small, then put as much Sugar unto it as you please. This powder consumeth all wind, and hindreth also the generation of other. You have also herebefore certain grosse powders for the stomach, which be also very good. In like manner do Annis, Fennel seed, Caraway, and comin, (either bare or confectioned, and taken before meat) consume all pain in the guts. The sirup of Wormwood expelleth also winds.

For this are also very convenient clisters. If they be made of such things as do cause wind to avoid, as this following: Take Mallows, Holihock roots, Violet leaves, Bear-foot, and Beets, of each one handful; Centory, *Rapontica*, Calamus, white Mints, Marjoram, Southernwood, Rue, and Hyssop, of each half a handful; seethe them all together in sufficient water, and take fifteen or sixteen ounces thereof, hony of Roses, and oyl of Rue, of each three ounces, *Hiera Picra* one ounce, *Benedicta Laxativa*, half an ounce, then temper them all together.

Yet this clister is to be diminished or augmented according to the ability of the sick person. Suppositories may also be used for this, which are thus to be made: Take Rue and Comin. Caraway, of each one handful, Swines bread one root and a half, *Boreas* one drach, clarified hony three ounces, make Suppositories thereof. Another: Take Bevercod, Hony Oxe gall, and oyl of Violets, of each a like quantity, let them seethe somewhat thick; afterwards wet a Suppositorie in it, bounden at a threed, and use it as before: it consumeth wind exceedingly and purgeth very much.

I have used with good successe the powder of the Albandab, cubebs, Cardamom, pepper, Mechoacan, and with Hony made into pills: sleep after you take the pills.

Or Take seaholme, herb and root, stamp it small and Hydromel, drink it.

Potions and such like.

Take the roots of Smallage, of Fennel and of Parsly, of each two ounces, Raisins, the stones taken out, two ounces and a half, ten or twelve fat Figs, twenty or four and twenty Jujubes: seethe them all together in two quarts of water even to the half, and take thereof three or four ounces tempered with the foresaid confection. The common people and husbandmen do commonly use slight things which they can best get; amongst which may this potion following be reckoned: Take fresh Cow dung about half an 3. temper it with good wine and wring it through a cloth, and then drink thereof, it is much commended. Other do ascribe this to sheeps dung, also Chickweed is commended for the same boyled in water and so drunken. Likewise also Wormwood wine, or wormwood sodden in water: also Mead being drunken is very good for this pain; Wine measurably drunken driveth not onely the wind out of the bowels, but also out of all parts of the body. The wines of Harts tongue and Marjoram gentle, are also much commended for these pains in the guts, and more other aromatical wines, as of Galangal, Nutmegs, and Cloves.

Item, take *Species Iustini* one drach. and drink the same twice a week with one ounce of Rose water, it is also good against the gravel. Master Tristrams water is also good against all pains in the guts: likewise is also commended one drach. of Bevercod drunken with one ounce of *Melicraton*.

In the mean time may outward things also be used, for this one may take the herbs, the seed, and other ingrediences whereof clisters have been made, wring them out hard, stamp them and temper them with Butter, with Barrows grease and oyl of Camomil unto a plaister, and so lay it warm over the belly, it is very good. But if one will lay any thing

thing upon the malady: then must the belly be warmed well before with warm clothes; for this may be made also the foresaid bags of Millet and Salt: or take unbeaten Millet, Oates, and Fennel, or Bran, which you can get: parch them in a pan, and apply it warm upon the pain.

Item, take parched Linseed six ounces, parched comin one ounce, Bran half a handful; beat them all grosse and make a bag thereof: then let it see the in water or wine a good space, afterwards wring it out and lay it very warm upon it.

Item, take the oyl of Scorpions, oyl of bitter Almonds, and Turpentine, of each six ℥; let them melt all by the fire, afterwards temper half a drach, of Saffron amongst it. Lastly, dip sheeps wool in it, and lay it warm upon the grief: or take Pellitory, and powdered Linseed, of each one handful, powr two ounces of the oyl of Scorpions unto it, and let them be made hot together: afterwards put a little Saffron unto it, and use it as before. Warm bread laid upon the belly or the stomach, asswageth the pain, and is good against the suffocation of the mother or womb.

Another: Take Hony, Butter, Salt and Vinegar, of each a like quantity, let them see the all together a good while until it begin to be somewhat tough, then spread it on a cloth, and bind it warm upon the belly.

Item, take wild Thyme, Marjoram, Caray leaves, Camomil, Wormwood and Sage; which you will, cut it small, and put it into a bag, then make it moist with wine or water; and let it warm in a pan and use it as before. Or Cow dung and Butter, of each a like much: temper amongst it half so much beaten Comin. Wolfs dung is also very good for this use, a plaister being made of it. For this is also good the plaister of Bayberries, which is described in the eleventh Chapter and the 5. S.

Item, another salve also which is described in the third Part, in the tenth Chapter and the 5. S. Take Comin, Caraways &c. Or prepare this following: Take Goose grease, and oyl of Scorpions, of each three ounces, Saffron one scruple, wax as much as sufficeth.

The oyles following are also to be used for this disease, viz. oyl of Lillies, Camomil, Rue, Dill, of bitter Almonds, Spike, Bayberries, and Elecampane roots, of Penniroyal; and such like oyles which be warm of nature, and chiefly if Ameos and Mastick be boyled in them.

The bathing and fomenting is also very profitable for this sicknesse, which may be made as hereafter followeth; and be prepared according as the cause requireth. The bathes of sweet waters are very good to assuage the pain, and they be especially commended after the cholick, and after purging, and that fasting. After bathing is some Treacle or Mithridate to be used and taken, and to sweate after it.

For this be also good Sulphurie baths which be warm by nature. Now will we declare all the foresaid things that expel wind and consume it, and especially those which may be used for Bathes and Fomentations, viz. Rue, Dill, Rosemary, Fennel, *Chamedryos* and filed Cypres.

Amongst the seeds, Annis, Fennel, Comin, Caraway, seeds of Rue, Ameos, and Dill seed. Note ye that the patient must sit no deeper then to the breast in this bath: and also may not tarry long therein, that he fall into no swoond. Otherwise the bath is very profitable, for it openeth the pores, and doth consume the wind whereby the pain is delayed. You may wet a sponge in his bath, and lay the same oftentimes warm upon the belly. Likewise you may also fill a bladder and hold it warm upon the belly. If you have not this decocted water, then fill a bladder half full with Linseed oyl, and make it warm in hot water, and so lay it upon the belly.

Another bath: Take Rue, Dill, Rosemary, Fennel, *Chamedryos* and filed Cypres.

After that the body is well purged, he may sit in a Tub with warm Sallad oyl, and when the pain is asswaged, then to go out of it again. But if the oyl cannot be had nor be gotten, then use this ensuing: Take Pellitory, Violet leaves, Rue, Camomil, Linseed, Fenegreek, Hollihocks, and the sprigs of Coleworts, of each three handfuls; see the them all together in water for a bath. Of this may you also make a Lotion for his feet, be it cooling or warming according as the case requireth.

For a Fume: Take Frankincense, Mastick, Lignum Aloes, and Sandaraca of each a like quantity, cast it upon hot coles, and receive the fume upon the belly, or where the pain

pain is, for it doth draw much wind unto it. The place also is first to be rubbed so long untill it be thorow red, and afterwards well anointed with any of the foresaid oyls.

The wind may also be consumed through good government, (if the same be put in practise) through exercise and sobriety: for that where there is not much moisture received into the body, there cannot ingender much wind. And when such a patient hath recovered his health, then must he beware of green herbs, milk, and all other things which be windy. He must also addict himself to drink hony water with spices, or prepare this Mead ensuing.

Take two ounces of clarified hony, three pints of water, see the and skum it well. When it is cleansed, then are you to hang therein half an ounce of grosse beaten Pepper, and afterwards let them see the again untill there remain about one quart of moisture. When it is then cold, take out the Pepper being well wrung out. For this serveth also burnt Wine, or Aqua vitæ, yet there is nothing better then good old wine moderately drunken. He is to be restrained from all watered wine, because it ingendreth winds. He must likewise beware of all cold drinks, viz. the water of all herbs, fruit, fish, milk, and such like.

Of all manner of pain in the belly. §. 8.

Albeit that herebefore there be many things discovered for to assuage the pain of the belly, notwithstanding we must here set down somewhat of the *Narcotica*, which be things that take away or do numbe the senses, for which we advise in the use of them to begin alway with the least, and so to come to the greatest, so that nature be not violated. Therefore where great pain is, you must apply parched Milt, Panick and salt.

Item, take Camomil, Melilot, Rue, Marjoram, Penniroyal, Rosemary, Comin, Annis, Fennel and Dill seed beaten grosse, which one will, and as much as one will: let them see the in wine, and whilest it is warm wet a sponge in it, and lay it upon the place of the pain. Make bags of the foresaid seeds and herbs, and sprinkle wine upon a hot stone, and warm them thereon. Or see the it in wine, and then lay them upon the belly as all other. Afterwards anoint the place with warm oyl, viz. oyl of Camomil and of *Costus*, but if the pain be intollerable great in the uppermost guts that one feareth to fall thereby in a swoond, one must (through extreme need) put things in practise which do numbe the senses: for which the Confection *Philonium* is to be used, and chiefly with the purging Confection *Diaphænicon*, but this must be done with the counsel of a learned Physician, as we have oftentimes already admonished, yet shall suffice half a drach. tempered with half an ounce of the Conserve of Roses.

Ot hers in stead of *Philonium*, use the pills of *Cynoglossa*, for that they be safer; also the *Triphera Saracénica*.

And albeit that through all these former reasons it may be sufficiently understood, how that he is to be kept with meat and drink, neverthelesse we will briefly rehearse it once again for method sake.

This patient is oftentimes and very long to be rubbed with warm clothes. He is also to enure him alwayes before meales to walk easily. He is also to be restrained from all Fruit, Pease, Beans, and Must, and all that procreateth winds. He shall also eat all light meats and dresse his meat with Dill seed, Comin and Annis; Partriches, and all other field Fowls are very good for him. The juice of old Cocks, boyled with the foresaid seeds, is here much commended.

For this sicknesse also is much advised to eat Hedghogs flesh roasted, which causeth all pains of the intrailes to cease. His bread must be a little more salted and raised: then commonly good old clear and white Wine, if there be no Ague with it, is to be his drink.

Of the pain of the bowels through any impostume and other affections of the guts. §. 9.

VVE have numbred this herebefore in the 4. §. for the fourth cause of the pains in the bowels. But in case this pain in the bowels be caused through any impostume and ulcer of the liver, of the spleen, Kidneys, or any other parts, then is the same to be known by the place where those parts do dye: Like as by each of these is sufficiently declared what is to be done for it. But if the bowels be hurt without any impostume and

and that the same may be felt with the finger or any other instrument, then may you find all that is described in the tenth Chapter and 3. §. But if in the pain of the belly through heat there appear any impostume in the one side, then must a vein be opened on the other side: for the same must not be foreflowed, for that it is much needfull. First, he must before other things have a vein opened within the third or fourth day in the contrary side of the pain, and afterwards on the other side where the pain is felt. This being now done, then take two parts of water, and one part of Vinegar, and make a sponge wet therein, and so apply it to the pain. When the sponge beginneth to be warm, then wet it again, and reiterate this oftentimes.

Moreover, the patient is oftentimes to be purged with Manna, Cassie, and four Dates, and let him be ordered like as one is to be ordered who hath an Ague. He must also beware of Vinegar, four Pomgranats and also all four things which may hurt the bowels. Boyled Barly, and Oaten paps, Mallows, Burrage, and Orange decocted in Hen broth, or eaten alone be very meet for him: and if the Ague be not great, then are they to be drest with Butter or with oyl. He must also keep a good diet, and must use much oyl of *Sesamum* in his meats, his drink must be Barly water decocted with Licorice, and all his whole government cooling and moistening, as followeth hereafter. Take Mallows with the roots, Hollihock roots, Bearfoot, and Violet leaves, of each one handful, Burrage flowers, and flowers of Buglosse, of each half an ounce, 4. or 5. Prunes; seethe them all together in a pot of water even to the half, and then take of this decoction 12. or 16. ounces, and temper with it two ounces of Cassie, oyl of Violets 3. ounces, of hony one ounce, then make a clister of it. This is also especially commended being made with Goats milk, Cassie, and oyl of Almonds. When as then the impostume is broken up, then are you to use for to cleanse it, clisters, barly water and hony, and afterwards consolidating medicines. But if so be that one perceive any parings of the bowels in the stools, and that with great pain, then are these following to be used.

Take somewhat lesse then a pound of steeled water and seethe therein broad and picked Plantain and Roses, of each one M. even to the half. Take 12. or 16. ounces thereof, and melt therein one ounce of Deer suet, three yolks of Eggs well beaten, oyl of Roses two ounces, Tho. Sugar one ounce, and temper them all together.

Another: Take broad Plantain, wild Tansie, and Comfry, of each one handful, Pomgranat pils one ounce: seethe them all together in a pot of steeled water even to the half: then melt in this decoction two ounces of Deer suet, *Trochiscos de Carabe*, *De Terra sigillata*, of each one quarter of an ounce, then make a Clister of it.

For plaisters, take the sodden herbs and the other things of the former Clisters, pownd them to growt, and temper therewith half an ounce of the pownded red Saunders, Barly meal two ounces, and oyl of Violets as much as doth suffice for a plaister, and then lay it warm over it, it doth abate the pain very much.

Another: Take Mallows, and Hollihock roots with the herbs of Nightshade, Violets, Camomil, and Melilot, of each half an ounce: beat them all together, and temper therewith oyl of Violets, of water Lillies and Ducks greafe, of each three drach. Linseed meal one ounce, and then make a plaister of it.

If need require to purge more, then may the same be done with the conserve of Prunes.

But if so be this pain of the bowels be with a cold tumour, then must stronger Clisters be used, as there be sundry set forth in the 6. §. against the pain of the bowels through *Phlegma*. But first are the oyl of Camomil with Vinegar, and the oyl of Roses (that it may pierce and strengthen the bowels) for to be used: after the Clisters expressed before in the 5. §. may this plaister following for mollification be used for to ripen and aswage the pain: Take Linseed meal, Fenegreek meal, Wheaten meal, and Barly meal, of each two ounces, six yolks of Eggs, oyl of Camomil, and good wine as much as is needfull for to make a plaister; this must be laid warm upon it.

Another: Take eighteen or twenty Figs, seethe them well in water, crumbs of white bread two ounces, White meal one ounce and a half, unsalted Barrows greafe, and oyl of Camomil as much as is needfull for to make a plaister: let them all seethe a little together, and then lay them warm upon it. you may also put warm unto it one ounce of beaten Camomil.

It happeneth also sometimes, that in these impostumes the urine is retained back,
because

because that the conduits are stopt through the tumor: therefore if that befall, the *Saphen* must be opened, and the Kidneys and the privities annointed with the oyl of Camomil, and oyl of Violets, and also are Clusters and plaisters to be used, like as shall hereafter be further spoken of in the provocation of urine.

Of the Pain in the Bowels through heat and Cholera. §. 10.

This is the last cause whereby (as is discoursed before in the fourth §. the pain of the guts may be ingendred; and then it cometh with heat and an Ague, it is not then so hurtful or lingring as that which proceedeth of *Phlegma*. For this must the Patient first of all be purged with syrups and such like things as do coole, and further be kept with necessary meat and drink. He is lastly to use Clusters in this manner following: first of all he is to take certain dayes together preparative syrups, as both the syrups of Vinegar, *Oxyssachara*, syrups of Violets, of Roses, of Endive, and of water Lillies, with some decoction wherein the same herbs have been decocted, whereof divers be described in the third Part.

For Purging.

Take fresh Cassie one ounce, or one ounce and a half, the juyce of Endive well clarified and skummed three or four ounces: then make a potion of it, and give it him warm, or in stead of the juyce, if one cannot get the same) then take Endive water.

Another; Take eightene or twenty Prunes, and five or six fat Figs: see the them all together in sufficient water, and take of this decoction three or four ounces, temper Cassie therein, and oyl of sweet Almonds five or six ounces tempered with Sugar, and the same drunken at once loose the body very gently, and is also most sure that one may give to the children newly born: Likewise *Manna* decocted with sower Dates, Prunes, and with Sugar, is also very requisite to loose and coole.

Concerning the meats, he must be restrained like as in other hot sicknesses, and must chiefly eschew alwayes meats which make wind. But oyl of Almonds used in his meat, be very meet for him.

All his Clusters must be made soluble and cooling, like as be these following: Take peeled Barly, Mallowses, Hollihock roots, and Violets, of each one handfull, Prunes, *Sebestes*, of each eight or ten, the seeds of Melons, of Purslane, of Gourds, of each one ounce, Bran half a handfull: See the them all together, and take of this decoction and put unto it oyl of Roses, and of Violets, of each one ounce and a half, Cassie for the Cluster one ounce, *Electuarium de Succo rosarum* five drachmes: then make a Cluster of it, like as hath been sufficiently shewed.

But here is to be noted, that if any parings avoid with the guts, then must oyl of Roses be most of all used. yet oyl of Violets doth assuage the pain of the guts if the same come through any sharpnesse or any heat.

Or take Mallowses, Hollihocks, Bearfoot, Violet hearbs, and Beates, of each one handfull, Barly and Bran, of each half a handfull: let them see the all together, and then take of this decoction twelve or sixteen ounces, and temper Cassie in it one ounce, *Hiera Picra* three quarters of an ounce, *Benedicta Laxativa* three drachmes, oyl of Violets three ounces, Salt one drachme or twain, minister it as is accustomed.

This ensuing is also specieal good if any body have been bounden certain dayes together: Take twelve or sixteen ounces of Cow milk, temper one ounce of Cassie amongst it, and minister it warme.

There may also a cooling plaister be layd upon the belly, whereof there be divers discovered against the heat of the stomach and the Liver: yet must alwayes some Camomil, Wormwood, and such like be tempered amongst it.

For a cooling you may also take preserved *Ribes*, or any such like, as in the Eleventh Chapter, §. 6. is shewed.

Of the pain of the Belly Mixt with gravel. §. 11.

For this disease is much advised, to take 3. dayes one after another, a good draught of the water of Eldern flowers, which helpeth marvelous well. Item, take the juyce of Pellitory

pellitorie eight ounces, oyl of Rue two ounces : seethe the dung of a Dog in it, which hath eaten nothing but bones : strain it through, and use it for a Clister. It is also much advised for to take for purgation half an ounce of *Diapnenicon*, and *Sebestes* one drachme, and a half, *Phylonium Romanum* one scruple, *Species Instini* half a scruple : temper them all together, and drink it, and then a little fat broth after it. But how easily an error is committed in distinguishing the pain of the guts, from the pain of the reins, and the pain of the gravel, it shall hereafter be declared, where we shall speake of the gravel.

Of the pain in the Bellies of young Children. §. 12.

WE have here briefly shewed of the oyl of sweet Almonds which is to be tempered with Sugar, and may be given boldly to new born children for the pain of the belly : This is alwayes found to be good. The water of Larks spurs is also good for the same, as well in old folks as in young children. For a small Clister, take Mallows, Hollihock roots, and *Pyrela*, of each half a handful, Melilot and Rosemary, of each half so much : seethe them in a pint of water, and then take of this decoction little or much, according to the bignesse of the child, Hony of Roses half an ounce, oyl of Camomil two ounces, Salthalf a drachme ; temper them all together. Item, take unto small children alwayes a spoonful of the water of black Cherries in their pap, for it asswageth the pain. Oyl of Nutmegs annointed about the Navel, and a warm cloth laid upon it : and in like manner the oyl of Scorpions is also very commodious for this infirmity. Also Chickweed fryed in oyl, and applyed warm on the belly. Also take Mints, and Mallows fryed in fresh Butter, or Camomil and Wormwood, of each a like much : cut them all together meetly small, and put them in a little bag : then make it meetly warm in hot Wine, wring it well out, and so lay it over the childs belly. Item, cut an Onion very small, and fry it in oyl, and bind the same upon the Navel of young children and old folks.

Albeit, that it be not our intent to write much of Chirurgerie, yet neverthelesse, we can not let this escape : &c. if any be wounded in the belly that his bowels issue forth, and then happen to swell, that they cannot be put back into the body, then warm them with warm milk or wine. After that may the Chirurgion well know what he hath to do.

Of the Wormes in the belly. §. 13.

First of all, there is not any thing more certain, then that in mans body, like as in stinking kennels, in Cheese, and in stinking flesh wormes do grow, and that out of a putrified matter : But in man do they chiefly proceed through unaccustomed meats that cannot be digested : also of Surfeiting and overcharging of the stomach. Item, through bathing, and use of venery with a full stomach, through eating of fresh Beanes, of salt fish that is without scales, through Swines flesh, and such like things more. Also these wormes do grow by eating much fruit. Therefore are children most annoyed thereby about harvest.

These wormes do ingender sometimes in the stomach, and otherwhiles in the bowels : and some suppose that they onely grow in the blind gut ; but they which have somewhat more carefully beheld them, do write that the long wormes do ingender in the uppermost bowels, and the small, like unto Cheese Magots, onely in the Arse gut and in the middlemost guts, should round wormes ingender called *Isourides*. Some do take it otherwise. In fine, we will let them dispute thereof ; for they do accord herein, that there be three sorts of wormes which may grow in mans body, like as is shewed before.

And to the end that somewhat may be discoursed of these kinds of Wormes : The long ones be knowne to be in young children through their graving in the bowels, through a small, dry, and troublesome Cough ; Moreover, they do awake suddenly out of their sleep sometimes with an outcry ; afterwards they do quickly hold their peace, and have an unequall pulse. Also they have uncertain Agues, with coldnesse of the outward members, which accidents do happen unto them without any cause three or four times a day. Such children have an unnatural desire of meat, they let out their tongue, gnash with their teeth, sweat about the eyes : they be gladly quiet, they be also very quickly angry, and snapish or testy on them that do awake them, and as now they be ruddie, and immediately bleake again ; they talk in their sleep, be frightened in their dreames, and do

do then rub their nose, the eyes sink into their heads, they will be very hard favoured in their face, they feele great paine in the belly, they have much some and spittle, their mouthes will be dry yet more by day then by night, and their breath stinketh much.

In like manner it happeneth very well, that they avoid the wormes at their nose, at the mouth, and through stooles: but amongst people of yeares there be besides these signes such an extreame pain of the belly also, that they cast their hands and feet from them as it were a Collick. And as they come into their stomach, then do they get a great wambling, and loathing of all meats. And when one forceth himself to eat, yet can he not swallow the meat, but must cast up again presently the meat which he hath taken: their ordure is very stinking, their belly swelleth on high, like as if it were full of wind.

These be now the signes of the long Wormes, which signes though they be not alwayes apparent, yet neverthelesse this disease may be knowne by some of these.

The broad wormes be as well in them that have no Ague, as in them which be troubled with lingring Agues: they do also bring some of the foresaid signes with them, and especially these will be knowne as well through the great gnawing in the stomach, as through the unmeasurable desire of meat. And although they have eaten enough, and do not by and by eat again, yet then do they feele that gnawing and biting again as before. They will be also very lean, and dry of body. But this is the very surest signe that the patient doth avoid through the stoole small things, like to the kernels of Gourds. It is also found, that some not esteeming this gnawing of the Wormes, and taking no advice for it, that the guts be bitten asunder, and that the wormes are got into the hollownesse of the belly, whereof doth follow afterwards a great calamitie, as madness, the falling sicknesse, dogs hunger, swooning, pain of the belly, obstruction or binding of the body, and lastly a painful and bitter death. Therefore is this disease not to be accompted small, but rather men are betimes to use all requisite remedies for it.

But if the wormes be not in the bowels, but in the stomach, and in the mouth of the stomach, then be they commonly vomited up, and they that be in the bowels are rid and dispatch through the stoole.

Of the third kind of Wormes which keep themselves in the Arsegut, shall immediatly hereafter be discoursed. I have therefore the longer discoursed of this, for that it is a common disease amongst children and common families, whereby common householders might know their right difference, afterwards we will write of the remedies serving for these common sorts of Wormes: but above all, there be prescribed by the learned certain common rules of them. The first is, that the lower the wormes be in the bowels, (whether they be there growing or descended out of the stomach thither) so much the better and stronger must the medicine be which is given from above, because that she may not loose her vertue through so long a passage. Secondly, the wormes *Iscaurides* are not so easily killed through Physick, as other Wormes, therefore must stronger remedies be used for them. Thirdly, to preserve himself from wormes, he is to beware of all such meats as do increase *Phlegma*, and to purge out the same in aged folks, like as we shall speak more at large thereof. Fourthly, the first intention of the Physitians, is to kill the wormes, afterwards to expel them, lest that through their stench they do infect the heart, the stomach, and the whole body. Fifthly, as soone as one perceiveth the wormes, then must he indeavour to expel them, and so to free himself from great distresse. Sixthly, all remedies which be hot in the third degree, are very fit for this purpose if there be not a strong Ague or impostume with it. Seventhly, if one will expell the wormes through any meat or drink, then is the same to be done with an empty stomach, and fasting. Eighthly, the wormes are most fittest to be killed through hot and bitter things, as (to the contrary) through sweet and fat things they are fed and sustained. Ninthly, all they that have the wormes, may be fed two dayes with sweet and fat things; but the third day when they be hungry and empty, are bitter things to be given. Tenthly, if one take any thing to kill the Wormes, then must the belly and the stomach be annointed or plaistered on the outside with astringent and bitter things. Eleventhly, if so be that the wormes be in the uppermost guts, or in the stomach, then will they be more easily killed and expelled through that which is taken at the mouth. But if there be in the neathermost guts, then are they to be killed with Clusters and Suppositories. But if in the middlemost guts, are to be used both these remedies.

The order how a man may preserve himselfe from the wormes.

ALl those that are to be preserved from worms are of three sorts, as children which do yet suck, children weaned: and of the age of 14. years. Now for to free the sucking children, the Nurse must eat all light meats, and refrain from all fruits, Fish, and Milk, but especially from overcharging her self with any kind of meats. The children which do not suck must be kept after the same manner, and be restrained from all that is slimy, and also beware of fruit, and especially of those which be not ripe, and those that be worm-eaten, for they also ingender wormes in the belly. The youths and people in years are to be kept likewise as we have said. Also twice or thrice a year phlegme ought to be prepraepared in them, with *Oxymel* of Squils, or *Compositum*, or with the syrup of *Calamita*, and such like. Afterwards they are to take *Hiera Picra*, with the decoction of Polipody roots, *Murabalan*, *Chebuli*, of a little Coloquint, for to purge. They are also to use rather roasted meat then sodden. They must eschew all grosse and fat meats, for thereby do the worms grow especially. Also he must eat every day a little mustard seed.

But if so be that the worms be present, then must one look to kill and expell them by all meanes, for which purpose these hot things following be fit, viz. Wormwood, Bay-leaves, Peach kernels, Rue, white Mints, bitter *Coffus*, Centory, Horehound, Lupins, Annis, Smallage seed, parched *Nardus* seed, Mints, Elecampane roots, dry Bayberries, Southernwood, Comin, Cresses seed, Caruway, bitter Almonds, *Diptamus*, Penniroyal, Gals of old beafts, and chiefly Oxe Gals, or wolfs gals, the common Wormseed, Cinamom, Gentian, the roots of the femal Fearn, and Agrimonie: of all which foresaid things, one drachme, or one drachme and a half is to be taken in winter time with wine, and in Summer with some cooling waters, and that chiefly with Purslaine and Endive water.

These things following do not onely kill the wormes, but also expel them forcibly, to wit, Aloe, roots of blew Flowerdeluce, the juyce of wilde Cucumbers, *Agaricus*, Coloquint, wilde Saffron, the fresh juyce of Elecampane roots, Turbith, and *Rabarbarum*. One may use some of these foresaid things if there be no Ague with it.

Cold simples which do kill the wormes are these: viz. prepared Coriander, Butchers broom seed, *Hypocistis*, sealed earth, Purslaine seed, seeds of Endive and of Lettice, the juyce of Plantane, rinds of Pomgranats, sower Pomgranats, Oranges and their seed, Citron seed, burnt Harts horn, Asses milk; all that is sower, bread infused in Vinegar, Broom seeds, Colewoort seed, dry Plantane, seeds of Orage, and unripe Sallad oyl, a good deal of it taken at once. You may boldly take these things, where as heat and the Ague is.

And further to speak of the compounded things, we will first of all take the things in hand which may be used inwardly and in heat: Take the syrup of Vinegar one ounce and a half, temper it with Endive water and Purslaine water, and drink this certain dayes together alwayes fasting. Item, Take the seeds of Butchers broom, sealed earth, *Hypocistis*, the juyce of Sloes, of each one quarter of an ounce: boyle them all together in sufficient water even to the half, and drink thereof certain dayes together three or four ounces at ounce. Or take Grasse roots, and Butchers broom seed of each one ounce; see the them all together in a pot of water even unto the half, and drink thereof even as before. Another: Take eightene or twenty *Sebestes*, Purslaine seed one drachme, Grasse roots and Mellet, of each one quarter of an ounce, Sugar four ounces, Verjuice, and the juyce of Pomgranats of each two spoonfuls: let them see the together, and skum them well. But if you have not this, then take in steed thereof good vinegar. Item, take prepared Coriander, and the seed of Smallage, of each one drach. and a half: calcined bones of a Stags hart 3. quarters of an ounce, red Coral one drach. Cinamom half a drach, *Calamus* half a scruple, prepared Pearls, half a drachme, *Diptamus*, *Ammoniacum*, field Ivory, and burnt Silk, of each two grains, eight or ten Bayberries, Sugar three quarters of an ounce: make a fine powder of of it, and give one drachme of it more or lesse.

Burnt Harts horne alone two or three drachmes given with Mead, doth Marvelously kil the Wormes. Or take burnt Harts horn one drachme, Pyony seed, Smallage seeds, Coriander, Colewoorts seed, *Nardus* seed, seeds of Plantane and of Endive, of each half a drachme, *Diptamus* one scruple, red Saunders, Coral, and Pearle, of each six grains, Sugar as much as all the rest, make a subtle powder of it.

Another: Take field Ivory which is a little parched one quarter of an ounce, prepared Coriander one drachme and a half, *Diptamus* one drachme and half a scruple, Sealed earth one drachme, temper them all together. Item: Take Rubarb, Basil seed, Plantaine seed Pomgranate pills, Caraway, Butchers broome seed, *Cardus Benedictus* seed, field Harts horn, and field Ivory, of each half an ounce, rinds of Mulberrie roots, Colewort seed, Citron seed; and rinds of Willow trees, of each three drachmes, Purslaine seed, and *Diptamus* of each two scruples, red Coral and Pearls, of each one scruple: make a powder thereof, and then give one drachme or twain of it, viz. in winter (when there is no Ague) with wine; but in Summer, and when there is an Ague with *Oxycrato*. Item, Take burnt harts horn one drach. prepared Coriander, and Aloe, of each half a scruple: beat them all together, and give it him with the syrup of Vinegar, or grasse water. In like manner is also especial good for this the leaves of Smallage one drachme: or take the seeds of Purslaine one drachme, *Muscus* four scruples, red Coral, and prepared Coriander, of each one scruple, Orage seeds one drachme: make a powder of all these, and give thereof with strong wine, or with water wherein grasse roots and Agrimony have been decocted, each time four grains. Another: Take Orage seeds one drachme, Wormseed (which is *Semen*) one drachme and a half, Grasse roots, flowers, of Hyssop, Southernwood, of each half a drachme, Licorice four scruples, Cinamom, and Dill seed, of each half a scruple: stamp each apart, and afterwards mix them together, and at the last put half a scruple of *Muscus* unto it: then give thereof from three or six graines unto half a scruple, with warm grasse water.

Item, take the seeds of Orage, of Purslaine, wilde Thyme, and Marjoram, of each half a drachme, Wormseed three drachmes, Licorice, and Lupines, of each one scruple, *Muscus* half a drachme, *Ambra* half a drachme: mix them all together, and give one drachme and somewhat more at one time with grasse water. Another: Take the seeds of Plantaine, and Wormseed, of each one drachme or somewhat lesse, according to the age, and give thereof as before. Item: Take Plantaine seed, calcined Harts horn, and Wormseed, of each a like quantity, use it as the other. Or if you would make a confection, then take burnt Harts horne one drachme, prepared Coriander, Pyony seed, the seed of Smallage, *Nardus* seed, the seeds of Plantaine, and of Endive, of each half a drach. *Diptamus* half a scruple, red Coral, Saunders, and Pearles, of each five graines, Sugar one ounce and a half: then make Tabulats thereof with Grasse water. Then take about one quarter of an ounce at once.

You have before in the second part, the third Chapter, and seventh § of the hardning of the breast, and in the third part, the second Chapter and eleventh §. a preparation of earth worms into powder against the yellow Jaundies, whereof may a drink or confection be made. But if the guts be distended, and the heat not over great, then lay this plaister following upon the belly: Take Linseed meal, and Bean meal, of each one ounce and a half, Wormwood one handful, Aloe three quarters of an ounce, and make a plaister of it with Meade, or with the oyl of wormwood.

But if there be a small ague with the worms, then may be given to people in years (each according to his age) Treacle of Mithridate: for both of them do kill the worms and expel them.

Item: Take the seeds of *Sophia* one drach. calcined Harts horn, Pomgranate peeles, of each half a drach. *Diptamus*, Cloves, Rubarb, of each one drach. Wormseed half a drach. Saffron fifteen grains, Sugar nine ounces: Seethe them all together in Wormwood water, or in grasse water, and make Tabulats thereof: or take wormseed one quarter of an ounce, Knotgrasse, and white *Diptamus*, of each two scruples, burnt Harts horn, Peach leaves, of each one scruple, Rubarb one drach. make them all together into a subtile powder and give thereof one drach. or twain at once. But if you will have a confection, then take thereto three ounces of Sugar decocted in water of Knotgrasse, and give thereof from half an ounce unto a whole, according to the age of the patient. Item, other more which be Laxative: Take parched Rubarb, and wormseed, of each one drach. prepared Pearls one drach. and a half, burnt Harts horn one drach. Sugar six ounces: make a confection of it as before. Or take wormseed half a drach. Comin one scruple, Cinamom two scruples, burnt Harts horn half a drachme, Turbith one quarter of an ounce, Sugar one ounce and a quarter: make loosings thereof, and give about one quarter of an ounce of it. Item, take Cinamom, burnt Hartshorn, Centory, and Gentian, of each one drachme, Rubarb one scruple, Sugar Six ounces decocted with grasse water

water : make also loofings thereof, They be also very good, and they be all together easie.

The seeds of Rue should also be very good for the worms : like as also is the Vinegar of Rue, and the common good vinegar. Take in like manner the flowers of Feverfew as much as you can gripe between two fingers, and use it fasting. This hereafter ensuing may be used for children of three years of age ; Take white Diptamus, wormseed, *Carlina*, and Rubarb, of each a like quantity ; pownd them to powder, and give each time one drach. thereof more or lesse with wine, according to the importance of the cause : whereupon you are to use for children the salve of Oranges, which shall be described hereafter, and after that, this potion ensuing : Take Rubarb two scruples, *Carlini* one scruple pownd small with wormwood water. In like sort also be very meet these pills following : Take Gentian, Myrrhe, Diptamus, wormwood, Mints and filed Harts horn, of each one drach. Turbith half a drach, Agaricus one quarter of an ounce, *Sul gemma* one drach. Ginger and Cinamom, of each two scruples, Aloe as much as the rest : then make pills of it with the juyce of wormwood, and use oftentimes of it about one drach. at once.

This composition following is most highly commended of the ancient Physitians : Take Gentian, Centory, and *Agaricus*, of each one drach. Cloves, Nardus seed, the roots of Costus, Annis, and water of Scordion, of each four scruples, burnt Harts horn, Roses, Sorrel seed, and prepared Pearls, of each half a drachme ; pownd each alone, afterwards temper them together, and sprinkle them with the juyce of Lemons, with sharp Vinegar, and Rosewater ; of each a like quantity, and let it dry again ; do so five or six times : At the last temper with it half a drach. of Saffron, one grain of Musk, and make thereof small loofings with the sirup of Citrons. One may take thereof from half a drachme to a whole, whether it be made in powder or pills. Conserve of Gilloflowers, and of Peach flowers, be also much commended for this purpose.

There may be also many things drunken ; as the juyce of Radish, and give of it to a strong person one quarter of an ounce : it is a very strong and a right medicine for a Plowman. This also is very like the same ; pownd Garlick, and wring out the juyce, and drink it as before.

Item, take the herb Basil, seethe it in vinegar and drink of it, the worms will run quick out of your body. Another : take Rye, boyl it, and drink sometimes of the decoction, and also temper your wine with it. Or take Citron pills one drachme, or one drachme and a half, give it to children in Milk ; it should be special good. Take the juyce of Elecampane roots four ounces, and drink it ; it is taken to be a special remedy. Item, take wormseed one ounce, Sene leaves one quarter of an ounce : pownd all together to powder, and take one drachme of it or twain, with wine, Beer, or Mead.

Item, take Pomgranat peeles beaten or sodden in wine, and drink of it fasting about one quarter of an ounce. One drach. of pownd Zeduary drunken once or twice a day, doth also kill the worms through his heat.

Another ; take Camomil two handfuls, twenty or five and twenty Sebestes, seethe them in a pot of water unto the half ; then take three ounces of this decoction, and temper with it three ounces of *Oxyracron*, and drink of it three or 4. mornings one after another.

Clifters be also very good for this if one can get Asses milk for it. If that cannot be gotten, then is there to be taken for it a broth which is decocted with 20. or 25. Sebestes and Rye, and mix with it butter and hony.

Also Cow milk may be taken for it alone, tempered with hony.

For to use outwardly, the learned have ordained divers remedies ; as plaisters, salves, and other means more, as hereafter followeth ; Take Aloe, Southernwood, of each a like quantity, temper them with hony or oyl of wormwood, and anoint therewith the belly.

Item, rub Oxe gall upon the Navel as much as you can ; if it be too thin, then temper amongst it beaten Wormwood, Gentian, or any other bitter thing. Note also, because that all bitter things be enemies to young children, that regard must be had to help them with salves, plaisters, and such like, as hereafter shall follow. For that through these means the Worms may be killed in young children, because children have tender, subtil. and thin intrails, so that the plaisters and salves may penetrate, kill the worms, and expell them, which also through the vinegar which is mixt amongst it may be the easier effected. This salve following is very much approved for it : Take Wormwood,

Lupines, Silvermountain, Comin, *Nardus* seed, Centory, *Doronicum*, burnt Harts horn, and Myrrhe, of each half an ounce, Aloe one ounce and an half, *Agaricus* one drach. the juice of Oranges two ounces, oyl of Wormwood, of bitter Almonds, and oyl of Peaches, of each one ounce, an Oxe gall: let the juyce and gall be sodden together and afterwards mix all the foresaid things amongst it, and then make a salve of it with Wax: with this salve is the belly, the stomach, and back bone to be anointed. But if you will make a plaister of it, then will it be good for the stone of the Kidneyes and Bladder. Or take the juyce of Mints two ounces, Centory, Wormseed, and Lupines, of each half an ounce, Gentian, Wormwood, of each one drach. *Diptamus*, *Semen Zedoarie*, of each three drach. Oxe gall one ounce, Aloe one drachme and a half, Mastick, of Spica, and of wormwood, of each one ounce, unripe Sallad oyl, and vinegar wherein toasted bread hath been infused and is wrung out again, of each two ounces, the juyce of Oranges half an ounce, white Wax 6. ounces: see the the juyce and the oyl untill all the moisture be consumed: when the oyl is cold, then temper the rest being beaten small amongst it, and let it see the a little again untill it be thick. Lastly, put three grains of *Muscus* unto it, and spread this salve on a round cloth and bind it on the Navel; it killeth all kinds of worms, and also expelleth them.

Another: Take the juyce of Fleawort, wormseed, Southernwood, Centory, Swines bread, Peach leaves, Lupines, *Ebulus* roots, Pomgranat pils, of each one drachme, the juyce of Garlick two ounces, the juyce of water Cresses twelve ounces: let all these see the unto the half, afterwards put as much wax unto it as sufficeth for to make a salve. Item, take Centory, Wormwood, and Lupines, of each half a drach, *Lignum Aloes*, burnt Harts horn, and *Diptamus*, of each one quarter of an ounce, Aloe as much as the rest, oyl of wormwood 3. 4. wax as much as will suffice. Or take Wormwood, and Lupines, of each half an 3. Cinamom, Comin, *Nardus* seed, Centory, wormseed, oyl of Peach kernels, and of bitter Almonds, of each 3. 4. wax five ounces, make a salve thereof: it hath been approved oftentimes. But if so be that you will have it stronger, then take *Agaricus* unto it one drach. Aloe one ounce and a half, Myrrhe one drach. and a half, the juyce of Oranges two ounces, Oxe gals one ounce, and use it as the rest. Take Treacle half an ounce, *Diptamus*, Gentian, and wormseed, of each one scruple. Aloe two scruples, Oxe gals one quarter of an ounce: temper them all together, and make with beaten Coriander a salve thereof; then spread it upon a cloth, and lay it upon the stomach. Item, take Seduary roots, Gentian, Aloe, and wormseed, of each one scruple, Cloves & Mastick, of each half a drach. Treacle one drach. and one quarter of an ounce. Of the stomachical salve which is described in the eleventh Chapter and the 5. §. make a plaister of it, and lay it over the stomach; for it expelleth worms, and doth also strengthen the stomach.

Item, take Aloe, wormwood, oyl of Peach kernels, of bitter Almonds, of Mastick, and of Spica, of each three quarters of an ounce, *Hypocistis* sealed earth, and Lupines, of each one scruple, Aloe, *Spec. Hiera Picra*, of each half a drach. *Nardus* seed, *Gallia Muscata*, Southernwood, Oxe gall, *Lignum Aloes*, of each one scruple, burnt Harts horn one quarter of an ounce, Endive seed one drach. wax as much as sufficeth for a Salve.

Another: Take oyl of wormwood, and of Myrtles, of each half an ounce, beaten Aloe, prepared Coriander, sealed earth, and *Nardus* seed of each five drachmes, the juyce of Quinces and Oxe gals, of each half an ounce: see the them with the oyl until all the moisture be consumed: afterwards temper the other ingredients amongst it.

This Salve following is very good, and common at the Apothecaries: Take the oyl of wormwood three drachmes, oyl of bitter Almonds one ounce, oyl of Mastick one quarter of an ounce, Myrrhe, Aloe, and white *Diptamus*, of each one scruple, wax as much as needeth.

The salve of Oranges (whereof we have spoken before) is thus prepared. Take a four Orange, cut it up at the top, and wring out the juyce; then anoint the Temples with it, the heart and the stomach: the same is especial good for young children.

Item, take oyl of bitter Almonds, of wormwood, Oxe gals, and white *Diptamus*, of each one drach. Mithridate, and the juyce of Oranges, of each one quarter of an ounce: temper them together and anoint the child therewith upon the Hart, Stomach, and Navel. Put also unto it one drachme of Aloe: it is a good and safe salve, especially if there be an Ague present with it.

Another: Take Southernwood one ounce, wormwood, and the rinds of the Bay tree, of

of each one drach. Sugar, Colewort seeds, of each half a drach. Bayberries one quarter of an ounce, Aloe half an ounce, burnt Harts horn one drachme, white *Diptamus* two \mathfrak{d} . see the them all together in Vinegar and Oyl: then strain it through a cloth, and use it as the other. Or take Linseed oyl one ounce, Rosin more or lesse according to the age: melt it at the fire, and anoint therewith the temples of the head, the stomach, and the belly. Some do much commend the same, although it seem flight.

Item, take Aloe half an ounce, white *Diptamus* and Saffron, of each one scruple: mingle them with a little sharp Vinegar, afterwards spread it on a leather and bind it on the Navel.

Take fresh beaten Wormwood, wet it with Vinegar, and lay it warm upon the stomach. Take the Marrow of Stags bones, temper it with a little molten Wax, and anoint therewith the whole back bone, and then lay it beaten upon the Navel. The juice of Radish spread upon the Navel is also good for worms. In like manner the oyl of Wormwood rubbed into the Navel (chiefly of young children) is also good for Worms. Item, there is also often to be used *Petrolinum* for the same.

Here do also follow certain plaisters which be good: Take Wormwood two ounces, *Euphorbium* one drachme, burnt Harts horn, and the gall of a Hare, of each half an ounce, Hony as much as sufficeth for a plaister.

Item, take *Nardus* seed two scruples, Aloe and red Coral, of each one drach. Wormwood and Mastick, of each one quarter of an ounce prepared Coriander one ounce: make powder thereof. Item, take Rye meal three ounces, Lupin meal five drach. Saffron one drach. Vinegar, and the juyce of Rue, of each two ounces, the juice of wormwood four ounces, then make a plaister thereof.

Another: Take Myrrhe, Gentian, Aloe and *Diptamus*, of each two drach. and a half, Wormwood seeds of Purslain, and of Orage, Lupins meal, filed Ivory; and burnt Harts horn, of each one drach. Saffron one drach. Barly meal one ounce, the juice of Garlick four ounces: temper them all together, and put two grains of *Muscus* unto it.

Item, take Mints and Wormwood, of each two ounces, Centory, *Agaricus*, of each half an ounce, Aloe one quarter of an ounce, Rosewater one ounce, Lupine meal as much as all the rest: make a plaister of it for to lay upon the stomach.

Another: Take Lupine meal, the juice of Wormwood, Mints, Peach leaves, and the juyce of Quinces, of each two ounces, sealed earth, prepared Coriander, Mastick, Myrtle seed, and Aloe, of each half an ounce, Oxe gall one ounce, and red Wine.

Item, take *Nardus* one scruple, Aloe one drachme, prepared Coriander two scruples and a half, Wormwood, Mastick, of each one quarter of an ounce, red Coral one drach. make a powder thereof, and temper it with the juyce of Wormwood, and with Vinegar: wet a cloth in it, and lay it upon the belly.

Another: Take the water of Mints and of Hyssop, of each six ounces, the water of Grasse twelve ounces, Malmsey eight ounces, Gentian, Myrrhe and Saffron, of each one drach. Lignum Aloes, Wormseed, of each three quarters of an ounce, *Muscus* five grains, vinegar five spoonfuls; use this as is aforesaid.

If it be so that the patient be very weak, then may this following be used: Take Sorrel water, and the water of Buglosse, and of Grasse, of each three ounces, *Spec. Cordialium temperatarum* one drachme, water of wormwood and of Hyssop, of each two ounces, the water of Broom flowers three ounces, Gentian, and *Diptamus*, of each half a drachme, Saffron half a scruple, mingle them together.

One may also use these bags following: Take Mints, Penniroyal Wormwood, white Mints, Southernwood, Roses, and Plantain, of each half a handful: beat them all grosse, afterwards put them into a little bag, and wear it on the stomach.

The patient may also smell oftentimes to the black *Nardus* seed, and likewise toasted bread which hath been steeped in Vinegar.

Take Feverfew, Rue, wormwood, Leeks, powdered ana. *M. r.* leaven of brown Bread, Vinegar, one pound, boyl them untill they be thick, apply it hot to the Navel.

Or drink the juyce of Alecost, alias costmarie, first and last for certain dayes.

Or drink the decoction of Centory, Rue, and Sage, sod to the half in ale three or four mornings.

Or stamp VVormwood and Rue, fry it with Oxe gall, spread it upon Leather,

and strew the powder of aloes upon it, and apply it warm to the Navel.

Of the Worms Ascarides which do keep in the Arsegut. S. 14.

Moreover, we will here for a conclusion of this Chapter, discourse of the small worms *Ascarides* which do keep themselves in the Arsegut. These worms may be perceived by the great itch that they cause there. And for to remedy this, dip a little wool in the oyl of Apricocks, or the juyce of white water Mints. Also you may mix Aloe and Oxe gall amongst it, and so thrust it into the Arsegut.

But first, the body must be purged with Rubarb; afterwards are Suppositories to be made of fresh Pork and put up into the Arsegut, and all the little Worms will stick fast unto it. Some do take for this powdred Pork. Also one may anoint the stalke of Coleworts with Oxe gall, and use the same as a Suppository. But above all other things is much to be commended Quicksilver mixed with Barrows grease, and to dip the finger in it, and so grease or anoint the arsegut within with it. But for children may Suppositories be prepared with Hony, and Salt peter, putting them up, and plucking them forth again immediately. Also, there may a small Clister be ministred of milk, with *Hiera Picra* and *Cassie*. Old folks are to have Clisters after this manner following: Take Southernwood, and Wormwood, of each one handful, the seeds of *Cuscuta*, parched Comin, and the seeds of Smallage, of each one ounce, Wormwood one quarter of an ounce. Bran half a handful, oyl of Peach kernels one ounce and a half, Salt one ounce, *Hiera Picra* 5. drach. the juyce of Leeks one ounce. Of thir decoction take not above eight ounces, and make of it a Clister.

The sixteenth Chapter.

Of the Kidneyes.

IN the left side, right under the Milt, in the body of all beafts, is the one Kidney placed, and the other in the right side a little higher, so that otherwhiles it doth touch a great part of the Liver. The Kidney which lyeth in the right side, is also in all beafts somewhat greater and fuller then that which is in the left side, and is not covered with so much fat. For because it is hotter then the left, therefore doth it consume the same fatnesse, which groweth through moisture, like as it is there very needful: for there is no part which sooner waxeth fat then the Kidneyes. Both of them be made fast very strongly to the back bone. They have sundry veins from the Liver whereby they draw blood, with water, and also some part of the gall unto them, separating the same blood from the water, and keeping as much of the blood as sufficeth for their sustenance: collecting also the water together in their concavities (like as in a pot) which the gall dyeth yellow; and then through the Conduits *Ureters* (whereof each Kidney hath one by it self) descendeth into the Bladder, and from thence is ejected by the yard.

These Conduits or *Ureters* are whitish, hard, somewhat fleshy, and of the nature of the Bladder, whereby they may not suddenly be bruised through the sharpnesse of the urine, or through some other occasions. The substance of the Kidneyes is of a tight well compacted flesh, fashioned partly round, and not unlike to Oxe Kidneyes (the greatnesse excepted.) These Kidneyes be also through many causes, and sundry sorts of sore diseases infected, which the Grecians do call *Nephritis*, which is, pain of the Kidneyes. But this pain of the Kidneyes doth come of many causes, as of impostumes, with heat and cold, of the gravel, and the stone, and further of many diseases, and sharpnesse of the urine, whereof we will hereafter directly write and discourse. But here, before we go any further, we will make a general declaration thereof.

First, the learned do divide all diseases of the Kidneyes into three principall sorts: to wit, if they be subject to any bad complexion, whether they have it of themselves, or be compounded with other diseases. Secondly, if they be not as they ought to be by nature. If they from the time of their birth be too great or too small, or fraughted and laden with grosse tough slime which do oppilate and stop the conduits that do descend into the Bladder. Thirdly,

Thirdly, there may be also impostumes and ulcers. These three things may be very well compounded together, whereby divers diseases and pains of the Kidneyes may be caused. The causes of these foresaid diseases may be as well outward, as inward: the outward may be blowes, falls, unaccustomed exercise, hard riding, much going a foot, great heat or cold about the Kidneyes, to drink puddle water, to carry unused packs, excessive letherie, long use of diuretical meats, and drinks. The inward causes are a bad complexion, as if it be too hot, or too cold, too dry, or too moist, the putrifaction of natural seed or sperme, impostumes, and other pains of the Kidneyes. The signs be apparent of themselves, and to be known by the pain of each place, as if the same be small, mean, or great. This doth otherwhiles appear through pissing blood, or the water which is like blood, even as there were flesh washed in it. But if these diseases assail one with heat or cold, therefore we will also (according to our custome) discourse a little of it, and comprehend them in two especial points.

*Of the pains in the Kidneyes through cold and
moisture. §. 1.*

THe signs of the cold diseases of the Kidneyes, are they which have neither heat nor thirst, nor great pain, and their water is not high coloured, but is much in quantity, because the same could not be wasted through unnatural heat, which the Ague, winter, and the gravel augmenteth.

For these diseases, must first a good dyet be used. All grosse, slimy, hard meats, and all cooling things are to be eschewed, as Endive, Lettice, Cicory, Spinage, and Beetes &c. unlesse there be some hot things drest with them, as Parsly, Fennel, Comin, and such like. Fish that be sodden are not good for this, neither that which is drest with dough or milk, Cheese is also herein forbidden. Also cold clear water, thick red wine, and all fruits that make grosse blood, as Pears, Apples, Quinces, Chestnuts, Dates and such like. In all other things he may direct himself according to his old custome; but he must not swallow down his meat greedily nor unchewed, that the stomach be not cloyed.

Great exercise immediately after meat is hurtful unto him. He is to keep himself quiet one hour and a half after meat at the least, without sleep. Also all moist and cold dwellings are to be shunned, like as near to the earth, or such as be under it, or do lye near unto the water. But he is to provide himself of good clothes and of a good dry chamber. He must forbear all sorrow, vexation, anger, lying long upon the back, riding and such like.

Concerning the remedies, heed is first to be taken whether the Kidneyes be obstructed: but if so be that this be, and that the patient be young, full of blood, and strong, than is the Median vein to be opened on the right foot, and to let out about four ounces of blood. And afterwards this Clister following is to be set according to his age: Take Beetes and Coleworts, of each one handfull, boyl them as is accustomed: then take thereof about 16. ounces, and temper in it *Benedicta Laxativa*, and the confection of Bay berries, of each one quarter of an ounce, course Sugar and Cassy half an ounce, Salt one quarter of an ounce, oyl of *Sesamum* and of Lillies, of each one ounce and a half. temper them all together, and then minister this Clister one hour before supper; This foresaid Clister is alwayes to be used every other day, according to the ability of the person.

After letting blood, or after the second use of Clisters, then may this purgation following or such like be used: Take the confection *De Psillio*, and *Sebeste*, of each two drach. and a half: temper them in three or four ounces of the decoction of Parsly roots, and fast after it at the least five hours.

Or if you had rather have pills, then is the patient to take the pills *Fætida* one scruple, *de Hiera Composita* two scruples: make five or seven pills thereof, and take them early in the morning.

Immediately after purging is the patient to use this following one whole week or twain alwayes betimes in the morning.

Take *Syrupum Acetosum Compositum* one ounce, *Syrupum de Calamintha* half an ounce, Fennel, Annis, and Wormwood water, of each one ounce, afterwards drink this warm.

When these kinds of potions have been used, then is he to purge again after this manner: Take Aloe half an ounce, *Agaricus*, Coloquint, and *Bdelium*, of each one scrup.

Ginger half a scruple, *Sal gemma* five grains; form eight or nine pills of one drachme thereof, and take them betimes in the morning.

Or take the confection of Bayberries one drach. *Electuarium Indum* three drachmes, and a half tempered with wine, and used as before. This confection following is also good for this: Take the seeds of Endive, of Smallage, and of Sorrel, of each one drach. Millet one quarter of an ounce, Cinamon, Ginger, Cloves and Mace, of each one drach. and a half, *Oxymel Compositum* six ounces, hony of Roses three ounces, Sugar two ounces; temper them together, and take a spoonful every morning before meat fours hours, and so continue it the space of two moneths.

You have before in the twelfth Chapter and 11. §. a good juice against the yellow Jaundies, beginning, Take Gentian, &c. which is also very good for this purpose, But if you had rather have a confection, then take *Spec. de Seminibus* one drach. and a half, *Milium Solis*, Licorice, Cinamom, Ginger, Annis, and Fennel, of each half a drachme, white Sugar four ounces, being dissolved with Fennel water, make Tabulates of it; then take thereof three drachmes alwayes before meat, and that induring the space of a month. Savine drieth and warmeth well, it is good for the kidneyes, but women must not use it much.

The sirupes which be fit for this are these: to wit, *Oxymel compositum*, *Miva cydoniarum aromatica*, *Oxymel scylliticum compositum*, & *de Radicibus*: all these sirupes do deopilate the obstructions of the Kidneyes. The plaister of Bayberries is especially commended for the cold Kidneyes.

Irem, take Barly meal, Frankincense and Mastick, of each one ounce, Myrtle seed, Roses, Camomil, of each a like much, for to mrke a plaister withall, lay the same warm upon the Kidneyes. This plaister strengtheneth, drieth, mollifieth, and suppleth, and doth hinder that the disease cannot corrode any further: and it is very good to incarnate or to ingender new flesh.

For a salve, take oyl of *Nardus* one ounce and a half, Saffron and Pepper, of each half an ounce, the salve of *Aragon* one ounce, white Wax three drachmes: melt them, and make thereof a salve. With these salves is the patient to be very well annointed morning and evening in the warm Sun all over the the back bone.

Another: Take oyl of Rue and of Saffron, of each two ounces, the salve of *Aragon* 3. 3. temper them together, and let the back bone be annointed with it every evening and morning: and fume the back with *Laudanum*, and then lay a warm cloth upon it. Also to set boxing cups on the buttocks with picking is much commended for this disease, because that the veins which feed the conduits of the urine do there end themselves in the very buttocks.

And if so be then every such patient do recover his health through the foresaid remedies, yet is he notwithstanding to use the foresaid salve, and two or three clisters more. And if so be that the sicknesse will not avoide with this, then take Spelt, Millet, of each 3. handfuls, made very warm in a bag, and lay the patient warm upon his back thereon, until it begin to be cold, and then annoint him on his Kidneyes with this salve following made very warm: Take oyl of sweet Almonds, of *Coffus*, and of Lillies, of each one 3. oyl of *Euphorbium* one ounce and a half, Bears greafe, and Badgers greafe, of each one ounce, Hens greafe one ounce and a half, *Sagapenum*, *Steckas*, *Coffus* roots, Myrrhe and Saffron, of each one scruple, Wax as much as needful to make a plaister withall. If you occupy it, then warm as much as you mean to occupy at one time.

Of the pain of the Kidneyes through wind. §. 2.

THis pain doth not appear in one place onely, but spreadeth it self abroad, and hath no signs of any impostume, neither of the stone nor ague, for the pain is more after that one hath eaten well, then before, and it is especially augmented through windy things when the meat is half digested. Now for to remedy this pain through windy things, then must he beware of all kinds of Pottage, of Pease, of Beans, &c.

Item, from all manner of fruit, from Chestnuts, from Rice, from Ric bread, and from Beer; for all these do ingender wind in the body. Against which are all things to be used which be light of digesture and expel wind, as Annis, Fennel, Comin, Caraway, the seeds of white *Sesamum*, *Agnus Castus*, and Rue seed; likewise the confection of *Diacuminum*, *Diacalamintum*, is very good for this.

He is also to be outwardly anointed upon the place of the kidneyes with oyl of Rue, of *Costus*, of Lillies, and with oyl of *Sesamum*, and afterwards to wear this plaister upon it: Take Parsly, Smallage leaves and roots, white Watermints, Marjoram, of each one handful, Cumin, Caraway, and Dill seed, of each one ounce; beat them and drie them in the oyl of Dill and of Rue, then make a plaister thereof and lay it upon the kidneyes: it is not onely good for all cold pains of the kidneyes with wind, but also for the gravel and for the stone, and against all obstructions of the same which do proceed of cold.

Of the obstructed Kidneyes. §. 3.

Of these forementioned reasons may easily be discerned, that the most causes of the pains of the kidneyes be none other than coldnesse and obstructions: for this, cold applications may be used, as the Conserves of Marjoram gentle which doth open all obstructions of the inner parts. In like manner also conserves of Betony, confected roots of Pimpernel, Eringus roots, and Calamus. Of wines be fit for this, Elecampane wine, Hyssop wine, aromatical wine, and chiefly all spiced wine as Claret wine, and Hippocras.

Item, Betony wine, *Asarabacca* wine, and wine of Marjoram gentle. In like sort also all the distilled wines, or *Aqua vite* of these herbs, also Mead, and Hony water. But he is much to be restrained from all puddle wines; for that they not onely obstruct the Kidneyes, but also all inward parts; they ingender gravel and the stone. Item, there is also a potion described in the 12. Chap. and 11. § of certain roots decocted, which be also very commodious for this disease.

The great Treacle or *Diatessaron*, if it be known how to give them in good sort, are highly commended for this purpose. This powder following is also good and meet for to open the obstructions of the Kidneyes, and to expel the cold: Take Annis, Fennel, Millet, Smallage seed, of each one quarter of an ounce, *Spicaromana* half a drachme, Licorice three drachmes, dragagant, Gum of the Cherry tree, of each one quarter of an ounce: beat them to powder, and take thereof about the second day alwaies one drachme with wine.

This sirupe following hath an especial propertie in deoppilating of the obstructed Kidneyes: to wit, *Miva citioniorum*, *Aromatica*, and *Oxymel* of Squils with other more, described before.

The Simples which do open these obstructions, be Agarick, Saxifrage, *Milium Solis* Parsley of Macedonia, or stone Parsley, white Mustard seed, Nettle seed, red Rease Porage, Fennel roots, Parsly roots, and roots of Sperage, of Smallage, and of Butchers broom, *Spica nardi*, *Spicaromana*, water Cresses, garden Cresses, and Pingles; the compounds are *Discalaminthum*, *Electuarium Ducis*, and *Philantropon*.

For all pains and obstructions of the Kidneyes I have used my vomiting potion with good successe, mentioned in the third part, Cap. 11. §. 4. this I have given twice in one week, according to the state of the Patient. And I have prohibited the party from milk and from all diuretick medicines.

Of the pain in the Kidneyes through heat and dryth. §. 4.

The signs of these hot diseases of the Kidneyes, are such as that they may be perceived by the heat in feeling, and all cold things are welcome to the Patient, and hot things contrary unto him, unlesse the fulnesse of the body doth hinder and let them.

The patient hath also a great thirst at all times, and a bad stomach: his urin is very little and high coloured, there swimmeth otherwhiles some fat upon it, and the rather in cholerick, and hot men: with the hot pain of the Kidneyes is more danger than with the cold: Therefore must one with all delay proceed forward without all necessary remedies: and that much rather, for that through the foresaid heat (which is mixed with a tough thick phlegmatick matter) the stone of the Kidneyes might easily grow, wherein first the Liver vein is to be opened, afterwards the *Sapha*, and such Clusters to be ministred as may cleanse the guts, that is, such as be decocted with Quinces & Dates. This following is to be oftentimes used: Take Goats milk twelve or sixteen ounces, melt in it Goats suet one ounce, oyl of Roses two ounces, and use them as the other. For preparative potions you

you are to make this. Take Lettice, Purslain, Liverwort, Shepherds purse, of each one handful, the seeds of Lettice, of Purslain, Endive, Roses, Butchers broom seed, Barberries, water Lillies, Burnt Ivory, red and white Saunders, of each one quarter of an ounce; Sugar, twelve ounces, then make a sirupe of it. You are afterwards to purge with fowr Dates, with Cassie, with *Manna*, and with *Succo Rosarum*.

Also for this (like as in the pain of the Kidneyes through cold) is needful a good order of dyet. Therefore is his dwelling to be high from the ground, and not on the water, but to open towards the East and the North, and not towards the South or against the West. His clothes are to hang loose about the body, and not girt tight or hard. Venery is very hurtful for this disease. Out of these foresaid reasons may easily be noted, that sore labour is hurtful; as to ride hard trotting horses, to go up hills and stairs, and that chiefly after meat. Notwithstanding moderate exercise is more commendable than to sit still utterly unoccupied. Also anger, heaviness of mind, and all other motions of the same are to be eschewed. One must not eat too much, for this sickness is caused most of all through overcharging of the stomach, or gluttony; sleeping or waking must also be moderate: for to use too much of either of them is hurtful. But one must chiefly refrain from lying much upon his back, for thereby will the humours sink much towards these parts: therefore is the first sleep to be done on the right side, and then finish it on the left side. To his meat and drink must be taken some more heed: he must eschue all old and unleavened bread, old flesh, and all herbs which make grosse humours, as Beets Coleworts, &c. All hot and tart meats, as salt flesh, Garlike, Onions, Leeks, and Radishes shall he forsake. In like manner must he not use the things that do vehemently force urine; as Fennel, Parsly, Smallage, and such like. But he may not eat bread which is light and leavened, and is two or three daies old, Hens, Pullets, young Pigeons, Fefants, Partridges, &c. will be his best meats: but he must forsake all water fowls. Young Bucks flesh, Veal, Lamb, young Mutton, Conies Hares, and wild Swines flesh may be eat very well, and especially young Hogs flesh is much commended for this disease. The fruits and herbs are Barly pap, wheaten pap, Coleworts, Spinage, Gourds, Cucumbers, Melons, Apricocks, green Fennel, and above all Sage and Betony. And in fine, all that hath a saltish and opening power, and not hot above the second degree, all sorts of Cherries, and especially the kernels of the same, be good for to cleanse the Kidneyes, and to break the stone. In like manner also Hasel nuts, fresh Almonds, and Figs that be well dryed, and Raisons be altogether much commended. This Patient may eat fowr Apples (but no sweet) and also Peaches. He must refrain from Pears (if they be not very sweet, and the stones taken out of them;) Pistaces, Pingles, (and sometimes nuts) be commended: but Chestnuts, Medlars, and Services are hurtful. Of all milk Sheeps milk is the very best for the Kidneyes, and next to that Goats milk: but above all other, the whay of milk. But the first milk after calving or *Colostrum* must be eschewed, except that of Sheep and Goats. Butter is not much commended, but Sallet oyl is much more requisite. Cheese is utterly to be refrained, for it hath an especial nature to ingender gravel, unlesse that it be permitted otherwhiles for custome sake, and that it be Cheese of a year old, which is dry, well salted, and not rotten. And alwaies in the end of the mealtide, of confectioned fruits, Olives and Rapes of Brimswick are most healthful, and *Sisarum*, Quinces, Ginger, Walnuts, conserves of Piony, of Butrage, Buglosse, of Roses, water Lillies, and especially of Cicory, which do open the obstruction and cleanse. Item, Vinegar, the juice of Citrons, of Lemons, half fowr, half sweet, Pomegranates be also very meet for this malady, but Verjuice is forbidden.

Of spices and seeds these are good, Cinamom, Pepper, Ginger, Saffron, Annis, Caraway, Lovage seed, *Ameos*, Rue seed, but a little of each for meats.

The drink for this Patient shall be white wine, or red wine which is not hard nor fowr, but of a good and pleasant tast. The Cherry wine doth not onely cool and moisten alone the Kidneyes, but also the inward parts of the body, therefore may the same be freely drunk. Preserved Cherries do also the same.

Thus much have we meant to speak of the order of dyet for those that be plagued and vexed with the Gravel, which may be augmented or diminished according to the quality of the cause.

How

How to assuage the pain in Kidneyes. §. 4.

VVE will speak now first of all of some particular things which have a secret vertue for to conveigh the medicines into the Kidneyes and Bladder: viz. Saxifrage, *Milium Solis*, Parsley of Macedonia, and stone Parsley, *Cantharides*, the roots of Fennel, Sperage, and Butchers broom feed, of Melons, Gourds, Cucumbers, and Pompeons. These following have power for to cool the Kidneyes: viz. Lettice seeds, the seeds of Purslain, Endive, white Pepper seed, Tassel, juice of Quinces, broad Plantain, and such like:

The compounded things are the sirupes of water Lillies, of Vinegar, and all that coolth the Liver and the Spleen, whereof is written before. Afterwards you have in the third part in the beginning of the eight Chap. sundry things which are also good and very meet, therefore are you not to leave them unread. But if you will have yet more, then look what is written of *Diabete*.

If any body then do meet with this disease, or fear to get the same; then must he take the utmost green pills of Beans, and distil water of them, and drink thereof two ounces tempered with Sugar. Other do temper amongst it as much water of Hounds tongue, and so use it every day. Take oyl of Violets, of water Lillies, and such like cooling things, and annoint therewith the Kidneyes.

You have also in the beginning of the foresaid eight Chapter, a salve called *Anodyna*, which asswageth all pains. Item, take the Oyl of Violets two ounces, Oyl of *Sesamum*, and of sweet Almonds, ana. ʒ. i. β. Butter, ʒ. i. Saffron, ʒ. i. β. Wax, ʒ. i. β. Dill seed, Cammomil, Ducks grease, ana. ʒ. β. three yolks of Eggs; temper them together, and make a salve thereof.

Another. Take Eldern oyl, ʒ. i. oyl of Roses and of Violets, ana. ʒ. β. Ceruse one ounce and a quarter, Rose water, ʒ. i. two yolks of Eggs, Wax, ʒ. 5. The oyl and Wax must be molten together; and let them seethe a little: when it is almost cold, then mix the other things amongst it; and at the last the two yolks of Eggs, and ten drach. of fine Bolus, and afterwards stir it well about. This salve is marvellous good for all our heated Kidneyes, and especially if one after the annointing do lay water Lilly leaves upon it.

Likewise doth the Saunders salve expel all hot matter and distemperature of the Kidneyes, like as same is described in the sixt Chapter and i. §.

Item, take the Saunders salve, and of that which is called *Comitissa*, ana. ʒ. β. oyl of Violets one quarter of an ounce; temper them all together and annoint the Kidneyes with it twice or thrice a day.

The Rose salve which is described in the first part, the second Chapter and first §. and other more which be noted in the second Part, the fourth Chap. and 3. §. are all together meet for this purpose.

Item, take Roses, Purslain. of each one handful, seeth them in Cow milk, and stamp them to growt: add unto it red Saunders powdred, ʒ. 2. oyl of Roses as much as you will for to make a salve of it.

Item, take oyl of Olive and fresh Butter, ana. ʒ. β. the juice of *Veronica*, of *Milium Solis*, and Marjoram gentle, ana. ʒ. 3. let them seeth together until the juice be consumed. This salve is much commended. Or take foresaid herbs, and seeth them in oyl or grease and wring them through a cloth.

Take Rose water and oyl of Roses, ana. ʒ. i. Vinegar one spoonful, the white of an egg, and bray them well together, and lay it blood warm over the Kidneyes.

If the pain will not thereby be eased, then let him wear a leaden plate, full of holes, upon the Kidneyes continually: it taketh away the heat and Venery: If one perceive any gravel in the Kidneyes, then cut a Radish in thin slices, and frie it in Goose grease, and lay it on the Kidneyes. In fine, for all such inflaming of the Reins, there is nothing better then to bathe, and chiefly in all such waters as do run over iron mines. You are also to look how to strengthen the stomach in this disease: look for that in the eleventh Chap. and the 4. §. unto the end thereof, where is shewed at large what strengtheneth the stomach with heat or with cold. For this also is convenient all that hereafter shall be written of the gravel and the stone of the Kidneyes.

Of an hard Impostume in the Kidneyes. §. 4.

THe Grecians do call this disease *Scleros*. The same may also be caused through two manner of means : First, if the matter of the impostume begin to harden through great heat, and to alter into a stone : Or that at the first it be an impostume of Melancholick humours, which is especially caused of cold that hardneth the matter. The signs of the said impostumes are sorenesse, or heavinesse about the place of the kidneyes with little or no pain at all, whereby the members do grow lean. The urine is wholly clear, raw, and very little : and although it be (as many famous Physitians do affirm) that this disease is not to be holpen, yet are you to use all things for it which be hereafter described for the hardnesse of the Milt and Liver. And first of all, he is to be purged, the *Saphea* or Liver vein is to be opened, and afterwards the Kidneyes to be anointed with Hens grease : with the marrow of Neats feet, or with the salve *Althea*. And afterwards this plaister following is to be applyed upon it : Take Linseed, and Fenegreek, of each five drachmes, Mallows, Hollyhock seed, Dillseed, and Cammomil, of each half an ounce, Gum, *Bdellium*, and Turpentine, of each three drachmes. First, dissolve the Gum in warm water, afterwards temper the rest amongst it, and so make a plaister of it. If so be then the Patient have any want of stools, then is Cassie or Manna to be used for it. This disease of the Kidneyes doth make also oftentimes that one cannot hold his water, yea that otherwise it passeth away from the Patient unwittingly in his sleep, whereof we will hereafter speak and discourse apart.

Of impostumes and ulcers in the Kidneyes. §. 7.

VHat difference is between the impostumes and ulcers of the Kidneyes, it is sufficiently declared in the eleventh Chap. and 29. §. because that the Kidneyes be subject to both of these maladies. Therefore we will discourse of them severally, and speak first of the impostumes, and therewith also shew all that concerneth both these diseases.

Notwithstanding that both these diseases, of *Hippocrates*, or *Galen*, and of all other learned be thought to be incurable, or that at the leastwise the same could not without great industry and long time be holpen ; for which they alleage many reasons ; yet are there neverthelesse many kinds of means found, whereby the pain may be asswaged. And if so be that they do not grow and wax worse. Now then concerning the outward remedies of this disease, you have for it salves, plaisters, and other means before for to lay upon it, wherewith is this remedy also much commended : which is, that one is to lay tow over all his privities, being wetted in the brayed yolks of Eggs, and to refresh and renew the same often.

We must also speak here somewhat of the causes of the impostume, and shew first that the Kidneyes and the bladder in this pain do depend so much one upon the other, that they cannot be discerned one from the other : therefore all that we shall write hereafter is fit for both these parts.

These foresaid impostumes may proceed as well out of cold as hot matter, which cometh to fall upon the Kidneyes and the bladder, and there to assemble. But if any outward cause do happen unto it, as blows, fallings, and such like, that must be learned of the sick person. If the impostume be in the Kidneyes, then is there great pain in the same place, the Patient cannot make his water, and there is a small Ague with it. Or if the disease be in the bladder, then doth there arise a very painful swelling about the privities, like to womens pangs in childbed, chiefly if there be a hot matter, which causeth also an ague. And if this do come through cold, then is the pain and the ague more tolerable, but the making of water very grievous, and this disease lingreth long. But in case that the impostume be in the right Kidney, then doth the pain draw upwards : or if it be in the left Kidney, then doth the pain stretch downwards even to the bladder ; the Patient hath one while cold hands, another while cold feet : and his legs on the same side will be for the most part asleep. Also the sick person cannot lie upon the whole side, but must lie upon his back, or his side where the malady is. There doth come also oftentimes great binding of the body, with the first headach, watching, rednesse

ness of the eyes and face, heavy breath, and especially if the impostume be in the membranes. And if the Patient do stir himself forcibly, then thinketh he that the impostume hangeth or sacketh.

But before we come to the remedies, there be certain rules which are to be observed in such like impostumes. First, in the beginning he must beware of giving too strong purgations. Secondly, onely laxative things are to be used: as Violets, Castie, and such like. Thirdly, if so be that the Patient be plethorick of body, you must open the Liver vein or *Saphea*. Fourthly, there must not be given unto him, so long as the impostume is not ripe, any thing that forceth urine; for thereby would the humours be driven to sink the more vehemently upon the Kidneyes, or into some other part of the body, whereby the disease might be increased. Fifthly, one must endeavour that the humours which do flow towards the kidneyes, may be conveyed into the outermost members. Sixthly, and that by reason that the kidneyes should not harden. Seventhly, when the impostume is teorow ripe (which may be perceived by the urine) then is there to be given him diuretical and strong things. Eightly, if the body be bound, then must he not be let blood; likewise also if he have too many stools; but all accidents are to be prevented and watched before. Ninthly, because that the Kidneyes be so far distant from the neck of the stomach; therefore are the medicines which are to be taken by the mouth, so to be composed, that their vigor, through so long a distance and passage, be not enfeebled and abated. Tenthly, all they that have any disease in the Kidneyes, are to eat and drink but little, chiefly if there be many humors in the body present. Eleventhly, if so be that the disease of the kidneyes may be holpen with any mild things, then must there be no strong things to knit and draw them together that they cannot come to any corruption. Therefore are temperate things to be used unto it, and warm and cold things to be mixed together.

Of the impostumation in the Kidneyes through heat. §. 8.

AND for to come to the remedies; if so be that this impostume be caused through heat, then is it first to be opened with Clisters, as hereafter followeth: Take Mallows, Viole leaves, and Hollihock roots, of each one handful, Linseed, Fenegreek seed, ana. \mathfrak{z} . 2. see the them altogether, and take of this decoction 12. or 16. ounces, oyl of Violets, \mathfrak{z} . 3. oyl of Roses, \mathfrak{z} . 3. for to strengthen the Kidneyes: make a Clister thereof, and you are to use the same 3. or 4. times, if it be needful: Or take Barly water alone with the foresaid oyl, or Sallar oyl. But if there be any lask or scouring with it, then use binding Clisters, and such as do strengthen the intrails, whereof every be divers discovered.

Also the liver vein is to be opened in these sick persons on the same side, and that in the arm where the disease is.

Secondly, if the Patient may sustain it, the vein is to be opened in the hams or bending of the knee. Or if it be not to be found, then to take or open the *Saphea*, and that alwaies in the side where the impostume is.

Afterwards cooling salves are to be used, or those plaisters to be laid upon it which we have lately described. And if the sickness come to diminish therewith, then is it a good sign: but if the pain and the Ague do continue stil, and the Patient cannot make any water, or that it passe too exceedingly away from him, then is a sign that there is an assembly of corruption in the Kidneyes, against which you have also a note before, what is to be done in these hot kind of accidents.

For this is this plaister following good: Take Roses, \mathfrak{z} . 1. the seed of Purslain, and white Poppy seed, ana. \mathfrak{z} . 6. Sallar oyl, \mathfrak{z} . 1. Barly meal as much as will suffice for to make a plaister.

Item, take pounded Cammomil, and Linseed oyl, of each one ounce, oyl of *Sesamum* four ounces, Bran as much as will suffice for to make a plaister; these being made, apply them on the Kidneyes. Item, take the slime of Fleawort, and of Quince kernels, of each one quarter of an ounce, oyl of Roses two ounces, Endive water six ounces, the seed of Purslain, of white Poppy, and Vinegar, of each half an ounce, Barley meal as much as is needfull for to make a plaister.

Item, take Hollihock roots, and Mallow roots, of each one handful, fresh Figs one ounce, the marrow of Veal bones, Butter, and Ducks grease, of each half an ounce, oyl

of sweet Almonds, and of Camomil, of each one ounce and a half, Camomil and Balm flowers, of each half an ounce, Barly meal, and wheat meal, as much as sufficeth for to make a plaister. This pap or plaister maturateth all impostumes.

In the beginning of these impostumes give the sick persons Barly water or Mead to drink, the water of Melons and Pompeons, tempered with Barly water the space of one week. Other do ordain this drink: Take the syrup of Violets, the musilage of Fleawort, and Mallowses, of Hollihock roots, and the seeds of Cotton, of each half an ounce, Reisons (the stones taken out) one ounce, Licorice three drachmes, Sugar eightene ounces; then make a syrup of it, and temper a little of the juyce of Nightshade with it, and drink it so with Barly water.

This syrup cooleth, and therefore it is very good against the Ague, which is alwayes present with this hot impostume: and relaxeth, clenseth, and asswageth the pain. Afterwards is the body to be purged with Cassy, sower Dates, Manna and such like.

The Dyet.

All such Patients as have a hot impostume in their Kidneyes, must (as is said) keep themselves very sober in eating and drinking, and must eat none other but Barly paps, Hen broths made sower with Verjuice, stoved Spinage, Mallowses, Orage, Lettice, Burrage, Almond milk, and young Pullets decocted with Gourds, &c. And this is to continue so long, until it be openly seen and known that the impostume is ripe. If so be then the patient between meales be troubled with any great thirst, then must be given unto him sugred Barly water to drink. But if so be that the Ague be very small, and that the impostume be through cold *Phlegma*, then must he rather drink Mead. But if there be great heat with it, then must he leave flesh, and Wine, alwayes at the first.

But if the same be caused through cold, then may watered wine be allowed, but no flesh, at all, chiefly Pork and Beef: also Cheese, Pease, Beanes, unleavened bread, and Rice, be forbidden. But all field fowles, reere Eggs, river fish, drest with Parsly rootes, and salt, are permitted for him.

Of Impostumes in the Kidneyes through cold. S. 9.

WE have admonished before that all such impostumes of the Kidneyes may also proceed of cold, and wherby the same may be knowne. For this impostume are Clusters fit to be adhibited, and then to make afterwards this potion following.

Take water Mints, Hyssop, Wormwood, rumbled Mints, Reisons, Ireos, of each one ounce, Caruway, Fennel, Endive, small Endive, of each one quarter of an ounce, Licorice, half an ounce, Hony nine ounces, prepare it then, and use it as other potions.

And if so be that after eight dayes there be many humors present, then first open his Liver vein, afterwards the *Saphea*, and purge the *Phlegma* with *Diatriach*, and use Clusters of herbs, which be mentioned in the first potion: but put Mallowses unto it, Hollihock roots, and Camomil: also oyl of Camomil and of *Nardus*. After the taking of this Clister, the Patient is to lye very high with his taile, that the Clister may the better run towards the Reines.

Of the Exulceration in the Kidnies. S. 10.

These Exulcerations may as well come in the Kidneyes, as in any other places of the body, wher they with their matter and corrosion do take away the natural operation of the Kidneyes. The causes of these ulcers may be blowes, falles, wounds, and such like: as also blood, and other humors, which descend thitherwards, and do there exulcerate and open the Kidnies and the bladder through their sharpnesse.

Item, if that any impostumation of the Kidneyes be not throwly healed: Item, through the gravell and the stone that do bruise the Kidneyes within: also of the use of all hot meats and Spices, and of eating salt, and by doing over great labour in the heat of the Sun. All these former causes may ingender some sharp humors which fall afterwards upon the Kidneyes, and there do corrode and exulcerate them.

The

The signs of these ulcers are corruption, and blood, with tough slime, as if they were small veins peeces, as it were flesh, which do passe away with the urine. If so be that there be any heat with it, that is knowne by the thirst and by the feeling. The signs of the Stone are to be found in their proper place.

If so be that the disease of the Kidnyes and the bladder, with other more such like diseases, do agree so neer together that the same may be hardly discerned, yet we will nevertheless discover certain especial signs of it.

For the diseases of the Kidnyes there is no grief in making water, like as there is in the disease of the Bladder, wherein the water is made with pain and longsome. In the ulcers of the Kidnyes are alwayes found in the urine small peeces of flesh like small red Corans: where to the contrary, in the ulcers of the Bladder, there avoid great and white peeces.

If so be that any skalinesse be pist out with blood, and corruption which stinketh, then doth such come out of the Bladder: like as contrariwise, that which cometh from the Kidnyes doth not stink. In the exulceration of the Bladder is losse of a little blood: but in the ulcers of the Kidnyes much. If so be then that the Kidnyes have any disease, then doth the Patient feel pain about the Reins: and in the disease of the Bladder, there doth the Patient feel pain above the privities. The corruption which cometh out of the Kidnyes is mixt together with the urine, and doth settle in an hours space not to the bottome of the glasse: where contrarily all that which cometh from the Bladder doth separate it self forthwith from the urine, settling to the bottom of the glasse. We are also to alleage certain common rules for this: as first, if there be any young cholerick person which feeleth pain in the water conduits, that the same must be forbidden Wine. Secondly, for as much as these ulcers do chiefly proceed through the falling down of any sharp humors, then it is needful that their sharpnesse and heat be allayed with sweet things. Thirdly, one must refrain from all hot, sharp, salt, bitter, and fowr things, and to use all that is to the contrary of them. Fourthly, to drink too much, whether it be Wine or Beer is hurtful that one be not thereby constrained to make much water. Fifthly, Venery, great labor, and exercise, be very hurtful for this disease, for that the parched Kidnyes cannot be throwly healed without rest and quiet. Sixthly, if so be there be nothing that may hinder the letting of blood, then is the same very profitable, as be also all great purgations. Seventhly, by reason that vomiting maketh the matter to have recourse unto another place, therefore is it not to be taken to be unprofitable for this disease. Eightly, if there be great pain with this ulceration, then must diligence be given first to assuage the same pain, and afterwards look well how to cure and cleanse this disease. Ninthly, for to heal this disease, one must first begin with things which provok urin gently, whereby the Kidnyes may be a little cleansed. Tenthly, all medicins which are to be taken for the diseased Kidnies, whether it be by vomit, or otherwise, must be alwayes done fasting, and he must also fast long after it. Eleventhly, after the mundification of the ulcers, astrigent and healing things are to be taken tempered alwayes with exsiccativē medicaments.

Thus for to heal these ulcers these are the right means: if so be that the Patient be hard bounden, then is he to be loosed with gentle Clisters. Accordingly, if he be full of blood, he must first have his Liver vein, and afterwards the *Saphea* to be opened. For his drink, the Patient is to use Hony water, or make this drink following: Take twelve ounces of peeled Barly, Fennel roots, Smallage roots, and maydenhair, of each one handful: seethe them all together in two pots of water untill that the Barly be well swollen. Afterwards take twelve ounces of Hony, and boyl it all together with the foresaid decoction, but scum it well, and drink thereof.

If so be that the ulcer be great, and that there be need of stronger things, then put Ireos, Hyssope, and Horehound, of each two ounces, and a good pint of water more. But if there be but a small ulcer which hath not long continued, then take Mallows, Hollihock seeds, the seeds of Melons and of Pompeons, of each a like much. But you peelee the seeds, and give thereof three drachmes at one time tempered with Mead. Afterwards shall he urge himself to vomit once every fourth day. Let this much suffice, as briefly spoken of the ulcers of the Kidnyes.

Of the Pissing of Blood.

FOR as much as this pissing of blood may be caused as well of the ulcers, in the Kidnies, as in the Liver, therefore we will describe it here in this Chapter. The pissing of blood is of two sorts: the one, when one pisseth fair clean blood: the other, when the same is mixed with matter or corruption. This pissing of blood, cometh of inward and outward causes. The outward may be caused through falles, blowes, strong riding, insatiable venery, great labour, of certain meats, and drinks, wounds, of a course of melancholick humors which are wont to be driven out through womens Terms, or through the Pyles. Of the inward causes are superfluity sharpnesse of humours and of the urine, winds, tumors, impostumes, debility of the Kidnies, and of the Bladder: then doth he feel the pain about the privities, and the blood is congealed, and separated from the urine. In case that the blood be much, and runneth out swiftly, then doth it signify a broken vein: but if it come out slow or longsome, then an ulcer: but if the urine be like water wherein fresh flesh is washed, then it is of a weakned Liver: and if so be that it do come of a superfluous blood, then is the same to be seen by the fulnesse of the body: but if it come through the sharpnesse of the humour, then doth the Patient feel a continual burning. But before we do come to the particular remedies, it is needful that we do make declaration of certain common rules. First if so be that the malady be new, then above all things is the Liver vein to be opened, and afterwards (if the cause require, and that the Patient be strong enough) the *Saphea* is to be opened, thereby to drive the blood to another place. Secondly, in the beginning are not astringent nor binding things to be used, that the blood may not congeal and coole, but he must first begin with such things as do cleanse the water conduits. Thirdly, if this pissing of blood do come as an expulsion of superfluity, or *Crisis*, then is it not to be stayed, if it be not so that thereby the natural powers be overmuch weakned. Fourthly, whensoever the pissing of blood, whether it be caused of the Liver, Kidnyes or Bladder, is thoroughly cleansed, then is the same blood to be holpen with cold and astringent things, and to mix amongst them Anodines. Fifthly, all such Patients, are to eschew all great labour, venery, hot drinks, all spices, and all hot things. Now for to come to the remedie of the same, then it is to be considered whether this pissing of blood do proceed of outward causes which may well be perceived by the sick person, and is also to be remedied. First of all, whether this pissing of blood have continued long or not. Of the pissing of blood, one must begin according to the contents of the other rules, with the cleansing of the ureters, which is to be done through these meanes: Take Maidenhair four handfuls, Melon seed one ounce and a half, Sugar and hony, of each nine ounces: make a cleer syrup of it, and give it with water wherein Melon seed is decocted.

Another which is very good. Take four handfuls uof Cincofoile, Sugar nine ounces: see the herbs in sufficient water, then wring it, and with Sugar make therof a syrup. This syrup is to be given with water wherein Plantaine is decocted: this syrup healeth and cleanseth certainly.

If any one fall or be beaten, whereby a vein is broken in the body: the Liver vein is then to be opened, for that thereby the blood will be drawn back which doth run out of these places. but if that the blood do avoid in abundance, and the Patient be strong enough, then is the *Saphea* to be opened the second day afterwards: and to the end that the blood which lyeth clotted in the water conduits might be carried forth, then give to the sick body a potion wherein Fennel roots, the roots of Smalage, Dragons roots, Ireos, Hyssope, Maidenhair and Ciceres be sodden, afterwards one drachme, or one drachme and a half of *Trochisci de Carabe* may be given him with water wherein the seeds of Butchers broom and such like is decocted, or the *Trochisci de terra figillata*.

For this is also meet the confection of *Phylonium Persicum*, but it is not to be used without the advice of a learned Physitian.

Some do also take three quarters of an ounce of the conserve of Roses, and temper amongst it seven grains of Henbane seed, and two scruples of prepared Corall, which may be used with steeld water. It is also very fit to use otherwhiles one ounce, or one ounce and a half of Cassy, and chiefly if there be heat withit. We have spoken before of the letting of blood, and thereupon are to give to this sick person a profitable purgation of

of Rubarb in substance which is deaten, and not wrung out, but in powder of Plantaine water; afterwards give him one drachme of beaten Horsetail, and one quarter of an ounce of Plantaine water, and strew all his meats with the same water.

All his flesh is to be sodden with Butchers Broom seed and unripe Grapes. He is alwayes to beware of all sharp, tart and salt things, and lay a plaister on the place of the malady made of *Bolus* and the juyce of Sloes, *Aloe*, *Licynum*, Vinegar and Rose water. If you will have more remedies, then looke into the former §. of the impostumes and ulcers of the Kidnyes.

And although all the same were caused of other meanes, yet shall you find also three remedies fit for the same. And if so be that this bleeding be caused through sharp meat, or any composed wind, then is the Patient to order himself as of the letting of blood, and taking of the foresaid *Trochisci* is before said. But if there be any impostume or ulcer of the Kidnyes with it, that may be seene by the matter and blood: therefore have you hereafter all that is requisite for the pissing of matter.

Let the Party be purged with some gentle medicine as *Cassia* newly drawne, *mechoachan*, *Manna*, or the like.

Then I have used my Mastick pils made of Mastick and venice turpentine sodden together: but above all, the powder of bole-Armenike, drunk in sheeps milk is to be used.

If any man pisse matter. §. 12.

THe pissing of matter must proceed out of the bladder, Kidnyes or some of the uppermost parts, as from some ulcer of the sides, ulcer of the lights, the Liver &c. the which may proceed from some outward causes, as of blowes, falles, woundes, strong diureticall medicines, and such like. the inward causes may be unclean impostumes, ulcers, superfluous, tough and grosse humours, wind or stone, which do settle there and make some excoiation. The signes of these accidents may be perceived easily by the pain of the same place and by the declaration of the Patient.

This infirmity is thus to be holpen. take peeled Melon seed, Cucumber seed, Gourd seed, and Pompeon seed, of each one ounce and a quarter, fine Bolus, *Gummi Arabicum*, Frankincense, and Dragons blood, of each five drachmes, *Opium* one drachme and a half, the seed of Smalage one drachme: make Trochiskes thereof with the muscilage of Quince kernels, and give the sick folks every day the weight of one quarter of an ounce with the syrup of Poppy heads. For this is also to be used consolidating and mundifying things, as hereafter followeth: Take peeled Melon seed, the seed of Hollihocks, and Nightshade, of each half an ounce, Bitter Almonds, Pompeon seed, fresh Maiden hair, Ireos, and Licorice, of each half a drachme: make a confection thereof with Sugar, or with clear hony. For mundification are also fit, Barly meal, mead, the decoction of figs, of Hore hound, and maiden hair decocted with milk. Now for to heal, you are to take great and small Comfrey, of each one quarter of an ounce, Dragons blood, Frankincense, Mastick, and fine Bolus, of each one drachme, parched Rubarb, the juyce of Sloes, and Myrtle seed, of each half a drachme, Indie *Spica* half a scruple, Sugar as much as you please, make a confection thereof.

This syrup following may also be prepared: Take Licorice one quarter of an ounce, Maiden hair and hounds rib, of each two handfuls, Peeled Melon seed, Pompeon seed, Cucumber seed, and Gourd seed, of each one drachme, white Poppy seed, Hollihock seed, and muscilage of Quince kernels, of each half an ounce, Dragagant and Gum, of each three drachmes, Rubarb, Roses, of each one ounce and a half, white Sugar nine ounces make a clear syrup of it. The *Trochisci de Alkekengi*, which is of winter Cherries, are surpassing good in this disease: and not onely for this, but also for all other diseases of the Kidnyes: give one drachme thereof, or one drachme and a half with Goats milk or Plantaine water. Also for this disease is Hony water to be spouted into the yard, and when the Patient hath kept it in a certain season and pist it out again, then is this following to be used: Take Ceruse, *Sarcocolla*, Gum. Frankincense, *Opium*, Dragons blood: of each half a scruple, temper it with four ounces of wofans milk, and spout one ounce thereof at one time through the yard. In like manner shall he drink Radish water, and water of Horse radish, or spout it in. For this must also this order be observed, to wit, that he now use consolidating, and then again mundifying things, and doe alter them according as occasion serveth.

Item, take oyl of Roses two ounces, oyl of Myrtle, and the juice of Plantain, of each one quarter of an ounce, *Trochiscorum de Terra sigillata, de Carabe*, of each one drachme, Vineger one quarter of an ounce, Wax as much as is needful for to make a salve. This salve for the pissing of blood and water, is to be rubbed on the place of the Kidneys, and also round about the privities above and beneath, being rubbed well in, and then well covered with warm clothes.

Of outward Ulcers of the Kidneyes. §. 13.

THese Ulcers outwardly in the Kidneys, are wont to be caused if one lye upon his back, then are the places of the Kidneys red, and do come to exulcerate. Now when this is perceived, then is there a plaister to be made with the meal of Miller and with Pannick meal, and be laid thereon, and then are you to strew it with Willow leaves, and to moisten the heated place with cold Rose water, or to lay any cooling things upon it. These salves following are also meet for this, viz. salve of Ceruse, Poplar salve, Sanders salve, and other cooling salve of *Galen*, vine leaves steeped in Rose water; and thin beaten Lead also which is full of holes, worn upon the reins. Item, take oyl of Roses tempered with a little vinegar and laid upon it. If that there do then appear bladder or blisters which do break open, then are they to be cured with cooling salves, and dried up with the salve of Ceruse or *Album coctum*.

All these foresaid sicknesses and diseases are the true messengers of the most grievous disease of the Stone or gravel of the Bladder and the Kidneys, whereof we will hereafter further discourse and write. But we will first of all prescribe a brief order of dyet for all them that be infected with these terrible diseases, as the pain of the Kidneys, impostumes, and ulcers.

The order of Dyet. §. 14.

ALL meats of milk, of wheat meal, of the crums of bread, barley paps, oaten paps, are very commodious for this disease. In like manner all field Fowles which are to be eaten, as Partridges, Pheasants, Doves, Turtle doves, Kids, and young Mutton. if it be utterly without an Ague: but if so be that there be a great heat with it, then is he to use Melons and Peaches which be very ripe.

Hasel Nuts, Almonds, Pistacies, Pingles, and such like may he also eat. Item, young hens, reere Eggs, hen-broth, wherein Purslain, Lettice, Melon seed, Pompeons, Gourds, Cucumbers, or any other cooling things have been sodden; all River fish that have scales, frayed, are to be tolerated. Green herbs, as Orage, Mallôwes, Purslain, and Lettice, are also very meet for him. His best drink were indeed Barley water; but if he will drink Wine, and so there be no Ague with it, then may he drink good thick red Wine tempered with water. Asses milk is marvellous good for him; and if the same cannot be gotten, then may one take Goats milk. It is before admonished that every such Patient is to beware of all sharp, hot, bitter, and sweet things, and chiefly of all fruit, whether they be green or dried.

The seventeenth Chapter.

Of the Gravel, Sand, or Stone of the Kidneyes, and of the Bladder.

His stone or gravel hath his principal off-spring in the Kidneys, in the Bladder, and seldom in the hollowesse of other inward parts, as of the Liver, &c. The cause of it, is commonly by inheritance, like as the Gout or Podagra, the Leprosie, and other more. Also these diseases do come through a weak stomach and Liver, that ingender much tough and grosse slime. In like sort also of a foggy ayr, surfeiting by meat or drink, the feeding of overmuch slimy meats, the which do obstruct not only the Kidneyes, but also all other inward parts, as hath been said, and hinder them that they cannot have their right operation: the

the which may evidently be seen in young children, which are most subject to this disease, for that they eat much milk, whereby the stone and gravel is most of all ingendred, of which the grossest sinketh into the bladder with the urin, where the same lyeth and dryeth, and is confirmed to the hardnesse of a stone, like as we for example cannot otherwise liken this foresaid grosse matter of the stone, then with the matter of a tyle stone, which is first a weak tough slimy earth, afterwards dryed, and at last burnt and baked in an oven to a hard stone. The stone of the bladder differeth also much from the stone of the Kidneys, for it is whiter, harder, and greater then the stone of the kidneys.

This foresaid stone or gravel is known by these signs. Lie he in the Bladder? then must the Patient often rub his privities with his hand, his member is alwayes erected. Also in young children, they feel most pain about their privities; the urine passeth from him with labour and very great pain, and otherwhiles the Arse gut thereby descendeth. But if it be the stone of the Kidneyes, then do they feel great pain in the reins of the back, as it were the Colick or pain of the guts, because that the pain draweth downwards.

As soon as they stirre themselves, then doth the pain increase; they are much inclined to vomiting and casting, their body is bound, their urine is raw and waterish, they are alwayes provoked to pisse, nevertheless they cannot be rid of it without very great pain; therefore can this growing and confirmation of the stone in these parts of the Kidneyes not be without great pain and grief. It is also evidently and sufficiently well known to each mans eyes, where the pain remaineth in one place that the urine doth avoid with gravel, sand, tough slime, yea sometimes mixt with blood and other things, and the kidneyes be full of heat.

Afterwards this grief and pain stretcheth even to the conduits of the urine, and principally in fat folks, and before even to the privities, and then especially when they would make water. But because there be many deceived in the knowledge of the stone, and adjudge otherwhiles the Colick for the Stone, and so come to use contrary medicines; therefore it is not without great need that we make a declaration of both their differences.

The first is this, that the pain of the Kidneyes is not so sharp as the pain of the Collick. Secondly, the pain of the Collick doth appear beneath in the right side, and stretcheth her from thence upwards towards the left side. Contrariwise, the pain of the kidneys doth begin from above, and so descendeth softly downwards even unto the place where it doth settle it self, and stretcheth her a little more towards the back. Thirdly, the pain of the kidneys is much more forcible when he is fasting, and the pain of the Collick is by fasting and emptinesse eased. Fourthly, the Collick cometh upon a sudden; and to the contrary, the pain of the kidneys cometh in a longer time. Fifthly, the Collick will be taken and driven away, when the wind and the ordure may have their expulsion or avoidance by Clusters, but the pain of the gravel not. Sixthly, all Saxifrages and all other things that break the stone, are good for the Kidneys and not for the Collick. Lastly, there is found in the urine gravel and sand, and not in the Collick or pain of the guts.

By all these foresaid declarations one may easily adjudge whether this disease be in the kidneys or in the bowels.

For to binder and restrain the ingendring and growing of the gravel and stone. §. 1.

And that we may orderly proceed herein, heed is first of all to be taken how the matter, whence the sand and stone is ingendred, may be taken away, and how that the unnatural heat may be tempered, the which is first to be done through those things that do purge the same matter, as hereafter followeth.

Take *Electuarium Indum* 3. drach. *Agaricus* one scruple, Ginger five grains, temper them with a little white wine, and drink it up, and fast thereupon four hours, then drink a cruse of sugred Barley water, and eat four hours after it.

Or take *Electuarium Diaphaniconis* one quarter of an ounce, Turbith one drach. Ginger one scruple, salt of Indy 3. grains, give it him with water wherein *Milium Solis* is decocted, and then made warm with Sugar.

One more milder; Take Turbith one drachme and a half, *Hermodactili* one drachme, *Diagridii* six grains, Salt of Indi two grains, Ginger half a scruple, Annis and Mastick, of each three grains, Sugar pennets one ounce, white Sugar half an ounce, steep them

them all together in three ounces of the water of Smallage, or the water of Maidenhair throughout the whole night; after that wring it out well and drink it; if so be that there appear any phlegmatick matter, then may the patients vein be opened: but if so be that the matter fall into the stomach, then it is advised that the patient be made to vomit, and how the same is to be effected, look for that in the Register; for that through vomiting, the matter will be especially drawn away which would run towards the reins. For this vomiting, be Radishes, Orage feeds, the middlemost peeles of Elder, and *Nuxvomica* to be used.

Some use Clusters, but they must be very easie and mild; but Suppositories are much more praised for this disease. Item, all things which move urine, do also let and hinder the growing of the stone or gravel. But first the mildest are to be begun withal, like as with these following, as Licorice, &c. and whereas is heat, Melon seed, Pompeon seed, Gourd seed, Cucumber seed, Sperage roots or the water of them, fresh Fennel, Hollihock roots and the flowres.

Afterwards are stronger things to be used, as Smallage, Maidenhair, dry Fennel, yellow wild Rapes, *Milium Solis*, Lovage, wild Smallage, Hares tongue, wild Thyme, Pistacies, Radish seed, Tassels, Thistlin seed, and such like, the ashes of Hares heads, of Wagtailes, prepared Bucks blood, *Lapis Spongia*, and Jewes stone: of all these foresaid things may sirupes, Juleps, confections, powders, pills, salves, bathes, and such like be prepared: and because the unnatural heat is one of the chief occasions of the stone or gravel, therefore are the foresaid cooling things to be used, and also all such medicines which in this former Chapter and 8. §. be described.

To let the growing of the Stone. §. 2.

NOW for to let that the Stone may grow no more, that consisteth in two kinds of causes, viz. that one prevent the tough phlegme from growing, which is the cause of the stone, and that the unnatural heat get not the mastery.

But in this it chiefly consisteth, that one keep a good order of diet, and eschew all that may cause that grosse matter, as milk, and all that is drest with it, fresh Cheese, Cow beef, Swines flesh, Goats flesh, Geese, and all water fowls, all grosse fish, and all other that be without skales, and all that is not wel baked, sandy, or is ground with a new sharped stone, Rice, Pease, Beans, Coleworts, fowr fruits, unripe apples and pears, Citrons, &c. and hard sod eggs be also very hurtful, troubled water, red thick wine, Must and Beer are also to be eschued,

But to the contrary, all light meats are to be used, as light and hard baked bread, which is a day or two old, wherein Fennel, Annis, Carawayes, or *Nardus* seeds are baked, Hens, Pullers, Partridges, Capons, young Mutton, Goats, Turtle doves, Doves, and all wild fowls, but especially Wagtailes are very meet for this sicknesse. He may also eat all river fish which have skales, as they that are prepared with parsley. In like manner also poched eggs. For his drink he shall take fair white Wine tempered with a little water, wherein the seed of Smallage and Fennel seed is decocted. Meade may also be used instead of his drink, and for a medicine. He may also drink sometimes pease broth, and the broth of Lentils wherewith parsley is decocted; but he is not to eat the pease at all. The kernels of bitter Almonds, of Peach stones, of Prune stones, Pingles, Pistacies, and Raisins is he to eat: in fine, he must eschew all which causeth the matter of the stone to increase, and to use all that cooleth the unnatural heat, and expelleth the matter of the stone, for which these things following are fit, and be very good, as *Agaricus*, *Hermoadactili*, Turbith, wild Saffron seed, roots of Polipody, and the smell of the wine Hellebore, and also a little root thereof steeped a day and a night in water, and the same water drunk also otherwhiles.

Amongst the compounded things there is *Benedicta laxativa* or *Inda*, which cleanse the Kidneyes, the Bladder and Ureters of all phlegme. The same doth also Cassie given with diuretical things, and with beaten Licorice, for the same dryeth not onely the gravel, but hindereth and letteth also the growing of the stone, and allayeth the heat: and if so be that one giveth it him with the seed of *Agnus castus*, or Licorice, then doth it help the reins marvelously, and stirreth no other humors then those whereof the stone doth grow.

Further, there be other things more which do cleanse the ureters or conduits of urine,

urine, and open them, as the water of Hyssope, and white water Mints, and of Marjoram, of Smallage, of Parsly, of Betony, of Pennyroyal of *Milium Solis*, and above all other the water of Hollihocks. Of Syrups which be most used, are the Syrups of Hyssop de *Calamintha*, *Acetosus compositus*, *Oxymel compositum*, and all other Oxymels, but especially the *Oxymel* of Squils: and for example: these compounded things ensuing may be made: Take *Oxymel* of Squils one ounce, syrup of Hyssope half an ounce, water of Harts tongue, and of wilde Cucumbers, of each one ounce, and a half. This drink is to be taken certain dayes together, untill one may evidently see in the colour of the urine and in other signs, that the disease apparently frameth it selfe on the better side, by the which the Physitians have their especial markes and signes.

And in case there be such matter present which may cause the stone to grow, then are they prepared through the first recited waters, syrups, and such like for expulsion; and when now the matter is prepared, then is the Patient to be purged, which may be done through this ensuing or such like meanes.

Take the confection *Benedicta* one ounce, or one ounce and a half, or somewhat lesse, according to the importance of the cause, then temper them together with three ounces of Parsly water.

Or prepare this following, which cleanseth much the Kidneyes, and expelleth the matter of the stone marvelously: Take Centory, peeled wilde Saffron seed, of each one drach. prepared *Agaricus*, powdered *Hermodactili*, of each four scruples, *Diagridion* six graines, Annis, Fennel, Licorice, the seed of Smallage, and Ginger, of each half a scruple, Sugar pennets one ounce: steep them altogether the space of 4. and twenty houres in 4. ounces of the water of Maidenhair, afterwards wring it out and drink it. Lastly, you are to govern your self as in all other purgations.

This following is also much commended for to prevent the gravel: Take about Saint Johns tide Mellet as it standeth and bloometh, then burn it with herb and root, and drink thereof morning and evening two or three ounces with wine, and then fast two houres upon it, and do so five or six dayes together: it is said, and also taken for to be certain, that doing this one shall be cleer and free from the gravel half a year.

Against the paine of the Gravel. §. 3.

But if in this disease there happen great pain with it through which the Physitians are much hindered, that they cannot use due remedies: then do they notwithstanding advise first of all, that at the first one is to begin with things which allay the paine, or at the least do ease it: for which are Clisters to be used made of these herbs following, as Mallowes, Hollihocks, Beets, Bearefoot, Pellitory, and such like with the oyl of Violets, with Cassie, with *Hiera Picra*, or the confection *Benedicta* tempered amongst it.

Secondly, when the foresaid paine is a little swaged, then are these things following to be used: Take water Cresses, Mallowes, Hollihocks, Mercury, Yarrow, Cinquefoil, *Pucedanum*, the herb of Mew, and Rue, of each one handful, *Calamus*, Barly, of each three ounces, Bran, Linseed, of each a little: let all these seethe in sufficient water, and take twelve ounces, temper amongst it *Hiera picra* *Benedicta* and *Lithontribon*, of each half an ounce, oyl of Camomil and of Rue, of each one ounce: this Clister looseth, expelleth wind, and also the paine.

Item, take afterwards of the foresaid herbs, but somewhat more watercresses, and a few Marigolds, and make a bath thereof, and set the Patient in it even up to the navel: you are also to put some stalks of Rapes unto it, then will it be the better.

Thirdly, take Mallowes, Hollihock roots, Watercresses, Camomil, Maidenhair, Linseed, and Fenegreek seed, of each two ounces: let them all seethe in sufficient water, wet a woollen clout or sponge therein, and lay it continually warm upon the place of the pain. The sodden herbs are you to pound small and temper with Camomil oyl, and so lay them upon it. The place of the pain is sometimes also to be annointed with these things following: Take the grease of Hens, of Geese, Hogs grease, fresh butter, oyl of *Camelina* and of Violets, of each half an ounce, oyl of Camomils, and Wax, of each two drachmes, then let them melt by the fire. But this is not continually to be used, to the end that the reins be not there by too much weakned and infeebled. After this annointing are these plaisters following to be layd upon it, which doe assuage the pain, and will open the

conduits of urine; Take three ounces of Wheaten meal, of Fenegreek meal, of Linseed, beaten Camomils, of each one drach. and a half, Salt one ounce, then make it to a plaister with the oyl of *Camelina*, and with the oyl of Scorpions, and then lay it warm upon it. You shall find hereafter many things more which allay the pain also.

Take of Parsly seeds powdered and searced 3. 1. white Wine, Saxifrage water, ana. 3. 4. drink it in the morning fasting, and lye in a bed and sweat.

Of those things which expel gravel and do break the stone. S. 4.

IF there be any fear had of the stone or gravel, or that one perceive it already, then may these things be used for it: Take oyl of Lillies, of Scorpions, and of Earth-worms, of each a like much, anoint the reins very fat with it by the fire, or by a warm oven. And if you cannot get this Scorpion oyl, then take onely the other oyles.

Item, eat every morning 6. or 7. bitter Almonds, of Peach kernels, like as is counselled before.

There is also much commended the bone of a Hare, which we call the Hares spring, powned, and the same drunken with fresh broth: when as any bodyes reins begin to grieve him, then is the red oyl of S. Johns wort esteemed to be very good for to anoint him therewith.

Item, take 18. or 20. Peach kernels, one quarter of an ounce of Raisins; eat them together, and drink a good draught upon it, of Pease broth sod without salt or suet: for this is also much commended, the Cicers or Spanish Pease which have a special vertue against the gravel.

Item, take Hollihock roots two pownd; the same being made clean, pownd them and see the them in two or three quarts of water until the half, and then strain this broth through a cloth, whereof you are every morning to drink a good pull. Afterwards use the foresaid potion of Cicers, and Peach kernels; and when you have a pound of this drink, then mix amongst it one drachme of beaten Cinamom, and as much of the Swams which groweth on the wilde Rose branches. You may also see the Parsly roots, Sperage roots, and Fennel roots with it, and drink often of it: this especially commended for them that would withstand the gravel.

Item, take roots of Pimpernel half an ounce, *Bisforta*, Tormentil, Polipody roots, and Annis, of each one quarter of an ounce, Gentian, Fenegreek, *Oculi cancrorum*, peach kernels, Lovage seed, the seed of Smallage, Pickrels bones, shales of hasel nuts, the seed of Mallows, and Camomil, of each one drachme; make a powder thereof; and take thereof the weight of one drachme, or one drachme and a half every day.

The ancient Physicians accustome to make this potion following, the which they do call Williams potion; Take one handful of Alehoofe, young Acorn buds half so much, the herb Mouse-ear a little, water and wine, of each a pint; let them see the together until about the half be sodden away, then strain it through a cloth, and drink thereof in the evening and morning, each time about 3. spoonfuls, and every 14. dayes make a fresh.

How the wine of winter Cherries is to be prepared, is amongst others declared in the eight parts; it openeth the conduits of urine marvellously, expelleth the matter whence the stone and gravel doth grow very vehemently, as well out of the Kidneyes ureters as also of the bladder.

And now further to come to a right proceffe of the gravel, take at the first five ounces of fresh oyl of sweet Almonds, and drink the same warm. Two hours afterwards take a good draught of this potion following, and afterwards as often as you will; Take Mallows with the herb and roots, and Hollihock leaves, of each one handful, Licorice one ounce, fresh Butter and clear hony, of each two ounces; see the them together in sufficient water, or in the water of Cresses, and so drink thereof as is expressed. The next day one is to take this confection following early in the morning: Take fresh Cassie and Benedicta, of each half an ounce, *Species Iustini* one drach. and a half; temper them together, and then strew them with Sugar and Licorice. Having taken this, then is the party to take thereupon presently a good draught of the water of Cresses, and through this advice hath many a one been released of the gravel.

Or take of the confection Benedicta five or six drach. Turpentine washed in water of Mallows, one quarter of an ounce; temper them all together with three ounces of Agrimony water, and then drink it as warm as you can: it is marvellous good against the stone,

Necessity

Necessity doth otherwhiles require that these Confections following are to be given to the patient: Take the confection *Benedicta* and washt Turpentine, of each three drach. and a half, Jewes stone which is prepared with water wherein Millet is decocted, one drachme, temper them all together with powdered Licorice, and then give it him with Cresses water. Men do also take sometimes for it half a drachme of prepared blood of a Buck also, which is not amisse.

Hereafter followeth one other necessary mean or proceffe: and first in case the stone be in the bladder, then are these pills to be prepared which do vehemently break the stone: Take the fruits of Balsam, Radish seed, & the seed of great Smalage. Some do take for this the seed of stone Parsly, *Opopunacum*, Capres roots, bitter Almonds, Saxifrage, Squinanth, Cipres roots, Indy Spica, Cassy wood, Harts tongue, wilde Rue, Gentian, Hartwort, *Asarabacca*, *Cardamom*, *Ammoniacum*, *Serapinum*, *Bdellium*, long Pepper and Calamus, of each a like much; the Gums are to be molten in sufficient Balsam, temper the rest among them beaten small, and make it into pills; take of them one drach. at once with the foresaid confection of *Benedicta* and of Turpentine, as is before rehearsed: when he is purged, then take pellitory of the wall, Mallows, of each one handful and a half, Linseed, Fenegreek seed, and Hollihock roots, of each one handful, fifteen or sixteen Sebestes, Licorice, powdered Millet, of each half an ounce: cut all that is to be cut, and let it boyl in fresh broth. Take 12. or 16. ounces thereof, and temper amongst it one ounce of *Benedicta*, oyl of bitter Almonds three ounces, slight Sugat one ounce and a half, Salt one drachme, and one yolk of an Egg; then mix them together, and set this Clister very warm.

Pills for the Stone.

And if that this purgation (by reason of the unpleasantnesse of the Turpentine) went against his stomach, then may he use one of these ensuing; Take fresh Cassie one ounce and a quarter, oyl of sweet Almonds four ounces, temper them together and drink it.

Or take *Electuarium de Sebesten* and Cassie, of each half an ounce, *Electuarium Indum* one drachme and a half, mix them all together with Sugar, if you will put therewith one drachme of Jewes stone, and make it to a drink with Millet water, then doth it expel the better.

After this are you to come to the things which do break the stone easily, and open the passages of urine. For to atchive this, then is the body first of all to be purged, and afterwards are these following and elected remedies to be used.

To break the stone is this following very forcible: Take prepared Bucks blood one drachme and a half, ashes of Scorpion one scruple, ten grains of good Treacle, burnt and prepared glasse one drachme, then see the Radishes, Saxifrages, winter Cherries in water or Wine, and take four ounces of this broth, or as much Bean water, and make the foresaid a potion, and use it fasting in the morning. In case that for all this the pain remaineth induring, then take scraped Licorice and Currans: of each one quarter of an ounce, powdered Millet, maiden hair, of each half an ounce, see the them together in water of Agrimony, Pellitory, or Camomil water; Take of this decoction two ounces and a half, *Spec. Lithontribi* one quarter an ounce, *Philonium Romanum* two scruples, good wine two ounces, Sugar one ounce; then temper them all together unto a potion, and drink it 3. hours before meat.

Item, take prepared Bucks blood one drachme and a half, *Oxymel* of Squils half an 3. wine wherein Radishes be decocted four ounces, then make a potion of it. Further, it is necessary that the stomach be strengthened, and the hot matter of the Kidneyes expelled, for which is meet also the foresaid Clister, if there be put unto it one ounce of Cassie more. Or use this following: Take twelve ounces of Linseed oyl, oyl of bitter Almonds six ounces, Hens grease four ounces, or in stead of that, as much fresh Butter, two yolks of Eggs, then mix them all together, and minister it warm. You may also give unto the sick body oyl of sweet or bitter Almonds, of each three ounces and a half or more to drink, for it is found, that the same taken by the mouth hath more asswaged the pain, then that which been used in the Clisters. It is in like sort found to be very good, that the place be fomented with these things following where the pain is, and after that anointed: Take Camomil, maiden hair, Linseed, and Hollihock roots, of each one handful, see the them all together in white Wine and water; then make a sponge wet in it, and lay the same wrung out very warm upon it.

For the anointing may many things be used, or like as hereafter followeth: take oyl of

Scorpions ʒ. i. oyl of sweet Almonds and Butter, of each half an ounce, muscilage of Linseed, Fenegreek, of each five drachmes, Saxifrage one drach. and a little molten wax, temper them all together. The last and highest mean for the intollerable pain is, that the *Narcotica* be used, which be things that take away all sense and feeling, thus: Take the first described decoction, and put therein of the confection of *Lithontribon* two drach. *Philonium Romanum* one drachme, oyl of sweet Almonds one quarter of an ounce, good white Wine two ounces, mingle them all together, and give thereof to drink. Will you then make a Clister of it? then take of the foresaid decoction about two ounces, oyl of sweet Almonds four ounces, *Philonium* one drach. wine three ounces, and then minister it like as is accustomed.

These two proceedings in this sicknesse, I thought good to describe thus at length, that every one might know how to chuse of the medicines following what is most needfull for him.

First, we will describe all such things which are to be eaten, and may be used in the body, and first of all beginning with the confections: Take sponge stones, Hollihock seed, Millet, and Medlar stones, of each half an ounce, prepared Bucks blood one drach. Jewes stones, and Gromel seed, of each one scruple, great and small Endive seed, and Pikes bones (which be unsodden) of each half a drachme, Sugar as much as of all the rest: but the Sugar decocted with the water of winter Cherries, and then make Tabulates thereof, and take of them every time half an ounce.

Or take Pomate stone, Jewes stone, and burnt glasse, of each one drachme and a half, prepared Bucks blood three drachmes, Gromel seed half an ounce, beat them all small together, Sugar as much as all the rest doth weigh, make with the water of winter Cherries, or the water of Mallows, tabulates of it, and take half an ounce at once thereof.

Item, take four ounces of Pistacies, steep them two dayes and two nights in the water of winter Cherries, take off the peeles, and chop them very small, Gromel seed half an ounce, roots of Cinquoile, Harts tongue, wilde Thyme, Rue seed, of each one drachme and a half, Sugar six ounces; then see the it with the water of Saxifrage, make tabulates of it, and use them as before.

Another; Take prepared Bucks blood one drachme and a half, the jaw-bones of Pickrels two scruples, Jew stones and Sponge stones, of each half an drachme, Melon seed, Hollihock seed, Licorice, the seed of Smallage, Cucubes, of each one scruple, Sugar two ounces and a half, make a confection thereof with the water of Mallows.

Fennel seed and Comin raw or concocted and eaten, be good for all diseases in the kidneyes of the stone and gravel. The confection of *Iustini* or *Lithontribon*, as they be prepared at all well furnished Apothecaries, are also marvellous good for this use.

In like manner also bitter Almonds confectioned and eaten, expell the matter whence the stone doth grow.

This following is also a very sumptuous Confection: Take burnt glasse, and burnt Grashoppers, whereof the feet and wings be cast away, of each three drachmes, the ashes of a burnt Hare, and prepared Bucks blood, of each one ounce, Plantain seed, Starch, the seed of Butchers broom, of each two drachmes and a half, *Sirupi Acetosi Compositi* thirty ounces, Sugar pennets twenty four ounces, then make an electuary thereof. This foresaid confection doth cleanse all slimy matter and gravel, it breaketh the stone, and openeth all conduits of urine, if one take every morning the space of fourteen dayes three drachmes, with the water of Gromel, or Radish water.

The Confection of a calcined Hare is thus to be prepared: Take Jewes stone and sponge stones of each one drachme, the powder of a burnt Hare one quarter of an ʒ. *Spr. Lithontribon* one quarter of an ʒ. Sugar four ounces; make thereof with Saxifrage water tabulates or a Confection.

This foresaid Electuary provoketh urine, and cleanseth all the ureters of all slime and gravel, and expelleth also all winds: take thereof two or three drachmes with the water of Sperage betimes in the morning, and also before both the meal tides.

Item, take yellow wild Rape seed, Comin, Balsam wood, Parsly seed, sweet Costus roots, Calamus, Annis, *Asarabacca*, Fennel and Cinamom, of each one drachme, the seed of Purslain, of Endive, of small Endive, of Lettice and *Creta Marina*, of each one drachme, *Lapis Lyncis*, Sponge stones, and burnt Glasse, of each one quarter of an ounce, Sugar as much as is needful for to make a Confection.

One may take a drachme or two thereof with a little water; all according to the importance of the cause

The

The Confection of horse Radishes is thus to be prepared; Take well cleansed horse Radishes, cut them in round slices, and let them stand and steep in vinegar until that they be very soft; Or pour strong wine upon it, and renew the same every day, and that the space of five or six dayes: at length see the them away therewith, and rub them through a strainer: afterwards, take thereof one pound, and one pound and a half of clarified hony, then let them see the together by a gentle fire, stirring them alwayes about until they be decocted, as behoveth for a confection. Afterwards let it be somewhat cold, and put the spices unto it, which hereafter in the eight part in the first Chapter of Calamus are described. Or take in the stead of the same half an ounce of Cinamom, Ginger three quarters of an ounce, Cardamom, Cutubes, Cloves, and Nutmegs, of each one drachme and a half; temper them together: therewithall the fuming of the horse Radishes in the head is abated and taken away. This confection is not onely good for the stone and gravel, but also for the stomach, it warmeth the inward parts, and delayeth the pain in the belly which proceedeth of cold; it is a right Treacle for the common people, and an especial medicine for the Scurvy.

There is also another Confection prepared for this called *Electuarium de Cineribus*, which is a confection of ashes, as followeth hereafter: Take ashes of burnt Scorpions one quarter of an ounce, *Cantharides* without heads and wings one drachme, prepared Bucks blood one quarter of an ounce, burnt glasse, ashes of unfer Coleworts, Hares ashes, ashes of Wagtailes, and ashes of Egshels whereof Chickins have been hatched, of each two drachmes, Jewes stones, stones of Oxe gals, Pepper, wild yellow Rape seed, Caraway, Hollibock seed, Gum, Saxifrage and Gromel seeds, *Seseli* Balsamifruits and the wood, *India Spica*, Maiden hair, Mallowses, Pompeons, Cucumbers, and Gourd seeds, of each one 3. of Roses, as much as sufficeth for to make a confection of it, take thereof morning and evening the quantity of a hasel nut at once, tempered with the decoction of Cicers.

Item, take Mithridate or new Treacle, half or a whole drach. with the decoction of Cicers: then expel and break the gravel and the stone, and also ease the pain, especially if it be used after bathing.

Amongst all other confectioned things, are especial good for the stone and gravel (chiefly if one want warmth) the preserved Elecampane roots, Pimpernel roots, *Calamus*, yellow Rapes, Parsneps, conserves of Gilloflowers, and of Piony: the water Cressles eaten for a sallad, expelleth the stone, the gravel and urine.

There be divers powders made for this which follow hereafter: Take prepared Bucks blood half an ounce, *Lapis Lyncis*, *Lapis cancrorum*, and peach kernels, of each one drach. the seed of Parsly and Smallage, of each half an ounce, beat them all together, and temper them all together, use thereof in the morning, at noon, and in the evening half a drachme, or more at once with that kind of Bean water which immediatly is described hereunderneath, and that so long, until the stone avoid, and that you perceive no more gravel.

Item, take Saxifrage, Annis, Pepper, the seed of Smallage, Gromel seed, and Sperage seed, of each a like much, beat them all together very small, and let them passe through a searce, then take thereof half a drachme or a whole drachme with honey water, or with wine.

This following hath oftentimes been approved: Take parched Peach kernels half an ounce, Medlar stones one ounce, pownd them very small, and then give him a drach. thereof with the water of Saxifrage wherein Cinqfoyle hath been decocted.

There is also one ounce, or one ounce and a half of *Oxymel* to be put thereto, and to temper the same with any water; that also expelleth the stone: but one must beware therein for using any hot things.

This drink is also very requisite for this: Take wild Thistle roots, which be the roots of Tassel, and roots of Smallage, of each one handfull, Annis, half a drach. see the them all together in a quart and a half of water unto the half.

Item, take Sponge stones, Jewes stones, burnt glasse, prepared Bucks blood and Sugar, of each a like quantity, give one drachme thereof with *Oxymel* or with the water of Smallage when it hath the pain.

Both these foresaid are by reason of the great help and cure that they do, called the hand of God.

Item, take the roots of Burres one drachme and a half, burnt glasse one drachme, rub the

the same with Vinegar, with the water of Smallage; or with any other such like distilled waters, this is marvellously praised of all ancient Physitians.

Another; Take Gromel seed one drachme, Licorice one quarter of an ounce, peeled Melon seed half an ounce, gum of the Cherry tree one ounce; pownd them all to powder, and give thereof at each time half an ounce with a little distilled water.

Or take Gromel seed, Annis, Fennel, Parsly seeds, and Peeled Melon seed, of each one drachme, *Lignum Aloes*, winter Cherries, red Saxifrage, Sponge stones, and Jewes stones, of each one scruple, the seed of Broom and of Saxifrage, of each half a drachme, Cinamom, prepared Coriander, and red Saunders, of each three quarters of an ounce, Cloves, Galangal, Ginger, of each three drach. white Sugar two ounces, make a powder of it, and take one drach. at once thereof with Mallows water and Pease broth.

Another; Take Gromel seed, and the seed of Saxifrage, of each one drach. the seeds of Lettice, of Henbane, of Pompeons, of white Poppies, of Melons, of Cucumbers, of Gourds (all together peeled) of each two scruples, powdered Licorice four scruples, *Trochisci Alkakengi* which is of winter Cherries one drach. and an half, the seed of Pimpernel, of Broom, of each two scruples, Sugar two ounces, make a powder of them.

In like manner, there be good for this disease powdered Medlar stones, and powdered Earth-worms of each one drach and a half well weighed, and take Fenelike with Saxifrage water. Item, see the Crab like as they be used to be sold, and wash the same with wine, and let it dry, then beat it clean to powder with his shels, and take one quarter of an 3. thereof with wine.

Or take the powder of Maiden hair one quarter of an ounce, and drink it with the water of Strawberries, or the water of Mallows, or the water of Parsly, it is also especial good.

Take half an ounce of the shales of the Hasel nuts beaten small, Sugar also as much, temper them together, and use thereof every time a drach. or more fasting in the morning with the water of Lillies; and women may drink it with wine or any thing else in stead of Lilly water. The stone which is cut out of one, beaten small, and half a drach. thereof taken every day with the water of Saxifrage or Radish water, doth also break the stone of the bladder.

Item, take Licorice one quarter of an ounce, Sponge stone, and Jewes stone, of each ten grains, Fennel seed, *Ameos*, *Mircha*, *Annis*, the seed of Mallows, peeled Melon seed, Pompeon seed, chopt small together, of each half a drachme, Cinamom one drach. beaten small together: there is the weight of a drachme thereof to be taken with any of the foresaid waters. There may also be prepared for this these pills ensuing: Take burnt glasse, ashes of a Hare, Sponge stone, and Jewes stone, of each a like much, make pills thereof with the water of Saxifrage: also three round slices of Radishes eaten every morning to be very good. In like sort also the small bird the Wagtail roasted, powdered, or taken as one will, is marvellous good for this, like as here before is specified already.

It is also taken for a certain experiment, if one do accustome to eat Nettles, that thereby he should be freed of the stone and gravel.

Pills for the
Stone.

Now we will write of certain potions which be meet for the stone and the gravel: Take Turpentine which is washed with Mallows water, three quarters of an ounce, *Species Iussini* two scruples, *Benedicta Laxativa* half a drach. let the Turpentine and decoction melt, afterwards temper the rest with it, and so drink it as warm as you can.

Another; Take Rubarb one quarter of an ounce, Juniper berries one ounce, the bark of the Cassie three drachmes, Jewes stone half an ounce, *Agaricus*, Ginger, Cinamom, Galangal and Mastik, of each one drachme, Mithridate three drach. Mace, Cloves, of each half a drach. spirit of wine one pint, and Malmsey three pints: set them all together the space of three moneths in the Sun there to distil; and of this distillation give 3. 2. early in the morning, or being in the bath, it is a marvellous and approved remedy.

Another; Take Rubarb, Ginger berries, Cassie wood, and Fennel, of each one quarter of an ounce, Annis one drach. Licorice five drachmes, Jewes stone half an ounce, *Agaricus*, Ginger, Cinamom and Cloves, of each one drach. Mithridate three drach. Mace, and Nutmegs, of each half a drachme, Mastick one drachme,; put all these together beaten in a glasse, and pour thereon three pounds of the spirit of Wine or Aqua vitæ, then stop it tight, and set it the space of five dayes in the Sun; stir it all together very well

well, then pour as much Malmsey unto it, and let it stand again eight or fourteen dayes in the sun, stirring it every day well about, afterwards strain it and keep it well; when as the gravell beginneth to prick, then take a spoonfull thereof every day, and you shall find amendment out of hand. This same may be distilled like as the former.

Another. Take a pint a of *Aqua vita* more or lesse as you will, Malmsey four ounces; Sugar candy eight ounces, the water of Strawberries four ounces, Parsly water 2. ounces, mix them together, and take a spoonful thereof, or as much as you please,

It is also here to be marked, that you need not be afraid of *Aqua vita*, burnt wine, or any other strong wine: for all learned do require to drink strong wine as, *Vinum punicum*, Malmsey, Muscadel, and such like, against the gravell or stone, yea when the paine is at the extremest, yet with moderation.

Some that love distillations do very much commend this potion following against the gravel: Take oyl of Mace and cleer Turpentine, of each ten or twelve drops, Annis water and Fennell water, of each one quarter of an ounce, the syrup of Licorice one ounce, oyl of Vitrioll three or four drops, then temper them well together, afterwards prove it: and if so be that it be not so sower that it set the teeth on edg, then it is meetly: and if it be not sower enough then put two drops of the oyl of Vitrioll more unto it. It is somewhat perillous to deale with the oyl of Vitriol, therefore good heed is to be had and taken, like as is declared in his description. Take Nettle seed two ounces and a half, pour wine upon it, and drink thereof. This wine is accounted marvellous good for the the gravel and for the stone.

Here before is oftentimes admonished of Bean water, which is thus made: when they begin to be ripe, or when they be in their full juyce, then is the ou termost green pods or peeles to be taken where the Beanes do lie, and the leaves, and all their moisture is to be distilled out of them in seething water. This being done, then take one ounce and a half thereof, prepared Bucks blood one drachme or four scruples, and give the Patient thereof in the morning when he riseth, and at night when he goeth to bed. And this is he to observe and continue so long untill that the stone or gravell be clean expelled, and no more gravel can be perceived; this is of all antient & latter Physitians taken to be a famous and certain experiment. Item, take womans milk about two ounces, steep therein cut sprigs of Cypres, and let them stand and steep the space of three or four hours in a warm place, and then drink it.

Item, take Knotgrasse half an ounce, red Pease and peeled Melon seed, of each one ounce, let them seethe in twelve ounces of water even unto the half, and give thereof one ounce at once tempered with a little Sugar: the mead or hony water is an especial medicine against the gravell and the stone. In like manner is also wine or water wherein Harts tongue and Mallows be decocted, and also of both these distilled waters.

Item, take a good handful of Watercresses, seethe them in a pint of water unto the half, and drink thereof morning and evening, each time three or four ounces, and doe this the space of 8. or 10 dayes together Some do also much commend Limons water:

Take the roots of Chervil and Saxifrage, of each a like quantity: seethe them in wine, and drink oftentimes thereof, it breaketh the stone, and causeth well to make water. Or take Maidenhair one handful, winter Cherries and Gromel seed, of each two drachmes, boyl them in a pint of white wine until two thirds remain, take three or four ounces at once, and especially after a bath the water of Larks spur.

Likewise also the water of *Carduus Benedictus*, if one do drink three or four ounces of it, is very good for the stone. Item, so are all these waters ensuing good therefore, viz. the water of Saxifrage, of Pellitory, of Cinquefoil, of Watercresses, of Fennel, of Radishes, of Maiden-hair, of Strawberries, and of Camomil.

Item, take a fresh Radish, cut it to thin round slices, and pour thereon *Vinum punicum*, or any good wine: afterwards drink thereof sometimes a good draught.

You have also herebefore in the twelfth chapter and eleventh §. a good drink against the gravell and the stone, beginning, take Gentian, &c.

Item, take Maidenhair, Sperage, Tassel leaves, water Mints, broad Plantaine, and red pease, of each a like quantity: seethe them altogether in water; then take of this decoction five ounces, and temper therewith two ounces of *Oxymyl*: afterwards give it to the Patient. Further, lay him a bed and let him sweat well: this openeth the conduits of urine, maketh all tough humors thin, and expelleth them which cause the stone and the gravel.

Further,

Further, there be divers Wines decocted and also unfodden, whereof we will discover some. Of all the most used are these following, as the wine of Winter Cherries, wine of Elecampane roots, wine of Hyssop, wine of Harts tongue, and wine of *Asarabacca*, which is thus to be prepared: Take Must, and to every quart of Must half an ounce of *Asarabacca*, the herb being taken off when the root hath been a drying the space of two moneths. Of this wine take every evening and every morning a good draught; it forceth the urine and the gravel, it warmeth all inward parts, it expelleth the Ague, it is good for the Drop sic, and also for the yellow Jaundies.

Sanguis menstrualis exiccatus, tritusq; et bibitus ante omnia lapidem frangit.

Also drink the Juice of *artemesia*, 3. 4. every morning, and it breaks the stone, and expels it like sand.

And to keep the stone from growing, use my vomiting potion mentioned in the third part, Cap. 11. §. 4.

Drink the juice of Radish roots in white Wine, or small drink, and it will cause urine and dissolve the stone. And anoint the reins, the yard and *peritoneum*, with the fat of a Conie and of a Fox, anoint with these fats mixed, and it will cure the Stone.

Also take Pellitory, Mugwort, Parsley, stamp them and seeth them in white Wine, drink it, and apply the herbs warm unto the yard and members unto the arse. *Prob.*

Another good Wine.

TAKE Strawberry leaves, Pellitory, Water cresses, and Gourd cresses, of each a like quantity; seeth them in Wine untill the third part be consumed, then drink thereof a meetly draught when you go to bed, and in the morning when you rise. This hath been oftentimes found very good.

All Physitians do conclude, that all troubled and thick Wine, much and often drunken, causeth the stone and the gravel speedily to grow. Therefore must one alwaies beware thereof.

The Cherry wine, like as it by reason of the temperate nature may be used in all sicknesses; so may the same also be occupied for this disease, and especially when the Cherries with their kernels be stamped in peeces, whereof it is made, then doth it drive out the gravel the better.

We will here yet describe certain sirupes which may be used with great commodity for the gravel, like as these ensuing; Take the roots of Sperage, of *Ruscus*, and of grassle, of each three ounces, Harts tongue with roots, *Creta marina*, Maidenhair, water Mints, Saxifrage, Pimpernel, and Yarrow, of each one handful, red Pease two ounces, Vinegar of Squils one ounce, white Sugar and hony, of each six ounces. Lastly, seeth a cleer sirupe of this, and use the same with diuretical waters.

Another.

TAKE Fennel roots, Parsley roots, the roots of Smallage and of Sperage, of each one handful, the seeds of Parsley, of Fennel, of Smallage, of Annis, of Caruway, of Lettice, of Purslain, of small Endive, of Melons, of Pompeons, of Gourds, and of Cucumbers, of each one ounce, red and white Saunders, Roses and Violets, of each half a drach. five and twenty or thirty dry Prunes, Harts tongue, Liverwort, Centory and Maidenhair, of each two handfuls. All these foresaid things seeth in sufficient water unto the half, and then wring them out, unto this decoction put eighteen ounces of Sugar, and let it seeth again to the sirupe, and then clarifie it with the white of an egg.

What outwardly ought to be used.

FOR the gravel and the stone may divers things be also outwardly used, whereof we shall hereafter write and discourse sufficiently, but we will first begin with the salve.

Take the fat of the kidneyes of a Weather, stamp it very small, and temper therewith a cruse full of the juyce of water Cresses, or garden Cresses, and let them seeth together; this being done, then strain it through a cloth, and anoint you therewith.

In like manner is also good for all gravel and pain of the reins, for the stone and the conduits

conduits of urine, and for all diseases of the bladder; the precious balm or oyl, which in the last part of this book, is the first of all therest that is described, if one be anointed therewith.

For a plaister is this following to be used; Take hollihock roots with the seed, Linseed, figs, and butter, of each one ounce, oyl of sweet Almonds two ounces, Wax as much as is needful for to make a plaister, and then lay it upon the kidneys: afterwards you are also to anoint the place of the reins with the oyl of Scorpions, and to spout some of that oyl therein. Item, take oyl of Scorpions 3. ounces, burnt sponge stones, and burnt Wagtailes, of each 3. drachmes, Jewes stone one trachme, make a salve or a plaister thereof with Wax.

Item, in the former sixteenth Chapter and the fifth Section is described a plaister of Radishes, which may also be used for this purpose. For this is also good a pap made of the crums of white bread decocted with Wine, and a little Saffron put to it:

Item, for to lay upon it; Take Pellitory, put some Scorpion oyl unto it, oyl of Camomil and some oyl of *Camelina*; fry them all together in a pan untill it be as thicke a pap, afterwards put amongst it powdered Saffron, and then lay it upon the kidneys.

Item, take Pellitory, Spikenard, *Spica Romana*, Fennel seed, Parsley seed, wild yellow Rape seed, and *Asarabacca*, of each one handful, pound them somewhat together, and put it in a bag, afterwards let it see the in Wine, and lay it over the reins.

Of bathing and fomenting in the gravel.

ALl they that can come to the warm sulphure bathes, may frank and freely use them, for these be very necessary for to break the stone.

But if so be that one cannot come at them, then let this following be prepared; Take Hollihock leaves, Fennel, Parsley with the roots, Pellitory and Linseed, of each one handful; put them together in a bag and see the them in a great kettle of water, afterwards let it be meetly cold without putting any other water unto it; then set the Patient in it even to the navel, as long as he can abide. This is to be often used, and so long untill that the Patient do find that the stone weareth away.

Another, take Pellitory, Lavender flowers, Parsley seed, Fennel seed, wild yellow Rape seed; see the them all together (as is aforesaid) and bathe therewith. The bag is also to be laid upon the kidneys.

Item, take the herb Horsetail, Mallowes, wild Thyme, the stalks of Rapes, put them all together in a bag, and see the them in a great kettle with water; and further, let it be meetly cold of it self, and used as before.

When one hath then bathed a certain space, then are diuretical potions and salves of the reins to be used, made of such things as are described herebefore.

These are now the principallest things which of the ancient and latter Physitians are described against the gravel and the stone of the bladder: also whatsoever else is prescribed for the infirmities of the kidneyes, that is for this most meet and convenient.

There be also more accidents which are wont next to the gravel and the stone to accord and accompany it, as *Lithiasis*, *Dysuria*, *Stranguria* and *Ischuria*, and all these bring also great pain and sometimes swelling, whereby the conduits of the urine be stopt; but because that these altogether belong but to the bladder and the neck of the same, therefore will we discourse thereof after the description of the Bladder.

But there is yet a heavy disease which proceedeth from the kidneys, the which we are here to describe, and therewith to conclude this Chapter.

When one cannot hold his water. §. 5.

THis disease the Grecians call *Diabeten*, the Latinists *Urinae profluvium*, which is an unnatural flux of the urine; with the great pain which is with this disease there is an excessive and intollerable thirst, the which when one thinketh to quench with drinking, then doth all that is drunk passe straight away from him, and is without any alteration of the same drink pist out again all together, whereby this disease hath his name also *Profluvium*.

Well now, this is a disease of the kidneyes, which is wholly to be compared with the disease

disease of the stomach in the flux *Lienteria*: in which disease of the stomach or flux, there is no satiableness of meat, because that the meat received, forthwith undigested and without any alteration passeth out through the bowels.

And albeit (as is said) this unnatural heat of the Reins commeth from the Liver, the which afterwards doth draw unto it the moisture which is received of the stomach, then doth this disease nevertheless for some come from the cold of the Kidnies and of the whole body, like as may be seen in them who get the palfie, and cannot hold their urine. If it proceed of heat, then it is known by the pain and pricking about the Kidnies, and by the great thirst. If of cold, that is to be perceived about the same parts, and in the outward members, for cold things offend him, and all warm things are acceptable.

By all these forementioned things are yet the tokens that in pissing there is no pain, and that there is stoppage of the stale: when this sickness growes to be old, whether it be in aged or young persons, then is it esteemed to be incurable, for that it consumeth the body from day to day, and that so long, until death that follow after it.

The cure of these sicknesses depend on these rules following, whereof the first is, like as this disease is caused most out of heat and dryth of the Kidnies, so is the same to be remedied through cooling and moist things: Secondly, if so be that the retentive force of the Kidnies be infeebled through the superfluous moisture which they do draw unto them, then are men to strengthen the same (if it be caused through heat) with astringent and cooling things, and to alter their nature: Thirdly, because that the whole body through the attraction and affluence of all watrish moisture, waxeth faint and thirsty: therefore it is good not to permit the sick person to drink much, that he fall not utterly thereby into the consuming ague *Marasmus*: Fourthly, if so be that the sickness be caused through heat, and that the Liver and stomach be also thereby infected, then is he to eschew all light meats and eggs: Fifthly, to the end the moisture may be drawn to another place, then is after much drinking of water parbraking and vomiting to be provoked: Sixthly, all that draweth the moisture outward, as the sweat, is here very profitable: Seventhly, like as the body in this sickness is commonly bound and obstructed, therefore is care to be had to open the same with *Clusters*.

And like as we have expressed that this disease *Diabetes* can be caused through heat and cold, therefore will we write distinctly and severally thereof, and first begin with the cold *Diabetes*:

Of the Effluxion of the Urine through cold. §. 6.

Though now it hapeneth (like as we have discovered here before) that the sick person do make water very much, and yet no heat perceived thereby, or that a nights his urin unwitting run from him, and had also no thirst, and abated not, then are all such remedies to be given him which do stay the urine: for which these things following shall be very meet: To wit, Eggs supt early in the morning fasting, stealed milk, or wherein peeble stones be flaked: but especially is the sheeps milk commended for it.

Some do advise that for this disease is every day to be taken half a drachme or a drachme of Mithridate with a good draught of Wine. These pills following are also highly commended for this disease: Take Bevercod, Myrrhe, Hyssop, Marjoram, Acorn cups, and *Pieratrion*, of of each a like quantity, make them to powder: then take the syrup of Myrtles, and forme a masse of pills thereof: afterwards then give a drachme thereof at once, to wit, when the Patient goeth to bed. Or use this powder following: Take Acorn cups, pownd them to powder, and take thereof one quarter of an ounce at once with red Wine before that you goe to bed. Item, take a burnt Hedg hog powdered one drachme or one drachme and a half, and give it him as before: the flesh of an Hedg hog is marvelous good for this. Item, take Acorns one drachme, Frankincense three ounces, and six drachmes of prepared Coriander, fine Bolus and Gum, of each one ounce and a quarter, then make a powder of it, and take every morning thereof one ounce and a half with red Wine. Item, take pownded Agrimony one drachme with red wine when you goe to bed.

Outwardly may some of these things following be used: Take oyl of Lillies, or oyl of Costus, annoint the privities with it and the parts above it; but temper amongst it some fine Bolus, Mastick, Momie, Myrrhe, and make a salve of it. Or lay one of these plaisters following upon it: Take *Landanum* and Mastick, of each one ounce, Frankincense, Cy-

pres;

pres nuts, of each one drach. *Lignum Aloes*, red *Styrax*, *Calamus*, *Galangal*, *Cinamom*, of each half a drachme; Turpentine one drachme, or as much as is needfull; melt the *Laudanum* in a warm mortar, then make a plaister thereof, and lay it over the privities; but first shave off the hair, that the plaister may be taken off without pain. Or make this following; Take *Laudanum* and Mastick, of each two drachmes, *Lignum Aloes*, red *Storax*, *Galangal* and Quince kernels, of each one drachme, Turpentine one ounce; pownd all that is to be powned, and add the *Laudanum* unto it as before, spread it on leather and apply it to the privities.

Another. Take the juyce of Mints twelve ounces, Frankincense and Mastick, of each half an ounce, Cypress nuts one quarter of an ounce, *Galangal*, *Lignum Aloes*, of each one drachme, Cinamom, or beaten Comin seed as much as is needfull for a plaister; use it as is before shewed.

It is to be noted, that the Comin seed must be parched before. So that further is requisite for this purpose, it may be sought for in the third part, the 11. Chapter, and also in the 12. Chapter, in the first part, and 13. S.

For the affluxion of urine through heat. S. 7.

IF so be that there be with this unnatural affluxion of the urine an unnatural thirst, and the drink forthwith piss out again, then are these means following to be used; first, in case that the body be bounden, then minister to the patient laxative clisters of the common cooling herbs, wherewith *Hiera Picra* or *Benedicta*, with the oyl of Violets be tempered; and immediatly afterwards open the liver vein, whereby all the ill accidents of the body may be defended and avoided.

And if it be needfull, purge the Patient with yellow Mirobalans and with Cassie, which both doe coole. But if you will make it that it be good for the gravel, then mix things amongst it which expel the gravel: afterward cause the Patient to vomit when he hath drunken much water, like as is taught in the sixth title.

By the Rosen of the firre tree made into powder 32. and drunk in sack every morning for 2. or 3. dayes, cures the *Diabetes*; *Probari sepe*.

Otherwise is this ensuing especially commended for this disease *Diabetes*; Take *Ancia* one quarter of an ounce, Rose leaves three drachmes, fine Bolus, Gum, and Dragagant, of each half an ounce; pownd them all small together, and let it passe through a small sieve; afterwards make it into small Trochiscs, with the musilage of Fleawort, and give thereof the weight of a drachme with Endive water, Burrage, and Cicorie water. Item, take fine Bolus, and Sealed earth, of each one scruple, the juyce of Sloes, Pomgrate flowers, Mirtle seed, red Coral, and Roses, of each one drachme; make a fine powder thereof when he goeth to rest, with thick red wine: or take the innermost rindes of hens mawes, wash them clean with Wine, and dry them, the powder of a burnt Hares head and Mastick, of each half an ounce, Agrimony five drachmes, burnt powder of an Hedge-Hog half an ounce, temper them all together, and pownd them all small to powder; afterwards give thereof one drachme and a half with red wine when he goeth to sleep.

Another. Take Nettle roots one handful, Vervain and Caruway, of each one handful and a half, seeth them together in sweet water, and drink thereof.

Item, take *Wiba* and Pears, stamp them together, distil a water thereof, and drink often of it; or mingle any other drink amongst it.

Outwardly may these things following be used; stamp cooling herbs, viz. Lettice, Purslain, Nightshade, Housleek, Rose leaves, and Willow leaves. Or cut fresh Pompeons or Citrons in broad peeces and lay them thereon: you may also wear a beaten plate of lead upon the reins, the which may be made oftentimes wet with Vinegar.

Also prepare this salve ensuing; Take three ounces of Poplar salve, oyl of Roses, and oyl of *Mandradora*, of each half an ounce, the musilage of Fleawort one quarter of an ounce, Vinegar one drachme, Wax as much as is needfull for to make therewith a salve. Item, take the juyce of Lettice, of Purslain and of Nightshade, of each one drachme and a half, Rose water one ounce, Vinegar half an ounce, white beaten Poppy seed one ounce, Wax as much as sufficeth for a salve, and anoint the reins with it.

After the anointing lay then this plaister following upon it; Take Barley meal, Vinegar and oyl of Roses, let them seeth together, and lay it thereon. Or take Vine leaves, Willow

Willow leaves, Quince leaves, Tassel leaves, and Houfleeke, of each one handfull, stamp them well together, and put unto it six ounces of Barley meal, oyl of Roses and Vinegar, as much as sufficeth for to make a plaister, then lay it cold upon it.

The order of Dyes.

ALL meats that do cool are good for this Patient, as Verjuyce, the juyce of *Rustus*, Barly, and all that is drest with Barly, Almond milk, and Rice, all fruits which cool and bind, as Medlars, *Sorba*, Sloes, Cherries, sometimes also plums, Mulberries, Pomgranates, and Strawberries are also good for him. If there be neither heat nor Ague with it, then may he have the foresaid things drest, as Barley, Rice, and Almonds with fresh broth. He may also use otherwhiles Neats feet and River fish, but very little salted. Also hen-broth decocted with cooling seeds is very good for him. His best drink shall be Barly water, wherein a little Fleawort is decocted. Buttermilk is also good for him. The juyce of the first mentioned fruits may be mixed with fresh Well water, and so drunk: in like sort also the Rose water of it self alone. Thick red wine is also (as before) to be tempered with fresh Well water. For this is also meet the sirupe of Violets, or Julep of Violets, with some cooling waters, or tempered with some Well water.

You have also herebefore in the twelfth Chapter and 3. §. other Juleps and Confections more which be also very fit for this use, as *Triasantalon* and *Diarrhodon Abbatis*, therefore is he to take now the one and then the other, to the end that nature chance not to abhor and loath that which is to be taken.

For an intollerable thirst may this following be used: Take burnt Ivory ten drachmes, Lettice seed and Purslain seed, of each 15. drachmes, Coriander seed, yellow Rose seeds, and fine *Bolus*, of each five drachmes, Pomgranate blossoms one quarter of an ounce, Camphire half a drach. then make a powder of it, and use one drachme thereof, or one drach. and a half at once with the juyce of Pomgranates.

What is further good for the thirst, look for it in Chap. 12. and §. 10. in the third part of this book.

This patient must restrain and keep himself from all labour, and conversation or company of women. Also to eschue all sower things, and to perform and do in all things like as herebefore in the sixth Chapter, and §. 1. is taught of the effluxion of humane seed.

The eighteenth Chapter.

Of the Bladder.

His inward part of the Bladder is common to all humane bodies; it is made of two strong skins or membranes, whereof the innermost skin is twice as strong as the outmost, and that not in vain, but to the end it might the better withstand the sharpnesse of the urine. Both these skins are formed of a slippery white matter: and between both the skins or membranes there run many veins, sinewes and arteries every way, whereby they do draw the moisture of the Ureters, which do come from the Reins, and do carry it into the Bladder.

For the foresaid Ureters be so small and so narrow, that one cannot in a dead body discern nor find the same; like as also the bladder of beasts doth manifest the same, which is so tight and so shut up, that no water nor wind can pierce through.

In men doth this Bladder lye with his neck (which is fleshy) very hard besides the Arsegut. crooked, and almost like this letter S. great and long even to the beginning of the Yard. But in women the neck of the bladder doth lye somewhat higher then the neck of the womb, it is also shorter and wider, and therefore also they may much easier be holpen of the stone then men.

Item, in the forepart of the neck of the bladder there is a muskelish flesh, the which holdeth the urine so long shut up, until a body desire to make or let go his water. Further,

ther, mens bladders be also according to the proportion of the body, much bigger then in any beasts; they can also stretch themselves very far, whereby they in time of need may retain and keep a great quantity of urine.

Whensoever this Bladder also is pricked in her membrane substance, or a hole made in it, then is it incurable; notwithstanding that *Aristotle* doth think that it hath been healed, but very seldom: for the neck of the bladder, which we have said to be fleshy, may be healed without plaister or salve, and only through the urine, like as is sufficiently made known and shewed by the stone cutters.

Amongst beasts, they only have bladders which bring forth a living creature into the world, and that have lights full of blood. But all that do lay eggs, as fowls and worms, they have altogether no bladder, the Tortoise only excepted.

This bladder is by nature ordained for a receiver of the urine, and to the body a very needful member; for if so be that nature must have expelled all her waterish moisture throughout all the whole body, not having any particular vent or passage for it, then of necessity should a body oftentimes either dry away or stifle.

To this bladder do also happen oftentimes many sundry diseases and perillous infections, as the gravel, the stone, painful making of urine, retention of the same the Strangury, flime, obstruction through blood, the which doth not only cause heat, swelling ulcers, and deadly impostumes, but also bringeth with it many kinds of other perils: and because that we herebefore have written at large thereof, therefore will we not here rehearse them again, but only speak and discourse of those things that concern the bladder and the neck of the same.

Of retention of urine in general. §. 1.

Under the name of the retention of urine we do comprehend all accidents, whereby the water is retained and kept back, whereof there be five kinds disclosed in the seventeenth Chapter, in the conclusion of the fourth §. and here are to be rehearsed. Amongst all these is the one more violent then the other, and for that cause are to be cured and holpen with divers and sundry remedies.

First, we will speak of the disease which the Grecians do call *Lithiasis*, which is when the stone of the bladder relying on the neck of the same, hindreth the passage of urine, or causeth such a distention of the yard and foreskin, that this and the stone together doth wholly hinder and keep back the urine, which is not without great pain and trouble to the Patient: but these meanes following are to be used in this extremity.

If so be that the Stone of the bladder cannot be expelled through the former remedies, then put back the stone and so let out the urine. First, the Patient is to be laid on high with his arse, and spread his legs abroad, and shake and rub the place strongly, that thereby the stone may be removed from the neck of the bladder, or the same is to be put back with a silver instrument, that thereby the urine might freely passe forth. But great care is to be had whether the passage for the urine be not shut up by some swelling, otherwise would the yard within thereby be bruised, and the grief made worse then before.

The second manner of the retention of urine is *Dysuria*, which is when a man doth make water with great grief and pain very slowly, the which is commonly perceived by the pricking pain and great heat in the forepart of the yard.

The third kind of the retention of urine is called *Stranguria*, which is when one is constrained to make water often, and that with a few drops at once. These two sorts of retention of urine, are so like one to the other, that few Physitians can sever them, yet nevertheless have they some differences.

Both these kinds are caused of a sharpness of some humour and of the urine, or through the debility of the muscles and of the retentive power. For if there come any sharp or corroding humour into the Bladder, then will it presently by force expel the same without any intermission.

Or if the retentive vertue of the bladder be weakened, then can it not abide the least distention in the world, but let the urine continually pass forth as an intollerable burthen.

Ischuria detaineth the urine altogether, and is caused diversly, to wit, of heat, of the hardnesse of the passage, of the debility of the expulsive, and force of the retentive vertue, and of the forementioned disease *Lithiasis*.

Also if there be any grosse and tough slime gathered together in the passage of the urine, or if there be any clotted blood, through blowes or falls settled in the bladder, which there do hinder the course of the urine.

In like manner also when the Kidneyes and the bladder do rankle and impostumate.

Lastly (as it oftentimes hath been found) when the water is long held up.

And albeit there be many sorts of this retention of urine, which at the last may cause impostumes, ulcers, and much pain; yet is this the total sum and conclusion, that all of them that detain or hinder the free passage of the urine, do require but one kind of remedy. Notwithstanding we will in this our discourse following (as much as shall be possible) shew some differences in them.

Although there have been divers causes shewed before of this disease, yet (to prosecute our accustomed method) we will recite them once again; namely, if one have fallen hard, or have had a blow or briuse on the bladder. Item, the tumors and impostumations which do stop the passage of the urine. Also when the back or any other part of the body is bruised, and the blood fall down into the bladder, and there lyeth clotted. Likewise thick tough slime or corruption, or other causes more, &c. whereof partly hath been spoken of before in the 16. Chapter and 7. §. and partly shall be treated of hereafter more at large.

The signs of this malady are these: if it proceed of any outward cause, that may be inquired of the patient. Or if the same be caused through congealed blood, stone, slime, or corruption, then may the same matter be perceived by the urine, and by the pain of the place infected, whence the matter cometh. Also by the silver probe, whereby the stone may be felt, or by the blood and slime which remaineth on the instrument being drawn forth.

Of the pain which is caused by the retention of the urine. §. 2.

WE have amongst other things before made mention of gravel, whereby not only the patient is grieved with great pain, but also the Physician is hindered from the application of those remedies as may seem meet for him; wherefore it is specially advised, first to delay the pain, or at the least to diminish it; for the which these remedies following are especially commended.

All gentle Clusters, easie purgations, and above all others, bathes of warm water, wherein Mallowses, Hollihock roots, and Nettle roots, Gromel seeds, or any such like mollifying things and Saxifrages are decocted, wherein these Patients are oftentimes to bathe themselves even to the navel.

Item, take Colewort leaves, Southernwood, Rosemary, Pigeon dung, wild Saffron seeds beaten grossly: seeth them all together in water for a bath. Or take Mallowses, Hollihock leaves, Pellitory of the wall, Southernwood, *Creta Marina*, Fenegreek seed, Hollihock seed, of each two handfuls; seeth them all together unto a bath. Afterwards anoint the Kidneys with the oyl of Scorpions, or with any of the foresaid salves.

With this bath may this powder following also be used with the decoction of Pepper: Take the seeds of Purslain and of small Endive, of each half a drach. Dill seed two scrup. Marjoram half a scruple; give this to the Patient when the pain is present.

Note also that these two meats be very good, both for the retention of the urine, and also for the strangurie. And if so be this be holpen, then will the pain which is in the end of the Yard soon cease.

In the description of the Kidneys there may you see many plaisters, salves and oyles, as that of *Anodinum*, and others more, which are very meet for this purpose.

Take a gallon of Sack, put it into a glasse vessel or stillatorie, set it into a pot of water, having a long glasse-receiver. The first liquor that cometh is called the spirit; the second is an *Aqua vita*: the third water is small, and the fourth water is smallest; and drink 4. or 6. ounces of this smallest water, and it will cause urine presently, and allayes the heat of the urine.

Or seeth Radish roots in white wine, and drink it. Or bruise the roots of Vervine, and drink it warm with white Wine. Or seeth Acorns and Myrrhe, and drink it. Or seeth the roots of Burredock in Wine and Oyl, and apply it to the yard and *perinaum*. Or drink Wine with the roots of Cucumbers.

Of the stopping of the Urine through the debility of the vertue
expulsive. §. 3.

IF any one be hindred in the making of his water, or that the same be altogether stopped without any swelling, ulcer, or pain of the Kidneyes, it is then to be censured that the same should come through the debility of the vertue expulsive; against the which such things shall be used as are diuretical, or that do provoke urine, as these pills following; Take the seeds of Smallage, Saltpeter, Maddar, great Smallage, Juniper berries, *Asarabacca*, *Ameos*, Fennel, *Spica*, and bitter Almonds, of each one ounce and a quarter; Melons five drachmes, *Cantharides* (the heads and wings cut away) half a drach. *Ammoniaceum* one drach. and a half; dissolve your gum in wine, and mix all the rest being beaten small amongst it; then make pills of them of the bignesse of peason, give three of them at one time. These pills have an especial efficacy for to dry the body, so that they are accounted very good for the Dropsie.

The *Electuarium Ducis* is also very good for this purpose, if thou give one quarter of an ounce of it with pease broth or wine, which thou wilt.

There was not long since one cured with this remedy following, who for the space of five daies could never make his water: first he took this elister; Take Pellitory of the wall two handfuls, Mallowses and Camomil, of each one handful, boyl them together; then take of this decoction the accustomed quantity, and temper amongst it one ounce of Cassie, oyl of Camomil three ounces, Turpentine one ounce, Licorice one quarter of an ounce, minister it warm.

Secondly, this following was also ordained for him; Take Cassie and Turpentine, of each one quarter of an ounce, *Benedicta Laxativa* two drach. prepared Jews stone 3. i. make an Electuary thereof with *Oxymel*. At night he took two ounces of *Oxymel* with the water of Maidenhair, and presently after this he made water.

Item, take four or five ounces of the juyce of Pellitory of the wall, and clarifie it with the white of an egg, then seeth it with Sugar to a sirupe, and use 3. ounces thereof every morning with the water of Mallowses, or with any such like distilled liquor.

This done, give unto the patient a purgation of Cassie. Thirdly, take Coriander seeds half an ounce, Mallowses one handful, one head of Garlick, pownd them all together, and seeth them with good white Wine until that one third part be consumed, and give him thereof three ounces to drink.

Peach kernels and the kernels of Cherry stones do also provoke urine. Item, preserved Pimpernel roots, Calamus, and the roots of *Eringus* are also very good for this purpose, confected Lovage seed, Annis seeds, Fennel seeds, Caruway seeds, Comin seeds, and Saxifrage seeds, these do expel all urine, gravel and stone. Treacle and Mithridate do also cause one to make water. Item, the confection of Cherries with their kernels beaten in peeces, and rub it through a strainer is also meet for this use; also half a drachme of dried Grasshoppers is very fit, and a great secret in this disease. Item, the stone which is cut out of a living body, and used as before hath been shewed in the expulsion of gravel, is also very convenient and commodious for this intent.

Take Tormentil, Pionie, *Bistoria*, Acorns and wild Flax, of each a like much, pownd them all together, and take thereof in the evening and morning one drach. with Wine. The Spanish flies do expel urine most violently, but beware of them because they be very sharp, and exulcerate the ureters; but the Grasshoppers are somewhat milder. Item, take the roots of Pimpernel beaten small as much as one can contain between his two fingers, and drink it with Wine. The powdered shels of Hasel nuts do the like also, and the jawes of Pickerels, if thou take of each of them a like quantity.

But if the urine be stopped by reason of the stone in the Bladder, then give unto the patient two small drops of the oyl of Sulphur with Wine or Agrimony water: or beat a Radish very small, presse out the juyce of it, and take 3. ʒ. thereof with wine; it provoketh urine immediatly, and breaketh the stone also. Item, drink in the morning 3. or 4. ounces of Radish water very warm, and fast two hours after it. In like manner also two in the evening two hours before supper, and walk after it.

Another. Take Mallowses and Garlick, of each a little, seeth them in Wine until the third part be waisted away, drink three or four ounces of this decoction at once. Or take *Balsamina altera* and the lesser burre leaves, boyl them together in wine, and drink it

as before. Take a great Onion, cut it small, and Mallowes one handful, boyl them in wine, and drink oftentimes of the decoction being warmed.

If a child could not make his water, then take ten or twelve bitter Almonds, and ten or twelve Peach kernels, and two ounces of Currans, stamp them all together, strain them through a cloth with water like to Almond milk, and give it the child to drink like Almond milk.

Amongst the herbed Wines are especially commended for the provoking of urine the Wine of Elecampane, of Harts tongue, of sweet Marjoram, of Cherries, of *Asarabacca*, and of winter Cherries, which are also mentioned before in the Treatise of the gravel. But if any one might not drink wine at all, or that he had it not, then may he drink Meade or Hony water, which is also very good. What sirupes and other things might be used for the provoking of urine, that hath sufficiently been shewed before in the discourse of the gravel. But *Oxymel compositum* and the sirupe of Vinegar are, for this use very highly commended. Clifters are of no small force in this disease, but especially when they be made with *Benedicta*, and the oyl of Scorpions.

Amongst the outward remedies are the forementioned bathings the especiallest and the most highly commended.

Hereafter follow the descriptions of salves and plaisters. Take a sliced Radish, seeth it to pap, and temper amongst it the oyl of bitter Almonds and the oyl of Scorpions with a little Wax, then spread this very thick upon a cloth, and so lay it upon the privities. Item, take Turpentine, oyl of Scorpions and of bitter Almonds, of each a like quantity, and a little molten Wax, then temper them together, and therewith anoint the whole privities.

Another. Take the oyl of Scorpions, of *Costus*, of Lillies, of Dill and Ducks greafe, of each half an ounce, Pellitory of the wall and Saxifrage beaten, of each one drachme, Comin three drach. Wax as much as sufficeth for a salve. For this you may also use the balmes and oyles which are described in the eight part, like as shall be shewed there more at large.

Here before in the affluxion of the humane feed, is also admonished that the navel is to be filled with a little old suet, either of an Oxe or of a Hart; the which is also an expert remedy for the making of water, but that is oftentimes to be used. The oyl of S. Johns wort should also expel urine if one be anointed with it.

If now there be any body which cannot make water, then cut two great Onions, and put a spoonful of Caruwaies unto it, pour then thereon some Sallad Oyl; afterwards fry them all together, and spread it on a cloth two handfals broad and meetly long, and so lay it as before upon the privities as warm as can be suffered: do this six or seven times together, it helpeth evidently. Item, take Pellitory of the wall, fry it in oyl, and so lay it warm on the privities. Some do write that the fat of Conies anointed on the privities and on the Kidneys, should marvellously expel urine. Likewise also the oyl of Bayberries, of Camomil and of Scorpions. The detention of the urine of what cause soever it be caused, this ensuing is good for it; take live or dead wood-lice, lay them over the privities before, and then pluck over the foreskin: these and Cony fat are by some highly commended: also the foreskin is to be put over the anointing with Cony fat.

This ensuing is also highly commended for Women when they cannot make water: Take filed Goats horn and Maiden hair, of each a like quantity, make them to powder, and strew them on a new hot tile: put this into a close stool and set the woman upon it, then sprinkle Wine on the tile to the end she may receive the vapour beneath; this is to be done twice or thrice a day, according as the obstruction of the urine is great. But if this malady seem wholly to get the mastery, then take the water of picked Plantain, make Almond milk with it, and drink thereof twice or thrice a day, it is also especial good. And if so be that the sharpnesse of the urine had made any excoriation, then anoint the place with the oyl of Eggs. And if a woman with child cannot make her water, then is she to take yellow Rose seeds and seeth them in Wine; when the pain is somewhat asswaged, then give thereof to drink; afterwards make a little oyl of Lillies warm, and anoint therewith the Reins and over all the belly. Item, take Sage and Wormwood, of each one handful, Rie meal one spoonful; seeth them all together, and let the woman sitting on a close stool receive of the vapour.

You have also in the fift Chapter, and 1. §. somewhat else which is also meet for this purpose.

Of the retention of urine through falls or blowes. §. 4.

IF the retention of the urine come of any outward cause, as of falls or of blowes, then must good heed be taken if so be that thereby any coagulated or clotted blood, not only in the bladder, but also in any of the inward parts, came to putrifie, like as in the stomach, in the breast, and elsewhere, then may great sorrow and trouble proceed of it, yea death it self; for that there follow great faintnesse after it, great weaknesse of the whole body, and the pulse will be so small that one can scarce feel it.

And to remedy the same, is the Liver vein of the sick person to be opened, and the bruised place irrigated from on high, oftentimes with warm water wherein Camomil, Melilot and Roses be decocted. Afterwards is the sick person to be anointed with this salve ensuing; Take Myrrhe and Mastick, of each one drachme, oyl of Roses one ounce, oyl of Dill half an ounce, wax as much as is needful.

But if the pain will not abate and cease, and that it appear that the bruise will come to an impostume and heat, and an ague stick unto it, then open the *Saphes*.

If the Patient be bound, then are milder clisters and purgations to be used, and the patient is to keep himself as sober in eating and drinking as may be possible the space of two dayes, and afterwards to dyet himself like as one that hath an Ague is wont to do. The place is to be fomented with the foresaid herbs and thereupon to anoint it with warm oyl of Violets, and with oyl of Camomil. The bladder is softly to be wrung from the top even to the privities; also an Oxe bladder may be filled with this decoction following, and laid upon the privities.

Take Mallows, Camomil, Rape leaves, Melilot, Violet leaves and Linseed, seeth them together, and make a felt or sponge wet in it, and lay it warm upon it. You may also make a bath for the loines thereof, putting thereto some Hollihock roots, Onions, Garlick and Colewort leaves powdered all together; seeth them and wring them out well, then put them in a bag which hath a hole in the middle to put the yard therein, and that he may lye upon it. Item, take Wormwood, put it in a bag, seeth it in wine and wring it well out, then lay it upon the privities, as is expressed, and admonish the patient that he endeavour himself to pisse oftentimes.

This ensuing is not only good for the clotted blood in the bladder, but also for all other places of the body, be it of whatsoever occasion it may be; Take Wormwood, Fennel, Smallage, the seed of the yellow root, red Storax, peeled Melon seed, and Radish leaves, of each a like quantity, make a powder of them, and give thereof between one and two drachmes with Asses milk, or with water wherein Fennel roots, and the roots of Smallage, of Parsley, of Sperage, or of *Ruscus* be decocted.

Of the retention of urine through some obstruction of the conduits. §. 5.

IF so be that it happen that this retention or painful making of water do vex or pain a body, and yet neverthelesse the bladder is full of urine, and that the patient had pisse any blood or matter before; then are those remedies to be given him which do open, and which do attenuate the clotted blood and corruption in the bladder, and make it fluxible: therefore one must first begin to wring the privities hard, that thereby the lowermost passages may be opened, and the urine may run out. Now if so be that this obstruction do come of clotted blood, of matter or of slime, then are Sperage water, Saxifrage water, and Radish water, especially good for it. In like manner is also very good, the broth of red Pease, of Fennel roots, of Parsley roots, and of Smallage, of each apart, or boiled together. Also Limon water is very much commended for this use. Item Treacle, good Mithridate, and most of all that which is declared in the retention of the urine.

Also Salt water, or this following may be spouted into the bladder, which may draw out the urine through their sharpnesse; take burnt ashes of Fern, Vine ashes and lime, of each a like quantity, pour as much water upon it until it be covered, let it stand so the space of 3. daies; afterwards pour it through a tight cloth, and spout a little thereof into the bladder. This can also be done with the oyl of Scorpions.

Item, take the seeds of Carrots, the seed of Stone Parsley, and of Parsley, of each one quarter of an ounce, *Hermodactili* 3. drachmes, make a powder thereof, and give one drach. thereof at each time. Or take the seed of Smallage, of Parsley, or Piony, of Brooms, and

of Saxifrage, of each one quarter of an ounce, Fennel seed, Caraway and Annis seeds, of each half a drachme, Gromel seeds, *Spica*, Cinamom, peeled Melon seeds, Pompeon seeds, Gourd seeds, and peeled Cucumber seed, of each one drachme, Licorice three drach. Sugar one ounce and a half, make a powder thereof, and give of it every day one drach. with some diuretical decoction. If so be that the sick person have no stools, then is the matter first to be prepared with *Oxymella diuretica*, or with *Oxymel* of Squils, and afterwards to purge with *Medicamnia Turbith*, and with *Agarico*, or with *Benedicta Laxativa*, whereunto are added *Hermodylyli*: also these ensuing clisters may be used.

Take Pellitory of the wall, water Cresses, Saxifrage, and Camomil, of each one handfull, see the them all together in water, and take twelve or sixteen ounces of this decoction, *Benedicta Laxativa* one ounce, Cassie and *Hiera Picra*, of each one quarter of an ounce, oyl of Rue three ounces make a clister thereof.

For an outward application, take handfulls of Rue leaves, pownd them a little, and fry them with Butter, or with oyl of sweet Almonds, or oyl of Scorpions, and lay it on the privities.

Another; Take Dock roots as many as you please, see the them in wine, fry them, and use them as before. Or take wheaten bran, let it see the to pap with oyl of Nuts, and use it warm.

Item, take Pellitory of the wall, water Cresses, Saxifrage and *Diptamus*, of each one handfull, Fennel and Annis seeds, of each half an ounce; see the them together in white wine, wring it out hard, put it between two cloths and lay it on the privities. You may also put the same decoction into the bladder, and so apply it warm unto it.

Of the first mentioned may also a bath be made, whereunto diuretical medicines shall be added, as Camomil, Stechas, Marjoram, Mints, the buds of Colewort stalkes, Pigeon dung, and let the sick person bathe therein as long as he can suffer it.

Another; Take Colewort leaves, Hollihock leaves, water Cresses, and garden Cresses, Pellitory of the wall, *Clavicularis*, Camomil, Smallage and Parsly roots, of each three handfulls; see the them all together unto a bath, and then lay the decocted herbs upon the privities.

For a salve you are to use Dogs greafe and wilde Cats greafe, of each one ounce, *Ammoniacum* half an ounce, oyl of Lillies two ounces, oyl of Scorpions one ounce, make a salve of it with Wax, and use it like as the other salves. Or take the salve which is described in the 3. §. beginning thus, Take oyl of Scorpions. &c.

Item, temper Balm and oyl of Roses, of each a like much with Wax. Further, of all these oyles following may also salves be prepared, as of the oyl of Scorpions, of bitter Almonds, of Lillies, of the kernels of Cherries, and of Pepper; or one may also use them as they be. For this disease are all things meet that be ordained for the stone of the bladder and of the Kidneyes.

Of the hot and scalding urine. §. 6.

There happneth also otherwhiles such a burning with the urine, that the patient thinketh none other than that fire passeth through his yard. The cause of this is, that there be mixt with the urine some hot cholerick or salt humours, which make this scalding in the passage.

This cometh commonly of great labour, much and long walking or travelling through heat of the Sun, through much venery, through long use of many hot meats, or for that the conduits of the yard have such exulceration within.

This infirmity is indeed not to be regarded slightly, for if it continue long, then doth it excoriate the yard within. The signs thereof be sundry, to wit, when the patient avoideth in his water sometimes matter, small scales like bran, and otherwhiles also blood.

These kinds of sick persons are to beware of all sharpe, salt, four, and such like meats, because that thereby the pain will be augmented. But he shall contrarywise use all cooling and moistening things, as well boyled Barly, Spinage, Lettice, Purslain, Mallows, Apples, Melons, Pompeons, Gourds; Prunes, Peaches, and Cherries, &c. Item, Lamb, hens, and Partridges drest with the foresaid herbs are the best meat for him. Buttermilk, and that sodden, is also very good.

He is to take for his drink Barly water, Buttermilk, watered wine, and fresh water tempered with sirupe of Violets or sirupe of Roses, Almond milk, or Sheeps milk which

(which is most meet for him) if there be one drachme or two of fine *Bolus* tempered amongst it. Item give him sirup of Violets with water of Melons, or if you have it not, then beat the seeds, and make thereof a decoction: afterwards drink it with the other meats. In the morning and evening use this powder following: Take peeled Melon seeds five drachmes, peeled Cucumber seeds, Citron seeds and peeled Pompeon seeds, each one 3. ss. Henbane seed one drachme, Sugar the weight of all the rest, then temper them all together; take thereof every morning and evening the weight of three drachmes, with Julep of Roses.

Another; Take peeled Melon seeds, seeds of Pompeons, of Gourds, and of Cucumbers chopt small, of each one ounce: the seeds of Purslain, of Henbane, and white Poppy seeds, Licorice and Currans, of each one drachme, Sugar three ounces, temper them together. Item, take Lettice seeds and the seeds of Purslain, of each half an ounce, powdered Sugar two ounces, make a powder thereof, and use it in all meats and drinks, it is marvellous good, yea for all old folks also.

These Trochisks following do cool and cleanse the Kidneyes and the bladder of all such matter which doth inflame or overheat the conduits of urine.

Take peeled Melon seeds, Pompeon seeds, Gourd seeds, and peeled Cucumber seeds, of each half an ounce, Dragagant, red Saunders, of each one drachme and a half, Purslain seeds, white Poppy seeds, of each three drach. white Henbane seeds one drach. make Trochisks thereof with the muscilage of Fleawort, afterwards take one drachme of them and break it in Barly water, and give it early in the morning and at night going to bed. You may also make an electuary of it. Cassy taken with Turpentine is also especially good for this purpose. The oyl of sweet Almonds asswageth and cooleth also the heat of the conduits of urine.

If in case then the Patient (because of the sharpnesse of the matter) ought to be purged more, then is the same to be done with four Dates, *Manna*, and Rubarb steeped in Endive water, or with the decoction of Violets: if there be salt flegme with it, then give him Cassie tempered with the whay of Goats milk, wherein Polipody roots, Annis, Violets and Burrage flowers have been decocted. When he hath thus been purged, then is the liver vein to be opened, and the foresaid powder to be diligently used.

If so be that a child hath this disease, then take Mallow seeds, Dragagant, and Licorice of each a like quantity, see the them in water according to the importance of the cause, and let him drink none other drink. If this urine be very sharp and hot, then take so much the more of the seeds. And in case that a child through the sharpnesse of the urine had gotten some exulceration, then use this salve ensuing: Take Myrrhe half an ounce, Barly meal or Bean meal one ounce, temper it to a soft unguent with the oyl of Roses, spread it on a cloth, and then lay it where it is needful.

The brayed white of an Egg may also be spouted into the privities, or take the muscilage of Fleawort and of Quince kernels, of each one drachme, temper them with womans milk.

Or take the seed of Fleawort three quarters of an ounce, the seed of Quinces five drach. peeled Melon seeds, Pompeons seeds, Gourd seeds, and peeled Cucumber seeds, of each one quarter of an ounce, white Popy seeds one drachme and a half; see the them all together in a pint of water until the third part be wasted, then strain it through a cloth that it may be like a muscilage, and spout thereof into the yard, it cooleth and asswageth the pain.

You shall use outwardly red and white Saunders, the seeds of *Ruscus*, burnt Ivory, and Myrtle seeds, of each one quarter of an ounce, the juyce of Plantain and Rose water, of each one ounce, Barly meal as much as sufficeth, then pownid then all together, and make a soft pap of it: you may also put unto it two whites of Eggs. But if one desire to have it stronger, then it the juyce of Sloes and *Hipocistis*, of each one drachme to be tempered amongst it and so to be layed upon it. If so be that the yard have an exulceration within, then is a cloth to be made wet in Rosewater and layed upon the yard.

If any one be forced against his will to make his water. §. 7.

Although this disease which the learned do call *Diannem*, be somewhat like unto *Diabetes*, and especially in this, that in both sorts of these diseases the urine passeth away against ones will and pleasure, yet is there neverthelesse a great difference between

them; for that with the disease *Diabetes* is a great heat of the kidneyes, her attractive vertue is against nature, whence followeth a great thirst, and great quantity of urine, all which is not with the disease *Diabetes*. For *Diabetes* is none other but a continual flux of the urine against a bodies will without any pain or heat, and also without any feeling of it. The occasions of this malady may be when the muscles of the neck of the bladder be perished, like as otherwhiles hapneth in cutting of the stone. This can also chance through falls, through blowes, or through great cold, as to sit upon a cold stone, through cold sicknesses, as the Palsie or Lithargie: Item, through immoderate and excessive drinking, and through great binding in the body. They may likewise happen unto women with child, when the child oppreseth the bladder too hard. Lastly, also through some impostumes about those parts. The signs of this disease are apparent, to wit, that all warm things are acceptable to the patient, and cold things contrary are hurtfull. When these diseases (as often befallerh) are caused through cold, then is this electuary very good, which hath efficacy for to stay this flux of urine.

Take Cipres nuts, the rinds of Cipres, Frankincense and the rinds of the same Myrtle seed, Comin, Miobalans both fried, and dried Pigeon dung, of each three drach. Amber, red Coral, and Roses, of each one quarter of an ounce, sirup of Quinces as much as is needful for to make an electuary therewith, whereof is to be taken every morning, noon, and evening, the bignesse of a Chestnut, with a decoction of Cipres nuts, Sage, Myrtle seed, and such like. This electuary is also good for the laxes called *Diarrhea* and *Lienteria*.

Another; Take *Miobalani*, *Chebuli*, *Emblivi* and *Belivici*, of each three drachmes, Atorns three drachmes and a half, which have layne four and twenty hours steeped in vinegar, Cipres roots, Myrtle seeds, Frankincense, dried Elecampane roots, red Storax, red Coral, and yellow seeds of Roses, of each two drachmes and a half, Myrrhe one drach. and a half, stamp them small, and make an electuary thereof with clarified hony.

For this is also good Treacle, Mithridate, and burnt Oxe bladders, of each taken alone with wine.

Item, take the dried kidneyes of a Hare, stamp them to powder, and Dill seed, of each half an ounce, the seed of Smallage one quarter of an ounce, make a powder thereof, and give it between two and three drachmes at once with a little cold water: boyled Hedges flesh is also very commodious for this purpose.

If so be that the patient have any need of stooles, then is this clister following very commodious for it, for when he keepeth it very long, then doth it strengthen the neck of the bladder, and draweth it together, that it doth afterwards keep the urine the better; Take Sage, Rue, *Clavicularis*, field Cypres, Camomil, Stechas, Nuts flowers and rinds of Cypres, of each half a M. then let them seethe together, and use this Clister like as is accustomed, but mix the oyl of Bevercod and of Behen, of each two ounces amongst it, powder of roasted *Chebuli*, Myrtle seeds and Cypres roots, of each one drachme and a half; lastly temper all together.

Outwardly may he use the Mineral and Sulphurish baths, but if one cannot get them, then make a dry sweating bath with the foresaid herbs, which are named in the description of the clisters, which also one may use for a bath for the Reins, if the same be sodden in Wine or lee, and put Salt or Allom unto it.

The privities and bladder are also to be anointed with these oyls following, whether they be tempered together or each a part. viz. with oyl of Bevercod, of Behen and Eldern, amongst which there may be a little *Picetrum*, Pepper, and the rinds of the Cypres tree mixed.

His order of dyet consisteth principally in this, to wit, that he do not overcharge himself neither with eating or drinking, and use nothing which for ceth urine, as Radishes, Cucumbers, Melons, Parsly, fruit, and such like. He is also to refrain from all clear, white, delicate Wine, and from Syder, but is rather to drink a red, thick, hard, and unwatered wine.

He must strew his meat with powned Comin which is somewhat parched: also with a little Mustard seed, Pepper, Caraway, or which one please; and he must specially beware of all that ingendreth much moysture in the body. Roasted Chestnuts and hasel nuts be very good for him.

Of the excoriation of the Bladder, and of the neck of the same. §. 8.

THe causes of this disease may be a precedent impostume, or some sharp humour of the body, the use of some hot meats and drinks which are salted too much, or some thing else which doth exacuate the urine, as is before discovered.

The signs of it are detention of the urine, and although the same have some small passage, yet happeneth it with anguish and great pain of the privities, and of other parts adjacent. In the urine are small skales to be seen, and otherwhiles blood and corruption, the which doth stinke. And now for to remedy this, then look what hath been prescribed against the gravel, stone, and such like; for all that is also meet for this purpose, and therefore not needful to be rehearsed at this present.

But here is especially needful a good order of diet, as hereafter followeth; all salt, sour, sharp, and sweet meats, also all great exercise must he refrain: yet all mild meats, and specially Sheeps milk is he to use.

He is to use for Physick such things which do munditie and cleanse the ulcers of their corruption, viz. *Trochiscos Alkekengi* three drach. with sirup or Julep of Violets. He is also oftentimes to drink mead, *Sist album Rafis* one drach. or two tempered with milk is oftentimes to be injected into the bath, or Hony water wherein Figs be decocted.

Of the impostume of the Bladder, or of the neck of the same. §. 9.

THere do come very seldom impostumations in the Bladder, or in the neck of the same; yet when they comethere, then commonly be they caused through bruises, blowes, and falls upon the same place, or such like. Item, through a sweaty and bloody body which is mixed with *Cholera*, repletion of the matrix and of the kidneyes, whence the matter falleth into the Bladder, and there impostumateh: the stone in the bladder may also cause the same.

The signs of these impostumes are Agues which be caused of pain, also biting and pricking pain above the privities, swelling of the same place with heat, which is also to be perceived by feeling detention of the urine, the which the patient cannot otherwise avoid but standing onely.

Herewith cometh also oppilation of the body, partbreaking of *Cholera*, heavy breath, cold of the outward parts, swelling of the tongue, distemperance of the brains; they be also distempered through hot and diuretical things; age, hot weather, and a licentious life do trouble and harm these patients greatly.

In these impostumes be certain common rules prescribed. First, if so be that this impostume be in tce bladder, in the neck of the bladder, or in the yard, then is no diuretical medicine to be given him. Secondly, the matter which causeth these impostumes, is to be derived to another place, except it were in the Plague, for then ought first a vein to be opened. Thirdly, when it is known which humour is most peccant, then must one look to purge the same with appropriated medicines: Fourthly, there be not any attractive clisters (neither in the beginning nor augmenting of the impostume) to be used, to the end that by the affluence of the humour the impostume be not augmented; but onely is to use onely mild things, so that through the great binding in the body there ensue no hurt: Fifthly, repelling medicines are not to be too long used, that the matter be not made too grosse, and those parts which be cold by nature be more refrigerated and cooled: Sixthly, whensoever through cooling things the outward accidents be somewhat ceased, then are such things to be used as may assuage the pain: Seventhly, if there be but a little moisture in the patients body, then are besides the expulsive medicaments, also bathing and rubbing to be used: Eighthly, if there be any impostumes in the neck of the bladder, then must one beware to use any instrument about or in it, for that in doing so you might hinder the matter greatly: Ninthly, when the detained urine, neither of it self, nor of any instrument may be letten out, then are other means to be used, whereof we have written somewhat before.

Thus for to help this disease, is in the beginning the *Baslica* to be opened, according to the prescription of the second rule, and let out as much blood as shall seem meet. But if the patient find himself meetly strong, and if so be that the matter be much, then is the *Saphea* to be opened the next day after. If the impostume be through heat, as of cold or *Cholera*, then take oyl of Roses and unripe Sallad oyl, of each one ounce, vinegar half an ounce

ounce, temper them all together, afterwards anoint it upon the place of the pain, and then strew upon it this powder following: take Myrtle seed, Roses, Dragons blood, and white Saunders, of each a like quantity, pounce them all together to powder, and lay a cloth upon it dipped in the foresaid oyl of Myrtles.

The patient is also to be purged with lenitive medicines and gentle clisters, thereby to mollifie the hardnesse of the impostume, and to assuage the pain, and so to open the conduits of urine.

Of all which you have had good direction before. Besides these is this fomentation following very meet: Take Camomil, Melilot, of each three ounces, Hollibock roots, Fenegreek, Linseed, of each one ounce and a half; let them all seethe well together in water, and then bathe the place affected therewith the space of an hour; afterwards fill a bladder with this decoction about half full, and lay it warm upon the privities; then anoint the pivity with oyl of Camomil, with oyl of Lillies, and such like, even as in the impostume of the kidneies hath been declared more at large.

For this is also very meet water baths, wherein Mallowses, Hollibock roots, Camomil, Linseed, Melilot, Marjoram, Cipres roots, Rape leaves, Colewort, Fenegreek, such like be decocted. If it be needfull to use warming oyls, then take oyl of Lillies, of S. Johns wort, of Rue, of sweet and bitter Almonds, of wall flowers; all these oyls do allay the pain, as also doth the oyl of tyles, and the plaister of Barberries, which consume all cold humours.

When as this impostume is broken, then follow the same course as hath been taught in the impostumes of the Kidneies.

To conclude, these things following are much commended to be eaten for all diseases of the bladder, viz. preserved Elecampane roots and Pimpernel roots, which expell all uncleannesse from the stomach: likewise also preserved Calamus, Treacle, Mithridate, conserve of Betony, Mead and Hony water. Item, the juyce of Lemons which is especial good for all bruifings of the bladder that were caused of the stone.

The nineteenth Chapter.

Of the Matrix or Womb.

From the beginning of this book of Physick hitherto we have written and discoursed of all the principall inward parts of our body, concerning as well men as women; but concerning the Matrix, which is onely proper to the femal kind, have we deferred untill this present, and now we will intreat somewhat thereof.

This Matrix or Womb is the chiefeft part whereby the generation of mankind is maintained, and ordained of God Almighty (Creator of nature it self) as for a vessel, receiver and preservative place of humane seed, which is therein formed unto a living creature, increased, defended, nourished, and sustained until the opportune time of birth.

The Grecians do call this Matrix or Womb *Metra* and *Hystera*, the Latinists *Matrix*, *Vulva*, *uterus*, and we by reason of her vertue, for that it incloseth the conceived child, the Mother or Womb. This hath her place in the neathermost part of the belly, right under the Navel. It reacheth backwards to the arse gut, and forward to the bladder. It is divided into two parts, wherof the first part is her whole body, wherin (as is said) humane seed is received, and the fruit preserved. The second part is the neck of the Matrix or Womb, which reacheth out of the foremost part of the privities, so that it is assimilated unto the Bladder with her neck, the ligaments wherewith she is bound to the hips, onely excepted. When this Matrix or Womb with all that belongeth thereto is rightly beholden, then is it only shapen like to a mans member, only that the humane member dependeth outwardly, and that the womanwood lieth hidden within, whereof in the beginning of the fifth Chapter, and afterwards hath been spoken at length.

Her substance is inwardly fleshy and rough, especially in the bottom strewed over all with small knops or bunches, which be full of small veins, that come and have their accourse from all parts of the body unto the womb, and incarnal use do draw and keep with them the humane seed, which also yeeld forth the flowers or terms, nourish the conceived

conceived fruit, and maintain the secondine. Also this Matrix hath two concavities, and it is supposed that in the concavity on the right side, Sons be conceived, and in that on the left side the Daughters, whereof we shall speak hereafter more at large.

Outwardly she is full of sinews and hard, because that she openeth and shutteth too again in the bearing of children, all which must be achieved and brought to passe through the sinews; the same hardnesse doth also defend her from many kinds of bruising.

The foresaid sinews be also causes of her motion, and ascending and descending in the body, for that because these sinews are very sensible and easily harmed, therefore they do shrink in and draw the mother upwards with great painfulnesse, as hereafter shall be shewed more at large.

The neck of the womb which is with some women long, and with some short, whereof the right measure is the breadth of eleven fingers, is shapen of a hard muskelly and sinewy flesh, which so hardeneth from day to day (especially in lecherous women or common harlots, and old women) that it is at the last altered into a kind of Cartilage.

This neck of the Matrix hath also where the Mother beginneth, an entrance which is never more opened but in the venereous act, in time of the terms, and in the birth, otherwise doth it remain alwayes most tightly shut, and especially after the receipt of the humane seed; so that nothing may go in or out. In young maidens or girles it is very thin, but in growing it waxeth thicker and bigger, viz. when the terms be at hand, and lesseneth when they be past; the thicknesse also increaseth with the being with child; and how many times more that she beareth child, so much the thicker doth it grow. In like sort also will it be harder and thicker in time of the first conception, but in the growing and increase of the child is it dilated, to the end the fruit might have room and scope: but in women that never conceived, or have not born any children at all, it continueth in one bignesse, and is much lesse than in fruitful women. In like manner is it also in children much smaller then the bladder, but with growing up it daily waxeth greater, yea that it is at last in greatnesse far exceeding the bladder.

These kinds and such like sundry motions, like as they have delight in odoriferous things, and a loathing of stinking things, for which it flieth, and for which it ascendeth, caused the wise Philosopher *Plato* to write as hereafter followeth; This part in women, which many do call *Metram* and *Hysteram*, is a living creature, very greedy of conception, therefore if it be drawn upwards untimely, and if it remain a long space unfruitful, then doth it become unwilling, it creepeth through the whole body, whereby the parts of respiration are so obstructed and stopt, that the woman can get no breath, yea it bringeth with it at the last great danger and peril, and causeth many kinds of sicknesses. These be the words of *Plato*; but this opinion is withstood by *Galen*.

This noble part in women is subject to many kinds of diseases and sicknesses, which if they do get the upper hand, do hinder the conception and the fruitfulness of women; which unfruitfulness is especially caused when she hath too many of her terms, or too few, or when the same is wholly detained, whence then followeth a spoyle of the natural seed, the whites, the suffocation of the mother, which otherwhiles stiflith women, the precipitation and falling out of the same, great pain, ulcers, impostumes, hardnings, Cancer, the unnatural disease *Mola*, barrennesse, and if she peradventure chance to conceive an untimely birth, whereof hereafter shall be written, yet first we will begin of womens terms and flowers.

Of the Terms or Flowers of women in general.

THAT these Termes of women be called the Flowers, is for this cause, viz. when it is seen that a tree bloweth, then is it esteemed meet and convenient to bear fruit, and contrariwise the tree unfruitful which bloweth not, except the Figtree. So is it likewise with women, that all they that have their Termes are fit and commodious to conceive and bear children, the which they that have not their Flowers or Termes, can never more accomplish. Secondly, the Latinists do call these flowers *Menstrua*, of the moneth, and thus, for they every moneth or thirty dayes return and come againe; or for that they according to the course of the Moon, that is, because they appear the first quarter of the Moon in young girles, the second quarter in them that be somewhat bigger, the third quarter in the middle sort, the last quarter in aged Women. Whereby all expert Physitians do observe in each time that each age is to have them, to wit, the young people in the new and increasing Moon, the old folks in the

the decrease of the Moon: in fine, the health of all women dependeth especially on this necessary menstrual flux, yea all her chastity, fruitfulness and welfare.

To the contrary, if they do not at all avoid, do flow too much, unorderedly, or be loathsome of colour, then do they cause all miseries, inclination to every, and many kind of sicknesses, like as hereafter shall be taught.

Wherewith it is to be esteemed for no small work of wonder, that amongst all creatures that do live and are of the female kind (except certain Apes) only women are subject unto this flux, and therefore have the Philosophers many kind of disputations, which be here too long and needlesse to be rehearsed. But of the fountain and matter of this blood, it is with one consent concluded, that it is a cold, undigested and grosse matter, and the blood of the whole body, the which through the foresaid veins is gathered together in the womb, and is afterwards expelled in due time as a matter hurtful and of no use. That this matter is also cold, is by this perceived, that when it passeth away, the woman feeleth a great cold over the whole body, this happeneth after many fashions. Of the Terms that be avoided over and above their natural custome, shall be hereafter spoken of with all their appertinances. The women whose Terms avoid in two or three dayes, are rid of them with small trouble, but if they endure long, then will they be thereby very feeble.

The first avoidance of their Terms is commonly about the fourteenth year, the which signifieth that then their natural seed beginneth to ripen, that the hair and breasts begin to grow, and they that be hot of nature do then get desire of the man, for that the womans Terms be none other but a natural seed which is not yet thoroughly ripe, and that through his superfluity of nature desireth to be expelled. This course of the Terms or Flowers abateth about the age of forty or two and forty years, or endureth sometimes untill the fiftieth year, but very seldom untill the sixtieth year, in which time women be still meet and fit for generation; yet do these Flowers or Terms of women come sometimes sooner and sometimes later, according to that the nature and complexion of the body is full of blood, strong, suffereth much labour, is quiet and feeble. It is also a common rule with all them that have experience in natural things, that a woman which getteth not her flowers, like as some which be hot and dry by nature, is barren and unfruitful, and that for those causes that are discovered in the seventh Chapter of the barrenness of men and women, although that it chanceth neverthelesse (but very seldom) that such women do conceive and bear.

This is also the natural custome, that when a woman hath conceived, that then her terms do tarry away, for this blood is prepared for a sustenance unto the child in the mothers womb; like as also after childbirth the same to that end is turned into milk, notwithstanding that it oftentimes happeneth that women with child avoid their Flowers or Terms after the old custome until the very day of birth, as we shall hereafter somewhat intreat thereof; but these women do bring small, spare, weak and not living children into the world, because they have been deprived of the most part of their nourishment. It is also contrary to the opinion of many women, that she shall open a vein when she is half gone with child, in case if she be not full of blood, and the veins not great, therefore is not the same very unadvisedly to be done. Item, in this flowing or course of womens terms, there is another wonderful nature and property, to wit, that so harmful and venomous a matter in mans body, without any hinderance, yea for a great preferment of health, may be retained and expelled. The common experience bringeth with it, and all learned do testifie the same, that these womens terms do bring innumerable sicknesses with them, and have many infectious properties; namely, where the same happeneth to fall, there groweth no fruit, spoileth the vines, the Must will be vinegar, the herbs wither, the trees dry away, iron rusteth, and all metals do darken and wax dim: the same being taken make a man mad, and chiefly the doggs: the Bees leave their hives if they be anointed therewith; women when they have the same, then do they darken through their breath all bright looking glasses, the ayr will be poysoned with them, and children (as it is said) bewitched. Now doest thou see thou stout high minded man, what a precious matter it is that thou hast in the beginning of thy birth, and what the matter is that hath thee nourished? This hath caused the ancient Poets to assimilate this flux unto the wars, saying, that *Mars* is no son of the god *Jupiter*, but of *Juno* onely, meaning by *Juno* this menstrual flux. And truly if this hurtful property be likened to the wars, then is it an expert and true similitude; for what doth more spoyle fruits, vineyards, Must, herbs and trees,

trees, then the wars? what is there which taketh away and wasteth more iron? how many bright harnesses be thereby darkened? where beareth madnesse more mastery? where are men more like to mad doggs then in the wars? how can the ayr be more venomd then through the stinking dead bodies? Here is now sufficiently spoken of this matter, now we will proceed with our medicines.

How to prefer and move the Terms or Flowers in women. §. 2.

FOR the first, we will speak of the causes whereby the terms be detained, the which be outward and inward. The outward causes be sore labour, hunger, care, great fatnesse, agues, dropies, consumptions, and some disease of the womb. The inward causes be a bad complexion, of heat, cold, dryth, or of moysture, whereby the vertue expulsive is weakned, so that it is not strong enough for to unburthen her self of the superfluities. Or that there be any malady in the Matrix or mother, to wit, if the neck of the womb be stopt and obstructed, and is swolne too, like as it may easily happen in the mother or in the veins of the same.

Now for to have some certain or infallible knowledge of these things, there may outward causes be easily perceived by the declaration of the patient her self. If it come through weaknesse of the expulsive power, then is it perceived by the heat, by the thirst, by the swift and strong pulse, and other signs of heat. But if such be caused through cold, then is the woman bleak, sleepey, without any thirst, the arteries of the pulse beat slowly, and the urine is of loathsome colour. If the disease be of any inward part, then doth the whole body declare the same through the great fatnesse or leanness. If such be caused through any of the four humours, that doth the blood sufficiently shew, which therein beareth sway. This obstruction doth bring to women no small sicknesse, besides that as it is said) they be barren, for that they fall thereby otherwhites into *Maniam*, (which is madnesse), into the falling sicknesse, suffocation, swellings, and impostumes of the womb, and of the other parts adjacent unto it, slothfulnesse and heavinesse of the whole body, great unlustinesse, wambling and parbreacking, coughing, and a heavy breathing, the dropie and detention of the urine, and of going to the stool: heavinesse of the mind, great pain of the head, and at last into the gout.

And to remedy all these diseases, therefore will we first of all prescribe certain common rules, whereof the first is, in case that the Terms be obstructed in a dry body, then must one beware of all those things that might cause either heat or dryth, to the end the disease be not increased thereby. The second is, if in the stay or detention of womens flowers the blood had course toward any other part of the body, then is it advised that the same blood be drawn out, which otherwise might be spoyled. Thirdly, to prefer these flowers, it is then needful that the veins be opened under the Matrix, that the blood may be drawn downwards. Fourthly, there is meet for this the strong binding of the thighes, and to hold the same a certain time bounden. Fifthly, if the disease come for that the veins be stopt in the Matrix, (be it of whatsoever occasion that it will) then is the blood to be diminished by opening of a vein, and to be diminished through laxative medicines, through abstinence, through exercise, and such like means. Sixthly, all strong things, as Hellebore, *Euphorbium* and *Nardus* seed (which is wont sometimes to be adhibited from below) must be but a very little, and not to be holden long therein, to the end that thereby the Ague nor any other anguish be caused. Seventhly, all that moveth the urine doth also move the Terms. Eightly, where there is observed no good order of dyet in eating or drinking, there can also no good advice nor remedy do any good at all. Ninthly, for to prefer the Terms, is first of all the same to be approved through gentle remedies, and at the last through stronger means. Tenthly, all warm and well favouring things are very meet for this if they be layed upon the navel, upon the privities, and upon the parts about it. Eleventhly, if this disease be caused through any ulcer, impostume, Ague, or any other cause, it is first to be practised how to remedy, and afterwards to move the flowers. Twelfthly, in case it be perceived that this detention of the flowers or terms doth cause any other sicknesse, or increaseth it, then is all diligence to be had to provoke the Terms: and if so be that the same cannot be effected, then may the vein be opened in the foot, and boxing cups be adhibited. Thirteenthly, because there is a great space from the stomach and the liver unto the Matrix, then is the Physick so to be tempered, that the same in so great a distance be not infeebled. Fourteenthly, all that

is to be put into the wombe is to be tyed to a strong threed, that one when he list may draw it out, and to the end also that through the long continuance there, it bruise not the neck of the mother, or cause not an Ague.

And to the end that we may come to the remedies for to open this obstruction, therefore first of all be the causes of these obstructions to be thought upon, in case that the same be caused of some outward accidents, like as of too great labour, great heat, of too much fasting, and such like, then is the same presently to be prevented. In hot causes are cooling things to be used: in cold warming things, which do open the obstructions. In a body that is full of blood are the veins under the Kidneys to be opened, which be most necessary to people that have not the termes: and if so be that hereby, and other more lettings of blood is nothing profited, then is one to come to the inward and outward remedies, wherein be three manner of wayes to be followed, which shall be described, of which each one may chuse what seemeth to be best and fittest for it.

And because that it is not bad counsel to rehearse and shew the simples which may stir up the termes, therefore we will here discover a good part of them; and first all that be warm by nature, and are weakest, are these, the roots of Smallage, of Fennel, of Butchers broom, of Sperage, of Parsly, of Grasse, Madder, Calamus, *Asarabacca*, Ireos, Valerian, white *Dipsamus*, and Elecampane roots. Item, the seeds of *Ruscus*, Lupins, seeds of both kinds of Parsly, Silver mountain, of Sperage, of Smallage, of Annis of Fennel, of Comin whether it be raw or confectioned, the herbs are these, Cinquefoil, Mugwort, wild Mints, Marjoram, Feverfew, Harts tongue, Spikenard, Wormwood, white water Mints, Juniper, wild Thyme, Lovage, *Cuscuta*, Maidenhair, Southernwood, and washt Turpentine.

These ensuing are much stronger, as Hemlock, Rue, Centory, *Laureola*, Savin, *Euphorbium*, *Ammoniacum*, *Sagapernum*, *Mirra*, *Opopanax*, and *Asa fetida*, the seed of *Nardus*, Mustard seed; Pepper, Bevercod, Coloquint, black Hellebore, *Pieretrum*, *Calamus*, roots of Celandine, the juice of wild Cucumbers, Licebane seeds, Boras, the galls of steeres, of hens, and of all other beasts.

The odoriferous things which prefer womens termes, be these, Indie *Spica*, Cinamom, Cassie wood, *Costas* roots, *Ameos*, *Muscus*, *Spica Romana*, Squinant, *Gallia Muscata*, and such like. They that may be burnt to receive the vapour thereof be these, viz: *Opopanax*, *Saponaria*, Frankincense, *Blatta Byzantia*, *Lignum Aloes*, and red Storax.

These be now the cooling things which prefer the termes, to wit, the seeds of small Endive, the seed of Melons, of Gourds, of Pompeons, of Cucumbers, of Endive, of Lettice, &c. and other more which shall be discovered hereafter; of all which pessaries may be made to use in the womb: also plaisters, salves, powders, oyls, potions, and baths, all as the cause requireth, and that necessity compelleth like as there be many sundry described hereafter, and now we will proceed.

The first meanes for to provoke the Termes, is to be described somewhat at length, wherein there be many sundry medicines of divers and sundry Physitians ordained and added together, out of which each may choose what is meet for him; but in the other twain we will be somewhat briefer, therefore one may take out of them all that might be wanting in this, and so first begin with those things which be meet for this to bring the body into health, and to shew therewithall how such obstructions and hinderances of the termes may be taken away, for which this syrup following is to be prepared; Take Mather two ounces, Lovage roots, the roots of Sperage, Cypres roots and Grasse roots, of each one ounce and a half, Silver mountaine two ounces, Baulm two ounces, Balsam wood and the fruits of the same, of each one ounce, *Spica* of Indy half a drachme, Licorice, Currans, Rosemary flowers, and *Stechedos* of each one ounce, Hony six ounces, white Sugar nine ounces, boyl a syrup of it, clarify it, and give thereof two ounces tempered with the decoction of *Ceeres*.

Another take Mather two ounces, Sperage roots, the roots of Butchers broom, and Cypres roots, of each one ounce, Corn mints, Valerian, Savine, white Water mints, and Pennyroyal, of each one handfull, Baulm two handfulls. Silver mountain two ounces, Balsam wood, and the fruits of the same, peeled Melon seed, of each one ounce, Spikenard half an ounce, Licorice, Currans, of each half an ounce, Hony and Sugar, of each six ounces, make a syrup of it, and give thereof at each time one ounce and a half, or two ounces, with the broth of *Ceeres*.

Anothe. Take the water of Smallage, the water of Lupins, of Sperage, and of Fennel,

nel, of each six ounces, Indy Spica one quarter of an ounce, Cinamom one drachme, *Ammoniacum*, and *Opopanax*, of each one drachme and a half, Parsley seed, and Fennel seeds, *Ameos*, wild yellow Rape seed and caruway, of each one quarter of an ounce, Gromell seed, stone Parsly seed and Agrimony, of each one handfull, Galangal, Cinamom and Saffron, of each half a drachme, syrup of Violets two ounces, Quince kernels, Mallows seed, of each half an ounce, see the them all together in two quarts of Gourds water until the third part be wasted, then strain it thorough, and then temper it with a little of the foresaid water and the syrup of Violets amongst it, and boyl it with so much hony as you please. Last of all strew some Cinamom in it, and as much vinegar of Squils, untill it be somewhat sowerish, then use it as the former : this forceth very vehemently the Terms.

For this is also very good the common syrups which be alwayes prepared at all substantial Apothecaries, as the syrup of Mugwort, of Maidenhair, of Cicory, with Rubarb, and the syrup of five roots.

When as now this syrup hath been used like as behooveth, then must be proceeded : and for to proceed orderly, it is very needful that women be purged of all superfluous humours, which may be done very commodiously with the confection *Benedicta* or *Hiera Picra*, tempered with the decoction of Madder : and of the foresaid confections you may use three quarters of an ounce, or an ounce, each apart or together. Afterwards are these laxative things to be used : Take Sene leaves, Pennyroyall and Madder, of each a like quantity : see the them in small white wine, and give thereof about three ounces at once.

Or take Pennyroyal, Nep, Southernwood, Rue, Centory and Hyssop, of each one handfull, Savin, Feverfew, of each one handfull and a half, *Opopanax*, *Ammoniacum*, Galangal, of each one drachme, Cinamom, Madder, of each one handfull, Myrrhe one quarter of an ounce : see the them all together with a quart of water until the third part be wasted, then take thereof two or three ounces fasting at one time.

Item, take the roots of Smallage, of Sperage, of Fennel, of Parsly, of *Carduus Benedictus*, of Butchers broom, of each one ounce and a half, Annis, Fennel, Caruway, and *Ameos* of each one drachme and a half, Mugwort, Pennyroyal, Mints, Horehound, Feverfew, and *Asarabacca*, of each half a handfull : see the them all together in two quarts of water unto the half, wring it together through a cloth, and mix therewith the syrup of the five roots, *de Calamintha*, *de Artemisia*, of each a like quantity, drink thereof in the morning and in the afternoone.

Another. Take Mints, Balm, Pennyroyal, Marjoram, and Southernwood, of each one handfull, Annis Fennel, Caruway, of each one ounce, the roots of Polipody one ounce and a half, Cicorie roots one ounce : cut the roots of the herbs very small, and see the them in a quart of water untill the third part be consumed, afterwards strain it through, and make it as sweet as you please.

Another potion with wine : Take Savin and Mugwort, of each one handfull, put two quarts of wine unto it, and let them see the together until the third part be wasted : take thereof evening and morning at each time two spoonfuls. Do you now desire to make a common potion ; then take Wormwood and Rue, of each one handfull, five or six pepper corns, see the them all together in a quart of wine, strain it then through, and drink thereof. In like manner may you see the Mallows in wine and drink thereof, it is also very good.

This potion following is very good and pleasant : Take a pint of good wine, Sage half a handfull, Cloves, Saffron and Mace, of each half a scruple, stamp them altogether, and bind it in a fine cloth, and hang it a night and a day in wine, wring it out oftentimes, divide it into three parts, and take one draught of it five hours before meat, the other draught after noone and the last after supper. But this is to be done in the wane of the Moone, and eat very little.

Item, take Hartwort and Pepper, of each one drachme, pour a pint of wine upon it, and drink thereof in the evening and morning, it mooveth much, and cleanseth the womb or Matrix from all bad humours.

Or take the herb Caruway one handfull, Mugwort one handfull and a half, Arfesmart one handfull, *Asarabacca* one drachme : see the them together in two quarts of water untill about the half, and drink thereof in the morning fasting a good draught.

Another. Take Pennyroyal one handfull, Marjoram gentle as much also, Mace one drachme,

drachme, and one quarter of an ounce of Bayberries beaten grossely : bind them all together in a cloth, and pour thereon twelve ounces of wine ; but let them seethe together in a Can in hot water the space of an hour, afterwards wring out the cloth, and drink the half of this wine in the morning, and the other half in the evening after the mealetide.

Item, take Mugwort, Feverfew, Pennyroyal, Baulme and Mallowses, of each one handfull, seethe them together in pint and a half of wine, and use them as before.

Take the rootes of Cicorie four handfulls, take out the woody hart, and cut them small, then pour two quarts of wine upon it, and let it seethe so long until the force be gone out of it, afterwards wring it out, and then seethe it unto a thin syrup, and so take every morning a spoonful or twain of it.

This following doth open much all obstructions, and forceth the Termes : Take of the confection *Triphera* without *Opium*, Mather and Silver mountain, of each half an ounce, Fenegreek, Turkish beanes and Ceeres, of each one quarter of an ounce, seethe them all together in eight ounces of water even unto the half, then strain it through, and temper in three ounces of this decoction the *Triphera* aforesaid. The Physitians therefore do occupie this *Triphera* without *Opium*, because it is forcible and strong. Also they temper therewith otherwhiles one drachme of the juyce of Savin, sometimes also *Mirra*, red Storax, *Bdellium* *Euphorbium* or *Opopanaxum*, all according to the importance of the cause. Item, take Cassie wood three drachmes beaten very small, and give it with wine.

One that is more feeble : Take Myrrhe, Bevercod and red Storax, of each three drach. Savin, fine and course Cinamom, of each one drachme and a half, make an electuary thereof with Hony, then take one quarter of an ounce thereof, and temper it in wine for a potion. Item, take Saffron one drachme or more, and drink it with wine or with Mallowses water. Saffron onely preferreth the Flowers ; the same doth also one drach. of powdered Cardamony.

Here now do follow certain powders which are to be taken in the potions, and amongst all things is nothing more to be commended then the Trochisks *de Mirra* which are thus prepared :

Take Myrrhe one drachme and a half, Lupins two drachmes and a half, Rue white water Mints, Candy, *Diptamus*, Comin, Madder, Elecampane roots, *Sagapenum*, *Opopanaxum*, of each one drachme, then make Trochisks thereof with the juyce of Mugwort, and give half an ounce thereof with the water wherein Juniper berries be decocted. Take Bevercod one drachme, powder of Mints half a scruple, drink it with wine, it is also very good for this use. Item, half a scruple of the Blossomes of the Nut tree taken with wine doth the same, S. Johns wort doth also move much the terms.

Also these wines ensuing are very good for it, viz. wine of Elecampane roots, of Marjoram gentle, of the herb Bennet, of Betony, of Gilloflowers, and of Rosemary. Item, take one handfull of Juniper berries, Madder, Cinamom and Myrrhe, of each half an ounce, seethe them all together in Mugwort water untill the third part be evaporated, strain it, and put one drachme of Boreas unto it, give thereof a good warm draught twice or thrice a day.

The same doth also the *Trochisci Gallie Muscatae Rafis*, four scruples taken with warm white wine, it helpeth immediatly,

It is here also to be noted, if so be that the Patient might drink no wine, then take the leaves of blew Flowerdeluce, stamp them and seeth them in Capon broth, and let her drink it : this is also found many times good, and it expelleth also dead children.

Item, take the scull of a Capon before he is boyled or roasted, stamp it, and drink it with Pennyroyal water : this may suffice for the potions.

Take Pennyroyal, Italian Comin, Mints, Ireos, Hartwort, Mather and Myrrhe, of each one quarter of an ounce, make an electuary thereof with clarified Hony, take two drach. of it, and drink a good draught of Beer or wine after it, wherein Savin, Pennyroyal, Mugwort, Fennel, rootes of Sperage, of Smallage, and of Parsly have been decocted.

Item, take of the electuary *Anidodum Hamagogum* half an ounce, and give it fasting. If you had rather drink it, then temper four ounces of Mugwort water amongst it, and use it against the time that the Flowers doe come. Treacle, and Mithridate do also force the Flowers very gently.

Amongst

Amongst the confections there be good for this the confectioned Elecampane roots; the confectioned *Eryngius*, conserves of Piony, and Myrrhe roasted in an apple. The Italian women do highly commend the electuary *Diacyminum*, if one do take every morning one quarter of an ounce of it, then will the terms come within the space of a moneth as they affirm: it doth make fruitful, and strengtheneth the stomach. The confectioned *Calamus* is especial good, if the obstruction do come through cold. Fennel seed confectioned forceth also the flowers: likewise also Comin and Caruway; Cinamom and Saffron are also to be used in all things.

These pills ensuing are also to be prepared; Take the pills *Alephangina* half a drachme, *Aloe* two scruples, beaten Savin one scruple, make fourteen pills of it with the water of Mugwort, and take the one half thereof at once; they do move the terms and the stools, and are also very safe.

Others. Take *Muscus* and Myrrhe, of each four scruples, Stechas, Mather, Pennyroyal, Citron pills, long Pepper, Cassie wood, Cassie pills, Piony seeds and *Calamus*, of each three quarters of an ounce, Indi Spica half a drach. make pills thereof with the juice of Mugwort, whereof take one drachme at once. The ancient Physitians do command pessaries to be used, as *Euphorbium* wrapt in wool. Item, take Hellebore and the juyce of Wormwood, of each one quarter of an ounce, *Ammoniacum* one drachme, temper it with Ox gall. But here ensue sundry which are safer: Take Bevercod and Myrrhe, of each a like quantity, *Muscus* a little, then form it with the oyl of Behen as an Acorn, and tye it to a threed, and put it into the Matrix before.

Or take fresh Rue, Wormwood and Coloquint, of each a like quantity, form a pessary thereof of Oxe gall. Item, take white Watermints, Swine bread, *Agnus Castus*, Rue, Savine, Mugwort, Pennyroyal, Marjoram, Radishes, Southernwood, Nettleseed, Juniper leaves, Mather, white Hellebore, Centory, Myrrhe, Bevercod, Elecampane roots, *Sagapenum*, *Opopanax*, of each one drachme, *Gallia Muscata* one scruple, stamp them all that is to be stamped, and then make a pessary of it with the juice of wild Cucumbers and Ox gall, and use them as before.

Another. Take Gentian and Pennyroyal, of each one quarter of an ounce, *Nigella* seeds one drachme, temper them together with powdered figgs, and with a little of the juyce of Mercury; these do make no heat like as the other.

Item, take Gentian two scruples, Coloquint and *Nigella* seed, of each one drachme, temper them together with the juice of wild Cucumbers. Or if you will have it stronger, then put some white Hellebore unto it: there be also sundry other made which be stronger and milder, according to the importance of the cause of the foresaid cold and warm things, each according to his good pleasure and content. Amongst all these things, and all that may be injected into the body and neck of the Matrix or womb, this general rule is to be observed, that the same may be used as well before as after bathing.

Outwardly may one bathe and foment with all that which here ensueth; Take *Asarabacca* half a handful, *Ebulus* leaves one handful and a half, Feverfew, Mints, Mugwort, Agrimony, Marjoram and Betony, of each one handful, Camomil, Melilot and Roses, of each half a handful; cut all the herbs and seeth them, like as hath been taught oftentimes. It is also very commodious and good to sit in warm water wherein Mallows have been decocted. Or take Mugwort and Savine, of each three handfuls, Mallows, Hollihock roots and Bearfoot, of each one handful, Fennel seeds, Parsley seeds, Annis, Dill seeds, Orage seeds, wild yellow Rape seeds, and *Asarabacca*, of each half a drachme, Camomil, Eldern flowers, Rosemary and Stechas, of each one drachme; make a little bag thereof, and seeth it in water, and then sit upon it.

Another. Take Mugwort, Savine tree, of each three handfuls, sweet *Costus* roots, Mallows, Hollihock roots and Bearfoot, of each two handfuls, the seed of Mallows, of Hollihocks, of Southernwood, of Linseed, of Fenegreek, of *Cuscuta*, mustard seed, of Lavender and of Silvermountain, of each one ounce and a half, Parsley seed, Fennel, Dill seed, wild yellow Rapeseed, and *Asarabacca*, of each half an ounce, Camomil, Eldern flowers, Stechas, Rosemary flowers, of each one ounce; seeth them as before, and then sit upon the bag. For fomentation, you are to use that which followeth hereafter; Take Camomil, Mugwort, Savine and Nettle roots, of each one handful, seeth them together in water, and receive the vapour from beneath. Item, take Rue, Sage, Southernwood and Savine, of each one handful, put them together into a new pot, and close it tight, but leave a hole open above on the cover, wherein a tap may be put whilest it boyleth; afterwards draw out

the tap, and receive the warm vapour from beneath, as is said before. Or take Myrrhe as much as you will, temper it with the juice of Mugwort, and let it dry; afterward put filed Harts horn unto it, to wit, the third part as much as there is Myrrhe, then strew this powder upon a hot tile, and receive the smoke beneath, but round about cover you close. You may also take for it, Pennyroyal, Rue, Savine leaves, and use them alone. Item, take Violet leaves two handfals, Myrrhe half an ounce, let them seethe together in rain-water, and foment therewith as warm as you can abide it. Take Pennyroyal, Nep, Southernwood, Rue, Centory and Hyssop, of each one handful, Savine, Feverfew, of each one handful and a half, Cinamom, Galangal, of each one drachme, Silvermountain and Mather, of each half a handful, Myrrhe one quarter of an ounce, beat them all grosse together, and seeth the same in a quart of water even to the half, and then use it as before; this also provoketh urine. Or take Pennyroyal, Marjoram, Sage and Mugwort, of each one handful, seeth them all together for a fomentation: for to fume, you are to take a little Coloquint, cast it upon a hot stone, and receive the fume from beneath; it greatly provoketh womens terms: but note, that Coloquint is very sharp, and that the said well favouring spices and other things be much safer for to fumigate withal. Or take Dill, Camomil, Melilot, Squinant, Cassie wood, *Cosmos* roots, Sulphur, Rue, Marjoram, Stechas, Southernwood, any of all these, or part of the same. To set boxing cups upon the thighes is also very behoöveful and available.

Drink the juyce of Savorie in the morning fasting two or three daies.

Or take of Castoreum, Acorns, seeds of Fennel, ana. 3. 1. powdered and searfed, and drink it with wine; if she be with child, it comforts it; if she be not with child, it brings down the Flowers.

Or take Dittanie roots, Angelico roots, *Aristolochia Rotunda*, ana. 3. 2. Saffron 3. 1. or 2. and with honey make an Electuary; the Dose is 3. 1.

Also make a pessarie of oyl, Nigella and *Diagridium*, roll them hard in a cloth, and put it up that it may touch the upper part.

Or put a clove of Garlick into the Matrix, have a threed put into it, and put into the Matrix so high as may be.

Seeth a Lillie root, and oatmeal and Linseed bruised, and Mallow leaves in new milk, and apply it warm to the secret parts and belly below.

Plaisters and Unguents.

Take the muscilage of Fleawort and of Linseed, of each one ounce, unsalted butter two ounces, Hens grease, Ducks grease, Goose grease, and the marrow of Calves bones, of each half an ounce, *Ammoniacum* one quarter of an ounce, oyl of *Sesamum* and oyl of sweet Almonds, of each five drachmes, Wax as much as is needful for a salve; then anoint you therewith behind and before, from the navel downwards, but not before that you have used all other means of bathing, letting of blood, potions, &c. Item, take of the confection *Benedicta* half an ounce, Turbith one quarter of an ounce, *Nigella* seed three drachmes, decocted Hony as much as sufficeth for to make a plaister. This is to be layed over the privities as before.

If so be that one perceiveth the terms after the use of this foresaid means, some do advise, and that very well, that this potion ensuing is to be made; Take Mugwort, Seneleaves, and Pennyroyal, of each half a handful, Cinamom half an ounce, Mace 3. drach. seeth it all together in three pints of good wine until about the fourth part be wasted, and this in a Can stopt tight in seething water: this expelleth the terms unto her due time.

The other orderly mean for to prefer the terms, is, that first of all the *Saphea* or *Media* shall be opened, and that afterwards a long bag is to be made, and to be filled with any of the foresaid herbs, which you like best, and then put unto it one quarter of an ounce of *Gallia Muscata*, and wear it so upon the privities. Afterwards make of one quarter of an ounce of the foresaid *Gallia* with the water of Mugwort nine pils, and take three thereof at once in the morning early, then make a pessary of the length of a finger, and fill the same with powdered Mercury, and put it into the place. Set boxing cups also upon the thighes, and in the hams, and then rub the leggs downwards with warm clothes.

Squinant and Madder decocted also in the water of Maidenhair and drunken, are also highly commended.

Item,

Item, take the pipes of Cassie when the Cassie is taken out, and let them be well scraped on the outside, as many as you will, Cinamom, Mace, Saffron, *Diptamus* and Baulm, of the one as much as of the other; make a powder thereof, and take a drachme thereof every morning with water of Mints; the same moveth them very gently.

But as much as concerneth letting of blood (whereof mention is made before) some do advise, and not without reason, if in case that a woman hath not had her Terms a long time, that her vein is to be opened besides her little toe, and the next day afterwards on the other foot.

The words of *Hippocrates* and of his expounder *Galen* be true, that the letting of blood and hunger do cause women with child to miscarry, for that thereby (they say) will the nourishment of the child be withdrawn.

Therefore good heed is to be taken in these things, for that many women have this for a custom, whether they be fat, grosse, strong, or lean, that they alwaies open a vein at the half of their going with child, like as we also have before admonished in the first Section.

But if one will needs be let blood, then must after the same (or else without letting of blood) bathings be oftentimes used, for which is Pennyroyal to be taken, field Mints, Southernwood, Centory and Hyssop, of each one handfull, Savine and Feverfew, of each one drach. Silver mountain, Madder, of each one handfull, Myrrhe one quarter of an ounce; stamp and chop them all small, and let them seeth in sufficient water: then make thereof a bath for the reins of the back, or a fomenting for the bottom of the belly. The boxing cups, whereof we have also spoken before, draw the blood downwards: Like as doth also the strong binding of the leggs.

The third mean is as hereafter followeth; three hours after the rising of the Sun, shall the *Saphes* of them be opened on the right foot which have not the flowers, and about five ounces of blood drawn. The next day after is this purgation following to be given: Take *Agaricus*, Turbith and Rubarb, of each one drach. *Indy Spica*, Ginger and Mace, of each six grains, *Sal gemma* one grain, Agrimony, Mugwort, of each one ounce and a half, let them be steeped four hours; afterwards wring it through a cloth, and temper amongst it three drachmes of *Benedicta Laxativa*, and then drink it betimes in the morning. The third day afterwards you are to begin to use this potion; Take Fennel roots, Parsley roots, Sperage roots, the roots of Butchers broom, and of Smallage, of each half an ounce: these being all cut small together, then seeth them in a quart of Well water unto the half; afterwards sweeten the decoction with Sugar, and then drink thereof five ounces, and so continue this the space of eight or ten dayes. In the mean time is the body to be kept open with gentle Clusters, or else they are every evening after supper to swallow a pill of *Alephangina* or of *Aloes*. Afterwards it is very good, that three times in 24. hours all the back bone be anointed with this salve ensuing; Take the oyl of wallflowers two ounces, oyl of Saffron one ounce, the grease of Badgers and of Hens, of each half an ounce, Saffron, *Indy Spica*, *Lignum Aloes*, and Mugwort, of each half a scruple, Wax as much as is needful for a salve. After the foresaid potions are these pills following to be used: Take *Pillula foetida* two scruples, *de Hiera composita* one scruple, make seven pills of it with the confection *Benedicta*.

And if so be that through all this advice the Terms do not appear, then are the tops of the thighes, hard by the privities, to be bounden hard: but if that will not help, set immediately hot cups behind on the calves of the legs, setting them up and off. Lastly, then make this bath following. Take Pennyroyal, white water Mints, Marjoram and Smallage, of each three handfulls, Savine six handfulls, *Opopanacum*, Myrrhe, of each 3. β . Hartwort, Rue, of each 3. handfulls; seethe them all together in sufficient water until about the half, but leave the herbs in it, and then make a bath of it for the reins even to the navel, and sit therein the space of half an hour, or as long as you can. When you have rested somewhat, then put some cotton (being dipped in the juice of Mercury) up into the place, and without doubt it will provoke the terms. Every such woman is also to beware of all slimie meats, which is from all hard meat, like as all that is made of Dough, of Pease, of Beans, of Cheefe, of Milk, and all that is drest with them, from all salt, cold and binding things, and from thick raw red Wine; but Cinamon, Saffron, Ginger, and Smallage seeds and roots, Annis, Fennel, Parsley seed, or any of all these is she to use alwayes with her meat.

But if so be that this retention of the terms be caused thereof, for that a woman had

but little blood, did great labour, were weak, lean, not long recovered from a long lingering sicknesse, or had lived a long time in hatred, malice, great sorrow, and such like; then is such to have those meats which nourish much, and she shall omit all hatred, sorrow, and such like. She is to bathe oftentimes in water, to sleep much, to take rest, and to be merry. She must also refrain from letting of blood, except it be a very little. But she is to use Pistacies, Pingles, Almonds, and other nutritive things as is before said. And although it appeared that her terms must be alwaies quickened through Physick, yet it must be begun with the mildest means, like as hath been counfelled before.

How that the excessive course of the Flowers is to be Stopt. §. 3.

VHen this scourse of womens terms getteth the mastery, then be there very heavy sicknesses to be feared, to wit, the dropsie, the consumption, *Hectica*, the pain of the back, the pain of the stomach, feeblenesse of natural digestion, lack of appetite, and such like diseases more. This issue is commonly caused of outward or inward occasions; the outward may be falls, blowes, thrusts, great running, leaping, dancing, walking in great heat, and such like, all which maketh the blood subtile and fluxible. Item, if there break a vein open in the Matrix or Womb, through unnatural and untimely birth, through any ulcers, or through any other bruifings in the neck of the womb, through long use of many hot spices, or of any subtile meat and drink.

The inward causes may be the strength of the expulsive, or the debility of the retentive vertue.

This may also be caused of some disease of the Matrix, and through the moisture of the same. But concerning the part it self, the same may be too feeble, too slippery, too wide, and too much open: yet in case the moisture of this part be caused of it, then is the flux of blood so great, that the Matrix and the parts adjacent cannot contain the humours, or these humours be so sharp, so subtile, so hot, so venemous, so salt, so biting, so cold, or so waterish, that the same cannot be retained. The outward causes may be enquired of the patient her self.

But if this disease be caused of the debility of the retentive vertue, then is the woman bleak or pale of colour, and weak. The signes of the same part be when as it waxeth lean, and consumeth: each humour may be adjudged out of the property of the body, like as we have taught the same elsewhere, as heat, of the fulnesse of the veins, thirst, itch, ill-favoured or loathsome colour of the face and of the whole body.

If then such proceed out of blood, then doth the colour of her Terms alter, and will be whitish; or if the same proceed of *Cholera*, then are the flowers somewhat yellowish, and if of *Melancholia*, then darkish, blew or black. By the foresaid colours one may easily come unto the full knowledge what humours might be the only cause of this excessive moisture, whereby may be known how to choose of these remedies following, where-with the excessive course of the Terms may be stayed.

But first of all there be for this purpose certain rules to be noted. First, you must never bathe for this excessive course of the Terms, neither yet use any kind of things which bringeth heat with it. Secondly, when this kind of issue cometh by reason of the fulnesse of the body, as it were an unburthening and cleansing of the same, then is it by no means to be stayed, if thereby be not feared a great debility. Thirdly, if so be that women be full of blood, and this fluxe come too abundantly, then is the *Basilica* vein to be opened, thereby to withdraw the blood. Fourthly, in case that it be perceived that red *Cholera*, or any other mixed moisture were cause of this flux, then is the same moisture or humour to be purged with appropriate medicines, yet mingling alwayes amongst it some binding and comforting things. Fifthly, infection is also very needful for this disease, or some such like instruments to be used, whereby the medicine might be brought into the womb. Sixthly, if any astringent things may be brought into it through any instruments, then may they help much better and a great deal sooner then those things that be given by the mouth. Seventhly, because that with this menstrual flux, not only the vertue digestive, but also the whole body is weakned, therefore are they to be sustained with light meat, as with yolks of eggs, with young flesh, and broth of the same, and such like. Sometimes also with water wherein the seed of Butchers broom is decocted or tempered with water of Sorrel. Eightly, it is also good to set great boxing cups under the breasts unpickt. Ninthly, this flux of the Terms is not to be stopt so long as one seeth that the woman hath her lively colour, and

and doth remain strong and healthy : but as soon as one perceiveth that her strength fadeth away, then be all means to be sought for to stop it. Tenthly, if one desire to purge any of the four humors, and to separate it from the clean blood, then may that best be effected by vomits, for that thereby the matter is derived to another place, and stay their course that they fall not downwards. Eleventhly, these women are to abstain from all heavy labour, and from all that maketh the blood fluxible and thin.

By all these forementioned propositions may be clearly seen and marked, that if any desire to cure or remedy this disease, that these women must lead an easie life, and keep themselves quiet. They must also live in such a place where it is not too hot nor too cold. They must also eschue all thin and waterish meats, viz. from fruit, except all that which bindeth; in like manner also from all meat which cause any kind of heat. But all kinds of roasted fowls, and all that maketh grosse blood, as Rice, Wheat and Lentils be good for them. They must also beware of overcharging them with meat or drink, whereof the causes be declared in the seventh rule, and afterward to put in practise these remedies following, according to the importance of the cause.

Thus for to speak first of the things which inwardly are to be used, hath been spoken of before, and also what order of diet, or government of life is to be observed. But in case that any do desire any amplier declaration of it, then let him look the seventeenth Chapter, and 17. Sect. where is spoken of the red or bloody flux, which also is most meet for this use. But for this menstrual flux, may this confection following be used : Take the *Species Triasantali* and *Diarrhodon Abbatis* of each one drachme, prepared fine *Bolus* two scruples, Bloodstone washed in Plantain water, and make tabulats thereof. Or use this powder following : Take *Species Triasantali* one drach. and a half, *Diarrhodon Abbatis* one drach, *de Gemmis Frigidis* one drach. and a half, prepared Coriander two scruples and a half, washed Bloodstone one drach. prepared *Bolus* half a drach. Shepherds purse two scruples, Roses, Coral, of each half a drach. Cinnamom one quarter of an ounce, Sugar as much as you please, then make a powder of it.

Item, take prepared *Bolus* one drach. sealed earth two scruples, Tormentil half a drach. *Bursa Pastoris* one scruple, *Species de gemmis frigidis* one drach. and a half, prepared Pearls one drach. Rubins Pomegranats, Smaragds, Jacints, Saphirs, of each half a scruple, Roses, red Coral, Saunders, of each one scruple, Sugar three ounces; make a powder thereof, and use it in broth, or strewed in meat. The confection of the refuse of iron is also very profitable to be used for this disease, especially if so be that the lesser remedies will not help.

Another. Take Conserve of Roses two ounces, Bloodstone, *Trochiscos de Carabe de terra sigillata*, and *de Spodia*, of each one drach. make a powder thereof, and temper them well together; afterwards take every time thereof about one drach. Take conserve of Roses six ounces, conserve of Burrage, Buglosse, and Balm, of each one ounce, prepared *Bolus* one drachme, prepared Pearls one quarter of an ounce, of the five precious stones above mentioned, of each one scruple, Cinamom one drachme, make an electuary thereof.

Another. Take of the dryest conserve of Roses three ounces, Marmalade two ounces and a half, red Coral one drach. *Bistorta*, *Trochiscos de Carabe* and prepared *Bolus*, ana. 3. ℥. prepared Bloodstone two drach. make an Electuary thereof with the sirupe of Mirtles.

Item, take conserve of Roses three ounces, Marmalade two ounces and a half, conserves of Burrage and Buglosse, ana. 3. 1. prepared *Bolus*, 3. 1. ℥. prepared Pearls, 3. 2. ℥. *Bistorta* one drachme, Tormentil two scrup. red Saunders one drach. then temper them all together with the sirupe of Mirtles unto a confection. The black confected Cherries are very good for this use : in like manner also the preserved Barberries.

Item, hold a root of Galangal long in your mouth, and chew the same small. It is also a common advice which is not to be despised, that tosted bread should be steeped with red Wine, and powned Nutmegs strewed upon it and so eaten.

Item, take fine *Bolus* which is well washed, Mastick, yellow Amber, prepared Coriander, and Dates, of each a like quantity, then take thereof at each time half a drach, with a rere egg. This powder ensuing is also marvellous good: Take prepared Bloodstone three drachmes, red Coral one drachme, and a half, Tormentil and *Trochiscos de Spodio* of each one drach. shaven Ivory, burnt Harts horn, of each two scruples, prepared

Pearls one quarter of an ounce, fine *Bolus* half a drach. stamp all that may be stamped very small; and strew your meat therewith.

Item, take powdered Horsetail leaves one drachme, and bestrew your meat with it. You may also drink of this powder following one drachme, lesse or more with the water of Plantain. Take of the first budded Harts horn, burn them in a potbakers oven thoroughly to white chalk, or give thereof one drachme, or one drachme and a half with red wine or Plantain water. You shall also find hereafter many fundry powders and waters to drink described. Take egshells whence young chickens have been hatched, and Nutmegs, of each a like quantity, temper them together, and drink thereof the weight of a drachme with Vinegar or Wine. The part within the Walnut taken a drach. thereof doth bind much.

Another. Take Tormentil and Nutmegs, of each a like quantity, Plantain seeds half as much, pownd them to powder, and give it in the morning and evening with old Beer.

Item, take *Trochiscos de Carabe* one drachme, beat them to powder, and make a potion thereof with Plantain water; this may be used the space of a whole week together, for that they do calm and stay the flux: the like doth also red Coral one drachme with Plantain water taken every day alwaies before meals.

Item, take burnt Harts horn and pownded Nettle seed, of each a like quantity, and take thereof the weight of one drachme with the water of Plantain. The juice of Yarrow doth bind also in this disease, if one take a spoonful or twain thereof. These juices ensuing may be decocted unto the form of a sirup, for to be used in winter time: like as the juice of broad Plantain, the juice of Shepherds purse, of Yarrow, &c. For this is also good the water of Eldern drunken, and Galangale chewed.

Item, if a woman do flower too much, whether it be in childbirth or otherwise, and that it be feared that she might bleed to death, then take one drach. of red Nettle seed pownded, and let her drink it with Plantain water.

Some do give chopt and boyled Poppy heads to drink, but it is not alwaies convenient: there be much safer things, viz. these ensuing.

Take fine *Bolus* one quarter of an ounce, bind it in a cloth, hang it in a pot of wine, and then drink thereof. Seethe Pimpernel in pease broth, and drink also thereof.

Or take dried Goats dung, stamp it to powder, and drink thereof; it doth not onely stay the menstrual fluxes in women, but also all kind of bleeding. For this also is very meet red Rose water drunken.

Amongst Clifters is this following very highly commended. Take Swines bread, Feverfew, Balm, Rue, Scabious, Rosemary flowers, Southernwood, Cumin, Silvermountain, *Ameos*, *Amomum*, Balsam fruit, Cucubes, Bayberries, *Calamus*, Cassie wood, *Cassia Fistula* and pipes, of each one drachme and a half, Dill seed, Annis seeds, of each one handful and a half, shaven Ivory two handfuls: seeth them altogether by a mild fire in two quarts of water unto the half, and presse it out, take twelve ounces of this decoction, oyl of *Sesamum*, of Rue, and of Pepper, of each half an ounce, Indy salt one drachme, *Diacastoreon*, confection of Bayberries and *Benedicta*, of each three drach. temper them well together, and minister it very warm. With this following a woman is to be fumed from beneath: Take *Alipta Muscata*, *Species Nera*, of each one drach. *Gallia Muscata*, and red Storax, of each three drach. Allome one drachme and a half. Of this powder is a drach. to be used at ounce. This temperature is not easily to be made, because of the manifold simples which do come therein, and it is not onely good for to stay the unnatural flux of flowers, but it is also good for the suffocation of the Matriz, for that it dryeth, and it is good for a barren womb, and especially if the malady proceed of cold. Pessaries and such like; Stamp dried Assé dung, and form Pessaries thereof with the juice of Plantain, and put it into the places.

Another. Take juice of Knotgras and washed sheeps wool, dip it therein, and lay it on the places.

Item, take Frankincense, Pomgranate blossoms, Gals, Antimony, and the juice of Sloes, of each a like quantity, bestrew the wool with it, and use it as before. For this is good also half a handful of pownded Plantain, and use it as before: or make a small Pessary of the juice of Sloes, and the juice of Plimpernel with Cotton.

Outwardly is this plaister ensuing to be used: Take the juice of Plantain 11. ounces, Rose water three ounces, Vinegar half an ounce, red Coral, Amber, Bloodstone

stone, fine *Bolus*, Mirtle seed, Acorn cups, and Frankincense, of each one quarter of an ounce, sealed earth as much as is needful for to make it thick enough: this being all beaten small and tempered together, then make two plaisters of it, and lay the one before, and the other behind.

The plaister *ex Galbano* may also be used, whereof here do follow two sorts. Take *Galbanum* three ounces, *Bdellium* three quarters of an ounce, stamped Feverfew half an ounce, and half a drach. Mirrhe half a drach. melt the Gums in Vinegar. But if they be not clean, then wring them through a cloth, and let the Vinegar see the away, then make a plaister thereof with Turpentine.

The other: Take *Galbanum* as much as you will, melt it, by the fire in red wine, temper fine *Bolus* amongst it, and Dragon blood, of each half as much as the weight of the *Galbanum*, then make a plaister with sufficient Wax and Turpentine.

Item, take powdered Lentils twelve ounces, Shepherds purse, and Plantain, of each 3 handfuls, dried Asses dung, and Goats dung, of each one ounce and a half, Frankincense, half an ounce, Dragons blood, Mints, of each one ounce and a half the juice of Sloes, *Hypocistis*, *Licium* of each one ounce, five whites of eggs, Bean meal three ounces, Gips 4 ounces, but steep the Gips the space of a day in Vinegar, and then make a plaister thereof with the juice of Plantain, so that it may be sodden with the meal until it be very thick. Lastly, mix the rest amongst it, and when it hath stood a good while, and is well tempered together, then take it from the fire, and stir it continually about until it be thorow cold. This plaister is to be laid over all the privities and all the parts about it. The same plaister doth marvellously stop the blood of the Piles, and all moisture of the Matrix of salt and tough humours, for that it is oftentimes approved.

Item, take the juce of Plantain as much as you will, temper therein *Trochises de Carabe*, and then apply them as all the rest.

Or take Wormwood, Nightshade, and Knotgrasse, of each a like much, stamp and wring the juice out of it, then temper as much Rye meal amongst it, until it be as thick as pap, afterwards lay it over the Navel, and over the Privities. Another: take Vinegar dregs, make it hot, and wet a blew cloth in it, and lay it thrice double over the privities.

Before in the third part the tenth Chapter and 5. §. ye have a precious Salve, beginning, Tak Cumin, &c. which is also meet for this use.

There is also a Salve called *De Galia*, which is thus to be prepared: Take Cumin, Dill seed, Caraway, Rue seed, *Ameos*, *Gallia Muscata*, of each one drach. and a half, *Epythimus* one quarter of an ounce, Indy salt two scrup. white Rosin one ounce and a half, oyl of Dill two ounces, oyl of Roses one ounce, Aloe, Cloves, of each two scruples, molten wax as much as is needful for to make a plaister of it, then lay it over the Kidneyes, and over the Privities: this Salve doth not onely stay the flux in women, but also expelleth the wind of the stomach, and hindreth parbraking. Or take *Sandaraca* one ounce and a half, powdered Cypres nuts one ounce, fine *Bolus* four ounces, Plantain seed, and Pimpernel roots, of each two ounces and a half, Starch three ounces, then make it with water wherein Acorns were decocted, unto a plaister or salve, and use it as is said. There may also be made a bath, as here followeth; Seethe the roots of *Curcuma* in sufficient water, and make thereof a bath for the reins.

It is also good to make a bath wherein Allome is decocted, or any of these things following which one will, as Mirtle seed, the rinds and roots of the Elm tree, the rinds of the Oak tree, Pomegranat blossomes and the peels, Acorns, Medlars, Lentils, and such like.

Item, it is said that if one do burn *Rauam Arboream* to ashes, and the ashes worn on the neck, that womens terms will be stopt thereby, but it is to be proved.

In like manner do so some advise, that the mosse of the black or Slo-thorn worn in ones shoes, should also stop the same.

Item, take Shepherds purse, and binde it on the soles of a womans feet. Others advise also that boxing cups should be set under her breast unpickt, for that they draw the blood upwards, and it is also a very good remedy for to stop therewith the flowing of the terms. Likewise it helpeth also exceedingly to binde the arms hard, to the end that thereby the blood might be drawn upwards.

Further, this setting of cups, binding, and all these things that are to be put into the places admonished before, be especially to be used, if it be perceived that through

such superfluous courses women be impotent, and were afraid of present falling into a swoon. In like manner also it is very requisite that she smell oftentimes to cold things, and use other more binding things which be described in the first part, the eight Chapter, and the 7. S.

For a conclusion it is to noted, whether there be heat or cold in this woman, that the medicine may be ordained accordingly. These be all warming things, and they also which stop blood, which do here follow, viz. Frankincense, Mastick, Cipres nuts, *Sandaraca*, *Landanum*, *Mirra*, Storax, Annis, and such like.

Cold stopping things be these, as Camphire, the juice of Sloes, burnt Ivory, Coriander, Dragons blood, Saunders, blood stone, *Hypocista*, fine *Bolus*, *Ruscus* seed, Mirtle seed, Gals, Pomegranat blossoms, the seed of Plantain, the seed of Melon, of Cucumbers, of Gourds, of Pomepeons, and Pimpernel roots, &c. whereby all tempered medicines may be adjudged.

Drink the powder of Parsnip seeds, and nettles seeds in wine, and it stayes the flux of flowers.

Or drink the powder of Coriander seeds in wine.

Or, drink the power of red Saunders in posset ale, or wine. Prob.

Make a fumigation of Broom, and let the woman receive the same into her matrix and it will stop the courses.

Also, R. of Pomgranat flowers, Acorn cups, Cipres Nuts, Sumach, Myrtles, ana. ʒ. 2. Red-roses, M. 2. Plantain, M. 3. seeth them in red wine, lb. 3. unto lb. 2. and with a Sponge foment the Reiny and Privy parts. After the fomentation, apply this plaister to the reins. Cinnamom, ʒ. 1. wheat flower, ʒ. 2. Saffron, a ʒ. Figs, pound, ʒ. the flesh of Quinces and Medlars, ana. ʒ. 2. oyl of Quinces, oyl of Saffron, of Roses, of Myrtles, ana. ʒ. 2. spread it upon leather and apply it to the Reins and back.

If a woman drink the sex that runs out of the oak tree with rain water, it stayes the flux of blood.

Of the whites, or white flux in Women. S. 4.

The disease which women do call the whites, and the Phisitians *Menstru alba*, hath a great acquaintance or fellowship with the avoidance of humane seed, or the running of the reins, whereof we have written at large before in the sixt Chapter: and it is also very evidently declared, that such kind of fluxes be caused through cold causes, which is here also to be noted.

But above all that which is there discovered do all famous Phisitians commend, that if it proceed of heat, women be first of all to be purged: for which, Cassie is passing good: afterwards give her every other day one drach. of *Trochiscos de Carade* tempered in Plantain water, or a quarter of an ounce of *Triphera ex parte Phenonis* tempered with a little fine Bolus. The reins are to be annointed with the salve of Roses, and with other things more which be prescribed in the spermatical flux. There is also to be given her every second or third day one drach. of the filing of Ivory to drink with Plantain water: and the cold loosings of *Diamargaritonis* she also to use oftentimes.

Item, take *Camphora* ten grains, bruise it small, beaten Amber one scruple; drink them together with Plantain water, it is a very good medicine.

For this is also esteemed to be a sure remedy, the first buds of the Blackberry bush, and the berries thereof dried, powdered, and drunken every day one drach. with red wine; or twice a day. There may also be made a confection of the said berries when they be ripe, seething the same with honey or Sugar, and to use thereof daily.

But in case that this disease proceed of cold, whereto some do make six kinds of baths which are to be used one upon the other, which me thinketh to be much too strong, for that they take Sulphure, Allom, steeled water and strong Menagegs, as Feverfew, Mugwort and Bayberries: afterwards again all things which be contrary, as Oken buds, Knot-grasse, Squinant, &c. Therefore will we leave the same unmentioned: but for this must be taken the flowers of dead Nettles powdered, the weight of a drachme with wine. Confected Annis seed is also very commodious for this. But in case that the issue be very sharp, then beat whites eggs of with Rose water, and make clothes wet in it, and put it up into womens secrets.

Of the suffocation or ascension of the Matrix. § 3.

THisterrible sicknesse is in many things most like to the falling evil *Epilepsia*, and the great swooning *Syncopi*, because the *Matrix* hath great simpathe with the heart, the Arteries, Brains, and with the two membranes which do cover the Brains. This malady cometh to women through divers causes, and especially when there is retention of their terms or flowers, yea also through the retention of their natural seed, especially to them that be accustomed to have the company of a man, and must then forbear it, as widowes, and aged maidens: for that in case the foresaid seed be retained, then causeth it many kinds of winds in the *Matrix* which do compel it so to ascend, that otherwhiles it oppresseth even the *Diaphragma*. This is then the opinion of divers learned men in this case; but *Galen* doth dispute against it with strong reasons, that the foresaid natural seed doth much rather cause this sicknesse, then the retention of the terms; chiefly in women which also are burthened with many bad humours, be full of blood, and brought up in idlenesse, have accustomed to company with a man (like as is expressed) and now suddenly are constrained to waite it. Therefore is commonly seen, saith he, that this suffocation for the most part troubleth widowes. He maintaineth also and that by good reason, that the mother doth ascend even to the *Diaphragma* (which is the midriffe) and there doth abridge the breath.

Thus may be caused through the retention and putrification of the seed, all manner of troublesome accidents, as giddinesse and pains of the head, madnesse, short breath, and panting of the heart, their natural colour doth alter into a yellow pale, yea sometimes into rednesse of the face and of the eyes, they gnash with their teeth, draw their hands and feet awry, they do also feel that there ascendeth somewhat upwards out of the belly, and commonly then do they presse down their belly with their hands; they also do sit commonly with their bent knees on the ground; they lose their speech: and neverthelesse when one calleth them by their names, then do they hear it, but they cannot answer, and do lye oftentimes, that neither breath nor pulse, nor any like can be perceived in them, yea are taken to be dead: and also sometimes they are so taken or assailed with these kinds of maladies that they depart out of this world: neverthelesse they alwayes retain their memory and knowledge; and when they come again to themselves, then do they rehearse all that is spoken and done. So that this disease (like as is rehearsed) is in many things to be compared with the falling sicknesse, onely that they do not come. In like manner it is not unlike the Palsey, but onely that there is no long breath with it, and very like the sleeping sicknesse *Lethargo*, but that there is no ague with it. Amongst all the foresaid signs is there no worse then the retention of the breath, for that the same cannot be long holden up without death follow after it; for that a body cannot live without breath.

This grievous accident may also be caused through a strong cold, which doth so sore assaile a body, that thereby all his breath and pulse will be so drawn inward that by the feeling it can be at no hand perceived, as we have also admonished here and there in the first part amongst the diseases of the brains. In fine, the mean to remedy this terrible disease consisteth in three severall things.

The first what is to be done in the hasty accident for to hinder the stifling.

The second (if so be that this disease be caused through retention of the seed) what is to be used for it.

The third, in case that this be caused through retention of the terms, or through any other bad humours, how one is to behave her self therein. When as this disease cometh with hinderance of the breath, then is speedy help needfull: therefore is cold well water, or Rosewater, to be cast by and by into her face, and to hold the mouth and nose to the end it may compel the breath backward, and break out with force: also the hands, feet, buttocks, and thighs, are to be rubbed hard with vinegar and salt, and afterwards to be bounden very hard. Another woman must make her finger fat with odoriferous oyl (as oyl of Lillies, or any other) and therewith anoint the neck of the womb or Matrix; and rub the same softly, to the end that the Matrix be thereby drawn downwards. Further, there is a little needling powder to be blown in the nose, to the end that through the strong motion of needling the mother may be drawn downward. They are also to be called hard and lowdly by their names, and to keep away all pleasant savours from their nose;

nose: but the places are to be fomented, anointed, or fumed with all odoriferous things. Also a great boxing cup is to be set upon the same place unpickt. You are also to hold all filthy loathsome favours before the nose, as *Assa foetida*, *Galbanum*, *Bevercod*: also the smell of old clots, of shooes burnt, of hair, of feathers, and such like that may be gotten seedily, are you to let her smell unto. For that (like as we in the beginning of the description of the Matrix or mother have admonished) the mother doth flie and avoid by nature all stinking things, and to the contrary loveth all odoriferous fumes and favours: yet are these stinking things not to be used but in extrem need: for that all that stinketh very loathsome, doth also weaken and infeeble nature. Amongst these foresaid things is Hares hair also very requisite. The chiefeft odoriferous things which are to be used beneath is *Muscus* and *Ambra* meet. And if one can get it suddenly this powder following is to be taken.

Take red Storax, *Lignum Aloes*, and Cloves, of each one drachme, Musk, Amber, of each half a drach. make all to powder, then bind it in a cloth and put it up into their places.

Item, take one ounce of the oyl of Lillies, *Muscus*, and Saffron, of each three grains: bruise them well together and dip a taint in it, and put it into the place, or fill a small bag with salt, and use it as before.

You are also to make a fume with these things following, to receive the same through an Ammel: Take Cassie wood, Cinamom, Thyme, *Gallia Muscata*, and such like. But if these will not help, then use one of the strong pessaries and others which be described before in this Chapter and the second §.

Verum (salvo pudore) presentissimum Remedium est, si maritus ungat penem cum Oleo Caryophyllorum, admixto parum Olei amygdalarum dulcium, ad caliditatem prioris temperandum, & cum uxore coeat, Matrix enim subito descendit.

When as now this patient beginneth to recover again (being a Maiden) and enclined to this grievous sicknesse, then is there no better remedy, then that she induce her self into the state of matrimony: if not, then is she to refrain from all these things, which do increase natural seed; as flesh, wine, and other, like as before is described in the sixt Chapter, and the 4. §. and the seventh Chapter and the 8. §. For this is also the letting of blood very meet, the use of all cooling meats, and the absence of men. All mineral baths which do dry, be also very fit for this use, and she may also use therewith these confections following.

Take fresh roots of Polipody six ounces, Sene leaves, Violets, Prunes, Sebestes, four Dates, and Currans, of each one ounce and a half; see the them in two quarts of water unto the half, afterwards wring it out; and whilest that the decoction is yet warm, steep therein six ounces of the seeds of Fleawort, so long that the muscilage may be drawn out of them, then put twenty four ounces of white Sugar unto it. Likewise also the pith of four Dates and Cassie which are prepared with the foresaid decoction, of each three ounces; then see the them again together by a mild fire until that it be thick, and temper it with these things following beaten very small, burnt Ivory, Rubarb, red and white Saunders, Roses, Violets, white Poppy seed, Purslain seed, Endive seed, Lettice seed, small Endive seed, of Fennel, Dragagant, Starch, scraped Ivory, Gum, Hollihocks, Fumitory, Lettice, and Annis seeds, of each a drachme and a half, *Diagridion* two drachmes and a half, Mirobalani Indi, Emblici, of each three drachmes; temper them all together in a mortar, and give from half an ounce unto seven drachmes.

This foresaid electuary is so highly commended, that it is called the gift of God. These are also not every day, but onely once or twice to be used, with a decoction of Mugwort and Sugar, and then to fast six hours upon it.

This being done, there shall a round plaister be laid upon the Navel *De balbano*, and not to take it off, before it fall away of it self, whereof there two divers sorts discovered before in the 3. §.

Lastly, these pills ensuing are to be used: Take Silvermountain, Madder, Penniroyal, the innermost rinds of Cassie pipes, Pomgranat kernels, Piony roots, and Calamus, of each three drach. *Muscus*, and *Spica* of Indy, of each half a drachme; then make pills thereof with the juyce of Mugwort, of them is she to take every day, or at leastwise about the other day, if she do not use the confection, and that before supper. But the same is not to be given if the terms be present, but when they be past, if you will have them milder, then put one drach. and a half of Aloes unto them.

But in case that this ascension of the Mother be caused through the obstruction of the terms,

terms, and that a woman be come to her self again, and that it is feared that it will return again, by reason that the cause is not yet taken away, and that it be certain that this disease were caused through the retention of the terms, or of the natural seed; then must diligence be used that the terms be preferred and moved, whereof we have before given a full instruction.

Item, if this suffocation of the Matrix proceed through obstruction or hinderance of the terms, then give her one quarter of an ounce of powdred *Agaricus* with wine or with Hony water, for it is a sure mean for it. It is also very good for the same, that there be taken one drachme of the pownded *Agnus Castus* with one ounce of the hony of Roses, especially if the disease do come through the detention of the seed: the *Trochisci de Myrrha* do also move much.

Secondly, the *Saphea* is also to be opened in the foot; and afterwards one drachme of pownded Betony with the water of Feverfew. In like manner also boxing cups are to be set upon the thighes picked or unpicked. Cut a piece of bread round like to a Dollar, and set three Wax candles in it of the length of a finger, set them so burning upon the navel, and then whelme over it a glasse of a quartern long, then do the candles go out, and the glasse doth draw the Mother or Matrix perforce into her due and wonted place: and this hath been oftentimes approved.

Item, anoint all the belly with oyl of Mastick, and make a pot-lid warm, winde it about with clothes, and hold it warm to the belly.

Item, take Bevercod and *Assa foetida*, of each one quarter of an ounce, *Philonium Romanum* one drachme; temper them together, and give it fasting, and drink upon it a good draught of Muscadel or Malmsey, it helpeth marvellous well.

The same vertue hath *Triphera magna*, the weight of a drachme and a half drunken with wine in the morning early. Likewise is also good for this one drachme of pownded Piony seeds drunken with hony water.

If the Matrix or Mother begin to ascend, then is to be taken one quarter of an ounce of yellow Rape seed with the mater of Mugwort.

For a plaister, you are to take *Galbanum* one drachme and a half, *Bdellium* one drach. Mugwort, Feverfew, of each half an ounce, oyl of Lillies one ounce; dissolve the gums in the oyl, and when they begin to be cold, then temper the powder amongst it: with this salve they are to anoint them beneath and above the navel, and then to lay a plaister of *Galbanum* upon it.

Item, take *Assa foetida* one ounce, *Galbanum* two ounces, melt them in vinegar, and spread them warm upon a leather of a quarter long, then lay them over the navel: the *Galbanum* is also good used alone. Whensoever you will lay any thing upon the place of pain, then take the roots of Lovage, cut them very small and put them in a bag. Cometh the pain of the Mother through cold? then see the it in wine; but if it be through heat, then see the them in water, and lay it on the place of the pain. Could you not get these roots? then take Acorn buds, it is also good.

Neefing and parbreaking is much advised for this, but especially heed must be taken to the strength of the patient.

And in case that the same Woman must live without a man, then is she so much the oftener to use anointing with the odoriferous salves with the fingers beneath, and use therewith all things which do diminish natural seed, as Rue, *Agnus Castus*, and such like, as elsewhere hath been shewed. Besides all these, you may look all that hath been said before in the second §. of the terms in women.

Of the descension and falling down of the Mother or Womb. §. 6.

LIke as the Womb or Mother in women ascendeth, so doth it also descend, so that it cometh so low, that she being turned about, it dependeth, and with a long end hangeth out of the body, like as is wont to happen with the Arsegut, whereof we have written in the tenth Chapter and the second §.

The causes of this disease may be outward and inward: the outward may come of falls, heavy birth, long sitting upon a cold stone, or in the water, through hard going to stool, through strong neefing, through running, leaping, through use of much cold salve, and such like. The inward be when the body is pestered and full of humours, which afterwards

afterwards do fall even to the womb, which do so unknit and dissolve the bands and stayes of the same, that they cannot hold the mother any longer; like as oftentimes befallerh in the palsie and falling sicknesse, also in ulcers and impostumes of the womb. The signs of this disease be manifest, if the same be caused through any outward causes, the same may be inquired of the patient her self. Otherwise it is to be considered whether the woman be fat, moist, live in quiet, is wont to eat much fruit, or much fish, &c. They have also oftentimes pain about the privy members, and in the neither part of the back-bone. There cometh also sometimes an Ague with it, retention of the urine, and hardning of the stool. Some get also much trembling, the cramp, and great fear, without any manifest causes, with many more grievous accidents. Now in case that the descension of the Mother do yet remain somewhat inwardly, then must a Midwife behold and search her: to wit, then she must put one finger into the neck of the womb or Matrix: if the passage be smooth and open, then is the mother not fallen down; but if she find therein any stop or let, then is it a sure sign that it is descended: and if so be the Matrix or mother continue long out of her natural place, then is it impossible that she should be reduced again into her due and natural place, and more impossible if the same depend out of the body.

Thus for to remedy this disease, then may one choose out of these things following those which are thought to be best and most meet, according to the quality of the disease. First of all take three boxing cups, and set the one upon the Navel or under the breasts, and the other two above the privities unpickt; these may draw the Matrix again into her accustomed place. The Midwife may also anoint the body within with oyl of Mastick, and do whatsoever is possible by manual operation to set the same again into her natural place.

Secondly, take a glowing brick, and strew thereon this powder following: Take Tormentil, the juyce of Sloes, and *Bistorta*, of each threee drachmes, the peeles and blossoms of Pomgranats, of each one quarter of an ounce. *Assa foetida* one ounce, Mastick, Frankincense, Galbanum, of each two drachmes and a half, Cipres nuts, Gals, Myrtle seed, of each five drach. stamp them together, and mix them well together: this fume is she to receive from beneath, but heed must be had that it come not into the nose: for to hold to her nose serve none other but well savouring and sweet smelling things, *Ambra*, *Musk*, and Violets, and all savours which are most acceptable unto her. These bad savours (as is said before) cause the Mother to ascend again. This same is also used whilest that the boxing cups are fastened.

Item, take a stinking egg from a brood hen, and dip cotton in it, and then lay it upon the dependant neck of the Matrix, then will it forthwith be drawn up again.

Or take Camomil, Marjoram, and Caraway, of each one handful, Linseed one handfull and a half; seethe it in water, and receive the vapour thereof.

If so be that there be heat with it, then are you to use this vapour following: Take Housleek as much as you please, beat it grosse, and afterwards lay it upon a hot stone, and let the woman receive the vapour thereof.

Thirdly, then is this fomentation to be made: Take three ounces of Roses, Myrtle seed, Violet leaves, Marigolds and Feverfew, of each one handful, *Assa foetida* 3. 3. break them all together, then put them in a bag and seethe them in red wine, and lay it after the vapour received upon the foresaid place.

Or take the blossoms and pils of Pomgranats, Cipres nuts, the rinds of Medlars and of the Service tree, of each one ounce, Allom one ounce and a half, seethe them all together in red wine, and foment therewith the places and the parts adjacent of the Matrix. Some do also advise to take Oxe tongue tempered with red wine, and to receive the vapour of it from beneath.

Fourthly, let every day the neck of the Mother and all parts about the Mother be anointed with the salve *Altheo*, but temper amongst it some marrow of any beasts, the fat of fowles, and oyl as much as you please; do this in the evening when she goeth to bed. You may also of such like things make a plaister, & apply it all the whole night as before.

Or take of Myrtles, of Lillies, and of Mastick, of each two ounces and a half, *Assa foetida*, *Bistorta*, and Tormentil, of each 3. 3. the gum is to be molten, then pownd all that is to be pownded, make a salve thereof, anoint therewith the body outwardly, and also the kidneyes.

Lesser; Take the yolks of two well brayed eggs, put unto them one ounce and a half of the oyl of Roses, fresh Butter half an ounce, make a salve thereof, and use it as before.

The

The dependant Matrix is to be washed often with wine which is steeled.

Also the oyl of sweet Almonds may be used for this purpose.

Fiftly; Take *Assa Fœtida* one ounce, Mastick, Frankincense, Myrtle seed, Galangal, and Cypres nuts, of each one drachme, stamped together very small, mix it with the oyl of Myrtles, and annoint therewith a Pessarie, afterwards put it into the places.

Sixtly: Take Rosin two ounces, Frankincense, Mastick, and Cypres gum, of each half an ounce, temper it together, and let it melt: make it then with the oyl of Mastick to a plaister, and weare it upon the privities: it will stay and let that the Mother or Matrix cannot fall any further out of the body. Or take Mastick one ounce, Frankincense half a drachme, Cypres nuts, Galles and Myrtle seed, of each one drachme, pilles and blossomes of Pomgranats, and Turpentine, of each one quarter of an ounce: pownd all that is to be pounded, and temper it all together with Turpentine and oyl of Mastick, as much as will suffice for to make a mild plaister, spread it on a cloth of a quarter long, and half a quarter broad, wear this plaister continually between the navell and the privities.

The common people do much commend to sit upon Oaken Boards, and to receive the fume of dryed Caruway from beneath: cakes baked with dryed seeds of *Verbascum*, and to eat them: to eat Annis seeds: to annoint the dependant Matrix oftentimes with the juyce of Sloes; and above all, vomiting and parbraking, thereby to draw the Matrix upwards, are very good.

Above all these which be before discovered against the descension of the Matrix, are these things ensuing also very good: Take burnt Date stones beaten small, and strew of this powder upon the dependant member.

A stronger. *Mumia*, *Licium*, *Hypocistis*, pownded Gals, of each two scruples, burnt and small beaten, Oyster shels two drachmes, and a half, then make a powder thereof, and use it as is before said. Item, take a wax candle of the length of six fingers breadth, and one finger thick, annoint it with oyl of Lillies, and put it up into the place.

Item, take Cypres nuts, unwormeaten Oaken leaves, Squinant, and Camomil, of each half an ounce, Roses one quarter of an ounce, Hares hair cut small, half a drachme: stamp all to powder, and put it in a bag of the length and breadth of a finger, then steep it in warme wine wherein Camomil hath been decocted, and so put it up into the body.

This woman is also to sit up to the navel in a bath, wherein Allume and other astringent things have been decocted, and let her sit therein about an hour.

Other do counsel to use this bag following: take Oaken buds, Medlar leaves, Service leaves, the uppermost sprigs of Ladies thistles, Cypres leaves, of each one handfull, the sprigs of Myrtles, Valerian, wild Mints, of each two handfuls, chop them all small afterwards put them into a bag, let it seeche well, and sit thereon when you are in the bath.

For a conclusion, there serveth for the intent all that is prescribed before in the tenth chapter and second §. of the falling out of the Arsegut, for that both these diseases have one kind of cause. Likewise also there are many things specified in the third part, the third chapter, and second §. of the tumorous breasts, which are meet for this purpose, like as also hereafter of women in childbed shall be said.

So much be then spoken of the suffocation and descension of the mother: now we will proceed to other accidents which also concern the Matrix of mother.

Put a grain of musk into her navell, and a little bees wax made broad to keep it in.

Or take woodbind leaves, Rosemary Flowers and buds, ana. in §. stamp them, and put them into clarified hony, boyl them, then strain it, and drink of it as the fit comes.

I have used my vomiting potion with good successe which is mentioned in the third part. cap. 11. §. 4.

Of the pain in the Mother or Matrix through Wind. §. 7.

First of all each one may well be assured which hath any understanding, that every unnatural accident which this part in women, to wit, the Matrix (whether it be of outward or inward causes) is subject to, cannot be without pain, which the Grecians do call *Hysferalgia*. Amongst these, the causes be most winds, which cause no lesse pain in that place then they do in the guts, whereof we will at this present write and discourse.

The causes of this may be blowes, thrusts and fals. Item outward cold, which cau-

seeth

feth an obstruction in the neck of the mother, whereby the winds be detained. These winds be also caused sometimes through hard and painful bearings, or through the long use of windy meats, as Rapes, Chestnuts, Rye bread, and such like. The signes of these winds be pain in the Matrix, and other parts adjacent, swelling up of the belly, and that the pain is now here now there.

To remedie this disease, some famous Physitians do advise that the body is first to be purged through some common clisters, through Cassie, or through the powder of *Hiera Picra*, and that afterwards one quarter of an ounce of *Triphera magna*, shall be taken in the morning with good wine, for the same is esteemed especial good.

These winds be also caused oftentimes through vomiting and parbraking.

Secondly, take for it two ounces and a half of *Oxymel*, and three ounces of the water of Camomil, afterwards set a common clister.

Thirdly, foment the belly with wine wherein Camomil is decocted. Lastly may *Triphera* or *Phylonium* is used.

The foresaid *Phylonium* is very good, but (as is oftentimes admonished) men must deale providently in it, for the *Triphera* is much safer.

Afterwards do the famous Physitians command to proceed with these things which do follow.

Take *Turbith* one drachme or four scruples, according as the woman is strong, Ginger one scruple, give it her with the water of Mugwort, or with common well water, wherein Mugwort is decocted: this is a very excellent medicine for to assuage all pains of the Matrix.

If so be that one peradventure fear any mischance, because the winds of the Matrix do oftentimes cause it, then take Caruway seed which is steeped in Vinegar, and dried again and powdered, one drachme, *Ameos*, Ginger, Bevercod, of each one scruple, temper them together, and give one drachme thereof with wine certain dayes together. Or take Gentian the weight of one drachme with wine, which easeth them marvellous much, for that it expelleth not onely the pain, but also preventeth that there return no pain unto it.

In the twelfth chapter and II. §. you have a potion with Gentian and others, which may also be used for this with great advancement.

Amongst the remedies which may be outwardly used, first is bathing good, whereto this following is to be prepared; Take Marjoram, field mints, Southernwood, Fennel, and such like things which expel wind, see the these in water for a bath.

Or if so be that bathing is not meet, then use fomenting of warm wine, wherein Camomil is decocted, and afterwards annoint the belly with the oyl of Eldern. Item, take oyl of Mastick one ounce, melt therein one quarter of an ounce of *Laudanum*, and annoint you therewith, yet the oyl of Lillies and Wall-flowers passeth all.

Item, rare sodden eggs brayed well with sweet milk, and some Saffron tempered amongst it, and then layed upon it, are highly commended for this use. It is also said, that if black Hellebore be layed beneath before the Matrix, then doth it draw all moysture unto it. But the Physitians do see the Hellebore, and make a cloth wet in the same decoction; this cleanseth the Matrix from all wind, without any molestation. This plaister following is especially commended for all winds and swellings of the Matrix: Take *Bellium* and *Ammoniacum*, of each two ounces, *Agnus Castus*, Centory, Southernwood, Marjoram, field Mints, *Ameos*, and Cassie wood, of each one drachme and a half, Turpentine as much as is needful for to make thereof two plaisters, then lay one before and the other behind.

Of the paine in the Mother through cold. §. 8.

Take *Doronicum*, Zeduary roots, the seeds of Smallage and Cinamom of each one quarter of an ounce, Frankincense half a drachme, Bevercod one drachme, white Sugar one ounce, temper them and stamp them all together, and give thereof a spoonfull with wine. In the first part and the twelfth chapter, there is a remedie for the memorie, to wit, of a grosser powder, which is also marvellous good to warme and strengthen the cold Matrix. Item, take one drachme of Treacle, Saffron four grains, temper them in two ounces of Mugwort water, and then drink it fasting, and fast three hours upon it. Mithridate is also very good for all diseases of the Matrix, and chiefly for them that proceed of cold. There is more good for this, Bevercod about the weight
niper

Cap. 19. Part 3. Of hardnesse or Impostume in the Matrix.

582

of a drachme tempered with oyl of Camomil, and the belly annointed with it. Ripe Juniper Berries eaten be also very good for this disease. The first Balsam (which is described in the eight part, is also especially good for the same, all plaisters, oyle, salves and fomentations, which be described in more other places, may be also used for this.

The simple things which be meet for a cold Matrix be these, to wit, Mugwort, Rue, Sage, Savin tree, *Asa foetida*, Madder, Juniper, Penniroyal, field Mints, white water mints, Calamus, *Serapinum*, and all that warmeth the Kidnyes.

For the falling down of the mother my vomiting potion is very good, mentioned part 3. cap. 11. §. 4.

Also take Apostolicon, and warm it, then touch the Matrix with it, and it will ascend, touch it therewith 3. or 4. times, and as need requires.

Make a bath with Nettles, and touch the Matrix with the Nettles and it will ascend.

Or Be. of Harts horn leaves, of Bayes, of Myrtles, ana. 3. l. powder them and let the woman drink it in broth or wine.

Of the pain in the Mother through heat. §. 9.

There commeth also otherwhiles a great paine in the Matrix through heat, so that there must oftentimes things be used which take away and dead the senses, like as the injection of Henbane seed, of Poppie seed, but it must be providently taken in hand, and not to use the same but in great heat. But if you will any thing that is more weake, then see the Poppie heads in water, and inject the decoction thereof, and foment it therewith on the outside. Warm sweet milk injected also is good for this purpose.

Of the contraction of the Mother, or the neck of the same. §. 10.

It chanceth also sometimes that the neck of the Mother is closed clean up, waxeth narrow, and shrinketh up. And for to mollify or soften the same, take Hollihock roots as many as you please, see the them in Swines grease, or in Turpentine, to the end it be a soft plaister: then dip a clout in it, and put it up into the neck of the Matrix. The same doth also the water wherein Hollihock roots be decocted. In like sort also the oyl of white *Narcissus*.

Of the Schirrus, or hardnesse of the Mother. §. 11.

Out of these forementioned accidents of the Matrix, whether it be through heat or cold, cannot these parts be hardened any way, but as the Spleen is hardened: for which these meanes ensuing be very good: Take Aloe one ounce, Mastick one quarter of an ounce, *Galbanum* dissolved in Vinegar one ounce: and being strained, temper the rest amongst it, and then make it with oyl of Camomil and Wax into a meetly hard plaister. The plaister of Melilot is also good for this use.

Item, see the Figgs and Fenegreek as much as you please in Barly water, and make thereof a Semicupe. This foresaid bath is good both for the pain and the heat also. There may also be used all that is before admonished in the Sixteenth chapter and first §. These herbs following do carry all other medicines towards the Matrix: as Penniroyall, Rosemary, Savin tree, Juniper, Rue, Bevercod, Yarrow, Cinquefoil, *Myrrha*, Sage, Madder and Lupins. But because that all these foresaid things doe also leade at things towards the Bladder and the Kidnyes, so doe they the same also to the Matrix.

Of the impostume in the Mother, or in the neck of the same. §. 12.

If so be that these foresaid diseases, as the retention of the terms of natural seed, or any other sharp humour, whether it be blood, *Cholera*, *Phlegma*, or *Melancholia*, winds, or any other cold moysture, the which falleth down to the Matrix, then may they soone cause an impostume: notwithstanding the same can proceed well of any outward causes, as of blowes, fallies, leachery, through a mischance, through the ignorant dealing of the Midwife, and such like things more, the which doe bring with them either heat or cold. The signs of a hot impostume, be Ague great pain between the navel and the privities, and round about the reins, much watching, unquietnesse, and pain in making water and going

going to stoole, swift Pulse, pain of the head and of the eyes, heavy breath, pain of the stomach with much parbraking.

These impostumes will be very hardly cured, and the harder if they are situated deep in the Matrix: but generally they are to be cured, like as the impostumes and ulcers of the reins are taught to be healed, viz. as in the sixteenth chapter and 6. 7. 8. 9. §. hath been shewed.

But here be first certain rules to be noted, whereof the first is, that one must endeavour to carry away the matter from thence which descendeth thitherwards. Secondly, the Liver vein is to be opened, and afterwards the vein in bending the knee, or if one can neither see nor find it, then is the *Saphea* to be taken. Thirdly, if so be that this impostumation be in the Matrix, or in the neck of the same, then be the terms in no wise to be moved, but onely (like as is said) to withdraw the matter into another place. Fourthly, after the letting of blood is the Patient to be purged. Fifthly, vomiting and parbraking is very commodious. Sixthly, if it be possible she is to refrain the space of three dayes from eating and drinking, or at least keep her self very sparing, and especially in drinking. Seventhly, she must watch as much as is possible. Eighthly, after that the body is well purged, then is the Matrix in the beginning of the sicknesse to be delaid with such kinds of plaisters as derive the matter from that place. Ninthly, amongst these foresaid remedies, temper alwayes somewhat which may assuage the pain. Tenthly in the declination of the disease are those things good which do ripen and mollifie the matter until it issue and break out. Eleventhly, if so be that this impostume would not be maturated and brought to matter, then is the same to be effected with Fenegreek, with Hollihock roots, with Camomil, with Wheat flower, with Pigeon dung, and with some Saffron being made to a plaister and layd thereupon. Twelfthly, the astringent remedies are not long to be used, to the end the impostumes be not hardened according to all these foresaid rules, every one may know how to order her self in the curing of this disease.

If this impostume do come through heat, then is heed first to be taken whether the sick person be bound in her body: if it be so, then are mild clisters to be let, or Suppositories, and afterwards to open a vein, as hath been shewed in the second rule. She is also to be fed with Barly paps, stued Spinage, and such like things: and to prepare the matter, give unto her the Julip or syrup of Violets at certain times to drink, and afterwards purge her with Cassie, four Dates or *Manna*, and also move her otherwhiles to vomit. Afterwards unto the reins, the kidneyes and the hips, are cooling salves, plaisters, and such like things to be applied, and so to coole them as much as is possible: for which you are to use this salve following: Take Dragagant and Gum, of each one ounce, dissolve them in wine, and temper therewith washed Ceruse, the Litharge of Gold, Starch, Dragons blood, fine *Bolus*, and Roses, of each one drach. burnt Copper two scruples, oyl of Roses and Wax, as much as sufficeth for to make a salve therewith: but if so be that one cannot apply the same to the malady, then seethe them all together with milk (except the Wax) and then dip a cloth therein or a sponge and lay it upon the disease.

If you had rather have somewhat else, then take the syrup of Fleawort alone, or temper it with oyl of Roses, with broad Plantaine water, with the water of Nightshade, and with the white of an Egge.

There may also a great tent of Cotton be made, and the same dipt in this receipt following, and put into the neck of the Matrix. Take wax and oyl of Violets, of each half an ounce, let all melt together, and whilst that it is yet warm, put thereto the juyce of Plantaine, of Nightshade, of each one ounce, Camphir half a drachme, then temper them well together in a mortar, and use it as is aforesaid. If so be that there be any great pain with it, then use oyl of Roses brayed with the white of an egge, and tempered with hens grease: but if the pain will not assuage and cease therewith, then is the vien in the ham to be opened, and with the foresaid decoction, Poppy seed is to be tempered. In like manner *Seif Album* is to be tempered with womans milk which giveth suck to a daughter or maiden child, and to be injected.

This plaister is also very good for it: Take Camomil, Melilot, Hollihock roots, Linseed and Fenegreek, of each one ounce, eight or ten Figges, six or seven Dates, stamp and sharpen this all together, and make a plaister thereof with water wherein Violets be decocted, and with oyl of Roses. At the greatest extremity there is to be put unto it a little *Opium*, Poppy seed, and Henbane seed. If so be that the impostume will be long a breaking, then temper amongst it one ounce and a half of powdered Pigeon dung, Mustard

Mustard seed half an ounce, Fennel seed three quarters of an ounce. But if this impostume be in any place where it may be seen, or where one may come by it, then is it to be opened through other meanes: when it is open, then cleanse it with Barly water of Hony water, wherein Hyssop, Savin, Madder, Mugwort, and such like be decocted. And if so be that the place must be incarnated, then take Aloe, Myrrhe, Frankincense, *Sarcocolla*, Dragons blood, litharge of Gold, and prepared Turke, of each a like quantity: make then a salve thereof with Wax and oyl of Roses, and use it according as opportunity serveth. And as before hath been said, cooling plaisters are to be used for it, and to take any of these things following, viz. Roses, Lentils, blossomes and peeles of Pomgranates, the musilage of Fleawort, Nightshade, Tassel, fresh sliced Gourds, and Saunders: all these are to be tempered with barly meal, and sodden to a plaister, and then to be layed over the privities.

Afterwards in the beginning of the disease, the juyce of broad Plantaine is to be injected oftentimes into the Matrix.

And to the end the Matrix inwardly may be perfectly mundified, prepare this water following: Take Gals, Lentils, Pomgranate blossoms, Butchers broom seeds, Roses and Saunders, of each a like quantity, seeth them in water, and inject the decoction into the place.

Or take Hyssope, Wormwood, Hony of Roses, seethe the saue in White wine and milke, and use it as is afore-said.

When the Matrix is cleansed from all uncleannesse, then is this bath to be used for to heal and to cause the flesh to grow: Take Centory six ounces, Ireos, Comfrey, Cassie roots, and Agrimony, of each three handfuls, *Sarcocolla*, Gum, Dragons blood, *Mumia*, *Hypocistis*, and Frankincense, of each one drach. seethe them all together in sufficient water unto the half, then put thereto prepared refuse of Iron 1. ounce and a quarter, then let it seeth a while and wax cold that it may be used for a bath. Of all the former things may plaisters, faves and pessaries be made, for they are to that intent very meet and profitable. Or if you will have a mean and milder bath, then take Mallowses, Violet leaves, Melilot, Plantain, Lentils, Fenegreek, and Colewort buds, and make a bath of it.

In like sort sodden Allume is available for this purpose, for this bath is generally commended of all learned men.

But when the Ague and the most pain is somewhat past, and the impostume remaineth still, which may be perceived when the Ague returneth, and the pain and hardnesse between the navel and the privities continueth, then are mollifying things to be used as these Pessaries following: Take Ducks greafe, the marrow of Harts bones, Neats feet oyl, *Bellum*, Saffron, and yolks of rosted eggs; of each a like quantity: dissolve them together in wine, and temper therewith the bottom of oyl of Lillies, then dip a taint of linnen often therein and put it into the place: it swageth the pain and allayeth the same. But of this hardnesse we shall shortly hereafter speak and discourse somewhat more at large.

But if this impostume be caused through cold, then doth the same happen through abundance of much *Phlegma* in the body, and that through continuall use of meat and drink, whereby the *Phlegma* is augmented, whereby such like humours do fall down to that place, and there do putrify and rancle. This impostume doth appear with a swelling above the privities near the navel and that with a continual ach, and yet no great pain, the woman is sleepey, and very lither: and these signs be the more certain, if the time of the year and the age of the Patient do agree with them.

For this, neither cold nor repelling remedies are meet; but maturatives, and such as expell *Phlegma*, sobriety, plaisters meetly warm, discussive and ripening seeds, laying on of Camomil, of Melilot, Savin, Marjoram, Mugwort, Linseed, Fenegreek, admixed with the foresaid oyles and greases, and they may also be sodden and injected. Likewise for this are meet, faves and plaisters which do warm, moysten and ripen, whereof we have before admonished, and shall again hereafter.

The third manner of the impostumation of the Mother, is such a bad and hard disease, and is much worse then any of the former, especially when it is confirmed and waxen old, for then it is not to be cured, but at last there cometh the canker of it, whereof we shall immediately hereafter speak and discourse at large. But to do some ease for it, is the place to be anointed with warm and maturative oyles, marrows and greases of beasts, and the decoction of Linseed, of Fenegreek seed, and oyl of Camomil, of Dill, or of Lillies.

to be injected. Also they are to weare plaisters *de Bdellio*, of liquid Storax, and of *Ammoniacum* thereon, and to use these fomentations and bathes following: Take the roots of Hollihock, two ounces, Camomil, Melilot, Mallows, Violet leaves, Linseed and Fenegreek seed, of each one ounce, let them seethe well in water, and of these decocted hearbs shall you make plaisters with some of the foresaid greases, viz. with swines grease, hens and ducks grease, &c.

Use also this salve following; Take oyl of Lillies and of Eldern, cony fat, the fat of Quails, Neates feet oyl, and oyl of Harts feet, oyl of sweet Almonds, and Butter, of each one ounce, annoint therewith the neck of the mother within and without, then annoint therewith a pessary of cotton and put it therein. And if so be the same do not content thee, then looke into the eleventh chapter, the 29. and 30. §. of the impostumes in the stomach.

Item, of the impostume in the Liver, the 12. chapter and 7. §. and 14. chapter and 2. §. of the impostume of the milit, where you shall find a sufficient direction for it.

Take of Venice Turpentine, 3. 4. Wax 3. 2. Sallad oyl 3. 6. Sack 3. 2. boyl them on a soft fire until the Sack is almost wasted: then put thereto of red Saunders powdered very fine and seared, seethe them again a little until it lookes red, still stirring of it, then strain it, and use it warm, it heales any hardnesse or Ulcer or other evill in the mouth of the Matrix, or in the Matrix.

Of the canker and Ulcer of the Womb or Matrix. §. 13.

VHat the difference is between the impostume and ulcer, is before in the eleventh Chapter and nine and twentieth §. sufficiently declared of the impostume of the stomach. But the ulcers of the Matrix be very noysome and perillous (as we have before alledged) and so qualified, that very easily they may come unto an incurable canker: for this ulcer and the canker have a great communion one with another: yet this difference is between them, that where the canker is, there must also be an ulcer, but not every impostume the canker. Thus may ulcers be holpen with the things which be ordained for the clefts of the Arsegut, and of the womans places: where to the contrary, the canker of this place is esteemed by all learned Physitians for to be incurable. The causes of these ulcers and canker of the Matrix may be (as we have already shewed of the ulceration in the nostrils in the first part) of wounds, of thrusts, of blowes, of falls, of some unclean impostume, of some sharp humours which do excoriate and exulcerate the Matrix, or the neck of the same within. The canker is commonly caused through melancholick blood, which maketh a hard impostume, and beginneth first onely of a small hardnesse, as the bignesse of a Pease or Beane, and afterwards increaseth, the which at last filleth the veins adjacent also with melancholick, thick, and black blood, whereby it will be harder and greater from day to day. The heat augmenteth with pricking until that it break out, whence then issueth a black green matter, and otherwhiles like as it were Wine lees, and sometimes like to water, the which stinketh none otherwise than as it were a Carrion, and corrodeth more and more, for that is the nature of cankers.

The signs of these ulcerations be pain, pricking, panting of the mother, and issue or descent of purulent matter according to the quality of the ulcer. But if it be caused through any outward occasion, that may be understood of the sick person her self. Or if it come through sharp blood, then is the pain sharp, pricking with great heat and Ague. Or if it be caused through *Pblegma*, then is the pain not too great, the place anguished, and impairerth slowly. If there run any cleer blood out of it with white corruption, then is there a small vein broken in the impostume. If the matter be like water wherein fresh flesh is washed, then is it a signe that this disease is caused through long retention of womans terms. If this impostume be caused of *Cholera*, then doth green matter run out of it. The signs of the canker have we discovered before.

In these kinds of ulcers and cankers in the wombe, do the learned prescribe certain rules, whereof good heed is to be taken. First in case this ulceration be very moist, then are drying things to be used for it. Secondly, if there be with the ulcer a venemous quality adjoyned, then is this the most principal meanes of healing, that the venemous quality may be taken away. Thirdly, that such kind of meat and drink be used as do cleanse and make a good blood which is most commodious for to cleanse the ulcers of the womb, for thereby

thereby will the venemous matter be best of all taken and drawn forth. Fourthly, these ulcers have no need of maturatives, for that thereby the venemous matter increaseth. Fifthly, the Physitians must use such things as doe dissolve and dry: and lastly, incarnatives. Sixthly, if this ulcers can be seen, then is the same to be refreshed with clean and fine clothes continually.

And now to begin with some medicines: Heed must first of all be taken of a good government of life, so that all that one doth eat, drink, or use (according to the ability of the Patient without the making of any heat (may be drying things, and commonly such things be ordained for this purpose as are warm in the first degree, but strongly drying. Quietnesse in this disease is better then motion. Hereby may it easily be marked and understood, that all cold and moyst meats be hurtful for this Patient, viz. Fish, Crabs, milk, and all that is drest with milk, much pap, fat, and such like be naught for her. Their most commodious drink shall be a thin, red, and hard wine, which is very drying and discursive: the same may be tempered with water wherein Mastick, two kinds of *Consolida* (if so be that the naure can abide it) and Feverfew be decocted. Secondly, concerning the other Physick (if that nature may abide it) the vein on the right foot is to be opened against evening, yet is good regard to be had to the souning, for that the letting of blood in the neithermost parts doe bring more debility with it than that of the upper parts. After the letting of blood, this potion following is to be given unto her 2. mornings together: take *Benedicta Laxativa*, half an ounce, *Agaricus* one scruple, Ginger and Graines, the juyce of Feverfew two ounces and a half, temper them together, and afterwards she is to govern her self even as the order is after purging. Thirdly give her this potion ensuing the space of certain dayes together, until that the urine appear of a good colour and very clean: Take *Oxymel* of Squils half an ounce, *Syrupus de Byzantiis*, and syrup of Vinegar, of each three quarters of an ounce, Lovage and Agrimony water, of each one ounce, Cicory water two ounces, this is to be drunken early in the morning: they may also sleep well upon it, and fast four hours after it.

This being done, minister unto her, *Pillulas Benedictas* four scruples, or one drachme and a half, formed with the juice of Mugwort, you may also temper one drachme of it with the foresaid water, and drink it: and if so be that the cause require stronger remedies, then take *Pillulas de Opopanacum*, and *de Hiera Composita*, of each half a drachme: make pilles thereof as is aforesaid. With this purging one must diligently have regard whether this ulcer or canker be so neer in the neck of the Matrix that one may come to it with the hand; likewise if the matter doe stick, to the end that according to the quantity thereof might be knowne what medicines should be used: but be it howsoever it will, Hony water is alwayes good for it. You may also cleanse the disease therewith where the ulcer is, and afterwards spread thereon this salve following: Take *Aloe*, Dragons blood, *Mirrha*, *Sarcocolla*, and Frankincense, of each a like quantity, Duckes grease as much as is needful for to make a mild unguent of it.

But this following is stronger: Take oyl of Feverfew flowers and of Saffron, of each half an ounce, oyl of Wal-flowers (especially if there be great pain with it) two ounces, *Sarcocolla*, *Mirrha*, and *Opopanacum*, of each one drachme, Turpentine three quarters of an ounce, *Muscus* one grain, white Wax as much as is needful for a salve; afterwards see the them all together in four ounces of the juyce of Smallage until all the juyce be consumed, then annoint therewith a pessary made of cotton, and put it into the place, and refresh it oftentimes: it is very commodious for it, and found oftentimes good. But if this disease be very deep inwardly, then doth need require that the body be cleansed with necessary things, to wit, with Hony water, and afterwards use the pessaries which be described in the fifth chapter and 2. §. beginning thus: Take Ducks grease, &c. and renew them four or five times a day, or make this following: Take Smallage, Feverfew, and Mugwort, all together, or each alone, stamp them together, make a pessary thereof, and annoint it with *Hiera Picra*.

You may also take the juyce of these foresaid herbs, and make a cloth wet with it, and lay the same upon the back, the hips, and on the hithermost part of the back-bone. For injection, this following is ordained: Take Hony water, see the therein Ireos and Wormwood, or see the Agrimony in Barly water, and temper clarified Hony, or Hony of Roses amongst it. If so be that the cause require stronger remedies, then take six ounces of Wine, burnt Allume, Verdigrease, of each half a drachme, temper them together, and let them stand so five hours, afterwards inject it.

This following is also good, and chiefly to dry the ulcers, and to draw them together; Take Gals, Pomgranat pills and the blossoms, and Allom, let it see the together with a little Agrimony: and if you think that there be any vein broken within the ulcer, then temper somewhat of these things following with it, as Dragons blood, Myrrhe, Frankincense, fine *Bolus*, Saffron, Hartwort with Rose water, or with Plantain water.

A bath for the reins is very necessary for this purpose, whereto you may prepare this following; Take Valerian roots, Mew, and roots of Smallage, of each four handfuls, *Myrrhe* and *Opopanacum*, of each one quarter of an ounce, the roots of Yarrow 4. handfuls, seeth them all in sufficient water, and sit therein to the Navel. Besides all this, there is another bath highly commended, wherein the roots of wild Cucumbers be decocted. For this is also very good that which is described in the 12. §. beginning thus, Take oyl of Centory 6. ounces, &c. But in case this ensuing matter remain stinking, and that there be heat with it, then use the other pessaries made of cotton and Roses, that are there discovered; but the ulcers must be cleansed before by the injection of honey water. Lastly, if so be that the hardnesse do continue, which may be perceived by feeling, as also by the pricking, by the pain, and by the issuing out of the matter, then is one to beware that there be no sharp medicines used for it, for that thereby the malady will be much the rather augmented, for all which is discovered in the fifth Chapter and 2. §. of the injection of the muscilage of Fleawort, and juice of Housleek, for that is also the liver vein to be opened, and the salve of Ceruse to be used. This person must also beware of all which augmenteth melancholy, whereof you may find a sufficient discourse in the 11. Chapter and 8. §.

Of an unnatural birth, called Mola. §. 14.

IT chanceth also sometimes, that in certain women which have no company with a man, yet their belly swelleth up no otherwise then as though they were with child, and all the signs of being with child agree also with it, for that their Terms be absent and stayed; they feel also some stirring in the Matrix, their breasts will be hard, the appetite of meat leaveth them, their natural colour will be pale, all which signs are common to women with child: notwithstanding they bear no child which bear this *Mola*. This *Mola* groweth after two sorts in the womb: the one will grow to a peece of flesh without any figure, half putrified, and is also no right flesh, but rather a spongy mass of wind, of water, and of some other superfluous blood, which through the accustomed terms cannot be expelled, and the same then being mixed with the natural seed, groweth otherwhiles to such a hardnesse, that the same cannot be cleft asunder with any hatchet. Secondly, it may also be ingendred of the said blood and the concurrence of certain tough humours, and so make a false shew like women with child.

Nevertheless the expert Physitians do distinguish three several signs, whereby bearing women, and they that be burthened with this unnatural masse, are to be known, for that first the moving of this *Mola* or unnatural masse is not like that of a child, because it is a thing which hath no life. Secondly, the belly of women which bear *Mola* is much harder, and not so movable from one place to another as theirs is that be with child. Thirdly, this masse falleth from the one side to the other. Fourthly, if a woman be burthened with *Mola*, then be her hands and feet very feeble and limber, and it seemeth also that her fingers be shorter, all which cannot be perceived in bearing women. Fifthly, the woman that beareth *Mola*, is not so merry as one that is with child. Sixthly, a woman with child is commonly after nine moneths delivered; but in the *Mola* is no certain time, for that it is found that women therewith have gone two years, four years, and also longer, yea their whole life time, that no physick hath holpen them. And from these that be cured, there avoideth oftentimes (as is said) a loathsome peece of flesh, and that with such pain as if she were delivered of a child. It avoideth sometimes into blood, otherwhiles to wind, and their belly falleth away as before. This is such an accident, that it ought not slightly to be regarded, for that thereby it may easily be marked, that the Matrix is utterly unclean and spoiled; therefore do these women easily fall again into the foresaid maladies; or if not, into an unnatural flux, ulcer, or impostume of the Matrix.

Lastly, they commonly fall into the Dropsies, *Ascites* or *Timpanites*, or into some other perillous sicknesses, whereof they die. Nevertheless must the Physitian not doubt of the cure, but as soon as he knoweth certainly that the woman be burthened with a

Mola,

Mola: and be not rightly with child, then is the woman to be commanded that she stir not too much, and lie for the most part upon the back; and with her legs higher then the body, and to constrain her self otherwhiles to vomit and parbrake, and refrain from all cold and moyst meates, for which this potion following is to be made: Take S. Johns wort, Savine, Rosemary, field Mints, and corn Mints, Lovage, Mugwort, Pennyroyall, and Mather, of each one handfull, Fennel, Squinant both kinds of parilly seed, *Calamus*, and wild Galangal, of each one drachme, Radish four ounces, seethe them together in sufficient quantity of water for a potion and use thereof every day three or four ounces, this potion melloweth that masse, and expelleth the humour whereby it might be increased.

There is also to be tempered with this potion one of these Trochisks following: Take Cinamom, Myrrhe, of each two drachmes and a half, Rue, Savine, field Mints, Pennyroyal, (all together dried) Mather, *Sagapenum* and *Opopanaxum*, of each one drachme, Cardamom, Juniper tree, Rosemary, of each one drachme and a half, form the Trochisks, of the weight of a quarter of an ounce. This afore prescribed is to be used the space of ten dayes or more.

Other do advise for a thing of smaller importance, to wit, that the woman two moneths every morning early, should take three ounces of warm Feverfew water, and to fast four hours at least after it.

Secondly, that she every fourth day when she drinketh of the water should take one of these pilles: Take *Galbanum* one quarter of an ounce, flowers of Mugwort, Saint Johns wort, and *Asarabacca*, of each one scruple, dissolve the Gum in good wine, and make thereof six Pilles of a drachme. She is also to purge once in fourteen dayes with three quarters of an ounce of *Benedicta Laxativa* tempered with two ounces of Feverfew water. Or if she had rather pilles, that she swallow one drachme of *Pillulas Fœtidas*. Fourthly, she is alwayes to weare this plaister following upon the belly the breadth of a finger beneath the navel reaching up towards the hips: Take *Galbanum* one ounce and a half, *Gallia Muscata* one quarter of an ounce, *Alipia Muscata* one drach, white Wax three drachmes, dissolve the Gum in good Wine, and then make a plaister thereof.

Fifthly, she is to use this bath ensuing for the reins thrice a week, twice a day: Take *Gallia Muscata* one quarter of an ounce, *Colophonia* half an ounce, Saint Johns wort flowers, Betony, Mugwort, and Feverfew, of each three handfuls, *Bistorta* five handfuls, seethe them together in sufficient water until it savour well: shee is to sit therein up to the navell. These be very excellent remedies for to bring the mother to good health again, to strengthen all the parts of generation, and to ease their maladies.

In fine, all those things may be used for this intent, which are prescribed for the expulsion of the dead child out of the mothers body, and for the secundine, and such like things more.

For the *Mola* make an Electuary of English Dittany leaves taken green and dried in the Sun, Angelico leaves, green and dried, ana. ʒ. i. Saffron, ʒ. 6. powder and searse them, then with clarified hony make an electuary, take a drachme, or two or three drach. in the morning fasting in a draught of white Wine. *Prob.* do so twelve or fourteen dayes together.

What commonly is good, and profitable for the Matrix, §. 15

Elecampane roots, the greater Pimpernel rootes, the roots of Eryngus, and Ginger, all preserved, conserves of Betony, of Gilloflowers, of Spikenard, of Lavender, and of Betony, wine of Elecampane rootes, of Avence, of Betony, and of Rosemary. The oyles are these, oyl of Lillies, of Rue, and of Bayes. Item, the juyce of Gentian and of other rootes which are described in the twelfth chapter and 11. §.

We have now almost written of all especial accidents and diseases of the womb, whereon naturally dependeth the whole state of humane generation. But if so be that this part of the body be not sound, and without all infirmities, then is the humane seed (be it as commodious as it will) neither rightly conceived, nor duely contained: and though it be received and contained, yet doth either a mischance follow after it, or at the least a feeble and weake birth. Unfruitfulnesse ensueth also thereby as we very largely have shewed in the seventh Chapter before: so that it seemeth not to stand without reason,

that many Philosophers and learned men have disputed and concluded : By what means this part once infected might be eased and prepared to fruitfulness, to which end it was first created, whereof, as also of the conception of fruitful women, of their infirmities, of their delivery, and of all that concerneth them, shall be spoken in this Chapter following.

The twentieth Chapter.

Of all that concerneth fruitful and child-bearing Women.

When as in women (as sometimes hath been said) this vessel of conception is by their terms well cleansed and freed of their forementioned and all other diseases, or if some disease now present can be remedied, then need not any one in this place take care for barrenness. What might move their terms, is sufficiently shewed before in the seventh Chapter, yet notwithstanding we purpose here to speak of divers things which are very commodious for conception : amongst which the first is sirupe prepared as followeth. Take Madder, Mugwort, of each half a handful, Mints, Wormwood, Fennel roots, Squinant, Marjoram, Calamus, Nep, Annis, of each half an ounce, Cloves, Buglosse flowers, and Balm flowers, of each three drachmes, Cypres roots, Galangal, Fennel, *Ameos*, and Silvermountain, of each one quarter of an ounce, Cinamom and Raisins, of each five drachmes, Honey as much as is needful : seeth them all together, and make a sirupe thereof, as hath been taught in the first part, the fift Chapter, and 6. §. Lastly, put unto it Mastick, Ginger, Mace, Cloves, scraped Ivory, Saffron, Nutmegs, *Doronicum*, Zeduary and Basil, of each half a drachme, and beat them all together small.

The second is a powder which they may use with their meat : Take Nutmegs, Cucubes, and Ginger, of each half a drachme, long Pepper, Mastick and Cinamom, of each one drachme, Galangal two scruples, the seeds of the Ash-tree, scraped Ivory, Silvermountain, red and white Behen, of each one scruple, beat them small, and mix them all together.

The third is this salve following, *Gallia Muscata*, Nutmegs, Bevercod, Hares rennet, and *Laudanum*, of each one quarter of an ounce, oyl of Spikenard, oyl of Mastick, and oyl of Mirtles, of each three drachmes, Wax as much as is needful for a salve, anoint the place of the mother with it every other day. The last is a confection prepared as followeth.

Take wilde yellow Rape seed, and tame Rape seed, scraped Ivory, white and red Behen, Silvermountain, and seeds of the Ash, of each half a drachme, Cinamom, *Doronicum*, Mace, Cloves, Galangal, long Pepper, Rosemary flowers, Balsome wood, *Blaise Bizantie*, Penniroyal, and Marjoram gentle, of each two scruples, Balm, Buglosse, Citron-pils, of each one scruple, Indy *Spica*, Ambra and Pearls, of each half a scruple, these being mixed and powned all together very small, take eight ounces of Sugar, or somewhat more, seeth it in Malmsey, and make an Electuary or tabulats of it.

To help Conception. Let the woman receive the fume of Darnel and Frankincense into her Matrix.

Or, use a Suppository of *Laudanum*, or emplaistered, or a fume of it, which helps the cold and moist Matrix.

To know whether a woman be with child or no. §. I.

When a woman hath layen with a man, if that her places after the action be dry, the *Labra* and sides of the same smaller and harder, then is it a sign that she retaineth the received seed, and (if the same passe not from her in seven daies) she remaineth with child.

Item, take Lettice, seethe it in water, and let her drink three or four ounces of that decoction, if so be that she parbrake the same up again, then hath she conceived. Take a steel needle, stick it in a new wooden dish, and let the woman make water in it, if there hang a little cloud at the needle, then is she with child. Or let her drink Mead fasting, if so be that she vomit the same up again she will prove with child.

Another

Another: Take Mace one quarter of an ounce, Saffron beaten small one drach, well water sixteen ounces, Honey two spoonfuls, boyl them all together as long as you would boyl an egg hard, let her drink the third part thereof when she goeth to bed, and continue it the space of three daies together; if so be that thereby she get not her terms, then is she undoubtedly with child: which of these thou mayest best believe, experience will teach thee.

The common signs that a woman hath conceived, be these, to wit, when her terms without ague and cold be stayed, for then the blood is divided three manner of waies; the subtillest doth feed the fruit, the middlemost doth by certain veins passe towards the breasts for a preparation of the milk, the grossest remaineth in the Matrix, which will be expelled in and after the delivery.

Item, when a Woman is conceived, then doth she finde great wambling and distemperature in the stomach, inappetency to meat, vomiting, with other symptomes more, as hath been shewed in the former Chapter, the 14. §. of *Mola*. she findeth also commonly the tenth day great headach, giddinesse, and darknesse of the eyes.

It is also said, if a woman perceive immediately after she hath layen with a man small pain and cold about the reins, that it is a sure sign of conception.

To know whether a Woman be with child of a Boy or a Girl. §. 2.

Albeit there be divers signs whether a woman be conceived of a Boy or a Girl, yet are they not so sure that one may stedfastly believe them; for example, it is adjudged that those women which bear a boy, have the right breast sooner hard and round then the left, but experience teacheth the contrary, and so it is with all the other signs; wherefore it seemeth superfluous to spend any time in this behalf: but because we are now come to the conception of mankind, we will speak of the symptomes and signs which are perceived in the woman with child.

Of those things which commonly appear in Women with child. §. 3.

Those that have conceived a man child, are for the most part better of colour, lustier, nimble of their joynts, and lesse troubled in the bearing then of a maiden child: they have also a better appetite to their meat; they do feel the most burden in the right side, in which place they also perceive the first motion and stirring of the child: the pulses be on the right side more swift and strong then on the left. When they rise from sitting, then do they lift up themselves with the right hand; the right eye looketh more lively then the left, and in going they commonly set their right foot forwards. But when they bear a maiden child, then judge all the foresaid signs to the contrary; they are paler, leaner, more pensive, and more troubled in the bearing. The man child stirreth lower in the mothers body, and (as the common opinion is) most of all in the right side. The legs and places do otherwhiles swell. It is also affirmed, that if milk be dropped on her urine, it should swim on the top. Likewise if she bear a son, then perceiveth she on the 40. day the milk to come into her breasts with a kind of tickling. And when she is with child with a daughter, she findeth the same about the 90. day. *Aristotle* neverthelesse acknowledgeth, and divers more, that this (as we have said before) is not alwaies certain, but with the motion in the right or left sides of a man or maiden child it seldom hapneth to the contrary, as may appear in beasts, which at one time commonly do bear two young ones, as Goats, Sheep, &c.

At what time, and in what manner the child groweth in the womb. §. 4.

Albeit this concern no Physick, but is rather a work of nature than any part of our Science, yet doth our method require that we should shew in what time, and also how the child doth increase and grow in his mothers body.

First, there is also (as hath been said before), a great difference between boyes and girls, to wit, the man child receiveth both form and life much sooner then the maiden child; yet the perfect fashioning of a man or maiden child is in manner as followeth. In the first six daies the seed doth swell like a bladder full of wind, or a windy egg, nine daies after that doth this bladder draw blood unto it, whereby in twelve daies the liver;

the Heart, and the brains are so evidently formed, that they severally may be seen and perceived about the 27. day. It is called of the Grecians *Embryo* or *Fetus*, that is, a fruit, whereof afterwards a perfect man is formed; the other members are fashioned within 18. daies following, so that the sum of all this time amounteth to 54. daies, in which space the life is for the most part also received, although the child (by reason of his weaknesse) seem rather to be still than to move even to the 90. day. When as now unto this number which maketh in all 135. daies, is added as much more, then (saith *Hippocrates*) you have the true time of the birth, which is just nine moneths, counting thirty daies for every moneth; but as we have said before, all things are longer deferred with a girl than with a boy, for they commonly be not born before the tenth moneth.

Secondly, some suppose that if a man-child be born in the seventh moneth (as it otherwhiles befals) that the fruit was perfectly formed at the first in 30. daies, and began to live and move in the 40. But a maiden child born in the 7. moneth receiveth her perfection in 35. daies, and beginneth to stir about the 60. day, and both of them are perfected in a 100. daies: but a man child which hath not been born until the ninth moneth, that getteth his perfect form in 45. daies; and stirreth about the 100. day, is born into the world about the 300. day. But the maiden children are fully fashioned about the 60. day, they stir about the 80. day, and are brought into the world about the 279. day. The cause why men children are sooner fashioned in the mothers womb, is, because the seed and the right side wherein they are conceived are hotter.

Thirdly, we read, that in the first moneth the conception should be nought else but a collection of blood, in the second moneth a forming of the body, in the third moneth a perfect body, in the fourth moneth the nails do grow, in the fifth moneth it getteth the perfect signs of a man or a woman child, in the sixth moneth do the veins begin to appear; in the seventh moneth doth the marrow grow in the bones; in the eighth moneth are the bones hardened and strengthened; in the ninth moneth doth it get a full proportion of a man or woman, and prepareth it self for birth. *Albertus Magnus* in the ninth book and fifth Chapter *De Animalibus*, sheweth divers more divisions of the kinds, and concludeth with these words following: *That which the Physicians do write of this matter, is not sufficiently approved: and they are not alwayes found to speak the truth.* These are the words of the foresaid *Albertus*. Now that this is true, appeareth by the difference of the foresaid computations. It differeth also sometimes according to the health and debility of the Parent, whereby the fruit of necessity is governed, and is brought into the world sooner or later; wherefore it may justly be said, that in this matter no certainty may be found.

The order of dyet for women with child. Song.

VWhen God hath endued a woman with his gracious blessing, that in the state of wedlock she should conceive with child, then let her take heed that she cast not away the gift of God voluntarily by some great misdiet, but that she acknowledge the goodnesse of God, and live in such sort, that by her dyet the conceived fruit be not only not harmed, but cherished and strengthened, and fall not into any mishap or mischance whatsoever. To this end we will at this present prescribe certain rules: first, a woman conceived shall alwaies contend to be loose in body, for the which she is to eat every morning before breakfast some ripe stued Prunes, especially if she be bound. Also she is to beware of all manner of needlesse labour, of leaping, dancing, vomiting, coughing, much venery, and especially presently after meals; also of great sorrow, frighting, fear, anger, and such like. Neither may she bath her self, unlesse it were some few daies before her childbirth, for then is it very commodious; as hereafter shall be shewed more at large. All manner of cold, all kind of stenches, all sharp and bitter meats, as Capers, unripe Olives, Radishes, French beans, Lupins, red Pease, Rue, white water Mints, Pen-niroyal, and whatsoever else might provoke her terms, is hurtful to her.

Contrariwise, she may use all manner of wholesome accustomed meat, and drink good red wine, or meetly strong beer, for the red wine is meeter for her than the white. Item, ripe fruits that are somewhat astringent, and that do strengthen the stomach, are very meet for her, as Quinces, Pears, &c. if she desire any other commodious meat, she shall not so strictly be kept from it, but that she may use a little of it at once. But if to be that she do long for some unnatural and unaccustomed meat, then is she

to be dealt withall as hereafter in this next §. shall be shewed.

For to strengthen her, serveth the warm coniection of *Diamargariton*, for it comforteth the stomach and the Matrix. For the same purpose serveth also this wine following, a little draught otherwhiles taken of it: Take Ginger and Cloves, of each one drach. roots of Lovage, Spiknard, white Pepper, of each half a drach. Comin, Galangal, Annis seeds, of each half an ounce, red Wine three pints, Sugar as much as you please, make Hipocras. If the woman be hot by nature, then do lay that wine with the decoction of Currans: what she ought to observe besides this, may you find every where in the discourse of conceived women.

Of the strange longing of women with child. §. 6.

Albeit that this disease of this unnatural appetite, which otherwhiles hapneth to women with Child, of some foul or unusual meats, as Chalke, Coals, Lime, Earth, Tar, raw flesh, fish and such like, which is sometimes rather an imagination, and an idle or vain conceit of some untoward women: neverthelesse the Philosophers do alledge a certain natural causes thereof, and affirm therewith, that this unnatural lust doth also come sometimes upon them which be not with child; yea also that men be otherwhiles plagued with it, although very seldom: wherefore this longing (by good reason) may also be reckoned amongst the unnatural hungers, and may be called a corrupting, as we before in the eleventh Chapter have moved somewhat thereof, and have alwayes hitherto determined to write somewhat thereof. This unnatural longing do the Greeks call *Cittam*, the Latinists *Pigam* and *Malaciam*, that is, a desire of bad meat, and is thus described.

Citta is a bad action of the stomach, wherein the party is greedy to eat unnatural and foul things. The causes of this unnatural desire are very bad humours, and especially *Melancholia*, which lyeth in the stomach, where the same is exciting this unnatural longing. In women with child, the matter of the terms doth cause it which cometh into the stomach; and because the same is of sundry natures, therefore do they also get divers lusts. But in those that be not with child, it doth come through retention of the terms, when those humours happen to ascend into the neck of the stomach, or by the obstruction of the liver or the milt, whereby the said Melancholick humour doth stir up this unnatural longing. The same bad melancholick humours may also be burnt in the stomach, as may appear in the quartain ague.

And for to remedy this disease (especially in women with child) must first heed be taken to their meat and drink. Roasted Lamb, Hens, Pullets, Partridges, and all kind of field fowles are very meet for her: yea also otherwhiles Bucks brains and Sheeps brains, whether they be roasted or sod. Her drink shall be good white wine.

After meat shall she eat roasted Pears, Hasel nuts, Marmalade, confected Pomgranats, and Chestnuts. Give her sometimes also Marmalade with spices, which you shall find described in the last part. Of the confection *Diantha* is every morning about half a quarter of an ounce to be used.

Item, give her oftentimes the *Syrupum de Mentha*. In like manner is good for her the *Mixa* of Quinces, temper them both as much as you please, and take three spoonfulls thereof before meat. It is also much advised for this woman that she must otherwhiles incline her self to partbreak and vomit, as with clear warm water and sirup of vinegar, whereof we will hereafter speak more at large, because that women conceived are much addicted unto it. But in case that they incline themselves to vomit, then is their stomach to be anointed with this salve following.

Take Mastick and oyl of Spike, of each a like quantity, Vinegar a little, lay this plaister following upon it, the flowers of Buglosse, of Balm, of Saunders, Citron pills, of each a like quantity, with oyl of Mastick and wax wrought together; or a bag made of the foresaid, except the oyl of Mastick and Wax, and so layd upon the neck of the stomach. But if it happen that they at any time desired that which might nourish them, and that they were detained from it, or that the same could not be gotten, whereby it came to pass that they were disquieted or vexed, then take presently a spoonfull of Hony, scrape a little Nutmeg in it, and so give it her.

If so be that any man, or woman (being not with child) were taken with such unnatural lust, they are to take these things following fasting, as *Oxymel Compositum* two ounces with water of Cipres roots, or the decoction of Cardamom, or take one ounce and a half of *Oxymel* of Squils with the foresaid water: afterwards to provoke vomit are they to

use, this hony water following, wherein Mustard seed, the seeds of Orage, or Dill, Onions, and Radishes is decocted.

For to purge, take *Pillulas Stomachicas*, or *de quinque generibus Mirobalanorum*, which you will one drachme; whereupon these confections following are to be used, viz. *Diaplyris*, *Diamoschu*, and *Diambra*. The stomach is to be strengthened with these things following.

Take Acorn cups one quarter of an ounce, Raisins with their stones seven drachmes, Annis three drachmes, *Mirobalani Indici*, *Bellirici*, *Emblici*, of each five drachmes, prepared refuse of iron one ounce and a quarter, four quarts of wine which is somewhat strong, and as much water; seethe them all together unto the half, and then strain it through a cloth, and let the patient drink it out now and then in the space of eight dayes.

Item, take Cardamom, Grains, Cucubes, of each a like quantity, white Sugar as much as all the rest: give thereof every morning one drachme and a half, with luke-warm water, afterwards use the foresaid confections, and anoint the stomach, and keep your self with eating and drinking like as is said before.

To help the longing, and preserve from Abortion.

Rx. of the leaves of Angelico, English Dittany leaves gathered green and dried in the Sun, Harts horn, ana ʒ. i. Saffron, ʒ. 3. powder them very fine and searce it, and with hony or Sugar make a thick electuary, let the patient take hereof ʒ. i. at one time or two drachmes.

If she abounds with evil humours which causes the diseases, you may give one drachme of this electuary with Aloes ʒ. ʒ. or ʒ. i. or ʒ. let her take at night to bedward, for two nights together if need be.

This electuary comforts the weak child in the womb.

Of the vomiting in women with child. §. 7.

VWith this vomiting are commonly women with child oppressed, untill that they do begin to feel the milk, and about the time they were wont to get their flow-ers, or when the childs hair beginneth to grow, then have they it most grievous. Also it is the more troublesome, for that as then all strange lusts do come unto them; neverthel-esse it oftentimes hapneth not long after they have conceived, that they as then are most inclined unto it. It is also otherwhiles commodious for them, as we have shewed be-fore.

But if so be that it do get the mastery, and that thereby the food be drawn away from the fruit, then must one do his best for to strengthen the stomach, & to remedy the vomit-ing: for which there be many remedies in the eleventh Chapter and eleventh §. described against the debility of the stomach, out of which may be easily chosen what is meet for women with child, but especially these things following be advised for safe things, as the sirup of Raspes, Marmalade, and sirup of Quinces, which the ancient Physitians do so highly commend, if a woman with child do use the same much, then will the fruit be sub-tiller and whiter, Annis, Fennel, Coriander, whether they be confectioned or not, are good against vomiting.

Item, take a hard sodden egg, and keep it very warm upon the mouth of the stomach. For this is also passing good the sirup of Verjuice.

When a child is weak in his mothers Womb. §. 8.

FOrasmuch as there is no doubt that the conceived children be also sick in their mo-thers body, therefore it is no small question how they are to be holpen. For seeing all sicknesses are known through feeling and sight, the which cannot be done by children in their mothers womb, for this cause this matter is troublesome to the Physitians.

But amongst other signs whereby it may be known, whether the child be sick in his mo-thers body or no, it is the very certainest if that the woman with child have her terms oftentimes and much; for that there can follow none other thereof but a debility of the child, because that his sustenance and nourishment is taken and drawn from him.

Secondly, when the milk runneth from women with child, then is it a sure token of the debity of the child; also that the child is not strong enough to draw his nourishment un-to it.

Thirdly,

Thirdly, if a woman do get a strong scouring, then is it so much to be doubted of a mischance, but it dependeth especially on two things, under which all other accidents (be they how they will) are contained, which is heat and cold, by which all the rest may easily be adjudged.

First (for to write of the debility of the child through heat and dryeth) is the mother to be purged of *Cholera*, viz. with this following, and such like; Take conserve of Prunes without any other addition half an ounce, warm whay of milk three ounces, give it unto her in the morning betimes, and let her fast upon it the space of five hours. Or take prepared Cassie one ounce with four ounces of Sorrel water or Barly water.

If you will have a stronger; Take two ounces of *Manna*, temper them together in three or four ounces of whay, and use it as before. Or if you will you may steep in the former a drachme of Rubarb, and wring it out well; or half a drachme of Rubarb beaten to powder given without steeping. All these medicines be very safe for the child and the mother.

Concerning the order of diet, it is to be cooling and moistening, as with Lettice, Beets, &c. like as is oftentimes admonished.

Also Barly water and Barly paps are to be used, the flesh is to be drest with vinegar and verjuice, with the juyce of Lemons, and such like that she eateth

Afterwards she is to drink every morning a good draught of whay, in summer cold, and in winter warm. Or take water of Endive and of Violets, of each two ounces. Or if you will have that which cooleth more, take sirup of Roses and of Endive, of each half an ounce, Succory water two ounces, temper them together,

These things following are yet more forcible then the former: Take sirup of Vinegar half an ounce, sirup of Citrons one ounce, Buglosse water and water of Sorrel, of each one ounce and a half, temper them all together. You may also drink one ounce of the conserve of Violets, tempered with three ounces of Endive water.

The clisters with those things which force urine and blood, and also all things which cause vomiting must be forborn; But if it be needful that one purge more, then shall the former suffice. But these three things are especially to be shunned.

One must also do his best for to defend and resist all bad properties, and to strengthen the same, which may be done in this manner following, to wit, that the woman every day three or four times do drink half an ounce of the sirup of Lemons with Barly water, it cooleth and quencheth thirst.

Item, take water of Citruls and Violets, of each six ounces, water of Sorrel twelve ounces, red Saunders, Roses, burnt Ivory, and the seed of Sorrel, of each one scruple Saffron half a scruple, Vinegar three spoonfuls, temper them all together, and make a cloth wet therein; afterwards lay it beneath on the privities, and behind on the rump. Also take then one ounce of small cut Pompeon peeles, oyl of Roses, and of water Lillies, of each one ounce and a half, small fresh Houfseek one ounce, temper them all well together, and anoint the foresaid places with it three or four times a day.

But if this debility do come through cold and moisture, then is this thus to be remedied: Take Buglosse water, the seeds of wild Saffron, grosse beaten *Agaricus*, and *Hermoadactils*, of each one scruple, Cinamom, Ginger, Roses, and prepared Coriander, of each four grains, let them steep together one whole night, afterwards wring it out, and drink it in the morning early.

Another; Take the water of Feverfew and of Balm, of each one ounce and a half, *Benedicta Laxativa* one ounce, white Sugar half an ounce, temper them together, and let them stand the whole night, afterwards strain it through a cloth, and use it as the other.

For this is also a good order of diet to be observed, wherefore these patients are to use nothing else but that is warm and dry of nature. And she is to boil in all her meats sage, Mints, Rosemary, and such like, which have no nature of opening. Their drink is to be meetly strong red wine tempered with a little steeled water; for it hath power to strengthen all the inward nourishing parts, and all veins.

One must also devise how to amend and cleanse these bad humors, which is thus to be effected: Take Sage water four ounces, *Miva* of Quinces one ounce, then mix them all together.

Item, take *Syrupum de Myrto* one ounce, water of Balm wherein Mastick is decocted, 3. 3. temper them together, and so give it her to drink.

A better: Take *Miva Citoniorum aromatica* one ounce, water wherein Myrtle seed is decocted three ounces, temper them to a potion. There may also be used in the morning early for a strengthening, half an ounce of confection Calamus. Likewise *Aromaticum rosatum*, *Rosata novella*, and conserve of Roses tempered with powder of Mastick, and with Mints water being drunken.

If it be needfull for to purge, then is one to use the former purgations without giving any stronger thing. This ensuing is also very commodious: Take the juyce of red Mints four ounces, *Agaricus* one drachme, let it steep together two dayes and two nights, then temper Ginger and Roses therewith, of each four grains, *Manna* half an ounce, let it stand drying in the warmth; afterwards make pills thereof, and use them oftentimes, for they purge the watery humours without any anguish.

Now for to remedy the venemous matter, for which you have hereafter three kinds of applications: Take Roses, Cipres nuts, burnt Ivory, and *Sandaraca*, of each one drach. Rosin three ounces, but you are to seethe the Rosin in red Vinegar un til that the vinegar be spent: afterwards temper the other ingredients amongst it, and make two plaisters of it, one quarter and a half of a yard long, and lay the one behind and the other before upon the place of the Mother.

One more forcible: Take oyl of Quinces, Roses, and of Mints, of each one ounce and a half, Comfry, Bloodstone, red Coral, *Sandaraca*, and burnt Date stones, of each one drachme, Wax as much as is needful for a salve, anoint therewith the place of the Mother and of the kidneyes; both these have so strengthened the fruit in sundry women, that they have fully born the same, which are accustomed to lye in too soon of all their former children.

Thirdly, take the water of Tassel and water of knotgrasse, of each six ounces, water of green Cipres nuts, or their decoction four ounces, the juyce of Sloes, burnt Ivory, and Roses, of each one drachme, Frankincense, *Sandaraca*, and Colophony, of each one drach. and a half, the juyce of Quinces six ounces, temper them well, and make a cloth wet therein eight double, and lay it warm upon the back.

Of mischances or untimely Births. §. 9.

THis untimely childbirth or mischance, may befall at any time without any difference after that women have conceived: as when the seed is not yet come to any perfect shape, or when the fruit hath some members, but yet before it come to be a perfect child, or is brought into the world before the due time, being not thoroughly born, or when it is violently or otherwise expelled. And it fareth therewith as it doth with the fruits of trees, when they begin first to bud and to fashion, then do they hang on brittle stalkes, so that otherwhiles they may be blown off and spoyled with a small wind; but being waxen great, then is there to be come greater force of winds or otherwise before they will fall off.

Lastly, when they be waxen very ripe and seasonable, then do they fall off of themselves.

In like manner doth it also happen with the conceived seed or fruit, which is at the first so weak and tender, that if a woman chance to leap, to fall, or to labour hard, the seed received is thereby divers times ejected.

Wherefore also between four and seven moneths she may purge most safely, and use Physick if need require: for before the 4. and after the 7. moneths must she forbear it (if possible it may be) for then it is perillous.

But to return to our purpose. We have shewed before, that if a woman hath retained humane seed the space of seven dayes, that it is a token of conception; but if it vade or avoid within seven dayes, then do the learned call it *Effluxionem*, which is an effluence or running out. But if so be that they detain it any longer time, and this effluence chance within forty dayes, then is it an *Abortus*, that is, a mischance; and within this time of forty dayes, do most mischances happen.

Thus if a boy be conceived, and void away within forty dayes, then is there none other shape to be seen thereof, but in case it be cast into cold water, there doth it make shew as a small bladder, and making it open, then is the fruit found in it as a great Cricket, with all his severall members, and likewise also the humane member.

And if a maiden child conceived chance to avoid or passe away within three moneths, then

then can no direction or token be seen, for that it consumeth in the water; but in case that it do come to the fourth moneth, then may some direction be seen thereby, but it soon consumeth and passeth away: for that (as we have said before) the girles receive their perfect fashion much later then the boyes, as also they be born for the most part in the tenth moneth. But when they be now come both into the world, the girles grow much faster then the boyes, and also do come sooner to their time of generation, and leave off much sooner, especially they that get many children one after another.

The causes of these mischances or untimely births, do the learned alledge to be of many sorts, which may neverthelesse be comprehended in four principal Articles, viz. of outward causes which proceed of the conceived fruit, when the Matrix hath any kind of disease; or if the humane seed be of no good disposition. Amongst outward causes be these, leaping, running, wringing, and chiefly in lying together, bathes, anger, sorrow, fear, trembling, loud calling, strong labour, surfetting of meat, and diuretical things, as Fennel, Parsley seed, and all other things which expel the stone. All hot spices, as Ginger, Galangal, Cinamom, Annis, and such like. Item, all that purgeth violently, as *Aloe*, *Epithymus*, *Coloquint*, *Scammony*, and *Euphorbium*. In like manner all scouring or laxes, the bloody flux, or the flux of the terms.

The same may also happen if a woman have any strange lust or longing, which she cannot come at or get it, and more other such like causes, whereof we have spoken before, whereof it is better to be silent then to disclose the same.

Also the conceived fruit otherwhiles falleth downwards before her limited time, whether it be for that it is sick or dead, for that it remaineth not with the face towards the back, with the hands upon the eyes, and the elbowes upon the knees, as the natural situation of it is.

Likewise also if the fruit through any disease of the parents, be infected whether in the seed or otherwise, wherewith also the fourth cause is approved. But if the conceived seed find any disease in the Matrix (be it whatsoever sicknesse or disease that it will) then must the fruit inherit it.

This reason following is also occasion of an untimely birth, to wit, when a woman is much and unmeasurable lean, conceiving she will very seldom have full birth; but if the Mother be exceeding lean (whence the fruit must suck and draw his nourishment) then will it be infeebled or diseased, and constrained to passe away, as hereafter shall be more amply said and taught.

Women which be meety fat or lean, and neverthelesse get a mischance every third or fourth moneth, that cometh (beside the former causes) some of slimie waterish humours which fall down into the veins and sinewes, whereon the secundine is fastened, whereby they do slack, are loose, and can sustain the burden no longer, without falling out of the mothers body.

By the breasts may also a mischance be perceived, for that when they be small, weak and slack in women with child, then is a mischance to be looked for and expected. When a child beginneth to come to his perfection, then hath it need of much nourishment. And if there be any disease or infirmity there, then will the breasts be small, soft, and slack, whereof the fruit must pine and dye. Or she will be impatient, striveth and strugleth so long until the secundine breaketh, and the fruit falleth away.

Now if a woman be pregnant with two children, and one breast only (whether it be the left or right) came to be small and slack, then is it a sign of the destruction of the child on the same side.

It is also found that certain women through stench of the snuffing of a candle or lamp, have gotten a mischance. Let this suffice of the mischance or untimely birth: we will now teach how the same is to be remedied.

How a mischance is to be prevented or hindered. §. 10.

WE have before shewed that women conceived sometimes do get their Terms, whereby that weak and spare, yea also dead children be brought into the world, which happeneth not without great peril of their life; wherefore we must write and discourse somewhat thereof.

First, the Terms do commonly come with pain of the back-bone, of the belly, and the privities, which be altogether signs of a mischance to come; for (like as we have said) thereby

thereby is the nourishment drawn away from the fruit; whereby it is not only infeebled, but also urged to passe away.

And to obviate or prevent this, all child-bearing women are first to beware from over-hot, cold, and overmoist ayr: All meat and drink which be too fat, too sharp, and too bitter, shall she also eschue, as Radishes, Parsley, Smallage, Fennel, Pease broth, Cinamom, Saffron, Galangal, Nutmegs, and such like spices. She is also to use oftentimes thick red Wine, but she is to eschue all great exercise of going, running, leaping, accompanying of a man, anger, and all overburthening: and therewith have regard that she alwayes have a soluble body, and if so be that be wanting, then is she to use some meat or drink which do loose the body, as the decoction of Mallowses, or Mercury, or stewed Prunes.

Otherwise she is to leave all clisters and other diuretical medicines. But if the body be obstructed too much, then is she to eat Cassie wood out of the pipes, or new prepared Cassie, and that especially if she have any issue or moistnesse in the neck of the Matrix; for that the Cassie doth cleanse the *Cholera* and *Phlegma* without any trouble: you are also in due time to put Rubarb unto it; yet Manna is more commended for it: powned Rubarb is also to be given to conceived women as it is; for so it is more effectual then if she took the infusion only.

Item, if so be that there appear in the neck of the Mother some sliminesse or moistnesse in the last moneth, then is she to use all things roasted, baked, and to do such exercises before meat as shall be drying; also take Pomgranate peeles, pownd them grosse, and seeth them in oyl of Lillies, and inject that into the Mother. That is the right mean for to stay the slipperinesse of the Matrix.

Afterwards take Mastick, *Mirra*, and *Galia Muscata*, of each half a drachme, Goose grease one ounce, dip therein unkembed sheeps wool, and put it into the places. Hares rennet, or the rennet of any other beast is marvellous good for it, whether there be any heat or impostume instant.

Burnt Ivory and the powder of Zeduary tempered together and strewed on the meat doth also stay the mischance.

To this end is also to be seen what is written before in the ninth Chapter and 3. S. of the excessive terms, all which is also meet for this use.

But she may use these things following, as the confection of Pearls, of which *Avicenna* describeth alwaies to eat one tabulat before meat and thereupon to drink a good draught of Wine, as she may do it very commodiously between both meal-tides twice or thrice a day.

Secondly, take the water of Mints, of Daisies, and water wherein Cypres nuts be decocted, of each one ounce, Sugar half an ounce; drink this early in the morning all together at one draught, whether it be cold or warm.

Thirdly, take scrap'd Ivory, red and white Coral, Mastick, Mints, the inward red peeles of Chestnuts, Acorns, Mirtle seed, and Cypres nuts, of each half a drachme; make pills thereof with the juice of Comfrey, whereof three are to be taken in the morning with the foresaid water before meat, and that afterwards she hath taken one of the foresaid tabulats.

Fourthly, take Cypres nuts, powned Gals, Mirtle seed, juice of Sloes and *Hypocistis*, of each half a drachme, Bloodstone, Amber, Dragon blood, and fine Bolus, of each one drachme and a half, refuse of Iron which hath been long decocted in vinegar, half an ounce, the innermost red peeles of Chestnuts one ounce, three or four whites of eggs, pownd all that is to be powned, and rub it all together a long time in a leaden mortar, then anoint therewith the whole belly from the navel to the privities four times a day.

Fifthly, make this plaister ensuing; Take Dragagant and Gum, both of them roasted, and *Bdellium*, of each one quarter of an ounce, the juce of Sloes, Frankincense, *Hypocistis* and *Sandaraca*, of each one drachme, fine Bolus and Dragon blood, of each one quarter of an ounce, Wax half an ounce, Paperglew dissolved in red vinegar two ounces, make a plaister thereof, and lay upon the privities, let it lye so, and if the same must be taken off for any certain cause, then lay it on again by and by; and if there be too little Wax and oyl of Mastick, then take as much as is needful for it.

Another. Take Frankincense, Mastick, Dragon blood and fine Bolus, of each one quarter of an ounce, Comin 3. drachmes, Pitch one ounce and a half, three small Cypres nuts,

nuts, Wax and oyl of Mastick, as much as is needful for to make a plaister; spread them on a cloth, and use it as is said before.

Make also this salve following: Take oyl of Nuts four ounces, Barrowes grease one ounce and a half, three small Cypres nuts, Mastick one drachme and half, let them seeth softly the space of five hours, and therewith anoint the place of the Matrix, which is between the navel and the privities, and behind upon the back over against it.

It is also written, that it is wonderful good to wear alwayes a Diamond on the finger.

Item, if a woman with child be burthened with an Ague, and that a mischance be doubted, then take Barley meal, the juice of Sloes and of Housleek, as much as you please, make into a plaister with vinegar, and then lay it oftentimes upon the belly: this plaister is also to be laid upon the liver. In case that now the woman with child be assailed with pricking, then have you before in the second Part, the fourth Chapter, and 12. §. how that might be remedied: stamped Crabs, the juice thereof wrong out, and tempered amongst womans milk; it defendeth also the untimely birth of women, and it is said that it is a sure remedy for it.

If so be that a mischance be feared through much wind, then give one drachme of good Mithridate with the water wherein Comin hath been decocted, twice a week; for thereby the fruit will be preserved and retained.

These confections or tabulats following are to be used: Take Pearls and *Pyretum*, of each one drachme, Ginger, Mastick, of each half an ounce, Zeduary, *Doronicum*, the seed of Smallage, Cassie wood, Cardamom, Nutmegs, Mace and Cinamom, of each one quarter of an ounce, red and white Behen, long and black Pepper, of each three drachmes, Saffron one drachme, Sugar eighteen ounces or lesse, decocted with the water of Buglosse, or water of Mints.

To prevent Abortion.

Take the skin of a Snake which is found in hedges, which the Snake slippeth, and put it into the Matrix, or dip the same skin in the juice of Quinces, and she will not miscarry, it being applyed to the Matrix. And let her eat of *Spodium* and Zedoarie.

Or let her take of my Electuary mentioned in the end of the 6. Section of this Chapter.

Also B. of barley meal, juice of morel, juice of Housleek and vinegar, and therewith make a plaister, and apply it to the belly, and remove it often; and this will keep the child from the Fever in the womb, and put of it upon the liver part of the woman; this will keep the child.

How a dead child is to be expelled out of his mothers womb. §. 11.

For this we will first have remembred all that is described before in the 19. Chapter, and 14. §. of the unnatural excrescence *Mola* in the Matrix, whereof that in the second §. of provoking the terms, and before of the mischances, and all that is discovered of the preferring of the birth, is also meet for the expulsion or delivery of a child; so that between these is none other difference then that this following is ordained rather for perfect children, of which women do commonly lye in within five or six moneths. Now for to prevent the same, are these remedies following commanded to be presently used, but first of all you must know whether the child be dead or not, to the end there be not a sick child expelled for a dead child: the which is to be known by this, and especially if it hath been dead two or three dayes. First, the mother doth get a great pain in the sinews of the eyes, which be *Optici nervi*. Secondly, she doth also feel pain behind in the neck, stretching downward along the back bone, because that the Matrix is fastened unto it. Thirdly, she doth feel great anguish and pain beneath. Fourthly, if a woman lye from one side unto another, then doth the burthen alwaies follow towards the lower side, which is of all other a sure token of a dead child, and that the ligament of the secundine have no more force to hold the dead fruit in one place. Fifthly, there is a great pain about the privities, and over all the neck of the Matrix. Sixthly, the thicknesse of the belly which was above is wholly sunken down. Seventhly, they do feel continually a cold about the privities. Eighthly, if one hold a warm hand long upon the belly and feel

no stirring, then it is a sure token that the child is dead. These be now the signs of a dead child before it begin to putrefie.

When it hath been dead three dayes, then beginneth it to stink; the woman is full of agues, and getteth a stinking breath; out of the Matrix runneth a foul stinking matter; the belly will be heavy, and stinking winds, which do arise in the mother, cause swelling thereof: and last of all, there will be foul and stinking peeces of flesh expelled through the neck of the mother. When all these things be seen, then hath a Physitian none other thing to do but to drive out the dead child. It is also needful before all other things, to preserve and strengthen the heart from all filthy stench, which may be brought to passe with this powder following, taking the same oftentimes with broths, for that it strengtheneth the vital spirits, and also the heart: it doth also withstand the ascending vapours.

Take white *Diptamus* one drachme and a half, Citron peeles, and the peeled seeds of the same, of each half a drachme, prepared Pearls four scruples, prepared Coriander one scruple, Roses two scruples, Sugar two ounces and a half, temper them all together to powder, and use thereof about one quarter of an ounce at once. Or take this following; Take white *Diptamus* and Zedary, of each one scruple, prepared Pearls, and *Species de gemmis frigidis*, of each half a drachme, mix them together, and give it her to drink at thrice; it withstandeth all stench that they infect not the heart. The fine Treacle doth also drive dead children out of the mothers bodies.

In like manner also the juice of Vervein, or the herb stamped and drunken with wine, driveth forth also the dead fruit; so doth Hyssop also.

Take *Trochiscos de Gallia* one drachme, give it with small white Wine, they expel the dead child and the secundine, and make an easie birth. Item, take the innermost skins of the mawes of Hens or of Capons, wash the same in Wine, dry them, and pown them to powder, give one drachme or one drachme and a half thereof with a draught of Wine, or with some broth, or with Rose water. Or take Betony and Rue with the roots, of each one handful, pour thereto one ounce of the juice of Salomons seal, white Wine one pint, let it seeth well, then strain it through a cloth, and so give it her to drink. Seeth Juniper berries in Honey, temper some wine with it, and so drink it together. Another; Womans milk drunken should also expel the dead child: likewise also the precious stone *Jaspis*. This is a common medicine which followeth hereafter: Take *Boreas* one drachme and a half, Cinamom and Saffron, of each one scruple, stamp them together, and give it with sweet Wine or Mugwort water to drink, it helpeth much to bear easily.

It is also said, that Linseed passeth all things to make women to be easily delivered, for if they drink the water which is decocted therewith, and put the same with cloathes beneath into the body, or bathe therein, then must the dead fruit avoid. Or take *Myrrha* as much as the quantity of a hasel nut, stamp it, and give it with Wine, or with water of Mugwort; the same expelleth much, whether that the child be dead or alive. The same doth also dogs milk tempered with hony. Item, take one ounce of Goats milk, dissolve therein two scruples of *Galbanum*, and so give it; it expelleth marvellously. Or if the woman be strong, then giue her as much of the juice of Garlick as will go into half an egshel with wine or hony. If from a woman through frightening or otherwise the child avoid, then take a Crab, stamp it, and wring out the juice, and then temper it with the water of Mugwort, and so drink it.

For pills; Take *Trochiscos de Myrrha* one scruple, *Galbanum* half a scruple, make five pills thereof with Pennyroyal water. Another; Take the fruit of the Savine tree one quarter of an ounce, *Asa fetida*, *Ammoniacum* and Madder, of each half a drachme; make eleven pills thereof, then take thereof at each time one, and that thrice a day.

For to use outwardly, take these things following; fume the woman beneath with the horn of the Asses foot, which hath an hidden nature for to expel the fruit; but if so be chat one can get no horn of the Asses foot, then is horn of a horses foot to be burnt. The same operation hath also the seed of *Basilicum*, if it be fumed and received beneath: likewise also the fume of *Landanum*; or take *Myrrha*, *Galbanum*, and Bevercod, of each a like quantity.

One may also hold before the privities Swines bread, or cotton wool made wet in the juice of the same: and to put it before into the body is also marvellous good for this purpose. Item, take black Hellebore, Licebane, Hartwort, Coloquint and *Ammoniacum*, of each

one quarter of an ounce, Oxé galls one ounce : the Gum is to be dissolved in the water of Mugwort, afterwarde temper the rest sodden well amongst it ; Or take *opopanacum* and Hartwort, of each a like quantity, and make a plaister thereof with the juyce of Mugwort ; if it be too soft, then put a little wax unto it, and so lay it warm upon it.

Out of all these forementioned things may you also make pessaries, and put them into the body before. For this is also good the plaister *de Galbano*, whereof there be two kinds in the nineteenth chapter, third §. Another ; Take unkemned sheeps wool, spread butter and Hony upon it, and apply it. Some do advise to hold a Snakes skin to the privities, for they say when it beginneth to warm, that nature will cause the dead fruit to follow presently.

For this are also baths prepared ; Take Mints ten handfuls, see the it in sufficient water, and sit therein up to the navel ; this worketh marvellously, especially if thereupon be used the juyce of Swines bread as is before said ; likewise doth also drive out a dead child, the plaister *de Radicibus* layd upon it, and the decoction of Garlick.

℞. of Polipodium, Mallow leaves, see the them and apply them warm to the Mother part, then see the Artimesia and apply it to the navel, and as far as the Mother part and upon her thighes, and she will forthwith be delivered, if it be of a dead child, but let it not lie too long lest the mother follow it. Or rost leek leaves in the embers and apply it warm to the navel, but let it not lye too long.

Or let her drink the juyce of Leeks two spoonfuls, and she will be delivered speedily, and bring away the secundines.

If the child be dead, let the woman drink dogs milk with Hony and wine, and she will soone be freed.

Or see the Savory in wine and drink it. Or drink Vervein with water or wine, and it will cast out the dead child.

Or put a Partridg Egg in the mother and it will make it larger. Also sow-bread which way soever it be used expels the dead child and secundines.

Or let the Midwife dip her hand in the oyl of Peter, called *Petroleum*, and put it into the mother part, and annoint the inner part with it, and it will bring out the dead child or after birth. And cause sneefing with powder of Pepper.

Use the electuary mentioned in the end of the 6. §. of this chapter. It will also help the throwes, and mitigates the paines after birth being taken in white Wine warm.

A preparative for an easie child-birth and delivery. §. 12.

ALl creatures have their certain time of bearing except woman onely, for that women may be delivered of a child in the seventh or eighth moneth, also in the ninth and tenth moneth, as we have sufficiently written before : yea it hath been also found that they have deferred both to the eleventh moneth, and also sometimes to the twelfth moneth.

It is also read of a woman that happened to lie in of a child in the thirteenth moneth after that she had conceived : yet it oftentimes cometh to passe that they be deceived in their reckoning : therefore it is not needful to dispute much of the time, for when the Pear is ripe (as is commonly said) then doth it fall off. Our purpose is here onely to discourse and shew through what meanes a fruitful woman is to be prepared, for to bear easily and with small pain. For because that on the child-birth dependeth the maintenance of humane kind, and that women in their child-birth are to expect all sundry mishaps, therefore have many famous Physitians thought thereon, and diligently studied, how fruitfull women might be prepared unto their child-birth, and therefore have described these notable meanes : first, how the obstruction is to be opened, and how the paines are to be provoked. Afterwards if a child in necessity of birth, or delivery chance to dye, how the same shall be expelled, whereof also hath been spoken in the former §§. and of other accidents more which are to be expected after child-birth.

When as now the time of child birth is at hand, and that a woman is almost past her reckoning, then is she to eat and drinke well without excesse, and to use such meats which might nourish well : viz. good Mutton, Veale, Hens, and Capons : all kind of field fowls, Eggs, good broths, with spices, as with Cinamom, Saffron, &c. and to drink good wine. But she must especially take care, that she alwayes have an open body : therewith is she to bath certain dayes together in this bath following : take Hollihock roots with the leaves

two M. Mallows and Betony of each one M. Mugwort, Marjoram, Mints, and Camomil, of each half a M. grosse beaten, Linseed two M. make two baggs thereof, and seethe them in al great kettle with water: afterwards let it be meetly cold, and then set the woman in it: the one bag must lye behind upon her back, and she must sit upon the other, or hold it upon the Navell, after bathing. take oyl of sweet Almonds, of Lillies, and of Violets, of each half an ounce, Linseed, Hollihocks roots, Fenegreek, Butter, and Hens greafe, of each one quarter of an ounce, Quince kernels, and Dragagant, of each one ounce, you are to stamp the seeds, and cut the rootes: afterwards seethe all together in rain water, and take out the muscilage, temper the same with oyl, then let the powned Dragagant, and Hens greafe seethe so long until the muscilage be consumed, and then make a salve of it: with this salve are you to annoint warm beneath the whole back, both the sides, and all the whole belly, even to the privities.

Another: Take oyl of sweet Almonds, of Lillies, and of Violets, of each half an ounce, Ducks and Hens greafe, of each three drach. white Wax as much as is needful: but if these salves cannot be gotten, then is oyl of Lillies alone to be used in their stead.

Also this ensuing may be prepared, Take the muscilage of Linseed, and of Hollihock roots, fresh Butter, the greafe of Hens, of Geese, and of Ducks: oyl of Lillies, and of sweet Almonds, of each half an ounce: let them melt by the fire and temper it well together. Or take Hollihock rootes with the leaves one handfull, cut it small; Venice sope one ounce and a half, and one pot of good fresh beer, let it seethe together unto the half, then will there be a Salve of it: with this foresaid salve is the woman to be annointed about her privities 5. or 6. weeks before her time, every day after bathing. These and such like meanes do open and soften the obstructions of the Matrix; so that thereby in necessity of birth, the throwes will not be so great, nor yet any thing like so painful.

When as now the time of childbirth and the throwes be instant: then may one chuse of these things following, that which according to the importance of the cause is supposed to be most requisite, first of all outwardly. There be sundry famous Physitians which account it greatly available to hold certain things before the privities, or bind the hip, with many strange ceremonies more, which are therewith to be used. But if these kinds of things happen with misbeeles, and that amendment be found thereby, then may they be taken for approved. Amongst the same things which seem also to be like unto truth, are Agrimony with the roots holden before the *Matrix*, and immediatly after birth to cast it away, to the end that the *Matrix* be not drawn down. Also Swines bread bounden upon the thighs. Item, Henbane roots, roots of Polypody, and of *Bistorta*, should also be very good for it; but what Loadstone, Smaragde, the Eagles head, and Corall, and chiefly if with the end wherewith it hath stood fast, it shall be turned toward the *Matrix* (may well help for childbirth: I cannot comprehend nor understand it: therefore each one may hold and censure the same as he list. That which followeth hereafter, is more like to be true. Take the roots of Polipody, and Mallows, of each one handfull: cut them small and seethe them very mellow, and lay them warm upon the privities; put also as much Mugwort unto it, whereof a woman shall presently fall in labour, and after delivery, it is immediatly to be taken away. The common people do commend to lay powned Bayberries upon the navel. For to further birth thereby, to take inwardly is much praised in time of this great need, the rinds of Cassie, the uttermost being black scraped off, the weight of three quarters of an ounce, and beaten very small, given to women in red Wine, or with the decoction of red Pease. Item, Saffron drink with wine helpeth also much to very speedy birth, and to diminishing of the pain, the same doth also Cinamom drunken with wine. Item take Boreas and Cassie pipes scraped well, stamp them very small, and temper them, and give thereof one drachme, or one drachme and a half, it is very forcible. There is also good for this that which is described in the 19. chapter and 2. §. for preferment of the terms, like as is also that which is discovered for the expulsion of a dead child. Item, take Hony one spoonful, put two spoonfuls of water unto it, and give it to drink, Fenegreek decocted with Hony is also very good for it: in like sort do the common people commend for it very highly the decoction of red Pease, or Cicers drunken. Take also Bevercod, *Asarabacca*, of each one drachme powned small, and give it with the decoction of red Peason. In this manner also may be used the seed of Silvermountain.

This ensuing is commended for a forcible and sure powder meet for this purpose. Take good Cinamom and Myrrhe, of each half a drachme, give it with small White wine,

it is especial good if a woman have once sneezed, or hath once vomited.

Take Cinamom one drach. Saffron half a drach. Cassie wood, and scraped Cassie pipes, of each two scruples; stamp it very small, and give it 4. or 5. times with the decoction of red Pease: Or take Myrrhe, Bevercod, red Storax, of each half a scruple, Cinamom and Savine tree, of each half a scruple, give it so unto women to drink, or make pils thereof: this is commended above all other things; as this also following is: Take Myrrhe, roots of Costus, and red Storax, of each half a drach. Ammoniacum, Savine tree, of each half a drachme; stamp them very small, and give it three or four times with the decoction of red Pease: of this also may you make pils.

For this is also good *Triphera magna* one drachme, or one drachme and a half; for it maketh women not unfruitful, as some women do falsely report, but doth advance fruitfulness. Some do advise, when a woman is past her time, that her mother vein or *Saphæa* upon the foot is to be opened, for that the birth will thereby be the easier, and it cleanseth the child; but how far this is from the opinion of the ancient Physitians, we have sufficiently declared before.

Other do advise to leech a Swallows nest in water, and strain it through a cloth, and then to take four ounces thereof, it will accelerate the birth. The fume also of a Mules fell, of Comin, of Colewort stalks, of Myrrhe, of Mirtle, of Steeres gall (which one will) received beneath, but above all Bevercod, and *Assafoetida*. Some say, that one should give one spoonful or twain of the juyce of Sloes, and alledge also therewith, that it is not to be taken but when a child is ready to be delivered. But we have here many better and most apparant things.

To cause easie birth, and to make the child dead or alive to come forth.

Take roots of *Aristolochia rotunda*, of Dittander, of each a drachme; drink it in warm white Wine. Or else take of our Antidote against the Plague two drachmes; this is approved: use it if need be every day. Or let her take a pessary or mother suppository made of the root of Madder.

When the throwes do not continue in women bearing. §. 13.

ALL that hath a strong odoriferous savour, as *Muscus*, and such like, is to be kept from women with child, and to be taken away, for that it doth hold back the throwes, and hindereth the birth or delivery. But for to advance birth, take Betony three handfuls, Mugwort one handful, Camomil, Pennyroyal, and Hyssop, of each one handful, Linseed grossly beaten two handfuls, cut all the herbs and fill a bag with it, let it seeth well in wine and water. This being done, then foment with this decoction the privities with a sponge five or six times, afterwards anoint the place with the oyl of Wal-flowers into the neck of the mother, if so be that the same can be conveniently done by the Midwife, whereby the woman will be stronger, and the birth be advanced, especially if the child be rightly placed.

And if so be that this will not yet help, then make this potion following, and give her thereof a good draught every two hours: Take Betony one handfull, Mugwort, pennyroyal, and Hyssop of each half a handfull, a pint of Rhenish Wine, or somewhat more: let them seeth together until about the fourth part be consumed: strain it, wring it out, and put unto it half a drachme of Saffron. Amongst each draught is to be put half a drachme of this powder following; Take of the black scraped Cassie pipes one drach. and make a subtil powder thereof, in like sort have you yet more before.

This following will be also much commended; Take white beaten Amber half a drachme, and give it with the water of Lillies, or with the decoction of red pease: it quickeneth mightily the throwes. It doth also chance sometimes that the throwes do avoid at the mouth; for which, take three or four skeanes of boyled warm linnen yarn, and let the woman with child receive this vapour; for thereby will the throwes fall downwards: every one may conceive thereof what he list, it is very like a grosse medicine for clowns.

Of the perillous and hard Childbirth in general. S. 14.

This known to all the World more then sufficiently, how hard and sower that some women lye in labour, before that they can avoid the child and secundine; so that it happeneth otherwhiles that young and strong women do die with the fruit. These perils have many occasions, so that otherwhiles the women themselves, or the child be a cause thereof. Such anguish may also proceed from the Matrix, or from the neck of the same. In like manner the same may be well caused through some obstruction of the Matrix, or through any other disease, as an impostume and such like, in the foresaid parts; this also may be brought to passe through the rudenesse and unhandsonnesse of the Midwife. When as these foresaid reasons be declared, then may the cause easily be adjudged of this grievous and perillous childbirth.

If the disease be of the woman, then hath she had a great former sicknesse, or she is diseased through hunger; she may be also too young, and have conceived before the due age; or she may be too old, or not have born before at any time, in which the places will be hardly opened; also if a woman be dismayed, or never wont to bear child, be also too fat of body, and is overcooled; then can she hardly be delivered of the child.

Secondly, the fruit it self may cause also a grievous labour, like as is said yet without foundation) that boyes be easier born into the world then girles. Item, if the child be too grosse of body or head, and therewith be very small and weak, that through his feeblenesse it cannot help it self to the birth. Item, if the child be dead, have two heads, or the like double members. Item, if the child with his hands and feet, and not with the head, doth lie in the birth place like as behooveth, and as is natural. Further; the Matrix may be by nature too narrow or too dry, so that with no moisture the passage can be made slippery. Item, if the woman before in the neck of the Matrix have had any exulceration, whereby the muskles could not stretch abroad, or that as yet there be some ulcer in the neck of the mother, or if it cometh by the secundine, then is the same so thick and so strong that it will not break. This grievous and very hard labour may also be caused by the stopping of the body.

If now this heavy labour do proceed of the forementioned diseases, sicknesses, hunger and such like outward causes, that may be very well perceived of the woman. The signs of a feeble or dead child are to be found in the 8. and 11. S. But if there be of none of all these signs any instant, and if that a woman is not strong, and that a child in delivery remain in the birth place, and cannot be brought into the world, then is it a certain sign that the after birth (like as is said) is too strong and not yet broken.

Thus be all perillous accidents of childbirth joyned to each other, that all of them for the most part are cured with one kind of remedy, whereof we have written much before. And because we have especially admonished here of the secundine, therefore doth our old order require, that we should also discourse somewhat particularly thereof. But because nature observeth this method, that it first expelleth the child, and afterwards the *Secundina*, which is the secundine, therefore we will also first of all write perfectly of the child, and afterwards of the secundine, with all which is ordained for the same. Lastly, we will shew and declare all that is meet for both of them.

When a woman cannot be delivered of a child. S. 15.

The causes of this hard and longsome childbirth are before sufficiently discovered. When as then a child appeareth with a hand or a foot before, which doth happen very seldom without swelling of the neck of the Matrix, and of the parts adjacent, then take Pennyroyal, Mugwort, and brown Betonie, of each a like quantity, hack it all together, and let it seeth in milk, lay it then under her, before the birth, as warm as she may abide it, about the member of the child, the same driveth away the swelling: or set seething water under it, when the child feelth the warmth, then doth it draw the member back again. This and the like things should Midwives know, on whose knowledge and experience, is very much depending, that very renowned advice which is discovered in the 13. S. of Amber, when the throwes will not continue; also there is laid unto it scraped Unicorns horn. Some be of opinion, that first of all the woman should take a Spoonful of oyl, with twice as much water.

Other

Other do also advise, that one should see the half a drach. of Mace, and so give it : this forceth also the secundine. If that then a child will not frame himself to birth in his mothers womb, and neverthelesse the throwes and the right time of birth be instant then take a little Lilly water, and as much good Rhenish wine, and so drink it together; it will frame it self the better afterwards. For this is also good the juite of Sloes, whereof we have spoken before. Another : Take fresh well water, and hony as much as you please, temper them together without seething or skimming, and so give it to drink, this quickneth the throws and pain, so that she will be the sooner delivered of child for that the pain expelleth the child and the secundine. Or take the flowers of Cypres, seeth them in wine, and drink a good draught thereof; this should be very certain, especially if the herbe or flowers may be gotten fresh. Item, take well powned Linseed, seeth the same in wine, and give the woman a good draught thereof. In like manner may she well drink wine, which is decocted with Plantain. Wine wherein Vine leaves have been steeped, should also expel birth. *Boreas* the weight of half a drach. drunken with wine, is also very advancing for it, as we have admonished before. A stronger. Take Saffron, and Pearls of each one scrup. *Borras*, §. 4. give this also with hony water if the throwes come not; but if so be that the throwes be instant, then give it with Mugwort water, or with sweet wine, it expelleth very swiftly. Now for to use outwardly may one chuse out of these things following for a time that which one will, as the seeds of Garlick, Savintre, Mugwort, S. Johns wort, Pigeon dung, the horn of an Asses foot, or of a horses foot, Ox dung, Wormwood and Rue; of all which tempered, or each alone : also to bathe, to make salves, plaisters, and such like. Item, take round Hartwort, Aristology, Savin tree and Cresses, of each a like, stamp and temper them all together with an Ox gall : then afterwards make a great taint moist therein, and put it before in to the places, it helpeth much to birth. This following doth also expel a child whether it be living or dead, and also the secundine very vehemently : Take Savintree, round Hartwort, *Asarabacca*, and Dragon roots of each a like quantity, pownd them all together, and temper them with hony : afterwards give to the woman thereof the weight of one quarter of an ounce, with water wherein Lupins be decocted, and if so be that this expel not sufficiently, then take *Opopanax*, and Oxe gall, of each one quarter of an ounce, Bevercod one drach. give it to the woman to drink with water wherein the Savintree and Fennel is decocted : and although all these foresaid medicines be meet and convenient for to expel the Secundine with them, yet we will neverthelesse in particlur as we have promised, write and discourse thereof.

Of the secundine or afterbirth, and how the same is to be expelled. §. 16.

THis afterbirth do the Latinists call *Secundinam* which is as much to say, as the secundine because it cometh away after that she is delivered of child, and of such like, wherefore, it is by us properly called the afterbirth or secundine. This foresaid afterbirth or secundine hath this use, to wit, when that in lying together both the seeds of the man and woman be tempered in the Matrix, and become like unto milk, then cometh about the same a caule or velme, which groweth by little and little with the fruit, and is augmented with it. The same is by nature ordained, that the fruit may be therewith, as it were with a cloth covered, enclosed about, guarded and defended, until the day of the birth, which presently after the birth of the child (if all things happen aright) doth avoid; or remaining behind, it bringeth very great peril with it, as we have said before, that amongst other accidents there to follow agues, stinking breath, pain of the head, swooning, and such like.

If in case then that these afterbirths do thereby tarry behind, for that a woman is waxen too weary and feeble through the former hard labour, then must some what be given her, whereby she may get some strength, and might comfort her heart, as *Diamargariton*, *Manus Christi*, and *Diaplyris*. She is also to be caused to neese, and to hold in her breath, whereby the undermost parts of the belly be pressed down, and stirred up to expel that which remaineth. And if so be that the secundine will not follow, then let the woman rest a little, anoint the belly and all other parts about it with oyl of Lillies, and oyl of Eldern flowers : also to keep the belly very warm, and then to use those things which are specified in the delivery of children in the 11. §. and also whatsoever shall be prescribed hereafter. All those that esteem much of precious stones do counsel, that when the afterbirth wil not follow, that then to the woman is to be given of the pow-

of the Aggat, and that thereupon the secundine must follow. It is also commanded to the contrary, that whensoever a woman is in labour, that then she is to put away from her all manner of precious stones, because that they do defer this childbirth. It is also said that corn flowers with Lilly water, do expel the secundine. We have also said before, that half an Eg-shel full of the juice of Garlick given with Hony water, doth expel the dead child and after-birth: but this advice may we leave for country people. Needling, is also especial good for delivery and avoiding of the after-birth.

For to use outward things therefore is much commended to make a lee of ashes, and to set the feet deep in them, they should draw the after-birth downwards. Item take Beech ashes, and pour seething water unto it, then let the vapor ascend from beneath upwards and the after-birth will follow. Take Peacocks feathers, or if you cannot get them, then take Hens feathers, kindle them, and let the fume ascend from beneath.

Item take Hollihock roots, seeth them very mellow, and then temper it with Barrows grease, with Goose grease, and therewith annoint the neck of the Matrix within. This draweth not onely the after-birth but also all other uncleannesse: for this is also chiefly good whatsoever before is described for the advancement and lightning of childbirth, and also for womens terms.

How that the afterbirths are to be eased. §. 17.

Take Squinant and Spikenard, of each one quarter of an ounce, seethe them together with water of Mugwort even to the half, and drink thereof two or three times, it allayeth the pain. Item, take Malmsey, or some other good wine, and make a caudle thereof with the yolks of Eggs and Cinamom. Or take Saffron, 3. β. Mace, ʒ. 1. *Triphera magna*, 3. β. take this at two times with warm wine, for this *Triphera* hath such power, that it doth presently assuage the pain. In like manner, this may be anointed in the neck of the Matrix very commodiously. Further, you have before in the 19. Chap. and 7. §. of the pain of the Matrix through wind, of *Triphera* and *Philonium*, and presently afterwards a powder with Turbith. Also how this Hellebore is to be used, all which things be very commodious for the afterthrowes. Item, take small powdered Woolblade, temper them as a dough, and bake cakes thereof, and give it to the woman to eat. Take good fat Figs, cut them to pieces, and grosse beaten Fenegreek, of each one handful; let them seethe together, and the woman to sit oftentimes over it, or to foment her beneath with clothes. Item, take the yolks of Eggs, temper them with the juice of Mugwort, and bake cakes thereof, and lay them behind upon the back. The same doth also Hollihock roots, or the leavs, if it be beaten, and with warm wine laid upon it, and oftentimes renewed.

For the excessive flood after birth. §. 18.

For this you have before in the 19. Chapter and 3. §. of the asswaging of the excessive terms of women many kinds of remedies which be also very meet for all women in childbed. Yet of the Physitians of *Augusta* be these following ordained for very especial remedies: At the first are these women in childbed (be it what it will) to take with broth fasting one drachme of the same powder with white *Diptamus*, that not long since hath been described in the 11. §. Afterwards she is to use this costly confection: Take conserve of Roses one ounce, conserve of Burrage, of Buglosse, and of Baulm, ana. 3. β. prepared *Bolus*, 3. β. prepared Pearls, 3. 1. good Cinamom, 3. 1. β. temper them all together. Item, take conserve of Piony, it cleanseth after birth. Let her use also this powder following: Take prepared *Bolus*, 3. 1. Sealed earth, ʒ. 2. Tormentil, 3. β. Shepherds purse, ʒ. 1. *Species de gemmis frigidis*, 3. 1. β. prepared Pearls, 3. 1. β. Roses, Coral, and Saunders, ana. ʒ. 1. Cinamom, ʒ. 2. β. Sugar, 3. 3. temper them well together, and take it with Henbroth. This following is yet more forcible in stanching. Take Bloodstone washed with Plantain water, 3. 1. β. red Coral, 3. 1. Tormentil and *Trochiscos de spodio*, ana. 3. β. scraped Ivory, and burnt Harts horn, ana. ʒ. 1. Prepared Pearls, ʒ. 4. fine *Bolus*, ʒ. 2. *Bursa Pastoris*, and red Saunders, ana. ʒ. 1. Cinamom, 3. 1. Sugar, 3. 6. make a powder thereof or lofings.

Be sure you stop not the floods after birth, for thereby you shall endanger the life of the childbed woman.

Of the superfluity of milk. §. 19.

When as now a woman is delivered of Child, and that the milk so excessively abounded and ran over that the child could not sufficiently suck or draw it out, and it were to be feared that it might come thereby to clot or to impostume, then must good remedies be sought, to which end divers be described in the third Chap. and §. 5.

Of divers other accidents after the birth. §. 20.

It hapneth many times that a woman after that she is delivered of child, her legs and feet happen to swell. For this, take Wormwood, Cammomil, Centory, Yarrow, Southernwood, and Spikenard, of each a like quantity, see the it altogether to a bath for the feet, and use it oftentimes. In like manner you have also before in the third Part and fifth Chapter, in the description of the places in women and their accidents, divers things which be meet for this purpose. Item, take Cammomil and Linseed, of each one handful, put them in a bag together, and see the them in wine, afterwards lay it over the swelling.

Or take a great Onion, rost the same in ashes, afterwards stamp it to a grout, and make a plaister thereof with sufficient Butter, and use it. These two last things may also be laid upon the belly against the afterthrowes.

As much as then concerneth the descension of the neck of the Matrix, the unnatural heat, the ach, and such like accidents which women in childbed be subject to, for that are divers remedies to be found before in the description of the places, nevertheless we will add somewhat more, and therewith conclude.

If so be that a woman with child come to be broken, then take Comfrey four handfuls, Self-heal one handful; see the them together for a bathe for the loynes, and let her sit therein over the privities.

Item, take a long peece of Allume, and put it into the body before, then shall the rupture go together again, and the entrance will be so narrow as ever it was before.

Or take two ounces of Coperas, four ounces of Gals, one ounce and a half of Gum; see the them together in sufficient rain water, and wash you therewith, but this is none other but as it were a right writing Ink.

Look also further, the first Chapter of the third Part of the ruptures of the Navel, and all that which shall be written of the ruptures, where one may chuse what seemeth best for every one.

The plaister *Diachilon*, whereof we have so oftentimes admonished, is thus to be made: Take Fennegreek, Linseed, and Hollihock roots, of each four ounces, see the them together, and draw out the muscilage, as in the first Part the third Chapter, and 7. §. is taught: put thereto nine ounces of Sallad oyl, Litharge of Gold three ounces, then see the them together again until the muscilage be spent, and make a plaister thereof: this plaister mollifieth all hardnesse of the Liver, of the Milt, and stomach, and of all other parts. There be also two sorts prepared, which are called *Compositum* and *Magnum*, which be both also more strong then the former, but they be not so much in use.

There hath also oftentimes been spoken of the sirupe *De Radicib.* the one called of two kinds of roots, which is thus made: Take Parsley roots, and Fennel roots, of each two ounces, let them see the in sufficient water; afterwards strain them through a cloth, and make a clarified sirupe thereof with twelve ounces of Sugar.

The sirupe of five kinds of roots is prepared in this manner: Take the roots of Smallage, of Fennel, of Parsley, of *Ruscus*, and of Sperage, of each one ounce, see the them very mellow, and then make a sirupe thereof with 12. ounces of Sugar. Both these kinds of sirupes be good against all kind of Agues which proceed through putrefaction of phlegme and choler.

The fourth Part of this general Practise of Physick,
doth intreat of the outward Members.

Although the Physitians, and especially the Anatomists do comprehend all other parts of mans body, which be not described in the former three parts of this Practise of Physick, in this fourth Part; yet will we divide them into principal parts; that is, the Arms and Legs. These be the especiallest outward parts, to wit, arms, hands, fingers, and nails: afterwards the legs, thighes, knees, the shins, the ankles, the feet and the toes. These be now the diseases which be generally incident to both these parts. First, that which the Physitians do call *Gutta*, and we the Gout, is divided into four principal Chapters, according to the member which is infected with it. viz. *Arthritis*, which is the right Gout: *Chiragra*, which is the Gout in the hands: *Ischia*, the Sciatick: Lastly, *Podagra* the Gout of the feet. Of all which we will orderly discourse and write, afterwards of Eluxations, Elocations, Extenuations, Bruises, and fractures of bones, and by what means each disease is to be holpen. Therefore will we in the name of God begin according to our old custome and method, with the highest parts, which be the Armes, and what is annexed unto them.

The first Chapter.

Of the Arms. §. 1.

These Arms be divided into three parts. First, they have their beginning at the shoulder blade with the Arme pits, reaching unto the Elbow. All which with the other part of the Arms be called by the Grecians and Latinists *Brachium*. The second part reacheth forth unto the hands and wrists of the arms; the third part is the hand unto the end of the fingers.

As much as concerneth now the first two parts. They be subject unto all outward and inward accidents or diseases; as bruises, fractures, wounds, impostumations, eluxations, diseases of the veins, and of the sinews, and to such like accidents more. All which diseases (according to the quality of the cause) are to be holpen with letting of blood, salves, plaisters, bathes, fomentations, &c. whereof in many places before, and also shortly hereafter in the Gout and in the Sciatica shall be more ample declaration made: so that at this present it is needlesse to write any further thereof.

Of the Armpits. §. 2.

As much as concerneth this part of the arms, we have thereof sufficiently spoken before, as also of the veins of the Armpits, and for what cause they ought to be opened, hath been sufficiently declared in the Introduction; we will here discourse of the lothsome stench of the Armpits, and chiefly in hot and fat folks; because that they have also much hair in this place, and be moist of nature; and how nearer that the stench is to the nose, so much the lothsomer is it. This stench is augmented through great labour at hot times, through want of shifting and alteration of clothes, through great incontinency,

continency and through some corrupted humours of the body. Which stench if it do continue very long, it is a sure sign of an incident palfie.

Then for to remedy this stench, it is needfull (according to the quality of the person) that all such are to be purged and let blood, and that they afterwards do bathe in these odoriferous herbs, as Mints, Melilot, Lavander, Treos, and such like.

This being done, the Armholes and the whole body are to be fomented with these things following: Take Annis, Comin, and Roses, of each two ounces, Cipres roots one ounce, Spikenard, and *Spica Romana*, of each one quarter of an ounce, powned *Ireas* one ounce: see the these all together in two quarts of water until about a third part be consumed; and then use it warm with clothes wet therein, and keep the body very clean with clothes and linnen. Afterwards use some these things following: Take the Litharge of gold one quarter of an ounce, Allom one drachme, Roses and Myrrhe, of each half a drach. beat them all to powder, and wash the Armpits with wine; and then strew the powder upon it: the Litharge of gold doth the same of it self tempered with Rosewater; in like manner also the Myrrhe.

Item, take Coperas one ounce, see the same in three ounces of water, let it be cold and anoint the stinking place with it. Take Thistle leaves one handfull, see the same in a pint of wine and drink thereof, it taketh away the stench throughout the whole body.

Item, take Litharge of gold one ounce, Frankincense half an ounce, powned them all together small when you go to bed, and temper a little thereof with wine, anoint therewith the place, and then in the morning wash it with vinegar. You may also use for this the oyl of Spike.

And if so be that the humours then be so sharp that they excoriate the place and bite open the skin, then wash it with warm water, and afterwards strew the place with burnt Allom.

Marmalade with spices doth also expel all stench.

Of the Hands: §. 3.

A *Naxagoras* was wont to say, that men above all creatures were most reasonable, for that they onely had hands. But *Aristotle* contrarieth this with great reasons, and faith, because that mankind is the most sharp witted amongst all creatures, therefore hath nature given him hands, which be none other then instruments of a reasonable creature for to use them whereto he desireth; so that these most noble and necessary members be made for to comprehend, to hold, to cast, and to labour; &c. In like manner also through their feeling to adjudge all that is hard, soft, hot, cold, thin, thick, and such like. Besides this, in stead of all weapons wherewith all other beasts be indued, that they may thereby seize upon all manner of weapons wherewith either in time of peace or war to guard and defend the body.

Item, with these hands be all renowned feats and cunning, and also all hurtful works achieved and brought to passe, as is daily seen. It appeareth also by daily experience, that commonly the right side is more forcible and much nimbler than the left, not that it is so in every body, or must be, for that it is oftentimes found to the contray, whether it be through the custome or otherwise, that some do most of all help themselves with the left hand, and be much nimbler and active with it.

Further, the hand is commonly divided into two parts, as the palme, the fingers, and one may if he will accompt the nailes with it. They be filled every where full of sinewes, wherewith they most commodiously and speedily be ready to all manner of actions. Inwardly in the palme of the hand be many kinds of lines or strakes seen, the which like as the *Chiromatici* do say, be signs of good and bad luck or fortune, whereof we will not here write any further, because that these Southsayers are by many learned regarded as lyars, for that they have no foundation; therefore be they also justly to be mocked and scorned; like as they be also taken and acknowledged of all upright Christians to be ungodly, and adjudged to be an illusion of Sathan. Thus may this suffice of the hands.

For to keep the Hands clean. §. 4.

IT becometh all men very well, with honesty, that they have alwayes clean hands, and that chiefly when they sit a table, whether it be that they tast any meat, or carve for others.

others; and for to come unto it, the same are oftentimes to be washed with fair water and Venice sope. If you will make them smell well, then look what is written thereof in the first Part, in the first Chapter, and second §. Or prepare in stead of the sope this ensuing: Take one spoonful of Hony, two yolks of Eggs well brayed, and a little Rosewater, and Lilly water; temper them, and see the them to pap, rub the hauds therewith, and afterwards wash it off with fair water.

Item, take the whites of Eggs well brayed, stir therein a little wheaten flower, Rosewater, and Orange peels powned small as much as you will. The juyce of Citrons is also very good for it: or if one cannot get it, then may the juyce of Lemons or Oranges be taken in stead of it. It is also especial good against all itchinesse of the hands, and all other parts of the body.

Or take the water of Lovage, and powned Argal, temper them together with the white of an Egg, as much as you please of each, bray them well together, and use them as before is specified.

For to make perfumed hands and gloves. §. 5.

Take clean Barrows grease as much as you please, and lay the same eight dayes in water or in lee, putting every day fresh water or lee unto it, and wash it well; afterwards five other dayes in fresh milk, washed also daily. Then after that wring it out clean, and put it into a pot, & put Rosewater unto it, the water of Eldern flowers, of Plantain, and of Lavander, of each a like quantity. Afterwards put odoriferous spices unto it, as Cloves, Cinamom, Nutmegs, and so let them see the together softly until the water be wasted away. At the last you are to put unto it *Muscus, Ambra*, golden waters, or any other well favouring things, stir them a long time well together, this salve is also good for all scabbiness and scurfe, &c.

For scabby Hands. §. 6.

For this may the foresaid salve or Pomander be used which is described in the first part, the tenth Chapter, and first §. For this is also very good the Gum of Dragagant dissolved in Rosewater, and the hands rubbed with it.

It hapneth also many times that the hands be full of the dry scurfe, like to that kind of itch which the Latinists do call *Impetiginem*; for which this following is to be used, and not onely for the hands, but also over the whole body, whereas is the dry scurff. Open some eggs, put out the whites and the yolks, the egg shels are to be laid in a cool place where they will not be bedusted, then will there gather amongst it a little water, which you are to put into a little glasse, and to anoint therewith the place that is scabby.

Item, see the Elecampane in the creame of milk, which is also very meet for this purpose.

Or see the these roots with Butter and Milk, and when they be mellow and sodden to pap, then temper some salt amongst it, this is alwayes found to be very good.

You have a sure salve for this before in the first Part, the third Chapter and tenth §: beginning thus: Take Turpentine, &c. Some do advise to take the Livers of Tenches, and to put the same in a glasse stopped tight and set in a warm place, and to anoint it with the water that cometh thereof.

Item, the juyce which is wrung out of Orange peeles, should be marvellous good for this purpose.

Another; Take the oyl of Juniper, and oyl of Argal, anoint the hands with it and all other scabbiness.

For chops in the Hands. §. 7.

Take four ounces of Sallad oyl, or oyl of Roses, Wax one ounce; melt them together and anoint the hands with it. Item, take oyl of Roses, white Wax, Mastick, Frankincense, and Hens grease, of each a like quantity; pown all that is to be powned, then temper them all together, and make a soft salve of it.

For

For itche or scabby hands. §. 8.

TAKE three ounces of sweet Butter, Turpentine two ounces, washed together certain times with vinegar; and then temper with it half an ounce of salt, and three drach. of dry Cerusse. Item, take a good peece of Rie bread, laying it the space of certain hours in fresh water untill it be well mollified, then wring it out through a course cloth, and wash your self therewith.

This following is also good and sure; Take Turpentine two ounces, fresh butter one ounce, oyl of Roses half an ounce, the juyce of Lemons or Oranges three quarters of an ounce, the white of an Egg well brayed, salt one drachme, then temper them all together with a mild fire or upon warm ashes. If so be that you will have it thicker; then put a little Wax unto it.

Or take the middlemost rinds of the Juniper tree, and Barrows grease, of each a like much: seethe the same together in Goats milk, and salt it well.

Take the oyl of Roses and liquid Storax, of each a like quantity; melt them together: this is especial good, and hath a good savour. Item, take fresh Elecampane roots, Malloes, Duck roots with the leaves, and Fumitory, of each one handful, Bran one handful; seethe them all together in three pints of water unto the half, and therewith wash the hands. Or take Sulphur vive half an ounce, small bruised Litharge of Silver three drachmes, dried Cerusse one quarter of an ounce, Barrowes grease one ounce, Camphire half a drachme, the juyce of Oranges half an ounce, temper them together and keep it in a glasse.

With this following be many people holpen whom nothing would help. Take the roots of Docks and Elecampane, of each one ounce, Cuckowpit and Comfry, of each half an ounce, Agrimony, Self-heal and broad Plantain, of each one handful, Vitriol half an ounce, Allom and Sulphur vive, of each one ounce, Saltpeter one quarter of an ounce, Roses one handful, Pomgranat pils half a handful; wine and water, of each one quart, sharpe vinegar twelve ounces; let it be all together infused, and then afterwards boyl it; in which are the hands to be bathed every morning and evening the space of six dayes. And afterwards be the hands to be moistened with a cloth dipped in this decoction following: Take washt Cerusse one drachme and a half, Allom, white Coperas, and Mastick, of each two scruples, Camphire half a drachme; this being all beaten small together, then bind it in a fine cloth, afterwards steep it in two ounces of Rosewater, and four ounces of Plantain water, whereof we have admonished before and taught in the former 6. §.

As much as now concerneth all itch or scurfe, thereof we will by Gods help speak sufficiently in the fifth part.

Of the Fingers. §. 9.

IN the last 6. §. we have generally written of the hands; but now will we thiuk upon the fingers, which be called by the Grecians *Dactyli*, and by the Latinists *Digiti*; by nature have all men five on each hand: othersome six, which be therefore called by the Latinists *Sedigiti*.

The first of these is the Thumbe, which is called the greatest and smallest; by the reason of his shortnesse is he verily the smallest, but by reason of his thicknesse and strength is he indeed the greatest, and therewithall so forcible, that he is a helper to the rest of the fingers, that without the same they be very impotent, because that he lying above the fingers, in holding fast shutteth them up. This have also the most cruel Tyrants acknowledged, who commanded to chop off the Captives thumbes and not their hands, to the end that they might not handle their weapon, nor do any other labour.

The first finger afterwards is called the forefinger, in Latine *Index* that we do therewith shew and point at all things.

The third do we name by reason of his place the middlemost, which the Latinists partly call *Infamem*: the cause of this name will we conceal at this present.

The fourth is the gold finger or *Annularis*, for that commonly the same is wont to be garnished and deckt with golden rings.

Lastly, followeth the small or ear finger. These five fingers have fifteen bones, each three; albeit some do ascribe to the thumbe but two bones. Through these bones and moving of the sinews, these fingers have two small joynts, amongst which the thumbe hath

no more but one: all which bend onely inwards, whereby they be meet for all cunning and subtile actions. But what mischances and diseases these parts be subject to, we will now write and discourse thereof.

Of the numbnesse of the fingers in part or in all §. 10.

THis numbnesse bringeth with it a hardning of the finewes, and is caused through heat, cold, or drieth; this numbnesse must be holpen immediatly, or the fingers will forthwith loose their motion thereby.

For this disease must be kept especially a good diet, and first of all are cold windy dwellings to be eschewed, and the whole body, chiefly the hands and the feet to be kept very warm, and then to refrain from all grosse binding and cooling meats, as old Beef, Skins, Paunches and Sinewes of all beasts.

Item, all that is drest with dough, all fish, and especially Eeles, Tenches, and Crabs must be refrain. He must also forbear milk, Cheese, and all old baked bread: from all kind of Beans and from cold herbs, as Lettice, Purslain, Beets, Pears and such like; red grosse thick wine is also not good for him: and if it be possible he is utterly to refrain wine, whether it be drunken watered or unwatered. Also he is not to overcharge himself with meat or drink at any hand. And he is above all to beware of vinegar, and from all sour things. Also long sleep is hurtful for him, and especially sleep by day; otherwise he may live according to his old custome.

As much as concerneth the use of Physick, he may take of these pills following four or five every day two hours alwayes before supper, and to continue this a certain space: take Aloe two ounces, steep it two dayes in the water of blew Flower-deluce, *Agaricus*, and *Turbith*, of each one drachme and a half, *Hermodyli* one quarter of an ounce, Mastick one scruple, Ginger, Annis, Cinamom, and Mace of each half a scruple, *Diagridii*, 2.℥. then pownd all small temper them together, and fashion six pills of each drachme.

Secondly, take oyl of Myrtles, and of Mastick, of each one ounce and a half, burnt Ivory, Amber, red Coral, and *Sandaraca*, of each one drachme, Mastick, Frankincense, of each half a drachme, Paper glew three quarters of an ounce, Dragagant and Gum, of each half a drachme, dissolve the glew in strong red Vinegar, with half an ounce of Wax. When it is almost cold, then temper the other spices with it, and make a tough salve of it, that it may be spread on leather, lay it within upon the bending of the hand, and round about the thumb.

Thirdly, take a piece of Milstone, let it be through hot, lay it in a great pan, and besprinkle it with good Wine and sharp Vinegar tempered together: and do this so long until there be about twelve ounces powred upon it.

Over this vapour be the hands to be holden being well covered, to the end that they may sweat well; afterwards dry them. This is to be done once every morning, and afterwards to bind up the hands in a piece of Fur.

Fourthly, take oyl of *Camelina*, and of sweet Almonds, of each two ounces, Calves marrow, Badgers greafe Ducks greafe, ana. 3. 1. *Bdellium* half an ounce, *Galbanum* one ounce and a quarter, Saffron half an ounce and drachme, dissolve the gum in white Vinegar, and then make a soft salve of it with Wax: with this salve are you to anoint all the hands and fingers morning and evening.

Fifthly, take one ounce of the gum of a Cherry tree, Bevercod and *Galbanum*, of each one quarter of an ounce, Sallad oyl six ounces, Calves marrow, Goose greafe, and Hens greafe, of each one ounce, white Wax one ounce and a half, Saffron two scruples *Lignum Aloes* half a drachme, and *Muscus* two grains: dissolve the gum in white Vinegar, and temper the fat amongst it.

Last of all, put all the other things beaten small unto it. When as the patient hath used all these foresaid fomentations, salves and plaisters, the space of ten or twelve dayes, then are the hands to be anointed with the first described salve.

When the fingers be numbed through bruises. §. 11.

THis cure or healing is commonly committed to the Chirurgions: but if the Sinewes be not utterly chopt off, then is there still some hope of health. Now for to remedy this, the patient is (like as is said already) to keep himself soberly, and to beware of

of much Wine, of Vinegar, and Venery, from stirring the bruised hand too much, and not to wash them with cold water, but is to use these fomentations following: Take a peece of a Millstone, make it very hot and put unto it as is before said, then cover the hands very warm. This being done, then are they to be anointed with this salve being made very warm. Take oyl of *Beben*, of *Costus*, and the suet or fat of a Lyon, or instead thereof mans greafe, the fat of a Bever, of each five ounces. Saffron two scruples, the marrow of an Oxe one ounce, powned *Hermodylyli*, Pionie roots, *Stechas* flowers, and Southernwood, of each half a drachme, Wax as much as is needful for to make a tough salve. This being done, then be the hands to be covered warm with unkembed sheeps wooll, and the bruised fingers are to be bounden and to be put into warm gloves, to the end they may be kept from all manner of cold. When as this hath been observed the space of eight daies, then is the fomentation to be omitted, and to use this salve following: Take oyl of *Nardus* one ounce and a half, oyl of *Euphorbium* one ounce, oyl of Saffron, and of Pepper, of each half an ounce, *Stechas*, Swines bread, white Pepper, *Hermodylyli*, Piony roots, and Southernwood, of each one drachme, *Glabanum*, *Serapionum*, and *Ammoniacum*, of each one quarter of an ounce; seeth the oyl and the Gum easily together. When it beginneth to be cold, then temper the powder in it, and make a salve of it, wherewith anoint the hands twice a day, and keep them alwayes warm.

Of the Fellon or Ancone in the Fingers. §. 12.

THis impostumation which some do call *Panaricium*, and we a *Fellon* or *Ancone*, is none other but a sharp and hot impostumation of the fingers, which bring such a pain with them, that the Patient thereby, neither by night nor by day can rest or sleep, neither can get any ease by any means, until that the said impostume be opened.

This impostumation is first to be remedied with cooling things that do also thereby mollifie and ripen like as this salve following; Take the oyl of Mastick, and unripe Salad oyl, of each one ounce, cleansed *Antimonium* half a drachme, prepared *Tinie* 3. drachm: white Wax half an ounce, Rosin half an ounce, the Wax, Rosin, and Oyl are to be molten together, and the rest to be tempered amongst it; afterwards anoint the fingers with it often.

Item, take Sulphur, Garlick, *Carni*, the soot of a Chimney, and Salt, of each a like quantity; pownd all to pap and bind it upon the hand. Yet one more; Take the innermost skins of Eg-shells, lay them upon the finger, and this former salve upon them, wherewith we will commend, and commit the cure of this accident unto the Chyrurgians.

Of the Naitles on the Fingers and Toes. §. 13.

THese Naitles are the outward parts of the sinews, and have their root and foundation, and do grow out of the superfluity of the same, which increasing consisteth not at all in the depth or breadth, but only like to hair in the length. *Aristotle* saith, that the fingers and the toes are given only for a defence: but *Galen* addeth unto it, that they be therefore made, for that therewith all small and subtile things might be opened. These Naitles have of themselves no sense or feeling, therefore do they need no great remedies; and for that cause will we only admonish here, and discourse of the impostumation of the roots of the Naitles.

And if so be that there be then any impostumation in the roots of the Nails, or there happen any other harm unto them, then take *Saxocolla*, Mastick, and Frankincense, of each one quarter of an ounce, Comfrey, burnt Allom, Hartwort, of each one drachme, *Ammoniacum*, *Myrrha*, Verdigrease, and white Copperas, of each one scruple; pownd them all to a subtil powder, and strew upon it. This powder dryeth, consumeth all bad flesh, and it healeth also marvellous well; this may you also use on the Naitles of the Feet.

The second Chapter.

Of the Legs and the Feet.

IN this second part of the outward members we will only add and write this, which is, that these Legs like the Arms also be divided into three parts; whereof the uppermost part is the whole hip even to the knees: the second part is from the knees even to the feet: the third part is the feet with all that is annexed unto them. As much as now concerneth the diseases of these three parts, they are to be holpen and healed with the same remedies which be ordained for the Arms. But the Leggs be subject to other more especial accidents, as broken veins called *Varices*, wherewith commonly the thighs, the knees, and the calves are burthened, like as we will admonish thereof in the fifth Part, Chap. 1. and §. 5. amongst other swellings. And albeit that it first of all behoveth to discourse of the uppermost part of the legs: yet will we neverthelesse defer it, until that we come where we shall write of the Sciatick, or Gout of the hips, because that we will observe our method.

Of the Knees. §. 1.

AS much as concerneth the knees and other members more, the which have no several description; therewith is to be dealt, like as is said in the Chapter of the Arms: but that only for all diseases of the Knees, the oyl of Tiles is highly recommended.

In like sort also this salve following is very requisite for all diseases of the knees, and of all other members, whether they be bruised through thrusts, through exulcerations, or wrinchings: Take the juyce of Sage, of Betony, of Rosemary, and of Camomil, of each one ounce: seeth these juyces in eight ounces of good Wine, until the Wine be almost wasted, then put powdered Mastick unto it, and Frankincense, of each three drach. and let them seeth again until they be meetly thick: afterwards temper therein one scruple of Saffron, oyl of Roses, of Earthworms, and of Mastick, of each one ounce and a half, oyl of Junipers, powdered Linseed, and powdered Juniper berries, of each one quarter of an ounce, then temper all them together: And if so be that it be too soft, then put a little Wax unto it.

When as any body hath any cold defluxion fallen into his knees, that he can neither go nor stand, then is this following especial good, and also many times approved: Take the oyl of Tyles, and of Turpentine, of each one drachme, oyl of Argal half a drachme, oyl of *Euphorbium* one scrup. oyl of Dill and of Juniper, of each one quarter of an ounce; make a salve thereof with a little Wax, and anoint the knees warm with it.

You shall also find hereafter divers sundry remedies for this in the description of the *Podagra*, and of *Arthritis*, which may also be used unto the knees. As much as doth appertain unto the veins of the knees hath been written before in the Introduction.

Of the Shins. §. 2.

IT cometh then oftentimes to passe, that there riseth upon the Shins certain ulcers which are not so soon to be healed, but continue, and do corrode also hitherwards and thitherwards, and make very great scabs; for which this following is to be used and thus prepared: Take Wax and Rosin, of each one ounce, sheeps suet two ounces, Pitch, and Sallad oyl, of each 3. ounces, Mastick and Frankincense, of each 3. drachmes and a half, washt Litharge of Gold one ounce and a half, Ceruse one quarter of an ounce; let the oyl and the Rosin be sodden together, and then melt the Wax amongst it. When it beginneth to be cold, then temper all the other things powdered small amongst it, and so keep it in a pot. At the first wash these ulcers thrice every day with warm sweet Wine, and then anoint it afterwards with the said salve.

Item, Take Ceruse, Antimony, Litharge of Gold, and burnt Lead, all of them washed, of each one ounce, molten suet 3. ounces, Frankincense, Momie, *Sandaraca*, *Sarcocolla*, burnt Allom, and Dragons blood, of each one ounce and a half, oyl of Roses, and of Vinegar,

negar, of each three quarters of an ounce, Wax and Rosin, of each one ounce, make a plaister of it. This plaister is very good for all depascent ulcers, which be caused of a burnr melancholick matter, it expelleth heat, it dryeth, it asswageth the pain, it matura-teth all hard byles and pushes, and especially it healeth all ulcers of the Shins.

The plaister *Sparadrapum* is also used for this, which is thus to be prepared: Take three ounces of Sheeps sewet, oyl of Roses and Ceruse, of each one ounce, Vinegar four ounces, Litharge of Gold one ounce and a half, Rosin and Turpentine of each one ounce: let the oyl and the fat see the well together, afterwards put the Vinegar and all other things unto it: and then add as much molten Wax unto it as will suffice for to make a tough plaister of it.

This plaister is also very good: but the Patient must above all things beware of over-much going and wearying the Legs.

Of the Feet. §. 3.

THe Feet be as foundations of the whole body, which also do in like manner di- vide into three parts, viz. the insteps of the Feet, the Plants or Soles, and the five Toes: which be not unlike to the fingers, but that they be a little shorter: and that the great Toe doth shut up and close the rest of the toes, as the thumb doth the fingers. They be very helpful and commodious unto men that they may stand the faster, and the bet- ter bear the burthen of the body.

The Feet and the whole legs do otherwhiles get the cramp, or a contracture of the sinewes, whereof we have written much before in the first Part, the twelfth Chapter, 14. and 15. §. They do oftentimes stink very much: and to remedie it there is nothing, but oftentimes to change ones Socks, and to bath the feet in water wherein Nut leaves, Cypres leaves, Allum, and other well savouring and odoriferous things be decocted. You have also before in the second §. of the first Chapter, where is discoursed of the stench of the Armpits, further instructions. For this it is also meet to keep clean the place between the toes, and to use oftentimes warm foot baths, and then to strew burnt Allum between the toes, which dryeth the stinking, and also keepeth them clean.

And because the Feet be much subject to be frozen, which yeeldeth no small hinde- rance to a body in going, therefore we will discourse some-what thereof.

Hereupon do some lay playing cards wetted, and affirm that they heal this disease in in every respect whether it be open or not. Some do counsel that a blew woollen clout should be burnt to powder and strewed upon it. Item, take the whites of five Eggs, and burn them in a little Barrowes grease, and annoint the frozen place with it: but I take the yolks to the better. This following is best of all: Take Turpentine, and put meetly much Salt unto it, stir it so long until it be thick like unto dough: after that spread it on a cloth, and lay it thereon the space of eight dayes: at the least twice a day: if it be used immediatly after that the feet be frozen, then doth it cleanse the same, and healeth it presently.

Touching cornes which come upon the Feet, so it is, that in the midst of the same there groweth a small black or white callositie, like as it were a wart, the which through his hardnesse maketh so great a pain, that one can hardly tread or goe upon it. Whereto some of these remedies ensuing may be used: Take the Gall of a Pickrel, and bind it upon it, or annoint it therewith. Item, make a plaister of red sealing Wax, and lay it thereon. Others do goe somewhat rougher to work with it, and doe take yellow Arsenicke, which is Orpiment (Copperas, and Allum, of each a like quantity, and tem- per it unto a salve with hony, and annoint it therewith. Or they do take one quarter of an ounce of *Galbanum*, and let it steep so long in vinegar until it be as soft as a salve, and lay the same so long upon it until the Cornes weare away. But this following is oftentimes found to be good, so that the whole Corne falleth away thereby, and is also very safe: Take of the plaister *Diachilon magnum*, and Pitch, which is Shoemakers Wax, of each a like much, make a plaister of it; spread it on a cloth and lay it upon it the, space of three or four dayes beneath on the plants of the Feet, and goe upon it, after- wards take fresh again so long until they be thoroughly whole.

You shall find more other good things in the first part, where we doe discourse of warts which be also very commodious for this purpose.

The third Chapter.

Of the pain in the Joynts in general.

Ext to the forementioned diseases and sicknesses which the arms, hands, legs, and feet be subject unto, there be divers more and much stronger diseases then the former, in the Joynts, which be also very needful to be described. But we will above all discourse generally of them; and divide this matter into two parts; whereof the first part is called by the learned *Gutta*, wherein shall be shewed all the causes, signs, orders, and other things which be commonly requisite for all pains of the joynts.

The second part shall we comprehend under a general Gout, or *Arthritis*, under which is contained all pains of the joynts: for most famous Physitians do severally write of them, and afterwards we will speak of three other sundry Species of the Gout, which only light upon certain places of the body, as *Chiragra*, *Ischia* and *Podagra*.

All sorts of Gouts may manifest themselves in whatsoever part of the body they will; yet are they so like one another, and so allyed together, that many learned men have written of them all under one, and have only excepted *Ischia*, to be another kind: which error grew on this foot; for that all the sorts of it do after one and the same manner pain all the joynts of the body. Neverthelesse, we will as much as is possible, and as much as the cause requireth, make a severall declaration of each by it self.

Of the Gout in general called Gutta. §. 1.

LIke as we have before admonished, so do the learned comprehend all diseases and defluxions which do fall into all the joynts under the name of *Gutta*, which is a passion or pain of the joynts which falleth into them and the sinews of mans body by some humours or wind from above, or from the next adjacent place; or which is caused through bad disposition of the whole body. This grievous pain may also be caused sometimes through a fracture of a bone, through wrenchings, through great stirrings with a full belly, through falls, blowes, thrusts, through exulcerations, and through great outward heat or cold: by which means all the joynts are weakened. For this also helpeth much; all cold and waterish meats if the same be well used; as fruit, great fishes, and especially if they be without scales, swines flesh, water fowls, and such like. To be idle, and to live without any exercise. Also excessive venery, especially after one hath eaten and drunken. Obstruction of any accustomed course, as of the Pyles, of any open ulcers, of detention of the Termes and such like, whereby nature was accustomed to cleanse herself. Item, it is also found by experience, that some do inherit this disease from their ancestors.

In fine, there be two principal causes whereby these kinds of diseases be provoked; as first of all the shew of these defluxions. Secondly, the increasing of these defluxions from above. Thirdly, feebleness of the members which receive this superfluity.

The signs of the Gout are manifest of themselves; to wit, if one feel great pain, and that at sundry times on the places where these defluxions do fall, otherwhiles with swelling, and sometimes without swelling, and whether this proceed of heat or cold, that may be perceived by feeling. If it then come through any outward cause, that may be demanded of the sick persons themselves, or if it come through any repletion of the body, that appeareth by the signs of the weins, grosseness of the body, fulness of the pulse, sloth of all the members, by the diminishing of understanding or memory, losse of appetite, and by the feebleness of the sight. If this disease be caused through blood, then it is commonly in fat and repleted bodies, with pain of the head, with great unlustiness, with unquiet sleep, with diminishing of the understanding, with weariness, with redness of the whole body and urine; there is also heat with it, panting and swelling, and that in the place infected, especially if one have lived sumptuously.

Item, all cold things are welcome unto him, and all warm things painful, and if they be used too long, also hurtful: Yet this the rather in young persons being full of blood by nature, and if he dwell in a hot countrey. If this disease be caused of *Phlegma*, or

of cold humours, then is there neither panting nor great pain with it, but remaineth for the most part in one place without removing hitherwards or thitherwards; neither is there also any great rednesse or heat with it, and for the more certainty that the same is caused through *Phlegma*, if the same be so found in an old person in winter time, after that he hath eaten much cold and moyst meats and drinks, or hath much and long frequented water. After all warm things be acceptable unto him, and all cold things noysome.

If so be that this disease proceed of *Cholera*, then is there a strong heat with it, that one can hardly suffer it in the feeling, also a great pain without swelling, with drought and distention. With this will the Patient perceive a bitternesse of the mouth. And these things will be the rather confirmed if the Patient be young and cholerick by nature, or if it be Sommer time; also being hot and dry weather; &c.

This pain of the joynts proceedeth very seldom, or also never through melancholy, if it be not mixed with some subtil moisture, then is there very little pain with it, and also little help for it whatsoever is done unto it: for the place of this disease will be hard, remaineth black without any rednesse. And it happeneth not but in old folks about winter, &c. If this be caused of wind, then is it swollen, thick without great pain, which oftentimes removeth from the one joynt to the other, and the Patient hath used much meat and drink before which do ingender wind. If there be any humours mixed amongst these winds, then must it be considered and passed upon the forementioned signs, whereby will very soon be perceived what humour hath mixed it self amongst these winds, according to which every one may know how to dispose and govern himself.

Like as then hitherto in divers places certain common rules have been made, so will we proceed here also: whereof the first is; For as much as the Gout *Arthritis*, *Podagra*, and such like, appear most of all in harvest, by reason of the fruit eaten the whole Sommer, therefore must all fruits be eschewed. Secondly, for as much as venery is so hurtful for this disease, and increaseth it very much, the same is to be refrained as much as is possible. Thirdly, a quiet idle life, and sleep by day time do hinder that the superfluity cannot be consumed. To the contrary, too great stirring and exercise, whereby the members be over-heated, are also oftentimes the cause of this pain of the members; therefore is the same as much as is possible to be eschued. Fourthly, all Wine, and especially strong Wine is very hurtful for all them that be plagued with the Gout. Fifthly, all ryoting and drunkennesse make bad digestion, whereby also the pain of the Gout is augmented. Sixthly, they that be hot of nature, and addicted to the Gout, are to refrain from all plegmatick meat which is drest with sundry things, and also from all meat which doth make *Cholera* and blood, for that when these two humours come together, then do they bring grosse & undigested defluxions in the joynts, whereof then the Gout is caused. Seventhly, there be some through purging and letting of blood that are freed from this disease, which may most commodiously be done in the spring of the year. Eighthly, the ayr hurterh them much that be troubled with the Gout. Ninthly, all great grosse fishes, and especially Eeles be hurtful for the Gout. Tenthly, sucking Pigs, all water fowls and old Hens are especially hurtful to the lower members. Eleventhly, milk and wine eaten together be very noysome for all members, and very hurtful for the head. Twelfthly, the drink which is taken without thirst bringeth much hurt to the body. Thirteenthly, like as great sursetting with meat is very hurtful for all the joynts, even so doth a moderate dyet refresh them. Fourteenthly, the going too much, or weary walking, and hanging down of the legs, especially presently after meat, is very hurtful for the joynts. Fifteenthly, to lie upon the back is also hurtful. Sixteenthly, anger is enemy to this disease. Seventeenthly, the great sensibility of the joynts, and especially of the feet, cannot suffer any pain. The foresaid 17. rules are only ordained for this purpose, to free one from the Gout: but as much as doth concern the means whereby these joynts are to be strengthened and preserved, that the same do not receive those defluxions whereon dependeth the principal means to free one from it, are in these rules following to be observed. Eighteenthly, it is very requisite that the feet be often bathed in Allom water. Nineteenthly, Sage decocted in Beer, and the same drunken oftentimes, is commended, as it were a very secret medicine and receipt which hath an ineffable operation in all diseases of the joynts. Twentiethly, Almond flower, Camomil, Myrrhe, Melilot and Roses be very commodious for the joynts. *Calamus* and ground Ivie have an especial vertue for to strengthen all the joynts, the same doth also the Indian Nut kernel. One and twentiethly, Vervein laid fresh upon the feet and so worn, is very good for the *Podagra*.

These things following do strengthen much the sinews. The root Behen and his oyl doth warm the contracted sinews; in like manner also *Bdellium* and *Calamus* laid upon it with oyl of Citron peeles, of Camomil, of Bevercod, Cypres roots, Cassie wood and Cypres: also oyl of *Costus*, and such like oyles are marvellously praised and commended for the sinews, and Centory in Clifters. Item, feet water made of the ashes of a Bay-tree. For a salve, the mother of Sallad oyl is good, and the dregs of the oyl of Lillies, and of all other oyles which be warm by nature. *Opopanacum* is also much commended, but *Pyretrum* and Pepper above all other to warm the sinews. For this be also dry sweet bathes good, or natural Sulphur bathes. After purging is Treacle and Mithridate much commended in all cold Gouts, drunken with Wine wherein Sage hath been decocted.

But as much as concerneth the curing of these joynt diseases, it is not needful to discourse any further of them, because that we hereafter will write of this matter at length. Therefore we will proceed in the name of God:

An Oyntment for all manner of Gouts.

Take in the Summer time of all the 3. sorts of Snailles, and fry them in a frying pan, and thereof make an oyntment to anoint the place affected with the Gout. Or anoint the place with the juice of Onions, and strew the powder of black Pepper thick upon it, then seeth Cumin and Calamint in Wine, and dip a sponge in it, and lay it upon the Peppered place, it consumes and draws out noysome humours. Or stamp the root of Ebulus with hogs lard, and apply it as a plaister.

The fourth Chapter.

Of the Gout in the Joynts, Arthritis.

He second description which speaketh commonly of the pain in the joynts, whereof we have briefly admonished before, is that which the Latinists do call *Morbum articulare*, and the Grecians *Arthritim*, which is as much to say, as the pain of the joynts, or an inflammation of the joynts, which proceedeth from within the body, and the Tendones be annoyed, hurt and pained. In fine, it is none other than a dispersed *Podagra* over the whole body: the which at one time cometh behind in the neck, another time in the shoulder blades; then again in the back bone, and in the hands, in the fingers, and in the elbowes: the which also sometimes creepeth into the nethermost joynts, as in the legs, the knees, in the feet and toes. And although in this disease, like as also in other diseases more, there be many sundry remedies sought by many sundry careful Physitians, according to the quality of the cause, and place of the pain; therefore is there but one general rule to be observed. First, how one shall be preserved from this disease. Secondly, how that the same is to be cured and taken away altogether. And because the time of the year importeth not a little therein, therefore is choise to be made of it.

In Summer the matter is thus to be handled. This kind of patient in the beginning of Summer is to be purged with that which ensueth: Take *Agaricus* one drach. Sugar one ounce, *Hermadaetils* one drach. and a half, water of field Cypres 3. ounces, make the water warm, and steep the rest 24. hours in it; afterwards wring it hard out, and drink it warm in the morning, and then fast six hours upon it.

Afterwards is this potion following to be used at least eight daies together early in the morning, and to fast four hours after it: Take one ounce of the hony of Roses, the water of white water Mints, and the water of field Cypres, of each one ounce and a half; temper them together. He may also take to prepare the humour, hony of Roses, *Syrupum de Stachade*, and some of the foresaid waters. The ninth day shall he swallow these pills following: Take *Pillularum de Hermadaetilis* and *Feridarum*, of each half a drachme; make thereof seven pills with the sirup of Roses, and take them early in the morning.

And

And if so be that one would take no pills, then take five drachmes of *Hieralogodion* and Turbith beaten small, half a scruple, *Diagridion* two graines, Ginger three graines, temper them together, and take it so, or put some distilled water unto it,

Some expert Physitians do advise much to this Clister : Take Ireos, the roots of wilde Cucumbers, field Cypres, and Saint Iohns wort, of each two handfuls. see the them all together in sufficient water : then take of this decoction twelve or sixteen ounces, and temper therewith *Hieralogodion* one ounce, oyl of Rue three ounces, Hony of Roses one ounce, the yolk of an egg well brayed, Salt one drachme, use it once a day.

In harvest is the Patient once every fourteen dayes to take one drachme of these pills following : Take Aloe two ounces, *Agaricus* and *Hermoadili*, of each one quarter of an ounce, Coloquint one drach. and a half, Ginger, Cinamom, *Asarabacca*, Cloves and Mace, of each one scruple, Turbith and *Epithymus*, of each one drach. Saffron one scruple; stamp each alone : afterwards temper them together, and pour sufficient field Cypres water upon it, and then set it out to dry in the Sun. Lastly pour more of the same water upon it, and let it dry again, to the end you may fashion pills of it.

Secondly, there is to be considered how that next after purging, between the spring and harvest, the matter might be derived toward another place, and so to expel it, which may be best of all done by those meanes which force urine, whereto these things following are to be used. First the Patient is to drink about the space of fourteen dayes, every morning five ounces of *Asarabacca* sugered : or in the sted thereof the water of Madder which is better. There is also good for this both these things following : Take Pease meal one scruple, old Treacle half a drach temper them together with two ounces of Smal-lage water, and so drink it, and fast five hours after it. Item, take *Trochiscos de Eupatorio*, half a drach. Gromel seed, Cinamom and *Carni*, of each five graines, *Benedicta laxativa*, one drach. and a half, temper them together with two ounces of strong white Wine, then drink it and fast five hours after it.

All that shall be hereafter mentioned consumeth the defluxions which be still settled in the joynts : then is the place of this disease to be rubbed softly, and annointed with this following, according as the Patient can suffer it : Take unripe Sallad oyl two ounces, well parched Salt one ounce, annoint the joynts very warm with it, and then wrap them in warm clothes. The joynts are to be also fomented with light red wine and Vinegar powdered on hot stones, that they may sweat well. They are also to be annointed with this following : Take *Sagapenum* one ounce, *Bdellium* and *Ammoniacum*, of each half an ounce, *Sandaraca* one quarter of an ounce : the Gum is to be dissolved in a little red Vinegar, and with Wax make a salve thereof.

Another : Take oyl of Roses and of Camomil, of each one ounce, three yolks of Eggs, Saffron three graines, temper them and use them together. After the annointing you are to strew the powder of earth wormes upon it, and cover it close with sheeps wool. Or take oyl of Foxes, oyl of earth-wormes, and washt Turpentine, of each one quarter of an ounce, Salt three drachmes use them as before : You are also to annoint the same places with warm oyl of Roses.

This following is also very highly commended : take Venice Sope 3. ounces and a half, cut very thin, and then let it see the a waume or twain in six ounces of the water of Fumitory, afterwards you are to put unto it the oyl of *Euphorbium*, and of S. Iohns wort, of each half an ounce, oyl of Juniper one ounce and a half, oyl of earth-wormes, one ounce, let it then see the until that the water be sodden away : afterwards you are to put unto it Mastick and Frankincense, of each one quarter of an ounce, Sulphur vif. *Euphorbium* and *Piretrum* of each two drach. and a half; use it as aforesaid.

The oyl of Earth-wormes is especial good for all pain of the joynts, and for all frozen sinewes ; the which is thus made ; Take Earth-wormes three ounces, wash the same with Wine, and pour unto it twelve ounces of Sallad oyl, Wine 6. ounces : see the them together by a gentle fire until the wine be sodden away, afterwards strain them through a cloth.

For this disease be all warm baths also requisite, and if they cannot be gotten, then are the same to be made by the advice of a learned Physitian, yet the most commodious time of bathing is from the middest of April to the end of May.

And because that these defluxions be more manifest in the Spring and Harvest then in any other time of the year, unto which times we have appropriated all these fore-said remedies : therefore will we now teach what is to be done unto it in winter.

For this is purging to be used again, and that in this manner following. When as September is half past, then are these pills to be taken once in the morning: Take *Pillulas de Agarico, & de Hermodactylis*, of each half a drachme, Indy salt two grains, make seven Pills thereof with the Confection of Roses. The day after is this following to be drunken, the which is thus 8. or 10. daies together to be continued: Take the sirupe of Wormwood, and *Syrupum de Eupatorio*, of each three quarters of an ounce, water of Hops, or field Cypres, of each one ounce and a half, temper them together: afterwards is this following to be drunken; Take the confection *Benedicta* three drachmes, *Inda* two drachmes and a half, water of blew flowerdeluce two ounces; temper them all together, make it warm and drink it.

Afterwards are the foresaid pills which be ordained to be used in Harvest, beginning; Take Aloe, &c. to be used throughout all the Winter.

As much as concerneth other things, those remedies are to be used which be ordained to be used in Summer, onely that they must be used in more quantity; like as it is advised in Summer to take one drachme, in Winter one drach. and a half; and so also with bathing and otherwise.

You shall hereafter have many sundry things which may be used against the Gout, or joynt diseases, viz. Confected Quinces, Marmalade, and all that may be made of Quinces, except that there be no spices with it if the disease be with heat. For this, be things also good which shall shortly after be ordained for the Gout *Podagra*. If so be that there be no special heat with it, and that wine may be used without any great danger, then is it his nature that it strengtheneth all outward members, if the same be moderately drunken. Amongst herb wines are these following much commended for it, viz. of Rosemary, of Wormwood, of Sage, and of Clarie: all which not only drunken, but also the joynts anointed with it, or the vapour thereof received into the diseased joynts, do also strengthen the same.

When one is come to his former health, then must one look to it, and also beware and take heed from all those things which are wont to cause those kinds of defluxions into the said joynts: To which end you may look all the rules in the first Chapter, which be described in the first §. Take good Turpentine the quantity of a Bean, or instead of that *Opopanacum*, or *Sagapenum*, which you will in the like quantity.

There is very meet in like manner, if one take early in the morning half a scruple of *Lignum Aloes*, with an ounce of the water of field Cypres. It is also much advised to take twice every week one drachme of good Mithridate, or instead thereof one Mirobalan *Cebuli* chewed and eaten: or one day Mithridate, and the other day one Mirobalan. All these foresaid things be not onely commodious, but also very safe. Let this suffice now generally spoken of the joynt disease *Arthritide*, and we will now proceed with the *Chiragra*.

The fifth Chapter.

Of the Gout in the Hands, Chiragra.

Either the second sort of the Gout will we describe the *Chiragra*, the which we do properly call the hand Gout. But because that betwixt the Gout of the hands and that of the feet there is none other difference, but that the one cometh in the hands, and the other in the feet: therefore will we here refer us to the Gout of the feet, where we will thoroughly discourse of these two kinds of infirmities:

The

The sixt Chapter.

Of the Gout of the Hips Ischia, commonly called Sciatica.

BEfore in the first Chapter and first §. in dividing the sorts of the Gout, and in the description of *Gutta*, is this kind *Ischia*, taken for the third sort, the which of the Physitians that do not well understand the Greek, is called *Scia* and *Sciatica*. This Gout of the hips is a long lingring pain, and especially when it cometh into the bones of the hips: notwithstanding that it doth otherwhiles appear in the uppermost parts, which is caused of a cold moisture that falleth down from above. And because that her grosse roughnesse cannot easily be consumed, but much rather augmented from day to day and made worse, then falleth it at the last into the knees, the legs, into the feet, and so out at the toes. The same tough humors do cause also oftentimes through their great, grosse, and tough sliminesse, that the hip bones be eluxated, although otherwhile they return again to their natural places, and that when the ligaments of these joynts through this waterish moisture happen to be loosed or resolved, and afterwaeds wax hard again, and shrink up as before. But if this foresaid hip bone be long eluxared, then doth it come easily to passe, that thereby the whole leg cometh to extenuate, whereof then a meer impotency or lamenesse might follow: so that this disease afterwards very hardly, but by actual cauterization may be holpen, whereby the matter may be drawn out with cautery, which, when one is minded to use it, is to be done beneath the knees in the Calves, and that in the leg so diseased.

But before and ere we come to the remedy, we will first prescribe a general rule how to govern himself in this order of dyer, which not onely in this, but also in other sicknesses (according to the importance of the cause and place) may be diminished, augmented and altered.

This that followeth here is ordained for them, in whose bodies all grosse, cold, tough and flegmatick humours tempered with *Cholera*, do abound.

But these must first eschue all cold ayr, low dwellings, and especially they which do lie near the water side. The windows of his dwellings are also to open against the South and East (if it be fair weather) and the rest remain shut. And if so be that the time of the year will permit it, then is his chamber to be alwaies kept warm, with a continual fire, and to behang the stone wals with Tapestry, or to let it be wainscotted, or fenced with boords. In like manner he is also to keep his head well from cold, and to beware of great exercise, especially if he feel any pain, and that so long as any pain is instant, and until the joynts be strengthened.

What concerneth further the meat and drink, one is to keep himself therein moderately, and to use all such sorts of meats and drinks which do yield small sustenance or nourishment, and be meet rather to make one lean than fat, and especially if there be any debility of the stomach, or any wambling with it. He is also to chew his meat well, and to eschew the variety of drinks. Otherwise he is to use those meats which be warm and dry, and that are drest and strewed with any drying and warming things; as with Pepper, Salt, Cinamom, Nutmegs, Fennel, Parsley, Annis, Hyssope, Mints, Thyme, and such like things more. His bread must be a little more than common bread, leavened and salted. He is also to eat no other flesh but Hens, Pullets, Pigeons, Fesants, and all kinds of field Fowls: yet for the most part rather roasted then sodden. Veal and Mutton is also very healthy for him. Amongst herbs be Colworts, Fennel, yellow rapes, &c. be very good for him; but all cold herbs must he eschue, or at least use them very seldom and little and being alwaies tempered with some warm herbs: red Pease, Lentils, and Rice drest with fresh flesh, may he eat. Amongst fruits there be none that be more requisite than Figs, Raisins, Hesel nuts, Almonds and such like. The sweet odoriferous Grapes be not much forbidden him. He is also to be restrained from butter as much as is possible, because of her slime and moist nature: but rather in stead thereof to use the oyl of sweet Almonds, Sallad oyl, or oyl of Walnuts, Vinegar, Verjuice, Limons, Oranges, or their juice be not commended, and if one will ever use them, then must some

other warming things, as Salt, Pepper, Cinamom, be tempered with it in eating of other meats. Also fish and doughy meats be very hurtful unto him. The best drink that he can drink is Hony water, which may be prepared as followeth; Take twelve quarts of water, and one quart of Hony, let them see the together until eight quarts remain; if you put Annis unto it, then will it be the better. Certain later Physitians do advise (and that with good reason) that these Patients should drink the decoction of *Guaiacum*; and how the same is to be prepared, that shall you find described hereafter in the fifth part, in the discourse of the Pocks. Out of these forementioned reasons is it easily to be noted and marked, that it were very good utterly to forbear wine: but if it cannot be, then to chuse a thin red wine, or the sirupe of Betony, and *Oxymel* of Squils decocted with Annis water.

Further, it is not very good to sleep much, and chiefly in the day time immediatly after meat, for that ingendreth much slime and other tough moistures. One hour and a half after supper is he to go to bed, and to lye first upon the right side, afterwards upon the left. Through much lying upon the back do the defluxions fall to great prejudice behind in the neck, and in the back bone. His sleep shall also not endure longer than 7. or 8. hours, and the rest of the time is to be spent in watching.

Purge the body with convenient Purges. Then take of Petroleum, ℥. 6. Trotter oyl, 3. 8. powder of Castoreum, 3. 2. Aquavite in a cold cause, or else no Aquavite, bath and anoint the grieved places therewith. Prob.

Use Rose water in stead of Aquavite in a hot cause.

Also see the the mosse of trees in water with oyl of Roses in a hot cause, and see the mosse of trees in water with oyl of Camomil in a cold cause, and apply it hot like a poultice.

Of the pain in the Hips or Sciatica through heat. S. 1.

TO remedy the manner of this pain, is but a little different from all other joynt diseases, because that they alwaies for the most part proceed of cold, and do ly deep in the joynts of the Hips. For the which in this disease all diuretical medicines be hurtful, because that thereby the matter will be made so much the grosser and tougher; so that afterwards it can by no means be consumed. Now when this disease is caused through heat, wherein commonly a cold flegmatick matter is mixed with *Cholera*: yet notwithstanding, *Phlegma* getting the mastery, the same may easily be perceived by the high coloured urine, and other signs more. Therefore for a beginning is the liver vein to be opened in the arm, and that in the same side where the pain is; afterwards the vein, (which is named of the disease, *Scia*) and standeth as described in the Introduction, upon the foot, and to let out 4. or 5. ounces of blood. But good heed is to be taken therein unto the strength and power of the Patient: for that, like as we have said in other places, the veins in the lower parts do weaken the body more when they be opened, then those in uppermost parts.

Other do counsel, that first the vein in the foot is to be opened: and if so be that the pain do not cease in some daies after it, that then the same vein should also be once opened in the other foot: and beware of going the space of eight daies. Likewise is also much commended to set boxing cups upon the hips, or above the Hips, according to the importance of the disease.

Take a piece of raw Beef well powdered, of the Buttock Beef, cut pieces of it as broad and long as the sole of your foot, and lay it to the soles of the feet. Prob.

Or, dissolve Gum, Armoniack in Vinegar and therewith anoint the Hip.

Of the pain in the Hips or Sciatica through cold. S. 2.

BUT if so be that this pain of the hips proceed through cold, like as for the most part it is wont to do, the which the bleaknesse of the face, the lingring pain, the belching of the stomach, the wambling and the falling down of all cold humors doth shew: then is the Patient to be respected and taught to order himself accordingly; yet have you for an example this ensuing.

For

For a preparative of the matter, make this sirupe following, and then take thereof about two ounces at once, according to that one is bound or loose of the body: and so fast 4. hours after it.

Take Fennel roots, Sperage roots, Parsly roots, Smallage roots, and Polipody roots, ana. \mathfrak{z} . i. the seed of *Ruscus*, wilde Sage, Gromil seeds, Nettle seed, the roots of Saxifrage, and the seeds of stone Parsly, ana. \mathfrak{z} . i. Harts tongue, two ounces, Juniper berries, \mathfrak{z} . 3. *Hermodactyli*, and Turbith, ana. \mathfrak{z} . β . Hony 18. ounces, Radish water 24. ounces, make a sirupe thereof.

Item, take all the foresaid things, and put unto it Ginger, wild Saffron seed, of each one ounce and a half, *Agaricus* three drach. stone Salt two scrup. Mace two scrup. and a half, *Sirupus de Stecade* three ounces, Hony as much as before, Rosemary water, of Calamus and of Sage as much as will suffice; afterwards see the a sirupe thereof. At the last put a little Cinamom, Mastick, Cloves, Nutmegs, and Mace unto it; also a little Musk and Amber.

For to purge; take the Confection of *Indi* three drach. or half an ounce, *de succo Rosarum*, \mathfrak{z} . i. β . water wherein Ginger is decocted, \mathfrak{z} . 3. give this betimes in the morning, and then sleep one hour after it: afterwards take a draught of Barly water after it. But if you had rather take Pils, then take *Pibulas foetidas*, and *Hermodactylorum*, of each apart \mathfrak{z} . i. or mixed, ana. \mathfrak{z} . β .

This also ensuing is to be prepared: Take the water of Piony roots; and the roots of *Narcissus*, of each two ounces, drink this for the space of certain daies, early in the morning.

Thereupon you are three hours after it, to swallow these things following; take *Pibulas foetidas*, and *de Sarcocolla*, ana. \mathfrak{z} . β . Swines bread, \mathfrak{z} . i. make thereof 12. pils with the juice of Smallage.

Other do take wash Aloe, \mathfrak{z} . β . *Agaricus*, \mathfrak{z} . i. make thereof with the sirupe *de Acetoso composito*, 35. Pils; then take of it about the third or fourth evening just before supper according to the quality of the cause.

Sharp Clifters with Salt, with *Hiera*, with Coloquint and other appropriate things, be exceeding requisite for this; as also are these ensuing: Take unwormeaten *Hermodactyls* one ounce, field Cypres, *Stechados*, Saint Johns wort, *Carni*, and Rue seed, of each one handful and a half, Cammomil, Melilot, and Dill seed, of each one handful, Saffron flowers one drachme; see the them all together in sufficient water, and take twelve or sixteen ounces of this decoction, Bevercod oyl three ounces, Indy salt one quarter of an ounce, *Hiera Colocynthidis* half an ounce, temper them, and set it meetly warm. These Clifters are very meet for to draw the cold matter from the hips, and to expel wind.

Another: Take Coloquint, \mathfrak{z} . β . Turbith, wilde Saffron seed, and Polipody roots, ana. \mathfrak{z} . β . *Asarabacca*, field Cypres, *Stechados*, Piony, white Pepper, and Rue seed, ana. \mathfrak{z} . i. β . see the them all together, and take of this decoction as before, and put unto it oyl of Costus, and of Bevercod, ana. \mathfrak{z} . i. β . Salt-peter four scruples: but use it not too hot.

The third. Take the pickle of Herrings, or salted Limons 12. ounces, oyl of Bevercod, 3. ounces, minister this clister like as the rest. These Clifters be much commended of al later and ancient Physitians: but they bruise otherwhiles the Arse guts within, which are hardly to be healed afterwards.

The fourth which is not too strong. Take S. Johns wort, Cammomil, Centory, Dill, Mallows, Briony roots, and Fenegreek, ana. \mathfrak{z} . i. Annis, \mathfrak{z} . 3. Coloquint one quarter of an ounce, stone Salt, \mathfrak{z} . β . Bran half a handful, oyl of bitter Almonds, and clarified Hony, ana. \mathfrak{z} . i. mix them together.

For a fomentation you are to take Pyony seed, Piony roots, and *Hermodactyli*, ana. \mathfrak{z} . i. β . S. Johns wort, Artichocke leaves, *Stechados*, and the herb Calamus, ana. \mathfrak{z} . 4. and 8. or 10. heads of white Poppy; see the them all together in 3. pints of water even to the half, at last put unto it one ounce and a half of Saffron flowers, and afterwards make a great cloth or a sponge wet in this decoction, and foment therewith twice a day the hip and all the buttock 3. or 4. times together.

Immediately after fomenting is the Hip to be annointed all over with this following: Take unripe Sallad oyl, or oyl of Roses four ounces, oyl of Costus and of South-thernwood, of each one ounce and a half, *Sandaraca* one quarter of an ounce, *Frankincense*, *Hippocistis*, Pyony seed, and *Hermodactyli*, of each one quarter of an ounce

ounce, Saltpeter, and Saffron, of each one drach. *Serapium*, *Opopanax*, and Rosin, ana. 3. i. ʒ. red Wax as much as is needful for to make a salve : temper them all together by the fire. This salve expelleth the pain. The same is also well to be used without fomenting: to wit, at noon.

Another: Take oyl of Foxes, 3. 3. oyl of *Pieretrum*, of Bevercod, Badgers greafe, ana. 3. ʒ. Artichock roots, *Agaricus* and *Stechados*, ana. 3. i. Lettice seede, Purslain seed, and the seeds of small Endive, and of water Lillies, of each one quarter of an ounce, Saffron, ʒ. i. white Wax as much as sufficeth for to make a weak salve with it, afterwards seeth it in 4. ounces of the juice of Solomons seal until the juice be well wasted; then anoint the whole Buttock with it onely at night; for it is somewhat cold of nature: according to which one may know how he should govern himself.

Item, take Turpentine, and small powdered *Hermodyli*, of each a like quantity; make a salve of it, and use it as the rest. But if you had not this salve, or desired not to use it, then may you anoint the place of the pain with the oyl of Lillies, of Spica, of Costus, of Foxes, and Bayes, and such like warm oyls, whether it be each apart, or tempered together.

Of plaisters, these following be good. Take *Apostolicon* one ounce and a half, *de Muscilaginibus* half an ounce, *Opopanax* and *Galbanum*, of each one quarter of an ounce, Piony roots, *Hermodyli*, Calamus, and white Henbane seed, of each two scrup. Saffron half a drach, then make a plaister thereof with wax, and spread it upon two round pieces of leather a span in breadth, and as now lay one upon it, and then another, and wear them alwaies upon it, until one will use the fomentation at nights. Item, take *Ammoni- acum*, 3. 6. *Sagapenum*, *Bdellium*, and *Opopanax*, ana. 3. i. ʒ. Swines bread, and *Hermodyli*, ana. 3. i. ʒ. Coperas, 3. i. ʒ. Wax as much as is needful; make a plaister or salve of it.

When this sicknesse beginneth to decrease, and yet neverthelesse there doth remain some wearisomnesse or anguish of the joynts, then is this plaister following to be made and to be laid behind upon the rump, and the whole buttocks: and if the same do make an itch, then is the same to be taken off again, and the place to be rubbed with rough clothes, and then to lay the same plaister again upon it, until that the joynt be well strengthened. Take Pitch six ounces, black Sope one ounce and a half, *Hermodyli* and Piony seed of each one drachme, Rosin one ounce, Roses, Mastick, and the juice of Sloes, of each four scruples, *Euphorbium* one scruple, burnt Coperas one drachme, Wax as much as will suffice for a plaister. In fine, all warming plaisters are very meet for this. The nature of Turpentine is, that it helpeth this *Sciatica*, through a secret operation: But because the same cannot be layd upon it, or anointed, therefore is it to be tempered amongst the foresaid oyls first mentioned, or any of them that one will; as the oyl of Saint Johns wort, which is especially commended for it. Some lay a sheeps skin upon it, like as it cometh out of warm lee wherein the leather dressers have it lying. Item, seethe Cumin in water, and make a sponge or twain moist in this warm decoction: wring it out, and foment the Hip therewith. Or take Betony, Sage, both or one of both, seethe them in Wine or Must, and whilst, and it is yet hot, temper this powder following in it: as *Chamedryos*, Betony, Centory, Hartswort, Gentian, ana. 3. ʒ. use them with a sponge as is before said.

Another. Take Elecampane roots as much as you please, seethe them well in Wine, stamp them in Swines greafe, and lay it upon the place. This is also good for all Byles of the Pocks.

This following is highly commended: take Elecampane roots powdered small, 8. ounces, of the best Sallad oyl that may be gotten 24. ounces, Malmsey one quart; seethe them all together until the wine be consumed, and use it as before.

Take a hot loaf and lay upon it, or let the warm reek or vapor go upon it, until the place of the pain begin to sweat, and do this certain times together. After all this foresaid fomenting, anointing, plaistering, and applications, it is firmly advised again to use these pills hot for the purging, but onely to strengthen the parts diseased. Take well boyled Turpentine, 3. ʒ. field Cipres one quarter of an ounce, *Hermodyli*, 3. i. make of a drach. 6. or 7. pills, and take one every morning and evening. Or take these following which be almost of the same nature: Take *Chamedryos*, field Cipres, *Hermodyli*, ana. 3. i. boyled Turpentine, 3. ʒ. make pills thereof with the sirupe of Betony, and use them as is before said.

Further

Further, it is also needfull that those parts which cause these defluxions be strengthened, the which may be done as followeth: For strengthening of the stomach he is oftentimes to use Mace, Cloves, Mints, Indy *Spica*, Squinant, Cypres roots, and *Lignum Aloes*; with his meat, and to use the Confection *Aromaticum Rosarum*, and *Diacalamintum*, Betony, Balm, and such like, with his accustomed meat. The compounded things are the Confection *Diambra*, *Diamoschu dulcis*, and *de Xiloaloe*, and that especially after supper. The Kidneyes will be strengthened with Almonds, Hasel nuts, Pingles, dry and salt Cheese; and with meat that is drest with sheeps milk; but they are to beware of much lying on the back, and much venery, especially presently after meat. Item, of diuretical things, as Parsly seed, Annis and Smallage seeds, &c. These be now the three principal parts and causes of the defluxion. The other parts are not so highly to be regarded.

And for to consume these kinds of defluxions be all Physitians of an opinion, that there is no better advice then to bathe in natural warm Sulphur bathes, Copperas bathes, Lime bathes, or Ash bathes. For that these do pierce through the whole body, dry exceedingly, and do consume also all moisture. And if so be that one cannot get into such natural bathes, then are Lees or bathes to be prepared of the foresaid things, but the body must first be well purged. And if the patient cannot bathe, or will not bathe, then are these things following to be used, which vehemently consume all moisture: Take *Sandaraca*, *Hypocistis*, Frankincense, and the juyce of Sloes, of each one quarter of an ounce, Lee as much as will suffice for to dissolve these things, and temper them withall in a mortar, then anoint the joynt therewith twice a day. This following is milder: Take pownded Cipres nuts three ounces, Meal dust one ounce, temper them together with the juyce of Bay-leaves, as aforesaid.

Item, take steeled water six ounces, pownded Rose two ounces Mastick, and prepared Iron drosse, of each one ounce, parched Salt three drachmes, temper them together in a mortar with the juyce of Tassel leaves, or with water wherein the same herb is decocted, it is good and approved. But if the pain continue, then is there no other remedy (as is aforesaid) but to use cauterization, which is also effected with plaisters which raise blisters: but before this is to be begun, the same is first to be tryed with the foresaid strong clisters, and afterwards this salve following is to be used: Take white Mustard seed, and Pigeons dung, of each a like quantity: then see the Figs in a little water until they be almost dry, then pownd them together for a plaister which is afterwards to be opened, and the water to be let out. If so be that this help not at one time, then is it once again to be used: and if the pain cease not then, and the joynt be eluxated, then is it to be cauterized which is burned; that will be done of an expert Chirurgion or learned Physitian. For a conclusion, may powder be used, which shall be ordained for the gout in the feet, which beginneth thus: Take two kinds of *Chamedryor*, &c.

And if one which is cured fall again into the same passion, like as is wont to happen, and especially in those who have taken small advice and but little purged, then is this order to be followed. In the beginning of the pain, take Cipres nuts three ounces, Barly meal one ounce and a half, Roses one ounce, Masticke, Myrtle seed, and *Sarcocolla*, of each two drach. and a half; see the this all together in hard white Wine until it be meetly tough like a plaister, then lay it warm upon it. This ensuing is yet more forcible: Take *Sandaraca* one ounce, Camomil, Melilot, and Dill seed. of each half an ounce, Meal dust three ounces, Roses one ounce; see the them all together in wine, as in the last is before-said, then stir amongst it the yolks of three Eggs, and use it as before.

But when the pain is increasing, then put unto one of these foresaid one ounce of the fat of sheeps wool: but when the pain is at the extreamest, then are things to be used which do assuage the pain as followeth: Take oyl of Roses, and of Camomil of each 3. ounces, six yolks of Eggs, let them see the very soft, stirring them alwayes about. Last of all, put one drachme and a half of Saffron unto it, and use it as before said. Or take Cow milk twelve ounces, Barly meal three ounces, Mastick half an ounce, Saffron one drachme. You are to let the meal and the milk see the thick, afterwards temper the rest amongst it. This is especial good if there be any heat with it.

But if the pain begin to diminish, then are drying things to be used for it; Take Myrtle seed, Mastick, *Sarcocolla*, Plantain, Piony seed, *Hermodytyli*, and field Cipres, of each one quarter of an ounce; stamp it all to powder, and temper it with one of the forementioned which you will, and you shall find a luckie operation.

The seventh Chapter.

*Of some accidents which this pain of the Hips
doth cause.*

VVE have in the beginning of this *Sciatica* declared, that the legs happen otherwhiles to extenuate, and especially when the member is eluxated or out of joynt, and hath so continued a long time, whereof there followeth further a numbnesse and lamenesse: for which by good reason we ought to admonish somewhat thereof before we begin to discourse of the feet.

Of the eluxation of the joynts. S. 1.

THis eluxation of the joynts do the Grecians call *Exarthrema*. The Latinists *Eluxationem*, and it is thus described: *Exarthrema* is a writhing aside of a joynt out of his natural place into another, whereby the free motion is hindered. This disease cannot be cured but by manual operation, and by the knowledge of all the parts of mans body, whereby each member which is eluxated by thrusting, falls, or by loosenesse of the ligaments in the *Sciatica*; and strengthenings of the diseased member, is restored: and although it chiefly concern the Chirurgions, neverthelesse we will here discourse somewhat of the eluxation of the hips in the *Sciatica*.

This plaister following doth marvellous much withstand all defluxions which fall down into any joynt, and do weaken the same. But first of all are the places of this disease to be rubbed with this water following, which is to be distilled out of a Calves gather in seething water or *Balneum*, the which is so much the better, if so be that there be Sage, Briony, Juniper berries, and such like (according to the quality of the cause) added unto it. Afterwards boiled Tansie laid warm upon it is very requisite, the plaister whereof we have spoken before, is thus prepared: Take *Colophonia* and Pitch, of each one ounce, the Muscilage of Hollihocks three quarters of an ounce, *Galbanum*, *Myrrha*, *Ammoniacum*, and Frankincense, of each three drach. Polopody roots, Miscleden and Hartwort, of each one quarter of an ounce, Wax one ounce, Turpentine three quarters of an ounce; the gums are to be dissolved in vinegar, and then to put the Wax, Pitch, and Turpentine unto it, and then let it melt by a soft fire, and to seethe it so long until that all the muscilage and vinegar be wasted away, afterwards temper the rest being beaten small amongst it; this being now all done, then spread this plaister upon a cloth or leather, and lay it upon the place of the disease.

Another; Take Hollihock roots three ounces, small Acorn buds three quarters of an ounce, fresh Self-heal flowers one ounce and a half, cut all very small, and stamp it to pap; then take unripe Sallad oyl, and oyl of Myrtles, of each three quarters of an ounce, thick red wine, twenty four ounces, Self-heal water twelve ounces; seethe all together so long until the wine and the water be consumed. Then wring it out with a presse, and put Frankincense and Myrrhe unto it, of each one drachme, Bucks suet one scruple and a half, Turpentine half an ounce; then let them seethe again until all the moisture be consumed.

Lastly, put unto it small bruised silver skum which is sifted through linnen, and Sealed earth, of each half a drachme, *Mini* two drachmes and a half, Wax as much as will suffice for a plaister; this plaister is not onely good for all Eluxations, but also for all fractures of the bones, for it asswageth all pain, and strengtheneth the sinews.

Item, take a young oaken pole, and shave off the outwardmost rinds, afterwards the white; these white rinds are to be sodden in Beer, and then a woollen cloth made wet therein, and so laid warm upon it. If you have no beer, then take wine or water.

Of the extenuated or withered Limbs. S.

VVE have before declared in the description of the pain of the hips or *Sciatica*, that after eluxation of the joynts, if the same continue long, the legs come quickly to extenuate, and afterwards to be lame.

Now

Now for to remedy these accidents will we here discover certain things, which it cannot otherwise well be but that both these diseases, extenuation and leanness must depend one upon the other: for that because the veins be bereft of their due nourishment, the sinews and the tendons be stiffened, then must necessarily ensue thereof such infirmities.

Therefore will we discourse of each part as much as need requireth, and concerneth the lameness. It is a disease if there be any contracture of the hands, arms, legs, joynts, or any other part, or be so lamed and numbed, that he cannot use his joynts, the which may also grow of many kind of causes, of *Apoplexia*, of the Pocks, of the Cramp, and such like; of all which hath been spoken before, and shall be written of hereafter; but we will onely discourse how that these diseases are to be prevented, proceeding of other causes.

Take Mallows, Camomil, Sage, Horehound, and Vervein, of each one handful, Juniper branches with the green berries two handfuls, powre five or six quarts of water unto it, and see the them so long as Calves flesh; this may be used the space of three dayes, afterwards may a fresh be made.

First, take Fox grease two ounces, Capons grease one ounce, melt them together, stirring them alwayes about. When it is now molten, then put half an ounce of Balsam oyl unto it and let it be cold. When as both these things be ready, then be the lamed limbs to be fomented in some vessel fit for that purpose. If so be that the lamed part cannot lye whole therein, then is he to be caused to sweat above the warm vapour, being covered all over, powring the hot decoction now and then unto it. This bathing or fomenting is to be done every day two times, and although the first, second, or third fomenting do not sufficiently ease, yet is the same not to be neglected, for that the alteration and ease cometh not before the fourth or fifth day. When as one hath sufficiently bathed, then is the sweat to be stroken off with the flat of the hand, & to let the party dry of it self. When as then this fomenting is thus effected, and whilest the place is still warm and dry, take of the foresaid salve the bignesse of a Pease, and rub it behind in the neck upon the backbone from one shoulder to the other; but warm the hands oftentimes, and so rub the salve well into it. Thirdly, rub also both the elbowes from the hands, and likewise also both the knees clean over beneath and above, at last also the toes beneath and above with as much alwayes of the foresaid salve as the quantity of a Pease, rubbing it therein. When as this is now so done, then is the patient to rest the space of half an hour after it. He may also once in ten or fourteen dayes go into a sweat bath, but not to tarry above one hour in it, and he is the same day to omit the fomentation; but like as is said, one is to proceed with the anointing and resting. This order is also to be pursued four, five, or six weeks, untill he can go again or use the rest of his joynts, by this means have many men found great ease.

Here do follow many more other bathes and salves, to wit, that men are to bathe the space of ten dayes in decocted *Ebulus* leaves, and that so long as nature may abide it. Afterwards use this salve following: Take the grease of the juyce of Alpes Goats suet, and Badgers grease, of each a like quantity, make a salve of it with Wax, and therewith anoint the nummed limbs morning and evening. Or take Sage, Marjoram, Saint Johns wort, Hollihock leaves and the root, of each two handfuls, Elecampane roots one handful, see the them all together, as is said.

For to make a precious salve you must have ready a good fat Goose, and roast the same as if one will eat it, then take good heed that there come no water unto it, with the neck and the intrails do therewith what you please. You must have also ready with it a young, sound, and fat Cat which is three moneths old, being a male Cat, kill him and flea him (the head and intrails being cast away) chop it small, stamp it afterwards in a mortar, and add unto it three ounces of Barrowes lard, cut it very small; Rosin, Frankincense, and Wax, of each one ounce and a half, stop these all together into the Goose, and stop it tight that it fall not out again, and then let it roast by a mild fire; set a dripping pan underneath it for to receive the fat that droppeth off: reserve this fat being cold, and anoint therewith every day (in a warm place) the lame and withered members: in like manner also the swollen, and all that have any pain: the extenuated and withered joynt will increase and grow again, and all pain shall be asswaged thereby. The Goose is to be well kept, to the end neither man nor beasts happen to eat it. Another salve: Take the marrow of a hail gelding which died through any mischance, or in the wars, as much as you please, Harts suet half so much, melt them together by a mild fire and then powre *Aqua viva* upon it, wring it out afterwards very warm through a cloth, and then anoint therewith

therewith the diseased place morning and evening, both these be marvellous good, and also very meet.

Item, take the grease of a Beaver, of a Uultur, and of a Badger, of each half an ounce; Sage, Penniroyal, and Holi-hock roots with the leaves, of each one handful; seethe well the herbs, and stamp them to grout, then temper the molten grease amongst it, and anoint the lame place with it.

Take oyl of Tyles and oyl of Almonds, of each alone, tempered together, and anoint therewith the members. The Mithridate and both the Treacle do bring the lamed members to right again, and to their former force, being well applyed outwardly as taken inwardly: but especially these oyls following be good for it, viz. oyl of Juniper, of Nutmegs, of Pepper, and blew Flower-deluce. Item, take a young Fox, make him clean, and chop his flesh very small, afterwards distill out the water, and put therein one drach. of smalled bruised Camphire: put it into a glasse stopt well, and leave it five dayes in the earth wheras Ants have their abode. Last of all, anoint you therewith in a warm bath, afterwards use this salve following: Take a young Fox made very clean and burnt to ashes, take thereof the half, and temper therewith one quarter of an ounce of bruised Camphire, oyl of Balsam half an ounce, Dogs grease two ounces and a half, Snakes grease one drach. and a half; melt these salves all together, and anoint you therewith after bathing. Both of these foresaid salves are to be used against lameness through heat and cold, for that they be of a temperate nature, and of the same nature is this also ensuing.

Take Rice as much as you will, steep it a day and a night in a sufficient quantity of Goats milk, afterwards distill it like as all other waters. This being done, distill it over again, and make oftentimes the lame members moist in it.

Seethe Vervina, Rosemary, Mallows, Rue, Wormwood, Southernwood, Sage, Hyssop, and Bayberries or leaves in water, so much as the parties withered limbs may stand in it in a vessel, then put into the decoction an Oxe gall, or two, or three, and of Castoreum, ounce one, or more, let the parties members be put into that decoction as hot as he can suffer it, and let him remain two hours or more, then let him go to the bed and sweat.

After you have used this every day twice for 7. or 8. dayes, then you must purge the party with convenient purges.

Of the extenuated or Withered members especially. § 3.

FOR as much then as we be entred into this matter, therefore will we not discourse of the same severally. Albeit this extenuation of the members may rather be named of their occasions then of the *Sciatica* alone, notwithstanding we will not here discourse of the consumption *Hectica*, *Apoplexia*, or of the Pockes, but onely of the extenuation of some parts, whether it be of the *Sciatica*, or of any other cause whatsoever, for which these salves following be good; Take wilde Cats grease, Harts suet, Bears grease, Swines grease, the marrow of Neats feet, Hony, Dogs grease, and Badgers grease, of each a like quantity; seethe all together with Wine untill the same be thoroughly waisted, afterwards pour it through a cloth, and anoint the withered Limbs with it.

Item, take Bevercod one ounce, long Pepper one quarter of an ounce, oyl of Wax, of Camomil, and of Bevercod, of each half an ounce, Wax one ounce, make a salve thereof: or take Sage, Mallows, Nettles with the roots, Camomil, and sprigs of Juniper, of each one handful, fresh Butter, and Dogs grease, of each three ounces; chop the herbs and seethe them to grout that one may wring them through a course cloth, then put the greases unto it, and let it seethe again together unto a salve. When now you will use the same, then are you first to go unto a sweat bath, and afterwards your self to be anointed before a warm fornace or fire upon the place of the disease twice a day: but you are to use the sweat bath but thrice a week, and do this the space of fourteen dayes. This foresaid salve is good for all scabbiness. The salve *Dialthaa* is fit for this same disease, whereof there be four kinds described in the third Part, the fourteenth Chapter, and 4. §.

This ensuing is also very requisite; Take living Crabs and Earthworms, of each a like quantity, dry them in an oven, and stamp them to powder, afterwards temper them with as much Swines grease, and make a salve thereof. For this are also good two precious Balsam oyls, whereof one is described in the second Part, the sixth Chapter, and 4. §. and the other in the eight Part, beginning: Take Myrrhe elected, &c.

Item

Item, there is yet more good for this; oyl of Tyles, and oyl of sweet Almonds. This ensuing is also accompted for sure, and is many times proved.

Take Earthworms, put them in an earthen pot stopt with a cover on the top, that the Ants may run in and out, then set it so in the earth where the Ants abide the space of 3. or 4. daies, and there will ingender a water of it, with this water anoint the withered limbs very warm, this should be certain and approved.

In case also that the withered members be oftentimes rubbed with distilled Calves-gathe-rwater which is described before, then shall one find amendment.

But if this lameness and extenuation be caused through heat which happeneth seldom, then have you a bath for it, which shall be prescribed against the *Podagra*. Item, the salve also of Earthworms, of Cassie, and other things more be meet for this intent, therefore it is needlesse to write here any further of it, but this foot-water following is especially ordained for it,

Take Feverfew, *Stechados*, and Cowslips, of each one handful and a half, the roots of *Eringus*, and Mallows, of each two handfals, Mather, Hartwort, of each one handful and a half, *Peucedanum* half a handful, cut them all grosse and let them seeth together, afterwards wash the feet and the lame hands with it. You may also use a sweat bath, for that strengtheneth the lame joynts very much.

Of the hardnesse of the joynts. §. 4.

THere cometh sometimes also a hard swelling in the joynts, whereby they lose their motion and bowing; for which these plaisters ensuing made hard or soft are to be used: Take the grounds of the oyl of Violets which lye beneath in the pot two ounces, two ounces of the oyl of Lillies, oyl of white *Camelina*, and oyl of sweet Almonds, of each one ounce and a half, Saffron one scruple, Badgers grease one ounce, white Wax one quarter of an ounce, Rosin as much as will suffice.

Item, Take the plaister of *Oxycroceum*, *Sagapenum*, *Opopanacum*, and *Ammoniacum*, of each half a drach. Rosin three quarters of an ounce, white Wax 3. drach. the gums are to be dissolved in sharp Vinegar, then put the plaister, Wax, and Rosin unto it.

If there be any hard byles with it; then take *Ammoniacum* one ounce and a half, *Piretrum*, and *Euphorbium*, of each one drachme, Saltpeter half a drach. make a plaister thereof with Wax and Rosin.

Herewith will we now conclude the third sort of the Gout, and come to the fourth sort which is the chiefest.

Take Pitch, Rosin, ana. half a pound, Sheeps sewet tryed 3. 4. melt them, then put into it of Frankincense half a pound, Saffron powdered 3. 3. or 4. *Landannum* 3. 4. seeth them, and therewith make plaisters.

The eight Chapter.

Of the Gout or Podagra in the Feet.

He fourth sort of the Gout, as we have admonished at the first, is the well known Gout of the Feet, *Podagra*; in which we also contain the Gout of the hands *Chiragra*; for that under these two sorts of Gouts there is no great difference, but that the one doth manifest it self in the hands, the other in the feet: and this kind of Gout is thus described.

Podagra is a defluxion which very painfully assaileth the finews with heat and cold, wherewith also the parts adjacent, the joynts and the legs be plagued with swelling and pain.

As much as concerneth the name of this disease, which the Latinists have taken from the Grecians; this name *Podagra* is nought else but a snare wherewith Birds be caught by their feet, and therefore is this disease of the Gout likened unto this instrument, for that it doth catch men by the feet, and holdeth them caught therewith.

The Poets do also call this disease *Scrupens Humorem*, which is a stonie humour; for that

that the same will in the hands and feet alter into a stone, so that the same may at last be taken out without any pain: and like as we have admonished before, this disease cometh not only in the feet, but also in the hands, which is called by the Grecians *Chiragra*, which is a pain of the hands.

The causes of this gout are manifold; to wit, inward, and also outward; the outward may be caused through great heat, which causeth the matter to melt. Item, through great idlenesse, or through great labour presently after meat: Also through venery with a full stomach, and that same especially doth cause the *Podagra*. Also the learned do certainly affirm, that no man can be plagued with the *Podagra*, so long as he hath not yet used the venereal act. *Galen* doth also confirm the same saying, that he never knew any man which was infected with the Gout, either of the hands or feet, before that he hath had to do with women. Dainty eating and drinking is also a great cause of the *Podagra*.

And that all this is so, we will shew an example. *Plinie* writeth that these diseases were very strange and new in Italy in his time; for which cause it is named with that outlandish name *Podagra*. But what made them at that time and new, but that at the same time the Romans lived very moderately in eating and drinking? *Hippocrates* writeth, that no Eunuch, nor any woman as long as she hath her terms, can get the *Podagra*, neither yet can be bald: Touching which, *Galen* his interpreter saith, that the same in the time of *Hippocrates* was true: for that the people in those dayes did meetly much labour, and did eat and drink soberly. But now he saith, that people do lead another life by going idle and rioting: for that one doth find now adaies Eunuches which be subject to the Gout without lying with any woman at all, which they do get only through their ryoting and quaffing. And so is it with women which do also spoyl themselves through a disordered life, that they get their terms very little or not at all.

And to the contrary measurable labour, by moderate eating and drinking, yea by hunger and abstinence from Wine, the *Podagra* tarrieth away and is left behind, the which I have seen by a Citizen in my time of *Landsborough* called *Lucas Kesselin*, who living again according to the pleasure of the world, got the *Podagra* again. And when he was best in health, then did he ride otherwhiles a horseback with two servants who must lift him up upon the horse: but when he came in poverty and drank no Wine, and lived hardly, then did the *Podagra* seek another lodging. So that he being fifty years old, was faine to trot up and down the countrey with a Pedlars pack on his back over high mountains for to get his living.

This hath then his original cause; for if there be no superfluous humours fallen down into those places, then would there be no pain nor grief: neither would these defluxions settle themselves in the joynts, if the body were not overcharged vvith some superfluity. Now the mean to keep the body free from all superfluous humours, is, that the body be kept with moderate exercise, to the end the meat may be well digested.

Hereby appeareth now sufficiently, that the gout is not caused sooner of any thing in the world, then of idlenesse and of excessive ryot.

When as now the *Podagra* is caused of any inward occasion, then doth it happen thereby that one having weak legs and feet, the matter whether it be blood, *Cholera*, *Phlegma*, or *Melancholia*, each alone or mixed, might lightly fall into them, whereby it may well be understood, that the *Podagra* can be short, long continuing, hot or cold.

It is also sometimes an inheritance of the children from the parents, and hath his vertue in both the seeds, and is imparted unto the children, so that the gouty fathers and mothers may also ingender goutie children.

Now may we also write somewhat of the signs which do not only signifie the gout of the feet or *Podagra*, but also all pain of the joynts.

If this disease be caused through blood, then doth it appear with rednesse, and with great continual pain and smart; the urine is thick and red, the pulse strong and full, and the pain is more in the morning then in the evening. And if the Patient be by nature full of blood and sanguine, then doth the same pain increase daily. The same happeneth also when the party is young, hath lived easily, and if it be in the spring time.

The signs, if the gout proceed of *Cholera*, then is the pain sharp, the place of the pain is yellowish, the urine very red and thin, the ordure is also yellow and thin, the pulse is swift, the heat is great, and chiefly on the place of the pain. as one may perceive in feeling of it; all which doth yeeld more assurance, if the patient be young and cholerick of nature,

ture, and if he have done great labour before, or if the weather be hot and he hath taken much hot meat and drink.

If this disease come of *Phlegma*, then is the pain not very great: also the part of the pain is not altered of colour, the urine is whitish and thick, the going to stoole is slimy, and the body in feeling is alwayes cold. And this manner of Gout is commonly alwayes in bodies which be cold of nature, and that in winter time, and after a disordered life in eating and drinking.

In Melancholick, bodies of the Gout commeth very seldome wherewith is also great pain, the Patient will be lean, the urine thin and crude. And this commonly happeneth in those bodies which be of a melancholick nature in the beginning of Winter. Sometimes this disease proceedeth through wind, whereby is a great and exceeding pain, the which by windie meats is increased and augmented.

How the Podagra is to be prevented. §. 1

When any one doth perceive and is assured, that this his sicknesse or disease commeth through heat, and that the time be at hand wherein he was wont to be assailed with it, then must he before whilst that he is well or in good estate (if he will by any kind of meanes be freed) be purged with those medicines which expell *Cholera*, and must refrain wine, even as all Physitians do advise, and in stead of these use some thin mead or drink, the decoction of Cinamom: for that mead is not onely good for the *Podagra*, but also requisite for all infirmities of the joynts. But if this Gout be caused through hot *Cholera*, then is Barly water rather commended, or water wherein Prunes be decocted. Item, temper fresh well water also with the juyce of Pomgranates. This also ensuing may be prepared: Take two ounces of Sugar, one handful of Barly, Raisins one handful, seethe them together in three pints of water unto the half: and if one will drink wine, then is there one half of this foresaid water to be tempered amongst it, or to drink some middle sort of cleer Beer. Further he must forbear all Hony meats, and all flesh. Also he is to eat and drink very little; but he is to sustain himself with Barly pap, Oaten pap, bread and Butter, and such like meates.

But what greater damages be found in this disease through sursetting is sufficiently shewed before.

The members also which are accustomably plagued with this pain, are to be restrained from overmuch motion, or from wearying himself too much, and that especially if the Patient be grosse and full of blood, and hath not a long time been let blood nor purged.

Of divers meanes whereby to free one from the Podagra. §. 2

These pills following are very highly commended; as that through the use of them many gouty people be not onely freed, but also healed all together: Take *Myrrha*, *Aloe*, *Lignum Aloes*, Cinamom, Mastick, and Rubarb, of each one quarter of an ounce, *Muscus*, five grains: make 36. or 40. pills with *Oxymel*, or as many as you please, whereof you are to take two or three every other day, and to continue thus the space of thirty dayes: afterwards, take every week once as much. But if so be that the *Podagra* do come in the mean while, then are pills to be used after the first manner.

First, take *Aloe*, Rubarb, *Species Hiera Galeni*, *Pillula sine quibus*, of each one drach. and a half, field Cypres four scruples steeped in wine: make pills thereof with Lavander water, and use them as all the rest: they be stronger then the former.

These Pills following hath the Emperor *Carolus* used against the *Podagra*: Take yellow *Mirebalani* *Chebuli*, and *Indi*, of each one drachme, oyl of sweet Almonds, one quarter of an ounce, the juyce of Roses, of Burrage, and of Fumitory, of each two ounces; temper them together, and let them stand in steep 24. hours, afterwards make it hot and wring it well out. This being all well done, then steep therein again half an ounce of Rubarb, *Indi Spica*, halfe scruple, Malmsey a spoonful, Wormwood water one ounce; let it then stand thus together steeped the space of ten hours, and afterwards wring it out hard.

Thirdly, take *Agaricus* one ounce, stone Salt four scruples, Ginger one scruple, Hony of Roses three scruples, *Oxymel* of Squills one quarter of an ounce, steep all together 24. hours in white Wine and wring it out well.

Fourthly,

Fourthly, take *Aloe* which is washed with Endive water, and *Manna*, of each one ounce, fresh Cassie two ounces, *Bdellium* two scruples, temper them well together in the foresaid boyled and steeped Colatures. Lastly, all being well tempered, then set them all together in the Sun stirring it often about, and when it is well dried, then form pills thereof.

Of these pills shall you take one every morning: they have a marvellous efficacy in preventing the *Podagra*: so that it is said, if one do not ryot, that one shall be holpen thereof in fifteen dayes. In the first part of this book, in the twelfth chapter, in the description of the Balsam you have a very costly salve, beginning thus. Take Bayberries, &c. which freeeth one marvellous much of the *Podagra*. Item, if one set his feet in warm Smiths water, or foment them over the vapour of the same water: it is also very good to chew every morning a little Mastick.

Use the oyntments and meanes mentioned in the 6. chapter before going §. 1. And purge with convenient purges.

How the Podagra is to be purged. §. 3.

IF so be that the *Podagra* be caused onely through *Cholera* and heat, then is this Syrup following to be prepared: Take Endive three handfuls, Roses one ounce and a half, red, white, and yellow Saunders all together one ounce, see the it well, and wring it out: then put unto this decoction twelve ounces of Sugar, and see the it to a syrup like as all other syrups be decocted: give thereof one ounce and a half with Endive water four or five times together, and then take these purgations ensuing after it: Take of the Electuary of the juyce of Roses five drachmes with the foresaid water, which is especial good for the joynts.

Or take fresh Figs half an ounce, Currans five drachmes, the rinds of yellow Mirobalans one ounce, let them steep a whole night, and see the them a little: then take of this decoction three ounces, and temper therein of the foresaid confection of Roses, and give it very warm early in the morning. Or if you had rather have pills, then take *Aloe* one drach. *Diagridii* five graines, Roses three graines, *Hermadailli* half a drach: make pills of it with the juyce of Roses; they be much commended.

If there happen great pain with this kind of hot Gout, then may two kinds of plaisters be prepared for it, whereof one is to be layd upon the place of the pain, therewith to stop the defluxion, and the other on the top of it for to assuage the pain. The first is thus made: Take Myrtle seed, the seed of *Ruscus* and *Bolus*, of each half an ounce, red and white Saunders, the juyce of Sloes, Pomgranate blossomes and peeles, Gals, of each one drachme, Rose water and Plantaine water, of each three drachmes, oyl of Roses one ounce and a half, Barly meal as much as will suffice for to make a plaister or pap. The other: Take red and white Saunders, Starch, and washt Ceruse, of each one quarter of an ounce, Poppie seed half an ounce, Camphir, one scruple, oyl of Roses three ounces, unsalted Butter one ounce and a half, the seed of Fleawort one drachme and a half, and two yolks of Eggs, temper them all together, and lay them upon it as is before said. An easier: Take the oyl of Roses three ounces, Vinegar half an ounce, temper them all together, and anoint the place of the pain with it; it assuageth the pain, and hindereth the defluxion.

Now when as these defluxions do first of all begin, then be salves, Oyles, and other things more used and applyed unto it, for which you may take one of these ensuing which you please: Take small powdered *Bolus* two ounces, Rose water, and water of Nightshade, of each one ounce, two or three drops of Vinegar: temper them well together and strike it thereon with a feather, or dip a cloth in it and lay it over the swelling: when it is dry, then take fresh, but alwayes warm. Item, take oyl of Roses, see the Eerab-worms in it, Mastick is also especial good. This following should be a special secret; see the Earth-wormes and Froggs in oyl of Roses until they be almost all consumed, then wring them out hard through a cloth, and anoint it very warm on the place of the pain. This ensuing is not unlike to the former: Take of the oldest Sallad oyl that you can get, twelve ounces, and twelve water Frogs, chop them very small and see the them well, when they be almost sodden enough, then temper therewith the juyce of Housleeke, and the juyce of Stonecrop, of each two ounces, then let it see the so long until the moysture be wasted away: afterwards wring it out, and use it as before.

Some

Some do commend above all things the muscilage of Frogs to be laid warm unto it, which is thus made: Take in the Spring green Frogs before they begin to cast their sperm, take out the bowels, and hang them on a thred to dry in the Sun until they begin to be somewhat dry, then pour Sallad oyl unto them, and let them seeth meetly well together, then wring them out, it is especial good for the sinews. Item, take Badgers grease and Turpentine, of each one ounce, Frankincense half an ounce, Wax as much as will suffice for to make a salve of it. Or take Poplar salve two ounces, small powdered *Bolus*, and oyl of Roses, of each half an ounce, temper them together unto a salve. This ensuing is also good for it; Take four yolks of eggs, Saffron one drachme, oyl of Roses two ounces, temper them well together, and use them as before. A principal good one: Take Vine Snails as many as you will, put them into a pot, and lay a tin lid upon it, afterwards whelme the same pot over another pot, and then set it over the fire, to the end that they may rost by little and little. This being done, the oyl will drop into the nethermost pot, and with this oyl anoint the hot gouts thorowly. Item, seeth ten eggs very hard, cut them overthwart, fill the whites with powdered Myrrhe; afterwards bind them together again, and lay them the space of 15. daies in a celler, or longer; then will a water drop out of it, which you may anoint upon the gout as a salve. In like manner fresh Castie is also much commended, with the muscilage of Fleawort, for all pain of the joynts through heat.

This ensuing asswageth the pain marvellously: Take the seed of Fleawort two ounces, seeth it in sufficient water until it be very slimie, afterwards wring it out very hard through a cloth: In this muscilage or slime melt one ounce and a half of Wax, Sallad oyl three ounces, let it then seeth a good while, stirring it alwayes equally about until it be cold.

Another of like force: Take oyl of Wallflowers two ounces, oyl of sweet Almonds, and oyl of *Camelina*, of each one ounce and a half, Butter one ounce, Saffron one drachme and a half, white Wax one ounce and a half, Dill seed, Camomil, and Ducks grease, of each half an ounce, three yolks of Eggs, then temper them one amongst another, and make a salve thereof.

Item, take wheat bran two handfuls, Vinecuist as much as will suffice for to make a poultice of it, Salt one quarter of an ounce; let it seeth a little together, and then lay it warm upon it, you shall hardly find any thing else that doth more assuage the pain. Item, take Barly meal or Pease meal, and powdered Roses, of each three ounces, white Wine as much as wil suffice for to make a pap thereof, then let it seeth a good while: if you will, you may also put a drach. of Mastick unto it.

Some do seeth Bran in three parts of water and one part of Vinegar, and so lay it upon it, and let it lye five or six hours upon it.

This also ensuing is thought to assuage all whatsoever; Take three ounces of unripe Sallad oyl, Saffron one drachme, four yolks of eggs, oyl of Roses four ounces: let the oyl seeth a good while, and when it beginneth to be cold, then temper the yolks amongst it, stirring it alwaies well about: afterwards Starch and Barly meal, of each one ounce and a half, and at the last Saffron: if you will have it more forcible, then put Butter unto it and *Bdellium*, of each one drachme: then steep them all together until the same be thorowly consumed, and afterwards temper the rest with it. Item, take the crums of white bread, steep them a good while in sweet milk, and then seeth them together to pap: now when it beginneth to cool, then temper a yolk or two of eggs amongst it, and a little oyl of Roses, and so lay it upon the swelling and pain. Some do temper Butter, Ducks or Goose grease, and Sugar also amongst it.

Another: Take Plantain seed, and Linseed, of each two handfuls, seeth them very soft until all the water be almost gone, then temper amongst it crums of white bread as much as you please: afterwards stamp them well together, and temper it with the oyl of Roses; and when the pain is very great, then is the juice of cooling herbs to be tempered amongst it, yea very well three or four greins of *Opium*, and one drachme of Saffron, like as the same may be very well done in the foresaid crums of white bread.

This also following is very good; Take Camomil, and Melilot, of each one ounce, Mallowes and Hollibock roots, of each half a handful, Fenegreek meal, Linseed meal, and Barly meal, of each one ounce: cut the herbs small, and seethe them mellow: afterwards wring them out, and stamp them well: last of all, mingle with the said meals

meals oyl of Roses, and oyl of Camomil, of each five ounces or more, then make pap therewith, and lay it over the pain, and renew the same oftentimes. Item, seeth wheat meal and red Wine to pap in fresh sweet milk: for this, is also good Bean meal decocted to pap in fresh sweet milk. These four oyles following be also commonly used for the Gout; to wit, oyl of Lillies, of Camomil, of sweet Almonds, and of Wallflowers, with which we do commonly temper Caslie extracted with vinegar, like as before there is also mention made of the oyl of Poplar buds.

Or take powdered Henbane seed, put it into a bag, and let it warm well, and so lay it upon the pain. Item, in great outward pain take Cowmilk six ounces, *Opium* half a scruple, crums of Rie bread, and these being well powdred as much as you please, make a soft plaister of it. In like manner you may also use the juice of Nightshade and of Plantain being tempered all together, or each apart.

By all these foresaid remedies may easily be marked, that all these simple things following be especial good for the hot *Podagra*; as namely, Nightshade, Housleek, Lettice, Endive, *Mirtus*, Muscilage of Fleawort, Vinegar, Rose water, Bolus, &c. in the 16. Chapter, and 4. §. of the hot Kidneyes.

Of the old Gout or *Podagra*, and of his pain. §. 4.

IF there be found with the pain of the Joynts, neither rednesse nor heat, and the Patient be of a cold nature, and that one be cold in the feeling, then may it easily be perceived that the cause proceedeth of cold. For this the Patient is to prepare himself to purge with these potions following: Take Sage, Cowslips, and field Cypres, of each one handful: seeth them all together in sufficient water until the third part be wasted: Unto this decoction put twelve ounces of Sugar, and then make a clarified sirup of it. If the matter be fluxible of it self, then is this following to be prepared; Take Calamus and Gentian, of each two ounces, Hartwort one ounce, S. Johns wort, Sage, field Cypres, Cowslips, Bayberries and *Chamadryos*, of each one handful, Annis, Fennel, and Piony seed, of each one ounce, Basil seed, Cinamom, of each half an ounce, seeth them all together in sufficient water even to the half; afterwards wring it out, and make it with six ounces of Hony, and nine ounces of Sugar unto a clarified sirup; give them one ounce and a half with some distilled water in the morning fasting. For a purgation is this following to be used; Take *Turbith* half an ounce, *Hermoadactili* one quarter of an ounce, *Diagridion* one drach. Mastick half a scruple, Sugar one ounce: then make a powder of it, and give thereof the fourth part at once, but no more for it is very strong. If you will, you may make pills thereof without the Sugar: but the pills of *Hermoadactyli* exceed all other pills, viz. in purging all phlegmatick humours. They have also an astringent vertue, whereby they obstruct the conduits where the defluxions take their course, Treacle and Mithridate are to be taken of gouty men one drachme, or one drachme and a half with great avail twice a week.

Item, take field Cypres powdered very small half a drachme, Turpentine 3. drachmes; temper them together, and take it with a wafer, or with fresh broth: it is also good for all lameness. These Patients are also to be bathed and fomented with this ensuing; Take Sage, Rosemary, Pennyroyal, Rue, Mints, Horehound, Marjoram gentle, Marjoram, Lavander, and Pomgranate peeles, of each one handful, seeth them all together in good Wine: afterwards strain the broth through a cloth, and put three ounces of butter unto it, and -hen put the feet therein, whether it be with pain or without pain, and lay the decocted herbs very warm upon it.

Item, when the place of the pain is fomented with boyled Fenegreek, then will the pain be thereby asswaged: Or take stinging Nettles, seeth them in water and foment with the damp of the same, and so lay the herbs warm upon it. The oyl of Foxes is also marvellous good for the *Podagra*, and for all pain of the joynts, like as is also the oyl of Tiles, and oyl of Sulphur, which be both hot and piercing.

Hereafter do more plaisters and other things ensue to be laid upon it; and that after the place of the disease hath been fomented or anointed with any salve, and the afflux of humours is somewhat ceased: Take boyled Alehoof and lay it therein and hold still the feet.

Further, it is much advised, that for the cold *Podagra*, there shall be two kinds of Plaisters prepared. First, take Cypres Nuts, Mastick, Myrrhe, and Frankincense, of each one quarter

quarter of an ounce, Gum, Dragagant, of each three drachmes, Sage water six ounces, Vinegar half an ounce: pownd all small that are to be pownded, and then make a meetly soft pap of it, or a plaister with Barley meal, and lay it upon the place of the pain.

Another: Take the muscilage of Fenegreek, and of Linseed, of each one ounce, salt Butter, oyl of white *Camelina*, or oyl of Roses, and burnt ashes of Colewort stalks, of each two ounces, Wax as much as will suffice for to make a plaister or salve of it: lay it or spread it upon the pain of the disease, it asswageth pain; the plaister *Diachylon* is also to be used for it.

Item, take soft Storax, Bevercod, *Euphorbium*, *Myrrha*, *Aloe*, and the juice of Sloes, of each a like quantity, Wine as much as you please; let it seeth well together and then wet a cloth therein and lay over it. Or dip a cloth in the warm decoction of *Ebnlus*. Before certain plaisters are described, of the crums of white bread; temper with one of the same one drach. and a half, or two drachmes of the powder of *Hermoadtlyli* and so lay upon it.

Item, seeth Onions in water, and make a cloth wet in it and lay it thereon. Or rost certain Onions, stamp them very small, spread it on a cloth and lay it thereon.

The common people do use Cow dung, and lay it thereon instead of a plaister; Also the distilled Cowdung may be laid upon it. Item, take the decoction of Rape, and lay it thereon. You are also to pownd Turneps, and to temper them with oyl of Roses, and to lay the same upon it. In like manner temper sodden, stamped and well salted Turneps, with about so much Bran as Turneps, and with sufficient oyl of Violets, make a plaister of it. Item, take a bag filled with Linseed, seeth it well, and lay it over the pain. These be now simple things which warm the joynts; to wit, S. Johns wort, *Hermoadtlyli*, *Ammoniacum*, *Euphorbium*, *Myrrha*, Squils, *Asarabacca*, Bevercod, liquid Storax, Cresses, Cowdung, Marjoram, Mints, white Mustard seed, Pine Apples, Capers roots, field Cypress, Camomil, Elecampane roots, *Gallia*, Radish, Rue, *Sagapenum*, and Vinegar of Squils, &c.

Some do advise, that for the *Podagra* there be made an issue, which is a running hole into the leg, which is alwaies to be kept open, whereby the matter may have issue. How this is to be done, shall be taught in the sixt Part, in the discourse of the Plague.

Others do raise blisters the breadth of four fingers under the knees on the outside of the leg, opening the same, and letting the water to run out: whereof we have in other places more of this book made declaration.

For the swellings and hardnesse of the joynts by means of the Gout, use *Emplastrum Diatesseron*.

Or R. of yellow Wax $\frac{3}{4}$. marrow of the thigh bone of a Cowe, fat of Ducks and of Hens, muscilage of Marshmallowes, and muscilage of Fenegreek q.s. Hyssop juice, as much as of the muscilages, oyl of Lillies $\frac{3}{2}$. and a little Turpentine if you please.

An especial and well approved Remedy for the Gout. S. 3.

First is this powder to be prepared; Take two kinds of *Chamedrys*, which is field Cypress and *Chamedrys*, Gentian, Centory flowers, *Rapontica*, the right *Aristolgia rotunda*, (whereof is sufficient store brought out of Switzerland) of each a like much; stamp each apart: afterwards temper them together, and use it thus. After the necessary purgation, whereof we have sufficiently spoken before, take the space of fourty dayes together, one drachme every morning of this said powder in the Sommer time with small Beer, and in Winter with Wine or Meade: Afterwards use no more but half a drach. and so prosecute this course the space of a whole year.

If so be that the body be bound in the mean while, then is the Patient to use twice every moneth these pils following; Take Mastick, Myrrhe, Cynamom, Aloe, and Rubarb, of each one scruple; being all pownded small, then make ten pils thereof with Hony of Roses, and take two or three at once. They be very weak, so that one may use the more thereof if he please. In the mean while the Patient must order himself very moderately in eating and drinking. Through this be many gouty persons thoroughly healed of the *Podagra*.

The direction for the Gout, sent to Charles the Emperour. §. 6.

THis advice or remedy was sent to the Emperour *Charles* his Majestie of famous memory, from *Francisco Toralto*, a Lord in the Kingdom of *Naples*, who had lien most miserably the space of fourteen years of the Gout: Take clean milk of a black Goat, and turn it with Figmilk, or if you have it not, wherewith you will; strain out the whay, and let the rest seeth in an earthen pot; scum it well, and let of three parts twain seeth away, and then strain it once again, to the end there remain no curds in it at all: afterwards, take the uppermost of Burrage a good part, and according to that there is much Whay, with some other things more which be meet for the *Podagra*, and according to that the *Podagra* doth proceed through heat or cold, let it steep well therein: afterwards strain it through a cloth, and drink of it once or twice a day. But if so be that the pain be intolerable great, then steep in the foresaid Whay wherein the Burrage and other things be steeped, one drach. or one drach. and a half of *Agaricus*: Take of this Whay ten or twelve ounces according to the quality of the sicknesse, and according as he can easily go to stool, and temper amongst it *Oxymel* of Hony of Roses, or (which is better) *Oxymel* of Squils two ounces: you are to drink of it in the morning as warm as you can, and to fast four hours after it at least. Further, he is in the mean time to exercise himself with walking and going: afterwards he is during the space of five or six daies to drink of this Whay without *Agaricus*, and that is to be done once every moneth.

And he is especially to endeavour himself to drink this in winter, for that it is sufficient if he do this twice a year. And this is especially to be done when one perceiveth that the *Podagra* is instant, thereby to be free: and although it appeared already, yet are you to proceed forward with it. What remedies are then to be used for it, may be seen and chosen out of the forementioned things. The letting of blood must be principally in the beginning of the spring, and before the pain ariseth; like as one may see and read more at large in the 2. §.

But above all things is a good dyet commended: for if the same be not kept, then may all other things help but little. This is now the principallest and the total of all, that *Toralto* communicated to the Emperours Majestie.

The order of dyet which is to be observed in this disease, may you perceive by all that which hath been said before, whereof also you shall find all things more amply described in the beginning of the sixth Chapter, where we have discoursed of the pain of the hips, that above all other things, Wine is chiefly forbidden unto all gouty people, as hath been before expressed. The decoction of Cinamom, Mead, &c. are they to drink, as is there admonished.

When any one doth go but ill after the Gout of the feet. §. 7.

THis debility of the feet doth sufficiently shew, that there is still some flegmatick matter present which ought to be expelled, whereto these pills ensaing are to be prepared: Take prepared Aloe half an ounce, Coloquint one drachme, *Diagridion* half a drachme, *Hermodytyli* half an ounce: temper them all together, and make seven pills of one drachme thereof: Afterwards, take every fourteen daies six thereof, and fast six hours upon it. In the mean time is he alwaies the fifth day to take one of them before supper.

Secondly, he is to use this confection following; Take *Species de Xiloaloe*, *Species Diatrionpipereon*, of each one drach. white Saunders, Violet and Sorrel seed, of each one scrup. Sugar six ounces decocted in water of *Asarabacca*, or water of Parsley; make Sugar plates thereof, and then take daily before noon and after noon, or at leastwise once a day of it, 3. drachmes at the least; and continue this the space of one whole moneth.

Thirdly, take one pinte and a half of Smiths water, and seeth therein fifteen or sixteen Cypres nuts, fourty or fifty Gals, *Hermodytyli*, and Piony roots, of each one ounce, until the third Part be wasted away. He is afterwards to rub the sick person from the knees unto the soles of the feet, letting it be made moist, to wit, once a day alwaies before meat.

Fourthly, take unripe Sallad oyl one ounce, *Sandaraca*, Mastick, and burnt Ivorie, of each one drach. temper this together, and therewith anoint after the former rubbing all the

the parts very warm which be weakened through the Gout, and continue it thus with rubbing, until they be thoroughly strengthened again, and grow to be well.

Fifthly, when the sick person hath used certain dayes to wash and anoint, and findeth neverthelesse no perfect amendment: then is this salve following to be used, like as the other precedent: Take Dragons blood, fine Bolus, *Sandaraca*, the juyce of Sloes, *Mastic*, *Frankincense* and *Myrrhe*, of each one quarter of an ounce, Sealed earth and Starch, of each one ounce, the juyce of Plantain and of *Roses*, of each one ounce and a half: then temper them a long time together in a mortar unto a salve.

These be now the very best and necessariest remedies, which of all ancient and later Physitians be prescribed for all the joynts of the body; God Almighty the chief and best Physitian give his blessing unto it.

What things they be which convey the medicines towards the joynts. §. 8.

Amongst all other things which be written of the joynts, we have yet to speak of this: which be the things that convey the medicines towards the joynts; amongst which, the chiefeft that are to be esteemed, be roasted Squils, Ginger, Calamus, which is the right *Acorus*, Pennyroyal, *Opopanax*, both of the kinds of Germinder, the seed *Amomum*, and other more.

The ninth Chapter.

Of the outward accidents of the Joynts and Members.

From the third Chapter hitherto we have discoursed of many kinds of diseases of the outward members, which are most of all caused through outward causes and defluxions: here will we now in this last Chapter adde certain outward accidents; as, when the outward members or joynts be beaten or strained.

Secondly, we will also admonish somewhat of the fracture of the bones. And because that by this there falleth otherwhiles some putrifaction of the bones, therefore will we here also discourse somewhat of it: and because that all this cannot be effected without great pain, we will shew withal, how that the same pain is to be asswaged. Lastly, how that the numbnesse and unsensiblenesse of the members may be prevented and cured.

Of strained members. §. 1.

If any one have strained any one member through falling or beating, and the same happened to swell without great heat, then take the salve *Dialthea* one ounce, oyl of Camomil and of Dill, of each half an ounce, Wax a little, and anoint the place therewith.

Another. Take salve of Agrippa, of *Althea*, and of the white salve which followeth hereafter, of each half an ounce; temper them together, and anoint the place affected with it; for which the Alabaster salve is also good.

Item, take Barly meal, Fenegreek and Linseed, of each one ounce, Mallowes one handfull, Wormwood half a handfull, Camomil and Melilot, of each one handfull and a half: the herbs and flowers are you to seeth well, and then seeth the meal amongst it: then are you with oyl of *Roses* to make a soft plaister or pap of it.

Item, take Bean meal three ounces, Camomil, *Roses*, Wormwood, and Bran, of each one handfull: the herbs and flowers are you to seeth to pap in good red Wine; at last, let the Bran also seeth with it, and then with oyl of *Roses* make a plaister or pap of it. For this disease, it is also good to open the Liver vein and let out five or six ounces of blood according to the ability of the Patient. You may also lay fresh Cowdung upon this disease, and anoint the place about it with *Bolus* which is tempered with Vinegar. The expert Physitians do advise, that Cowdung should be tempered amongst oyl of *Roses*.

Item, take the whites of Eggs brayed well, and temper amongst it the powder of Wormwood as much as you please, and so lay them upon the bruised place.

The golden waters are also commended for this, but they be hot; but if so be that there be great heat with it, then need not one stay to open the vein, like as we have said before. But these diseases would be alwaies suppressed with cooling things: for which you have five kinds of white salves: Take Sallad oyl three quarters of an ounce, white Wax and Ceruse, of each two ounces, the white of an egge: the Wax and oyl are to be melted by a soft fire, and afterwards to be well tempered with the Ceruse, and the white of the Egg. This is not onely good for bruised members, but taketh away all the blew spots which be come of fals, blowes, and such like occasions. This is the common white salve which is alwaies ready at the Apothecaries, and is called *Unguentum Album*. The other salve. If so be that you desire to have this forementioned salve more cooling, then temper half a drachme of Camphire well amongst it, and this is then called at the Apothecaries *Unguentum Camphoratum*. The third white salve with Camphire. Take six ounces of the oyl of Roses, the whites of three eggs brayed well, white Wax one ounce and a half, Ceruse six ounces, Camphire broken in Rose water one drachme; melt the oyl and the wax together, and then afterwards temper the Camphire and the whites of eggs amongst it; afterwards put the Ceruse unto it bruised very small, bruise litharge of Gold wash'd in Rose water one drach. and a half, washt Ceruse half an ounce and half a drach. oyl of Roses three ounces and a half, white Wax about three quarters of an ounce: then melt the oyl and the Wax together, and temper the Ceruse and Litharge amongst it until it be thoroughly cold. All these foresaid Unguents do cool all hot swellings, of whatsoever causes the same may proceed: they do repel all raw places, and they do also cool all the heat of scalding or burning. The fift is *Unguentum de Cerusa*, whereof we have admonished so often in this book. The same is thus described by Mesua: Take Ceruse and Litharge of Gold, of each three quarters of an ounce, burnt lead, litharge of Silver, of each half an ounce, Mastick, Frankincense, of each two drach. and a half, oyl of Roses and Vinegar, as much as sufficeth for a salve: first pour the dry things into the mortar, and rub it very small: afterwards pour some Vineger, then some oyl unto it, stirring it well alwaies about until it be thick enough. This salve is also good for all salt *Phlegma*, and for all dry itch.

For a strain or bruise, fry stone horse dung with *Aqua vita*, and apply it hot. *Prob.*

Of the fractures of bones. §. 2.

THESE fractures of bones do the Grecians call *Catagma*. And although the setting, splinting, and binding of this fracture, and what else belongeth unto it, concerneth more the Chirurgions then Physitians: notwithstanding doth our common order and method aske a meanes wherby this disease might be holpen. Of which there is not a little spoken before, where we have discoursed of the lamed, extenuated, bruised, and strained members, which all together with the fractures of bones have a great communion, because they be also caused through such like occasions. First of all it happeneth oftentimes in this fracture, that the marrow in the bones (whereby they be sustained and nourished) is consumed and dried away: for which, you have a salve in the second Part and the fourth Chapter, of the marrow of a young Fole, which is marvellous good for it.

In like manner there is also described before in the seventh Chapter, and 2. §. yet one more of the marrow of a Stone horse, and other more which be there recited for the extenuation of the members, and all that is necessary for such like accidents. You have likewise four kinds of *Dialthaa* salves in the third Part, the 13. Chapter and 4. §. which be altogether meet for this. Neither is the crook back or crooked breast ought else but an eluxation or fracture of the back bone and ribs, as in the second Part may appear at large, which may there be seen. The plaister of a Ram is marvellously commended for this, which is described in the third Part, the third Chapter, and 1. §.

And for to augment the remedies which may serve for these fractures, we will adde plaisters, salves, sparadraps, applications, and all kind of things that are requisite for the fracture of the bones, which the Chyrurgions may use.

Take Wax five ounces and a half, *Ammoniacum* and *Galbanum*, of each two ounces; dissolve the Gum in Vineger, strain them thorough a cloth, let it seeth until the Vineger be wasted away, and melt the Wax amongst it.

Then take Camomil, Balm with the roots and Mallowes, of each one handful: chop

chop them and stamp them well, afterwards seeth them in two pound of May butter, and a pound and a half of Dogs grease, as long as one may seeth an egg hard: this being done, wring it out hard, and stir the molten Wax with the Gums amongst it. When it is almost cold, then take one ounce and a half of Bevercod, oyl of Camomil two ounces and a half, of Bayes sixteen ounces, temper all together and keep it in a pot; this salve do the Chyrurgions esteem to be an especial secret. And if you will use it, then take not too much at one time; make it warm and rub well the place with it; afterwards lay this sear-cloth following upon it.

Take Wax three ounces, Rosin one ounce and a half, Mastick one ounce, *Galbanum*, and Frankincense, of each three quarters of an ounce: dissolve the *Galbanum* in a little Vinegar; stamp all that is to be stamped; melt the Wax and Rosin in an ounce of oyl: strain it afterwards thorough a cloth, and have a cloth ready as big as the sear-cloth must be. Lastly, soke it therein, and after the anointing apply it upon the place affected.

Others: Take four ounces of Sallad oyl, melt therein half an ounce of Wax: when it is almost cold, then stir half an ounce of powdered Mastick amongst it, and use it as before.

Item; Take white Wax, and Frankincense, of each half an ounce, of oyl of Linseed four ounces; melt them all together and draw a cloth thorough it. Item, take Wax and fresh Butter, of each a like quantity, melt them together: these two be especial good against all swellings.

Another. Take Fenegreek meal as much as you please, seeth it in water and put powdered Comfrey unto it, until it be as it were grout, then apply it to the fracture.

Item, take litharge of Gold, fine Bolus, and Comfrey, of each three ounces, Bean meal one ounce and a half; pound them all together, and pour good Vinegar unto it, and let it stand so one night: afterwards put molten Wax and Rosin unto it, of each 3. ounces, Sallad oyl twelve ounces, then temper them all together on the fire, and let it seeth well until that the Vinegar be consumed: When it is almost cold, then stirre 3. 2. of powdered Dragagant steeped in wine or Vinegar amongst it, that it be like unto Gelly. Or take Rosin five ounces, Saffron, *Euphorbium*, and long Pepper, of each one drachme, *Aqua vita* one ounce and a half, stamp all that is to be stamped; dissolve the Rosin in *Aqua vita*, and then let it seeth altogether until that the *Aqua vita* be boyled away, then take Wax as much as is needful for a plaister: this plaister is also very good for all other ruptures.

Item; Take Turpentine and Wax, of each four ounces, *Galbanum* three quarters of an ounce, *Ammoniacum* half an ounce: dissolve the Gums in Wine, and then temper them all together; when it is almost cold, then put one quarter of an ounce of Myrrhe, and as much Turpentine unto it, and make a plaister of it. In like manner you have in the third Part, and the third Chapter, one more beginning thus; Take Dragons blood, &c. And yet one other in the second Part, the third Chapter, and 5. §. beginning thus; Take Pitch, &c. Item, one more in the first Part, the first Chapter, and 1. §. which be all together very good for the fractures of bones.

For the putrifaction of the bones. §. 3.

Take burnt Lead two ounces, Myrrhe half an ounce, Aloe, *Opopanaxum*, Iron dross, burnt Squinant, and the rinds of the Fir tree, of each one drachme, then make a powder of it, and strew it upon the putrified bone; for it separateth the same, and healeth marvellously.

Take *Canterbury* bells, pound them small, and strew this powder also upon it. The same operation hath the water also wherein *Sal Armoniack* is decocted.

Here follow some especial things for the pain of the Joynts. §. 4.

It happeneth also otherwhiles, that in the uttermost parts of the members, as in the hands and feet, there cometh great pain, whether it be of the foresaid causes or of something else that hath fallen, or been laid upon them, which may well be caused both of heat and cold.

But if so be that heat cause this pain, then doth it appear with rednesse, with hardnesse,

and with swelling, which is also a sign of some impostume to come. But if it be caused through cold, then is the pain without any rednesse or heat: but with deafnesse, pensivenesse, palenesse, and sometime with a dry itching scurfie.

When as these signs be present, they give commonly to understand, that there might follow of it a palsey or *Paralysis*, and an extinguishment of all natural heat.

If this disease come through some outward causes, then look on the same parts, whether they be redder than any other. Then is it to be anointed with cooling oyls, as with oyl of Roses, of Violets, of water Lillies, and such like.

The letting of blood is very good for this: as if the pain be in the feet, then open the vein in the arm on the same side, &c.

If it be caused through drith, and that neither rednesse nor whitnesse can be perceived, and neverthelesse the member seemeth to be paler from day to day; then let warm water fall from on high upon it, and afterwards let it be anointed with the salve which is molten together of oyl and white Wax.

But if you have this salve stronger, then use that *Anodion* which is described in the second part, the fift Chapter, and 18. §. or any other which be specified in the pain of the *Podagra*. But if the place be somewhat greater or swollen up, and that in feeling it be found somewhat coolish, then is it to be rubbed oftentimes with warm clothes that the pores or vents might open, and afterwards let this fomenting be made ready. Take Camomil, Marjoram, and *Stechados*, of each one handful; seeth them, and hold the member over the vapour. Or take a sponge being made wet therein, and so lay it warm upon it: you must also let warm water upon it from on high: Afterwards anoint the member with oyl of Wal-flowers, of Costus, of Lillies, or any such like, which be warm by nature. In eating and drinking he is to keep himself sober, and to exercise himself much, and to bath. And if so be that this will not help sufficiently, then is he to be purged of all flegmatick humors, as with the pills de *Hermodyllyis*, *Fœtidis*, and *Medicamine Turbith*. Lastly, and in need he is to use those things which be described in the first Part, the twelfth Chapter, and 13. §. of *Paralysis*.

Of the insensiblenesse, shaking, and numbnesse of the Limbs. §. 5.

OF all these diseases we have in the first part very largely and amply written: likewise also every where in the fourth part: which means may also be used in all these accidents: but especially there be very good for this two sure golden waters, which shall be hereafter described in the last part amongst other vital waters, whether it be that they be used outwardly, or drunk inwardly; for they be good for all diseases of the outward members and joynts, like as is this also following: Take dry Willow wood, and burn it in two pots, one above the other, like as the oyl of Juniper wood is wont to be made, and with the oyl that runneth out into the nethermost pot, anoint the place affected the space of 9. daies.

Another; take Quinces which rot upon the tree, Bevercod, Bayberries, Sage, and Juniper berries, of each a like quantity; stamp them, and cut them meetly grosse; afterward seethe it all together in good wine, and then rub the joynts with it. These two things aforesaid be very highly commended of the common people.

If so be that there be any thing discovered, not onely that concerneth the fractures of the bones, but also this whole fourth part of the joynts and outward members, wherein may be any want; thereof must advice be had with expert Physitians and Chirurgions, and so we will conclude therewith this fourth Part.

The fifth part of this Book comprehendeth all the
Accidents and Diseases, which do spread them-
selves abroad over the whole body.

IN the foresaid four parts we have most of all described all outward and inward parts of mans body, with all their accidental diseases: this fifth part shall discourse of those things which spread themselves abroad over the whole body: amongst which, outwardly is the skin, which covereth the whole body; inwardly are the veins, the blood, flesh, sinewes and bones. Item, other accidental things more, as heat, cold, *Phlegma*, *Melancholia*, fatnesse, leannesse, sleep, sweat, and such like.

To the Skin well we ascribe many kinds of diseases, to wit, what may hurt the same inwardly and outwardly; as all impostumes, ulcers, or boyls, warts, spots, blisters, clifts, itchings, scurfe, swellings, *Varices*, Carbuncles, and such like. Item, many other corroding ulcers, as *Fistulas*, Cankers, Grangreen, Pocks, Leprosie, *Cacoetes*, and many other incurable ulcers. Afterwards we will discourse of such things as hurt the skin on the outside, as burning or scalding by fire, by water, or Gunpowder, splints, thorns, all kinds of wounds, and whatsoever may appertain unto them. Lastly, of *Cicatrices*, which be left behind after the cure of the forementioned accidents.

The first Chapter.

Of the Skin.

THe Skin is by nature given to all living creatures that have blood in them, not onely for an ornament and defence, but also as a garment of the whole body, which in one place is found thicker, thinner and softer then in another.

The outwardmost Skin is of it self insensible, and more fine and thin in mankind, then in any other creature. The Skin within the hand, on the forehead, and for the most part over the whole face, and on the heels, can hardly be fleyed off, by reason that they be throughout knit and woven with sinews and muscles. In like manner, if there be no flesh with it, and that it were wounded, it would not be possible to heal the same together again; like as may be seen in the eyelids, in the foreskin, and other places more of the body.

What diseases or accidents this skin is subject to, we have discovered it before, and will also write somewhat more of it hereafter.

Of the inward causes which harm the Skin. §. I.

FOrasmuch as this fifth Part of our Practise of Physick doth not discourse of any other matter but of ulcers, anguishes, and impostumations, and such like accidents which harm the the skin; therefore we will discourse and write somewhat of it in general at the first, notwithstanding the difference which is between the ulcers and impostumes; like as in the third Part, the 11. Chapter, and 29. §. is declared.

Thus

Thus will we under the name of impostumations contain all that proceedeth and followeth after, which the Physitians do thus describe.

An impostume is a disease or malady which altereth one member or part of the body from his natural kind, into an unnatural constitution. Or an impostume is an unnatural Tumour or swelling of a member, through wind, blood, or water, which hath drawn one of these matters unto it.

This impostume may be caused of all the four humours, and also of a several humour, or of a mixed humour, and that in this manner: when any part is badly qualified, be it of whatsoever cause it will, or that any bad humours, winds, waters, or other superfluities have axcesse from any other part which is stronger then that whither they be sent, which is not able enough to expell the affluent humours from him; then there do they remain, and putrifie, and at the last impostumate.

When as such kinds of impostumes be called onely of blood, then do the Grecians call it *Phlegmonem*, which is an hot swelling, with great pain and beating.

For if any swellings be caused through *Phlegma*, or any other waterish moisture, then be they called *Oedema*, and it is a soft tumour without pain, and it is sometimes seen in dead bodies, in Hydropical persons, and in those parts which are extenuated.

If any swelling be caused through pure *Cholera*, then is the same called *Erysipelas*, which is the Rose. Of *Melancholia* cometh a hard swelling called *Schirrus*, the Canker and such like; which maladies do mix themselves oftentimes with divers other swellings, ulcers, and such like; as we shall especially write hereafter, and discourse of divers and sundry of them. But (as is said) we will begin with the first.

Of the Warts. S. 2.

How il-favoured this excrescence of the skin is to the sight, is sufficiently known unto all men, whereof there be also many kinds, some altogether dry, hard, black, and cleft or chopt: others be moist, running itchie, and where pain is to be felt in handling them. Their principal cause is a very burnt melancholick blood. Therefore ought such things first to be used as withstand the ingendring of melancholick blood, as we have elsewhere shewed, and shall hereafter declare more at large.

But amongst the things which may outwardly be used, be these following; Take Willow rinds and burn them to ashes; afterwards mix it with sharp vineger, and anoint the Warts with it, especially if they stand in secret place, or rub them with Asses milk, afterwards lay the foresaid on them being spread upon a cloth, then will they fall off without pain.

Item, take the juice of Celendine, and the juice of Purslain, of each one ounce, oyl of Sulphur one drachme and a half; then temper them together, and anoint them therewith. The same doth also oyl of Sulphur alone: Take the juice of Marigolds, and temper it with salve unto a plaister. Some do take Cranes eyes, and temper them with the juice of Onions and Salt unto a plaister, and so bind upon it. It is also said that red sealing Wax is very good for it; Take a garden Snail, strew it with Salt, put it into a glasse, then cometh there an oyl of it in the space of two daies, then anoint the Warts therewith and they will fall off.

You may also anoint them with the oyl *Camelina*. If they be so great that they may be tyed with a horse hair or any strong silken threed, then tye the thred from day to day fast about them, until they dry away and fall off.

With this are you also to note, that when there be many Warts together, like as commonly hapneth, you must begin first at the greatest, for that they have such a sympathy one with another, that when the greatest (being as the mother) hath her nourishment taken away, thereby the rest may easily be killed.

Item, burn them with a Rye straw, and take afterwards powdered Saffron, seeth it in Sallad oyl, and then put Salt unto it and Swines grease, to the end it may be as a salve, and then lay it upon them.

For this is also meet all that which is discovered in the fourth Part, the second chapter and 3. S. for the Corns. The warts require also a moderate dyer, and that he forbear all that ingender melancholick blood.

of

Of the Measels, red Gum, and of the small Pocks in general. §. 3.

Children are for the most part subject unto these diseases, and all ancient folks otherwhiles. And like as the same be perillous in young children, so be they more perillous in ancient people. They do come also through many kinds of means, sometimes like red spots; also with waterish blisters which outwardly appear clean over ones body upon the skin as big as Millet seed, which at last dry away and fall off. These be also (to tell the troth) not without great danger, especially if they happen through cold not to break out: or if they have appeared already upon the skin on the outside, and be stricken in again; for thereby do they make a narrowness of the breast, a short breath, hoarseness, disease of the throat, or of the mouth, and anguish of the whole body with great Agues.

The learned have sought out the causes of this breaking out of the small Pocks, Measels, and such like; therefore be they of opinion, that one bringeth the cause of this sickness with him out of his mothers womb when he is born. For that because as the fruit is nourished of the finest blood of his mothers Terms: so doth the uncleanness of that blood remain in the pores of the children, and in other places more, which nature afterwards driveth out in due time.

And because that all humane creatures be through such means and nourishment sustained and fed in their mothers womb, therefore doth it seldom happen that any kind of people can be old, without getting these Pocks or Measels, whereof this common false opinion is spread and grown amongst many people, that all children must once have these Pocks or Measels, whereby many mothers which have many children, if any of them get the Pocks or Measels, let them run one amongst another, whereby one child is infected of another, and so do catch the Pocks or Measels: saying besides the truth, that it is better that they get them in their childhood, then when they be grown in years. But this is none other (like as I have said) but a false opinion, for one may be freed of this sickness, through a good diet.

There be also other causes more concerning these maladies, viz. stincking aire, which doth heat the blood and other humours of the body, and troubleth them. Like as to be long conversant in the warm Sun: also to overcharge him with such meat which quickly corrupteth in the stomach, as fish and milk eaten together, through much bad blood, through omitting an accustomed letting of blood, and such like causes more.

The signs of these sicknesses be pain of the back, itch of the ears and of the nose, which come of the vapours of the corrupt matter, and are partly pestilential; therefore they have a frightful sleep, and the pricking may be felt over the whole body. With this they have also a slothfulness in all parts, redness of the face and of the eyes, and somewhat swelling; and they be so long pinched with sleepiness, until the Pocks do break out upon them every where.

And although (like as we have admonished) the Measels and the Pocks have one kind of cause, yet we will discourse of each apart, as much as is possible.

Of the Measels.

This is (as we have said) a common infirmity of children, and it also assaileth ancient and full grown people, so that they over the whole body (some lesse, other some more) are besprinkled with red spots. There is also great heat oftentimes with it, & a puriveness in the breast. In this sickness must one beware especially of cold, yea of open aire, and of hot meat and drink. And ancient persons are to order themselves, as we shall shew in discourse of the small Pocks. Common people do especially commend the Conserve of Eldern flowers, and the same rubbed upon the heated parts. But what is further convenient for this purpose, you may make choyce thereof according to the importance of the cause, out of the description ensuing of the small Pocks, what shall like you best.

Of the small Pocks. §. 5.

VHen as Children be assailed with these foresaid Measels or Pocks, and they will not break out, then take oyl of Camomil and good Wine, of each one ounce and a half, Saltpeter one drachme, seethe it together until all the Wine be waisted, and anoint the whole body with it when it is very well warmed. This potion following is very good for all aged people, and also for all young children. Take Citron peels one quarter of an ounce, four Dates one quarter of an ounce, Cicory roots half an ounce, the flowers of Buglosse and Burrage, of each half a handful: seethe them together in a pint of water until about the third part be consumed; afterwards strain it, and temper amongst it *Acetostatis Citri* two ounces, *de Corticibus Citri*, *de Succo Acetoso*, of each one ounce: give oftentimes a little of it, for it is very meet and pleasant.

Item, take Olive leaves two handfuls, Agrimony one handful; seethe it all together in good Wine, and drink thereof every morning three or four spoonfuls: it drieth up all affluent humours. But when these Pocks begin to fall away, then are these means following to be used, according to the importance of the cause: Take Cerusse half an ounce, oyl of Roses one ounce and a half, Camphir the quantity of a Pease, Saltpeter half a drachme, and two or three peeled Almonds, wherewith you are to chafe the Camphire. Afterwards temper one amongst the other, and therewith anoint the place of the Pocks: Or take Sallad oyl, and Cerusse as before: then temper them together with a little Vinegar and Rosewater, and use it as before. Some do also advise to take strong lee, which is hereafter described against the burning of Gunpowder.

Another sort of the small Pocks, which be called Swines Pocks. §. 6.

LIke as we have said before, these kind of Pocks be much like to the other before mentioned, and proceed also of the same cause, saving onely that these whereof we now write, be bigger, broader, and also with great anguish of the breast and of the breath: therefore may all be used for this, that is expressed for the troubled breast in the second Part, the fifth Chapter, and 9. §. aswell in old as in young people. But especially is this salve following to be ordained for it: Take fresh Butter, Oyl of sweet Almonds, and Goose grease, of each half an ounce, Wax as much as is needful. Some do put unto it half an ounce of Turpentine, and one ounce of liquid Storax: this is especial good, and also approved oftentimes.

Aged people be much advised to eat none other thing but Barly pap, or Oaten paps, and to drink Barly water. Take fourteen or fifteen Figs, Pistacies one quarter of an ounce, Fennel seed, the seeds of smallage and *Lacca* of each three drachmes, Lentils one ounce and a half, Dragagant half a drachme, Roses, Saunders, burnt Ivory, and Quince kernels, of each half an ounce; seethe them all together in three quarts of water, until a third part be waisted, and then drink a good draught thereof in the morning and evening. He is also to use oftentimes *Oxyssachara*, conserve of Roses, conserve of Raspes, the sirup of Sorrel, of Verjuice, and of Quinces, to make the blood thick with it, and to cool it. There is especially commended for this, the water of Lentils when it is boyled in the third liquor, to wit, the two first being powred out. If now it be feared that the Pocks should hurt the eyes, then is this following to be used for it: Take *Lycium*, the juyce of Sloes, and Saffron, of each one drachme, Camphire one Scruple; temper this all together in Rosewater, and drop it oftentimes into the eyes. If so be that now any Pocks or any rednesse be perceived on the apple of the eye, then use *Siefalbum*, and that according to the quality of the cause; for which yon may look into the Register, where you shall also the manner to make it. But if there do come any exulceration in the throat or mouth, then cleanse the same with Barly water, wherein sirup of Mulberries, wine of Pomgranats, and such like be decocted, and drink the same also softly. The juyce of Mints is also to be drawn up through the nose, tempered with Saunders Verjuice and Vinegar; the same also fumed is good for it. Now when as the Pocks do anguish the Lighs, then use *Diapapaver*. If there be any hoarsenesse or roughnesse of the throat, then look what is good for it in the place where we discourse of it; For which is also this gargarisation to be made with Licorice, Jujubes, Sebestes, and Figs decocted in water, and a little Dragagant dissolved in it, and then to cleanse the mouth with it, and sometimes to swallow down some of it. When as there is no Ague with, then is it
very

very good that one drink warm Goats milk. Now for to free the intrails from the Pocks, roasted Quinces are to be taken with Sugar, or the syrup of the same. If a scowring happen with it, look what is described in the third part, the eleventh chapter, and 13. §. Lastly all renowned and famous Physitians do advise (against the opinion of the common people) that one should about the seventh day open the Pocks, if they be ripe, with a golden needle, for to let out the matter, to the end that through their sharpnesse they should not eat inward, and leave great Cicatrises behind them. Make also a powder with Salt, Lentils meal, Bean meal, Pease meal, litharge of Gold and Ceruse: strew the parts with it, to the end that thereby the matter may dry. All which cannot be hurtful.

If so be that after healing of the Pocks there do remaine great dents, pits, or scars, then may these things ensuing be used.

Take *Sarcocolla*, Melon seed, washed Rice, whites of Eggs, Chalk, Bolus, or white Sugar: temper them with the oyl of Roses, or the oyl of Lillies, and therewith anoint the Cicatrises. Or instead of the oyl, take Hens grease.

Item, take the Caule of a young Goat or Kid, pour Goats milk upon it, then set it so in the Sun, and pour fresh milk every day upon it the space of one week; afterwards lay it the space of four daies in Rose water, and then hang it up to dry. This being done, shread it small, and put it into a silver beaker, and set it in boiling water: when it is molten, then strain it thorough a cloth, and anoint therewith the marks and small Pocks.

Of clefts in the Skin. §. 7.

YOU have in the first Part, the ninth Chapter, and 1. §. of the clefts in the lips. Item, in the third Part, the fifth Chapter, and 2. §. in the description of the places in women. And in the tenth Chapter and 11. §. of the clefts in the Arsegut. Also in the fourth Part, the first Chapter, and 7. §. of the clefts in the hands: all which remedies there described may be used for this our intent, and also all these that follow.

Take the green rinde of the Elder, steep it in a sufficient quantity of Sallad oyl, boyl them together, wring them out hard, and with wax make a salve of them. This salve is also very good to be used against the burning fire.

Item, take oyl of Roses, white wax, Frankincense, Mastick, and Hens grease, of each half an ounce, Ginger half a drachme; melt the Wax, the Oyl, and the grease together, and temper the rest amongst it.

Of the Itch in the skin. §. 8.

BEFORE we begin to write of the Scabs, we will first intreat of the dry itch of the skin. This is called in Latine *Pruritus*, which is a desire to rub and scatch, either the whole body or some part of it, by reason of the great itch, which is caused of some sharp humours, which do yet lye under the skin.

Also, if the humours (which are stirred up either by heat or by labour) be so tough, that they cannot transpire through the skin and the pores of the same, then do they cause an itch. Also Lice, Fleas, Ants, and Woodlice, do cause an itch. If one do but seldom change his apparel.

The inward causes may be an over-great heat of the liver, which doth ingender sharp and adust humors; also, debility of the vertue expulsive, as doth appear in aged folks. The signs of this itch are manifest, as that a body cannot sleep for it, and is hindered from doing his businesse aright.

Now to come to the remedies of the Itch, the Patient shall have a vein opened, be purged, and almost observe the same order which hereafter is prescribed against scabbednesse. A sweating bath and water baths are specially commended for this purpose, which being once used, and not turning away the itch, shew that the humours in quantity do abound which cause the same. This bathing is to be reiterated, and the body to be rubbed where it itcheth most with this receipt following: Take white Roses two ounces, beat them thoroughly with Vinegar, and adde one ounce of Bran unto them. The next day following bath again, and rub your body with powdered Smallage, with green Nutshells, or with Fenegreek. These itchy Patients are to forbear all manner of Salt and hot things, and especially all that might inflame or burn the blood.

If this itch be about the yard or member of a man, then take a quarter of an ounce of Ceruse, Sulphur viv. one drachme and a half, *Opium* half a drachme: make a salve of it with Vinegar: some do add two scruples of beaten Licebane unto it. If this itch be in the Arsegeut or in the womb, then take burnt Allum one quarter of an ounce, Argal one ounce, temper them with Vinegar, spread it on a cloth and so apply it.

Put white Mercurie 3. 2. into a quart of spring water, let it infuse and dissolve of it self; then after three dayes wash the itchie place with it. *Prob.*

But purging with convenient medicines is good for this

Of Scabbednesse. §. 9.

Scabbednesse is of divers kinds, some with scales, some with blisters, some with matter, and some without matter, some dry and red; but all of them with an intolerable itch, according to the nature of the humours which cause the same, and are mixed with the blood.

The cause of this infirmity, are the uses of all kind of hot, sharp, salt, and bitter meates, as spices, strong wine, oyl, Hony, want of change in apparel, to lie or deale with them that be scabbed, with many other inward causes, that proceed of an inflamed and corrupted blood.

The signs of all manner of scabbednesse are apparent, but of what kind of humour the same is caused, shall appear by these reasons following. If it be caused of blood, that may be known by the repletion of the body, rednesse of the parts, and if the blood or matter do issue forth in the scratching: the Patient hath a sweet tast in the mouth. But if this scabbednesse be caused of Salt phlegme, then is the skin yellowish, scaly, and reasonably full of matter. The Patient cannot be quiet for the itch, and after scratching findeth great pain and smarting. If it proceed of *Cholera*, then perceiveth he not onely a great drought of the joynts, but also in the scabs themselves, with pricking, burning, and small store of moysture: or if it be caused of Melancholick, then is the skin blackish, dry, with many scales, and without matter.

Now for to cure this common and well known grief, are these rules following to be observed diligently. First because the common cause of this disease is grosse and foul blood, first of all a vein ought to be opened. Secondly, after the letting of blood, is the body to be purged, and especially with Myrobalans, and Fumitory. Thirdly, because the itch and scabbednesse are ingendred of salt, sharp, sweet, and spiced meates, are the same wholly to be forborn. Fourthly, venery is to be shunned, because thereby the humours is drawn to the outside of the body, where it doth raise hot and stinking vapours, that disperse themselves under the skin. Fifthly, bathing, inunction, and whatsoever else may be used outwardly, doth small ease, unless the body be first thoroughly purged. Sixthly, in eating and drinking refrain all salt, sharp, sweet, and hot things. Seventhly, fowr and moyst meates that do not suddenly putrify in the stomach, are good for him. Eightly, because Peaches and some other herbs, also fish, milk, and such like do corrupt the blood, they are to be shunned. Ninthly, the Patient must forbear scratching as much as is possible, for thereby little pusses are turned into great scabs. Tenthly, the moyster that the scabbednesse is, the stronger remedies doth it require.

As concerning the cure of this infirmity, the opening of the Median or Liver vein is not to be omitted, and that as long as the Patient can endure it. Then is the humour to be prepared with *Oxyfaccbara*, syrup of Fumitory, and Pease broth, afterwards to purge with Cassy, with fowr Dates, Miobalans, with Dodder, or with Rubarb infused or sodden in whay of milk, but above all other things is Fumitory commended, whether it be the juyce, the syrup, the conserve, or decoctive potions, or whatsoever else may be made of it.

Sene leaves do the same, whereof thou may use those two kinds of potions in his scabbednesse which are described in the third part and 20. §.

Item, take powdered Sene leaves one drachme, strew them upon stewed Currans, and so eat them daily: use them so long, until thou be loose in the body, and as thy stomach will suffer thee. Some do commend the golden water which is described in the last Part, if a little of it be taken either inwardly, or anointed on the scabbednesse outwardly. After that the body hath been thoroughly purged, it is a common order to bath, otherwhiles in fair water, otherwhiles also in natural dry baths, each as you like it best. But those that cannot

cannot intend to travel to the dry baths, may take Salt, Allum, Brimstone, Argal, and such like according as the scabbednesse doth require, and so with water make a bath of them.

There are also many kinds of salves and oyles ordained for it, whereof divers shall be specified at this present : Take litharge of silver finely powdered two ounces, Vinegar 4. ounces, boyle them together until one third part be wasted, then add 2. ounces of oyl of Olives unto it, one ounce of Ceruse, then boyle them together until they be thick, stirring them continually.

Another : take Ceruse two ounces, litharge of Silver one ounce, Mastick, and Frankincense, of each two drach. beat them all together to fine powder, and mix them with 3. ounces of the oyl of Quinces, and in the tempering of them pour now and then 4. or 5. drops of Rose-water and Vinegar unto them.

In like manner you have also in the 4. Part, the 9. chapter and 1. §. five kinds of white salves, which one may also use with all security for scabbednesse.

Item, in the first Part, the third chapter. and 10. §. there is a good salve beginning thus : Take Turpentine &c.

Item, take Bayberries, Vinegar, and oyl of Olives as much as you please, and temper them all together to a salve, it is very good and safe. Take the roots of *Bistorta* one drachme, prepared *Sarcocolla* two drachmes and a half, *Sandaraca* four scruples, prepared *Tutia* one scruple, Turpentine washt with water of Fumitory four ounces, Camphire, half a scruple, temper amongst it six ounces of the next following salve of Elecampane roots.

Take the juice of Elecampane roots, and of Dock roots, of each three ounces, Salt-peter, *Sarcocolla*, the litharge of Silver and Mastick, of each 15. grains, Copperas and Allum, (called *Hamemum*) of each two scruples, mortified Quicksilver one drachme, the Butter, Pitch and Turpentine, must you melt together, and afterwards temper the other ingredients amongst it, and let it seethe with a soft fire until all the juyces be consumed : you are then to anoint the Patient therewith by a good fire, and that especially on the places where the most scabbednesse is : this salve draweth the corruption outward.

Another : Take washt Turpentine two ounces, washt Butter one ounce, Salt half an ounce, the juyce of three Limons, two yolks of Eggs brayed, oyl of Roses half an ounce, or as much as is needful for to make a thin salve : then temper it all together, it is a safe salve.

In the fourth Part, the seventh chapter, and third §. you have also a good salve, beginning thus : Take Sage, Mallowses, &c. which one may use very safely for all manner of scabs; or take Dock roots, pownd them very small, temper Vinegar amongst it. and salt it well ; with this are you to rub your self well in the bath when you will goe out of it, without wetting your self after it.

Item, take Dock roots, and Hollihock roots, of each two ounces and a half, Hellebore roots one ounce, Smallage half an ounce, seethe them all together in fresh well water until the third part be wasted : strain it, and put into this decoction one ounce and a half of Salt, Salt-peter one quarter of an ounce, fresh Butter, and oyl of Roses of each two ounces : let it seeth the second time until all the moysture be consumed, afterwards temper amongst it washt Turpentine one ounce, Treacle 3. drach. the juice of Limons, or of Oranges two ounces ; lastly, temper them all together.

Item, take the juice of Mints, liquid Storax, of each one ounce and a half, Salt 3. ounces, oyl of Roses two ounces and a half, and make a salve thereof.

The plaister *Diachilon* may also be well melted in oyl of Roses for the same use; Sulphur vive tempered with Turpentine, is also much commended for this. Or make it thus; Take Sulphur vive half an ounce, Salt as much also stampd small together, Sallad oyl two ounces, then make it to a salve with Wax, as thick as you desire. Take Ashes, Salt and Sulphur, of each one ounce, bind them all together in a fine cloth, and then seeth it in four ounces of Sallad oyl, and rub the scabbednesse therewith.

Another. Take Turpentine which is washt well with Rose water two ounces, oyl of Roses, oyl of Costus, and fresh Butter, of each half an ounce, Sulphur vive three drach. Salt-peter one quarter of an ounce, and two yolks of Eggs, then temper it upon warm ashes. Item, take washt Turpentine six ounces, Quick Lime two ounces, Soot of the chymney one quarter of an ounce, and temper them all together.

This salve following is much stronger then the forementioned : take the salve of Elecampane

campane roots, not long since described, 9. ounces, Myrrhe, Swines bread, Hartwort, powdered all together very small, of each one quarter of an ounce, Bean meal two ounces, Sene powder one quarter of an ounce, *Sal gemma*, two scruples, temper them all together unto a salve.

Some do take fresh butter and Swines bread, of each 4. ounces, Ceruse three drachmes, Quick-silver one drach. stir them to long together that you see the Quick-silver the more, and therewith anoint the place infected once a day.

Other do make it thus: They do take powdered Bayberries, and fresh May butter, of each four ounces, and melt it by the fire: when it is a little cold, then mix one drach. of Quicksilver amongst it, and afterwards the Bayberries, juyce of Nightshade, and juyce of Mallowses, of each three quarters of an ounce: if one cannot get the juices, then take the powdered herbs, and if so be that the salve be not tough enough, then put a little Turpentine unto it.

Item, take mans greafe, Rose water and Quicksilver, each according to his weight, like as it is said before in this last salve and anoint therewith the scabbed place once a day.

Another. Take a small Cruise full of rain water, and put therein one drachme of *Mercurii sublimati*, so let it seeth together in a glasse with a narrow neck by a soft fire: and when it is cold, then temper therewith the juice of Limons, and Rosewater, of each half an ounce, and use it as before. Some do take *Aqua vine*, and therein do they seethe a little Quicksilver, and therewith anoint the scabs.

Item, take Swines greafe two ounces and a half, oyl of Bayberries one ounce, mortified Quicksilver, Frankincense and Mastick, of each one drach. Salt two ounces, the juice of Plantain and of Fumitory, of each one ounce and a half: lastly, temper one scruple of Orpiment with it.

Or take Barrowes greafe twelve ounces, Quicksilver mortified with vinegar half an ounce, oyl of Roses one ounce, Frankincense, Mastick Myrrhe, *Sarcocolla*, and litharge of Silver, of each half a drach. Turpentine 3. ounces which is washed well in the juice of Fumitory, Wax half an ounce; the two last are to be molten together, and temper the Barrowes greafe amongst it, and at last the other powders: then stirre all well together until it be cold. With this salve is the Patient to anoint himself twice a day the space of five daies, and the other six or eight daies afterwards, then is he to wash him with this water following:

Take Dock roots and Elecampane roots both cut, of each six ounces Bran six handfuls, Mallowses, Violet, leaves, and Fumitory, of each twelve ounces, seeth all together in sufficient water, that one may bath therein, sit in it meetly warm, and coming out of the bath, lay your self about the space of an hour in bed.

But here is to be noted, that salves which be tempered with Quick-silver, are more meet for the Pocks then for scabs, as hereafter shall be shewed in more ample manner.

If any body be plagued with a troublesome scabbednesse, which proceedeth from a salt melancholick matter: then take the juyce of Elecampane rootes, and Dock roots, of each half an ounce, liquid Storax, black Hellebore, and prepared Tuttie, of each two scruples; temper these all together in a leaden mortar, four or five hours together unto a salve.

It happeneth also otherwhiles, that by some disease of the stomach or of the Liver, this diseale doth grow, and doth so spread it self over the whole body, that one supposeth certainly that it is a right Leprosie. For this do all expert Physitians know good advice, with letting of blood and purging at the first. And for this kind of scabs is this remedie following found, wherein I my self have found marvellous operations: take oyl of bitter Almonds sixteen ounces, fiftie common Crevets, pownd them, and let them seeth in the oyl: afterwards wring them hard through a cloth, and temper amongst it eight ounces of the oyl of Eggs, and anoint you therewith twice a day. For this is also good Sallad oyl, wherein Frogs be decocted. Item, take a water Snake, cut off the head and the taile, and cast it away, afterwards cut the rest in small peeces, and seeth them in oyl and strain it.

In like manner you have also in the fourth Part, the first chapter and 8. §. against the scabbed hands a salve, beginning thus: Take Dock roots, &c. which is very meet for this kind of scab, and exceedeth also all others. The oyl of Eldern flowers doth cleanse, and mollifieth and taketh all scabbednesse away from the hands. The oyl of Eggs is very commodious

commodious of it self for all sharp scabs, likewise also the oyl of Tiles, Juniper oyl, whether it be drawn out of the wood, or out of the seed, doth expel all infections of the skin, although it were a Canker, or any old ulcer. Also, oyl distilled out of Wheat is much commended for the same.

We have also in the fourth Part, the first chapter, and 6. §. other remedies more against the scabbednesse and the sorenesse, which may be used for this, and over the whole body. Also the maiden milk is very good for this, which is described in the first Part, the 5. chapter, and 1. §.

Of Tumours. §. 10.

BEcause we have sufficiently before discoursed of scabbednesse, thereof we will now speak and discourse of certain swellings, which assaile the skin and the flesh under it. And because there can be no impostumes without swelling or rankling, as also all swelling may be caused of blowes, falls, wounds, fractures of bones, and such like: therefore it is needlesse to spend any longer time therein, every one may himself seek in the Register for the member, wherein every such swelling doth manifest it self, where may be found perfect direction for all: wherefore we will onely here declare certain common rules.

First, is a Nutmeg very good for to cleanse all corruption of the blood, and that especially for the swelling of the Milt: conserve of Eldern berries doth also cure all inward swelling. In like manner doth conserve of the same flowers expel all scourings of the belly. Four or 5. Figs eaten twice a day are also very meet in all swellings. Amongst oyles which may be anointed on the outside, are these following: to wit, oyl of Mints, of Dill, of Lillies, and Tiles. And amongst all salves, the salve of *Althæa*.

There is a kind of swelling, which is soft, without pain, and which spreadeth it self far abroad, which the Grecians do call *Oedema*, which ingendereth of wind and cold humours; with this manner of swelling are commonly hydropical Patients troubled, and those that have the Consumption, or any other long lingering disease. This swelling is also in the foresaid sickness no cause of the same, but onely an accident; so that the same hath no need of any special remedy, but onely to apply unto it *Oxyrrhadinum*, tempered with salt, or salted Sallad oyl.

Of all Botches, Byles, and other hard swellings. §. 11.

NOW if there appeare any hard swellings, Botches, Byles, Wens in any place of the body, and that at last there besal with it heat, or rednesse with pain, without inclining neverthelesse to impostumation; then do the Grecians call the same *Phlegmāhas*: But this name comprehendeth many kinds of swellings, for that by the name *Phlegmone* be understood all the swellings of the groines, the *Bubones* and such like more, because that the same be caused of one kind of cause, viz. of blood and *Cholera*. These swellings may also be caused of falles, of blowes, or of thrusts, through which the humours be drawn towards the bruised place, and there being gathered together, do make such umours, impostumations, and other swellings. Besides that it happeneth so much the sooner, if a body be plethorick and full of blood.

The signs of these foresaid swellings, are heat, rednesse, paine and beating, which is felt deep in the flesh, the whole member where this impostume is: thereby appeareth distempered with heat and inflammation, with great swellings and desire of cooling things.

And when as the member is more sinewie wherein this impostume cometh, so much greater is the paine; and how much more fleshy it is, so much is the pain and the pricking the lesse, and cometh easier to a perfect impostumation. Now for to remedy these kinds of swellings, must we note certain rules.

First, if the Patient be plethorick, then is one of his veins to be opened, and that alwayes in the side where the swelling is not, and according to the situation of the place where the swelling appeareth. Secondly, if the matter be hot, then must one give the Patient those medicines which allay the heat. Thirdly, when the matter is well purged, then are repulsive remedies to be used upon the swelling, if it be not that the swelling stand in such a place, whereby nature is wont to expel all superfluity from her. Fourthly, amongst the things which hinder repulsion be gross and rough humors, cold and abundance of the matter.

Fiftly, if so be that a swelling be great, and it seem to be inclined to impostumation, then are no repulsive things to be used, but onely maturatives. Sixtly, when it is certain that the impostume is ripe, and full of corruption, then is the same to be immediatly opened, and especially if it stand neer some noble part: for that if one delay the opening too long, then might the matter eas inward, and do more hurt. Seventhly, the healing of this hot impostume, consisteth onely in staying of the affluent humours and in discussing the matter present.

Now for to heale this impostume, one must imitate the first rule, and in the beginning open the vein on the contrary side. But if so be that the tumour have already continued three or four dayes, and the same were very big, then is the vein to be opened on the same side where the swelling is. The Patient is also to be purged with sower Dates, with Cassie, with syrup of Roses, with the confection of the juyce of Roses, or such like, and lay upon it repulsive medicaments for to lessen the power of the swelling, as cold herbs, Purslain, Gourds, Endive, and Nightshade powned, and their juyces.

When as now the cause is come to the state, and to the highest, then are maturatives to be used, whereof here be divers discoursed.

Some Pock Physicians do advise, that do not know better, or they that gladly hold the matter long in their hands, that the swelling is the space of thirty dayes together to be fomented with *Marchasita*, but that is very needlesse.

This confection following is of the same quality, and therefore to be also omitted: Take *Scrophularia*, Polipody roots, Betony and swines bread, of each one drach. pownd them small together, and being tempered with three ounces of Sugar, make a salve thereof. For to apply unto it might this foresaid be borne withall in some sort, for that it mollifyeth all hard swellings, like as many other plaisters do.

Take the muscilage of Hollihock roots, of Fenegreek, and of Linseed, of each one ounce and a half, Barly meal two ounces, oyl of Lillies and of Hens grease, of each one ounce, Butter half an ounce, Saffron half a scruple, and one yolk of an Egg: seethe the muscilage with meale by a mild fire, and at last stir the yolk of the Egg amongst it. This plaister mollifieth all swellings which be mixed with cold and heat: it swageth also the pain in all the sinewy parts, and such like things more. Will you now use it for all cold swellings: then temper amongst it *Ammoniacum*, *Bdellium*, and liquid Sorax, of each half an ounce, wherewith it is very commodious to mollifie and ripen all hard swellings.

Another. Take Camomil one handful, seeth it in good Wine even to the half, then temper amongst it Sallad oyl and Butter, of each one ounce and a half, and as much Barly meal until it be a pap: then lay it upon the tumour: it ripeneth and mollifieth all hardnesse.

Item, take Camomil, Melilot, Roses, Dill seed, Fenegreek, Hollihock seed, and Linseed, of each one handful, oyl of Lillies, and unsalted butter, of each two ounces, Saffron one scruple, temper them together by a soft fire unto a plaister, it mollifieth all hardnesse and easeth the pain.

Another. Take Camomil, Melilot, Mallows, and Hollihock flowers, of each one handful, Barly meal one ounce, oyl of Lillies and of Camomil, of each one ounce and a half: seeth the flowers in sufficient water unto the half, wring it out well, and pownd it: put then the oyl and meal unto it: this plaister hath the same operation with the other. Yet one more which is very good.

Take Hens grease, Goose grease, and marrow of Neats feet, of each one ounce, Muscilage of Hollihock roots, of Fenegreek, and of Linseed, of each one ounce, *Bdellium*, *Galbanum*, and *Ammoniacum*, of each one ounce and a half: dissolve the Gums in two ounces of oyl of Lillies, and then melt them with the grease and slime. Then pownd 24. or 25. fat Figgs amongst it, and stir them all together, and lay thereof upon the swelling. For to anoint, is this following to be prepared: Take Beane meale, Allum, Polipody roots, Swines bread, wild Cucumbers, Hartwort, *Scrophularia*, of each a like quantity beaten, Sallad oyl as much as is needful for to make a salve thereof. This is a very strong salve.

Take well decocted Rosemary rootes, and temper them with Hony: Item, take oyl of Roses one ounce and a half, washed Turpentine two ounces, *Mirra*, half an ounce, the yolks of 2. eggs, Barly meale as much as is needful for to make a soft plaister with it. This plaister causeth all swellings to ripen: take Violets and water Lillies of each

one ounce, oyl of Quinces half an ounce, Starch, two ounces, Camphire one scruple, fine Bolus one drachme: make a salve thereof for to use for all hot swellings. Item, take Pitch, Turpentine, and Rosin, of each one ounce and a half, Wax one ounce, Sallad oyl three quarters of an ounce, let them melt together by a mild fire. The plaister *Dia-chilon* doth also much mollify all hard swellings.

In the second Part, the second chapter and 7. §. you have many excellent things which also may be used for this purpose.

But if so be that these hard kind of swellings, and impostumes be ripe, which is thereby easily to be known, when the heat, the ague, and other accidents do diminish; also, when the hardnesse is mollified, then must the swelling be opened, and so kept with taints, and to cleanse it well, so that for certaine dayes together all the matter and corruption may run out: lay also clouts on every time with red or any other amper wine, wherein Roses and Camomil have been decocted.

If so be that now after the healing like as it happeneth sometimes in these kind of hot swellings, there remain some pain which keepeth the Patient disquiet, then lay beaten yolks of Eggs upon it, tempered with oyl of Roses.

Or take crums of white bread, and pour seething water upon it, then wring it out againe and temper them with oyl of Roses unto a pap.

Item, seeth Mallows in common water, stamp them, and temper them with Bran and oyl of Violets: to all these forementioned things are you to temper alwayes some Saffron, because that it hath an especial power in allaying all paines.

In this disease of scabs and boyles, purging is very good. Also pownd Billow rootes green with hogs lard and apply it, and it will break and heale the boyle.

Or take of the yellow salve of made of Hony, Wax, Rosen, Turpentine and hogs lard, and apply it when the byle is broken, this heales it. *Prob.*

Of the Rose, a certaine Impediment, called Erysipelas. §. 12.

AMongst the hot swellings whereof commonly the foresaid impostumes are caused, is also the Rose or *Erysipelas*, which is none other thing but an inflammation of the skin, which in this country we call the Rose.

The Latinists do call it *Ignem sacrum*, which is the whole fire, for that when the Rose appeareth in any place of the body, then doth it come with a burning heat, with an ague, and with a dry rednesse. And to know this impediment from all other inflammations, lay your finger upon the chiefeest place of the rednesse, wring it so easily, if so be that then the place whence you lift up your finger, that you had so wrung do seem white, and in the twinkling of an eye seeme red again, then is it a sure signe of the Rose. This swelling commonly assaileth one with a quivering, with heat, and cold, it infecteth also onely the skin without piercing (as other swellings) into the flesh, or very seldome, and when this inflammation of the Rose goeth inward into the body, then is it a very bad signe.

Now for to heal this infection of the Rose, must heed be taken to these orders following. First, cannot one doe better, then to purge this hot cholerick matter (whence this swelling hath his foundation) with necessary medicines: Secondly, these cholerick humours (which be as it were a skum of the blood) be not onely a cause of this Rose, by their abundance, but also by their heat and inflammation; wherefore it is not hurtful for to open a vein, thereby to cool the blood. Thirdly, the cooling of this inflammation may not be used in all places by laying on of some repulsive things, to the end that the hot matter be not repelled and driven to any noble part, as to the braines the heart, &c. where some great mischance might ensue.

Fourthly, no cold things are to be used for this swelling, if the body before be not well purged. Fifthly, it is not needful for to ripen these swellings, but onely to coole them. Sixthly, if this Rose be without any mixture of other swellings, then doth it not hurt although one drink cold water, but it is rather a medicine in this disease. Seventhly, when the swelling is caused of a red *Cholera*, then is it so much the hotter, therefore strong cooling things are to be used. Eightly, if so be that this swelling be tempered with another sort of swelling, then is the same so long to be cooled, until one perceive that the member hath gotten again his natural colour. Ninthly, if the place of the swelling begin to seem black and brown, then use no cooling things more, to the end that thereby it come not to impostumate and rankle.

And to prevent these things, this is to be done: first of all purge the Patient for to expel the *Cholera* with Cassie, *Electuario Lenitivo*, *Diaphœnicone*, de *Succo Rosarum*, De *Sebeste*, as is shewed at large in the third Part, the twelfth chapter, and 6. §. But it were not amisse alwayes to add some Rubarb unto either of these medicines.

But above all, he must beware of the use of Scammony, or *Diagridion*. But take 24. or 25. Prunes, fowr Dates, one ounce and a quarter, seeth them well in sufficient well water, then take of this decoction three ounces, and steep therein one drachme of Rubarb throughout the whole night, afterwards wring it out in the morning, and mingle one ounce of the syrup of Violets with it. Or as much as you think good, and so drink it warm. If this purgation be too weak, then take some of the forenamed, and especially *De Succo Rosarum*, and temper therewith one quarter of an ounce. It happeneth also oftentimes, that through the taking of any medicine, pain and marvellous accidents are perceived, then is the Patient to take warm water, or this ensuing.

Take Annis, and Fennel, of each half a drachme, Roses, Violets, flowers of Burrage and of Buglosse, of each half a handful, Saffron three grains, seeth it together with water, and drink a good draught thereof, or lay it upon the stomach.

Afterwards set a boxing cup (unpickt) upon the heart, and two behind upon the back, and if so be that the age, and the repletion of the body may suffer it, then is the Liver vein to be opened; otherwise may it be omitted, for that in this disease letting of blood is not alwayes necessary.

His whole order of dyet must be cooling things, whereof wine is much forbidden, and in the stead thereof, is there nothing more requisite then Barly water. There may also be used sometime the syrup of Endive, of Vinegar, of Sorrel, and of Poppie heads: or the syrup and Julep of Roses, and of Violets is also much commended: and if so be that the long use of Barly water went against him, then may he drink Well water: as heretofore you have seen further direction in a hot stomach and Liver.

For to use outwardly: Take Lettice, which is somewhat grossely beaten, and lay it upon the heat of the swelling: or in the stead thereof, take Lettice water. In like manner may you also use this following, whether it be tempered, or each alone, being made wet with a sponge, and so laid upon it. viz. water of Endive, of Corn Roses, of water Lillies, of Violets, or the decoction of Roses.

Item, lay Creame of milk upon it, tempered with Bran, or crums of white bread steeped in milk; and in like manner also *Oxyrrhodinum*. Or take the juyce of Plantain, and juyce of Housleek, of each a like quantity, and temper some Vinegar with it. Some do use for it the right writing inke. Take Plantaine one handful, Nightshade and Violets, of each half a handful, Linseed and Fenegreek meal, of each half an ounce, let it seeth together to growt: afterwards temper the yolk of an Egg amongst it, and use it as the other.

Another: Take Barly meal two ounces, Linseed meal and Roses of each one ounce and half, red and white Saunders of each one quarter of an ounce, fine Bolus and Camphire, of each one drachme, the juyce of Nightshade and of Housleek, of each two ounces, and a little Vinegar: temper them all together with the oyl of Roses unto a soft plaister.

This oyl following is also very good to assuage heat, viz. oyl of Roses, of water Lillies, of Violets, and of Poppy heads. Neverthelesse, there is here to be noted, that all oylie and fat things be not very meet for this: so that they are not to be used for this disease, but onely for to mix them with other things.

For to anoint withall, take small powdered litharge of Gold, temper it unto dough with oyl of Roses, afterwards put a little sharp Vinegar unto it, and stir it so long together until that the Vinegar be well tempered amongst it: this is chiefly to be anointed upon the Rose there where there be any blisters apparent, three times a day. The salve of Roses, and the cooling salve *Galen*, be very good for this, especially if there be a little Camphire tempered with both these.

Also this salve following may sometimes be anointed upon it; Take the oyl of Roses, of Camomil, of Eggs, and juyce of Plantaine, of each a like quantity, temper them all together.

Or take this following: Take the juyce of Plantaine four ounces, Rose water, and oyl of Roses, of each one ounce and a half. If you desire to make a salve thereof, then let it seeth until all the juyce be wasted, and then put some Wax unto it: Otherwise may you

Cap. i. Part 5. Of the Carbuncle or Plague sore.

597

you dip a cloth therein and lay it thereon, and as then, the last described pap over it, beginning, Take Plantain a handful, &c.

Item, take Barley meal, Hony, and the juice of Apples, of each a like quantity, let them seeth together unto grout, and use them as the other. You may also use fomenting, where Roses, Camomil and Houfleeke be decocted.

Of the swellings of the Groyns, Armpits, and Eares. §. 13.

WE have here before in the common description of the impostume and swelling admonished, that there is also comprehended by the same name, the swelling of the Groyns *Bubones*, as also the Carbuncles or Plague sores. But because these swellings do commonly appear in man and woman in the armholes, or in the groyns: therefore have we in the third Part, the second Chapter, and first §. written thereof at large. And it is also so with all other anguishes, Byles, *Furunculis*, but that they be somewhat more tollerable.

Of the Carbuncle or Plague-sore, a perillous swelling. §. 14.

THis Impostume do the Greeks call *Anthracem*, which is a Cole; the Latinists call it *Carbonem* and *Carbunculum*, which name we have retained in our speech, howbeit that some make a difference between *Anthrax* and *Carbunculus*: This impostume is described as followeth.

Anthrax is an hot impostume, by which the place where it appeareth is inflamed, burneth the grosse blood, and causeth a black cole or core with an intollerable pain. And there is also in truth no worse impostume amongst all the rest then this *Anthrax*, as all well learned Physicians do write thereof, and as daily experience bringeth with it.

The signs whereby these two impostumes be known, is first a rednesse of the member, with a small blackish, dark blew, or pale push, whereon a scale groweth, under the which there is some matter or corruption gathered. But by reason these hot Carbuncles, or plague-sores, for the most part, and most perillously make shew in the time of plague (where shall be written at large of this matter) therefore will we not divide the matter: but all those that are taken with them at other times, we do remit to the sixt part of this book, providing there to teach at length whatsoever shall seem needful for it; therefore we will be the briefer at this present.

First must they which be infected with this disease, cause a vein to be opened, and that on the contrary side, if so be that he be full of blood, and of humours; afterwards upon the same side: and if that cannot be compassed, at leastwise there to set boxing cups; afterwards the Patient is to be purged with the Whay of Milk, with *Epithymo*, with *Agaricus*, or with sower Dates.

For to comfort him withal may he use Citrons, Limons and Oranges. In eating and drinking is he to keep himself, as one that is full of the ague, and according as the heat is great. Outwardly is he not to use cold things, as in the Rose, for that the matter is somewhat thicker: But one may make a plaister of Gals, Plantain, Lentils, of crusts of bread, or Bran, tempered with Vineger, Allom molten in Vineger, and then laid with clothes upon it: for this are also good Pomgranates cut in peeces, and decocted mellow in Vinegar, and laid upon it as a plaister; for thereby will the heat and the pain be swaged. Now for to cause this pain to ripen, make a plaister of Figs, of Currans, of Nuts, of Barly meal, decocted with Wine and oyl.

Round about the Carbuncle lay the salve of fine Bolus, made of Vinegar and Rose water, to defend the parts adjacent from heat.

When as now this anguish is broken up, then is it to be healed and cleansed with the mundificative which is described in the second Part, the second Chapter, and 9. §. and to use drying things so long, until that they be thorowly healed, which may be effected with the salve *Basilicon*, which is thus made: Take Ceruse five drachmes, Licharge of gold one quarter of an ounce, the Licharge of silver one drach. and a half, Dragagant one drach. make a powder thereof, and temper it with an ounce of white Wax, and 3. ounces of Oyl of Roses, unto a salve.

Salve Basilicon

Of all manner of old Ulcers and old Sores, S. 15.

THese ulcers or old Sores, whether they be caused of Impostumes, windes, or any other occasions, be alwayes called by the Latinists *Solutionem Continuitatis*, which is, a leparation of a continuity, which alwayes happeneth in all ulcers and sores, where the skin and the flesh parteth asunder : whereof there be found many kinds, as we also have described many of them before, and shall do hereafter again. But this present S. shall tell onely of all old ulcers in general: for which some of these rules following are to be observed.

First, if one see that an ulcer or wound do yeeld much thin matter, then is it a sign that one is to use drying things. Secondly, if so be that the matter be tough and thick, then are *Abstersiva*, which are mundifying things, to be used. Thirdly, when these kinds of Ulcers be dressed, then is heed to be taken that the ulcer be not blown upon with the South wind, that there come also no cold, nor moisture unto it, and that especially when the ulcer is moyst and hot. Fourthly, for all wounds dry things be good, and that the rather if the same be deep. Fifthly, because there can be no good flesh ingendered, unlesse that the wound be first well dried and cleansed, therefore such things must be used for it at times, otherwise would the matter be augmented in the wounds, and be impossible for to engender flesh. Sixthly, there will be no flesh at all engendered, if it be not that the salve be like to the nature of the ulcer: therefore in all dry parts of the body dry things are to be used, and in moyst parts, moyst remedies to be applyed. Seventhly, it must be looked too, that there be used no oyles in any ulcer, for that they bring a putrifaction in all deep wounds and ulcers, and especially in warm time of yeare whether it be in dry or moyst complexions. Eighthly, it is needful, that in all qualities of the members which be hurt with any wound, or ulcer, where flesh must be engendered, the blood must be well cleansed, because that is the substance out of which the flesh must grow: and this not onely in the same member, but also over the whole body. Ninthly, the drying medicines shall be no higher then dry in the first degree, for that when the same dry too fast, then will the young flesh be consumed and dried away. Tenthly, all drying medicines be very meet for all dry complexions: like as to the contrary, all moyst medicines be most necessary for all moyst natures: whence it then followeth, that dry bodies or dry parties will be cured with dry medicines, and moyst with moyst. Eleventhly, if the wounds or sores, be moyst by nature, then be dry remedies to be used for it. Twelfthly, if there be two kinds of ulcers, which be like one another in the matter, and the one were in a dry body, and the other were in a moyst body, then in the ulcer in the dry body, are such things to be used which be more dry, and in a moyst body apply remedies which do dry lesse, for to heale the same: therefore is Frankincense, and such like to be used in in moyst bodies, because that it dryeth not forcibly. And on the contrary, Hartwort, Treos, and such like things, which do dry forcibly are to be used in dry bodies. Thirteenthly, the Ulcers which yeeld a thick matter and be swollen are to be cured with such drying things which do not bite, as Pomgranate peeles, decocted Plantain and such like.

Now concerning the cure, there shall be by each description especially declared, how that the purging, letting of blood, and such like shall be used: Here will we onely discourse, as much as concerneth all old ulcers, what plaisters, salves, and other applications are to be used for them.

Take old Barrowes grease, Butter, Bucks suet, Hony, Wax, and Rosin, of each a like quantity, and a little Wine; melt the same by the fire: afterwards take Sallad oyl as much as is needful for a soft plaister: this being done, then wring it through a cloth, and let it be cold: This salve and all other salves which here ensue, may be freely used in all ulcers, observing alwayes the difference between heat and cold. Take Sallad oyl and Vinegar, of each two ounces, Wax half an ounce, Bruised Litharge of Gold one ounce and a half, Verdigrease one drach. let the Vinegar be hot, and temper the other things amongst it, then seeth it together until that it be red.

This ensuing is very like unto it: Take oyl and Vinegar, of each two ounces, Wax half an ounce, the Litharge of gold one ounce and a half, Mastick and Verdigrease, of of each one drachme, seeth the oyl and Vinegar so long till the Vinegar be all waisted, and until the salve waxe red.

Item,

Item, take oyl of Roses three drach. oyl of Cammomil one drach. Ceruse one quarter of an ounce, Dragon blood and fine Bolus, of each half an ounce, Camphire one drach. litharge of gold half a drach. prepared Tutty one quarter of an ounce, Coral one drach. Wax as much as is needful for to make a plaister; then spread it upon a leather, and lay it upon it.

But before that there be this or that laid upon it, the ulcer is to be oftentimes washed with this ensuing: Take white Wine four ounces, Rose water two ounces, the white of a hard sodden egg bruised small, burnt Allume one quarter of an ounce, Verdigrease one drachme, seethe them all together by a mild fire, and let it afterwards settle; then strain it, and keep it well stopt: and if it be too strong, then take more wine and Rose water unto it.

This plaister following is called at the Apothecaries *Basilicum*, and of the Chirurgions, the water plaister. The same is especial good for all dry sores, which be without matter or moisture, and especially for the sinewes, for that it dryeth, cleanseth, and causeth the flesh to grow, and is thus prepared.

Take Wax, Rosin, Oxe suet, Pitch, Turpentine, Frankincense, Mirrhe, and *Colophonium*, of each a like quantity: but first you are to melt the Wax, and then the Pitch amongst it: afterwards put the Turpentine into it, and then mix the Mirrhe and the Frankincense powdered small amongst it. Now when it is cold, so that it may be handled with the hands, then must it be wrought thorowly with wet hands. Out of this will also a salve be made with oyl, like as before in the 14. §. you have seen another.

Item, in the second part, the third Chapter, and 9. §. is there one more, which becometh thus: Take clarified Hony, &c. which may be used for all hot and cold ulcers.

The Chirurgions do use this following under the name of the green plaister: Take Dogs grease, Wax, Rosin, and Barrows grease, of each one ounce, Nightshade and Mallows, of each one handful; seeth the herbs to pap in Goats milk, until it be altogether thick, afterwards pownd it altogether, and temper it with another.

Wheresoever there be any Blisters which will impostumate or rankle, which the Chirurgions do call *Coscos exulceratos*, thereto are these salves ensuing to be used: Take litharge of Gold as much as you will, steep the same the space of two dayes in Vinegar, and pour off the Vinegar three times, and pour fresh upon it again; stir it oftentimes about, and then let stand in the hot Sun; afterwards stir it and bruise it the space of two or three hours in a leaden mortar, putting unto it in stirring it, now and then, a little Vinegar, Violets, and oyl of Violets, until it be thick; then at the last put two ounces of Ceruse unto it, the juice of Plantain and of Housleek, of each half an ounce, Camphire half a drach. and two whites of eggs, so make thereof a soft salve, and anoint therewith all Blisters which be caused of heat, and all other exulcerations of the skin. The next day after is this disease to be washed with this water following; Take Dock roots, Mallows, and Violet leaves, of each one handful; seethe all together in fair well water, and strain it thorow a cloth, afterwards temper it with Rose water as much as you please, and use it oftentimes.

Of a stinking and running ulcer. §. 16.

These ulcers or stinking sores do come of grosse and tough humours. When one will heal them, then is the Patient to eat none other but light meats, and to drink thin drink, and to purge the watery and melancholy humors, to the end that thereby all affluent humors may be taken away. In like manner is the Patient to be let blood, if there be none other thing that letteth it: and to cut out all foul stinking flesh, or to bite or eat it out by some cantery, that there may grow new and good flesh in it, for the which these things following are very commodious.

First, for to cleanse the ulcers, is special good the salve *Mundificativum Apis*, which is described in the second Part. Item, the salve of the Apostles, which may be found in the Register, and is marvellous good for all kind of ulcers.

This following is also much commended: Take Plantain water, wine of Pomgranates, and Hony, of each two ounces, Verdigrease and Allume, of each one ounce and a quarter; boyl them together until it become thick, then apply it to the ulcers. Item, take unripe Sallad oyl one ounce and a half, burnt Lead three drach. prepared Tutty three quar-

The plaister
Gratia Dei.

The black plai-
ster.

Salve of Egypt.

ters of an ounce, Mastick, Frankincense, and *Sarcocolla*, of each one drach. and a half, seeth all together in 6. ounces of water of Plantain until the water be wasted away: if you will make a plaister of it, then put as much wax unto it as is needful. This salve isto be laid with plegents in the ulcer. This ensuing doth cleanse and consume all bad matter of the ulcer. Take quick lime four ounces, oyl 16. ounces, Deer suet 3. ounces, Wax as much as sufficeth for a plaister or salve: melt them together, and stir it so long until it be cold. Another. Take small sifted Oatmeal eight ounces, the juice of Marjoram and of Nightshade, of each four ounces, fresh Barrows grease 6. ounces, temper them all together, and then lay it so thereon, the same doth ripen, cool, and mundifie. There is also well prepared a very costly plaister, which is called *Gratia Dei*, which is especial good for all stinking ulcers, fresh wounds, and for all bad flesh, iron, glasse, wood, poyson, bones, and all that doth hurt in the wounds, doth it draw out and healeth it, which is made thus: Take Turpentine one ounce, Rosin 6. ounces, white wax 2. ounces, Mastick half an ounce, Vervein, Betony, and the great Pimpernel, of each half a handful: stamp all the herbs, and seethe them in strong wine, until the third part be wasted: afterwards strain it and wring it out. Then are you to seethe in this decoction the Wax, Rosin, and Mastick, stirring it alwaies about, until it be well mixed together, then set it from the fire, and put the Turpentine and the rest into it, then stir it very strong, so long untill it be thorow cold. The Chirurgions have also a plaister which they do call the black plaister, which is very good for all wounds, ulcers, and Fistulaes, and is thus prepared: Take Amber, Verdigrease, Sulphur, Lytharge of Gold, Lime, and Bayberries, of each a like quantity, powned very small, clarified Honey, as much as is needful for to make a plaister or a salve.

The salve of Egypt called *Unguentum Aegyptiacum* doth also cleanse exceedingly all Fistulaes, stinking ulcers, and cleanseth them of the bad flesh, and is thus prepared: Take Verdigrease five drach. clear hony, 3. 1. and three quarters, strong Vinegar 7. drach. then seethe them together until it be thick enough. It is an especial good salve for all stinking sores, to cause the same to dry.

Item; take Verdigrease half an ounce, Saltpeter one ounce, bruise them together upon a stone and set it on fire with a paper, then will the Saltpeter be burnt: all that remaineth on the stone are you to lay with the stone and all, in a moist celler, and the stone lying awry, then in time will there be an oyl run out of it; then temper this oyl with Rose water, or with the white of an egg; it is too strong alone, but it healeth passing well.

Item, these oyls ensuing be also very good for such like ulcers, viz. oyl of eggs, of Dill, of Lillies, of blew Flower-deluce, of Wallflowers, and oyl of Tyles.

Amongst the waters and such like be also good the two aforesaid golden waters, which we shall describe hereafter in the last part, and M. Tristams water, one of these which one will, drunk or applied to the ulcer.

For this may also be used a certain lee tempered with Sallad oyl, which hereafter shall be described against the burning with gun-powder.

The red powder.

Or make this following; take small cut Hartwort one quarter of an ounce, *Assa fetida* one drag. Centory one drach. and a half, quick lime half a drach. lay them all together to steep in a pint of lee, afterwards seethe it until a third part be wasted, wherewith the ulcer is to be washed luke-warm. Item, pownd honyfuckle to powder, and let it boil well in wine, afterwards lay this wine upon the ulcer. The Chirurgions have also sundry powders in use; amongst which there is one very common, which they do call the red powder, and is prepared thus: Take *Colophonium* one ounce, Comfrey, Bloodstone, or Argal, Dragon blood, and Momy, of each half an ounce, make a powder of all these: the same doth heal all ulcers, wounds, and Fistulaes, when they be cleansed from all foul flesh. You may also use it in all wounds. Item, take Bean meal half an ounce, mill dust 5. drach. Mastick 3. 8. Dragagant, Gum, Momy, fine Bolus, and Dragon blood, ana. 3. 1. temper them all together, and strew it in the moist ulcers. Of this powder may one make also a plaister, putting wax and Turpentine unto it, which most mightily doth dry all ulcers. It is also much commended that all they which be troubled with an old ulcer, ought to take one drach. of Mithridate or Treacle, more or lesse according to the ability of the person, and that with the water of Fumitory: the like may he also use the stomachical powder which is expressed in the first part the second Chap. and 1. §. beginning thus: Take Sene leaves, &c. which powder if so be that the Patient do use diligently, he need not fear at all of any bad ulcer. The Rosemary Wine is also much esteemed

esteemed, for that it consumeth all excessive moysture of the body, and keepeth the body in good healeth. Item, if one wash the ulcer there-with, then will it both cleanse and heal it.

Of the broken veins called Varices. §. 17.

OF these *Varices*, or broken veins, is very much admonished in the fourth part in the beginning of the second Chapter. And although these broken veins do appear most in the Hips, and in the legs; nevertheless the same do also happen indeed in other parts of the body, where they be seen knobbed, green, and black. These said veins of the breast, do stick full of Melancholy blood, and are very ill to be healed.

They which labour much with the legs, travel much by land, do bear heavy burthens, and do eat many melancholike meats, are for the most part troubled with these broken veins.

Concerning the means whereby these broken veins are to be healed, is that at first the *Basilica* be opened, and that the patient be purged with such medicines as expell melancholike humours, whereof there be sundry expressed here and there in this Book, and that is also oftentimes to be done, and he is to beware of all grosse meats.

When as this hath been continued a long time, then are the broken veins to be opened, and the blood to be let run clean out of it. Some do also use the actual cautery; yet must the uppermost vein be opened where it first beginneth, and afterwards to lay upon it this salve or plaister: Take Cerusse, Antimoy, Litharge of Silver, and burnt Lead, of each one ounce, Sheeps suet four ounces, Frankincense, Momy, *Sandaraca*, *Sarcocolla*, burnt Allom, and Dragons blood, of each three drachmes oyl of Roses, and Vinegar of Roses, of each three drachmes, white Wax and Rosin, of each half an ounce: temper them together, and then make a salve or a plaister thereof: this is also good for all old ulcers, for it dryeth and swageth the pain.

Item, Take Frankincense, Mastick, Myrrhe, and Momy, of each one drachme and a half, the juyce of blew Flower-deluce two drachmes and a half, Hartwort, Southernwood, and prepared Earthworms dried to powder, of each one drachme bruised small, Litharge of gold half an ounce, burnt Copperas, burnt Lead, Gals, Cipres nuts, the roots or *Carcuma*, white and red Coral, and Roses, of each two ounces, Deer suet, and oyl of blew Flower-deluce, of each one ounce; pound all that is to be powdered, but the Rosin, the Turpentine, and the oyl are to be molten by the fire, and so tempered with the rest to a salve. Some do take Lupine meal, and make a plaister with water wherein *Tamariscus* is decocted, or with Goats dung and Wine. Also the uppermost members from whence this heavy blood falleth down, are to be strengthened, and their disease cured.

The second Chapter.

Of depascens Ulcers in general. §. 1.

FOR as much as we be now come to write of those Ulcers which do not continue in a place, but corrode hitherwards and thitherwards corrupting the skin, the flesh, yea sometimes the bones; therefore is it first to be known that these ulcers be called *Phagedana*: but for the more difference, such like ulcers have their severall names: amongst which *Herpes*, *Phagedana*, and *Cancer*, be the chiefest: the first whereof, to wit, *Herpes*, doth yeeld much thin and subtile moisture; the *Cancer*, grosse and tough matter, and *Phagedana*, middle between thin and thick matter; but *Herpes* is not alwayes an open ulcer, but creepeth in time hitherwards and thitherwards like a Snake, whereof this disease also beareth her name; the one place healing, and the other excoriating; *Phagedana* is a great ulcer, and corrodeth very deep into the place and on every side of it; *Cancer* (which is the Canker) shall hereafter have his proper description. And albeit, these sores (as is said) do somewhat differ; yet are they for the most part comprehended all under the name of a *Fistula*, and it is thought that the *Fistula* is alwayes a cause of the other: therefore we will also first of all write of that.

Of the Fistula. §. 2.

THis name of *Fistula* (or *Fistel* in English) have the Latinists first of all given unto this ulcer, which doth signifie a Pipe: for as a Pipe is long and hollow, so is the nature of this ulcer also, being deep and having in the beginning but a small issue; for which cause it is described, as hereafter followeth. A *Fistula* is an ulcer, the which round about it hath a callous skin, deep, and long, penetrating into the body, and very crooked, which be hard to close up or to heal; and the which sometimes also in stead of good matter, do yeeld a subtile moisture.

It is found also that these *Fistels* do appear very little above in the skin, and nevertheless do lye with their roots deep and hidden in the flesh, wherefore they be also the more dangerous to be healed, like as you may see in the seventh Chapter and eleventh §. of the *Fistel* in the corner of the eyes. Item, where we discourse of the impostumes of the eares, and also of the *Fistel* of the gums which are all together described in the first part, and in the second part, the third Chapter, and ninth §. In like manner also in the third part, the tenth Chapter, and twelfth §. of the *Fistula* of the *Arsegut*. The causes of these *Fistels* may be precedent impostumes badly cured; or for that one hath stayed too long from opening of them, whereby the matter hath eaten inwards, and so is turned into a *Fistel*. In like manner may also a *Fistel* grow of a wound which is not well mundified, also of fractures of bones, or any other bad humours of the body which lye hidden under the skin, and under the flesh, which do there corrupt the same, and be changed into a *Fistel*.

The signs be these, viz. when one wringeth them, then be they without pain, if it be not that they stand some where about a sinew, or had some corruption in them. If so be that this *Fistel* be onely in the flesh, then will the matter be white in a short space. Or if the *Fistel* be old, then doth it yeeld a long space thick and troubled matter: or if the *Fistel* be in a sinew, then is the matter thin and black, and if one wring it, then doth there run out bloody matter. If so be the same be in the bone, then doth there run out thin and yellow matter. And if so be that it pierce into the hollownesse of the bone, then issueth a fat oily water, whereby may easily be guessed that the marrow is spoiled, with other more such like signs, which be discovered in the same places.

Now for to heal these *Fistels*, must certain articles be noted: First, because all *Fistels* proceed most of a waterish moisture, therefore are all drying things to be used unto it, and the patient is to eat those things that make good blood. Secondly, by reason that the material cause is rooted in the body, it is necessary to have the same prepared and expelled. Thirdly, in old and very deep *Fistels*, it is surest of all (if one will heal the same) that they either by incision or by an actual cautery be taken away even to the bottom, as to the contrary, the potential cautery because of the sinews is dangerous and hurtful. Fourthly, all *Fistels* that go into the bone will never more be healed, if the bone be not first scaled. Fifthly, they that do go into the flesh, must of necessity be dilated and opened, to the end that they may be the better mundified and dried.

The cure of this *Fistel* is of great importance, so that the patient is to order himself in eating and drinking, according as the first rule giveth notice, and to use all drying things for it: also he is to lead his life in a dry dwelling, and there to settle himself. Fish and such like things be noysome for him, good flesh rather roasted then sod is commodious for him; his drink shall be good wine; but because of the sharp matter, the same is to be somewhat watered. And for to prepare the matter of the *Fistel*, take *Oxymel* of *Squils*, or *Diureticum* and such like, which may also be used in the *Fistel* it self.

These be then the things which may be used outwardly: Take *Frankincense* and *Aloe*, of each one ounce, scummed *Hony* five ounces, see the *Hony* until it be thick. When it beginneth to be cold, then temper the powders amongst it; at the last put one ounce and a half of molten *Assafetida* unto it, and rub it a good while in a mortar: This is a passing remedy to heal the *Fistel*, and also to cure all old ulcers, for that it cleanseth the same, it consumeth all corrupted flesh, it separateth all scurfe and corrupted bones.

Item, take *Turpentine* which is oftentimes washed with *Sorrel* water four ounces, the yolk of an *Egg*, temper them together, and put six ounces of the juyce of *Smallage* unto it, let it see the together till the juyce be consumed: then add half a drachme of *Saffron* unto

unto it : this cleanseth and consumeth all that doth any hurt in ulcers or wounds, and it maketh also flesh to grow.

Next unto this plaister and salve may you use the water which not long since in the first Chapter and 16. §. is described, beginning thus ; Take small beaten Hartwort, &c.

The Chirurgions have also a kind of plaister which is not onely good for all Fistels, but also for all wounds, and is thus made.

Take Vervein, Betony, *Herba Vulneraria*, Buglosse, Agrimony, *Consolida Saracenicæ*, Yarrow, Pimpernel, the great and small Plantain, of each one handful, pownd them all together, and wring out the juyce : afterwards see the it in three pints of good wine, and wring it through a cloth, then put it into a kettle, and put a pound of Turpentine unto it, Wax 4. ounces, *Colophonium* 8. ounces. This being all done, see the it sufficiently, and when it beginneth to be cold, then stir two ounces of pownded Mastick amongst it.

For this is also very good the plaister of *Gratia Dei*, the foresaid water of Hartwort, the salve of the Apostles.

Item, take the urine of a man child, and rub it a long time in a leaden mortar until it be thick, afterwards let it dry unto a powder, and then strew this powder on the Fistel. The powder of Ireos strewed also thereon causeth flesh to grow : the powder of Hony-suckles is also very good for this use ; Rosemary wine, and such like more that be discovered in the 16. §. be very good. Celendine pownded small, and so laid upon the Fistel : or the juyce of the same dropt therein doth heal the Fistels. For this may also be used the oyl of old linnen, as been said in the first Part.

Item, make an oyl of water Cresses, and spread it or lay it upon the disease, wherewith it is mundified. Thus much be written of the Fistula, now will we proceed to speak and discourse of the running ulcers.

Of the corroding ulcers, called Herpes. §. 3.

THe name of this ulcer is as much to say as a Snake, like as we have admonished already, for that it creepeth forwards like as Snakes do, and remaineth not in one place, but windeth it self hither and thither, infecting most of all the skin onely, without eating deeper inwards. The cause of this ulcer or sore, is the same with that of the other, to wit, superfluity of *Cholera*, if she meetly remain and abide in her proper nature, that is, if the *Cholera* be not mixed with any other humour : or for that when this *Cholera* doth spread it self over the whole body, then doth it cause the yellow Jaundies, which by nature is of two sorts. When as now this *Cholera* is thick and grosse, then will the whole skin even to the flesh be thereby damnified, and this ulcer will be then called *Herpes exedens*, which is the corroding *Herpes*. The other sort of *Cholera* is subtiler, which remaineth (as is said) in the uppermost part of the skin, which doth singe the outside as if it were a fire, the which without any addition is called *Herpes*, or *Herpes miliaris*, as having the name of the Milet seed, for that this exulceration is like unto it.

The signs of these ulcers be these : the member loseth his natural colour, and waxeth black, soft, and stinking ; also if the pulse and the pain diminish, and in the mean while the ulcer doth so corrode, that if it be not looked to in time, the member must be cut off, or the party must look for death thereby.

The remedies of these ulcers (saith *Galenus*) be these which are wont to be used for the corroding *Erysipelas*, wherefore we may write so much the lesse thereof. But if it be perceived that it begin to putrifie, then temper sealed earth and fine Bolus with Vinegar together, and spread it round about the ulcer, and also in it. But if this will not help, then be the corners round about the ulcers to be scarified, or lanced, and also to set boxing cups and horseleaches thereon, which may suck out the bad blood ; this plaister following is also to be laid upon it : Take Pease meal, or Bean meal and salt, temper them all together with the sirup of Vinegar, and lay it as a pap unto it : the scarified place must also be washed twice a day with Vinegar, and then to anoint this salve following over it : Take *Assa fetida*, Nettle seed, and Hartwort roots, of each half an ounce. Verdigrease one quarter of an ounce, temper it with vinegar to the thicknesse of Hony, and anoint therewith the whole disease, and the places about it. And to the end that these ulcers may not corrode any further, then take Verdigrease, Allom, & Hony, of each a like quantity, & use it as is before said. The selfsame taketh away all bad flesh, and sustaineth the new flesh. But in case that through these foresaid things the rotting ceased not, but daily did

did corrode more and more, and the stench increased, then shall you strew thereon this powder ensuing, to wit, powdered Hartwort and Gals, of each a little quantity. Or take Dragagant and Copperas, tempered together with vinegar, and ifso be that this foresaid do not profit, then are the edges, yea the whole accident to be cauterised with corrosives or hot irons: then take the roots of Celendine, unslackt lime, Copperas, Myrrhe, Hartwort and Vardigrease, of each a like quantity, tempered with the juyce of Plantain, or powdered Orpiment alone tempered with the foresaid juyce. When as then the corrosives have done their work, and the crustes or flakes be yet hard, then must they be anointed with fresh butter until they do fall away of themselves, and afterwards those things to be used which are wont to ingender skin and flesh.

The other sort of these ulcers is *Herpes miliaris*, whereof we have admonished before. Some do call it, *Formica*, that is, the Ant. This ulcer is also of sundry natures, and that according to the nature of the humour, whereof it is caused. It is also comprehended in three sorts or species: the one, which runneth hither and thither, which is caused of a subtile moisture, and is also quickly consumed: the second, that creepeth forward hither and thither, which is very hurtful: the third is of a grosse and hot *Cholera*, which entrencheth somewhat deeper into the flesh, and is mixed with some *Phlegma*, and thence cometh the *Formica miliaris*, which is hotter and harder to be cured. Out of all these foresaid reasons be the signs apparant, and before sufficiently rehearsed and discovered.

Now for to remedy this accident, is this the briefest way; that first of all be prescribed to the patient a good order of dyet, like as is done in the Agues. For purging is he to use four Dates, Cassy, *Epithymum* with Rubarb, steeped in Endive water, or whay of milk. If it be *Herpes miliaris*, then take *Diatribith*. Further, you are to take Gals, Pomgranat pils, and fine Bolus, of each a like quantity; afterwards temper it with Rosewater and a little Vinegar, and then anoint it thereon with a feather.

Item, take the heads of salted fish, rost them in an earthen pot upon the fire, until they be almost burnt, and then mix them with strong wine, spread it upon the disease; or take sheeps wool, and fry it until it be black, then pound it, and temper as much Rosewater amongst it until it be thick, and anoint therewith the foresaid accident clean over, twice or thrice a day, and then lay a white or blew cloth upon it. There be yet divers other sorts of impostumes and ulcers, which be of the same nature, differing in names and causes; but because we do comprehend them amongst the forementioned, therefore will we omit them, and especially because they may all be cured and holpen with these foresaid remedies.

Of the hard Tumour Scirrhus. §. 4.

BEfore we come to the third corroding ulcer, namely, the Canker; we must first of all admonish of this tumour, which the learned do call *Scirrhus*, of some *Scirrosis*, whereof we have also made mention before in the third part, the twelfth Chapter and the fifth §. and that by reason that this *Scirrhus* hath great alliance with the *Scirrhus* of the Liver. This *Scirrhus* is of two sorts, and both those are of the unnatural tumours of the body, whereof one is so hard, that it yeeldeth not at any hand; yea it is without pain and feeling, which is also accompted for incurable. This swelling is of colour like lead or ashes, and is caused onely through Melancholy, the which is (as it were) dregs of all humours. The second hath but a little sense, and also some pain; for it proceedeth out of *Melancholia* and *Phlegma*, which be tempered together, and is of colour like to the other. The same may also be cured, but not easily, as before we have sufficiently written in the first Chapter, and 11. §. This foresaid hardnesse may be well caused of some former impostume, which is not well cleansed or healed: whereas the corruption remaining doth clod and harden. The difference between this *Scirrhus* and the Canker is, that in the compasse of the Canker, there is heat, beating, and opening of the veins: whereof there is none with this *Scirrhus*: for that *Scirrhus* is without heat, without pain, and without any sense or feeling, and also incurable. But for as much as this *Scirrhus*, doth appear as well in other places of the body, to wit, in the liver, milt, and stomach, &c. and that we have written sufficiently in sundry places thereof, therefore it is not needful for to discourse here any further of it, but to proceed with the Canker.

Of the Canker. §. 5.

THis corroding ulcer, which is taken to be a kind of Fistel, hath her name of the Sea Crab, which men call in Latine *Cancer*, which the Italians call *Granzo*, and the Grecians *Carcinoma*, not onely for that it creepeth hither and thither, but also like as *Galeus* witnesseth, for that many times this Canker hath been seen, and especially in womens breasts, in all sorts like unto the Sea Crab; for the veins do reach into the Canker (being filled with black blood) no otherwise, but as they were the feet of the Sea Crab. This Canker is in the beginning very easie to be healed: but if it grow old, and hath rooted in too long, then hath it never been seen that the same could be healed without incision. The cause of this Canker is a superfluity of melancholick humours. Other do suppose that it is caused of melancholick humours which be burnt by *Cholera*, or be partly tempered therewith: whereof the Physitians do make two kinds of tumors; the one being a melancholick and hard swelling, without any ulcer, and with a little pain, as before (in the discourse of *Scirrhus*) we have shewed. The other sort is a corroding ulcer, as we have before declared. The signs of a beginning Canker be these: the same beginneth first as a small beane, round, and dark of colour, being tempered with green and black colours, and appearing with some heat and pain: it remaineth also immoveable in the same place where it beginneth: but herein hath the Canker a difference with the *Scirrhus*, viz. that the Canker is caused of burnt Melancholick being tempered with burnt *Cholera*: and the right *Scirrhus* of a thick melancholick humour tempered with *Phlegma*. Secondly, the Canker causeth also great pain and beating, whereof *Scirrhus* is free. Thirdly, the Canker hath black and not red veins about it, as the *Scirrhus* or the *Plegmone* hath. Fourthly, the Canker beginneth first to grow of it self: to the contrary, *Scirrhus* doth alwayes come after some impostume. Fifthly, the Canker is very sensible, and the *Scirrhus* without any sense or feeling at all.

For this hard Canker, which is not yet exulcerated, be these rules ensuing ordained: First the Patient is to beware of all meat which ingendereth burnt *Cholera*, of all spices, and of all things which do heat the body. Secondly, he is to eat no meat, but that which maketh good blood. Thirdly, if at the first and in the beginning of the Canker he lay thereto all that which is necessary for it, then may the Canker be holpen; but the old Canker can be cured by no manner of means without incision. Fourthly, necessity requireth in this sickness, that the body is to be opened with the decocted *Epithymo*, which is also very meet for the lengthening of life, although that it cannot yeeld perfect health. Fifthly, in the beginning is the Median to be opened. Sixtly, when a woman that is under fiftie yeeres of age, hath the Canker, and hath not her termes, then must it be indeavoured that she get the same. Seventhly, if it be a man, then is he to open the Pyles. Eightly, it doth not help to purge once or twice, but the same is to be done oftentimes; for that the humors which cause this disease are not easily taken away. Ninthly, by this foresaid order, and through all means which be possible, you are to endeavour, that the hard Canker be not opened.

We must also ordain an order of dyet. First, regard must be had, that the Patient have his dwelling in a temperate ayr, which is somewhat warm and moyst. Also, he is to take heed of all hot meats that may inflame the blood, and whereof heavy thick blood might ingender; as Coleworts, Lentils, Beef, Milk, Hares, Geese, salted or smoaked flesh, Beans, Pease, hot spices, Onions, Garlick, Leeks, Mustard, Cresses, Radish, and such like. Also the Patient must beware of doing any kind of labour in the Sun, or of overheating of himself by any means, and of drinking strong grosse wine. But to the contrary, he must endeavor himself for to eat and drink none other thing but good hail meal, as Pullets, Hens, Lamb, Mutton, and Partridges: he may also eat all kind of River fish, which have scales. Item, Parsley, Burrage, Purslain, Lettice, Pompeons, and such like, be also not forbidden him: fresh sodden Eggs, Oaten pap, and Barley pap is also very good for him. His drink must be cleer white Wine, which shall be alwaies somewhat watered.

In fine, his whole government must be moistening and cooling; and if so be that there be any heat with it, then may he eat and drink Buttermilk. And like as the first rule giveth to understand, the Median is in the beginning to be opened and to let out as much blood as the ability of the Patient can suffer: and further to observe all things that the former rules do teach.

We have not here to tell of any other remedies, because that we have already written, in four places of the Canker, viz. in the first Part, the eight Chapter, and 5. §. Item, in the second Part, the third Chapter and 10. §. of the Canker of the breasts. Likewise also in the third Part, the 10. Chapter, and 12. §. of the Canker of the Arsegut. Also in the third Part, the 19. Chapter, and 13. §. of the Canker of the Matrix: In all which places one may most plentifully see by what means these diseases are to be remedied. Nevertheless, all that which followeth hereafter is very commodious to be used, viz. the plaister *Gratia Dei*. But before you use this plaister, some do advise, that round about the Canker should be well and deep scarified, or to set Leaches about it, and to wash the scarified place three or four times with a sharp lee, wherein Lentils be decocted, and afterwards to fill the ulcer with flat plegents, which be anointed with the salve of Egypt. But you shall understand that the foresaid salve, like as also powdered Agrimony, or the juice thereof, (which be much commended for this disease) cause the good flesh to separate from the bad.

Take Lupine meal, Linseed meal, and Barley meal, of each 4. ounces, the juice of Wormwood, and Salt, of each half an ounce, Sope and Lee, of each a little; seeth them then together to pap. Item, take powdered Allom, and the powder of Earth-worms, of each one ounce. Or take fresh Earth-worms, pownd them with the Allom, and so lay them upon the disease.

Item, take Wine lees, and Allom, of each a like quantity, and so lay it upon the Canker, and chiefly upon the disease *Herpes*.

For this is also meet the salve of Roses, which is discovered before in the Introduction. Likewise also the salve of *Tutin*, which is called *Diapampholigos*; or this following, Take Litharge of gold, and Ceruse, of each a like quantity, put them together in a leaden mortar with oyl of Camomil, and Rose water, and rub it so long until it be as thick as salve: this is as meet for the hidden and secret Canker, as for the Canker exulcerated. This ensuing doth also withstand the Canker that it grow no further, whether it be exulcerated or not: Take sealed Earth, fine Bolus, and Ceruse, of each a like quantity: temper it with the juice of Lettice, or with the juice of Housleek, and then stir it well together in a leaden mortar as before, and spread it on the Canker. The muscilage of Fleawort is also very good being tempered amongst it. The oyl of Sulphur, the oyl of Juniper, whether it be distilled of the wood, or of the berries, tempered together, or each apart, be very good for the Canker.

This powder following is also used to be strewed on this disease: Take burnt bones of a sound man, Cinquefoil, the roots of *Mandragora* and Orpiment, of each one quarter of an ounce, make a powder thereof, and bestrew therewith the open canker: The Orpiment is very venomous and sharp; notwithstanding it is commended above all other for the Woolf, the Fistula, Canker, and in the Ulcer *Herpes exedens*, if one know providently to use it. This Orpiment was wont to be tempered with the juice of Plantain, or with the juice of Nightshade, and to make a cloth wet in it, and with the powder of the same to bestrew the ulcer, and then afterwards to lay the wet cloth upon it. But when you will use this Orpiment, then anoint the Canker round about with fine Bolus, which is mixed with the juice of Nightshade, for to free the place from any inflammation. If so be that the sore be thereby distempered and swollen up with heat, then lay one day or twain the foresaid cooling herbs upon it, and the pain will assuage therewith.

If you wil know whether the root of the Canker be taken away, that is to be known hereby, viz. if it stink no more, and if there begin any flesh to grow, like as is wont to happen in all other ulcers when they grow full of flesh, and be covered with the skin. It is a great abuse that some suppose, that there is to be laid upon the Canker of necessity the flesh of Hens, Capons, &c. the which the Canker should eat up, and should lessen the malady.

There is also used in the exulcerated Canker *Mercurius Precipitatus*, for that it is not so strong as the Orpiment. But the foresaid washing with Vinegar, Lee, and plaisters, is much more surer and rather used. Item, take the roots of *Verbascum*, and Dock roots, of each half an ounce, the dried ordure of a sound man one ounce; make thereof a powder, and use that as the former. Or make a powder of Cheruil, temper it with Hony and lay it thereon, it healeth much. The water of *Carduus Benedictus* should have a great vertue against this disease.

For the heat and inflammation of the Ulcers. §. 6.

First, for this inflammation may those things serve, which before in the first Chapter and 12. §. are ordained against the Rose. In like manner also all that which presently hereafter against the burning of fire and water shall be described, and especially this ensuing: Take oyl of Eggs, and oyl of Roses, of each one ounce, Vinegar half an ounce, black Hellebore ten grains: this being well tempered together, it is especial good for all inflammations of all ulcers.

Other more: Take Woolblade, pownd it very small and temper it with Vinegar, then lay it upon the heat: Or steep Quince kernels in water and anoint the heat with the muscilage.

Take Corn Roses, and Water Lillies, of each a like quantity, beat them and lay them thereon; if you cannot get them, then take their water. For this is also good, the leaves of the Mulberry tree: likewise also Poppy leaves decocted in rain water.

In like manner also broad Plantain, and *Bursa Pastoris* laid thereon after the same order. The herb *Carduus Benedictus* decocted and laid thereon, is also good: the juyce of Sloes spread upon the heat, doth take away the inflammation. But if so be that the inflammation hath gotten the upper hand already, then is this following very good: Take strong water one ounce, and put therein one quarter of an ounce of Quicksilver, and let it stand so certain hours together; afterwards take a feather and anoint therewith the disease once or twice a day, then shall the Canker begin outwardly, and in other places more to separate, till that the foul burnt flesh will fall out: afterwards use the salve *Apostolorum*, or the salve of Egypt with flat pledgents therein, and that twice a day; afterwards lay some of the plaisters upon it which be described against the wild fire.

Item, for the cooling of this burning, take the oyl of Eldern flowers six ounces, the oyl of S. Johns wort one ounce, oyl of Turpentine half an ounce, let them so mixed the space of certain dayes, stand in the Sun, and then keep it until the time of need.

There be many more sundry things which be very requisite for this, especially in the treatise of the plague, therefore we will not rehearse them at this present.

The third Chapter.

Of the Pox, and of the lamenesse which is caused thereby.

This sicknesse and infection of the whole body of man, is placed by good reason next to the above mentioned ulcers, because they exceed all other ulcers, except the before said in badnesse: the which now adaies when I did write this, hath been known about the space of threescore and ten years, and from the time that King Charles of France, 1494. did besiege the City of Neapoli; so that this disease until this present day is yet therefore called the French Pox, and in Latine *Morbus Gallicus*. But the same sicknesse was known long before in Spain, whither long before it had been brought out of the Indies, and out of the New found lands, like as also until this time it is called by some *Scabies Hispanica*: so that before that any one could cure this disease, people were burnt, launched, and cauterized most miserably, and rather spoyled then healed; but daily experience brought by little and little more help and amendment for it. And like as the Quicksilver and such like means were not so sure, there hath been found out at last the use of *Guaiacum*.

Now concerning the remedies of this disease, I will first of all prescribe a processe of the ancient Physitians (the which in those daies was found good) and is as yet not utterly to be rejected, and afterward alledge three of the most famous Physitians for this sicknesse, whereunto we notwithstanding shall at the last adde certain good things more; whereof each may chuse which one thinketh him to be most meet, and according to that the disease doth require.

An order and cure of the ancient Physicians. §. 1.

AS soon as a body can perceive that he is infected with this disease, then is he to keep himself warm, to sweat much in hot bathes, to use cupping, to be let blood twice: afterwards he is to remain in a close chamber, and to let himself be twice a day anointed with this salve over all his joynts, and then to sweat upon it the space of two hours: and because that every one cannot abide to sweat, then must heed be had to the strength of the Patient, to the end he fall not thereby in any swooning.

Purging is also needful for this Patient, which may be done as hereafter followeth: Take white Turbith half an ounce, Ginger one quarter of an ounce, Galangal, and Mastick, Cloves, and Cardamom, of each half a drach. *Hermodytyli*, *Diagridion*, and Sene leaves, of each half an ounce, Sugar three ounces: take one drachme thereof, or one drach. and a half at once, and fast five hours after it. They write that this powder may boldly be given, and that it may be used also in other sicknesses. It is nevertheless very strong, especially if one take one drachme and a half thereof: but in mine opinion two scruples is sufficient in weak men, and a drachme sufficient in a strong body for to purge sufficiently.

The foresaid ancient Physicians do also advise, that one must take one quarter of an ounce of prepared black Hellebore, (viz. a strong body) steeped in Goats milk, and strained, and then drunken, for that it cleanseth and healeth the Poxe; it is very good, but for strong persons it is strong enough.

For as much then as these foresaid medicines be very strong, therefore can I not omit to add certain things of the later Physicians unto that of the ancient, and to teach a safer mean, which all they which needs must use Quicksilver, should observe. For this you have first in the third Part, the 11. Chapter and 20. §. the manner to make the infusion of Sene leaves, and how the same should be drunken with some kind of sirupes. These potions may one drink 3. or 4. times, every day once early in the morning: and afterwards (as the ancient Physicians do advise) the Patient is to purge with pills *De Fumo terra* one drachme, this is the common dose of them, but it may be augmented or diminished, according to the ability of the Patient. You may also steep Fumitory in Goats milk, or let them seeth together, and drink thereof in the morning and evening: or you may drink the water of Fumitory alone, for the Fumitory doth cleanse the blood marvellous much.

When as now the Patient is well purged, then is this salve ensuing to be prepared: Take Frankincense one ounce, Ceruse one ounce and a half, Litharge of gold two ounces, Dragons blood one quarter of an ounce, pound them all together, and sift it through a Sieve; afterwards take 16. ounces of molten Barrows grease, and so pour it as hot as it is upon cold water, and so let it stand: this being done, then temper therein one quarter of an ounce of Quicksilver, so long until you can see it no more. Some do kill the Quicksilver in Turpentine, or vinegar of Roses, but it is needlesse: now then how this salve is to be used, that have we shewed at the first. They divide the salve in four, five, or six parts, and they spend in the inunction every day one part, according to the ability of the person. But because that after this inunction the mouth will be sore, they do use for it Allom, and Barly water, and let the Patient wash his mouth therewith: Or they take a pinte of Wine, and half as much Vinegar, half an ounce of Allom, two Spoonfuls of Hony, and temper them together. With this do they gargarise the mouth when the tongue is excoriated, to wit, with a rag which is tyed to a stick, which hath been described in the first Part, the first Chapter, and 3. §.

Before times the sick persons which were infected with this disease, were wont to be more plagued with lameness, and for that do they use this bath following; Take refuse of iron, make them glowing hot, and then cast them into a closed tub, afterwards take Camomil, Marjoram, and Thyme, seeth them, and make with both the vapours a bath; then dry off the sweat with warm clothes, continue this the space of eight dayes together, or so long, till that you be whole, at each time, the space of an hour.

Item, take small powdered Frankincense, temper it with two ounces of *Aqua vite*, stirre it oftentimes about, and then anoint therewith the members which be lame. If so be that the Patient have any ulcer, then take four ounces of Barrows grease, Quicksilver one ounce and a half, salt Lard, Dogs grease, Bears grease, and Badgers grease, of each three quarters

quarters of an ounce, temper them all together. But note, that you must use the salt Lard in no other salves, but when you have old ulcers in hand.

For the foresaid old ulcers is this powder following to be used: Take Salt, and white Argal, of each a like quantity, burn them together in hot ashes.

Also stinking ulcers be made wet with this ensuing: Take half an ounce of *Mercurii Sublimati*, Allom three quarters of an ounce, Ceruse one ounce, bruise all together very small upon a small Marble stone, put a pinte of vinegar unto it, and make a cloth wet therein, and therewith wash the ulcer. Take *Mercurius Sublimatus* half an ounce, *Aqua vite* twelve ounces, then anoint the ulcers with it: this is very strong.

Of the lameness, and of the extenuation of the members, hath been spoken before in the fourth part, the seventh Chapter and 2. §. for the lamed member of the Pox. This is in fine the means whereby the ancient Physicians were wont to heal the Pox.

How to decoct Guaiacum. §. 2.

BEfore that we come to the curing of the Pox which is used in our time, which happeneth for the most part by the decoction of *Guaiac.* called *Lignum Guaiacum*, and *Lignum sanctum*, we will first of all teach how this dyet drink is to be decocted and prepared of *Guaiac.* as followeth hereafter.

First, take small filed or shaven *Guaiac.* 16. ounces, *Steckas*, field Cypres, rinds of the same beaten small 12. ounces, *Carduus Benedictus*, S. Johns wort, yellow Lillies and Betony, of each one handful, first put the wood and the powdered rindes in a leaden earthen pot, and then pour thereon seven quarts of water: let them stand in steep together the space of a whole night, being stopp tight too: afterwards set the pot to seeth easily, when the fourth part is consumed add the herbs unto them, then put two quarts of Wine unto it, cover the pot close, and let them cool. The rindes, wood, and herbs, are to be dried, and well kept for to have the same used again another time, as shall hereafter be taught.

The second manner: Take rindes of *Guaiacum* eight ounces; *Guaiacum* four ounces, powdered small together, Well water five quarts, let them stand and steep together about the space of 24. hours, then seeth it all together until about the third part be wasted. Take it afterwards from the fire closed very tight, and let it stand so as steep the space of twelve hours; strain it thorow a cloth, and wring it well out, afterwards pour unto it as much white Wine (which is not sweet) as the potion is, then cast two ounces of *Hermoadactilis* into it, and keep this potion as before.

The third sort: Take four quarts of Renish wine, and eight ounces of grated *Guaiac.* powdered rindes four ounces, Betonie, and powdered Licorice, of each one ounce, then let it stand as steep the space of 24. hours, and afterwards seeth it to the half: strain the portion through a cloth, and drink thereof morning and evening the space of fourty dayes, each time four or five ounces.

The fourth potion: Take three quarts of Wine, rasped *Guaiac.* eight ounces, powdered rindes four ounces, Licorice two ounces; let them seeth well together, and afterwards pour 4. quarts of Wine upon it, and let it seeth again until the fourth part be wasted.

These be now the most usual manners to make this decoction, yet may the same be altered according to the importance of the sicknesse, and according to the strength of the Patient: now followeth here what order the Physicians now adaies do observe in healing the Pox.

Another manner to heal the Pox. §. 3.

BEfore the Patient begin to drink, he ought first to be purged, for which the Cassie is most meet: also he is to be let blood. But especially this is the most fittest mean: Take Sene leaves, Polypodie roots, and Currans, of each three quarters of an ounce, seeth them all together in six ounces of Fennel water until the third part be wasted. In this decoction are you to steep the space of a whole night *Rubarb* and *Agaricus*, of each one drachme: afterwards wring it out, and put unto it one ounce of the hony of Roses, whereof you are at least every morning to take one draught 3. dayes together, and afterwards to observe this order following.

The next day after the taking of these potions, must he in the morning betimes drink four ounces of the decoction of *Guaiac.* as is taught before in the second §. and that as

warm as he may abide it : then is he to sleep or rest one hour. He is to drink so much again and rest, and do this the third time. But after the third draught, he is to arise, and shall according to the old custome break his fast, and that of such meates which be light of digesture. His drink that he is to drink on day times, is thus to be prepared.

Take the wood and the rinds whereof the first drink hath been decocted, and then pour water and wine unto it (as is said) and let them seeth together until the fourth part be consumed, and this must be his daily drink, but this may be altered diversly, according to the quality of the cause.

Against the evening he is to drink of the first potion a good draught very warm, and an hour afterwards he is to go to supper, and so continue this until the fift day : but the sixt day is he to take the potion with Rubarb. The seventh day he shall take none other but a spoonful of this composition following : Take small powdered *Guaiaac* one ounce, Mace half an ounce, hony of Roses two ounces, temper them together. The eight day he is to begin again as before, to drink of the first decoction, and so continue the space of ten dayes together, unlesse it be found good to augment and increase it. The eighteenth day is he to take again the infusion of Rubarb, and the two dayes following : Then is he to use none other thing but Hony tempered with the powder of *Guaiaac*. Afterwards he is every day three hours after every meale tide to take three ounces of this potion following.

Take Juniper berries and Bayberries, of each two ounces, Mustard seed half an ounce, pownd them all grosse, and seeth them in four pints of water unto the half.

As long as one doth use these things, he must keep himself out of the ayre, and remaine in a warm chamber, for that thereby the matter of the Pox is expelled outwards towards the skin : and when you find that it breaketh out, then is he to wash himself with these things following : Take a quart of Vinegar, Allum, and Verdigrease, of each one ounce, eight well brayed whites of Eggs ; pownd all that is to be pownded, and then wash him with this Vinegar when he hath thus washed him therewith, and especially where there be any scales, then are they to be let dry, and the scales will fall off of themselves. Thus fareth it with this second cure, which is very safe, without any defect of the inward or outward parts, by which meanes there be a great number cured.

And as we have said, his meat must be light of digesture, viz. young flesh, eggs, and all that is drest therewith : also all other things which make good blood : but Milk, Cheese, Fruit, and such like be very highly forbidden in this disease. For this may also be used the golden water, which standeth described amongst other in the last part, whether it be drunken, or anointed outwardly upon it. So is also Treacle highly recommended for the same.

The third cure of the Pox. §. 4.

THis cure ensuing have I tryed my self in a woman which had used many sundry cures, and could not be holpen ; but by this meanes following she grew to be so healthy, that I knew her twelve yeares after alwayes in very good health, without any hinderance by the same disease. First of all in this disease (like as in all other such like) the Patient is to be purged, and that according to the ability of the person and strength of nature. Further, in eating and drinking he is to order himself like a woman in Childbed.

After the purgation, he is to take a good warm draught of the first and strongest decoction, which is before described. Having taken the same, then is he to be covered warm, to the end he may sweat well, even so much as his power may well permit. The sweat is to be dryed well with warm clothes ; and it were very good that the clothes wherewith he hath been once dryed should be washed every time, and that he put on a clean shirt every morning ; for if the Patient keep him warm and clean, then may the potion have her operation the better.

At meales, and throughout the whole day may he use this potion following : Take boyled rinds and *Guaiaac* ; lay them to steep as before, and seeth them. This may also be done even to the third time, and then to mix all the three decoctions together. When one hath about two quarts of the very strongest decoction, then must he set again to steep with fresh *Guaiaac* and rinds, to the end that one may betimes have more drink in a readinesse. If so be that the Patient have any outward sore or scabbednesse, then is he to wash the same with the dregs of this potion, or lay it upon it with a cloth : and if so be that the sore be somewhat deep, then be pledgents to be laid into it, which be made wet in the dregs of this decoction.

This

This is so to be done in the morning after sweating, and in the evening one hour before supper:

And if so be that these pledgents were baked therein, like as it happeneth also, then are they to be wetted with a little of the warm potion, and then to lay fresh to it again.

The clothes wherewith his sores be once drest, are not to be used again without washing. Now when as these sores be almost healed, and the flesh would grow too proud, there is then a fine powder to be powdered of the rinds, and to be strewed oftentimes thereon: and also to be letten lye upon it, until that there fall off dry scals; this powder dryeth much with all pain. But if so be that it be a rich person, that had need of the use of this potion, then is he to take of the best Rhenish wine, for that it is more penetrating then any other, and also not too hot.

Of the fourth cure of the Pox. §. 5.

IT is first here to be noted, that in all these medicines ensuing, no proper or due rules are prescribed, for that they be not set down by one Physitian onely, but gathered together out of sundry mens works, according as the cause requireth; wherefore every one is (as he thinketh best) to chuse that which liketh him best. And for that cause be all these remedies ensuing ordained most for them which could not be healed by the former decoction.

First, it is needful that the Patient above all things, and before he use any syrup or purgation, do take one ounce of well washt Turpentine, with a little fresh broth, or water of Fumitory made warm: for this prepareth the way for all other Physick, to penetrate the tetter through the whole body. So that it hath been found before times, that thereby the working of the medicine hath been perceived even to the great toe.

Whereby it may be known, what a power Turpentine hath to open the way for Physick. This Turpentine is also given with the decoction, or with Malmsey, and it may also be made much stronger.

Take Turpentine as much as you will, and put it in a glasse: afterwards set it in the warm Sun, and temper a little Sugar from day to day amongst it, then stir it well about. This is especial good for the head, for the breast, for the paine of the belly, for the gravel, and for the laxation of the body.

And to come again to our purpose: This syrup following is especial good for the Pox: Take Sene leaves, *Epithymum*, yellow Mirobalans, Sebestes, Licorice and *Rapontica*, of each half an ounce, field Cypres three drach. Polipody roots, Fumitory or the juice thereof, Hops or their juyce, of each 12. ounces, flowers of Burrage, of Violets, and Comin of each three drachmes, cut all that is to be cut, and let it seeth together in 5. quarts of wine, until about a quart remain: afterwards take of this decoction a pint, and temper therewith the syrup of Fumitory, and of Hops, of each two ounces, *Oxymel* of Squills one ounce and a half, syrup of Violets one ounce, good Sugar as much as you please: then take thereof three ounces at once, and that with Endive water.

You have also take this decoction with the infusions of Sene leaves, or water of Fumitory certain dayes together, augmenting or diminishing the same, according as you would have it for to purge; this being done, you are to purge with Cassie or any other thing, according to the quality of the cause foresaid.

You may also in the third Part, 14. chapter, and §. 5. many kinds of things which be all good for the Pox.

Of the letting of blood we have also spoken before, which also doth much good in this sicknesse, because that the bad blood is thereby diminished.

But therein is no certain order to be given, but you are to order your self therein according to the quality of the cause and ability of the person; But it is alwayes especial good that the Hemorrhoides be opened: for if they bleed not too much, then do they preserve one from the Pox and Leprosie, as we have taught in the 10. chapter, in the beginning of the §. 5.

Before that now the inunction or *Stricado* be used, it is first exceeding needful that one foment the joynts, and that he take for it Calamus, Marjoram, Garden Mints, Horehound, Bayberries, Southernwood, and Dock roots, of each one M. cut it all together, and seeth it in well water until about the third part be consumed; with this decoction before and in the anointing, foment the members which are to be anointed, and

afterwards with warm clothes dry up the sweat, and then anoint them; this is to be pursued, as long as the anointing endureth, which is commonly four or five dayes, and until the pain doth come in the teeth, the mouth, and the flesh of the teeth excoriateth, and the phlegme doth excessively begin to issue and run, then is the inunction to be stayed. For this be many kind of salves prepared, and chiefly this following; Take Barrowes grease six ounces, Quicksilver killed with the juice of Sage three ounces, black Sope three quarters of an ounce, Argal beaten small one ounce: make a salve thereof, and stir it together in a mortar the space of half a day, that it may be very well tempered together.

This salve ensuing is very much used at *Augusta*; Take fresh Butter half an ounce, Barrowes grease two ounces, Treacle and Mithridate, of each one quarter of an ounce, mortified Quicksilver one ounce and a half, prepared Litharge of gold and Salt, of each one drachme and a half, oyl of Foxes, and good *Aqua vite*, of each one quarter of an ounce, Saffron five grains, afterwards temper them all together: This salve is called *Unguentum Mercuriale*, and is by reason of the Treacle and the Mithridate much safer then any other salve.

Item take Barrowes grease one ounce and a half, Turpentine and Quicksilver, of each half an ounce, powdered Bayberries one drachme and a half, oyl of Juniper one drachme, oyl of *Euphorbium*, and bruised Cinoper, of each one quarter of an ounce; temper it together. Item, take Barrowes grease 4. ounces, Quicksilver two ounces and a half; seeth it all together in sufficient Vinegar, and put unto it the ashes of Beechen wood 2. ounces, oyl of Bay one ounce and a half, Mastick one ounce, Frankincense one ounce and 3. quarters; temper them all together so long, until that the salve be blewish: and then anoint therewith the Patient but once a day, for that the salve is strong.

Note also, that in case if any body be anointed too much with Quicksilver, then is the juyce of the great Pimpernel to be given him to drink, wherewith some be holpen, in whom the Quicksilver was seen to lye in the veins.

And because there appear sundry accidents through the inunction, viz. Ach of the teeth and gums, rawnesse and swelling of the throat, excessive flabbering, weaknesse of nature, binding of the body, and such like, therein one must be provident.

First, the pain of the gums is to be remedied with the juice of Wormwood, wherein whites of Eggs be brayed; to wit, if one wash the teeth and the flesh of the teeth with it, and cleanse the throat also with it. It helpeth likewise for this to cleanse the mouth oftentimes with sheeps milk.

Secondly, take Rose water, and Honey of Roses, or other clear Hony tempered with Whay.

Thirdly, this ensuing is much commended; Take the juice of Laurel, and cleanse therewith the mouth. Each one may try this that will.

Some do advise, that the mouth must be cleansed with cold water, or with the juyce of Nightshade, for that thereby will the flux of the mouth be stoppt.

Fourthly, chew Linseed, or the roots of Woolblade.

Fifthly, this disease is to be eased with a kind of fomenting of the members, which have been anointed before with warm water, wherein Rosemary and Sage is decocted.

Sixthly, it is needful, that the Patient live very soberly, and do use good strong broths, and other forcible things, and that all his meats and drinks be also mixed with all that which doth strengthen and fortifie the heart.

Seventhly, there is to be used for this, Conserve of Roses, of Buglosse, of Burrage, *Manna Christi*, with Pearls, and such like things that strengthen the heart.

Eightly, there is a common Clister to be set with Hen-broth, Sugar, yolks of Eggs, and with Salt, thereby to resist all accidents and obstructions of the body; and in great weaknesse of nature, is he to use Sugar of Violets.

Ninthly, prepare this salve: Take Gum, Bears grease, and Oyl of Roses, of each a like quantity: temper them together with a little oyl of Balsam; then is the Patient to anoint therewith his face, both the temples of the head, and his hands: for thereby shall he get again his natural colour.

Now to prevent those foresaid accidents, give the Patient one ounce and a quarter of Cassie, to wit, after the fourth inunction. And when he beginneth to flabber, then hold again from anointing, until two dayes afterwards; then purge him again after the third or fourth *Strigado*.

When

When you do prevent the matter in that manner, then will the putrifaction of the mouth not be so hurtful.

For the sore and foul gums is this following very good: wash the mouth oftentimes with Vinegar, wherein some Allom is molten. In the evening and morning be the teeth to be anointed with the salve of Egypt: but beware of swallowing the same salve down. For the rotting or putrifying of the gums, read in the first Part, the 13. Chapter, and 7. §. what is written there against the foul Gums.

Item, take Hony of Roses and the juyce of Mulberries, of each one ounce, Plantain water 8. ounces, Allom one quarter of an ounce, then temper them together, and use it to the washing of the mouth. You may also set boxing cups upon the shoulders.

For the Pox that have continued long. §. 6.

IF so be that this sicknesse be so stale or old, that it be not well to be holpen, then give the Patient a Pill with Quicksilver, which is killed with the juyce of Limons, and with as much Rubarb, viz. of each about one scruple; if the pain be very great, then temper therewith *Opium*, and Saffron, of each two grains. This is to be done alwaies about the second day, when he goeth to bed, or that he let himself be anointed the space of eight daies, where otherwise he ought to be anointed the space of three or four daies. But alwaies after the fourth inunction is the Patient to be purged, and to omit the same day the inunction, and afterwards to go on with the inunction unto the end of the same eight daies, and when the eight daies be compleat and ended, then is he to drink the decoction of *Guaiac.* made after the common manner. When as the third part of this decoction is spent, then put unto it two ounces of *Rapontica*, Turbith half an ounce, *Cardus Benedictus* half a M. *Agaricus* half an ounce, Sene leaves half a M. the rinds of *Guaiac.* four ounces, good strong Wine one quart, then let so much thereof seeth away as there is wine put unto it.

If so be that this will purge too strong, then give him rather the potion of Sene leaves, which is described in the third Part, the 11. Chapter, and 20. §. every second day. These pills also ensuing may be used for purging: Take *Rapontica*, Rubarb, Manna and Aloe, of each one drachme, Ginger and *Spica* of Indi, of each six grains; temper them all together with the sirup of Fumitory, and make six pills of one drach. weight, and take thereof every evening twain. The pills *Aggregativa*, and *de Lapide Lazuli* are also good for this purpose.

If there be great pain with it. §. 7.

IF now there be great pain with it, then take Frankincense, Litharge of Gold, Argal, Mastick, Ceruse and Allom, of each one quarter of an ounce, oyl of Bay and *Aqua viva*, of each one ounce, Barrows greafe five ounces, mortified Quicksilver one ounce and a half, then temper them together unto a salve. This Salve doth mellow all cores, and cleanseth all ulcers.

Item, take Sallad oyl, the oyl of Foxes, or oyl of Costus six ounces, and seeth therein one drach. of Quicksilver; the same flyeth away, but the force of the Quicksilver remaineth still. This oyl swageth all pain of the Pox marvellously.

Or take the spirit of Wine, which is four times distilled, six ounces, Quicksilver which is mortified in Copperas water, one ounce and a half, yellow Saunders three quarters of an ounce, Allom two drach, *Lignum Aloes* one drach, *Muscus* eight grains, *Ambra* five grains, steep all these things together in the spirit of Wine, and make a cloth wet therewith, and wash all the places, where the pain is: Or make a cloth wet, and lay the same upon it, and especially upon all the joynts.

Another. Take oyl of Roses four ounces, washit Earthworms and Turpentine, of each half an ounce, Salt two drach. let it seeth well together, and so lay a cloth dipped in it, upon all the joynts: you may also temper the oyl of Foxes amongst it, and then it is not only good for the sinews, but also especially for all pain of the Pox.

Of the Byles in the Pox. §. 8.

IF there appear any blisters or byles in this sicknesse upon any, then annoint the same three times a day with a salve which is before described in the first Chapter, and

and twelfth §. beginning thus:— Take small powdered Litharge of Gold, &c. But the expert Physicians for the Pocks do deem that there is nothing better for the Byles of the Pocks than unbleached Lime tempered with black Sope, for that this openeth the skin, and thereby will the pain also be taken away.

You have also in the fourth part, the sixth Chapter, and second §. in the description of *Sciatica*, two very good and safe salves made of Hollibock roots, and Elecampane roots, for to mollifie all hard nodes or knots. The gray plaister *Diachylon* may also be used very well for it.

But in case that the same be so hard, and so irremediable, that they must be opened by a potential cautery; we will put a meet Chirurgion in trust with the same, yet we will here teach the making of a corrosive to be used at need.

Take Vine sticks, burn them to ashes, and ashes of Beechen wood, of each a like quantity, powre sufficient water upon it, and then let it run four times through a bag. Of this lye take three quarts, and put unto it blew willow ashes, unbleached Lime, ashes of the Vine and of the Beech tree, of each half a pound: let this stand for the space of 8. daies in a wooden vessel, stirring it about every day 3. or 4. times; afterwards filter it so long until it be very clear. This Lee are you then to see the in an iron pan upon a good fire, so long till it be sodden thick enough. Now for to know whether it be enough, stick a quill into it, and if the feathers do fall off, then take the pan from the fire, and hold it on one side, to the end it may run all together, and may be hard. It is also here to be marked, that when as in seething it beginneth to make bladders, or bubbles (like as pap is wont to do) then is it a sign that it is sufficiently decocted, and then cast it on a board, and cut it parcelwise. When it is through cold and waxen hard, then keep it in a glasse stopp'd very close and tight, in a dry place.

Another: Take unbleached Lime, Vine ashes, Willow ashes, Argal, and burnt Salpeter, of each a like quantity, pound it all small, and put it in new a pot: afterwards pour sharp Lee upon it, and so let it stand three daies space, but stir it oftentimes about: filter this Lee so often that it be very clear, at the last see the it and keep it as before.

For all open sores in the Pocks. §. 9.

Take Ceruse as much as you please, and Sallad oyl as much as is needful, and a little Vinegar and Rosewater, bruise them together upon a rubbing stone, anoint therewith the running sores of the Pocks, and other.

Item; take oyl of Roses, Saltpeter, and peeled Almonds, of each a like quantity, Camphire a little, then rub it altogether as before.

For this may you also according to the importance of the cause temper small bruised Tatty, for that this healeth marvellous well all sores, and especially those which do stand about the throat: but if it be feared that they eat too deep inwards, then are they to be anointed before and after meat.

For the scales and other spots. §. 10.

Take oyl of *Camelina*, and Oyl of sweet Almonds of each four ounces, Butter and marrow of Oxe bones, of each three ounces, the grease of Geese and of Ducks, of each one ounce, white Wax two ounces, make a salve thereof. This salve hath a marvellous vertue in mollifying all scales, impostumes, and other scirrhoties which proceed of melancholy, and all hardned sinews. Will you then have this salve to assuage the pain more? then temper the brayed yolks of three eggs amongst it, and one drach. of Saffron. If you then desire to have it pierce more stronger, then take *Bdellium* and *Ammoniacum*, of each one ounce: dissolve them in Vinegar, and put them amongst it; then see the them until that all the moisture be consumed, and stir it together one amongst another.

Now for to heal all cicatrices, marks and spots, use this ensuing: Take a pound of Sulphur, beat the same grosse, and see the it with water in a covered pot; but look to it, that there go no vapour out of it: afterwards hold the member over it, and receive the vapour thereof: afterwards anoint it with sweet Butter. You shall also find good things for this in the description of burning.

The fourth Chapter.

Of the Leprosie.

AL famous Physitians do esteeme no disease upon earth to be more terrible and hurtful than the right Leprosie: for this maledy doth so vehemently infect the body, that it not onely enfeebleth all the members of the whole body, but spoileth and putrifieth also the same on all sides, that the members will fall parcelwise from the body: and it taketh away utterly his whole natural essence, for that his nose will be crooked, broad, and faine down, his lips great, thick, and swollen, and his ears sharp; so that these people besides that they be disdained and despised of all the world, as if they were the filthiest creatures on earth, they must live and dye in misery. And to the end that we might partly learn to know the misery which is caused through the Leprosie, these are the most common signs; the falling out of the hair of the beard and the eyebrows, hoarse speech, a short, heavy, and stinking breath, great continual thirst, hardning and swelling of the spleen, unnatural heat of the Liver and of the Kidneys, wherewith is commonly gravel also: the Patient wil be vexed with terrible dreams, and wil be much plagued (as it is commonly said) with the night Mare. He wil also be vexed with much wind of the belly, and with great binding. Also the fingers and toes do rankle and swell, the nails do sliuer and cleave, and spoil, that at last they do fall out. Wheresoever they have any opennesse, there runneth out alwaies a black, loathsome and stinking matter. Otherwise they have over the whole body a hot, irksome and itching scabbednesse with blisters and scales, which for the most part do appear in the throat and in the nostrils, whereby they do take away the breath from the Patient. He getteth thick cornels or knobs on the skin of the thighes, legs and feet, which do get a numbnesse, whereby the natural colour is altered into a dead black and blew colour. The eyes do also get another form or fashion, whereby their lively sight is darkened.

These be now (like as is said, and shall yet be said) the most common signs of the Leprosie, especially of that which the learned do call *Elephantiasis*; whereby all the foresaid signs do shew themselves not all at one time, but alwaies in a good part of them. It hapneth also well, that otherwhiles but one member onely, or some of the body is infected with this disease, and not the whole body.

We will also discover somewhat here of the causes of this sicknesse. It may be caused of a bad air, as in time of the plague, by conversing or dwelling besides Lepers, or by much speech with them; for that through their venomous breath may one be easily infected. And this is such a disease, whereby the one is not onely infected of the other, but the children also do inherit the same from their parents; so that whether the man or the woman be infected with it, the other will soon take it also. This miserable sicknesse is wont also to be caused of great anger, long sorrow, fear, and faintheartednesse, whereby much melancholy blood is ingendred, and then out of it the Leprosie. Item, of the long use of melancholick meats, as Pease, Beans, &c. old cheese, Goats flesh, Bears flesh, Foxes, Asses, and measelly Swines flesh, all old salt flesh, grosse fish, milk and fish eaten together, and such like things more. Item, through too-hot a Liver, whereby the blood is burnt. The Leprosie divided by the learned into four parts, and each species of the same called after a certain beast, for that it hath a little likeness to the nature of the same beast: whereof the 1. is *Leonina*, of the Lions, the 2. *Tyria*, of the venomous snake *Tyro*: the 3. *Alopecia*, of the Fox: the 4. *Elephantiasis*, of the Elephant.

The first species hath her name of the Lion, for that they that be therewith infected, be raging mad, as otherwhiles the Lions be. This species is caused through an overheated and burnt blood, whereby they also get a deformity of the face, which is horrible to look upon: they do cry out, and beat their bodies so vehemently that their own skin doth thereby harden: they be also so hungry and thirsty that they cannot be satisfied: they are also deprived altogether of sleep, until that at last they be very mad and distraught.

Concerning the second sort, it is well known throughout all the world, that the Snakes do at a certain time renew themselves, strippe off their skinn from them, and

do get a new : the which also hapneth in this sort of Leprosie, otherwhiles 10. or 12. times a year, so that their skin goeth off with great heat and sharp pain, out of which runneth a subtil matter which infecteth the parts round about it : and this not onely therefore, but also for that this kind of Leprosie doth infect and hurt all other people dwelling by. This Leprosie is also contagious, that all whatsoever he spoileth doth stink none otherwise than do the holes of these sorts of Snakes *Tyri*.

The third species which is called after the Fox : it is very well known that this beast is subtil and ravenous, also frequenteth unknown and secret holes : also commonly twice a year cometh to cast his hair, and at last consumeth utterly.

This species of Leprosie is also of this nature, that the Patient can by no means be perswaded for to use any counsel, but feareth alwaies that he shall be extenuated. At the first have we admonished, that the parties beard and the hair of his eyelids will fall out : the same hapneth in this also, for that because his meat and drink can alter into no natural nourishment, therefore will not onely the nourishment of the hair be taken away, but also the sustenance of the whole body, whereby the Patient must extenuate and consume.

The fourth species receiveth her name of the Elephant : the cause of this Leprosie cometh through the use of all bad and melancholick meats, the which cannot sustain a body, nor ingender sound flesh, but do rather spoil and destroy the same. In like manner do they also clean change the natural colour of the body, and make the same a dark gray, like as is the colour of the Elephant. Other are of opinion that this name proceedeth of a lothsome sight, for that this disease hath a lothsome sight. In like manner also for the altering of the voyce, which seemeth like to the voice of an Elephant, with other more such like things. But for that at the first in all such leproous people the head oftentimes and the whole body do swell so, that one may say very well that he is like to an Elephant : their face is sometime so terrible to look upon, that one should be affrighted of the same, as of a terrible beast ; for that their face, fingers and toes be full of sores, and those so great as a Nutmeg or Bean, and of the colour of a Mulberry, which is not as yet thoroughly ripe. When as these come to impostumate, then do they yield (as is said) a stinking matter : the eyelids do also swell sometimes so thick as a finger, afterwards they do split and cleave. But this is not all, for they do hurt also the mouth, the throat, and the nose so wonderfully that the Patient can hardly get his breath, and do alter afterwards commonly into the canker, and into all such peril, that he cometh to stifie thereby. The ears be also commonly full of sores and scales, and be also sometimes eaten up that they fall off, yea they do so eat inward that they make the Patient utterly deaf. The arteries and other veins of the neck will be apparantly filled full of thick and clotted blood, whereby the voice will be hoarse, and ulcers and blisters do appear in the joynts with a great hardnesse of the spleen, and is almost a general numbnesse of all the members, so that they cannot use them. Lastly (which is most of all to be wondred at) this sicknesse doth commonly cause the great rupture *Buris*, whereof we have written in the third part, the first Chapter, and 8.

Out of these four species of Leprosie may each expert man well guesse, that the first species is caused through a burnt cholerick melancholy : the second species out of a phlegmatick melancholy : the third out of melancholy which is mixed with blood : and the fourth of a burnt melancholick matter : therefore this last kind of Leprosie is much worse than any of the rest. This may suffice of the nature and causes of the Leprosie. Now we will come to the Physical means which may be used against it.

For this above all are these rules to be observed.

First, although the Leprosie hath setled her root, yet letting of blood is good, but very little, like as also no strong purgations be good ; for when this sicknesse is confirmed, then is the matter without the veins and in the outward members, out of which it is not to be expelled.

Secondly, this sicknesse is not to be driven away, but onely at the first through the purging of the melancholick, and other bad humours.

Thirdly, I take that there be much spoiled blood instant, then is a vein to be opened, whether it be in the arm or upon the hand. But if there be not much blood instant, then is letting of blood to be omitted.

Fourthly, both the veins of the throat (whereof we have written in the Introduction) are to be opened in great hoarsnesse, and that especially if one be afraid of stinging.

Fifthly,

Fifthly, there be in the beginning no strong medicines (especially Hellebore) to be given, for that this matter is not to be purged, but it is rather to be put in practise with mild things which do purge melancholy.

Sixthly, each one that is infected with this disease shall beware of venery. Seventhly, neither bathes nor salves are to be used before and until that the patient be duly purged, for the grosse matter doth obstruct the pores.

Eighthly, the flesh of the Snake of *Tyrus*, and all things wherein the same shall be tempered, are very meet for leprous people, and advised to be used by all learned men.

For the Leprosie.

Take of my Lixivium mentioned in the 1. Part, 1. Chapter, and 4. §. make it hot and wash the Leprous party therewith very hot; do so for 2. or 3. dayes 3. times every day.

Then take my yellow salve made of Hony, Wax, and Rosin, Turpentine and hogs lard, and anoint the leprous parts with it as hot as may be suffered, & let it lye thick upon the sores, then cover it with clean white paper and bind it and sow it up with cloth that the papers move not; let it so remain 3. dayes, then dresse it again, and in 2. or 3. dressings you shall have fair skin, and the leprous scurfe will be gone.

And purge the party with Sene, and Anniseed decocted in small ale sod to the half.

Or purge with Confectio Hamech.

This is my own experiment which I have proved several times with good successe.

Of means and medicines against the Leprosie. §. 1.

The famous Physitian *Galenus* doth write thus; the Leprosie is an alteration of natural warmth, which appeareth with terrible and itching sores. And yet in another place he doth admonish that (in the beginning of *Elephantiasis*) he hath healed it through letting of blood, and through strong purging of melancholy: therefore must these sicknesses at the first (and as soon as they can be perceived) be remedied; for which one is to imitate this proceffe ensuing: and although the same be more inclined to the healing of *Elephantiasis* then to any of the other kinds, neverthelesse the same is meet to heal all Species of Leprosies.

An order of Dyet. §. 2.

FOR as much as melancholy is of a dry and cold nature, therefore must (to the contrary) warm and moist things be used for to mitigate the matter according as the humour is weighty, mean, little, and venomous.

First, then concerning the aire, the patient is to keep himself in a meetly warm and moist aire, and that especially about rocks that are lying towards the East, the South, or towards the North, and also about so springing fountains. But if the wind cometh to blow over some odoriferous trees or flowers, then is it the better: but if one cannot get such an aire, and that the year be very hot, then sprinkle the chamber with fresh water wherein Violets, Waterlillies and Lettice be decocted. Also lay these Trociskes insuing upon hot coales, therewith for to fume the chamber: Take Violets and waterlillies, of each one ounce, the seeds of Lettice, of Endive, and of small Endive, of each half an ounce, the seeds of Mellons, of Pompeons, of Gourds and of Cucumbers, all together peeled, of each one drachme and a half, Starch half an ounce, Camphire one drach. make Trociskes thereof with the juyce of Lettice, each about half an ounce in weight. When the same be dried, then pownd them to powder, and let the patient therewith fume his dwelling, viz. in the morning, at noon, and in the evening.

Although now his dwellings were sitnated towards the North, and towards cold winds, yet is this fumigation very requisite for him, but the leaves of Apple trees, or sweet Pomgranats or of Almonds, or such like decocted amongst them are to be put unto it: also all his linnen, and especially his shirts are to be washed with the same water. In like manner also are his clothes to be fumed.

Further, this bag ensuing is to be prepared for to smel unto it.

Take

Take sealed earth and fine Bolus, of each one quarter of an ounce, the flowers of Burage, of Buglosse, of Basil, of each one drachme and a half, Violets and Waterlillies, of each one quarter of an ounce, Camphire half a scruple, wild Vine leaves, Broom flowers, and Lettice seed, of each three quarters of an ounce, pownd each alone, temper each alone, temper them very well one amongst another, and then bind it in a fine cloth. He must also beware of all such clothes as do wring the head and the breast too hard, or be too narrow. The hands and the feet are in sommer with linnen, and in winter with good warm sheeps pelts to be kept warm, and also the head preserved from all cold.

Concerning his meat, it should be very good that all his bread were kneaded with water of Purslain, of Lettice, of Endive, or with some such like waters, a little salted, but meetly baked, and not eaten before it be two dayes old. All his flesh must be light for to be digested, as namely, Pullets, field fowles, fat Ducks, Partridges, Pheasants, Finches, wood Pigeons, and such like. Amongst all other flesh is good for him the flesh of young Goats, Lambs, Calves, young swine, of young Muttons, Harts; and especially of young Conies, young house Doves and Hares, shall he not eat, because that the melancholike humours by them are ingendred. All river fish which is not slimy, is very good for him rather sodden then roasted. All fruit that is sweet, as Cherries, Cresses, Hasel nuts, Almonds, Muscadel grapes, and other sweet grapes, shall not onely be permitted, but much rather be advised for to use them. In like manner fresh Figs, and water drunken upon it, Peaches, sweet Apples, and sweet Pomgranats are very good in this sicknesse: but all sour fruit is to be forborn, for that vinegar and all whatsoever is sour doth harm much the melancholike person. Walnuts, Chestnuts, Quinces, Servises, and such must he forbear. The decoction of red and white Pease, and these green herbs, viz. Spinage Lettice, Beets, Endive and Purslain be very good for him, and especially if some Fennel be chopt amongst them. Item, ripe Melons, because they cool and moisten, are not ill for him. Milk is also for this sicknesse not discommended, all hot Spice, as Pepper, Cinamom, Galangal and Ginger are hurtful unto him, for that the matter thereby is the more burnt. But for to prevent the consumption, this powder following is to be prepared: Take Saffron one drachme, Cinamom two drachmes, Mace three drachmes, the seed of Violets, of waterlillies, of Sorrel, and of Endive, red and white Coral, red and white Saunders, of each one drachme, pownd each alone, and temper them together.

Item, he may also use Hens grease, Ducks grease, Calves suet, Mutton suet, if it be not much salted, for all these suets be much better in this sicknesse then butter. Leeks, Garlicke, Sives and Radishes are to be refrained, or at leastwise used very seldom. In like manner also salted fish, salted flesh, and such like. The stomach, the liver, the heart, and chiefly the spleen of what beasts soever they be, he is not to eat, howbeit the brains of beasts being sodden are not ill.

As concerning his drink, he is to beware drinking of all kind of red thick wine, and also of all white wine which is strong, and ascendeth or climeth into the head, but a milde, white, and sweet Wine which is not strong. And if this kind of wine cannot be had, then is his wine to be tempered with good well water or fountain water. When it is cold weather, then may he use Hony water, which from twenty quarts of water and one quart of Hony is decocted unto the fourth Part. When the Grapes be ripe in the forepart of winter, then is alwayes this wine following to be prepared: take one hundred quarts and an half, or two hundred quarts of sweet Must, and steep therein twelve ounces of green small Endive, cut very small, Elecampane roots eighteen ounces, the seed of Dock and of Sorrel, of each one ounce, then put it all together in wine, and let the wine stand over a year and be very clear. If the wine be now too strong, then temper in their drinking good well water with it, or let it see the together. Of this wine is he to drink all the whole winter even to the end of March: but from the moneth of March until the end of the moneth of September, then take Must and fountain water, of each one hundred quarts, Liverwort, water Cresses and Garden leaves, of each six ounces, green Citron leaves 12. ounces, cut them very small, and let it see the all together. When this potion is cleansed, then drink it as before.

The patient is also to see to it that he eat not without hunger, nor drink without thirst, and especially if his stomach be not well framed; To the contrary, he is not to fast any longer then till he feeleth that the meat in his stomach be clean spent. Many dishes or messes be not good for him, but all spoon meats that are thin are very meet for him. He is to beware of all dry meats: He is also to hold him sober in drinking, that the meat come not

not to swim in the stomach. If so be he find after meat that his meat doe trouble him, then is he to take this following to parbreak it out again: Take three ounces of water wherein Radishes be decocted, white Sugar and Hony, of each half an ounce, *Sal gemma* three grains, Comin five grains, Vinegar two ounces, temper them together and drink it luke-warm. But in case that the vomiting will not yet follow after it, then thrust your finger or a feather in your throat as deep as you can, which is made fat with oyl. If it will not yet be, then must it be looked to, that the meat come not to rot in the stomach, and there ingender an Ague of it, which is to be done with this potion following: Take fresh prepared Cassly which is prepared with water of Violets one ounce, water wherein the herb Mercury hath been decocted three ounces, then make them warm together, and drink it at one good draught.

Of sleeping and Waking. §. 4.

They that be burthened with this disease, ought to sleep the space of eight hours at the least, and to go to bed one hour after meat, and to turn oftentimes about from one side to the other. The head is to lye very high, and to sleep half sitting. When it is cold weather, then is he to cover his whole body, and especially his head very warm. Reasonable exercise is very good for him, if so be that he can exercise himself. His head must he let be oftentimes and softly rubbed. Last of all he is to beware of all motions of the mind, as from anger, sorrow, and such like; for that these things do augment the burning of the melancholy.

Let this suffice to be spoken of the order of diet, whereof we shall hereafter discourse more at large; and teach also how this matter might be diminished and expelled.

Of letting of Blood. §. 4.

VVE have before expressed in the general rules how that letting blood in the confirmed Leprosie may not avail, except it be seen that the patient be very full of blood: for which, setting of boxes is also very commodious, whether it be in the neck, the shoulders, the thighs, or upon the calves, and upon other places more according to the importance of the cause. But if so be that the Leprosie be not rooted, then is first the letting of blood to be used, and that for an unburthening of the noisom matter.

But if now the patient be very plethorick, and the veins be full of blood, then must one open the patients Median in the left arm, and let out three or four ounces of blood. Or if there appear such fulnesse of blood about the liver, then is the liver vein to be opened in the right arm. But if there be any fulnesse in the veins about the head, then is the head vein to be opened, and that upon the hand about the great thomb. This letting of blood is in the beginning of the Leprosie, one of the most principallest medicines and means, because that the burning blood can through no more commodious way be expelled.

After letting blood (or if it be not esteemed needful) do all learned commend the potion of *Epithymus*; whereof there be three sorts in the first part, the twelfth Chapter, and eight §. is described, whereof the patient shall take in the morning betimes 4. or 6. ounces very warm, and then to sleep one hour upon it, for it is a very mild laxative, and afterwards he is to fast six hours after it. But if you desire a weaker potion, then take fresh roots of Polipody, powdered Sene leaves, *Thymus* and *Epithymus*, of each one drachme *Mirobalani Indi* one quarter of an ounce, Whay five ounces, Annis, Cinamom, wild yellow Rape seed and Mace, of each half a scruple, and beat it small, and steep it the space of twenty four hours in warm whay, afterwards wring it out, and so give it to drink.

Item, take the Confection of Sene leaves 3. quarters of an ounce, and tompea it with whay of Goats milk: this is a safe and elected medicine. This following is somewhat stronger: Take Sene leaves one drach. Indy salt, prepared Azur stone, and fine Bolus, of each two greins, then give it warm with three ounces of the water of Hops. Or take two ounce of the juyce of the leaves of Polipody, temper it with one ounce of good wine unto a potion. If you will have this more pleasant, then take the distilled water which is distilled out of the leaves and roots of Polipody.

Had you rather take pills? then let these following be prepared; Take Polipody, *Thymus* and *Epithymus*, of each five grains, prepared Azur stone, and fine Bolus, of each half a scruple, Annis, Mace and Ginger, of each two grains, Indy salt three grains, then

make

make thereof 7. or 9. pills, and that with the juyce of Roses for to be taken at one time. After this may one bring together many purging things, but these before said be sufficient for a pattern and example.

This clister may be made thus: Take Burrage, Buglosse, the uttermost of the *Agaricus*, Elecampane roots, and fresh Polipody, of each one handful, then seeth them all together in sufficient water unto the half, then take thereof twelve or sixteen ounces for a clister, without any other addition.

Another: Take of this foresaid decoction 12. ounces, Butter half an ounce, then temper them all together: or take good sweet Wine wherein Mallows and Violet leaves have been decocted 4. ounces, confection of Sene leaves and Cassly, of each half an ounce, Indy salt one scruple, temper them well together, and then set it very warm as a clister. Here followeth a stronger: Take Coloquint *Mirobalani Indi*, *Emblaci*, *Epishymus*, *Thymus*, Fumitory, and Sene leaves of each one handful, seeth all together in sufficient water even to the half, and use them without any other addition for a clister. There may also be taken six ounces of the decoction wherein an Hedghog is boyled, and putting thereto 4. ounces of the oyle of Violets, Indy salt one drachme, confection of *Hamech* three quarters of an ounce, and temper this together unto a clister.

But this following is the mildest, and notwithstanding the most commodious: Take whay of Goates milk 12. or 16. ounces, Cassie one ounce, and set it warm.

If it be seen that the matter do annoy more the head then any other member, then is this laxative potion to be used: Take the confection of *Diafena* and *Hamech*, of each three drachmes, the decocted or distilled water of Betony, water of Violets, or of the Savin tree, of each one ounce and a half, temper it all together.

If so be that the brest be most of all infected, then take *Agaricus* one drachme and a half, *Mirobalani Indi* one quarter of an ounce, fresh Polipody, and the husks of the Sene leaves, of each one drachme, Fennel water, and water of Hyssop, of each two ounces: make it warm, and steep the rest the space of 24. hours in it: afterwards drink it warm in the morning early.

Or if so be that these melancholick humours do bruise the Liver most of all, and the rest of the intrailles, then is this following to be used: Take Annis, *Spica*, Violet seed, *Cuscuta* seed, Sorrel seed and Mastick, of each half a drachme, Roses, and the leaves of the wild Vine, of each four scruples, seeth them all together in six ounces of water even to the half: Take of this decoction and temper therein of the confection *ad melancholiam Avicenna*.

These be now the things whereby all such noysome humours may be diminished. First it is to be considered how the grosse melancholick blood might be drawn from the vital parts to the outside: for this is very good after the use of the former purgation that the Patient do forcibly stir and exercise himself, viz. to go afoot, and to clime up to the mountaines, whereby natural heat might be provoked, and the matter consumed.

Secondly, it is very good that he be rubbed from the neck along the back bone downwards, and from the shoulders to the hands, and from the thighs to the feet with hot clothes until the skin be very red.

Thirdly, he shall bathe in this bath following morning and evening: Take fresh or dry Fumitory twelve ounces, the Elecampane leaves, Violet leaves, and small Hou-sleek, of each six ounces, Camomil, Melilot, and *Spica Romana*, of each eight ounces, seeth them together in so much water as is needful: in this shall the Patient bathe, and be softly rubbed.

Fourthly, prepare this salve following: Take oyl of *Sesamum* six ounces, Camomil, Dill seed, Burrage flowers, and Fumitory, of each one drachme, flowers of Elecampane, and Dock seed, of each one drachme and a half: pownd them all small, steep them and seeth them all together in the foresaid oyl unto the half: afterwards anoint therewith the body twice or thrice a day, and especially the whole back bone, and also all other parts which are infected.

There is also used for this hot and blistering herbs, viz. pownded, wherewith the members may be rubbed, whereby the bad humours be drawn outward toward the skin: these herbs be Marjoram, Pennyroyal, wild Thyme, Nepe and Crowfoot, which have an especial power for to draw out the melancholike humours towards the skin, changing them into water, through the blisters which appear after this cha-fing.

Some do use *Cantharides*, but they are too strong, for they expel urine very violently, yea that the blood followeth with it, and do excoriate the conduits of the urine if the same be used at any one time in many places.

For this is also good boxing cups set on the outward members, and the skin picked. If so be that there be any other soreneffe or impostumation with it, then have you before in the 2. §. how the Patient is to parbrake, the which is very meet for this.

But in these cases there is nothing better then to open the hemorrhoides, which may be effected by the rubbing of fig-leaves, or by the rubbing with the leaves of Comfrey; also with rubbing with an hairen cloth which is steeped in an Ox gall.

There may also a small boxing cup be set upon the fundament, and when as the Arse-gut doth appear and come forth, then may the veins which do as then appear be opened with a lancet, and to let them bleed so long, until that the thick and grosse blood do alter into clear and thin blood. This is also to be done four times a year, for it is very commodious.

For to expel the matter of this sickness by urine. §. 5.

Afterwards it is also very meet, that this noysome matter be driven out thorough the urine, for which you are to use one ounce or more of the potion of *Epithymo*, or of the water wherein *Epithymus* is decocted, whereof the Patient is in the morning and also at afternoon to drink, for that it driveth out a black and melancholike urine.

Or take in the morning early one ounce of the juyce of Smallage. Item, take 3. ounces of the juyce of Pease, or the decoction wherein pease be boyled.

There is also Azure stone sodden in the water of Miller, and take thereof 3. ounces: Take *Indi Spica* one quarter of an ounce, *Mirobalani Indi* three drachmes, seeth them in nine ounces of Fennel water even to the half, afterwards strain it through a cloth, and wring it out hard, and then drink it.

The flowers of Broom be also taken for this, Madder, Valerian and Mew, of each one handful, let them seeth altogether in eighteen ounces of water unto the half, and then drink thereof four or five ounces with powdered Licorice and Gromel seed, of each half a drachme tempered therewith.

Wherewith the Mouth and other parts are to be washed. §. 6.

Take the decoction of Linseed four ounces, and *Oxymel Compositum* two ounces; temper them well together, and wash the mouth oftentimes with it alwaies twice before supper, and two hours before dinner. You may also after the same manner chew Swines bread and spit it out again; or instead thereof chew *Agaricus*, which is more forcible and more safe.

Item, prepare this gargarisme ensuing; Take *Mirobalani Indi*, Violets, Burrage flowers, and Buglosse flowers, of each one drach. the roots of Polipody one quarter of an ounce, *Indi Salt* one drachme, the Husks of Sene one quarter of an ounce: seeth them all together in twelve ounces of water even to the half, and use it warm alwayes one hour before noon, and an hour before supper; to wit, ten or twelve times together. This ensuing is also much commended for the Leprosie, if it be often washed therewith in the beginning: Take Myrrhe and *Sarcocolla*, of each three drachmes, Ireos, roots of Fumitory, of Mew, and Hartwort, of each 3. quarters of an ounce, black Hellebore two ounces, the seeds of Mallows, of Hollihocks, of Fumitory, and the leaves of Elecampane, of each three handfuls, cut them and stamp them together, afterwards let them seeth in two quarts of water unto three pints.

In like manner there is also much commended for this the golden water, if that one do take a little and oftentimes thereof, and do anoint the Leprosie therewith. The oyl of Tiles is also much commended in the beginning of the Leprosie.

But because the most principal cure of this Leprosie consisteth in consuming of the melancholike matter of this sickness, and that the blood must be well cleansed; therefore will we to that end describe certain good things, beginning first with the least.

Whereby the blood in the Leprosie shall be cleansed. §. 7.

Take the water of Hops, and of Fumitory, of each one ounce and a half, temper them together, and give it in the Summer cold, and in the Winter warm.

Item, Take the Whay of Goats milk, or of Sheeps milk, and drink thereof in the morning like as is said before. This following is also more forcible: Take four ounces of Cheese whay made of sheeps milk, and the juyce of Fumitory, temper them all together, and so drink it warm. These three things have an especial property with the breast, with the liver, and with the stomach, and do consume all burnt humours of the same.

Item, Take the sirup of *Epithymo* one ounce and a half, the water of Elecampane, of Sorrel, and of small Endive, of each one ounce and a half, temper them together, and drink it certain dayes together: the same expelleth the grosse matter. This following is also meet for the same; take *Syrupum de Thymo*, *Acetosum compositum*, *de Byzantiis*, of each half an ounce, water of Smallage and of Fumitory, of each one ounce and a half, and use them as before.

This ensuing is especial good for the melancholy which is caused through burnt blood, and where it may evidently be seen, that heat of the Liver, of the breast, and of the head is with it: Take the seeds of Melons, of Cucumbers, of Pompeons, and of Gourds, of each three drachmes, flowers of Violets, of Burrage, Buglosse, and of small Endive, the seed of Sorrel, of small Endive, and of Waterlillies, of each one handful and a half; Fumitory flowers, Elecampane roots, red and white Saunders, burnt Ivory, red and white Corral, of each one drachme, the juyce of sweet apples six and thirty ounces, fresh Mallows, Endive, Sorrel, Hops, Purslain, and Lettice, of each three handfuls, Dock leaves, Elecampane roots, *Bistorta*, Swines bread, and Gentian, of each one handful, wild Vine leaves, small Housleek and Liverwort, of each three handfuls; seeth this all together (except the juyce of Apples) in four quarts of water unto the half, afterwards wring it out hard and strain it: this being done, then put to this decoction the juyce of Apples, and three ounces of sharp Vinegar, white Sugar six and thirty ounces, then seeth them all together (alwaies skimming) by a mild fire, until that about the third part be wasted, whereof you are to keep the one half, and the other half are you to seeth to a sirup; for that of the first is every day to be taken five ounces, and of that which is sodden to a sirup two ounces, with water of Agrimony, and Fumitory: to wit, of each one ounce and a half. This hath done marvels, but it must be continually used the space of six weeks or two moneths.

This sirupe (as also all other) is alwaies to be taken when the meat is digested in the stomach, and afterwards to sleep an hour or twain, and then without doing any great labour, to fast five hours after it. In Summer it is to be taken cold, and in Winter luke-warm.

For to consume the remanent matter. §. 8.

Vhen you do perceive that this matter is much diminished, then give the Patient during the space of a moneth, alwaies early in the morning one drachme of powdered Nep with Sheeps Whay, for it is a safe remedy.

In like manner you may give unto this Patient some dayes together one ounce of the juyce of Marsh Mints or of white water Mints, and that especially in the beginning of this sicknesse.

The Powder of burnt Hedgehogs flesh hath an especial power for to consume this matter, if that one take the weight of a drach. oftentimes with Whay, or give him oftentimes half a drachme of Treacle with decoctions of Hedghogs flesh. These be now sufficient and sure things chosen out of divers others.

If so be that there remain any bad matter in the joynts, then must the same (if one will have perfect health) be also consumed, to the end that thereby (the same there remaining) the whole body be not infected again. For which these two bathes are to be used at the first: take Marjoram 12. ounces, Bayberries, the seeds of Licebane and Mustard seed, of each six ounces, Sulphur vive 4. ounces, the Earth called *Sinopida* two ounces; then seeth them all together in much water unto the half, then bathe therewith the space of five or six dayes twice a day. When the Patient cometh out of the bath, then is the whole body

to be anointed with Treacle, and the same to be rubbed in well. Afterwards he is to go to bed, and to sweat well upon it; and although he could not sweat well at the first, yet give him after bathing half a drachme of the Treacle *Diateffaron*, with a little water of Violets, and then cover him close.

When he hath thus bathed, then is he to use this bath following: Take Fenegreek, and the seeds of white *Sesamum*, of each twelve ounces, the roots of Lillies six ounces: then let them seeth together to a bath as before, yet in bathing is the body to be rubbed with black Sope, and then to lye abed as is said.

When as now the matter is sufficiently prepared through bathing, and drawn towards the skin, then doth the cause require that it might be consumed, whereto stronger medicines be necessary, like as this ensuing may be prepared: Take Verdigrease, Orpiment, Copperas, and white *Cadmia*, of each six ounces, unsleckt Lime twelve ounces, the roots of Crowfoot eighteen ounces, Allom four ounces, Sal-armoniack eight ounces, pownd them all together, and then distil them in a helme, as strong water is wont to be made, and anoint therewith all scales and blisters every where.

The third day are you to anoint them with this following; Take one ounce and a half of Starch, and washed litharge of gold two ounces, unsleckt lime one drachme and a half, Dragons blood half an ounce, Vinegar as much as is needful for to temper together, afterwards temper them together in a leaden mortar.

Other do use this following: Take the swet foot of a chimney two ounces, litharge of gold one ounce, Frankincense half an ounce, Mastick five drachmes, oyl of Juniper, and oyl of Wheat, of each four ounces, yellow Wax two ounces, pownd all small that be to be pownded, and then temper therewith two ounces of the oyl of Violets, afterwards put unto it the gold litharge, the Mastick, and Frankincense, and at last a little Vinegar, yet stirring it alwayes about. Other do temper amongst it six ounces of the juyce of Cuccopit roots.

What is to be used for the Scales, §. 9.

IF that there be any scales upon any sores, then are they to be anointed with this salve following: Take the oyl of *Sesamum*, Asses sewer, of each six ounces, the yolk of an egg, Camphire half a drachme, then temper them all together with sufficient whites of eggs, it is also good against all heat of the joynts, it healeth and causeth the flesh to ingender.

If so be that these foresaid scales will not fall off of themselves, then do some take them off with Rafors, even to the root, yet not altogether at one time, but one before, and another afterwards. The blood do they stanch with pownded litharge of gold. They do make also a salve with fresh Hares blood, or with a young mans blood, which is very meet for this.

The anointing with this salve is to be done but once in three dayes, and then to wash the party with some water wherein Bran is decocted. You have also more at large of these things in the Chapter where the Pox be discoursed of.

When as after all this the matter proceedeth well the space of two or three moneths, then is one not to foreflow purging in the mean whiles, but to take good heed to these two things ensuing.

First, to the stopping of the nose, which maketh an unseemly speech, and for to let that, make a long taint of Cotton, anoint it with the salve of Citron (which one findeth commonly ready at the Apothecaries) strew thereon small pownded litharge of gold, or Hartwort, or in the stead thereof take the confection of *Aurea Alexandrina*.

Further, you are to spout in the nose some luke-warm Wine, amongst which a little Vinegar of Squils is tempered.

Secondly, because that the hair of the eyelids fallen out do give a great deformity, therefore it is to be looked to, that the same be made to grow again, whereof you may read in the sixt Chapter and 8. §.

But this ensuing is especially commended in the deformity; to wit, that the eyebrows be rubbed until they be red, and then are Leaches to be set upon it: and when as they be fallen off, then have this salve following prepared: Take fresh Venus hair, and *Laudanum*, of each a like quantity, seeth the same in oyl of Bayberries, and a little Wine, afterwards wring them out, and therewith anoint the eyebrowes, and all other infected places.

If so be that there appear any new matter, or any new impostume, then must one begin to bathe with the last foresaid decoction, and in like manner also to anoint with the foresaid things, for that in such lingering sicknesses, must the remedies so oftentimes be reiterated as the diseases make return.

For to strengthen the Heart, the Liver, and the Braines in the Leprosie. §. 10.

BEcause that by the foresaid parts and other more this Leprosie taketh her beginning, therefore are the same to be strengthened: for which this following is very good; to wit, the confection of *Latiscans Almanforis*, whereof give every day (half an hour before noon) one quarter of an ounce with Endive water, the water of Water Lillies, or with water of Agrimony.

Secondly, the great Treacle is very forcible, for it strengtheneth the natural heat and the vital spirits, that it may the more mightily withstand all venome, if one take half a drach. thereof with any distilled water.

Item, take the confection *Diambra*, *Diamoschu*, and *Manus Christi* with Pearls, likewise half a drachme of *Lignum Aloes*, tempered with two ounces of water of Water Lillies, and drunk in the evening when one goeth to bed.

There is also highly commended to take oftentimes one scruple of Pearles with one ounce of Basil water.

What concerneth the Skin. §. 11.

WHen as the skin through great unnatural heat is annoyed and hurt, which may be perceived by the corroding and by the sharp matter, then is the same place to be anointed with the juyce of Lettice, of Purslain, of Water Lillies, and also with unripe Salad oyl; but if it be caused through cold, that thereby the natural heat be extinguished, then is there no better thing then to bathe the place with strong red Wine warmed.

But if the disease of the skin do not import any thing, then is it better that it be bathed with a mild Lee, with Nep, or garden Mints; and if this corroding do increase, then use this precious salve ensuing: Take litharge of Gold and Ceruse, of each two ounces, oyl of Roses two ounces and a half, the juyce of Rue four ounces, Starch as much as sufficeth, then stir it the space of certain hours in a leaden mortar, at last temper one quarter of an ounce of small bruised Camphire amongst it.

Of the actual and potential cauterie. §. 12.

THese actual and potential cauteries are both of them commended by the Physitians in the extreamest need, to wit, upon the head, and in the neck, and in more other places, but because it may not be effected without danger of some other parts (like as also they themselves do acknowledge) therefore we will not write any ampler thereof at this present.

If any one be so hardly assailed of the Leprosie, that he be no otherwise to be holpen but by cauterization, he may take the advice of those men that have experience in it. And because that all which we have hitherto written is more meet for the *Elephantiasis*, (like as we have declared at first) notwithstanding it is also good for all species of the Leprosie, therefore followeth hereafter all that which is commodious for all species of this sickness.

What is requisite for every sort of Leprosie. §. 13.

FOR this, hath Treacle the highest commendation: in like sort the confection of *Hiera* and Hedghogs flesh (whereof we have admonished before) whether it be roasted, fried, or sodden. Also the flesh of the venomous Snake *Tyrus* is commended by *Galen* and other famous Physitians more. But because that we (God be praised) have not this Snake here in this Realm, it is not needful for to write much thereof, but to speak rather of those things that are to be gotten in this countrey, and may give ease, as the powder of burnt Hares one drachme and a half, with four ounces of wine drunk three dayes together. Take in like manner as much powder of Squils, or the juyce of the same, with the syrup of Squils, and then temper half a drachme more or lesse of *Assa foetida*, with Hony amongst

amongst it. Item, take powdered Comin five drachmes, with clarified Hony.

There may also be more written, yea a whole book full of the Leprosie, and how that every accident of the same is at the beginning to be eased; but if so be that the foresaid remedies will help the sick person, then be the accidents the easier to be holpen: for which we have also in many places written much of the foresaid diseases, which altogether may and ought to be used for this, and therewith we will conclude.

Of the bad Ulcer Cacoete. §. 14.

FOR a conclusion of these corrodings, impostumes, and ulcers, we will also briefly write of those which the Grecians do call *Cacoete*, which is a species of the Canker, and so venomous, that it continueth with a body all his life time: for notwithstanding all the counsel which may be done for it, yet is it all in vain, and it doth remain incurable, and moreover (like as is said) is very long continuing: yet do some commend this ensuing for some especial thing.

Take *Soldonella* half a drachme, powdred Rubarb two scruples, give the same to drink oftentimes with white Wine: when this is taken, then give to the Patient the next day afterward the sirup of Wormwood, and of Cicorie, with Rubarb, of each one ounce: and so continue every other day. Afterwards anoint the place of the disease with oyl of Roses, or oyl of sweet Almonds.

The fifth Chapter.

Of outward infection and woundings of the Skin.

IN the beginning of this fifth Part we have before declared many things whereby the skin is infected and annoyed within. Now doth our method require, that we should write somewhat of the outward accidents of the skin, which be hurtful to the same, and also to the flesh underneath it, and we will also begin with the least, which is of burning or scalding.

Of burning or scalding with fire, hot water, and of burning with Gunpowder. §. 1.

IF there be any burnt with fire or scalded with hot water, then have the things or medicines whereby both these are to be cooled and healed, small difference: but concerning the burning with Gunpowder, of that we will write after another manner.

Of the burning of fire, or scalding with hot water, there cometh at the first an excessive pain, and divers blisters whereout water doth run.

Secondly, if one will heal these sores, then is there first to be spread thereon a pap of the powder of Saunders, with Rose water, and tempered with a little Camphire, or with the water of Nightshade.

Or temper fine Bolus with Vinegar, with Rosewater, and with water of Nightshade: these things are to be laid upon it so long, until the pain be almost gone. For this may also be used the salve of Poplar, mixed with the white of an egge. And if so be that the blisters do not break of themselves, then are they to be opened with a needle, to the end that the flesh next underneath be not harmed thereby.

This is now a necessary and common manner of doing, viz. at the first: but what is meet to have more done in it, that shall hereafter follow.

And because that such kind of diseases may be rather healed with salves then otherwise, therefore will we first of all begin with them.

These things following are to be used immediatly after the burning, and until the pain be at the extreamest: Take oyl of Roses and unripe Sallad oyl, of each three ounces, white Wax, washed Litharge of gold, and Ceruse, of each one ounce, Starch 3. quarters of an ounce; melt the oyl and the Wax together, and then powr it hot upon cold water: afterwards wash it three times, and that with Nightshade water: at last temper the other things amongst it. But if you will have it more drying, then may you mix powdered Cypres nuts amongst it, as many as you please.

Item, take Butter, or Swines grease, eight ounces : let it be hot, and pour it upon cold water : afterwards let it be stiff again, and then put it into a dish : stir it well about, and pour of the water unto it until it be through white : at last stir one ounce and a half of Peter oyl in it, and therewith anoint the burning.

But if so be that the burning be two or three dayes old, then take of the foresaid salve, and spread it upon linnen as a plaister, and lay it six or seven times a day upon it according to the importance of the burning, for that how much the oftener it is refreshed, so much the better and sooner is the same also to be healed.

If so be that the burning be great and deep, then do not bind it tight to the end the heat may passe out the better.

Item, take Butter wherein an egge is baked and burnt, pour it upon cold water : when it is stiff, then wash the same eight times with cold water, and at the last twice with Vinegar : now take two ounces and a half of this Butter, put thereto the whites of two eggs well brayed, Linseed oyl half an ounce, then anoint it on the burning.

Commonly the oyl of Roses is good for burning being tempered with salt, Linseed oyl, Inke, and *Oxyration*.

Item, take oyl of Roses one ounce, three yolks of eggs, mix them well together : you may also add four or five graines of Saffron unto it.

Another. Take oyl of Roses three ounces, *Bolus* one drachme, make it very hot ; afterwards dip a cloth in it, and lay it thereon as hot as the Patient can abide it. But if the pain be abating, then is there a salve to be chosen of this Lime ensuing : Take unselect Lime, pour water upon it, but thrust not the hand into it, but stir it well about with a spoone until that it scum ; afterwards strike it off with a feather, and temper it with Sallad oyl : at last anoint it on the burning ; the same is very highly commended.

Or take unselect Lime, and with Sallad oyl make a salve of it as thick as a pap, and anoint therewith.

Item, take oyl of Roses two ounces, unripe Sallad oyl one ounce and a half, white Wax half an ounce, let it seeth a little all together ; afterwards pour it upon cold water, and wash it therewith. This being done, temper small bruised Ceruse amongst it three quarters of an ounce, Frankincense and *Sarcocolla*, of each one drachme, prepared Lime half an ounce, Saffron half a scruple, washed litharge of gold, three quarters of an ounce, then temper them all together.

This following is a well approved salve for burning : take quick Lime which is flaked with good wine, let the lime dry well and put in as much Linseed oyl until it be as it were a dough : afterwards anoint the burning with it, and then lay none other upon it.

But if so be that it wax dry and hard, then spread more upon it and take it not off, for that the burning will be suddenly whole, and when it is healed, then falleth it away it self. This is thus by some to be assured : neverthelesse it is perillous not to looke to it in long time, for that there might some other thing stick unto it.

For this is also fit, the oyl of Saint Johns wort alone or tempered with washed lime, and so spread upon the burning, for it cooleth marvellous much. Item, take of oile Roses three ounces, white Frankincense one ounce, Ceruse three ounces, the whites of three eggs, Camphir one drachme, make thereof a salve.

Another. Take oyl of Olives four ounces, powdered Frankincense half an ounce, the innermost rinds of Eldern, one quarter of an ounce : seeth them all together with a little Vinegar, until that the Vinegar be throughly wasted, then strain it through a cloth and use it as before.

Item : take old candle tallow, Goates suet, and Linseed oyl, of each a like quantity : let them melt together, and put thereto the whites of Hens dung, as much of the one as of the other things ; let it seeth well together, and then strain it through a cloth, afterwards lay it upon the burnt place, and let it lie thereon a day or twaine ; then wash it off with luke-warm water, and lay again a fresh plaister upon it.

For this is also good all the white salves which are described in the fourth part, the ninth chapter, and 1. §. Item, yet another salve which is to be found in the first Part, the seventh chapter, and 17. §. This salve following is also very good for all sorts of burning ; Take oyl of Roses two ounces, the yolks of six eggs stamped well together, and temper some Saffron amongst it, afterwards spread it on a cloth and lay it upon the burning ; it healeth very speedily.

Another.

Another. Seeth Mustard seed in the cream of milk, then pownd it to pap and wring it through a cloth, afterward anoint therewith the burning. After the same manner is Linseed also to be sodden, strained and used.

Or take Oaten meal, boyl it in Cream, and use it as the rest: this is especial good for scalding with hot water.

Item, take the juyce of Rapes or of Onions, each apart or mixed together, and anoint the burning oftentimes with it, and lay the leaves of the Cherry tree upon it.

Take the juyce of an Onion, and oyl of the kernels of Apricocks half an ounce, temper them together. The sirup of *Oxycraton* doth cool much the burning. Ink tempered with the water of *Carduus Benedictus* is much commended for this; if one make a cloth wet therein and lay upon it.

Item, the leaves of Water Lillies laid upon the burning do cool and also heal. Of the inflammation and heat of the ulcers which is caused within; you have heard before in the second Chapter, and sixth §.

Of burning with Gun-powder. §. 2.

IF any have a shotten pellet cut out of his body, then is this oyl following to be laid upon it: Take oyl of Eldern flowers 12. ounces, oyl of S. Johns wort one ounce, Turpentine half an ounce; temper these together, and set them certain daies in the Sun: this hath a marvellous efficacie and vertue.

Another. Take oyl of Roses, Nightshade water, Rose water, water of Lillies, and oyl of Saint Johns wort, of each a like quantity, and wash therewith the Wound oftentimes.

Item, for to cool the inflammation; take the water of Nightshade and of Saint Johns wort, of each eight ounces, Allom half an ounce, Ceruse, Litharge of silver, and Verdigrase, of each one drachme, pownd them all small together, and temper them well together, and then lay it as warm upon it as may be suffered three or four times together.

Or take Linseed Oyl, unbleckt Lime, fine Bolus, and Rie meal, of each a like quantity, stir them well together, then spread them on the burning: it draweth out the heat and the powder.

Item, take good Hony eight ounces, let it seeth and be well scummed, then put thereto half as much sharp Vinegar of Roses, and seeth it all together until it be brown: afterwards put a spoonful of beaten Allom unto it, and keep it well; for the elder it is, so much the better it is.

There is also prepared for this two kinds of Lee; the one which is made of quick Lime, and laid upon it with a wet cloth; the other is, if one temper strong lee, with Sallad oyl, and lay it thereon: this lee is very good for all heat, whether it be through burning with Gunpowder, or otherwise for all inflammation which doth appear outwardly.

For all scalles of burning. §. 3.

TAke Ceruse one ounce and a half, Camphire half a drachme, Rose water three quarters of an ounce, Starch half an ounce; bruise it, and temper it well together in a mortar with the white of an Egge unto a thin salve; spread it thereon and round about the scalles, and they will dry and fall off.

Before in the third Chapter and 10. §. you have yet more other fit remedies for it.

The sixth Chapter.

For to draw Splinters and Thorns out of the Skin.

If that any Splinter or Thorn do stick in the skin, then must one look to pull out the same immediatly; otherwise it must ranckle out with great pain.

Thus for to remedy this; Take Oxe suet, Wax and Rosin, of each a like quantity, *Pirola*, Beets, Lovage, Lady mantle, and Sanicle, according to the quantity of the former; pownd them together; and wring out the juyce; afterwards put it amongst the molten Wax, Rosin, and suet, and then boyl it until all the juyce be wasted, and

there become a salve of it.

Another. Take two parts of Sallad oyl, and one part of Rosin, or Turpentine, and as much Wax, let it melt together, and stir it well until it be cold.

For this is also good, the plaister *Apostolicon* and *Gratia Dei*, that are described before.

Item, the juyce of Barberries tempered with Barley meal, is also good for it. *Srifs de Thure* draweth out the Arrowes, like as before is shewed.

The roots of Beets, of Polipody, decocted with their leaves and laid thereon, draw also much.

If so be that any body in spinning get a shive in their finger, then take picked Plantain leaves, wring out the juyce, and lay it upon it, it will quickly draw out the shive that sticketh in the hand, and heal it.

The seventh Chapter.

Of Wounds and all that concerneth them.

Amongst all outward accidents which harm the skin and the parts adjacent, are the wounds also to be accounted: for which you have before (in the common description of plecters) certain rules which be also necessary for all wounds, and may be applied unto them: therefore they are to be added here.

In all wounds (whereof soever they be caused, whether it be of pricking, cutting, shooting, or falling) the Chirurgion must first look that he cause the blood to be franched: but if that be not performed, then doth the Patients strength and power wear away, and at last his life also. Therefore will we first of all write and discourse thereof.

For to franch blood. S. 1.

Take Gum of Arabia, and Dragagant, of each one drachme, red Coral, Bloodstone, burnt Ivorie and Camphire, of each half a drachme, make this powder with water of Plantain unto a dough, and lay it upon the wounds. Some do also temper it with Bole-armoniack and Momy, which is not amisse.

Item, take Frankincense, Mastick, and small cut Hares hair, of each a like quantity; make a soft salve thereof with the white of an Egge, and lay it upon the bleeding.

Or take Dragons blood, unsleckt Lime and Frankincense, of each a like quantity: this are you to use if there be any great vein perished: but if the great veins be hurt the long way, then use burnt Copperas with it.

Item, take the white of an Egg, fine Bolus, Dragons blood, Bloodstone, and Frankincense, of each a like quantity; make a plaister of it, and then spread it upon Tow, and so lay it upon the wound.

Or stamp Peach kernels, and make a plaister of it with the white of an egg.

Item, take yellow Rose seed, pownd it to powder, and temper Vinegar therewith unto

to a pap, and so lay it upon the bleeding wound, it will stop it:

Resolve Coperas in Vinegar, and set it certain daies in the hot sun; or let it see the, afterwards wet a cloth therein, and so lay it upon it.

The parings of Parchment boyled in Lime, and laid upon it, are also very forcible so to stanch blood. Burn a hat to ashes and strew it into the wound.

Dried Swines dung powned to powder, doth also stanch blood.

Item, take Egshels, and lay it so long in strong Vinegar to steep, until that they be very soft, and then let them be hard again; afterwards pownd them small, and use them as the other.

Mans hair also burnt, and beaten to powder, staunceth much the bleeding at the nose, and all other manner of bleeding.

The juice of Shepherds purse stancheth and cooleth all hot blood. In May are you to take Comfrey with the leaves, and shred it small; this being done; distil it like other water, and drop in the wound.

The same do the Chirurgions ascribe to Maiden milk, which is in the first part, the first Chapter and 1. §. described.

Item, for to stanch the blood at the nose, hold upon the forehead a cold flint stone, bloodstone, Calcedony or Carnoyl stones, or put in his hand the roots of Corn Roses: a man is to hang his privities in strong Vinegar, or a cloth wet therein and laid thereon, the bleeding will cease immediatly.

For to stanch the blood you may also look into these places following, as of the bleeding of the Eares in the first part, the 9. Chapter, and 4. §. of the bleeding of the gums, in the first part, the 17. Chapter, and 7. §.

Item, of spetting of blood, in the second Part, first Chapter and 11. Section to stanch the bleeding of the Hemorrhoides, in the third Part, the 9. Chapter, and 4. Section, of pissing blood, in the third Part, the 16. Chapter, and 11. Section, and of womens terms in the third Part, the 19. Chapter, and 3. §.

Of the clotted blood in the body. §. 2.

IF so be that a wounded man, or one that hath taken a fall, hapned to bleed inward, then are all means to be sought to expel the same with all speed; for otherwise it must inwardly corrupt and putrefie, whereby very perillous agues and other deadly diseases might ingender, whereof in the second Part, the first Chapter, and 17. §. (of the spetting blood) is sufficiently written. The common people do advise, that in this disease one is to drink his own urine, whereby the clotted blood should be expelled. The same doth also the wine of Harts tongue, and all other vulneral potions which hereafter shall be described.

This plaister following is much commended: Take Goats Milk and Hony, as much as you please, let it be very warm together, and stir fine Bolus therein until it be a salve, and bind that upon it, whereby the congealed and clotted blood will be expelled.

Of the stitching of wounds. §. 3.

THis stitching of the wounds is committed to the Chirurgions charge, according to the importance of the cause: but I will add this onely unto it, and speak of those things that do heal the wounds together without stitching.

Take Mastick and Dragons blood, of each one quarter of an ounce, Frankincense one drachme, Mill dust and Bean meal, of each one ounce and a half; make them all to powder, and temper them with the brayed whites of Egges and Rose water unto a pap. Afterwards spread it upon two long clouts which be somewhat strong, and that are as long as the wound is, and lay one upon each side of the wound, upon the whole flesh: this being dry, then sew the wound so close together, as you please, the needle not going through the skinne, but through the clouts onely. The golden salve (is also much commended) called *Unguentum Aureum Mesue*, which is made thus.

Item, take yellow Wax three ounces, Sallad oyl twelve ounces, Turpentine one ounce, Rosin and Colosonie of each one quarter of an ounce, Frankincense and Mastick of each half an ounce, Saffron half a drachme, let Wax, Turpentine, and oyl melt

melt together, and afterwards put the Rosin unto it : and when it beginneth to be cold, then temper amongst it the Mastick, Frankincense, and Saffron : this joyneth the the wounds together, and healeth them. In the first Part, the seventh Chapter and tenth Section, there have you a water described, beginning thus. Take Litharge of Silver, &c. which is very much renowned for this purpose. In like sort M. Tristrams water, and other golden waters, with four kinds of Balms which are to be found in the last Part.

of fresh wounds. §. 4.

THese forementioned things be verily the chiefeft, which may be used without any delay for all fresh wounds. When as now the blood is staunched, and all finished that is needful to be done, then are these things ensuing commended highly. First, M. Tristrams water is thought meet to heal all fresh wounds, which may also be done with all golden waters, whether it be that one take them inward, or lay them outwardly upon them. The oyl of Tyles should not onely heal, but also preserve the wounds from all putrified flesh ; this is also ascribed to the oyl of Linnen. The oyl of S. Johns wort is also much commended, and the oyl of Roses ; for that they have an astringent vertue and efficacy. Likewise the oyl of Spike, and oyl of Lead. It is also streightly commanded, that all new wounds shall be washed with Wormwood or with Rosemary : for that both these keep the fresh wounds clean, and far from all putrification, and are also healing.

But if any one be but a little wounded, so that it be not needful to go to a Chirurgion with it, then use this salve following. Take Turpentine which is 3. times washed in Wine, and stir the yolk of an egg amongst it, Barly meal one quarter of an ounce, Saffron five grains ; temper them together. This salve is good for all pain, although it be also in a sinewie part ; it maketh flesh speedily to grow. It is also not unlike to *Unguento Mundificativo*. This plaister following will heal the wound in twenty dayes, without matter and without pain. Take Wax half an ounce, white Coral three drach. *Colosonia* and Momy, of each seven drachmes, Myrrhe two drachmes, Camphire, Loadstone, of each half a drachme, oyl of Eggs as much as is needful for to mix amongst all the rest.

This salve is thus to be used, if any one be cut or thrust, and if this plaister be laid upon it within twenty four hours, then shall the wound within twenty dayes without any corruption or any other addition be healed. If so be that then it be a thrust that goeth quite through, then is one to have four plaisters in a readinesse, and to lay two upon it before noon, and two at afternoon, without putting any thing else unto it. But if so be that it be but a wound, then are two enough : to the end that there remain no clotted blood within, is this powder following to be given to the Patient ; take Momy one quarter of an ounce, fine Bolus and Dragons blood, of each one drachme, give thereof to the Patient evening and morning, the quantity of an Hasel nut.

Many kinds of vulneral potions. §. 5.

EVery Chirurgion will shew his cunning in this ; for each one hath a several potion which he keepeth as a *secretum secretorum*. Also it is indeed of great importance, when as the inward parts be perished, or if there be any blood inwardly congealed, it can in no better way be holpen then by this means : wherefore we have here rehearsed certain of these vulneral potions, whereof Chirurgions do much esteem. Take wild Beets (which is *Pirola*) with their roots one M. *Consolida saracenica*, the roots 2. M. Mugwort without roots four M. and powre thereto one quart of Wine in a new leaden pot ; then stop it tight, to the end there flye no vapor out : afterwards let it seeth together by a small fire, until about the third part be consumed, drink thereof morning and evening, according as the disease is great, and according as the body is hot or cold, take strong or small Wine. But in winter when the herbs be dry, then take one ounce of Mugwort, *Consolida saracenica* half an ounce, wilde Beets two drach. and seethe it as before in a quart of Wine : this is an approved potion for ulcers, wounds, and all other diseases, being used inwardly, and also outwardly. This plaister following is also to be used with it : Take clarified hony eight ounces, Wheat flour two ounces, Linseed oyl three ounces, fine Bolus one ounce and a half, then make thereof

thereof a plaister, and lay it thereon. Item, Take *Consolida faracenicæ* with yellow flowers, Mugwort, wild Beets and Lady-mantle, of each one M. see the all together in a quart of Wine, whether it be Malmsey, or any other good Wine. This potion hath been approved oftentimes, and was found very good.

Another: Take wild Beets, wilde Tansie, Sanicle, and Agrimony, being all gathered at a full Moon, dried in the ayre, and then stamped to powder; when as you will use thereof, then take an earthen pot which will hold a quart of moysture, and put therein of this foresaid powder, as much as you can gripe at two or three times between your two fingers, and according as the wound requireth: afterwards pour unto it a pint of wine, and cover the pot very tight with a slice of bread, then let it stand the space of a good hour in a warm place until it be cold, and give thereof to the wounded person twice a day. You may also strew of this powder in the wounds. Yet another; Take *Consolida faracenicæ*, Agrimony, wild Tansie, Mugwort, Cicory, Southernwood, and wild Beets, of each a like quantity, dry the herbs in the shadow and stamp them to powder: afterwards take a quart of Wine, and put thereto an ounce of this powder, then see the in hot water, until the breadth of three or four fingers be consumed: afterwards put thereto a spoonful of *Asarabacca* powdered small, and give thereof to the Patient when he goeth to bed three or four ounces at one time. Another; Take Sanicle, Avence, Agrimony, Buglosse, Vervein, Cicory flowers, *Consolida faracenicæ*, Betony, Hysop, Sage, Mugwort, wild Tansie, wild Beets, and S. Johns wort, of each a like quantity: see the them all together in wine, and give the Patient thereof twice a day, at each time three or four spoonfuls.

Item, take *Consolida faracenicæ*, Agrimony, Sanicle, wild Tansie, Plantain, and Beets, of each a like quantity, let it see the together in Wine, and give thereof warm. Divers such like potions are described in the third Part, the third Chapter of the fractures of bones.

Of the plaisters for thrusts and wounds. §. 6.

First, to write of the Plaisters for thrusts, there be many kinds prepared for it, as hereafter followeth: Take Wax one ounce and a half, Colofony and Momy, of each two ounces, Frankincense one ounce, Camphire one ounce and a quarter, bruise it small, and afterwards melt the Wax and the Colofony, temper then the rest amongst it, and work it well together, anointing the hands well with oyl of Eggs. Another, which is approved: Take Turpentine four ounces, Colofony and Rosin, of each two ounces, white *Cadmia* 3. 1. Loadstone, 3. 1. Frankincense, 3. 2. Mastick and Momy, ana. 3. 3. Juniper oyl one quarter of an ounce, oyl of Eggs and Camphire, ana. 3. 3. dissolve the Gum in Wine or Vinegar, and strain it through a cloth into a pan, afterwards let it see the together, then put thereto the *Cadmia* and Ceruse: when it hath sodden well, then put the Loadstone unto it, and let it wale once again: afterwards add the Frankincense, Mastick, and the Mummy unto it. This being done, let it see the a little more, and when it is waxen lukewarm, then put the Camphire well bruised unto it, and then work it further well together unto a plaister.

Item, take Wax, Rosin, Turpentine, oyl of Eggs, and Sallad oyl of each four ounces, oyl of Roses one ounce, see the it all together unto a plaister, and then at last put unto it one drachme of Camphire: but if it be too hard, make it softer with oyl of Roses.

Another: Take Wax and Colofony, of each one ounce, Momy one quarter of an ounce, Frankincense, Myrre, and Mastick, of each half an ounce, white Coral three drachmes, Loadstone one drachme, white *Cadmia* one quarter of an ounce, Dragons blood one drach. Camphire one ounce, make thereof a plaister. For this, is also very good the plaister of Master *Flakenstone*, which is described in the second Chapter and the 1. Section.

Item, take Wax two ounces, Turpentine, and Gummi *Heloni*, of each one ounce, Dragons blood, and Hartworth, of each half an ounce, Gummi *Ammoniacum* one ounce, Ceruse one ounce and a half, Frankincense, Momy, Mastick, and Juniper-berries, of each one ounce, Allome one ounce and a half, make a plaister thereof.

Another; Take Wax four ounces, Momy, Colofony, Mastick, and Frankincense of each one quarter of an ounce, white Coral three drachmes, Camphire half an ounce, oyl

of Eggs one ounce, melt the oyl with the Wax upon a mild fire, and then let it be somewhat cold, afterwards temper all the other things (beaten very small) amongst it. This being done, let it seeth softly, stirring it round about, at last temper the Camphir with four spoonfuls of the oyl of Juniper amongst it.

Item, take oyl of Roses and Wax of each four ounces, Deer suet two ounces, Frankincense and Myrrh, of each half an ounce, Galbanum, Mastick, and Turpentine, of each half an ounce, make a plaister of it. This ensuing is not onely good for wounds, but also for all ulcers: Take Turpentine and Wax, of each four ounces, Mastick two ounces, Rose leaves, 16 ounces, brown Betony, the greater Pimpernel, spiked Plantain, Nightshade, Divels bit, Vervein, and Storks bill, of each eight ounces, add a quart of wine unto it, seeth first therein the Roses alone: this being done, pour it through a cloth and wring out the juyce well: afterwards take the other herbs, and put them also into a kettle, with two quarts of Wine, afterwards let them seeth together even to the half, then wring it well out, and let the decoction be very hot that the Wax may melt in it, then put the Rose wine with the Mastick also unto it, then seeth it to a plaister, and work it very strongly with the hands, but you must first anoint them with Butter. This foresaid plaister is not onely good for wounds, but also for all ulcers. Also you have in the first Chapter, and 15. S. many things which are also very meet for to cure the wounds.

The Chirurgions have yet a black plaister in use, which is made thus: Take Frankincense half an ounce, Momy half an ounce, Colofonie three quarters of an ounce, oyl of Eggs half an ounce, Camphir one drachme, white Wax three drachmes: melt the Wax and the oyl of eggs with the pownded Colofony, and then temper the other things pownded amongst it. If it be too hard, add a little Turpentine unto it.

Item, take clarified Hony eight ounces, fine meal two ounces, Linseed oyl three ounces, fine Bolus one ounce and a half, make a plaister thereof, and lay it upon the wounds: for this is also requisite the plaister *Gratia Dei.*

Vulneral Salves. S. 7.

There be also many kinds of Vulneral Salves prepared, amongst which this ensuing is one of the principallest, which is called *Unguentum Fuscum*, and is made thus: Take oyl of Violets nine ounces, Wax two ounces, Colofony one ounce, plume Allom three quarters of an ounce, Pitch, *Sagapenum*, and *Gummi Arabicum*, of each one ounce, Mastick, Galbanum, *Ammoniacum*, *Bellinum*, *Opopanax*, Frankincense and Turpentine, of each three quarters of an ounce, the oyl of Violets and Wax are you to melt and to let it seeth thoroughly: afterwards temper the Pitch and the Colofony with the dissolved gums amongst it, and when it beginneth to be cold, then mix the rest with it. This salve is somewhat attractive, cleansing, and also healing.

This ensuing is said to heale all wounds: Take Turpentine three ounces, Wax seven drachmes, oyl of Camomil, and oyl of Roses, of each one ounce and a quarter, Frankincense and Mastick, of each one ounce, Myrrh and Rosin, of each half an ounce, good red Wine and Vinegar of each three quarters of an ounce: let the gum be steeped the space of 24. hours in the Vinegar and Wine, afterwards melt it upon the fire with the Wax and oyl, then let them seeth until the wine be almost all wasted, when it beginneth to be cold, then temper the rest amongst it, and work this salve with your hands, yet the same being first anointed with the oyl of Mastick.

This salve cleanseth all wounds, it causeth the flesh to grow, and healeth also very much. Another, which is also very good.

Take Lovage, *Bistorta*, Sage, Plantain, Yarrow, Elecampane leaves, wilde Tanisie, Sanicle, Cinkquefoyl, wild Beets, Mallowses, Betony, Agrimony, Vervein, and *Consolida Sarracenic*, of each a like quantity: shred all these herbs, and then put sufficient sweet Butter unto it: Afterwards stamp all these herbs together, and let them so stand certain dayes.

This being done, make it afterwards warm, and presse it out hard and then let it seeth so long together until the juice of all the herbs be consumed, then put unto it Oxe suet, Harts suet, Bucks suet, the marrow of an Oxe, Wax, Rosin, and Turpentine, of each a like quantity, according to the quantity of the Butter and afterwards

wards melt them all together: when it beginneth to be cold; then put unto it Frankincense, Myrrhe, Fennegreek meal, Allom, Verdigrease, and Mastick being beaten small all together, then stir it much together. Another which is briefer; take Oxe suet, Harts suet, Wax, Turpentine, Hony, Lovage, Violets, Betony, Agrimony, and wild Tansie, of each as much as you please, stamp the herbs and wring out the juyce, afterwards see the it in the suets until it be as thick as a salve: Item, take Rue, Sulphur, *Chamaleon niger*, of each a like quantity, and Oxe suet, as much as will suffice for to make a salve.

For to draw matter out of the Wounds. §. 8.

Take Wax one ounce and a half, Rosin three quarters of an ounce, Harts suet one ounce, Turpentine and Sallad oyl, as much as is needful for to make a salve or plaister; or take clarified Hony, and Turpentine washed with wine, of each half an ounce, oyl of Roses two ounces, let it seethe together until it be thick. This cleanseth the wounds of all kind of matter, and withstandeth all affluxions. But if there be any heat with it, then take in stead of common Hony, Hony of Roses, but temper not the same with it, until the other be first boyled.

Of the Taints. §. 9.

If you think that the wounds will heal too soon, then cut a dry root of Gentian for a taint as big as you please, and use the same in stead of a taint; for when the same waxeth moist, then doth it swell, and holdeth open the wounds as long as you please, and it is wholesome of itself. Anoint also the taint with the same *Apostolorum*, or *Egyptiacum*, which be both very meet to keep open all wounds and ulcers, and also to cleanse them.

For foul flesh. §. 10.

Now these two be contrary; of the first mentioned salve the plaister *Gratia Dei* letteth no foul flesh grow in the wound; so also doth the oyl of Tyles. Item, take burnt Allom, and fine Bolus, of each a like quantity, and strew it therein. Or take Verdigrease, and Trochiskes de *Chelidonia*, of each a like quantity; make powder thereof and strew it therein. For this is also very meet, burnt Harts bones two parts, Salt one part, and use them as before. Take the juyce of *Narcissus*, of Plantain, and garden Mints, and the juyce of Rue; all these juyces or those that you can get may you take and use. Item, burn Birchen rinds to powder, and temper it with burnt Allom, or use each alone. If so be that then there grow any worms in the wounds, then temper the juyce of Rue with vinegar and drop it therein.

To stanch the Synovia. §. 11.

Take the white of an Egg and put a little Saffron amongst it, afterwarward beat them wet together with a piece of pownded Allom the bignesse of a Hasel nut, and lay it upon the place whence the *Synovia* issueth.

Another, Take the white of an Egg, and mingle therewith Allom, and Salt, of each one drachme beaten small, and then use it as the other.

Item, burn Lentils to powder and strew it therein; afterwards take Turpentine and Sallad oyl, let them heat together, and then mix therein the burnt Lentils unto a salve or plaister; or take Hempseed, pownd it until it yeeld oyl, afterwards lay it in a fine cloth over the diseafe and bind it unto it. Item, take the water of the greater Pimpernel and drop it therein. Item, take Strawberry leaves, and apply them unto the place. Or take the fruit of Roses, dry them, stamp them to powder and strew it therein.

When a wounded member is lamed. §. 12.

For this do the Chirurgions use this ensuing: Take Cow dung and Goats dung, make a plaister of it with the oyl of Earthworms, and so lay it warm unto it: by this means do the shrunken sinews wax loose. But look in the fourth part the seventh Chapter, and second

second §. what is written of the lamenesse and extenuation of the members. The like also in the 3. Chapter of the Pox, where you shall find good direction of this matter.

To cause the flesh to grow in wounds. §. 13.

THe Grecians and the Physitians do call the things which cause the flesh to grow *Sarcotica*, which be for the most part dry in the first degree: for if they be overmuch drying, then will they not onely dry the humours which do fall into the wounds, but the blood also, and the whole substance of the part. This salve following is very requisite for it: Take Hony six ounces, see the and scum the same until it be a little thick; afterwards temper therein Myrrhe, *Sarcocolla*, and Aloe, of each one drachme and a half, pound all together to powder.

Item, take the Lytharge of Silver, refuse of Iron, Centory, Aloe, Frankincense, and Mastick, of each a like quantity, make a subtil powder of it. For this is also meet the plaister *Album coctum*, *Triapharmacum*, and *Apostolicon*, which all together ingender flesh, and are prescribed for the same intent. For this also be these plaisters following to be used, viz. *Emplastrum griseum*, or *de lapide Calaminari*, which is thus made; Take prepared *Calaminari* half an ounce, Lytharge of gold one ounce, Cerusse one quarter of an 3. Turp half a drachme, Mastick one drachme and a half, Myrrhe one drachme, Camphire two scruples, make thereof a plaister; if it be too hard, put more Turpentine unto it: this plaister dryeth, causeth flesh to grow, healeth and cicatrifeth all wounds. The other; Take prepared *Calaminari* four ounces, Mastick, Frankincense, and Dragagant of each one drachme, the Lytharge of silver half an ounce, Wax three quarters of an ounce, Rosin half an ounce, prepared Turp two scruples, and oyl of Roses as much as is needful, this is somewhat weaker then the other. The salve of Turp, *Diapampholigos*, is very meet for this use, so is also the salve *Apostolorum*.

Of that which causeth the Skin to grow. §. 14.

AT last if you perceive that the flesh is grown so high, that there wanteth onely cicatrification, then are things to be used which have an astringent vertue, and which do dry exceedingly without corrosion. For which be most fit all the salves of lime which be described in the fifth Chapter, and first §. In like manner also the five white salves which be discovered in the ninth Chapter, and first §. and the last mentioned *Diapampholigos*. This powder following is exceeding good for it: Take Lytharge of silver, burnt Allom, washed Lime, burnt Lead, Gals and Pomgranat peels, of each a like quantity, strew it upon the wound; for this also it is very fit that the wounds be washed with Wormwood wine, or Rosemary wine. Concerning the wounds of the head we have written somewhat in the description of the scull in the first part, the fourth Chapond in *Saggenia*.

The eight Chapter

Of the Cicatrices and spots of the Skin.

WHen there hath been any body wounded, or hath had some other exulceration healed, then will there remain on the same place some cicatrice or mark. For as hath been admonished at the first, the skin doth never more heal of it self, but there must grow a new skin. Also it happeneth otherwhiles, that new-born children do bring spots into the world. And because that the same are placed in the face they do make a great deformity, therefore we will also discourse of them.

Amongst the Grecians be those spots that be called *Leuca*, and by the Latinists *Vitiliginis*, which be white spots of the body. Item, there be also black spots of the Leprosie. Of the spots which appear in the face we have written in the first part, the 5. Chap. and first §. which remedies may also be used over the whole body. But because there be so many kind of sorts, we are to write the more at large of them.

Of the moles or marks that children are born withall. §. 1.

IT hapneth also many times, that new-born children do bring with them into the world certain spots or moles, which are caused by some frightening, strange lusts, and such like, which women (being with Child) may get, as by experience hath oftentimes been seen. Chew in the morning fasting Mustard seed, and anoint therewith the spots, do this oftentimes, then will the spots wear away: but look diligently unto it, that it come not into the child's eyes; also breath not into his eyes.

There come also otherwhiles certain markes and other red spots of the skin, for which, the *Basilica* is first to be opened, and afterwards some cooling sirupes, and other cooling potions, but we will write and discouse severally thereof.

Of red spots through heat. §. 2.

OF these spots we have before admonished in the first Chapter, and 4. §. that all that may be used for it which is ordained for the Rose, or *Erisipelas*. But if so be that this be caused through some uncleanness of blood (as it commonly hapneth) and that notwithstanding there be no special heat instant, then can no better thing be used for it then the sirupe of Fumitory, and all that may be made of that herb; for that herb hath an especial vertue to cleanse the blood, and to take the itch of the skin. Afterwards are you to use this salve following: Take unsleckt lime, and prepared *Tuty*, of each one drachme, oyl of Saint Johns wort two ounces, and a little Wax, then temper them all together. Or take Camphire, and bruise it with an Almond, then temper the same with Rosewater, and anoint the spots therewith. Take oyl of Eggs as much as you please, and temper amongst it a good part of bruised litharge of silver, then anoint therewith the spots; this driveth them away how lothsome soever they be.

For this is also very fit the oyl of Juniper, and the oyl of bitter Almonds, and of each alike, or each apart. Also you may use for this maidens milk, *Lac virginis*, which is described in the first part, the fifth Chap. and 1. §. Item, take Hellebore two ounces, stamp it to pap, and put thereto as much of the juyce of Agrimony, and a little Rosewater, then rub the spots with it. Or litharge of silver, take burnt Allom, burnt Lead, washed Lime, Gals, and Pomgranat blossoms, of each one drachme, and make a powder thereof.

Of spots which come by falls. §. 3.

BEfore in the first Chap. and 6. §. is a salve described, beginning thus: Take the caul of Goats, &c. which is especially good for all spots, and very safe.

Of spots by stripes or falls. §. 4.

FOR this, you have in the first part, the fifth Chapter and 5. §. two good remedies, without which, you may use these ensuing, which may be rather used upon the whole body then in the face, because that Orpiment is somewhat venomous; Take the juyce of Marjoram gentle two ounces, Orpiment half a drachme, oyl of Camomil one ounce, make a salve thereof. Item, take Wormwood three handfuls, *Asarabacca*, and Plantin, of each two handfuls, Salpeter, and wild yellow Rape seed, of each three drachmes, Comin, and Sulphire vive powdered small, of each three drachmes, Saffron one drach. two well brayed yolks of Eggs; make a plaister of it with the juyce of *Solidago media*, until it be decocted hard enough. But if the foresaid spots be without heat, then are to be used for it all kinds of fat of beasts, and of all fowles, or the plaister *Diachilon* molten amongst it, and so used. Item, take fresh Butter, and the decoction of Mallows; temper the Gals of Capons with the white of an Egg, and use it as the other. In the fourth part, the 7. Chapter, and 3. §. is a salve beginning thus: Take Sage, and Mallows, &c. which also is very good for all kind of spots.

These things following be also much commended, as the oyl of bitter Almonds, of Juniper, Citrons salve, the fatnesse of an Asses neck, and M. Tristrams water.

And

And to conclude, we will describe a strong salve, which taketh away all spots, and softneth all hard swellings, and doth also consume the same. Take the roots of wild Cucumbers, the roots of white Behen, the litharge of gold, and Argal, of each one drachme and a half, *Sagapenum*, and Pigeons dung of each one scruple, oyl of *Sasamum* three ounces, oyl of Juniper, and oyl of wheat, of each two ounces and a half, white wax one ounce and a half, seethe them together in four ounces of the juyce of Orenge, until all the juyce be spent: take afterwards the white of an Egg, small bruised Camphire one drachme, Vinegar 12. ounces, wash the rest with it, after that all is well tempered together; and afterwards use this salve.

The ninth Chapter.

Of inward things which spread themselves over all the body.

WE have taught before of all outward accidents, which outwardly do infect the skin: but now will we write of those things and parts which are spread within through the whole body, which hold the same together, underprop it, and sustain the body upright; these are the bones, veins, and arteries, with the blood that is in them, and all that concerneth them; how the same is to be clenched, and when it runneth overmuch, how it shall be stopped; how it shall be letten out, and his naturall heat cooled. There shall also be discoursed of the sweat, as a superfluity of all humours. Afterwards we shall discourse of the sinews, of the tendons and ligaments.

Item, of the flesh, and chiefly of that which we do call the muscles. For as much as wearisomnesse, fatnesse, leannessse, sleep, pain, *Phlegma*, or slime, with many other cold diseases, as well as the blood, *Cholera* and *Melancholia*, may be dispersed in the whole body, and that the blood hath no certain place in the body, as the *Cholera* in the bladder of the gall, and *Melancholia* in the milt: (of which two hath been written in other places) therefore we must not pretermitt to write of the nature of *Phlegma*, and must first begin with the bones.

Of the bones. §. 1.

THE bones of the whole body be (as it were) the foundation and stay of the body, and also the hardest parts which be in it. These are ingendred of the heat of the body, which drieth the moisture, and hardneth the bones. *Plato* supposeth that their beginning is of the marrow, which should be so dried away, and hardned through heat: wherefore *Empedocles* doth ascribe the most part of them to *Vulcan*, that is, the fire. By nature they be dry, earthly, cold, hard, without blood, and also without feeling. They do get their beginning of the uppermost part of the back bone, which stretcheth it self even to the thighes. They be also hard knit together, and bounden through the sinews & ligaments, that there is not one amongst 248. (or as *Albertus* reckoneth, amongst 276.) that are in mans body, the which is not fastened to another bone. When these bones be broken, then do they not grow together again in the own substance, but by a certain liquor, which the Grecians do call *Poros*, the which hardneth there so sore, that therewith the whole fracture groweth together again. But whensoever that these bones do break, or get any other disease, then look what we have written thereof in the fourth part, the ninth Chapter, and second §.

Of Napta. §. 2.

IT hapneth also sometimes that in certain places of the body such a matter is gathered, that doth so harden and grow out of some bone, that it seemeth to be a right bone, which in Latine is called *Napta*, and although this ought to be cured by Chirurgery, we will nevertheless ordain this for it: Take Frankincense one ounce, Mastick five drach. Cerusse three quarters of an ounce, quicksilver half an ounce; temper them all together with four ounces of Swines grease, and rub therewith the *Napta*, at the fire very hard, not regarding what pain soever it doth.

The

The tenth Chapter.

Of three kinds of Veins in general.

He Veins are described by *Galen* in this manner: The Veins (saith he) are a sort of the blood, tempered and mixed of blood and natural spirits, moist and warm, with great sensibility. And under this name are comprehended three sorts; to wit, blood veins (called by the Latinists *Vena*) Arteries and pulse veins, *Arterie*, or *Vena pulsatiles*, for that they beat continually.

Secondly, the nature of these veins is warm and moist; what difference there is between both these sorts of veins, besides the beating, that shall appear in this description following; the Anatomists do account 365. veins in a mans body.

Thirdly, there be sinews, which be also comprehended under the name of veins; which have no fellowship at all with the blood veins, but only that they do lye spread over all the body, whereof in case that one lose her motion and feeling, then will forthwith the whole body, or some part of it (according to the quality of the disease) be without might, and and deprived of all motion.

Of the blood veins.

Now for to describe these three sorts of veins, we will first of all admonish of the blood veins, which are called of the Physicians and Anatomists *Quiera*, which are still veins, and that by reason they be naturally quiet and without motion; for when they be moved, that is done by some outward cause.

Albertus and *Aristoteles* would maintain and defend against *Galenus*, that these veins did take their off-spring from the heart: But according to the opinion of *Galen* and *Hippocrates*, have they their beginning in the Liver, which question we will leave to the Anatomists to be decided. But we will shew here in brief what hath moved *Hippocrates* to ascribe the beginning of these veins unto the Liver, viz. for that in all creatures (which have blood) there is no greater vein then the Liver vein, which appeareth none otherwise but as the body of a tree, which is thickest beneath in the ground, and at his beginning, and besides his root stretching forth wide and abroad, and the branches above do spread themselves again in many sprigs or twigs. And thus it is also with the arteries, wherefore the foresaid authors have also affirmed, that the Liver is none other thing but like to a root and fountain of all other veins, so that she doth impart her blood first of all to the heart, as to the most noble part of the body. This is now sufficiently spoken in general of the blood veins, whereof we will speak and discourse more at large hereafter.

Of the Arteries.

Hereof *Galen* writeth thus; the Arteries are vessels of the thin and clean blood, wherein are more natural spirits or ayr, more heat, dryth, and feeling, then in the blood veins, which remain alwaies panting and beating.

They have their off-spring of the left concavity of the heart, and the first branch a little off from his root is parted in twain, whereof the one part goeth upwards, and the other downwards, where (in both places) the foresaid blood-veins are spread abroad, with divers small veins, so that there be few arteries without veins. This altogether is most diligently described by *Aristotle*, *Galen*, *Albert*, and also of *Walter Riif*, and at last with lively figures it is apparant to the eyes.

These arteries or pulse veins be by nature (as is said) much hotter, dryer, thicker, sensibler, and harder, then the blood veins: Partly like unto the nature of the sinews; they also receive some blood, but it is subtiler and fairer then the blood of the veins; they be also much more replenished with vital spirits then the veins, which is also a cause of their continual panting and moving, which happeneth so forcibly, that the same is outwardly felt over the whole body, and especially on the hands, feet, temples of the head, and on other places more may be seen and felt. All Physicians may deeme thereby,

whether the nature be strong or feeble, and all according as the pulse beateth swift, slow, hard, soft, steddye, or very trembling.

The ancient Physitians have been of opinion, that both these sorts of veins, and especially the arteries (if they be cut or chopt off) could not be consolidated again, yea that the heart veins be utterly incurable. But *Galenus* acknowledgeth utterly that the same could hardly be effected in men that be old, but in young people otherwise. Of women and young children doth he admonish that one should not be discouraged; for that he had (saith he) healed enough himself that were wounded after this manner. For this be also before many good remedies in the second part, the fift Chapter, and 18. §. if a vein be broken in the breast or any other place, which may also be used inwardly and outwardly for this purpose.

In like manner you may also use for it this confection insuing; Take Henbane seed, and white Poppy seeds of each one ounce and a quarter, Sealed earth, and red Coral, of each five drachmes, old conserve of Roses, the older the better, four ounces; temper all together, and take thereof morning and evening each time half a drachme and no more; this is very good and also forcible for all kinds of bleeding. When as now the veins do swell be it of whatsoever cause it will, then anoint them with Treacle or Mithridate.

moderated (which is to be used) Of the Blood. §. 3.

IT is sufficiently known that mans body is joyned together of four kinds of humours or complexions: to wit, of blood, *Cholera*, *Melancholia*, and *Phlegma*: but amongst these is the blood one of the best, partly, for that it is the matter of the vital spirits, wherein life it self hath his being, or for that it is to be compared with the beginning of life, because it is by nature warm, and moyst: or because it hath more vertue to nourish and to sustaine, then any of the other humours.

In fine it is such a Jewel of nature, that if the same be taken away then death doth ensue.

Cholera and *Melancholia* have their proper places or residencies in the body, wherein they do gather themselves, as we have of late declared, from which places they do also shew their power in the ingendring of sicknesses.

But the blood and *Phlegma* are so divided into two parts of the body, that one cannot so soone open the skin in any place, but immediately the blood doth issue forth, and that the veins be the vessels and habitation of the blood, hath been declared before: without the which there can also be no blood found, except in the least concavity of the heart. Whereof *Albertus* hath been of none other opinion, but that the veins do begin there, and not in the liver.

The nature of the blood is hot and moyst: yea so hot, that in the whole body there is nothing hotter: and to the contrary nothing colder then the *Phlegma*.

Therefore this hot and moyst blood is given to all living creatures, not onely for a nourishment of all members of the body, but also to maintaine them by their natural warmth, and no otherwise. For example, good wood is laid upon the fire for to warm a whole chamber with it; in like sort also, as the fire is abated and his burning taken away, if the same be overcharged with too much wood, or if the wood be too moyst; also if the wood be pluckt away, or too little laid upon it: so is it with the heat of the heart, that if the same be too much, or too little; likewise overcold, unmeasurable hot, or is too feeble. When the heart shall feele these kinds of diseases then will all the other members of the body be partakers thereof.

It is also the opinion and censure of all learned that the blood is the most principal meanes in the mothers body, whereby the heart as the chief part of the body, hath his beginning.

Concerning his nature and property, then is this not a small miracle of nature, that it hath no feeling of it self; neverthelesse it is cause of the same and of life also. And it is found by daily experience, that if there run much blood from any creature, that thereby come swoonings, yea the life it self runneth out with the blood.

Neither is the blood alike in all men, nor in all members; it getteth also through age many kinds of nature. In children it is thin and watrish, in youth hot and sharp, in men at the fullest and best of all, and all these foresaid very much and abundant.

In age there is but a little, thick and black, and clotting very suddenly as well inwardly as outwardly upon the body.

In like manner it is also sure, that how fatter a body is, so much the lesser blood hath he, for that is through the fatnesse consumed, as is seene, that all fat hath no blood in it. Contrarily, how much the leaner, so much the blacker is the blood. Besides these is also womens blood much grosser and blacker then mens blood, and women have also lesse blood in the outward then in the inward parts.

Moreover, there is no creature fuller of blood amongst all them that have received life; then women, wherefore nature doth unburthen them every moneth of all their superfluities of the blood, and they are lesse subject then men unto all sicknesses which proceed of blood.

Albeit it happeneth (yet seldome) that they bleed at the nose, or by the Hemorrhoids, then do they quickly find, that they have their terms the lesse.

Secondly, the blood also in the Heart, Lights, and arteries, is much subtiler then that in the veins: The grosse blood is drawn away by the flesh, whereby the foresaid blood is more subtiler, thin and scummy. The upright good blood, which is without any disease, is light red, sweet in tast, and not too thick, and in that estate it may be sustained and augmented by good meat and drink, if one take abundantly thereof: but to the contrary, it will be diminished through want of those things. The blood doth especially increase by good strong wine moderately drunken, it maketh the same also faire and fresh, and especially the wine which is thick red, for that wine behoveth not to be much digested.

In fine, according to that the food is good or bad, thereafter is the blood qualified: for the fatter it is ingendred from this proper nature, so much the blacker it is. If the same spoyle through abundance, then will in the broken veins be knots called *Varices*; whereof we have written in the first chapter and seventeenth §. of the 5. Part: or it will be expelled through the bleeding at the nose, or through the Hemorrhoids: also it is oftentimes altered in impostumations and corruptions. What diseases are caused of the corruption of the blood, that shall hereafter be taught and declared.

Amongst all living creatures is the blood of man the most subtiler: as to the contrary; the Asses blood the most grosse. So long as it doth remain in the body, it doth keep his warm and moist nature: but as soon as it is out, then doth it thicken, yet one mans blood more then another, whence afterwards you may separate the little hairens or *Fibra*. The blood of a Steer is so hard, that being drunken it is a deadly poyson.

Contrariwise, certain beasts blood doth not thicken at all, viz. Hares blood, Conies blood, Harts and Hinds blood, the blood of Roes, of Swine, of Goates, and such like more. The Philosophers opinion is, that all grosse thick blood doth give strength, subtiler and thin blood, wittinesse, little blood, feare, and very little wit.

But for conclusion, this ensuing is a marvellous property of the blood, that nature hath placed such power therein, that the countenance of a man is altered in the twinkling of an eye, as happeneth in great anger, shamefastnesse and such, through the course of blood.

Contrarily, if the same depart from the face, it sheweth feare and fright. And in these alterations of the palenesse and rednesse, doth keep such a difference, that thereby may be adjudged and known, how the heart and mind of man is disposed within.

Whereby the blood may be cleansed. §. 4.

Albeit that we have taught enough for all sicknesses, which be caused through the uncleannesse of the blood, by what meanes the blood may be cleansed, yet can it not but be necessary to discover certain things here which be meet for the same. And first, what things they be: the confected Nutmegs are especially commended for this, because they make very good and haile blood. Neverthelesse it is not advised, that they which be of hot nature should use the same, unless it be very seldome.

We have also declared in other places, that there is nothing that cleanseth the blood more then Fumitory, and all that is made of Fumitory, as conserve, syrup, juyce, water, and especially if the same be decocted in Whay of Goates milk.

Rosemary is highly commended for it. In the first part, the second chapter, and first §. is a powder described, beginning thus; Take Sene leaves which is also marvellous good for this purpose. Concerning the drink, we have told before that there is nothing better then good red wine.

Amongst

Amongst herb-wines, the Burrage Wine, Wine of Buglosse and of *Tamariscus* is commended: for this may you look also into these places ensuing, where there be divers and sundry things described, whereby the blood may be cleansed, as in the third Part, the 11. Chapter, and sixt §. Item, in the fifth Part of the ulcers and of scabbednesse, which be commonly caused of unclean blood, as also of the Pox and the Leprosie, hereafter shall be spoken of it in the description of *Phlegma*.

How the abundant bleeding is to be stanchd. §. 5.

Also there is nothing to be written of this abundant bleeding, but onely to alledge certain places where divers and sundry remedies are set down for to stanch blood withal, as in the first Part, the 8. Chapter, and 7 §. Item, in the first Part, the 9. Chapter, and 5 §. Also in the first Part, the 13. Chapter, and 7 §. Item, in the second Part, the fifth Chapter, and seventeenth §. Item, in the third Part, the eight Chapter, and 4 §. Yet again in the third Part, the 11. Chapter, and 16 §. Item, more in the third Part, the 14. Chapter, and 11 §.

And if so be that this bleeding come upon women in childbed too fast, then look for it in the conclusion of the third part, and before in the seventh Chapter, where certain precious vulneral potions are described, in which places there may good means be found, according to the importance of the bleeding.

How to let out superfluous blood. §. 6.

It is no lesse needful in many men to take away the superfluous blood, whereby nature is overcharged, and many sicknesses caused, then in others to increase it, and this happeneth most conveniently through letting of blood, through application of boxing cups, or through fastning of leeches.

Of the letting of blood we have spoken at large in the Introduction, and also written of the sixteen veins of the body which are wont to be opened, and likewise in what sicknesses each of them is to be opened, whereby each one that readeth it, shall find a good direction.

The second means whereby this noisome blood may be taken away, are the cups, whereof we have discoursed at large in the foresaid Introduction. Also in like sort of the setting on of the Leeches, thither do we direct the Reader, and so conclude this Chapter.

The eleventh Chapter.

Of the natural warmth of mans body.

BEcause we have now written of the veins, and also how the same do spread themselves throughout the whole body, and other things concerning this, therefore we will admonish of the natural heat, which with the blood is imparted unto all parts of the body, for that the blood and the natural heat be so linked one with another and befriended, that one cannot continue without the other, but death must presently ensue: Yea there is also none other thing that giveth shape in the beginning to all living bodies, and afterwards causeth them to increase to the hour of death, but this natural heat which is born with us.

This is the only cause of all working: and it is known, that all that groweth and increaseth, yea also all herbs and plants must have their nourishment thereby, and each according to the right property of his nature which giveth to each thing according to his need, both moysture and drouth: but how were it possible that the same may be concocted and altered for the sustenance and increase of mans body, if there be no natural warmth with it? This natural warmth doth maintain all health, and consumeth all bad humors, it consumeth also meat and drink, whereby all inward parts do receive their power and strength, and also are made apt to do all things whereto they were created.

The

The hardned skin will be mellowed and made thin through this natural heat, all wounds and ulcers be brought to natural matter, it swageth the pain, it looseth and softneth all contracted sinewes. Item, this natural heat is that which causeth the wounded head to heale, and freeth it from all his heavy accidents, dryeth the moysture of the same, expelleth all corrupted bones, and taketh away the venom of all corroding ulcers. This naturall warmth doth warm all frozen members, it helpeth all diseases of the Matrix and privities, &c. The same natural heat doth heale all broken bones. But how may that be better seen then by daily examples, which we have daily before our eyes, and as it appeareth in old folks; for it is seen that how much the natural heat abateth in them, so much the weaker and the more incurable do they wax of all diseases: and most manifestly in the dying, where it is cleerely seen, that how much the more the natural heat doth abate, so much the nearer is death at hand. Therefore must heed alwayes be taken that it be kept in his natural being: for if so be that the same bee too great or too small in any body, then can follow none other but heavy sicknesses, and at length death it self. The like may be seen in the Palsey, and in the Plague. Therefore we will here discover certain things which sustain this natural heat, and do increase and strengthen the same, and afterwards shew what is to be used against unnatural heat. First, there be certain Spiced Wines, Claret Wines, Hypocras Wines, and such like commended for it; but they must be used with providence, to the end that according to the quality of nature and of the age they may be prepared, that they heat not overmuch: for that the right nature of wine is, that it being moderately drunken, doth preserve and sustain the natural warmth, and strengtheneth the powers of men. The same doth also Elecampane Wine, and confected Nutmegs used morning and evening after meate. The conserve of Rosemary doth warm all those which be half dead. But what need is it to write so largely thereof, seeing there is no sickness, which cometh through cold described in all this book, wherein hath not been taught how this weak natural heat, might be holpen: Hereafter also shall be spoken of the *Phlegma*, and by that meanes also of cold, and what is to be done for these cold diseases where further advertisement may be sought for.

Of Unnatural heat. §. 1.

IN all hot diseases which have been discovered hitherto, be meanes every where declared, wherewith this unnatural heat might be quenched and flaked. But we will here not onely alledge the passages where the same is taught, but also declare what may be meet for it. For this are sundry things described, as the cooling salve *Galen*, the salve of Roses, the salve of Saunders, and the Pomade. For this is also good the Poplar salve, all which you may mix as you please, or use each alone.

In like manner these oyles following, as of Poppy heads, of Roses, of Violets, and of water Lillies, which do coole more then the oyl of Roses, or oyl of Violets. For an outward application, take the water of Corne Roses, and of Nightshade of each two ounces, sealed earth, and fine *Bolus*. of each one drachme, Camphir ten graines, temper them all together and lay it upon the forehead, or where the heat is.

One may use inwardly the conserve of Buglosse, of Burrage, of water Lillies, of Violets, of Cicorie, of red and white Roses, confected Cherries, and conserve of Barberries.

Item, confected roots of Cicorie, Framboys, confected Peaches (which one may use in all hot sicknesses) and Prunes that be confected. Item, fresh Cassie is very necessary in all unnatural and sharp heat.

The sower Dates do coole and purge very mildly, and they do also quench the thirst. The simple things be Lettice, Endive, Cicorie, and bread that is steeped in cold water, Fishes, Limons, Oranges, Pompeons, Melons, sweet Wine, Peares, Apples and Cherries, &c.

These foresaid things are not only to be used in hot sicknesses but also to take them moderately being in health in hot times. There is also a syrup made of the juyce of Oranges, of sower Pomgranates, of white Roses, and of Sorrel, the which do coole much in the time of the Plague, and in all pestilential sicknesses, which do inflame the heart and the stomach.

The syrup of Roses laxative doth especially coole all heat of Agues: Likewise also the syrup of Verjuyce, of Violets, of Endive, and Vinegar.

In like manner also *Oxycraton*, *Oxyfacchara*, Julep of Roses, and of Violets: the Honey of Roses hath a meetly cooling nature, therefore the same may also be used in hot Agues.

When the Patient desireth to drink in great heat, then be some of these foresaid sirupes to be tempered amongst it, for which the sirupe of Violets, of Burrage, and of Roses, be the most principal, if the same be tempered with Well water, or any cooling potion. The same doth also fresh Well water alone.

Item, Barly water, or Henbroth dressed with Endive, watred wine, Henbroth with Sugar and Barly, and the water of Larks spur drunken three or four times a day; these beforesaid do take away the unnatural heat, whether it be in the Plague, or in any other hot agues.

Take water of Larks spur and of Buglosse, of each two ounces, Cicorie water one ounce, drink twice thereof morning and evening: it strengtheneth and cooleth also the heart in all hot things.

Take a handful of Raisins, stamp them to pap, and pour upon it eight ounces of water of Buglosse, Cinamom one drachme, then wring it through a cloth, and afterwards take it, or give it to drink with Almond milk.

But if so be that some unnatural heat do assail you without any special sicknesse, then is this ensuing to be used for it: Take a black Cockrel of a year old, chop it alive one part from another, take the Liver, and stamp it very warm in a mortar, then temper with it womans milk of one that giveth suck to a boy, afterwards wring it together through a cloth, and give thereof to the over-heated body two or three spoonfuls. Some do commend this very highly, and it may be tried without peril.

Item, the juyce of green Nutshells be very good against all accidents which may be caused of heat.

The twelfth Chapter.

Of the Sweat in general.

After the description of unnatural heat, we are to write somewhat also of the sweat (which is contained in the corrupted blood) and pierceth through the whole body. The same is thus briefly described of *Galen*: Sweat is a cleansing and an excessive moisture which is mixed with the blood as the Whay is with the milk. Other do expound it more at large. The sweat (say they) is a moisture, which is caused of the vapours of the body, which spreadeth it out to the uttermost parts of the body, and penetrateth out through the skin, whereby the blood is unburthened of much uncleannesse, whereof there be two sorts, the one natural, which in great sicknesses is a good sign or *Crisis*, which kind of sweat doth break out also upon men through great labour, or in Sommer time, and is a wholesome and healing sweat, which bringeth great ease and lightening with it. The other kind of sweat is unnatural and also hurtful, as is seen in them which suffer great pain, or that lye a dying: therefore it is not unjustly said (as also the truth is,) that sweat is a sign of all the moistnesse which reigneth in the body. For when as the sweat breaketh forth excessively, then is it a sign of great abundance of subtile moistures, and of the strength of the expulsive vertue. Like as to the contrary, a little sweat giveth knowledge of the toughnesse and thicknesse of the same, or debility of the expulsive power. If so be that the sweat be red, then is it a sign that the blood hath the mastery: but if so be that the sweat be yellow, then hath *Cholera* the preheminnence; or if it be white, *Phlegma*; and if it be blackish, *Melancholia*. And if so be that the sweat stink, then must the blood also in the veins whence the said sweat cometh, stink also. Item, these differences may be perceived by the tongue, that when one will prove his sweat, and the same be sweet, then is it a sign that the blood reigneth; and if bitter, then *Cholera*, &c.

The causes of the sweat be over-hot ayr, great labour, warm weather, bathing, to go too hot clothed, and a moist body. But commonly it is caused through great rioting which is lately committed: the first cause will be taken away, if one beware of labour, and tarry out of warm ayr, &c. The second through purging; but the sweat may come of

of whatsoever cause that it will, it is alwayes very profitable for a moyst body, and healthful; therefore is the same to be required in many sundry perillous diseases, viz. in franticknesse, *Phrenitide*, in which the sweat is especially very meet if the same be excessively expelled.

The Physitians which be very expert have taken through the sweat no small signification of life or of death, and especially in those dayes which they call *Criticos*, which be these ensuing, that do yeeld also a good prognostication of health. The 3. 5. 7. 9. 11. 14. 20. 21. 24. 27. 30. 31. 34. and 40. the other which cometh between these foresaid dayes do signifie to the contrary a long continuing sicknesse. This sweating is also every where common with all Agues, and especially in all hot Agues, but after a severall or different manner; for if the sweat be cold, and that it be onely about the head, in the face, and in the neck, then it is a very bad sign; if it come with a sharp Ague, then is it a sign of death, or cometh it with a mild Ague, then doth it signifie a lingring sicknesse; by which it also signifyeth that where the sweat doth break out, there the disease and the sicknesse is. Moreover we will add this unto it, that when the blood is unmeasurable moyst, thence springeth alwayes a very greivous sicknesse, for that thereby it will be waterish (like as the Whay of milk) retaining neverthelesse the red colour, whereby it cometh also that a body sweateth blood otherwhiles.

For sweating be also these rules ensuing prescribed. First the sweat is not to be moved before, and ere that the matter be purged whence that this is provoked, and so long as the Patient feeleth ease thereby, and be not over much weakned. Secondly in consuming maladies, as *Hedica* and *Phthisis* sweating is not meet. Thirdly, if the sweating get so much the mastery, that a body is thereby weakned, then is the sweating to be caused to cease by uncovering or taking away the coverings. Or doth it come through over much heat: then is the Patient to live soberly, and fast. But if so be that it do come through repletion of the body, then is the same moysture or humour which causeth the sweat to be purged. Afterwards is the body to be anointed with this salve following: Take Roses one ounce, red Saunders, blossomes of Pomgranates, Galles, and Mirtle leaves, of each half an ounce: seeth all together in four and twenty ounces of water until the third part be spent: afterwards strain it through a cloth, and put unto it six ounces of the oyl of Roses, and then let it seeth so long until all the water be consumed, afterwards strain it through a cloth.

With this salve is the Patient especially to anoint the side and the breast. He is also to drink oftentimes Julep of Roses, and of Violets, and to moysten the breast sometimes and the sides with cold water, and also to sleep alone, but upon no bed which is filled with feathers, and that but light covered.

This sweating causeth also sometimes swooning which is not without danger. This Patient is not to be bounden, rubbed, nor to keep in his breath, like as is done to others which fall into a swooning by some other cause: for that the foresaid things do drive out more matter and sweat out of the body. For this also is wine to be eschewed, for that it expelleth also sweat: but the face is to be sprinkled with Rosewater, and with well water. The Patient must also refrain from over hot labour, and not to cover himself too much. He must set his bed in a cold place, and hang the same with cold odoriferous things, as Roses, Saunders, Camphir, Quinces, Waterhillies, and such like.

Whereby the sweat is provoked. S. 1.

AT the first are the pores to be opened, as doth the oyl of Camomil, and of Dill, if one be anointed therewith: or take Pepper, Cinamom, Calamus, *Rapontica*, *Pieretrum*, Rubarb, Costus, Cassie wood, Balsam fruits, Marjoram gentle, and the juyce of white Mints: temper some of these foresaid things together and seeth them with Sal-lad oyl in wine, anoint you there-with, it causeth a man to sweat.

Further, these things following are to be used before one go to bed, therewith to expel the sweat, to wit, half a drachme or a whole drachme of Treacle or Mithridate. Item, take an Onion, and put good Treacle unto it, afterwards rost it soft in hot ashes, and eat a good deale thereof, then lay you in bed to sweat therewith, and afterwards dry your self clean with dry clothes.

For bathing, he is to take the quantity of a nut of conserves of Rosemary, or conserve of Fumitory, both of them do expel sweat: the conserve of Eldern is berries the common peoples phylick for this purpose. Item,

Item, take Rose water, Wormwood water, and Rue water; of each a like quantity, and use thereof every morning a good draught: or take one ounce of Ginger, and seeth it in a pint of red Wine; afterwards strain it without wringing, and then drink five ounces thereof: it causeth also to sweat well, and that especially in quartain Agues. Now to the end to abate the heat, then temper amongst it julep of Violets. *Oxymel compositum* doth also move sweat.

But if one cannot sweat, then take two or three brick stones and make them very hot, and wrap them in a wet cloth, and lay first one, and then another to the feet, under the arm-pits, or the sides of the Patient, or between his legs; then will the vapour cause the Patient to sweat. And if so be that there be a stinking sweat instant, like as the stench of the armpits, whereof we have written in the fourth Part, the first Chapter and 2. §. and in the second Chapter, in the third §. then may one with the foresaid, use this ensuing; Take white Copperas half an ounce, let it boyl so long in a pint of water as one would seeth an egg hard, or somewhat longer, and wash you therewith. Also the sweat will be expelled by anointing with oyl of Quinces, or by taking of Marmalade with spice.

Of the sweat-bath and others. §. 2.

IT is very common that sweat is usually provoked by bathes, which is attempted after divers manners, and must be done for many kinds of maladies, as we have declared in many places; for which now that bathing is noisome and bad, we have also taught here and there, as the same may be looked for in the Table.

The thirteenth Chapter.

Of the Sinews.

IT is a question amongst certain learned men whence the sinews (which the Latinists call *Nervos*) have their beginning: *Aristoteles* was of opinion that they came from the heart, although it cannot be perceived that there-hence any should come: but *Galenus* with his followers do say, that the sinews take their beginning in the brains and the back-bone. And this opinion is not without a foundation and sure ground, because that as soon as the sinews be inflamed with an unnatural heat, the brains thereby are so infected, that commonly these men be distraught of their wits and understanding, yea waxe childish, and as the Physicians name it *Deliri*. *Albertus* doth reckon to be in mans body 77. sinews, as well great as small, hard, soft, and other; and therein do all learned agree, that they be all of a cold nature, yet the one lesse then the other, and also without blood, wherefore some call them the white veins. Amongst these be three principal sorts: the first which we chiefly call *Nervos*, which is sinews; the second, *Tendones*, which be the tendones; the third *Ligamenta*, which be ligaments or binding sinews. The first sort have their beginning in the brains, of both the skins of the brains, and in the backbone, the which *Albertus* calleth the Vicegerent of the brains, for that they be both almost of one nature. These *Nervi* or sinews, the which by the Grecians is as much to say as bending, be by nature a little warmer and also dryer then the veins or any other sinews, they are also more sensible then the arteries, and of such power that they frank and freely impart unto the whole body all motion and feeling.

These foresaid sinews are by nature so placed in the backbone, and his holes, which be 60. in number, and that they be spread over the whole body, giving each part his sense and action; so that each may adjudge what is hurtful for him, or paineth any whit. They do spread themselves abroad over the whole body, to wit, out of the backbone, as it were a spring, which with many sundry spouts or gutters is derived hither and thitherwards, in a pleasant garden, for to moisten the same, and to impart her water unto it: So is also our body naturally nourished with these sinews and all other veins, which (like as is said) receive their beginning out of the brains, and so descend even to the feet beneath. And although this dispersion be so bountifully and pleasantly performed, notwithstanding there come no sinewes into the bones, except the teeth, neither yet in the gristles

gristles nor in the fatnesse, nor in the ligaments (which be knitters of the members or joynts : therefore all these foresaid parts have no feeling or motion neither need they any.

When as now the forsaide sinewes are spread abroad every where in the muscles or lacerts, which (as is said) are instruments whereby we have all our motion, yet in other places, where need requireth, the other sort are, to wit, the tendones. These be of tight compacted substance, easily cut in the length, overtwhart very hardly or scant at all. When as they also (like as is oftentimes admonished) be wounded, then are they healed with great trouble. They can also abide no fire, like as the sinewes do : for whensoever one is wounded or hurt, then doth the same member loose his accustomed action, or will at the least be much weakned. It is also much to be wondered at, to wit, when a sinew is hurt, then there followeth much pain and mishap after it : and being hewed or cut quite asunder, that then the Patient knoweth not of any pain.

The tendones or lacerts be amongst these three sorts of sinewes the most hardest : contrariwise, the ligaments be the most softest, as shall be shewed hereafter. These tendones be also not so sensible as the right sinewes, and be also much bigger.

The third sort of sinewes the Grecians do call *Syndesmos*, the Latinists *Ligamenta*, (which be bonds or knitters) *Albertus* doth call them *Cordae*, that is, Cords : these have no feeling where they hold fast in the muscles or bones, but they bind onely the muscles and bones together.

Let this now suffice of the nature of the sinewes, and they that desire to have ampler direction thereof, let them look into *Aristoteles*, *Galenus*, *Albertus*, and other *Anatomici*, which have written thereof very largely.

Of hurt and wounded sinewes. §. 1.

Commonly the perished sinewes do require such remedies as are wont to be used for the increase of the infeebled warmth, and do dry hard and draw, yet without any corroding and bad property.

The wounds are also to be kept open long, and if so be that they be too narrow, then make them wider, to the end that all bad matter may run out. Besides that, all diligence is to be used for to assuage the pain. If now there be any sinew pricked in letting of blood, or otherwise, then take oyl of Camomil, of Roses, and oyl of S. Johns wort, of each one ounce, three well brayed yolks of eggs and Saffron one scruple, temper them all together, and lay it thereon.

For the Pain. §. 2.

If so be that there be any great pain in the wounded sinewes, then use these salves *Anodyna*, whereby the pain may be assuaged, whereof you may find sufficiently written in the first part, the fourth Chapter and twelfth §. in the second part, the 7. Chapter : in the third part, the sixteenth Chapter and 4. §. also in the third part the 17. chapter and 2. §. This ensuing is also very meet for it : Take oyl of Lillies, one ounce and a half, oyl of Dill and of Camomil of each one ounce, white Wax as much as is needful for to make a salve.

Another *Anodynum* : Take Wallflowers three ounces, oyl of sweet Almonds, and oyl of *Sesamum*, of each one drachme and a half, fresh Butter one ounce, Saffron half a drachme, white Wax one drachme and a half, oyl of Dill, of Camomil, and Ducks grease, of each one quarter of an ounce, one well brayed yolk of an egge, then temper them together unto a salve. For this you have also before in the third chapter and 7. §. a salve, beginning thus, Take oyl of Roses &c. and other things more, which do much assuage the pain.

Item, take the marrow of Calves bones, and very old Sallad oyl, of each four ounces, Earth-wormes washt in wine two ounces, seeth them together in water meetly well, afterwards straine the broth thorow a cloth : it is marvellous good for the sinewes, for that it assuageth all pain, and mollifyeth the sinewes.

These foresaid things be not onely good for paines of the sinewes, which be caused through wounds, but also for all other pain of the sinewes, as this following is also : Take Henbane seed half an ounce, black Poppy seed, one quarter of an ounce, Saffron

one ounce, *Hermodyli* two ounces and a half, small bruised crums of bread four ounces : temper them all together, and so lay this warm upon it, and that thrice in four and twenty hours, afterwards anoint the place with oyl of Foxes, or with any such like oyl, which shall hereafter be discovered : After that strew the powder of Earth-worms upon it ; or temper the powder with Hony, and use it as before. It is also good for all pain of the members, and hardning of the sinews. There may also a plaister be made of the foresaid Earth-worms, and apply it. Cow dung tempered with oyl and layd warm upon it, is also good.

Item, take oyl of Foxes three ounces, Sallad oyl four ounces, Earth-wormes washed in Wine two ounces : let them seeth all together, like as is said before, it strengtheneth marvellous much all bruised sinewes, and warmeth also the same when they be wounded. Oyl of Bricks is good for all pain and all diseases of the sinewes. In like manner the three sorts of Balsam oyl which be described in the last part,

When the sinewes be resolved and limber. §. 3.

Take Turpentine which is many times washed with Rosewater two ounces, powdered Frankincense, and Corns of the same, of each two drachmes and a half, make a salve thereof. This doth also a salve which is made with washed Lime and Sallad oyl, or oyl of Saint Johns wort. Item, there is also good for this all vital waters.

For Sinewes that be shrunk, or for the Cramp of the sinewes. §. 4.

Item, take one ounce of the plaister *Diachilon*, *Ammoniacum* and *Bdellium*, of each one quarter of an ounce, steep these two gums four and twenty hours in Vinegar, and afterwards let them seeth until all the Vinegar be spent, then mix the plaister amongst it, and also five drachmes of Bears grease ; when it is now sufficiently boyled, then work it well together with the hands, the hands being first made wet in Vinegar, this plaister doth mollify and digest.

Or take the seeds of Hollihocks, of Flax, and of Fenegreek, of each two ounces, oyl of Lillies, and of Olives, of each one ounce, Wax as much as is needful for a salve : this salve softeneth all manner of hardnesse of the sinewes and of the joynts, it asswageth the pain, it strengtheneth the extenuated members.

Take the oyl of Behen two ounces, *Ammoniacum*, *Bdellium*, of each two drachmes, Saffron two scruples, white Wax as much as will suffice for a soft oymment : at the last add one ounce of Neates foot oyl unto it.

Item, take oyl of Spikenard, oyl of Saffron, of each six drachmes, Bevercod, *Ammoniacum*, *Sagapenum*, Badgers grease and Bears grease, of each three drachmes, marrow of Oxe bones half an ounce, Wax as much as will suffice, besprinkle them all with Vinegar of Squills.

If you would have it digest and dry stronger, add unto it Pellitory of Spain, Bevercod, *Euphorbium*, and roots of Costus, of each two drach. Saltpeter half a drach. make it all into an oymment : this oymment is good for the Palsey and coldnesse of the sinewes, but especially for the shaking in the fit of an ague. This salve *Dialthea* is very good for the contraction and shortning of the sinewes.

Item, take Camomil flowers, sprigs of the Juniper tree, Sage, Mallowses, Southernwood, and Nettle rootes of each one handful, shred and beat them very small, and put unto them sixteen ounces of fresh Butter, Dogs grease twelve ounces, boyl them together until all the juyce of the herbs be consumed, then strain them, and add unto them molten Wax three ounces, *Ammoniacum*, *Galbanum*, of each one ounce, dissolve the gums in Vinegar, and mix them with the rest : when it beginneth to coole, stir amongst it oyl of Bevercod six drachmes, oyl of Camomil two ounces, oyl of Bayes eight ounces ; lastly, temper them well together. The Apothecaries do call it *Unguentum Nervinum*, but it is not used every where.

Item, take Wax, Pitch, and marrow of Oxe bones, of each one ounce, oyl of Roses two ounces, mix them all together and put unto them the powder of Earth-worms, and so anoint the place agreed with it. As concerning the Cramp (which is nothing else but a contraction and conclusion of the sinewes) hath been spoken in the first part, the 12. Chapter, and 15. §. where also I shewed what might be used for it. And this following

is very meet for the same: Take the juice of broad Plantain, boil it with strong wine, and binde it upon the place where the Cramp is. Item, take the roots of water Lillies, cut them in round slices, and so apply them, it hath been approved oftentimes. When the Cramp cometh in one foot, then bend back one of your toes, or bind it hard with a whipcord: but the best counsel is, to arise presently and walk, and to keep the foot warm. Cramp rings are also worn for it, but I find no great good in them. These oyls following are very commodious for the Cramp, to wit, oyl of Lillies, of Rue, of Wallflowers, and of Turpentine, which is made as followeth. Take Turpentine three pound, put it into a body, make fast the head, and the receiver unloose it very close, distil it in sand or ashes with an easie fire. First, there cometh over a clear water with oyl, next a yellow oyl, lastly, a dark and grosse oyl, keepe each apart, for they are good for all cold griefs, and especially for them of the sinews. There is also good for it the oyl of Tyles, oyl Quinces, which also comforteth the sinews. The oyl of Cammomil is not onely good for the sinews, but also for all the joynts. The oyl of S. Johns wort is especial good for the same. The ridge in the back-bone being anointed with the oyl of Juniper, restoreth motion into all parts. Oyl of Bayes, of bitter Almonds, and of Bevercodd, have an especial vertue to soften the hard and contracted sinews.

Now follow those things which may be used inwardly.

Both the kinds of Treacle, and the Mithridate are marvellous good for the infections of the sinews.

Item, take *Calamus*, flowers of Stechados, of each three ounces, Currans, Fennel roots, Parsley roots, of each one ounce, Centory, Coloquint, *Hermadaetilis*, of each half an ounce, boyl them in a quart of water unto the half, and strain them out hard, then put 12. ounces of Hony unto it, and let them boyl together again until they be reasonable thick, afterwards put unto them fine powder of prepared Agarick one ounce, *Turkish* half an ounce, Ginger and *Diagridion*, of each one drach. and a half, Spike of Indy one drach. make an Electuary of them. This Electuary purgeth all phlegmatick, tough, green, and waterish matter from all the parts of the body both inward and outward. It asswageth all pains of the joynts, sinews, and such like. Give of it at once four or six drach. with the decoction of Ginger, if phlegme do abound. Contrariwise in a cholerick body give it with the water of Succory very warm, and let him fast six hours after it, and before he be set down to dinner, let him drink a good draught of Mead; For the same purpose also serveth the confection of *Diacorum*, and especially the first of them which are described in the last Part. Likewise the conserve of Lavender, of Spike-nard, of Sage and the preserved roots of *Eringus*.

His common drink shall be Mead, or Hony water. Amongst the herbed wines are these commended, the wines of Elecampane roots, Rosemary, Sage, and Wormwood. These wines are all very good for the sinews not onely taken inwardly, but also the infected places chafed and fomented outwardly. Common clisters are sometimes used for to comfort the sinews, whereof there be divers described almost every where, and such as may be used according to the place infected. But a little Coloquint is for the most part added unto them all.

This contraction and induration of the sinews doth in time turn to a perfect lame-nesse, whereof hath been spoken before in the fourth Part, the seventh Chapter, and second §. and after that in this fifth Part, in the second Chapter, of the Pocks, in which places you may find sufficient store of remedies to content your self.

These things following are very hurtful for the sinews, the continual use of strong wines, venery, idlenesse, slothfulnesse, warm water, and especially in them that are wounded in the sinews.

The fourteenth Chapter.

Of the flesh and Muscles or Lacerts.

WE must now speak of the flesh of the body which covereth the bones, veins, sinews, and in fine, all that is comprehended in the skin. First, in respect of those parts which we call Muscles or Lacerts, the flesh in Latin called *Caro*, is very little in quantity; for the number of Muscles is so infinite, that it hath been impossible for the ancient Physitians to name them all. Some did take them to be in number five hundred, *Albertus*, 529. The flesh and Muscles are ingendred of blood, they are warm and moist by nature, and soft in handling, and those that are coldish by nature (without any evident heat) they have much and very soft flesh. That which we call flesh, is placed every where between the muscles, onely differing in this, that the muscles are contained in a thin subtile membrane, to the end that the sinews with their small twigs might the better passe through it, and impart their motion unto the muscles. This flesh is otherwhiles changed into fat, to wit, in fat men, or in them that live delicately; or else sometimes it decreaseth and the muscles also upon divers occasions. They that are very fleshy have also big veins, full of black blood, with great entrails, and a big belly. These persons are especially commanded by all learned Physitians, that they shall not purge themselves in Sommer time.

The other kind of flesh, namely Muscles and Lacerts, are peradventure so called, because they are not unlike to the Evets: for *Lacerta* in Latin is a Lizard or Buet in English. *Aristotle*, *Albertus*, *Galeus*, with divers other have written very curiously of the veins and sinews, and have shewed how they are dispersed and spread over all the body, and how by the Muscles they move and stir every member severally, whereof we need not at this present make any further mention. But to speak of them in brief: the body of the muscles is made of three several kinds of substance, for their beginning and the very head of them is full of sinews. Their middle (which is called the belly of the muscle) is flesh. Their tayl, or the ends of the Muscles is harder and more sinewy then the head, whereof the Tendons are made. In fine, these Muscles do consist of sinews, of flesh, of ligaments, and velms, so that by the multitude of these sinews, are all the parts of the body, moved inward and outward, upwards and downwards, quickly or slowly, too and fro, all as a man will himself. Besides this, they are according to their situations of divers proportions, as long, thick, broad, &c. and so strangely coadunated and conjoyned, that their use may easier be perceived by their motion, than by sight, or by any other means whatsoever, but especially, in the face, in the forehead, and in the lips. These muscles may not be wounded without great danger, for by reason of the sinews which passe through them, by those wounds very great and heavy accidents must needs ensue. But the greatest danger is wounding, hurting or in any way harming them of the back, for then can the Patient neither make water, nor go the stool, nor do any other businesse at all aright. By these means cometh the Cramp, the falling sicknesse. I will not speak of the great misfortune that might follow if the same do putrisie. Because therefore the muscles are very sensible, they do find by overmuch labour, by long walking, by running, and such like, a great debility, wearisomnesse, and pain; so do the sinews also and the Tendons themselves. But it were in vain to shew at this present how all the infirmities that the muscles are subject unto might be remedied, because the same hath been sufficiently spoken of in those places where we have intreated of Ulcers, Wounds, Pocks, Leprosie, and such like.

The 15. Chapter.

Of the fat of mans body.

After the description of the flesh it is very needfull that we write and discourse of the fat in mans body. This fat is a division of the nourishment in the skin and other parts, heaped insensibly and tight together: this insensibleness hath the fat of the blood whence it is ingendred; for that the fat is none other thing, but digested blood, which also is insensible. By nature it is most moist; therefore the fat of all beasts, and also the fat of men is wont to be used for many kind of diseases, as may be seen here and there in this Book: and (as it is said) the fat hath his beginning of the fattest part of the blood, which runneth through the veins towards the skin, and setting it self on the same and on the sinews (both which are dry by nature) for to moisten them. But if it happen to touch the parts that be cold and bloodlesse, then doth it come to congeal, and to wax hard there: therefore that doth most of all happen in cold bodies, viz. in women, and in all such beasts which have kept all winter, and be unmeasurable fat; where to the contrary, all that be hot by nature, wax lean and weak. Amongst all parts of men and beasts there are none that be fatter then the kidneies, and that chiefly on the left kidneies, more then on the right; yet especially in sheep, wherein also the kidneies be otherwhiles so abundantly covered with fat that they cannot make water, but are constrained thereby to dye.

Of the troublesomnesse of Fattnesse. §. 1.

There is no better disposition of the body, as well amongst new born children, as other ancient people, but that a man be meetly fat, not too lean, nor too fat; or if so be that any of both must be, it is alwayes better to be lean then fat; for that if a body be over-burthened with fattnesse, then hapneth it amongst other inconveniences, that a body be alwayes slothful, unfit for labour, and for walking. I say nothing of other diseases and sickneses which fat people be more subject to, then the lean. This excessive fattnes commeth of blood, whereby all the parts of a mans body be fed and sustained: the fat bodies have alwayes narrow veins, and arteries, and therefore also little blood, and fewer vital spirits; so that when they begin to be old, the natural heat is wholly abated and very lightly might be extinguished, or at leastwise spilt and lost. Wherefore *Hippocrates* also saith by good right, that they that be fat by nature, do dye much sooner then they that be lean. But they that are between both by nature (saith he) and afterwards wax fat by their dainty and bountifull diet, they alwayes keep their great veins, although they increase in the flesh and fattnesse, therefore in them is lesse danger, although they be fat, and that their natural heat be corrupted in them. Also the Philosophers do conclude (like as we also daily see before our eyes) that both humane and bruite beasts bodies which are very fat, do remain unfruitful. For they have but little and weak natural seed, because that (as is said) leanness is to be commended far before fattnesse of the body. Therefore must all men which are inclined to be fat, use these things following: Take *Sandaraca* three quarters of an ounce, drink it in the morning with water, and with *Oxymel*.

Item, take the rinds of yellow Mirobalans, (roast them as though that they were half burnt) one quarter of an ounce; stamp them all to a subtile powder, & then give it to drink with Plantain water. Look also into the second part the third Chapter, and 2. §. for the Pills which marvellously hinder fattnesse.

Item, take every morning a crust with vinegar, wherein a little Pepper is tempered; drink it very warm. But if one fear that it might hurt the sinews, then is it to be forborne.

The sixteenth Chapter.

For great Leanness.

He reason why leanness is better for a body then fatness, we have discovered before: nevertheless if the leanness were exceeding much, then is it very dangerous for healthy folks: for it behoveth no great proof that the body waxeth lean, when it wanteth food, for when the meat doth not digest, and is not conveyed to the appropriate members, or when people be overcharged with intolerable labour, with great sorrow, and such like. Likewise do some also fall into great leanness, for that their body is too cold and too dry; other will also be lean, for that the digestive and nutritive vertues, or any of both these be weakened.

Item, this extreame leanness is caused also of the consumption *Phthisis*, whereof we have sufficiently written before, and also in the fourth part, the seventh Chapter, and second §. For this may first be used all that is forbidden in the excessive fatness: neither is counsel to be deferred over long in this disease of leanness; for when as the leanness beginneth to root, then doth the same not onely provoke *Phthisis* which is the consumption; but also other more deadly accidents: so that not onely all the flesh of mans body will be consumed, but also all the vertue and strength.

And what might be used for this falling away, is to be sought for in the two forementioned places, there is especially commended (amongst other outward remedies) the rubbing with the flat of the hand of all outward members. All they that are wont lightly to parbreak, may not be purged in Winter, when this leanness is not caused through some hot Agues, but that the meat received is not by nature conveyed toward his due place; so that (like as it is wont to chance oftentimes) the ordure is cast out of the mouth; then is the patient to use good white wine for his drink, yet tempered with water wherein Fennel seed is decocted. For his meat be Hens, Capons, or rather the broth of them, that is wrung or stamped out of their flesh. This patient is also to foment often his privities and there about, with a sponge dipped in the decoction of these things following: Take Fenegreek seed, and of the white *Sesamum*, of each four ounces, Mallows and Smalage, of each three handfuls, *Bdellium* half a drachme, Comin three drachmes, Caraway, Dillseed, *Ameos*, Fennel, of each half an ounce, field Cipres, Centory, of each half a handful. cut that is to be cut, and stamp the rest, let it see the in sufficient water. You are also to use a warming plaister for the stomach, whereof there be seen in the third part, the eleventh Chapter, and fifth §. and elsewhere described.

This plaister ensuing is also good for it: Take 12. ounces of the broth wherein sheeps suet hath boyled a good while, Sallad oyl and Butter, of each 2. ounces, Saffron 6. grains, Salt one drachme, slight Sugar one ounce and a half; temper it, and set this Clister one hour and a half before supper; at which time he is to use the powder which is described in the third part, the 16. Chapter. and 3. §. beginning thus, Take Annis, Fennel, &c.

The seventeenth Chapter.

Of wearisomnesse.

WE have taught in the description of the Muscles, that the wearinesse of the body is caused through great labour, which weakeneth the sinewes and the Muscles, as daily experience doth teach us: and when a man is weary without this cause, as though one had beaten his members in peeces, then doth it signifie a great imminent disease. The learned do divide this wearisomnesse into many kind of species, as they that come of ulcers, wounds, and such like, which may be apparantly perceived.

This doth come through great coldnesse of the matter, which is very easily to be cured, by warm dwellings, by rubbings, by sweet bathes, and such like; which do warm the members,

members, open the pores, and make the matter in the sinews and muscles subtil. Nature is also to be kept warm with eating and drinking: wherefore every such Patient is to keep himself with good white wine which is not too strong, and to use other things more, which shall seem meet for all cold diseases, whereof we (for a conclusion of this fift Part) shall write immediately hereafter. Now we purpose only to speak of the wearisomnesse which is caused of great labour: for the which there is no better nor safer remedy then rest and sleep. But this following may be used for it; Take Rue as much as you please, temper it well with Sallad oyl, and therewith anoint both the feet; it is very good.

Item, take a little Salt in a cloth, bind it fast together, and dip it in the water, cast it into the fire, let it rost until it be black, and run together; afterwards pownd it and temper it with Vinegar, wet therein a woollen clout, and rub therewith the soles of the feet.

The eighteenth Chapter.

Of Sleep.

IF it be well considered what sleep is, then doth it not bear in vain the high title which is attributed unto it: and because that the sleep doth also oppress the whole body, passeth through each part of the same, and bringeth it to rest, therefore it is by good right placed in that degree. Concerning his title the learned do write as followeth. Sleep is a continuing and a moistening of natural heat, an elected rest of all the members, which doth none otherwise cover and suppress all motions of the mind, then as the ashes do the fire, which by a little stirring or uncovering of it, will immediately burn again. And if so be that this rest which is imparted to the body, be sleep, and is as it were a remedy of labour, then may it well be thought, that they that cannot rest at all do sleep unnaturally, for that it taketh away the wits and all actions of the mind: wherefore sleep is called of *Ovidius*, and *Seneca Tragicus*, a compeller of all mishap, and a rest of the mind, the best part of life, an image of death to come, and Deaths brother. And further, this sleep is a confuser of the true and false visions, a haven of life, a taker away of wearied sight, and with the Poets, the pleasantest amongst all goods, yea the onely giver of tranquillity on earth. For sleep driveth away sorrow, it is the remedy for sorrow and care, it freeth the heart, and bringeth all things to rest. The foresaid sleep is a quickening of the weary and weak members, a strengthener of the labourer. It maketh the King and his Subjects merry, forry, and blessed. And to conclude, it is then so needful for nature, that without sleep this life cannot be upholden. You have before in the first Part, the 12. Chapter and 6. §. also in the 10. §. of the Lethargie; and in the six natural things in the first Part, Chapter 5. and 10. §. all which may serve for this intent. Yet these be the things which provoke sleep, viz. Conserve of Water Lillies, sirup of Poppy heads, which may be used for this purpose: Lettice eaten in the evening for Sallads is also good: The Conserve of Piony stayeth all fantasies and fear by night, which will hinder men of their sleep: Sirupe of Citrons, Wormwood Wine, oyl of Dill, oyl of Poppy heads; and also that which is beaten out of the heads, and the temples of the head anointed therewith, are very meet for it.

THere shall not here be written of *Lethargo*, which is a species of the Palsey, and described in the first Part, the 12. Chapter, and 10. §. but of that sleep which causeth a body to his great hinderance to sleep too much, in some kind of grievous agues, phlegmatick sicknesses, sweating sickness, and such like.

Now for to keep sluggards and sleepers waking, thereto are merry folks fit to company with one, pleasant speech, musick, and play, if the Patient have any desire of it: the rubbing of the arms and legs, with or without footwater, cold water, Hony of Roses holden in the mouth: in like manner also the anointing on the temples of the head with cold water, and the same sprinkled in the face.

The

The nineteenth Chapter.

Of Pain.

WE will not here dispute of the outward pain of the body, or the inward pain of the conscience, whereof the Philosophers and Divines do write. Our book doth only speak of Physicks sicknesses, wherein the pain is such an accident of humane debility, that there cometh not one so small a sickness wherewith there is not otherwhiles some pain, like as may be seen by all the foresaid infirmities: and as is here in particular discoursed of all sicknesses, and to each is attributed his proper remedy for to assuage at least the pain of the same, if it cannot be cured: wherefore we will send the Reader, and every one that hath occasion to take advice therein, to the titles of all diseases that do molest the body with pain.

The twentieth Chapter.

Of Phlegma.

AS we have oftentimes admonished before, that the body of man and the most part of all other living creatures are made and sustained of many kinds of humors, that so long also as the same be equally tempered, do bring health with them; contrariwise, if that one do reign above another, it doth cause a sickness.

Of *Cholera* when it getteth the mastery, then do hot sicknesses grow out of it, as may further be read in the description of the Gall. In like manner also it is taught in the Chapter of the hot stomach, and in other places more.

Of the burnt black blood of *Melancholia* hath been spoken in the first Part, the twelfth Chapter, and eight §. and in the second Part, the fourth Chapter, and 9. §. Item, in the fifth Chapter and 15. §. also in the third Part, the 11. Chapter and 28. §. and in other places more.

Concerning the clean blood, thereof hath been written not long ago in the 10. Chapter and 3. §. so that we by good right may also write of the *Phlegma*, because that the same doth no lesse penetrate the body then the other.

This bodily humour which is called of the Grecians *Phlegma*, and of the Latinists *Pituita*, is a waterish moisture which runneth through the veins of all the body with the blood, whereby the brains, the neck, the members, the sinewes, and other parts (which draw that humour unto them) be nourished, moistned and cooled: wherefore it were not good that the same were wholly expelled by purging.

Also *Phlegma* doth appear by the slime, matter, snore, spittle, and such like that man avoideth.

In fine, all that is cold of nature and moyst (saith *Galenus*) we do call *Phlegma*, it preserveth also his nature in such proportion, that it is no moister nor colder in the body: and although the same be also thoroughly concocted, yet neverthelesse doth it remain alwaies cold, and that not onely in the body, but also when it is driven out of the body with purging medicines; so that it can be warmed by no means.

This cold moistnesse (next to the blood) is the highest esteemed; as it is (because of the forementioned reasons) most needfull to all living creatures.

But this is onely spoken of that kind which the Physicians do call the sweet *Phlegma*, for that it is of sundry natures, viz. thick, thin, and like to molten glasse or gips: that which is tart and sower, is undigested and crude. The salt waterish moisture, or *Phlegma* when it is putrified, then doth it cause sundry sicknesses, as unhealthinesse of the whole body, cold swelling, sluggishnesse, much sleep, and head-ach; and especially where it doth abound greatly, then doth it cause sower belchings of the stomach, the Gout, and diseases of the sinews: all which sheweth that this waterish moisture must be purged; what

what Physick ought then to be used to expel *Phlegma*, is sufficiently declared over the whole book. But for the better satisfaction we will here describe the best of them.

First, there is nothing more fit, then that all men that spend their life in daintinesse and idlenesse (whereby they do gather much waterish humours) might observe such an order of dyet which might be clean contrary to their former life, as you shall find described in the discourse of the sicknesses which be caused through *Phlegma*.

These be the simple things which consume *Phlegma*, viz. Pennyroyal, Marjoram, Nep; Sage, Marjoram gentle, Hyssop, wild Thyme, Rue, Fennel roots, Smallage, Parsly roots, Sperage roots, Pepper, Ginger, Cloves, Maiden hair, Hony, Squils, Vinegar, and most of all whatsoever is warm, and dry by nature. Aloe doth also purge *Phlegma*; Cassie doth by a secret vertue expel it gently; *Agaricus* hath power to drive out all sliminesse, to attenuate the thick, and to open obstructions; the hot Gumme *Euphorbium* is used onely at the greatest need: the juyce of wild Cucumbers *Elaterium* expelleth waterish humours most forcibly; but it cannot well be used without danger above the quantity of four grains. In like manner also the leaves of *Mezerion* four grains, or six at the most.

The seeds of *Palma Christi* do some use to the number of thirty when they be peeled, but it is very much: they do purge the *Phlegma* very well, but with great pain and torments of the Patient, for that they do purge upwards and downwards, and are very hurtful to the stomach.

Now when the *Phlegma* lieth deep in the body and in the joynts, then will it by Coloquint be drawn forth best of all.

The *Mirobalani Chebuli*, *Emblici*, and *Bellirici*, do purge very mildly, and that chiefly from the head and the brains.

The seed of wild Saffron doth expel all moysture, and especially the dropsie, one quarter of an ounce, or 3. drachmes given at one time. Turbith is also especial good for it, but it is seldom used alone, but tempered with other things that hereafter ensue, viz. with Sene leaves, Polipody roots, *Sal gemma*, *Stechas*, *Ireos*, *Behen*, *Hermoadtilyli*, Nettle roots, Ginger, Coleworts broth, Sugar, Hyssop, Agrimony, Pepper, Hartwort, Centory, Helibore, *Piretrum*, burnt Squils, *Sarcesolla*, *Opopanacum*, and *Sagapenum*.

Amongst mixed and compounded things which do expel *Phlegma*, be first these sirups following, as both the sirupes of Vinegar, both the Oxy-mels, and Oxy-mel of Squils, *Oxy-sacchara*, *Hydromel*, *Syrupus de Calamintha*, *de Prassio*, and Sirup of Wormwood: all these do expel *Phlegma* through the urine.

Item, you have more in the second Part, the fifth Chapter, a very good potion for the breast in a dry cough, called *Decoctio Pectoralis*, which doth consume the cold slime. The Confection *Benedicta*, *Hiera Picra*, *Pillula fetida*, *de Euphorbia*, *Cochia*, *sine quibus*, *de Hermoadtilyli majores & minores*: all these do expel and purge. Item, *Diaturbith cum Rhabbarb*, and *Medicamen de Turbith*, and other more.

For a purging potion is this ensuing to be prepared: Take Harts tongue, Agrimony, and Maidenhair, of each one handful, Annis, Fennel seed, *Epithymum*, *Agaricus*, *Cuscuta*, Parsley seed, wild Saffron seed, Turbith, seed of Smallage, and Sene leaves, of each one quarter of an ounce, seeth them together in sufficient water: or take *Mirobalani Chebuli*, and *Emblici*, of each half an ounce, and lay it all together in a warm place to steep: afterwards wring it out, and make three potions thereof: then temper of the foresaid sirup or Oxy-mel therewith one ounce, or one ounce and a half, and take thereof every morning.

There is also prepared for it this laxative confection: Take Cinamom, Cloves, and Nutmegs, of each half a drachme, Mace, Cardamom, and *Lignum Aloes*, of each one scruple, Ginger one drachme, Turbith three quarters of an ounce, *Diagridion* 3. grains, Sugar six ounces, dissolved in the jnice of Quinces, boyl it to the thicknesse of Hony, and then temper the rest amongst it: when it is now almost cold, then take three drachmes thereof, or half an ounce at once; but in hot weather it is not to be used, it purgeth *Phlegma* and *Cholera* marvellously.

These things following be also very good, to wit, conserve of Rosemary, of Sage, confection of Ginger, *Calamus*, and Nutmegs, &c.

Item, Treacle and Mithridate one drachme thereof taken otherwhiles. *Tysane* or Barly pap is also very good.

For drink, is Wine meetly good to be drunken, for that it consumeth slime, and amen-

deth

death all diseases which spring of *Cholera*: the same doth also Betonie Wine, Elecampane Wine, the wine of Avenge, of Hyssop, of Rosemary, of Sage, and of Wormwood, the Claret Wine, and other spiced Wines, whereof shall be spoken more at large in the last Part: likewise also all vital and golden waters, the sower juice of Pomgranates used in meat, or tempered in drink, is very good. In the first Part, the second Chapter, and second §. be two pectoral potions discovered, which be very meet for it.

Now for to use outwardly, you have in the first Part, the second Chapter, and 13. §. a salve of a roasted Goose, which is marvellous piercing, and consumeth the tough slime. The salve of Roses doth also delay all flegmatick defluxions.

Item, oyl of Camomil and oyl of Rue anointed on the outside, or used with Clusters. Thus much be now spoken of the cold *Phlegma*; concerning the hot *Phlegma*, that concerneth the pestilential Agues, and other sicknesses which are caused through heat.

The 21. Chapter.

Of the cold Diseases.

VEN as we have discovered throughly in the discourse of the cold *Phlegma*, what here and there throughout this whole book hath been declared to be fit for this purpose, the same shall also be done in the discourse of divers cold sicknesses, of whatsoever occasion that they may be caused, as of age, of defluxions of the stomach, of the Matrix, of the breast, or howsoever the same might be: first of all therefore we will here teach what might be used for them.

First, there is good for it the conserve of Eyebright, which dryeth the brains. Item, the conserve of Hyssop and of Betony, of Gilloflowers, of Lavender, of Spikenard, of Rosemary, of Marjoram gentle, and of Sage. In like manner also confectioned Ginger, *Calamus*, Elecampane roots, and confectioned roots of the greater Pimpernel.

The confections be also good which be made of the Horse Radish, the Marmalade with spices, both kinds of Treacle, the Mithridate, and confectioned Annis seeds be also good. Rosemary Wine is for this a very forcible and healthy drink. Item, Elecampane Wine, Hyssop and Lavender Wine: and for moistnesse of the head is very meet the Wine of *Asarabacca* roots: moreover, all other spiced Wines, as Hippocras and Claret Wine be much commended for it; and if there were any body which could drink no Wine, he may drink common Meade.

Oyl of *Spica* is much commended, anointed outwardly upon it, against all cold diseases of the brains, of the stomach, of the liver, of the spleen, and of all the intrails. In like manner also these oyles following, viz. of blew Flowerdeluce, of Bevercod, of Bay, of Wallflowers, of Wormwood, and above all others the oyl of Tiles or Bricks.

In fine, all that is before described for the cold *Phlegma*, and in other places for all cold sicknesses, may serve for this intent, and so we will conclude this fifth Part.

The sixth Part of this Book maketh mention of all such sicknesses as are incident to the whole body.

WE have treated of many kinds of sicknesses in these former five Parts of this Book of Physick, all which pinch and pain one certain part of mans body, and also sometimes indeed the whole body, for that nature hath so knit and combined all the members of the body one unto another in unmeasurable shape and uniformity, that as there is any member anguished with pain or any disease, even then all the other members impart therewith: so that whensoever the head, the heart, the stomach, the Liver, or any other suffereth, all the other members (one lesse, another more) must be partakers of this foresaid anguish, and in such measure are all of them grieved according to the quantity of the infirmity. And for as much as the Ague is so spread throughout the whole body, that (as it is commonly said) there is not so small a corner free; yea further (as all famous Physitians witnesse and alledge for an infallible saying and *Axioma*) that there is no disease so small which bringing with it an alteration of nature, that is without the Ague or Fever; therefore will we comprehend them all in this sixth Part; that thereby we may also detect the noisome Plague or Pestilence which is also a spice of an Ague, and also some other, whereof hitherto in our former parts we have not sufficiently declared.

The first Chapter.

Of all manner of Agues in general.

THESE very common and manifest diseases are called of the Greeks *Pyretos*, that is, fiery, and with the Latinists *Febris*, that is, a seething or boyling, and in our vulgar tongue we name this sickness the Ague, that is, a superfluous, hurtful, and unhail heat, that sometimes often, and sometimes more vehement then before cometh again, and returneth. Or an Ague is an unnatural mixture of natural spirits in a hotter and dryer nature then is necessary. And in another place, The heat which diseaseth the whole body, we call the Ague. Again, the Ague is an alteration of natural warmth into a fiery warmth, and therefore is a hot and dry disease. The old Masters or Physitians named all such sicknesses Agues, when any stood and complained of grief without any outward swelling, without the Rose, without anguish, and (to be brief) without any sore outward.

So if there were any that were pained with the stich in the side, with an inflammation of the lungs, and such like, then had they their special names, whereby they account the Ague not to be a particular malady, but incident and casual or *casum*: so that they held opinion none to be right Agues but such where the bad humours in the veins were inflamed, and yet the outward members felt not any painfulnesse.

And these Agues are of so many kinds, that *Hippocrates* in describing them in a manner, forgetteth his old and brief custome of writing; where he saith thus: Some are long,

long, byting, and yet mild: other without biting at all, but coming again; some strong and mighty; other that quickly inflame the body: some continuing at all times, are small and dry; other that bring no manner of belching or vomit with them. Some are full of filthinesse and very il-favoured; other that taketh one with moisture and sweat. In like sort they have many kinds of colours, ruddie, Saffron yellow, and some have very bleak colours.

It is not then a great wonder that the cold with the heat do cease at certain hours; as at one time it continueth, and at another time cometh again the third or fourth day, or twice on the third day; so that otherwhiles it hangeth on a body a whole year, yea sometimes ones whole life long. Any one may decipher the species of Agues as he will, yet neverthelesse in truth there be but three sorts of mingled Agues, and even so they come also through three manner of causes: that is, out of *Cholera*, out of a black and melancholick humour, and out of *Phlegma*. For every one of these hath at the first two kinds of properties, as an intermission, at one time ceasing and remaining still, or continuance at all times induring alike, which are divided into many sorts, and also mingling themselves wit others, according as the matter or humour is much or little, or more or lesse putrified, and also even as the places or parts be enclined whence the Agues grow and spring.

All such unnatural mixtures and *Intemperies*, whereof we in the first Part, in the first Chapter and 1. §. and then afterwards in the second Part, in the beginning of the sixth Chapter, and of the Heart, have briefly written, with those as are needful to be rehearsed again, are eight in particular, whereof the hot and dry mixtures are the most perillous and noysome, which being first kindled in the Heart, and then spread throughout or over all the whole body, are now called the Agues.

They are also of this nature (especially the Ague of one day) that if one give not the Patient somewhat to eat, then presently they are of more force and power: for hunger (in this Ague) otherwhiles dryeth the Patient so vehemently, that therby (as in other dangerous Agues) he will be so grieved in his head, that he seemeth to be out of his wit. The second *Intemperies* is almost like to the first, specially concerning the Ague, but that it is hot and moist. The third, whereas the moisture or the drouth (be it in what kind of Ague that it will) prevaieth the one over the other, but not superabundantly, or above mean and measure, this is the best. But when this uniformity is overthrown and broken, then is it best for all unnatural mixtures that they be hindred, whereby (as hath been shewed) they come not to last long. Of like nature is that, that with cold and heat keepeth a just mean or temperature: But where the drouth surpasseth the moisture, thereout cometh *Intemperies*. The fourth is a just mean, to wit, containing the equal measure in all that hath been said, yet alwaies inclining a little to the contrariety.

The other four mixtures are alwaies either cold and moist, cold, moist, or dry and cold. For these mixtures of the humours are the very same whence all Agues spring in such a wonderful manner, that it is not possible for the Physitians to discern them, but only Quotidians from the tertians and quartain Agues, whereon depend all other mingled Agues, for that they out of this *Intemperies* do flow as it were out of a fountain, and are to be easily perceived and known. So that Physitians when as such Agues raig, must have special care of these three things; to wit, of the strength of the Patient, the occasion of the Ague, and to know the species of the Ague.

But for the better understanding of all those things, we will briefly declare certain species of Agues, which *Galen* hath collected out of many and divers other Writers, and we will first begin with the very last.

The second Chapter.

Of the one daies Ague, called Ephemera.

Ephemera, of the Greek word is that Ague called, which usually endureth but 24. hours. These species of Agues come onely in the veins, where they enflame the vital spirits, whereof we shall more at large speak hereafter. *Putrida Febres* are Agues where the humours do putrifie in the veins; amongst which are some that do cease a certain time, whereof the chiefeft are the aforesaid three sorts, that is to say, the quotidian, the tertian, and the quartain Agues. The quotidian Ague is bred and ingendred of *Phlegma*, the tertian of *Cholera*, and the quartain of *Melancholia*. *Continua Febris* is an Ague that alwaies without ceasing remaineth continually without intermission. *Causos* of the Greeks, and of the Latinists *Ardens Febris*, is called a burning Ague. This Ague continueth alwaies after one manner, until that through the health or death of the Patient it be ended. It is such an Ague as burneth still after one manner, and is the very hottest of all Agues: it maketh the tongue black and dry, it bringeth great thirst, and desire of cold things. If you will now read more of this unnatural heat, then look in the first Part, the 11. Chapter, and 1. §. where it is in particular described.

Emphysores, that hurteth the mouth through her heat, and maketh it full of blisters, whereof it hath this name given. *Lypiria*, this cooleth the Patients hands and feet, but inwardly the whole body is inflamed, his water and going to the stool stopped and stayed, whereby also cometh thirst and hardening of the tongue; the pulse will be feeble and small, and the natural heat decayeth, and that no otherwise, then as it were altogether extinguished.

Rhodes, that is as much as a Flix or Lax, which happeneth unto one with great vomiting, cold, shaking, thirst, disquietnesse, and feeblenesse of the pulse.

Astringens, that is, astringent or binding, is contrary to the other before mentioned, for that thereby the body will be stopped, the vomiting stayed with a strong pulse, it endureth also long, it wasteth the body and maketh it lean.

Icteriades, that is, mixt with the yellow Jaundies, for it bringeth them with it. This inflameth the Liver, and dryeth the tongue in such manner, that it is terrible to behold: what might be further written hereof, that may you learn in reading over the description of the Yellowes.

The Pestilent Agues do come with great heat and intolerable thirst, the going to stool is with much noise and great stench: also the urine stinketh much: the pulses are so feeble, that one can scant feel them, as shortly shall be written more at large.

Languida Febres, are slothful Agues, that distemper the head, stufte the nostrils, stop the urine, and going to stool.

Phricodes, that is, when as with the shaking there is a great heat attained, the pulse feeble and scarce to be felt: moreover, the belly doth swell, with much rumbling noise, the tongue will be very moist, whereby neverthelesse the Patient will complain much of bitterness and drouth of his mouth.

Quotidiana, is the quotidian Ague, that at a prefixed time either in the day or in the night returneth again.

Tertiana, is the tertian Ague, wherewith the Patient is one day free, and is on the third day vexed therewith.

Quartana, is the quartain Ague, which ceaseth 2. daies, and returneth the fourth day.

Hepialos, is a phlegmatick Ague, whereof the Patient sometimes of cold, and otherwhiles of heat complaineth. Some name this also of the similitude that it hath with the molten glasse *Vitrium*. Other name it the raw and unconcocted Ague.

Hamitritica, is the half tertian Ague, that is a very strong Ague that never ceaseth altogether, but happeneth one day gentle, and the other day harder.

Errabunda, are erring and wandring Agues, that keep no certain time nor measure, and these thereby do cause the melancholick humours to rot and foster in some place of the body, which otherwise in another place are not touched or moved at all, whereby all such Agues of necessity are ingendred.

Helica, (whereof also cometh *Marasmus*) is such an Ague as infecteth the parts of the body, like as the *Ephemera* doth the vital spirits, and as the *Putrida* or rotten Agues do the humours. Of this Ague proceedeth the Consumption, which not onely wasteth the flesh, but also the marrow in the bones, as we shall hereafter both of this and other Agues declare more at large.

These are now the most principal sorts of Agues, and at this present shall these brief notes suffice. We will now proceed with those things that furthermore do appertain unto Agues. Wherefore chiefly it is to be observed, that every one of them by the Physicians is divided into four parts. The first they term *Accessum*, which is the beginning of the Ague: thereupon followeth *Incrementum*, the increase. The third is *Status*, that is, when the Ague is in the highest degree, and standeth still. The last part is *Declinatio*, that is, the decrease, or declination; of which parts of the Ague we have elsewhere more at large given intelligence.

There hath been also a great debate amongst the learned, whether men might know every kind of Ague in one day of four and twenty hours: some thought that no man could rightly judge of the Ague before the third day. So that *Galen* in divers places derideth them, and confuteth their opinion with many profound reasons. The simple or compounded Agues (saith he) are to be known, but the compounded very hardly: yet it is not impossible to discern them in one day.

Many Agues, and most of all other maladies whatsoever may well be known, the second, third, (or at the longest) the fourth day: for there is no disease that in 3. or 4. daies might not apparantly be judged: so also are all agues according to the humour into which the blood is altered, qualified, and do also give a certain sign of their nature. If *Phlegma* be cause of the Ague, then of necessity will it indure very long, and longer if it proceed and come of the melancholick humours; but if it ensue from *Cholera*, then can it not tarry long, seeing it doth vehemently waste the same.

To conclude, all easie agues are ended in four daies: as also all violent agues can kill a body in four daies, which may be seen in the pestilent fevers.

Thus far have we generally spoken of agues, now will we shew the means and remedies for the same, and will first begin with the commonest, and with the best known: amongst which the most part of the foresaid agues are comprehended.

The least of them all is, the first recited ague, *Ephemera* or *Diaria* in Latine, for that the same seldom holdeth the Patient (not disorderly eating and drinking) longer then a day, that is, 24. hours, because it is not fixed so fast in the heart, but onely in the *Spiritibus vitalibus*, which we call the Vital spirits. This Ague hath no corrupt or rotten humors that can be incended, or can provoke any swelling of the outward parts.

To conclude, this ague is likened unto a hot ayr that quickly loseth her efficacie and power.

This Ague is thus described; *Ephemera* is an ague wherein the vital spirits are incended, and so spread over the whole body without any long permanence. And that is a certain token of such kind of Agues, that they must alwaies have some cause going before, whereby it is procured; as namely, wearinesse, much watching, wrath, great sorrow, and such like vexation of the mind.

Item, the heat of the Sun, cold, great labour, drunkenness, venemous ayr, and heat about the privities, be it through swelling, or any other occasion, conversation with sick men, or those that be diseased in the lights, use of indigestible meats, and such like.

The tokens whereby they are known are needlesse to rehearse, by reason that they may be perceived and known of the Patient, thereby the better to remedy the same.

For amongst all others, this disease is never more apparant then in the urine, and by the pulse: for that in this ague the urine is commonly higher coloured then accustomed, and the pulse much swifter; as anger also is deformed by his own pulse.

Item, great sorrow, and a disquiet mind have also their own signs. Also by what observations, and how the *Cholera*, the melancholy, the *Phlegma*, and the blood is known: we have taught in their due place.

Those that are troubled with the agues that breed through any swelling or ulcers, they feel a continual swift, and hard beating pulse: they are very hot burning with a ruddy countenance and white urine.

And to conclude, they are all commonly Ephemeric agues that have the pulse equal. And albeit the same sometimes be unequal, yet is it scarcely to be perceived very ill to be.

These

These are now the most usual and convenient signs of this Ague, which we have said are very easie to be holpen if men look unto it betimes: for being delayed too long, then fall the diseases into agues that are worse, and be of longer continuance: as namely, in *Putridas*, and *Hecticas*, so that many by negligent delaies fall into their perpetual destruction.

Therefore use these remedies following for it: first, a bath whereby the pores are opened, that thereby all noysome vapours might exhalate. For when as they are shut up, or through exterior cold closed together, then must all such infectious humours remain in the body, whence divers perillous agues are caused.

For all those that are infected with the ague through any swelling of the privities, is the ayr hurtful either before or after the bath: but above all things it is in other agues to be shunned. But if any one will tarry long in the bath, then must he be gently anointed by the hand with Sallad oyl, especially such as got their agues through labour and travel.

The diet of the diseased must be such as may ingender good blood, of a light digesture. Those that through the heat of the Sun, or by wrath or anger are fallen into this ague, they must use cooling and moystening things; if through cold, warm things; through watching, sorrowes, and cares, moystening things, and such as will provoke sleep. All those that are thus afflicted, may well use Wine that is small or watered; for such is alwaies more fit then water alone, because it expelleth water and sweat.

But in all these points is to be observed the age of the Patient, his strength, his custom of living, the season of the year, and the nature of the country, and such like.

All these are forbidden Wine that in this Ague proceeding of the heat of the Sun, have a swelling of the privities, or of any other part, till such time as all such inflammations be ended: The like also for all such that have their pores obstructed, and be therewith stout and corpulent of person. All such as through overwatching, or through great sorrow are fallen into a small Ague, must after their bathing be fed with moyst meats, that are light of digestion, and make good blood. To those that by reason of long watching are feeble, may the wine be allowed without further regard or care, unlesse they had much headach, or feel great motion of the pulses in the temples of the head, these common rules must also be observed in other feavers.

All those that get the Ague through wrath, sorrow, or deep speculation, they may drink Wine well enough: in like manner also the idle headed, but onely when their fit or madnesse is past, before which it is very dangerous to use the same.

This also is a common rule, first alwaies to seek remedy for all those accidents that are most troublesome, or to take away the cause of the sicknesse by his contrary, as labour by rest; wrath, sorrow, and madnesse, with merry and pleasant conceits; watching with sleep; those that get it through much speculation must wholly leave it off: even so must it be with the swelling and inflammation of the privities, that the same may heal, and the pain be asswaged.

Here hast thou briefly set down, what order of dyet and other things are to be observed in any accident whatsoever. Now will we learn you after the briefest manner we can, what things are to be used in any of the foresaid causes.

When as then any body through the heat of the Sun, or through a bath, falleth into an Ague, then must you anoint his head with the oyl of water Lillies, Roses and Violets mingled together, or each alone: you may also make a decoction of cold herbs, or oyl of Willows, or of any of the foresaid oyles mingled with it: and then let it drop from on high on his breast. If the Patient have great thirst or drought, then give him to drink Well water, or Almond milk.

When the Ague is past, then let him bathe as hath been above said. But if the Ague proceed of outward cold, then is sweating good for it: or can he not sweat? then may he use warm bathes, wherein hath been decocted wild and garden Mints, Smallage, Fennel, and Parsley, with the roots.

Also anoint the head with the oyl of Dill, of Camomil, and with oyl of Behen: but he must forbear the drinking of water. Likewise lay the Patient in a meetly warm chamber, anointing his body softly, and when the ague is past and gone, then may the Patient use to eat all manner of land fowles, and such like food. Is he then corpulent and full of blood? then open a vein, and let him use in this bath stone Rue, Camomil, Fennel, and Stoneclevers, &c.

Or come these Agues through the use of any hot meats? then use cold things; as Lettice, Purslain, and the juyce of Pomgranates.

Purge with Cassie, Manna, sower Dates, or with Conserve of Prunes. Take also of the Confection of *Diatriasantalon*, Endive water, *Oxyacchara*, Julep of Roses, Barley water with a little Camphire, Lettice, Purslain and such like cold herbs, or the juyce of them. If this ague come of drunkenesse, of strong wine, or such like drink, then must the Patient urge himself to vomit, or to purge with the foresaid cold things. If there be adjoynd a great pain of the head, then must you anoint it with the oyl of Roses, or with some juyce of cold herbs.

Or if this issueth through great sorrow, fear, flight, over-much watching, madnesse, wrath, or such like, then remedy these things as is said, by their contraries; to wit, mirth, musick, comfort, sleep, and with such like: he must also shake off and forget all causes of sorrow and fear.

Likewise this Patient shall smell unto Roses, Violets, and Saunders, and wet clothes in the musilage of Fleawort, and the juyce of cool herbs, mingled with a little Camphire, and lay them upon his head. When the Ague proceedeth of wrath, especially in young folks, then is the Wine to be refrained.

These Agues also proceed as well of exceeding joy, as they do of great wrath, albeit the same chanceth seldom; yet it is by the foresaid means in like sort healed.

These Agues may also come very easily through excessive labour, by reason that the same heateth the vital spirits.

For the same must be prescribed light meats, rest, bathes, measurable sleeping.

Or if these Agues be caused of overmuch sleep and rest, as often it falleth out, then shall he constrain himself to watch, and let his body be rubbed over with hot clothes.

These Agues are very subject to all fluxes of the belly, and dysenteries of what cause soever the same doth proceed.

For this are all astringent and binding things to be used, and to do all that is fit to be done in such like sicknesses.

Also Cotton dipped in the oyl of Mastick, or oyl of Quinces, and laid over the stomach; but upon the liver and heart cool things.

If the Patient should thirst or hunger, then shall he use, and especially at the beginning, Barly paps, Oaten paps, water bathes, and rest: and for his drink he shall take water mingled with the juyce of Pomgranates. But if he be cloyed with too much meat, then causeth it lightly an Ague to follow: for which Clusters, purgations and sobriety are to be used: but if there be any sower belchings upward admised, then use *Diagalanga*, or *Diatrianpipereon*, and anoint the stomach with the oyl of Mastick, the oyl of Wormwood, or with oyl of Spike, laying sheeps Wooll thereon. Afterwards when the ague hath left him, let him use sleep and sobriety.

The agues which proceed of any Impostumes, Ulcers, Pleurifies, puffing up of the Lights, swelling of the privities, which is caused of pain, *Cholera*, heat, and thirst (more then the foresaid agues are) these shall you remedy thus: first, search out of what humours they grow; if of blood, then must the Patient open a vein, thereby to ease the impostume or any other hot swellings: or do they come of *Cholera*? then must the Patient be purged; and moreover the ulcers or impostumes must be cleansed, ripened, and healed.

It happeneth also, that as young children have the Worms, they also fall into such an ague: for this all such things are to be used as are ordained and thought most meet for the destroying of Worms, and especially a salve, beginning thus; Take oyl of bitter Almonds, &c. Thus have we sufficiently spoken of *Diarie* Agues, and mentioned how they are to be dealt withal.

The third Chapter.

Of the continual Ague, Continua, in generall.

Allen termeth these continual Agues *Continuas Febres*, which from the first time that they enter upon a man, endure continually without intermission; if they be not through health or through death dissolved, albeit otherwhiles they were a little fainter or slower: yet nevertheless sometimes many dayes, yea weekes, endure still. Of these are chiefly twaine, the one that increaseth the third day, which is more perillous then the other, to wit, then those that change their nature the second day: and by reason of this alteration, the Physitians do give these agues divers names, whereof the principallest is *Typhodes*, that is burning, which greatly agreeth with the half tertian Ague. Then is there *Synochus*, which proceedeth of a superfluity and inflammation of the blood mixt with *Cholera*, taketh hold most of all upon the bodies of young temperate and hot persons, whereof we shall hereafter speak more at large. The signs of these Agues be, that 24 hours long their fit continueth, incessantly beginning and increasing. The pulses of them are swift and hard, the urine is redder then it was before; these things following are all to be observed, and well to be remembered that in dry and hot weather they are few, yet strong and bad Agues do raigne, but without any sweat at all: In wet weather are these Agues most rife, and that with sweat.

For so much as these continual Agues are first of all described amongst hot Agues, therefore here we will admonish the Reader, that we make this our discourse so much the longer, to the end we might declare the matter more openly; and that such hot agues as hereafter follow, may thereby the better be known, and easier cured, and that especially in this §. wherein shall be taught the meanes which are to be kept in meat and drink, in vomiting, and sleep, also what might revive those that are so diseased whereby they should be eased in great heat, and after what order they should govern themselves, their Ague being gone.

The Ague that is continual, Continua. § 1.

THe occasion of all such mighty Agues is the putrifying of the humours within the great veins: and the cause of the putrifaction aforesaid is a stay and detaining of superfluous tough humours that are caried in the body, the heat whereof approaching to the heart inflameth the same. This commonly happeneth in all such bodies that are filled with tough humours or that the veins through heat of the same are over dried. This Ague also may ingender of venomous ayre; as in the time of pestilence is to be seen. Item, through great cold (whereby the pores be shut up) through sore labour in the hot Sun, through much watching, through great anguish, grievous thoughts, and through a great flux of the belly.

The common signs of this mightie ague, are the pain of the head and great heat (easily to be felt) watching, great thirst, swift and unequal pulse, red, thick, and yellowish urine, the Patient rageth in his sleep, his senses are troubled, and complaineth of terrible dreames. If he be young, and the season of the year be hot, and that he dwell in a high and hilly Country, then are all these recited signs the likelier to be certain and true.

The order of dyet in time of hot Agues. § 2.

IF so be that these Patients desire to be rid of these agues, then is it very needful that they have a good government or order in eating and drinking, and they must have a special care to be fed with such meates, through which they may be cooled, the blood putrified and moystened, whereby the heat and drought may be withstood. In like manner shall the Patient be kept in the beginning of his sicknesse (whilest he is in strength) sober in eating and drinking, and encrease the same according to opportunity. In like sort with the letting of blood if the Patient be red in the face, his veins full and young, then is he to be let blood (in a very hot ague) until he fall into a swoone.

But if the patient be so weak, that such forcible letting of blood may hurt him: then

let it be done at divers hours, every time a little, two or three dayes together, for some are to be dealt withal more gently than other, and require that the *Salvatella* upon the right hand (to wit, by the little finger) may be opened, and that there shall above five ounces of blood be let out.

We have before given order what kind of meat this Patient is to use, that the same must be cooling and cleansing the blood, as Cicorie, and Endive with the roots, water Cresses sodden in his meat: and in like sort also a Sallad made of the same herbs and rootes, with oyl and Vinegar; and there is chiefly to be put into the same Sallad, Liverwort (that useth to grow besides the water Cresses) which is passing good. Also the juyce of Oranges, Pomgranates, or Limons are to be used with his meat; and amongst other herbs, Spinage, Beets, and Turneps, with their leaves are excellent good. Item, Lettice, Endive, and Parsley, and mingle amongst them sometime a little Marjoram, Pennyroyal, and wilde Thyme, and Hyssope (but once) for that it is warm of nature. Of fruites let them use Damask prunes, Oranges, and Pomgranates. And of flesh let him be served with that of Calves, Hens and Capons, the which are to be bruised and eaten with the broth, also make sops with Vinegar, mingling the yolks of Eggs and Sugar amongst it. Item, Partridges, Fesants, field fowls, and such like are not hurtful: it is also to be noted, that with the flesh is to be sodden Parsley rootes, Cicorie rootes, and Verjuice, with a little Marjoram and Hyssope. Moreover, the seeds of Lettice, Melons, and Cucumbers, are passing good: yet not all together, but sometime of the one, and sometime of the other. Peeled Barly sodden with Hen broth is much set by; and also Hen broth alone, wherein a little bread is soked.

Item, shives of bread soked in water and the water poured out, and afterwards the juyce of Pomgranates poured thereon, and bestrewed with Sugar, it is very good meat for all such maladies. Some are of opinion that the flesh of a Magpy, is a certaine good medicine for the Ague; and some suppose that young Magpies with the feathers distilled, and the water of them given to the Patient to drink, and it were not amisse, that in the distilling of them, there were put the rootes of Parsley and of Elecampane.

For these hot agues may fountain water be drunken, or any other clear river water, that hath been sodden once before, or poured a good while and often out of one pot into another. Or you may mingle with this water julep of Violets, or julep of Roses, and so drink it unsodden: Barly water is a very fit drink for all such maladies, and may be mingled with the foresaid julep.

Wine (though very little) is otherwhiles permitted: and also Sugar water, and sodden Henbroth (the fat blown off) is very good.

Common rules for Agues. S. 3.

According to the prescribed ordinance or government of the life, we are to shew in like manner the remedies and cures. But first we will declare certaine rules, which in all hot Agues must be observed: that thereby for all such maladies a better order may be had and kept. The first rule is, how to discern easily that the Patient cannot come to his health, until the putrified matter of the Ague be purged away. Secondly, the eyes are to be fixed upon the matter that ingendreth the Ague, that the same be prepared for purging, the Ague which is present be corrected, and that which is to come be hindered. Thirdly, when this putrified matter is to be taken away, then must care be had how to open the obstructions, which are the foundations of the ague, for otherwise there can no good be done. Fourthly, if the ague be forcible and hot, and the Patients strength very small to resist the same, that it is impossible for the Patient to tolerate the violence of the ague, then must the Patient not be suffered to use many cold things before, that thereby the natural heat be not quite extinguished: but if he be strong and may withstand the sicknes, then cut off the cause, expel the matter, keep the Patient sparingly and let him not use over cold things. Fifthly, if natural strength in the ague be very weak, then must the Physitians strengthen the same, coole the unnatural heat, and with meet food comfort the debility of the body. Sixthly, the cooling of the Ague is not to be effected with drying or binding things, unlesse it be when the material cause is expelled. Seventhly, if the nature and buality of the Ague be doubtful, then must the patient live sparingly, and especially when the ague assaileth that it may find an empty stomach. Eighthly, all fresh fruit are very hurtful, by reason that they will soone stink and putrifie in

in the stomach. Ninthly, while the Patient is in good strength, and hath blood enough, or is full of humours, then first of all let him blood, and especially when as his urine is red and thick, and when it is doubted, that the *Cholera* will get the upper hand. Tenthly, and if so be (as is rehearsed) that nature be of ability, then use those things first which loose the body mildly: afterwards open a vein, and then purge. Eleventhly, in these kind of Agues there is no strong purgation to be ministred. Twelfthly, if by the wambeling or pain of the stomach, it be perceived, that the corruption falleth into the stomach, then shall you minister to the Patient a vomit: but if through the rumbling of the belly it be perceived, that the matter be fallen down into the bowels, then is it to be expelled with purgations. Thirteenthly, those medicines that might hurt the bowels, be noysome and not commodious, in case that the Patient have not used preparatives before, be it in heat or cold; or in case that the corruption made not the Patient stark mad, or that he were in doubt to fall into a greater mischief. Fourteenthly, as the blood prevaieth and that a vein must be opened, then is the preparation of the matter to be expected by reason that the same concerneth the other bad humours, and not the blood. Fifteenthly, when the *Crisis* is near hand, you must forbear to minister any medicine.

But if the same be imperfect, then is it to be ayded, and to help nature in that, which she cannot perform of her self, that is, in strengthening her, and in right use of the medicines. Sixteenthly, if the letting of blood be thought meet, then is the same to be done at the first, for otherwhiles it will not do so well: for when the Patient is over weakened, then might the same be a mean of his death. Seventeenthly, the Patient is to be purged when the Ague is weakest. Eighteenthly, wine bathes and fomentations are to be abstained in forcible and strong Agues, and rather drink cold water, which hath great efficacie to coole the heat of the Ague, but not to expel the putrified matter through the pores, or through the urine. Nineteenthly, when the principal parts of the body (as the Heart, the Head, the Liver) be strong, and the Ague is vehement and hot, then may one boldly give the Patient water to drink, yet not if he be in yeares, for those are not very strong of nature. Twentiethly, if there be much blood, much tough slime or phleam, and binding of the body present, then first of all let the Patient blood, afterwards attenuate the matter, and lastly open the pores and warm them. One and twentiethly, above all things have regard to the strength of the Patient, and if he be strong enough and that he have need of purging, then is the same to executed without any care: But if his strength be small, then let it alone at any hand, except it be some gentle thing, and after that he be somewhat strengthened. Two and twentiethly, if in the *Febris putrida* be any obstruction, then heed is to be taken to open the same, the which if it be caused of some humours, then are they to be evacuated. If those humours be tough and grosse, attenuate them. And if the Ague be mixt, then prepare your medicines accordingly. Three and twentiethly, because the cold attracted ayre penetrateth to the heart, and other inward parts, let him thereby be refreshed, opening all manner of windowes about him. Four and twentiethly it happeneth otherwhiles, besides the grievousnesse of the disease, and the presence of divers accidents, that sometimes there are those things given to the Patient that are hurtful for the Ague, as in the swoonings in the Ague, for the which of necessity Wine and fresh broth are to be given to the Patient: wherein is to be considered, that the greatest extremity is first to be eased. Five and twentiethly, if need require that much blood or humours are to be taken away, and that the strength of the Patient will not abide it, then must the same be done by little and little at divers times, and not at one time, even as is before expressed at large. But if the strength of the Patient will permit it, then is it to be done at once. Six and twentiethly, in these forcible and vehement Agues must the Physitian be provident and warie, how to expel and purge: for it is better to leave one part of the matter in the body, then to expel it all at one time. Seven and twentiethly, the Physitian must alwayes be bold and liberal in comforting the Patient: for although healthful meates breed some inconvenience, yet are they better then too much abstinence. Eight and twentiethly, minister alwayes unto the Patient for his mouth such things as will keep the throat moyst, that through great heat it dry not too sore; the which is accomplished by the musilage of Fleawort, the juyce of Pomegranates, the musilage of Quince kernels, by Purslain and Licorice, which things also, are good for to quench thirst.

Of common things for hot Agues. §. 4.

After the description of the common rules (which are to be noted) we will now treat of this, namely, when it is found, that an Ague doth approach, then must the Patient take four ounces of the water of *Carduus Benedictus*.

Item, take the rootes of Cicorie, cut them, pownd them, and wring out their juyce, drink a spoonful half an hour before the Ague assaileth: but it is to be noted, that the inward heart of the root is to be taken away. Or take pownded rootes of Cicorie, as many as you think good, and pour wine thereon, boyle them in *Balneo*, and then drink thereof three or four times, to wit, morning and evening: it is also passing good for such as are swollen with the Ague: Chervell water is very good to drive away the Ague.

A marvellous water of the ancient Physitians: take a spoonful of Fennel seeds, and as much Salt, pownd them together; and let it run through a searse or hairen Seive, then take good Vinegar, and the urine of a man child, about six ounces of each, give to the Patient thereof three or four times, to wit, when the Ague beginneth to assaile, and have regard that he vomit it not up again. This do all the Physitians use, but hereafter follow many better and fitter things.

Out of the foresaid things ealie is it to be noted, that for all hot agues these waters ensuing are passing good, as water of Endive, Cicorie, Burrage, *Cuscuta*, Sorrel, Maidenhair, and of such like.

All aguish diseases may freely use these syrups, or any of them which one listeth, as syrup of Vinegar, of Verjuyce, Violets, Cicorie, with Rubarb or without, of Citrons, Roses, Endive, or of Sorrel.

Item, *Syrupum de Jujubis*, de *Bizantiis*, *Acetosum compositum*, de *Radicihus*, *Oxymel*, and *Melivatum*, and if there be not much Cholera abounding, then use the Hony of Roses, which is good for all agues: take thereof which you will, and mingle it with the water of Liverwort, of Endive, and Fumitory, Sorrel, or with water of Maidenhair, and such like. Of these confections following, you may use which you please, as *Diarrhadon*, *Triasantali*, *Trochiscos de Spodio cum Semine Acetosa*, de *Eupatoria*, de *Berberis*, pownded, and mingled with any of the foresaid waters, and drunken, and the Whay of milk is chiefly commended. These are the meates that an anguish body may well and commodiously eat and use.

Of the lothing of meat in them that be assailed with the Ague. §. 5.

For as much as in all hot agues the appetite of feeding is taken away, whereby nature is suppressed and waxeth faint, and thereby scarce able to resist the ague; therefore it is very requisite that herein good counsel be had and taken.

For this you find in the third part, the eleventh chapter, and ninth §. what is to be done herein; likewise you may use for it any of these things ensuing.

Take Conserves of Roses two ounces, Confected Citron rinds, syrup of Apples as much as you think good: mingle them together, and use thereof fasting at each time half an ounce.

There is also a confection or compound, that is called the Kings sauce, the which is very good to provoke appetite, and the same is to be made with Sorrel, Cinamom, Cloves, and Vinegar. Others make it of Vinegar, Sorrel, Fennel, and Parsly.

The third sort, take the juyce of Parsly, Sugar and Vinegar. Item, one may compound syrup of Vinegar with *Oxymel*.

In like sort there is good for it both the syrups of Mints. After meales it is very good to use prepared Coriander seed, Annis seeds, and Almonds confection. Item, Cinamom, Marmalade, Conserves of Roses, and hony of Roses, roasted or baked Peares, are very excellent good.

Every such Patient is to be outwardly anointed with the salve of Saunders on the place of the Liver, and on the Kidnyes, with the cooling salve of Galen. This water here next following is also very soveraign to be used thereto for the washing of the feet.

Take Sage, Camomil, and Bayberries, of each a handful, Marjoram half a handful, Citron rinds, and Orange pils, of each half an ounce, a pint of strong Wine and common

common Lee, as much as will suffice: let them all seeth together, and use it oftentimes, for it will provoke appetite.

For the thirst in hot Agues. §. 6.

BECAUSE continual Agues provoke great thirst, therefore we will not cease to give some knowledge and caveat how the same may be holpen and remedied, the which will be effected with Barley water, and with cold and moist things, and also with such lozenges as be prepared and made with the muscilage of Eleawort, the muscilage of Quince kernels, and with Dragagant.

Sugarcandie, and the kernels of Pomgranates, are also very often to be used, and he shall receive the cold and moist ayr. Before in the third Part, the 12. Chapter, and 10. §. there are also divers things declared, being all very good to slake or quench the thirst.

Item, take sirupes of Violets one ounce, Barley water three ounces, Cinamom water one ounce, oyl of Vitriol three or four scruples, mingle them together, they will become a red potion with a tart or sharp taste; but because there are other more pleasanter things, do I counsel you to leave out the oyl of Vitriol.

Of purging and such like. §. 17.

AND for the expulsion of this matter or corruption in the best manner, thereto is very sovereign washt Aloe which is described in the Introduction. The common plague pills be also passing good for the same, the which pills are called *de Tribus*, and are to be mingled with Rubarb.

Also once a week at the least, let the Patient take in some cooling and laxative medicine; as namely, conserves of Prunes, and Cassie, the which are good in old maladies; and therefore is commonly to be given an ounce and a half, with half a drach. of Rubarb. Manna is excellent good for it, and the confections of *Diamanna cum Rhabarbaro*, the which are to be had in all well furnished Apothecaries shops. There are some that give counsel (and that very well) that the next day following the Patient is to take three ounces of laxative sirupe of Roses mingled (if it please him) with some distilled water. Also there is good for it the lozenges *de succo Rosarum*, *Diaphenicon*, *de Psillio*, & *Diacatholicon* or use this potion following; Take sower Dates one ounce, break them in Cicorie water, and strain it through a cloth. This done, mingle Cassie and conserve of Prunes, of each half an ounce, half a drach. of beaten Rubarb, and five grains of *Spica* amongst it. Take this in the morning early, and thereupon fast afterwards six hours.

There are also cooling clisters used for it which the Physitians do call *Lavativa*, (that is, cleansing Clisters) by reason that they are for none other purpose, but to strengthen the bowels, to make them slippery, and to warm them, as these ensuing: First, take Barley water and Sugar, or broth made of sheeps purtenance, wherewith is mingled fresh Butter, or Hogs grease: otherwhiles Beets, and Mercury. Likewise there are many clisters of Sallad oyl, and oyl of Violets, and also (in the pain of the belly) of Linseed oyl without putting any other thing thereto, but twelve or sixteen ounces taken at one time for one clister. And when the going to stool and urine are to be provoked, then use thereto fresh broth that is most common and fit, wherein Barley is sodden and is mingled with oyl. Or if you will have it stronger, then take an ounce of any of these confections mingled amongst it, as *de Sebestis*, *Hiera*, *Diaprunis*, Cassie, Thomas Sugar, oyl of Violets, Hony of Roses, or of Violets.

For the vomiting in the Agues. §. 8.

ALL that lie of hot Agues may easily be brought to vomit, and that chiefly after their taking of any medicine, and to prevent it, look into the third Part, the 20. Chap. and 7. §.

For the losse of Sleep. §. 9.

THEY that are plagued with the Agues are easily barred from their natural sleep, and to further the same, look into the fifth Part, the 18. Chapter, where is sufficiently treated what hereto belongeth.

For

For to relieve them that be sick of the Ague. §. 10.

Furthermore, there are many things that revive these Patients whereby their heaviness (that proceedeth from the heat of the Ague) might be clean taken away; to wit, that fresh linnen and sheets be given often unto them, their beds often rouzed and made, also set in their sights glasse bottles filled with fair water, put often fair water out of one pot into another in the presence of the Patient. Urge him to smell often to a glasse filled with fair water, Rose water, and good Rhenish Wine, and give them Pomegranates, Oranges, and Rhenish wine to suck upon, and especially before meat. Let their hands and face be often anointed before and after meat with some pleasant odoriferous things.

For the relief or comforting of the sick. §. 11.

These kinds of hot maladies require also, that sometime the diseased have somewhat given them, whereby the natural spirits may be revived, quickened, strengthened, and cherished. Therefore it is requisite that we write somewhat thereof.

Hereto is very soveraign the black confected Cherries, red and dried Cherries with the Conserves of the same, and all that may be made of Cherries.

The confected Muscadel pears, with or without wine, according to the quality of the Ague, are passing good.

Item, conserve of Barberries, and the sirup of the same, are also very good for it: And in like manner all that may be made of Raspes.

Item, Conserve of Buglosse, of Burrage, and of Roses, of each apart or mixed together.

Sugar of Roses melted in Well water, and so drunken, is also passing good for the same: and in like manner the Sugar of *Manna Christi*.

Some use for laving a shive of bread, soaked in Rosemary wine, for that it strengtheneth and quickeneth appetite: but it is better for the cold then for the hot Ague. If so be that the Patient do get blisters in the mouth, or the tongue fur, and the throat do burn, as chanceth oftentimes, then look into the first Part, the 13. Chapter, and 2. §. where you shall find very good remedies for the same.

Ordinances for all those that are recovered of a long sickness. §. 12.

Now if it come to passe, that sick folks begin to amend, and the disease wear away, the breath beginneth to be free, the pain to cease, the sleep to come, and have lust and appetite to their meat, then may be freely said, that the Patient beginneth to recover: then is the Patient to be kept very sober in his dyet of eating and drinking, and not feed upon any other meats then are requisite for such like diseases, like as Barley grout, Currans, and broth wherein the roots of Parsly and Cicorie are sodden, for that all these things do strengthen and moisten. There must also be used outwardly for the strengthening of the stomach, oyl of Mints, of Mastick, of Wormwood and of *Spica*. You may also make a salve for the stomach, with the foresaid oyles, being mingled with Cloves, Nutmegs, and Cinamom, and with a little molten Wax.

Item, the plaister of Mastick, and other plaisters more, that are specified in the description of the stomach, are very good for it, being laid on the stomach outwardly. Concerning the Patients binding of the body, you may use any cooling things, specified in the third Part, the 11. Chapter, and 20. §.

Above all the rest that is spoken of before, for the recovery of all diseases, it is passing good to alter the place or situation, especially to draw near to the mountains or hills, whereas it is dry, and far from the sea, and from all noysome and stinking lakes.

Aromaticum Rosatum doth strengthen wonderful much.

The fourth Chapter.

Of the half third daies Ague, called Hemitritæa.

His disease is also a kind of continual ague, the which is one day slacker then another, and appeareth in the outward members, at one time with great heat, and another with great cold; therefore must you have daily care to mark how it taketh one, and what humours there be that do reign most of all in the same Ague, that there may the better order be taken for redresse thereof; like as in the beginning of the continual agues, and hereafter shall be taught in the description of the Quotidian, Tertian, and Quartain agues. The mixture of these agues is of *Cholera* and *Phlegma*, for which cause it is joyned half with a tertian, and half with a quartain ague, whereby groweth a continual ague. And when the *Cholera* getteth the upper hand, then is the tertian the more stronger; and when there is most of the *Phlegma*, then is the quartain the mightiest.

So that when they are both of equivalent efficacy, then it is onely called *Hemitritæa*, that is, when both these humours do work equally, and have their operations alike.

There is for the heat of these agues given commonly to the Patient Barley water, that is sod with Melon seeds, Gourd seeds, Endive seeds, and such like. For the cold, is Pepper, Cinamom, and Anniseed, and the Wormwood much praised, especially *Oxyacchara*, be it of whatsoever humour this ague doth proceed.

The fifth Chapter.

Of the Tertian Ague.

Like as we have in the former Chapter made mention of the tertian Ague, and have numbred the same amongst the hot agues (whereof we now do speak) so doth our method now require to adde these and all other hot agues unto them.

This ague doth alter her self into many kinds of sorts and species, according as it mingleth it self with other agues, which oftentimes happeneth. But if this Ague remain in her own property, then do the learned call it *Exquiritam*, and *Legitimam*, that is as much to say, as neat of it self and unmingled: and it is such a kind of Ague, wherein the property of the person, his age, the time of the year, the state of the body, and the whole former order of dyet do agree one with another, and accord with the humour which causeth this Ague. This exquisite tertian ague cometh not above seven times, and is wholly without peril.

The second sort of this Ague, they term *Tertianam Notham*, or *Spuriam*, that is as much to say, as a bastard tertian Ague, whereof we will speak and declare hereafter apart. Now to speak of the right nature and property of the tertian ague, they are commonly subject unto it which are cold of nature, and of a middle age, because that in them the Gall most aboundeth: also in Sommer time when the *Cholera* raigneth, there happen many hot and burning *Causones*, whereof we shall hereafter make mention.

This tertian Ague raigneth most in hot dry countries, in hot dry swellings, and in hot ayr. All bodies that do labour sore in the Summer, watch much, live in great sorrow, are nourished with subtile meats and such like, are most subject to these sorts of Agues: as also all they that use too much Physick, they that are hot and dry of nature. And although all species of the tertian ague (as also the *Exquiritæ*) are the very hottest; yet have they neverthelesse with the ague *Causone* this difference, that the foresaid tertian ague forceth much gall with the bloud into the veins, and there inflameth the same.

To be brief, these are called *Tertianæ exquisitæ*, for that they come upon the third day, expelling the *Cholera* through vomits, going to stool, and through sweat.

And whereas none of these foresaid things appear there at all, then it is to be called only *Tertianæ*; for that the same thereby onely differeth from the *Exquiritæ*.

For when this tertian ague maketh appearance which continueth many hours, to wit,

the whole space of the tertian Ague, the which remaineth continually 28. 30. 36. or 40 hours, the same do the learned term *Tertianam extensam*, that is, a lengthened or extended tertian ague.

In like manner they term that *Tertianam duplicem*, which is mingled with the quotidian Ague.

Item, *Hemitritiam* whereof we have declared before, and many more that we omit for brevity sake.

It cometh to passe that all Tertians approach with a greater and with a more trembling cold, and have commonly this nature that they do not continue long nor yet (as is also said) keep not their fits above seven times. And if there be any that giveth occasion by some ill diet that the same continue any longer, yet doth she alwayes alter her own nature into another ague, the which may be prevented through good government of life. The occasions of this ague are partly declared before, to wit, sore labour, or great exercise, and that chiefly at hot times, long use of things that increase the *Choleram*, and inflame the humours, as Garlick, Pepper, and all that is drest therewith, also Ginger, and fined strong wine, and such like.

The signs of the very true Tertian ague are these, when it doth assaile you with great shaking and cold, which is more violent in this Tertian, then in any other ague.

Afterwards the heat followeth upon it, a strong swift pulse, and drouth of the tongue, and of the whole body. The patient feeleth a pricking over all his body, as if he were prickt with nailes: the urine is red as fire, and you may preceive the heat by the feeling: there is great disquietnesse with it, and no sleep at all; yet without any pain in the head unlesse it be not an exquisite tertian, but a mingled ague. Also if there be any great thirst, madnesse, and frowardnesse with it, there cometh a sweat in the end unto it: and these signs are the more surer, if the patient be young and cholerick, in the summer time, in a lean body, and that hath lived very continently, and is much inclined to vomit *Choleram*.

It is first to be considered, that all the common rules that we have before collected in describing the continual Ague, are also very requisite herein, as these rules following shall further declare.

First, the exquisite Tertian or third dayes ague that proceedeth of red *Cholera*, must be well moistened and cooled.

Secondly, for as much as the *Cholera* is the hottest and dryest humour of the body: therefore it is requisite that it be expelled which is fallen into the stomach by vomits: and that which falleth down lower, is to be expelled and purged by going to the stool, be it by potions or clisters.

Thirdly, all moystening meats are very good, except such as putrifie quickly in the body.

Fourthly, the recovery for this and all other putrified agues consisteth herein, that all putrified humours must be clean purged out, and the unnatural heat quenched; for if in the exquisite Tertian, the corruption be lesse then the heat, then the more diligence ought to be had for to cool the same, then for to purge the humor.

Fifthly, if the patient be much bound in body, then is he in the beginning to be opened and loosed with moderate clisters, that the bad humours may be somewhat expelled and diminished.

Sixthly, because all fruits are hurtful for all agues, therefore they ought to be forborn.

Seventhly, two or three hours before the ague cometh, the patient is to eat somewhat, and likewise also when the ague is departed.

Eightly, when by the preparative medicines the humour is made to vanish a little, and to be concocted (which may be perceived by the urine) then is it high time that the same be purged, and that by that way whither it most inclineth.

Ninthly, if after the assault of the ague, and after the departure thereof there followeth sweat, then must the same be suffered to take his course, unlesse that some swooning, or such like accidents are feared.

Tenthly, at the beginning of the ague the patient must shun drinking and sleeping, to the end that the humour thereby be inclosed in the body, and that the drinking hindreth the vomiting up of the humour.

Eleventhly, the letting of blood is never good for the third dayes ague, before that the patient have had it three or four times.

Twelfthly, there are no *Mirobalans* to be given to the patient at the beginning of this

this Ague because they purge at the first, and afterwards bind the body.

Thirteenthly, he ought also to be secluded from *Diagridian*: for it inflameth the

fourteenthly he must not take any sour thing with any thing made of Barley: for that the one spoyleth the other, albeit either of them by themselves are commodious.

Fifteenthly, Rubarb purgeth *Cholera*, but it warmeth somewhat, and leaveth a heat behind; therefore the same is to be taken in the water of Endive.

Sixteenthly, if it be perceived, that there do any hot vapors ascend into the head, they are forthwith to be withdrawn, by a moderate Clister, thereby to draw them downwards, and to strengthen the head, that it receive not them so speedily.

And to come to the cure thereof, it is requisite that we make some mention of such things as are declared in the foresaid rules, which I hope shall never a whit mislike the Reader: This is the opinion of all expert Physicians, and the nearest way, and above all other (so far as is possible) to coole and moisten the body: for because this ague is hot and dry, therefore must it be cured and corrected with contrary things, to wit, with cold and moist things.

When as the *Cholera* lighteth in the mouth of the stomach, then must the same through vomits be expelled: but if it descend, and fall into the bowels, then must it be purged downwards, albeit the nature of an exquisite Tertian be such that it commonly expelleth the same of it self, either by sweat or by urine. The *Cholera* is also lightly to be purged downward, and that through a mild Clister, whereof there be divers described before in the third Chapter, 7. §.

And if so be that need require any stronger, then take of the foresaid decoction twelve or sixteen ounces mingled with *Benedicta laxativa*, Cassie, and course Sugar, of each half an ounce, confection of Bevered two drachmes, *Sal gemma*, one drachme, *Sal lad* oyl, and oyl of *Sesamum* of each one ounce and a half, mingle them all together, and exhibite this Clister at least an hour before meat.

For the provoking of urine, there is a potion to be made, wherein Smallage and Dill hath been steeped.

If you would use stronger, then look in the third Part, the eighteenth Chapter and the first §. &c.

When as the humor is purged through Clisters, and is expelled through the urine, then do some famous Physitians give counsel, that the Patient should open the *Salvatella* upon the hand, and afterwards to purge him with milde and cooling medicines, as hereafter followeth.

Take four Dates and Cassie, of each a quarter of an ounce, Rubarb one scruple, Whay of milk three ounces, mingle them together, and drink it, and fast six hours after it.

Take of the decoction of fruits, called *Decoctio fructuum*, four ounces, steep two drach. of Rubarb in it all night: early in the morning wring it out hard, and mingle therewith two ounces of Manna, one quarter of an ounce of *Diacatholicon*, take it fasting: but of the *Diacatholicon* may you take more or lesse, according to the ability of the Patient. There are more such like in the description of the continual Ague.

After purging, let him drink five or six dayes one after another, of this potion following: take *Oxyacchara* one ounce, syrup of Violets half an ounce, water of Sorrel and of Cicorie, of each one ounce and a half, and mingle them together.

But when as you perceive that the corruption beginneth to be concocted, then may be given to the sick body without fear the juyce of wormwood, drest in this manner: take the highest sprigs of Wormwood, pould them to pap, and then strain out the juyce: and afterwards take every morning hereof a spoonfull and fast two hours after it: so do also at nights two hours after supper. Some do use to steep the Wormwood in *Melicraton*, and drink thereof.

This following is an especial medicine for the grief of the stomach of *Cholera*, to wit, to use often bathing in fresh water, for thereby is the *Cholera* wasted, cooled, and moistened, if the same be used twice a day and he may remain therein so long as it liketh the Patient, but it must alwayes be used with moderation, and at oportune times.

Secondly, he must observe such an order of dyet, whereby the *Cholera* may be avoided, whereof is sufficient mention made in the description of the Gall and stomach.

But briefly to expresse the meaning of *Galen*, which is, that in *Tertian exquisita* such Government is to be kept, that the Patient drink no wine so long as this disease indureth:

but the disease being cleane gone, that then wine is to be taken watered.

All cold and moyst meates are perfect good for this maladie, wherewith the Patient may cherish himself as long as he thinketh meet, and as his stomach can digest them.

Amongst all green herbs, these be good; Orage, Blites, Docks, Mallows, Lettice and Gourds. Likewise also Barly paps, and all river fish: and amongst Fowls, let those suffice as have soft flesh, and of other the wings onely.

Item, all wood Fowls, the braines and feet of hogs, rere sod Eggs, and especially the yolks be better then the whites.

He may use all fruits that are not hard of digestion: but he must forbear at any hand Hony, Mustard, salt meates, and all hard meates. All this hath *Galen* left behind and described for a dyet in the mixed tertian Ague.

Here is to be noted, that at all times the Patient shall eat at least four or five hours before that the Ague approacheth, that it may find an empty stomach; and in like manner he shall not eat until two or three hours be past after it.

The sixth Chapter.

Of the counterfeit and bastard tertian, that is, a false third dayes Ague.

He third dayes Ague which the Latinists tearme *Notham*, *Spuriam*, that is a bastard tertian, is so called, by reason of a due cause which proceedeth not of meere *Cholera*: and because that the *Cholera* is mixt with *Phlegma*, so that both of them are converted into one kind of humour. And the difference of them which is between the late described *Hemitritian* and this *Notha*, is, that the first appeareth in the beginning with two kinds of humours, as the *Notha* cometh with one onely, and hath but one kind of putrification of two several humours.

The signs whereby this counterfeit tertian may be known from the exquisite tertian, are these.

First this *Notha* (as is aforesaid) is not exquisite, but mixed. The exquisite tertian cometh not above seven times, except the Patient or the Physitian have committed an error, whereby it is continued. And the bastard tertian heateth not the body so greatly, and all the symptomes are not so vehement as accustomed in all other Agues: for this Ague lasteth longer then twelve hours, and otherwhiles remaineth two moneths, specially in old phlegmatick persons, and that in winter season.

These signes, also following do manifest how to know the difference between it and the right tertian Ague, to wit, that the humour or matter of this Ague departeth not so soone, and abateth not the body so quickly, neither doth this Ague end with such a sweat.

These are the common rules to be observed for this Ague: First, even as this counterfeit tertian Ague differeth from the right tertian Ague, so require they several kinds of cure. Secondly, as the same is mixed with *Cholera* and *Phlegma*, so must also the medicines that serve for the same, be mingled, and must be both digestives and purgers. Thirdly, for that the syrup of Vinegar doth attenuate *Phlegma*, and doth digest *Cholera*, therefore is the same very commodious to be used for it. Fourthly, because the same Ague cometh not so speedily to the state or highest, the Patient may eat and drink moderately, lest for want thereof he lose his strength, and may expect the state of the Ague.

And to speak farther hereof, it appeareth plainly, that touching these Agues, the old proverb may be verified, where men usually say, the Ague hath three deadly enemies, namely purging, fasting, and letting of blood: which three in truth do not onely gell these bastard tertians, but also all other Agues. But in this Ague, whereof we have spoken, which is not so exquisite and pure as the former, there must be regard taken that the sicknesse increase not, lest therby the sick persons be quite overthrown, because (as aforesaid) there are two sundry kinds of impediments at hand, it is scarce possible therein to keep a meane: yet specially is abstinencie good; that the more the same is used so, much the more will the sicknesse be discussed and spent, but the same feebleth greatly the strength of the Patient: for how much the greater it is so, much the more doth it abate and weaken

weaken the Patient. But to the contrary, the more that the Patient feedeth, so much the more doth the malady increase; wherefore special care is to be had, that that be alwaies done or left undone which is most requisite and profitable, so that in strong natures the abstinence, and in weak good nourishment be prescribed, which not onely in this, but in all other maladies is to be specially observed and kept.

In this counterfeit and mixt tertian ague, at the first the Patient is not to bath, but onely when it beginneth to abate: and the Patient must not have every day meat to eat, but every other day, and must keep himself quiet, cover close his breast, and otherwhiles use a Clister.

Item, for purging you must take half an ounce of Cassie, *Diaphœnicon* two drachmes, and a half, and whay of milk three ounces mingled together. For a preparative of the humour, use this potion following: Syrup of Vinegar one ounce, *Syrupum de Eupatorio* half an ounce, mingle them together with water of Sorrel, of Cicory, and of Fennel, of each one ounce, drink it off in the morning fasting cold or warm: this is continually to be taken, till his urine begin to wax paler, and certain small cloudes be perceived in the bottome.

Afterwards, let him take these things following; take Cassie prepared with Cicory water three ounces, Rubarb and *Agaricus*, of each one scruple, *Spica* of Indy, and Ginger, of each four graines, decoction of Melons, Gourds, and Citruls three ounces, mingle them together with the rest, and so give it him warm.

There is also to be used for these agues, letting of blood, and that at the very beginning. The whole ordinance or government of dyet must not be cold nor moyst, as is said of the right tertian, but must be such that it warm, digest, and open. It is also very good to dresse all his meat with Parsley, Fennel, and such like things, and his Barley paps with some Pepper. Item, let him use Hony water, wherein Hyssope, Marjoram, and Spiknard hath been steeped or sodden. Also all things that provoke urine (except such as warm and dry too fast) are passing good, and likewise *Syrupus acetosus compositus*. if you desire more other things, then looke what is before written thereof.

And you must not faile, but to give every seven dayes once to the Patient for this ague the juyce of Wormwood. *Oxymel* is also passing good, and especially that which is made of Squils, which openeth all obstructions. Some also accustom to give for these species of agues, Mithridate or Treacle, according as the same is over hot or cold. To conclude, vomit after meat is so requisite for all aguish persons, that thereby onely many are freed and holpen.

Some will have many things to be used for this Ague, as there be many will give counsel thereto, when all meanes and wayes have been tryed, then take two ounces and a half of the salve of Poplars, and mingle it with Cobwebs, and so lay them upon the pulse three hours before the Ague cometh. Some bind it upon the pulse before the ague cometh with Cinquefoil. Item take, a handful of Eldern leaves, Lavander, and Salt, of each a little, mingle them well together with Sallad oyl and so lay it upon the pulse; this should also drive away the Ague.

The seventh Chapter.

Of the burning Feaver, called Causon

Of this ague is rehearsal made amongst other Agues in the first chapter of the sixt part, that it is (like to the right Tertian Agues) the hottest of all other agues, even as we have also said in the fifth Chapter, in which two places her properties are expressed; for the observation therefore of our accustomed methode, we will here shew and rehearse somewhat thereof.

First, this ague is thus described; *Causon*, that is a burning Feaver, is a very forcible and continual Ague, and proceedeth of a red *Cholera*, which putrifyeth and enflameth in the veins neer the heart, in the Liver, and in the mouth of the stomach, or about any part of the body. The occasions thereof are sometimes the very hot time, great labour that is done in the heat of the Sun, hot meates, wrath, inflammation of the Liver, and of the blood in the veins, and other causes more, that are rehearsed in the two places aforementioned.

The

The signs of the same ague are a continual heat, and never ceasing burning, and that rather inwardly then outwardly, with many more terrible accidents: also, there is great drought of the tongue, which at the first is yellowish, and afterwards burnt and waxeth blackish with great thirst, without any sweat (if a *Crisis* be not at hand) the pulses beat freely, the eyes are hollow, the appetite faileth utterly, and the water or urine in this ague is fiery, and yellow of colour: yea, it chanceth otherwhiles that hearing, seeing, and speech is taken away by this ague, with a great binding of the body.

In these perillous Agues that commonly make a dispatch of one in four, five (or at most) in seven dayes through death or health: these common rules following are to be observed, and also all those that are herebefore noted in the third chapter, and third §.

First, hasten to expel and mitigate the humour.

Secondly, when the urine is yellow, or yellowish, and the pulse slow, then must you not let blood; for that the *Cholera* thereby will be the more inflamed, because the most blood which delayeth *Cholera*, might thereby be drawn out.

Thirdly, if the urine be red and thick, and the pulse strong and mighty, then first of all must you open a vein.

Fourthly, if it do seem that it is good to let blood, then must it be done at the first: for afterwards it is not allowable, least that thereby great feebleness, yea death it self be procured.

Fifthly, when the heat is almost past, then are you to give the Patient to eat and drink sparingly; yet in such measure, that the natural strength be not thereby too much enfeebled: otherwise force the Patient (although against his will) to use cooling meats.

Sixthly, you must also give the Patient oftentimes cold water to drink, and let him suffer no thirst.

Seventhly, when his nose or any other part happen to bleed during his sickness, then must you speedily stanch the same, that he lose no manner of strength thereby.

Eighthly, that the hot damps of the *Cholera* may not ascend into the head, the same therefore must be cooled with the oyl of Roses, Vinegar, Saunders, and with Rose water. And when as the Patient cannot sleep at all, or happeneth to fall into any frenzie, the same must be cured with meet things, as may be found out in the register.

Ninthly, first of all must this *Cholera* be expelled (be it by vomits or stooles,) and seek afterwards to coole the great heat which cannot more conveniently be done, then that there be sufficient cold water given to the Patient to drink.

Tenthly, even as before we have expressed, these diseased are commonly much bound in the belly, which must be prevented the first or second day with mild clisters.

Eleventhly, the Patient must also have a drink given him wherein Prunes and sower Dates have been sodden, also heed must be taken that he go twice or thrice a day to stool.

Twelfthly, the heart must be comforted (which is inflamed with this heat) with cooling cordial matters without all delay. And these are the common rules which are to be observed in this burning Feaver.

Concerning his order of dyet, his dwelling place should be coole, airie, and be sprinkled with water and Vinegar. His head must be set with Vine branches, Willow boughs, and other coole green things; for the same do coole and alter the ayre that by the lungs is drawn towards the heart, whereby the heat of the heart is chiefly cooled.

Secondly, even as is expressed in the third rule, if the Patients urine be red and thick, then must his Median or *Basilica* be opened, and the same day or the day following must he use these medicines following, thereby to prevent all terrible accidents of the heart.

Take flowers of Burrage, Buglosse and Violets, of each half an ounce, twenty or five and twenty Prunes: seeth them all together in sufficient water till the third part be sodden away, then take three or four ounces of his broth, and put therein Cassie and sower Dates, of each three quarters of an ounce, Rubarb steeped in Endive water half a drach. afterwards give it to the Patient early in the morning.

Item, to coole and prepare the humour, make this syrup; take great and small Endive, Lettice, Purslain, Agrimony, Liverwort, sprigs of Poppie leaves, and green Maidenhair, of each a handful, Violets, Waterlilies, Roses, and *Lens Palustris*, of each one ounce seeds of Lettice, Endive, Purslain, and of small Endive, of each one quarter of an ounce; seeth them all together in sufficient water till there be eighteen ounces remaining, then put as much Sugar thereto, and let it seeth again and clarify it; put thereto Endive water, Rose water, and the juyce of Pomgranates, of each six ounces, burnt Ivory,

Ivory, red and white Saunders, Camphir, and white Poppie seeds, of each a drach. and a half : then afterwards seeth them all together unto a syrup, give thereof four times in four and twenty hours, tempered with Barly or fountain water.

And when you perceive the next day that the ague is abated, and thereby make shew as though the fourth day it would end ; then must you not give the Patient to eat (but as necessity requireth, and as the fit rule sheweth :) crums of white bread soaked in fountain water are good for him. Likewise Almond milk is also good for him, if the same be made with Melons or Cucumber seeds. You may also mingle amongst his drink syrup of Vinegar, muscilage of Endive, of Purslain, and Melons seeds : and in like manner the syrup of Poppie heads, and chiefly of black Poppies. But in case there light upon any young Patient any intolerable thirst, and thereby longeth to drink cold water, then must you let him have it, and that so much as he may drink up at a good draught : and then afterwards if the thirst and heat yet continue with the Patient, give it him ounce again to drink. But note that old folks have not any such drink. Secondly, good heed must be taken that none of the principal parts thereby be damnified ; but onely let such have it as it is meet for. Thirdly, it must not be given at all if the ague proceed of any cold humour. Fourthly, it must not be ministred when the natural strength is much decayed. Fifthly, if there be no great obstruction at hand. Sixthly, if the sicknesse be not increasing, but decreasing. Seventhly, it is not tolerable, unlesse the thirst and the lust to drink water be very extream. Eightly, if there be any fear of any great feeblenesse, then must you mingle that water with the juyce of Pomgranates, or with Verjuyce. Hen broth, wherein Lettice, Purslain, and Cucumbers are sodden, is also very meet for him.

Item, raw Butter milk well fugared and crummed with white bread in it, is marvellous medicinable. But if there come any sweat, then must speciall care be had that the Patient continue in it, and sweat as long as his strength will abide it. With the blood must be dealt as is said in the eight rule.

The eight Chapter.

Of the Ague which is called Synochus.

Amongst all other continuall agues is this also comprehended which the Greeks call *Synochus*, whereof we have also spoken before in the third chapter, that the same groweth through the superfluity of the blood being mingled with *Cholera*. The learned describe 2. manner of these agues : whereof the one is provoked of the blood that is not putrified, and the other sort of a putrified and noysome blood in the veins. The cause of the first ague is, if the party be by nature sanguine and full of blood, and therewithal useth daily meates that ingender much blood : as namely, good delicate flesh and wine, yolks of eggs, and such like, little or too much, lacke of exercise, vapours of superfluous and over hot blood, that draweth upwards and never findeth any issue, because the pores and all inward passages are obstructed. The signs of this ague are, when the pulse doth beat alike strong and swift ; if the heat be not extream, then may it best of all be perceived in the palm of the hand : the urine for the most part is like unto that of healthful persons, yet the same is often red and thick, and specially in a corpulent body. Herewith may appeare also a rednesse of the body, and of the face, with a fulnesse of the veins, and there is no cold nor shaking, but a troublesome breathing ; otherwhiles they fall into a dead sleep, as it were into a *Letbargus*, whereof we have spoken in the first part, the twelfth Chapter, and tenth §. Before that any do fall into this ague, he feelth first a great wearisomenesse over all his body, and an itching of the nose, ach of the head, and in his sleep he seeth many red and bloody fantasies : above all this the speech is troublesome unto him. For this bloody ague are described these rules following. First, it is the opinion of all learned Physitians, that all such Patients are to be letten blood even until they begin to fall into a swoond. Secondly, if it appeare very waterish and cholerike, then must the same be cooled and thickned. Thirdly, if the same be too grosse and too thick, then must the same be made subtil and thin. Fourthly, the body must after letting of blood be well frothed, that the pores may be opened. Fifthly, when as the letting of blood is

neglected

neglected (and the Patient yet strong enough) then is the same to be done still, yet at all times with the counsel of a learned Physitian. Sixtly, if the Patient will not abide letting of blood, then must alteration, penning, and expulsive things be used, whereby the superfluous humour and blood may be abated. Seventhly the letting of blood and drinking of cold water work and effect so much, that you need not use any other things. Eightly, this ague requireth great abstinence, if nature may abide it. Ninthly, when this ague proceedeth of surfeiting in meat, then must the letting of blood not be used before the 2 or 3. day: notwithstanding that the malady is such wherein the opening of a vein may not be omitted, for that it quickly annoyeth; wherefore must the first rule be forthwith applied, by letting him blood in the Median so long till he begin to swoone. And if the same cannot be effected at one time, then is the same to be done at sundry times, every time a little. Afterwards let the Patient use cooling things, as namely, syrup of Verjuice, of Purslain, of Pomgranates, and of Limons, or of Sorrel: much cold water is also to be given to the Patient to drink, yet with such direction as before in the description of the ague *Chinon* hath been shewed.

Let him have bread to eat that is steeped in the juice of Pomgranates or Verjuice.

Barley water is the most commodious drink that he may drink, and Syrup of Roses may be mingled amongst it; if he go not to the stoole, then make him a chicken broth wherein Mallows are sodden.

Purge the Patient also with sower Dates, with conserve of Prunes, Cassie, or with Manna, and so proceed with cooling things, till the heat be clean extinguished.

Of the Ague Synochus, with putrified blood. §. 1.

THe other sort of this continual ague is also very strong, proceeding of a putrification of the blood. And hereof is a disputation also amongst the learned: for some say that when as the blood cometh for to putrify, that then it is no longer blood, and therefore this ague *Synochus* cannot be ingendered of blood. The causes are the same that are of the other, but that onely with the former there are many inward vapors without any putrification of the blood. In like manner the signs of both these agues are the same, but that in the first the heat is greater, and all other symptomes more violent then in this. In fine, herein do they both agree, that there is never any increasing or abating of the fit, as may be observed in other continual agues. Now to cure this ague, the Patient must be let blood out of hand, if the stomach be not overcharged with meat, and that the age and strength will permit the same, and thereupon purge as is taught for the former ague. And if it fall out (as it accusometh to fall out) that with this ague there were adjoynd a feebleness of the Liver, then must these Trochisks following be prepared for it.

Take burnt Ivory, Dragagant and starch of each a drach. seeds of Purslain one quarter of an ounce, Licorice one quarter of an ounce and one scruple, make thereof then Trochisks with Dragagant dissolved in Endive water; they do coole and comfort the stomach, and also the Liver.

Another. Take two scruples of Roses, two scruples and a half of Barberies, seeds of Melons, Cucumbers, Citruls, Purslain and burnt Ivory, of each a scruple, Dragagant, Gum, and Almonds, of each half a scruple, Rubarb Saffron and Camphir, of each seven grains: make thereof Trochisks, and minister one drach. of them at once with Barly water; you may also mix the aforesaid Trochisks with conserve of Roses, and so use them.

For this are also commodious the dosinges, *Diatrisan/antalou*, *Diatragacanthum Frigidum*, and that for both sorts of these agues, because both of them do ask one and the same kind of remedies.

Of the order of dyet. §. 2.

BOTH of these agues do require a sparing dyet, as Barly pottage, Oaten paps, Hen brothes, wherein Lettice or Verjuice is sodden, and such like. One may also seeth Lentils by pouring out the first broth thereof, and dressing the second with Parsley and a little vinegar, or juyce of Pomgranates. The broth of red Pease with Sugar, stewed apples, and peares, and fresh Gourds drest with Almond milk are specially good. He may also eat otherwhiles Melons, Citruls, Endive, Lettice, and Purslain. But if the Patient be bound in the body, then may you seeth in the Almond milk Spinage, Mercury, and such like: or take conserve of Prunes, sower Dates, Cassy and Manna, of which you will; also mild Clusters may be used and taken for this purpose. And

And if the Patient have great head-ach, then delay the same with oyl of Roses, Vinegar, or with *Oxyrrhodino*. In like manner may you also use a little oyl of Violets, or oyl of water Lillies being dropt into his eares, and to hold Roses, Camphir, or Saunders before his nose. If the Patient cannot take any sleep or rest, and that no lithargy be feared, then is the juyce of cold and moyst herbs to be used, and in like manner of small and great Housleek, of Nightshade, Lettice, Purslain, and of Poppie leaves, or Poppie heads, Poplar salve, and such like, dip a cloth therein and lay it upon his forehead. The very best and most usual drink that can be used in this sicknesse is Barly water; but in great heat you must mingle therewith (as is said) the juyce of Pomgranates, verjuice.

Item, cold water with syrup of Pomgranates, or any other cooling syrup. And if there chanceth any swooning called *Cardiaca* with it (whereof we have admonished in the 2^d part, the 6. chapter) then is the same to be holpen with cooling and fragrant things, even as hath been shewed in the foresaid places, and especially apply this plaister following to the Liver. Take red, white and yellow Saunders, of each three drach. Roses and Barly meal, of each one ounce, Camphir a quarter of an ounce, make a plaister thereof with Rose water. If so be that he fall into a great sleep, then must you chase the hands and the feet very vehemently with vinegar, pouring the same also upon a hot stone, that the vapour thereof may ascend into the nose; you must also call earnestly upon him, pull him by the hair or by the nose, and use such like things more for the same, as be shewed in the first part the 12. chapter, and 10. §. for when as these vapours do ascend forcibly into the head, then is the dead Palley to be expected. Whereas is unquenchable thirst, there must the water be mingled with vinegar, and hold these losinges following under the tongue; Take the juyce of unripe Grapes, of Sorrell, of Lettice, wine of Pomgranates, and white Vinegar, of each an ounce, put thereto white Sugar and Sugarcandy, as much as is thought meet, letting it seeth so long together as shall suffice to make losinges of it. Here is, now sufficiently treated of this *Synochus*, and of other hot agues.

The ninth Chapter.

Of the Quotidian Ague, *Quotidiana*

THe cause of this daily ague proceedeth of a putrified *Pblegma*, and slimy corruption, which nature forceth towards the exterior parts of the body, and there ingendereth such a cold, which may be called rather a shaking then right cold, wherewith so burtheneth and suppresseth nature, that thereby the pulses are faint, and unnatural heat stirred up, and the pulses are found unequal: When as the cold avoideth, then by and by followeth the heat, which is shorter then the cold, continueth longer because of her slownesse, and by reason of her toughnesse; whereby this ague cometh to her state very slowly, and declineth very sodainly: so that it happeneth therein as if one lay green wood upon the fire, where the moysture withstandeth and suppresseth the heat, and remaineth so long without burning till all the moysture be consumed, and then sodainly burneth away as as long as there remaineth any wood.

The occasion of this ague is outwardly cold and moyst ayre, the long use of cold and moyst meat, as fish, fruit, and such like, and unaccustomed idlenesse, to bathe much in sweet waters and great rioting.

Item, if the body be overcharged with overmoyst and slimy humours that putrify in the body, go out of the veins, and send stinking vapours towards the heart, whereof an ague might ensue. This ague is also very easily by her signs to be known from the tertian ague, for it beginneth not by and by after the first day with cold, but beginneth by little and little: also the pulse, altereth not, as it doth in the tertian ague. The Patient complaineth of no great heat, of no short breathing, neither of any great thirst. His urine is like unto the urine of such as have new gotten the quartain ague, not knowing of any sweat at the beginning, but in time doth he perceive it: so that these signs are so manifestly differing from the tertian ague, that they seeme to have no communion at all.

Also one may perceive by this Patient that the heat is somewhat mixt with a vapour, which appeareth outwardly; also the pulses of this Ague be much fainter then the tertian.

or quartain agues. The tongue is moyst, and he is quickly provoked to vomit, whereby he casteth up much filth: and in like manner is the going to the privie cold by nature, moyst, undigested, waterish, and full of vapors. The urine is white and thin, and otherwhiles thick and troubled, and the whole body full of waterish humours. All bodies that live in quiet, are fat and moyst, haunting daily riotousnesse and surfetting, much bathing in fresh waters, and such as have their habitations neer to moist places, are most of all subiect to this disease. To conclude, this ague long enduring is not without peril of life.

Now to remedie and cure this ague the better, you must above all observe these rules following: First, this Patient is to use that which warmeth and attenuateth the humour.

Secondly, if the Patient can hardly cast or vomit, then is it a sign that the tough phlegme of the stomach must be incided.

Thirdly, you are in the beginning of the ague to force the Patient to vomit, whereby the matter or humour might partly be abated.

Fourthly, these inciding and attenuating medicines must be used from the beginning to the very ending of the malady, yet now and then, as the Physitian thinketh meet.

Fifthly, all kind of agues in the beginning do accord with these three things, to wit, that the nature be brought through easie means to be laxative, to provoke vomit, and moreover to use such things that do incide and attenuate the matter and expel urine.

Sixtly, for as much as the debility of the stomach and of the Liver is an occasion of many filthy humours, therefore need requireth that you seek to comfort and open the same, and also the spleen.

Seventhly, for that this ague from the beginning till it come to the highest state, requireth much time; therefore you are to consider of the Patient accordingly, and to give him much or little meat.

Eighthly, one must in the beginning of the ague, and likewise as often also as it assaileth, keep the Patient awake, and that so long till it begin to decline, that the expulsion of the humours be not thereby hindered.

Ninthly, he is not to be fed so long as the fit of the ague endureth, but a good space before, and afterwards, unlesse that some debility and weaknesse require the contrary. And how these agues are by medicines to be cured, that is before in the fifth part, the 20. chapter sufficiently taught and expressed, whereby every one may govern himself: and especially these pills here following are to be prepared for these phlegmatick agues: Take the rinds of *Mirbalani*, *Chebuli*, *Rubarb*, *Cinamom*, *Cardamom*, and cloves of each a drach. Aloe three drach. beat all these together very small, and with the juyce of Mints, wherein a drach. and a half of *Agaricus* is steeped: then make pills thereof, And every morning and evening, take half a drach. at once.

You are also to receive a potion that is described in the third part, the twelfth chapter beginning thus, take *Gentian*, &c.

You are in general at the first to use alwayes for these agues *Oxymel*, and other things more that provoke urine, as hath been taught in the third part the 18. chapter.

This Patient is also to use none other meat, then such as doth separate the tough phlegme and expelleth it. In like manner, when the ague is at the state, then must care be had for the mouth of the stomach, like as there are therefore divers medicines ordained in the description of the stomach in the third part, the 11. chapter. Vomiting is for these agues passing good, for thereby will many slimy humours be expelled: And how to provoke vomit, you may search and find in the first Register.

The tenth Chapter.

Of the Quartain Ague, *Quartana*.

When as these Quartain Agues are mixt with other agues then hath she her beginning of Melancholy, as the Quotidian ague of *Phelgma*. And because the black melancholick blood hath his residence in the Milt: it will commonly be felt in the same place at the beginning. This ague is (as her cause is) cold and dry. Albeit the same humours are very grosse, cold, and heavy, yet doth their cold nature not appeare forthwith, to wit, in the beginning, or the first day, but by little and little, as it ingendereth: so that the cold (when the ague is at the highest)

highest) doth not otherwise shew it self; then it doth unto such as are stiffened by extreme cold in the hard winter; and it is to be likened by a stone, muskle, or bone, which lying in the fire and being hot, you cannot well know the heat till you feel it.

So fareth it also with melancholike humours, when they happen to kindle, then remaineth there no moisture till they be clean burnt: and therefore are they the longer before they kindle then any other, for that (as is said) the corruption cometh to kindle by little and little.

By the foresaid occasions it cometh to passe also that pulse beateth very slow, faint and longsome, yea in young folks so very faint, that they may be likened to old folks: for as this Ague beginneth to increase and attain to the highest, then will the pulse be the more swifter and forcible, yet not so strong as it is in the Tertian Ague, whereof we will further write and make mention.

The causes of this quartain Ague are (even as abovesaid) first the melancholike blood; time of the harvest, and after that the winter, for that at these seasons these humours are not onely stirred, but also augmented more vehement and durable; so that otherwhile they endure untill winter; whereas to the contrary the same are shorter in sommer, and the rather, if the nature of the country be inclined that way; and the time of the year otherwhiles is such, that it ingendreth foul blood, whereby then such and other Agues are caused. Wherefore good heed must be taken to all these foresaid things; and in like manner whether the Patient be not of a melancholike nature, and hath not used before to eat such kinds of meats, whereof this melancholike blood is ingendered or increased, as bread of Miller, Lentils, Beans, Chestnuts, salt Cheefe, salt fish, Beef, Hares, Harts, Cabbages, and such like. Item, all other things that inflame the blood, as Garlick, Cresses, Pepper, Mustard, strong and spiced wines, burnt wine, and all kinds of hot spice or fruits; but especially great labour, travel in the heat of the Sun, long anger, great sorrow, and long former Agues, whereby the blood and other humours are burnt and putrified, and are altered by the great heat into *Melancholiam* before they be expelled, whereof you have further instruction in the description of Melancholy, and of the stomach.

Item, have special care whether the Milt of the Patient be not swoln, or have any other infirmity. Or whether the Patient have before had no erratick Ague, for that the quartain Ague never cometh alone, but commonly alwayes after another Ague.

You must alwayes mark well, whether the urine be white, thin, and waterish; in these things, as also in the pulse and cold doth it altogether differ from the tertian, but regard not you the vomiting of the gall, for that is the onely nature of the tertian ague: but if you find by the motion of the pulse or otherwise, after the ague is gone, or if there be any signs of the ague, then is there no doubt at all but that it is a quartain Ague.

Now to cure this ague, we will first of all shew you certain rules; and for the first, if the pulse be forcible, and beateth swiftly, the water be red and grosse, the Patient be young and full of blood, then shall you not omit, but open the *Basilica* or Milt vein on the left hand: but if the blood be red and clear, then stop it again; but if it be thick and black, then let it run, and that so long as the parties strength be able to bear it. Secondly, if so be that the Patient have not much blood, let him then not bleed at all. Thirdly, you must not give to any that is taken with the Ague any strong purgation at the first, by reason that all melancholike humours are very tough and grosse, and the same may not be purged in the beginning, but mild purgations must be used, and gentle clisters. Fourthly, all meats and drinks that are prepared daily for the Patient, shall be laxative; that he may alwayes have some vacuacion. Fifthly, against such time as the Ague approacheth, the patient must at any hand refrain food, that nature thereby may work the better on the matter of the Ague, also the easier expel and withstand it. Sixthly, he may not bathe until the Ague begin to decrease. Seventhly, he must forbear all fruits, by reason of their grosse moisture that lightly doth putrifie, and may provoke obstructions. Eighthly, these Patients must take heed of the cold air, and settle themselves in temperate dwellings. Ninthly, they that have any obstruction in their veins, are to use such meats and drinks that warm and moisten. Tenthly, because that this humour is compact, and the state thereof a great while after it beginneth, the Patient is not to be kept oversparingly, but let him be cherished with meat, that he may retain his force and strength, and expect the *status* of the disease. Eleventhly, for this kind of sicknesse you must not give any overhot and dry things, for fear that the Ague be not thereby doubled, prolonged

and altered into a continual ague. Twelfthly, you are not to use overcold remedies, because they do thicken and harden the matter, wherefore mild means are alwaies to be used and taken.

Out of these foresaid rules it is easily to be understood, that no strong medicines are to be used in the beginning of this ague, except that one see that there is great store of blood at hand, at which time the Median may be opened in the right arm.

Also if the blood be black and thick, as it happeneth to be of such that have a diseased spleen, then may one let it run the longer; but if it be red and clean, then must it be presently stopt.

The ordinance and government of his life must be such, that he feed not upon any thing that provoketh or breedeth wind, but use all meats that ingender good blood, and keep the body open and soluble: and if any defect be hereof, then must a mild clister be ministred. Also, he shall forbear swines flesh, and all meats that are slimy and hard of digestion, and of all that which might make the body cold and dry.

His drink must be thin white wine, his meat all manner of field fowls, but no water fowls, fish of light digestion, and not slimy, salt meats and mustard may he also use. Also he may sometimes use the confection *Diatrion pipereon*, or *Diaspolicicon*: and although the patient did drink every day a little pepper with water, it were not amisse. This Patient shall not wholly forbear from riding, walking, and from baths, if he hath been accustomed to it, yet is the bath not very good for him.

If this quartain ague be not very strong, nor yet continue long, then can it not hurt, if the patient upon his free dayes do execute his affairs and businesse. But about the time as is supposed that the ague is come to the highest state, then must the patient feed very moderately, yea more sparingly then ever before, keeping himself very quiet, and anoint the belly with such things as may keep the body open and soluble: and also use such things as provoke urine, whereof you shall find good instruction at due time and place.

And as soon as one perceiveth that the humours begin to avoid, then are those things to be used that expel melancholy, and that not once, but as often as need shall require.

Also to provoke him to vomit, and that after meat, and (if need be) let him take a little black Hellebore therewith to ease and further the vomiting.

But they that cannot vomit must be purged; Treacle is also passing good for them; yet it is to be noted, that none of these foresaid things may be used before the sickness be at the highest, for thereby might of a single quartain ague be made a double; and lastly of a double quartain a three double ague.

Galen writeth (out of whom this counsel is gathered) that he knew a Physitian, who (before the quartain was at the highest) gave his patient Treacle, whereby the same ague so increased that he dyed thereof.

When as this order hath been observed in this ague, then do the later Physitians teach that these things following are very fit to be used.

Take Ginger one ounce, cut it small, and then seeth it in red wine until there remain five ounces, then mingle therewith one ounce and a half of the Julep of Violets, and so drink it, to wit, two hours before the ague cometh upon you, and the same will make you sweat throughly.

Item, take an ounce of the juice of Plantain two hours before the fit of the ague approacheth, it will remove the ague. The water of *Carduus Benedictus*, or the herb sod in Wine and drunken, cureth the ague. The common people take the powder of this herb and strow it upon a shive or twain of bread that is soked in burnt wine or *Aqua vita*, and so eat the bread before the ague come. *Oxymel scilliticum compositum* openeth all obstructions in the quartain and tertian agues.

Some commend the wine of *Asarabacca* roots, for this root hath the nature of the Hellebore, it drieth all inward parts, and provoketh urine, and will therefore also expel the ague. The like vertues are ascribed to the wines of Harts tongue, of Hyssope, and of *Tamariscus*. The sirup of *Oxyfaccara* is also passing good.

The eleventh Chapter.

Of the Consumption or Ethick Hectica.

His is one of the most perillous Agues that may light upon a man; for by her hot and dry operation she dryeth up all natural moisture of mans body: This *Hectica* is not satisfied with the hurt that it doth to all natural moisture and vital spirits, but it dryeth also all nourishing parts; and all the flesh of the whole body, yea the marrow of the bones also, so that it may duely and rightly be called the consuming Ague.

This destroying heat beginneth first in the heart, of the Ague which is termed *Causon*, that is, the burning Fever, whereof we have written in the seventh Chap. which continueth there so long until it consume the very sap and moisture of the heart. And albeit it doth not consume and waste all the moisture of the heart, yet doth it burn and spoil the same. For it fareth with the heart as with a wick in a Lamp, that at the beginning doth burn light and clear; but the longer that it burneth, the harder, and the more burnt, the drier it waxeth, where by a little and a little it loseth light and extinguisheth: and albeit more oyl be poured unto it, yet burneth it not then the brighter, but the flame remaineth small and slack, and the longer that it burneth, the darker it is, till at the last all of it goeth clean out of it self. So fareth it also with this *Hectica*, with or without an ague, as plainly may appear in very old men, which are commonly said to dye like a lamp or candle. This is to be noted also in children, that sometimes also use to abate and fall away.

This Consumption, namely that which is without an ague, is called of the Greeks *Marasmodos*, that is a Consumption; and of the Latinists *Senectus*, that is, old age, whereby we may call it the infection of the heart, whereof we have spoken in the second Part, the sixth Chapter §. 9. In like manner in the description of the Consumption, in the fifth Chap. §. 22.

When this *Hectica* spreadeth her self over all the whole body, drying it altogether up, then is it (as we have already told) called *Marasmodos*.

This sickness is incurable, and above all mens help, for that the natural heat would quickly like a tree (through very great age, or in them that lie about the fire) through extrem heat be dried away.

The causes of this *Hectica*, are all outward things, which do heat the parts of the body, whereby many agues might be provoked, whence at the last this consumption is founded and springeth.

Item, the hunger and thirst, if they be not remedied betimes, the which for the most part hapneth to cholerick and lean men, who falling into a quotidian ague, are thereby lightly turned into a burning, and lastly into this ague *Hectica*.

Item, the perishing of the lights may very well be a cause of this *Hectica*, whereby is hindered that the fresh air may not cool the heart sufficiently; and there be other more occasions, whereby the heart may be inflamed.

We will now admonish somewhat of her signs. They that fall into *Tabem*, that is, into a Consumption, are easily to be discerned; for before that one come to feel their pulses, one may see how their eyes be sunk and fallen into their heads.

The apples of their eyes will be dry in this agony and wrinkled, and the flesh round about their eyes fallen away, so that one may otherwhiles almost see the bones of their brows.

It seemeth also otherwhiles, that these diseased persons face is so bedusted with dry dust, as it is in them that have gone the whole day through the dust in the heat of the Sun. Also the lively ruddiness and colour over all the whole body is vanished and gone: and likewise the skin of their forehead so hardened and shrunk, that they seem to close their eyelids very badly: and sleeping, they lie with their eyes half open, which can be no due sleep, but rather an over-great watching, and the flesh in the temples of the head doth so wast away, that there seemeth to be a great hollownesse. To conclude, there remaineth no more then the very skin & the bones, so that when one seeth them naked, he would judge

none other than that the carcase were covered with a dry skin, and that all the intrails are taken out, or lye hid in the breast: and when as one toucheth the skin and plucketh it hard, then shall he find it, through dry, and it seemeth that by plucking it will follow. These sick persons have a hard pulse, and at the first touching of them doth one perceive small heat, but when you hold your hand long upon them, then may you feel the heat under your hand increase, and divers such like signs more.

Of this malady *Hectica* and *Tabes* is a great disputation, whereof here we will not make many words, but will commend that matter to the learned: yet nevertheless before we come to the cure, we will briefly admonish thus much, that such as be of a moist nature in the beginning of the Consumption, are not assailed with this Ague *Hectica*, but they onely that be dry of nature, and somewhat hot, and therewith do great labour, watch much, and live in carefulnesse, where their natural moisture is wasted and spent, these presently are taken with this ague *Hectica*, and specially such as chafe much, live in extreame sorrow, or frequent great heat. And although this sickness when it hath long endured, and is once rooted into the body, be thought incurable, yet nevertheless men must not disdain the help and means which God the Lord hath ordained for the use man, but pray heartily unto him that he will blesse them for the glory of his holy name.

Wherefore these rules following are to be observed and imitated, for thereby may be gathered a perfect cure of this sickness. First, it is needful for the languishing persons that they use all things that may moisten and cool. Secondly, because these diseased persons must neither be purged nor warmed, therefore the warm bath is also hurtful, for thereby the heat is increased. Thirdly, all their meat and drink must be cooling and moistening, or at the leastwise temperate, as barley pape, *Ptisana*, henbroth, and *Panada*. Fourthly, the curing of this *Hectica* is like to that in the drouth of the stomach, whereof we have written in the third Part, the second Chapter; and seventh Section yet are cooling things hereto required, by reason of the great heat of the ague. Fifthly, if need require that other meats are to be ministred unto him which are not cooling, as namely Wine and fresh broth, yet nevertheless therewith are cooling things to be used.

Sixthly, if the ague proceed of any impostume or bruise of some other part, then special regard be had for the healing thereof, and that the liver be cooled and brought in course. Seventhly, a good cool aire is one of the principal helps, and therewith fresh linnen also that is washed in water, where Roses, Willow leaves, or *Trochisci de Camphora* be steeped. In like manner Rosewater is very commodious for it. Eightly, the smell of Camphire, Rosewater, fresh Poppy heads, Roses, Saunders, and such like, is very requisite and profitable for this Patient. Ninthly, all cooling plaisters (wherein no astringent things are intermingled) are to be laid on his brest. Tenthly, if this diseased person desire to have health, then must he (so far as is possible) incline himself to sleep, and to all quietnesse and rest, and keep himself from thirst, hunger, pensivenesse, anger, hatred, and much sorrow. Eleventhly, he must not sleep upon any thing but a mattresse. Twelfthly, it is also marvellous good for this sickness to keep by the noise and rushing of waters, or by springing fountains. It is very good to hang up all green things about his bed, or to sprinkle his chamber with the water wherein such herbs are or shall be sodden. Thirteenthly, Goats milk or asses milk, whereof that is best of them that are fed in a meadow where cool herbs grow, is a most soveraign medicine for this malady. Fourteenthly, womens milk surpasseth all other milks. Fifteenthly, buttermilk is likewise very good for this sickness. Sixteenthly, to conclude, for Consumptions are all manner of milks from the beginning to the ending there very excellent good; and all good fresh henbroth sodden with Lettice, Purslain and verjuice, is exceeding profitable for the Patient.

But above all things, special care is to be had that he observe and keep a good diet, wherefore he is to eat and drink but little, using alwayes such meats as do nourish well, to wit, Pheasants, Partridges, young Quails, and such like, as hens flesh, Veal, Mutton and Lambs broth, &c. wherein Lettice, Purslain, and such like cooling herbs are sodden.

And as we have declared before, let him use alwaies Goats milk or Asses milk, and above all, womans milk; for all these are so highly commended for this disease, that it is not possible to tell of any thing that may exceed them, to help and cure this malady. For if he use any of these, or any other good milk, in such measure that he be not cloyed by taking too much thereof at once, but to take it the oftner, and namely, betimes in the morning

morning meetly warm, or when it is new milked, and that about 2. ounces thereof at once, and then afterwards in the day time four times more, about three or four ounces at once, so that 5. draughts be taken within 24. hours.

His meat must be (as is said) Barly pap that is drest with fresh broth, and pap of starch, or that is made with grated bread, and wherein also one of the foresaid herbs are sodden, sometimes one of them, and sometime another. Pease broth wherein Hens or any other thing is sodden, or of it self, is passing good.

The very best drink for this disease is Barly water wherein sugar penners is dissolved: and to retain the patients strength, you are to permit unto him thin white Wine, that which is very clear, being mingled with fair water, when he sitteth at meat: but the mealtide being past, let him drink nothing but Barly water.

They that are quelled with this malady, have for the most part alwayes a very dry mouth, dry tongue, and great thirst, whereto prepare these confections following, and hold them in his mouth to refresh the same therewith; Take the seeds of Fleawort and Quince kernels, of each three ounces, steep them 7. or 8. hours together in luke-warm water, presse out the muscilage, put thereto afterwards the juyce of Pomgranats two ounces, Sugarcandy one ounce and a half, starch as much as is meet for to make it in form of a confection. If you will have it to drink after the manner of a Julep, then leave out the starch, and put thereto the water of Purslain and of Citruls, of each 8. ounces; and so let it see the a little together: and lastly clarifie it with the white of an Egg. If one hold green Lettice or Purslain in his mouth, that refresheth it much.

You have also in the third part, the 12. Chapter and 10. §. and afterwards in the seventeenth Chapter and 7. § very many things which are all good against the thirst, where you may have choyce of that which is best for this malady.

These cooling and comfortable medicines following are to be daily used for refreshing and comforting, namely, conserves of Roses, conserves of water Lillies, and the sirups of them both, conserves of Cicory. In like manner also the roots of the same in a Sallad or confection, are very meet for it.

The confectioned Citrons, and the juyce thereof, the juyce and sirup of Orenge, conserves of white Roses, and all that is made thereof, is for this purpose highly commended, for they cool more then red Roses.

Secondly, the Kidneyes and back bone are also through this malady very much tormented with a great heat; whereto is very commodious the salve of Roses, wherewith he must be anointed 6. or 7. times in 24. hours. Also it is very good to moisten the back bone often with milk, and also to anoint it with oyl of Roses or with oyl of Violets.

Thirdly, there happeneth otherwhiles to this Patient (that is feeble already) a fore sweat, which may cast the patient altogether down, which may by the foresaid means be hindred. But if that will not help, then besprinkle the face and the whole body often with this water following; Take 12. ounces of Rosewater, one quarter of an ounce of Camphire, Purslain seeds and red Saunders, of each a drach. one quarter of an ounce of starch, mingle them all together.

This drink following is also highly commended: Take 6. or 7. river Crabs, lay them in a quart of water, then cast therein a handful of ashes, and let them stand 4. hours long, afterwards rub them well therewith, and wash them clean with fair water 3. or 4. times, and so see the them; and take the tayles of them, cut them very small, and see the them again with a quart of Barly water till they be almost consumed; then strain the broth through a cloth, and give thereof 3. or 4. ounces every time to the Patient to drink when you will. But if you will have this water to cool more more and nourish lesse, then see the the Crabs, whole and uncut, and not so long time as is afore said.

After this manner may you also dresse a Tortoyse that liveth in fresh water, and is excellent good for this disease.

The small fishes that are taken in fresh waters, are very commodious for this disease, if they be taken without spice.

In the description of the consumption *Phthisis*, in the second part, the 5. Chapter, and 22. §. are many kinds of remedies prescribed for this *Hectica*, and afterwards also in the 6. Chapter of the panting of the heart through heat, are divers cullises described that are very good and profitable to be drunken.

You may also prepare these confections following for the same: take of the white

flesh of a young Hen or Capon six ounces, starch one ounce and a half, new oyl of sweet Almonds six ounces, five whites of new laid Eggs; let the oyl, starch, and Eggs seethe together on a soft fire untill it be thick, afterwards mingle the flesh of a Capon being chopt small amongst them, and make cakes thereof, whereof the patient may use a little at each time, and as often as him please, which also is as good as if he took much at once, seldom, and better. Or prepare this following: Take white Poppy seeds, peeled seeds of Melons, Citruls, Cucumbers, and of Pompeons, of each a quarter of an ounce, Almonds, Hasel nuts: Pistacies (all of them shaled) and Sebestes, of each 3. drachmes, Pingles that have been steeped 24. hours before in Rosewater 5. drach. conserves of Burrage, Buglosse and *Species Diarrhodon Abbatis* of each one quarter of an ounce, conserve of Roses five drachmes, *Manns Christi* with pearls and sugar pennets, of each half an ounce, roasted Capons flesh two ounces, white flesh of Hens that is stuf and drest with Buglosse, Baulm, Burrage, and Endive three ounces; cut both of these small, and then mingle therewith *Species Diambra* and *de Gemmis*, of each half a drachme, *Doronicum*, Saffron, Cinamom, Roses, and red Coral, of each five drach. *Species Diatria/antalon*, and grains, prepared pearls a quarter of an ounce, Sugar sodden as thick as honny, as much as need requireth for to make a confection, mingle them well, and use it, as the aforesaid, one quarter of an ounce at once.

There is also usually made for this a confection of oyl of sweet Almonds, starch, and Sugar. The preserved Gourds are also wonderful good against this unnatural heat.

Of the Ague Hectica, With a pain in the breast, Empyema and Phthisis. §. I.

IN this compounded Ague, which it placed amongst the *Putridas* or putrified Agues, there doth appear besides the former signs, cold, and a very stiffness of cold, which cometh at uncertain times, sometimes by day and otherwhiles by night, and that alwayes unstedfast, which hapneth by the diversity of the humours, whereof now the one and then the other is stirred up and inflamed. The corruption which is gathered together in the breast, out of the head, or out of the veins, doth chiefly cause this consumption, which lyeth there putrified and mingled with the blood, is cast out and expelled; and albeit that this kind of consumption and also the former be incurable, yet you must be marvellous diligent by these means following to accomplish health as far as it is possible.

First, therefore you must refrain and shun all things that are sharpe and salt, as Mustard, Radishes, Onions, Garlick, and such like.

Item, all flatulent and windy things, and all that is cold by nature and hard of digestion, as unfodden milk, porridge of Pease or Beans, unleavened and dough baked bread, Verjuice and Lemons &c.

His drink must be good common clear Beer, or any thin red sweet Wine, but he must refrain from strong wine and beer: but if he cannot bear wine nor beer, then give him to drink good Sugred Barly water.

Young Lambs flesh, young swine, Muttons of a year old, and Calves, are very wholesome meat for him. Also Larks, wood fowls, Partridges, Peasants, and Hares; and specially river Crabs sod in Barly water or milk, are passing good.

Coleworts sodden, strew Barly drest with starch, Calves feet sodden in Vinegar, the lights of all beasts, but chiefly of Foxes and hogs, rare sodden Eggs, or the same drest with other meat, fresh Butter and Cheese but little salted, milk pap, three or four dry Figs eaten before meals, and sweet Pomgranats roasted in the warm ashes, are all of them much nourishing. After meat let him also eat three or four roasted hasel nuts, and Saffron and Cinamon in his meat measurably.

These confections following are also most commodious for him: Take white Poppy seeds an ounce, roasted flesh of a Capon 4. ounces, starch three quarters of an ounce, prepared Pingles 4 ounces, peeled Almonds 3. ounces, Roses three drach. yellow Saunders and Mace, of each a quarter of an ounce, Cinamom three quarters of an ounce, Cloves half an ounce, *Lignum Aloes* two drachmes and a half, Nutmegs a drachme, Amber two scruples, Musk 6. grains, fresh oyl of sweet Almonds 4. ounces, Sugar which is sodden with Rosewater and Baulme water, as much as need requireth for a confection; mingle all these well together beaten and shred small: take thereof every morning and evening half an ounce every time before meat.

And when as this disease falleth out of the head into the breast, and that this Ague

Hectica

Hectica hath from thence her beginning, then must special care be had for to comfort the brains, which may thus be compassed. First, let the head be shaven bald, and then upon the naked shaven head lay this plaister following: Take *Laudanum* a drachme and a half, Rosin and red Storax, of each three quarters of an ounce, Mastick, Roses and white Coral, of each half a drachme, *Sandaraca* a drachme and a half, Mace, two scruples, Cloves 1. scruple; dissolve the gum and Rosin in vinegar that is not too eager, then mingle it all together with molten Wax, and make thereof two round plaisters, which you may lay thereon, now one and then another.

Secondly, take a little piece of Mastick, chew the same once a day at the least a long time, and then spit out the moisture, and about the third evening let him alwayes after meat swallow a piece of Mastick.

Thirdly, the 5. night when he goeth to bed let him take a drachme and a half of this confection following: Take of the confection *Diapapaver* half an ounce, Frankincense and *Sandaraca*, of each 8. grains; and mingle them all together.

Fourthly, take of the confection of *Loch de Pino*, and *de Papavere*, of each an ounce, prepared Fox lights one quarter of an ounce, Ireos two scruples, flowers of Centory half a scruple, make a confection thereof with Vine cuict, whereof the patient is to take every morning two or three drachmes, and likewise at night as much more, to wit, two hours after meat. Also you may drink it mingled with warm barley water, or with sweet wine, and so drink it. Also the Patient may take of this confection into his mouth, and so swallow it up oftentimes.

Fifthly, take two ounces of Currans, a drachme of sliced Licorice, Hyssop and Horehound, of each 2. scruples, yellow seeds of Roses 2. drachmes, prepared Fox lights one drachme and a half, Dragagant and Gum, of each a drachme, melt the gum in Vine cuict, half a scruple of Saffron, white Pepper five grains, and white Sugar thrice as much as all the rest do weigh, make it to powder, whereof let him eat a spoonful after dinner and supper.

Sixthly, when as the patient hath used ten dayes long the foresaid three things, then let him take these things following other ten dayes: Take distilled Colewort water two ounces, water of blew Flower-deluce flowers, and of Horehound, of each half an ounce, powdered Elecampane roots and Mouse ear that groweth on the mountains of each a scruple, which the patient must take luke-warm early in the morning, and fast four hours after it.

Seventhly, take Knotgrasse, Mouse ear, Roses, red Coral, Bloodstone, and yellow Amber, of each one scruple, Dragagant half a scruple, hony of Violets, and Sugar pennets, of each three quarters of an ounce; afterward seethe the hony and Sugar until it be thick, and then mingle them with it, and take thereof an hour before supper a spoonful, and again as much more at midnight.

Eighthly, (this being done) you must use this confection following: Take fresh roots of blew Flower-deluce one ounce, fresh Elecampane roots half an ounce, Comfry, Daisies, juyce of Sloes, Dragagant and Gum, of each a scruple, Frankincense, Mastick, and *Sarcocolla* (prepared with womens milk,) of each half a drachme, Bloodstone, yellow Amber, Dragons blood, prepared Fox lights, Centory flowers, Mirtle seed, Knotgrasse, Mouse ear and Briony, of each two scruples, dissolve all the gums in the musilage or slime of Sebestes that were steeped in warm hony water, let them seethe therein; scumming it alwayes: and when it is sod to pap, to wit, the herbs and the roots, then strain out the juyce through a cloth, and put thereto two ounces of sweet wine, Currans half an ounce, and 10. or 12. Dates; pownd all the same very small, and mingle then the Gums with the rest of the foresaid things: also half a drachme of Saffron, powdered Saxifrage a drachme and half, whereof give the patient a spoonful in the morning, and half an hour before both his mealtides, half as much, and let him swallow it down by little and little. This cleanseth the breast, ingendreth flesh; and withall damnifieth not the breath.

Ninthly, when the patient hath used this confection four dayes long, then let him take 9. of these pills following, to wit, in the morning betimes three, and three more before noon, and also before supper other three more. This must he continue four dayes together or longer, even as the cause requireth. Take Lungwort, Knotgrasse, Comfry, Daisies, of each a drachme, Saffron, Licorice, Saxifrage, of each one scruple, Starch, sealed

earth, prepar'd Tuty, and Dragagant, of each two scruples, make pills thereof with the juyce of Comfry, and form 8. to a drachme.

Tenthly, if occasion serve that the heart must also be strengthened, and to quench and refresh all drouth, and to cool and moisten all heat, for which you shall take new conserves of Roses two ounces, conserves of Buglosse one ounce, burnt Ivory, Roses, seeds of Endive, of Purslain and Lettice, of each a drachme and a half peeled Melon seed, Pompeon seed, Gourd seeds, and peeled cucumber seeds, of each five drachmes, sugar pennets two ounces, starch one ounce, prepared crabs tails (as in this Chapter not long ago is taught) four ounces, pownd all very small, and mingled into a confection, then when he hath used the pills, let him take a spoonful thereof, and that in the morning early, and likewise again an hour and a half before both mealtides, and after them half as much.

Last of all, this patient must lay this small bag upon his left breasts: Take Violets, water Lillies, burnt Ivory, Roses, red and white Coral, Harts bones, and *Doronicum*, of each a drachme and a half, the Jacinth stone, the Smaragde stone, and Saphire stone, of each half a scruple, pearls a drachme and a half, three leaves of beaten gold, and Mace one drachme and a half, saffron a scruple, Cardamom and Galangal, of each five grains, pownd each alone, and then mingle them all together, and lastly make it into a silken cushion or little bag.

But if you covet to have the brains strengthened, then look in the beginning of the first part for the pain of the head, and after that where the brains are described.

The twelfth Chapter.

Of the Ague *Marasmode*.

F this Ague and of the nature thereof we have in the former described *Hectica* made a plain demonstration. This is of some taken for to be a second *Hectica*.

In fine, they are both such kind of Agues, that there is small help of man to be had against them.

This properly is that which the Physitians call *Senectam*, that is, the old age, to wit, a consuming of the whole body. The causes of this is, that the heat and the drouth get the mastery, which might be caused when one is fasting and hath a cold stomach; In like manner also when one is overheated, and straightway drinketh cold water upon it: Also the hot air and the heat of the time may well provoke and raise that which wasteth, dryeth up, and oftentimes expelleth the natural heat, whereby the body is sustained, whereof the cold and drouth do follow.

Moreover, this sicknesse may be caused of the debility of natural heat which cannot nourish the whole body; and in like manner of cold vapours that ascend towards the heart and over-cool the same. Likewise of all cold causes that lye hidden in the body, as may be seen by very old folks.

These are signs of this malady that it is without any Ague, but with a slow pulse, with an extenuation of the whole body, without heat, and in feeling may a general cold be perceived: the urine is thin, white and waterish.

In fine, there are no other signs to be found then age, as are to be seen in very old folks.

Now to come to the remedies of this kind of consumption, this patient shall use as neer as he may, all warm and moist things. He must often bathe himself in fresh warm water, and use many moistening clisters, as the broth of Lambs heads, of tripes, of Hens, and the like: for these are very commodious for him, because they moisten the bowels, and refresh and nourish the liver.

But you must put hereto neither salt nor any spice, that they be not too sharp, and may be held in the longer. You must also take for this Clister not above 6. ounces of broth at once, but in four and twenty hours you are to minister three or four.

Also the rubbing or bathing of the external parts after meals is greatly commended: and as Hony in the Ague *Hectica* is very hurtful; so is it in this disease *Marasmode* very

very commodious. Further, all light meats are passing good for him that are not slimy, as fresh broth, rear eggs, with a thin and pleasant Wine being measurably used, and such like.

Item, all the salves, plaisters, and other things which are prescribed for the Fever *Helica*, may also be used in this sicknesse.

But for these diseases special heed is to be taken of cold, and of all things as in any way consume the radical humidity.

Those that will have any further declaration of this infirmity, let them read that which hath been said in the description of the consumption or feaver *Helica*.

The thirteenth Chapter.

Of the long lingring Agues.

THe long continuing of Agues dependeth upon three kinds of causes.

First, when any one hath an outward sore which hardly will be cured.

Secondly, if the Patient or Physitian ever mistake, or keepeth some bad order.

Thirdly, this is also procured by some outward occasion, as by the time of the year, by continual rain, by the nature of the Countrey, by the unhailnesse of the dwelling place, by great care and troubles of

mind.

But when it is known that there are none of these foresaid occasions, then must it of necessity depend on the fourth cause, that is, on a grosse, tough and slimy humour. If therefore you will have remedy against the continuing of Agues, then must you cure and take away the foresaid causes with their contraries. For that these long continuing Agues are commonly caused by an obstruction of the liver, whereto these things following are principally good, to wit, *Syrupus Diarrhodon*, de Cichorio, de Eupulit, de Eupatorio, de capillo Veneris, *Oxymel compositum*, de Bysantiis, de Radicibus: Item, the decoction of *Adiantum*, Harts tongue, Agrimony, Wormwood, Endive, Cicorie, of all, or of some of them. The common pestilential pills, called *Rassi*, and Rubarb, Cassie, *Hierapicra*, conserve of Prunes, *Agaricum*, and sirupe of Roses laxative, are also excellent good.

Item, you must boyl also Parsly roots with your meat: the Wine shall be mingled with water wherein Cinamom, Anniseed, Coriander, and Fennel roots are sodden.

You must anoint the liver with the salve that is described in the third Part, the twelfth Chapter, and 3. §. beginning thus, Take oyl of bitter Almonds, &c. in which place you shall find many more other remedies against the obstruction of the liver through heat and cold. For the liver being deoppilated and opened, then will the long lingring Ague be easily mitigated.

The fourteenth Chapter.

Of swellings that follow after the Ague.

IT cometh oftentimes to passe that some have their feet swolne after the long continuing of an Ague, then use a bath to sweat in, and take one ounce of the distilled water of Camomil flowers which hath been drawn onely out of the yellow seeds of the flowers. You must boyl in the water of this bath Sloe leaves, and therewithal bathe and sweat. In the bathing you shall forbear from drink: but this bath is more commodious after some phlegmatick Agues, then after any hot Agues: and what order of dyet is to be observed after a lingring ague when the Patient beginneth to recover, hath been sufficiently shewed and declared in the third Chapter, and 12. §.

The fifteenth Chapter.

Of the Plague.

His most noisome, terrible, and perillous malady of the Plague, is called of the Greeks *Epidemia*, and of the Latinists *Lues*, *Pestis*, and *Pestilencia*, which last name we also use. This malady is described by *Galen* after this manner.

The Plague is a sicknesse that doth infect all, or at the least very many men, and is caused of the venomous ayr.

Or thus, The Plague is a disease that either speedily killeth, or soon forsaketh a man.

And where such sicknesses get the upper hand, there distresse and misery aboundeth, for it hath been seen by experience that it hath made away men, cattel, and fowles of the ayr, yea many thousands of fishes in the waters, and that not only villages and townes have been deprived thereby of all their inhabitants, but also great Cities and Countries have by the same been made desolate.

The causes of the Plague. §. 1.

OF the natural causes of the Plague, there are as many opinions amongst the Philosophers, as there are causes that procure it; as namely of venomous vapours of the earth that are infected by some earthquakes: or if a countrey be hot, moyst, full of stench, full of lakes, or still standing waters, and cloyed with stench of dead bodies, as it oftentimes befalleth after great wars and slaughters; but especially is the ayr infected as is above said through sin, whereby it may diversly be venomd.

Also when the ayr is warm and moyst, and that it doth rain much in time of heat, with a Southernly wind, whereof we will not at this present make any further discourse; but they that desire to have any ampler description hereof, may read over the Philosophers, and other learned Physitians.

But howsoever this is the most certain cause of this sicknesse, that God the Lord for our manifold sins and wickednesse, to wit, idolatry, incredulity, and ingratitude, hath used this Plague and many afflictions more, as hunger, war, and shedding of blood, to punish the foresaid sins and transgressions. These are his rods and scourges (even the ministers of his wrath) to chastise the wicked world, as (through his Prophets) he hath foresaid and threatned the world, and as both holy Scriptures and heathen Writers testifie, that it hath afterward ensued accordingly.

Signs of the Plague to come. §. 2.

FIRST, it is a certain sign that the ayr is infected, and that a Plague is to be expected, if in the end of the Sommer there appear Comets, or any other impressions, which men call flakes of fire, stars that fall or shoot, and such like in the element, which proceed of vapours that are drawn out of the earth into the ayr, and there are kindled, whereby both men and cattel are infected.

Secondly, when any unaccustomed heap of beasts are seen, as of Frogs, Toades, Grashoppers, Mice, and Wormes, which oftentimes have been approved heretofore.

Thirdly, when in the Winter the South or East winds abound, misty or foggy weather full of vapours, and glowing or drowfie, and like as it would rain, and yet raineth not at all: these are signs that the ayr is not as it should be. Also if the spring of the year be cold and dry without rain, the wind Southernly, the ayr foggy and lowring, and standeth so at a stay eight daies long, and then altereth into warmth: if these alterations often chance, then is it a certain and infallible sign that the Plague is at hand. In like manner also is it a sure token of the Plague to ensue, when in the Sommer time it is hot adaies and cold anights.

Item, when the Sommer is not hot, but gloomy and cloudy, and one day hot and another day cold, then must we look for a plague in harvest. In like manner also if two or

three

three daies be very hot, and afterwards very cold, as it often chanceth, then doth it prognosticate a plague.

How to prevent the Plague. §. 3.

THere is no more Christian nor certain means for to escape this great punishment; then for a man to reconcile himself to his heavenly Father, and to pray unto him with much contrition and hearty repentance of his sins, that it would please him to withhold his threatenings and punishments for our due deserts, and that we acknowledge him from the bottom of our hearts to be the right only and true Physitian that will and can preserve us, be it living or dying, in perpetual health and welfare.

Yet notwithstanding hath he not in vain created natural means, nor forbidden us to use them, but rather all things, as Physitians, Physick, roots, herbs, seeds, and the aires; yea all that is above and under the earth for the benefit of man, and to serve him: therefore we ought duly to accept and receive the same as a most godly benefit and noble blessing of so good a God, and in no manner of wise to despise the same; and therefore are all learned Physitians most highly to be esteemed, that have found out so many meanes for all kind of diseases, as also for this present infection, and have revealed and made them known to mankind.

And to the end men may have a good instruction, how this sicknesse may be holpen with the foresaid remedies, there shall be observed these three principal points: the first whereof, is for the healthy, that thereby they may know what order is to be kept, whereby they might be freed from this venomous contagion.

Secondly, we are to shew, that if any be taken with the Ague, or other signs, with sores or biles, or not at all, what ought to be done to them, or what is to be left off.

Thirdly, we will speak of all such as keep those that are so diseased, and are to minister and serve them, for the which there be many approved and famous medicines selected, both by the ancient and latter Physitians; our most loving and merciful God give us his gracious blessing and prosperity to finish them.

First then it is generally concluded by all learned men, that forasmuch as the heart requireth a sweet, clean, and healthy ayr, like as the body requireth meat and drink; also that nothing is more venomous, noysome, nor hurtful for the same, then a foul stinking air; for thence cometh it especially, if a loose and unstayed life, either in excesse of meat, drink, exercise, incontinencie, wrath, and such like be adjoyned, that the venomous ayr with other infections, the sooner hurt the heart and inner parts, and by their contagion disease the whole body, and lastly bereave man of his vital breath.

How the healthy may be kept and preserved from the infection of the Plague. §. 4.

EVEN as we have oftentimes heretofore admonished, so will we now shew by what means the hail and healthy may in the time of the Plague be freed and preserved from this contagious malady; therefore it is first of all needful to observe a good dyet in eating and drinking: and further, a fair clean dwelling which must be smoked and perfumed, thereby to correct and take away the corruption of the ayr.

For this must be used all fragrant things, to keep the body loose with laxative medicines, and to comfort the heart with cordials, and alwaies to take somewhat whereby all the parts of the body and the vital spirits might be comforted and defended against the venomous ayr, and contagion of others that we might be conversant withal, with many more things as shall hereafter appear.

And first of the order to be observed in dyet. It is passing good, and very needful for every body that wisheth to live out of the danger of the Plague, to take great heed that his body be not pestered with over many humours, nor overcharged with meat and drink, but to live very soberly, and that all such meat as he taketh must be more drying then moistening, for that whereas there is an unmeasurable fulnesse of the stomach, there are many bad humours ingendred, which afterwards by this contagion very easily are infected. Neither ought any body to eat before that he feel and find that his former meats are digested, and when nature by hunger or thirst requireth food, then satisfie her without longer delay: for as the overcharging of the stomach is a great cause of corruption, even so also doth an empty stomach procure bad humours. It is likewise very commodious, that

that all the Patients meat be rather cold then hot in operation, which must be dressed with sower and eager things, as we shall hereafter instruct you more at large. His bread must be of good wheat, well raised, baked, and seasoned. Of fowles, the Partridges, land fowles, Pullets, Hens, Capons, and young Pigeons.

Item, young Weathers and Veal, yet rather roasted then sodden, or else if it be sodden, then must it be dressed with sower things. And for that the Plague oftentimes infecteth all fourfooted beasts, as Oxen, sheep, swine, and sometimes the very birds of the ayre, therefore great heed must be taken that then neither the flesh nor the milk of them in any way be used: also the Magistrates ought not to permit any of the flesh of those beasts so infected, to be sold.

Note also, that in the time of the Plague all sower things are very wholesome, and therefore Vinegar is highly commended with all kind of meats, and especially vinegar of Roses, or of Gilloflowers, or of Framboyes. Item, horse radish with Vinegar and Sorrel beaten for sauce, Pomegranates, Saint Johns grapes, or *Ribes vulgaris*, Verjuice, preserved Cherries, conserves of Barberries, and all sirupes that are made of these foresaid things, unripe Grapes dressed with their meat, new Limons and Citrons, those are all very good to be used in time of the Plague.

Item, for all such as have no pain in their eyes, nor ache in the head, are roasted Onions (or the same softened in fair water) passing good: but Garlick above all the rest (being dressed in meats) is wonderful good, and much esteemed for a preservative against this kind of infection. Therefore it is commanded that men dip their bread in Vinegar, where-with the juice of wild Thyme and of Garlick is tempered: also to eat the kernels of two or three Nuts dipped in the same.

And you may use this sauce following with your meat: Take Vinegar and juice of Limons, temper it as you think good with powdered Walnuts, and with a little grated bread, and you may also (if you please) put thereto some Saffron and Cinamom. And you may make a temperature also with Currans and vinegar, flesh broth, Cinamom, poched eggs are also permitted if they be used with verjuice.

Of fruits, all that be sower are onely tolerated. And you may strew this powder following upon the meat; Take prepared pearls one quarter of an ounce, red Coral and fine Bolus, of each half a drachme, Cinamom two drachmes and a half, and then mingle them all together.

The meats that are forbidden to be used for the healthy, are these, to wit, Milk and all that is dressed therewith: all sweet fruits, stewed apples and pears are allowed; muddy or slimy fish are especially prohibited, as Eeles, Tenches, and such like; but such fish as are taken from sandy ground are not bad: old powdered flesh, or salt fish are also suspected. But be it flesh or fish, let the same be alwaies dressed with some sower thing, as with Vinegar, the juice of Limons, Verjuice, and such like.

Or you may use these sauces following; Take the juice of Pimpernel, of Sorrel, Buglosse, of Scabious, of Rue, of Lettice, of Endive, of Baulm, of Elecampane, all together, or some of them, as it pleaseth you, and mingle them with vinegar and bread, as you think good.

Item, Capers with the juice of Limons or of Citrons, is also a healthy sauce to be used. All water fowls, as Ducks, Geese, Hernsewes, and such like, let him not eat; notwithstanding that the Ducks blood is thought to be a preservative against venome.

And for your drink, you must not use any but onely to slack thirst withal, or according as the party hath eaten: the best drink is white cleer and thin Wine (which is not sweet) being tempered with steeled water, or that wherein Gold hath been extinguished. But there can be no better thing then to drink fair fountain water which is tempered with vinegar and Sugar, or water wherein the juice of Pomgranates is mixed. You may also make a drink of Barberries, and Juniper berries, whereof you need to take but now and then a little draught. And you must also note here, that it were not amisse to drink every mealtide a draught of Wormwood or Sage Wine, or instead of them to take a bit of bread that is steeped in the Wine of Elecampane and wine of Zeduary.

These are the ordinances that in the time of the Plague are to be kept and observed in meat and drink, having alwaies a good regard (as we have already said) of the time of the year, of the constitution of the Patient, of his accustomed manner of diet, and so forth, whereby either of the foresaid things may be used or omitted.

How their dwellings ought to be S. 5.

It is also very needful for a preservation against this sicknesse, that the house and all the chambers (as well as the body) be kept neat and cleane. Therefore every household-er ought, if he love the health of himself and his family) to look diligently that his house or place of his dwelling be kept cleane. All tame beasts, and especially swine ought to be kept farre apart from all your dwelling houses. Your house is to have many windowes in it, and that such windowes as do stand towards the West and South must you keep close and shut; but the windowes that be towards the East and North must be opened wide, so that the Plague be not in those quarters neer hand. Warm stoves are very unhail, and especially if they do lie low; but in the chimney it is best to burn dry wood, and most of all Juniper wood, dry Vine branches, Firwood, Ash, Oakes, Cypres wood, Bay-trees, and Rosemary sticks, and that according to the nature of the place where every kind of wood is best to be had, and chiefly the Beech tree for that there is no kind of wood that more taketh away the venomous vapour or infection of the Plague then the Beech tree doth.

Moreover, you must cause the house to be swept wherein you dwell at least twice a day, and be sprinked with vinegar or Rose water, and to smoke it with some of these things following, to wit, with Juniper berries, Hyssop, Marjoram, wild Thyme, Mints, Rosemary, Marjoram gentle, and Basil, with Lavander, Pennyroyal, and apple parings, or such like. And for rich men you may make divers compounded things, whereof we will write at large, which you may use as need shall require.

First there are perfumes which the Apothecaries do call *Ozyletes*: for this must you use Juniper, yellow Saunders, Paradise wood, Frankincense, and Juniper berries, of each 3. drachmes, Amber, Juniper, Gum, *Sandaraca*, and Rosemary flowers, of each one drachme, Nutmegs and Cloves, of each one drachme and a half; pownd them all together to powder, and then put to it of *Laudanum* one ounce, and a half, *Benzoin* and red Storax, of each a quarter of an ounce, black Frankincense three drachmes, Tilly coles that are to be sprinked and moystned with *Aqua viva* being beaten small, half as much as all the rest; afterwards make the mortar and the pestle very warm, and then put therein the *Laudanum* with a little Turpentine, temper them together till they be as soft as dough, and mix then therewith all the foresaid things, and make hereof a strong dough with mollified Dragagant, and roule it one a table that is rubbed over with oyl of Spike, and make the candles as great and as small as you list to have them, making them underneath with three feet that they may stand, and let them dry in the Sun: and when you set those candles in a close chamber to fume, they will for certain expel all the venomous aire of the Plague.

These things following are used for this at Augburch in high Duchland, to wit, *Laudanum* 2. ounces, black and white Frankincense, of each 1. ounce, red Storax half an ounce, *Benzoi* 3. quarters of an ounce, Cloves, Roses, Cinamom, black Coriander, Mastick, *Sandaraca*, Cypres wood, Bayberries, yellow Saunders and Nutmegs, of each one drachme beaten small, liquid Storax 2. ounces, Wax one ounce, Turpentine 2. ounces and a half; burnt wine or *Aqua viva* as much as is needful; the *Laudanum*, Storax, Wax, and Turpentine is to be molten in a warm mortar, and hereof may you make candles as is before taught; if the dough be hard, then make it soft with burnt wine. Another: take Paradise wood, Saffron, Cinamom, Cloves, yellow Saunders, and Roses, of each half a drachme; Mastick, red Storax, and Frankincense, of each a quarter of an ounce; pownd them very small, and then make it up with liquid Storax, into dough, but temper not too many Tilly coles amongst it that the vertue of the other things be not thereby abated, and form them as before.

Or take *Benzoin*, *Gallia Muscata*, red Storax, and roots of Costus, of each half an ounce, *Diptamus*, Tormentil, Citron peels, and Setwal, of each a drach. red and white Behen, of each half a drach: red, yellow, and white Saunders, Roses, of each half a drach: pownd all that is to be pownded melt, the *Laudanum* with Rose water in a warm mortar; and then form candles thereof, as is aforesaid; these candles are special good against the pestilent ayre. But for that the right Costus roots and Behen are ill to be gotten, are these candles but seldome made.

These following are also used: take *Laudanum*, red Storax, Myrrhe and Mastick of
X x each

each a quarter of an ounce, Rosemary leaves, and wild Galangal, and Roses of each half an ounce, Cinamom, Cloves, yellow Saunders, and Nutmegs, of each a drach. Tilly coles moystened with burnt wine, or *Aqua vita*, 4. ounces, then form them as before.

Yet other; take Cypres wood and Juniper, of each half a drach. small beaten Juniper berries (the kernels taken out) Rosemary leaves, and wild Galangal, of each 3 drach. black and white Frankincense, of each half an ounce, *Laudanum* 3. quarters of an ounce, Tilly coles as. aforesaid.

In the stead of these fuming candles, men use to make also cakes of all the foresaid doughes (but onely the coles left out) and in winter time you may use them layd on the coles, or on the hot furnace of your stove.

Item, take yellow Saunders, *Benzoin*, and red Storax, of each a quarter of an ounce, white Frankincense, one drach. Nutmegs and Cloves, of each half a drach. Roses, Coriander, and Sugar, of each a scruple, beat all small to powder, and then mingle them together with Dragagant dissolved in Rose water (as before is taught) in a mortar, and in Sommer then prepare them with fresh Roses, to wit, that each cake be covered with a Rose leaf, and then pressed flat: but if you would have them costlier, then put unto it 4. grains of Musk and, 2 grains of Amber, dissolved in Rose water, and then will they be exceeding pleasant.

These are also usually made at Ausburgh: take *Benzoin* three quarters of an ounce, the rootes of Cypres half a drachme, red Storax, and white Saunders, of each three drach. Cloves and prepared Coriander, of each a drach. Calamus and Frankincense of each half a drach. Musk two graines, white Sugar 6. 3. then make cakes thereof with dissolved Dragagant.

Item, take beaten Cypres and Juniper wood, of each 3. drach. Rosemary flowers and Juniper berries, of each a quarter of an ounce, white and black Frankincense, of each half an ounce, beat them very small, and temper them with as much *Laudanum*, that it cleave together, or with dissolved Dragagant, Turpentine or Storax.

Or take Juniper berries, Bayberries, Roses, Wormwood branches, Mastick, Frankincense, Cardamom, Rue, and Cloves, of each a like quantity; then mix them together with dissolved Dragagant as aforesaid, then lay it on the furnace in your stove.

Here followeth now a very costly water to temper with these kinds of cakes, Candles and Pomanders.

Take good Rose water one pint, Lavander flowers 3. M. Cloves and Cinamom, of each half an ounce, yellow and white Saunders, of each 3. quarters of an ounce, Mace a quarter of an ounce, Roses one M. *Benzoin* and red Storax of each 2. drach. pownd them small, and pour the Rose water thereon, or Muscadell wine, or any other strong wine, eight ounces, *Aqua vita*, one ounce: let it be close stopt one moneth or twain, and so stand in the Sun; afterwards distil it in seething water, stopt very exceeding tight and close, with a helme, and with that which is stilled temper Musk and Amber, and then set it in the Sun again.

This Rose water following is also very excellent for the same, or any such like intent: when you will distil the Roses in common stils, then must you not set them in sand but in ashes, and then put some Roses unto it, and cast on it the powder of Cloves, then lay on it more Roses, and so do till the Stil be full; then put on the helme, and make it tight and close, taking heed of burning. And if you will have it stronger, then put to them more spices, as *Benzoin*, and such like. Lastly, then may you strengthen the savour of the water distilled with Musk and Amber; both of these waters may also be used for other things as is aforesaid. But if you would spare this labour, then may you use the foresaid things, each apart or mixed together (as you please) with hot coles, and so let it savour and fume. In like manner may you prepare these powders following; take *Benzoin*, red Storax, Paradise wood, Musk, Amber, Cloves, Frankincense, Myrrhe, Mastick, and *Gallia Muscata*, which or as many of them as you will; pownd them to powder; for this powder you must omit the coles, the *Laudanum*, and the other dissolved things, the which otherwise are commonly used in the compositions before. Item, take grated or powdered Cypres wood a M. also of prepared Cypres half as much, beaten Rosemary, half as much as of the Cypres, black and white Frankincense, of each half an ounce, Bayberries, sheled clean a quarter of an ounce, being grossly beaten, mingle them well together, and strew a little of it on the coles; for it is a most pleasant savour.

And if you fear that such odoriferous favours were too hot in Sommer, then may you put

put thereto some of the leaves and seeds of Myrtle, also to augment the quantity of Camphire, Sanders and Citron peels: sprinkle it also with vinegar or Rose water. Instead of fire strew the chamber with Rose leaves, and let them be swept out at night, that they be no cause of stench; and before you go to bed you must fume the chamber well.

It is also very meet that you keep lying in the chamber where you sleep, odoriferous Quinces, Citrons, Apples, Pears, Oranges, and such like. When they begin to rot, then must they be had away, and other laid in their places.

Also in Summer you may prepare this powder following: Take Roses, Myrtle seeds, Citron peels, red, yellow, and white Sanders, Sorrel seeds, and wild Vine leaves, of each one drach. and a half, Myrrhe, Paradise wood, Dragagant, and Gum, of each two drach. Camphire a drach. all stamped small, and put them together. You may also make it up into cakes with dissolved Dragagant. If it be in Winter, then take Myrrhe, Paradise wood, Mastick, red Storax, and Frankincense, of each a drach. Cloves, Citron peels, and the roots of Cypres, of each half a drach. Camphire a scrup. *Gallia Muscata* ten grains, Musk and Amber, of each 5. grains; beat them together into a powder. You may also make cakes of it with liquid Storax and Rosewater: if you will put *Laudanum* to it, then make the same warm as aforesaid, and fashion your cakes as big as you will have them. For the common people and for the husbandmen the Bay tree is very good, or if the country yield it, Juniper wood with his berries, and with dry Hen dung fumed: or take powdered Wormwood and Bayberries, of each alike. The rich folks do use to lay also with their clothes odoriferous bags, for which all the powders that are before mentioned for fumes, and hereafter for Pomanders, are very good, excepting the *Laudanum*, the which is not to be powdered, and other more such soft things. This following is very common in *France*; Take Ireos four ounces, Roses two ounces, wild Galangal, Cloves and Marjoram gentle, of each two drach. yellow Saunders, and *Benzoin*, of each 2. ounces, red Storax half an ounce, then mingle them all together, and put them in a bag. If you will you may put thereto Musk and Amber, or Camphire. In the first Part, the 12. Chapter, you have also an especial bag to strengthen the head, as thus; Take Ireos, &c. the which is very commodious for this our purpose. Also you have in the second Chap. and elsewhere, applications for the strengthening of the heart; the which are not onely profitable, but also very necessary for this intent.

What exercise is to be used in the Plague. §. 6.

IN the time of infection the healthy are to exercise themselves moderately, and rather use easie walking then a great pace, that thereby the venemous ayr may not overmuch be drawn into the body, as it happeneth to such as at such times do greatly labour and travel; but when a man abideth in a clean place, void of pestilent ayr, and will exercise his body according to his old accustomed manner, that cannot but be thought passing good.

Of the sleep in this sickness. §. 7.

AT such time as the Plague reigneth, some think that it is better to sleep by day then by night, even seven or eight hours long: first upon the right side being meely well covered, and his head raised high. But seeing the same is not accustomed with us, then must they eat but little in the evening, and sleep the foresaid time of seven or eight hours. But if he could not sleep a nights, then must he about 12. a clock, being two hours after his meal compose himself to sleep. Others counsel to sleep a nights in a chamber that is well fumed, and close shut, but not very long, for that through much sleep the body is too much moistened, the which must alwaies be inclined to drouth as much as possibly may be. They also forbid sleeping by day, and that chiefly in Winter.

Also you must take heed of excessive and overmuch watching, for that greatly dryeth and weakeneth nature.

Of Purging and letting blood. §. 8.

CARE must also be had that the body be not too much bound: and if the going to stool come of it self, it is the better; if not, then must the party be holpen with supposito-ries, and mild Clusters, with Cassie, Manna, sowt Dates, and such like means; whereof we have here and there spoken at large; but especially in the third Part, the 11. Chapter, and §. 20.

Other would have that young cholerick bodies should generally be purged in the summer, and in the beginning of winter, with the foresaid cooling and laxative things, and also with yellow Mirobalans boyled with Plum-porridge: but in the end of Autumne, and in the Winter with stronger medicines, to wit, with Agarick, with Turbith, and with Polipody: but they must be used with great heed and discretion.

Touching letting of blood: When the party is once purged, and above sixteen years old, being full of blood and strong, and without any obstruction of the liver, then may he have a vein opened. In like manner also women, if their terms and flowers be stopped, and if they be without piles in the fundament, then may they in May and in Autumne let blood, and if occasion serveth, once a moneth, to wit, in the Liver vein, or Milt vein, every time three or four ounces, for this taketh away the boyling of the blood and the *Cholera* in the veins. Yet for this infection must sometimes one, sometimes more be opened, but especially that which is fullest of blood.

But great regard must (as hath been said) be taken of the age and weaknesse of the patient: also whether a woman have conceived or not, or whether she have her termes or not, or have the Hemorrhoides or not, with many such circumstances more, that the weaknesse of the party thereby be not augmented.

Above and beside all this must the patient abstain from venery as much as may be.

Of the motions of the mind. §. 9.

NOW concerning the motions of the mind, as sadnesse, fear, sodain motions of the mind, and such like, they do greatly alter and spoyle the blood, whereby it may the sooner receive the pestilent ayr, and anger especially inflameth the heart, like as also doth overmuch gladnesse: notwithstanding moderate gladnesse is most commodious for the heart.

Of bathes and other common causes. §. 10.

AT such times take heed of bathing, for that thereby is the body moistened, the pores opened, and all the members made the readier to receive the infection of the Plague.

It is therefore very ill done (yea a temptation of God) in the time of the plague to frequent common bathing houses, for that the Plague can by no means be sooner gotten, by reason that as well the pores of the infected as the sound are opened, whereby the venomous vapour of the infected is let forth, and may easily be received of the healthy: wherefore it is much better (as the custome of the countrey is) to refrain wholly from bathing.

In like manner it is not good at such times to wash the head, for thereby are the vital spirits weakened, but onely to comb their heads with an Ivory comb.

But the hands must often be washt, sometimes with Wine, and otherwhiles with vinegar, and especially with Rose vinegar.

How one shall govern himself without doores. §. 11.

IT is very good that at this time every man observe a good diet within doores, and not accompany himself with many men, for amongst many are as well those that be infected, as those that are healthy, whereby the diseased infect the healthy with their breath: but for that it is impossible to forbear it, by reason that every man hath businesse with others, it is therefore best that every one defend himself from all ill ayres. Wherefore first we counsel the common sort, and men of occupation (which cannot bear greater charge) to observe the rules following: to wit, that he in the morning betimes before he go abroad, or settle himself to work, take 3. or 4. dry Figgs, 3. or 4. kernels of Nuts, and 15. or 16. leaves of Rue, with a little salt. This composition or medicine is so sure and approved, that men have used the same every where for all manner of Plagues three hundred years before the birth of Christ, and the same was found out by K. *Mithridates* that waged wars with the *Romans*. Some adde to it a few Almonds, and make it to a confection with clarified Hony. It is also passing good for all such as be not afraid of the bitternesse, that they use in the morning fasting a peece of the root of Gentian, and especially when he hath used of the premises. Other do also give counsel to eat but one Fig and one Nut kernel, but it is too little for a full grown person, for children it will suffice.

It

It is also very good before the going forth in the morning to break ones fast, and thereupon to take a little Unicorns horn, Tormentil, Gentian, Angelica, Diptamus, Citron peels, or a bit of Zeduary, and hold it in your mouth: or to wash the mouth with Vinegar wherein Wormwood hath been decocted.

For this also confected Calamus is much commended, taken before the going out into the air, for it hath an especial vertue against all venemous air. Also some do counsel not to go out of doors before that the mouth and nostrils be cleansed with wine wherein Treacle is mixed.

The composition following is commended for an especial preservation if inunction be made with it: Take the juyce of Garlick and Rose vinegar, of each one ounce and a half, Treacle three quarters of an ounce, Bevercod two drachmes, mix them together, and therewith anoint the mouth, lips, and nose.

Some do use this salve following, therewith to anoint the heart before they go out of the house, the which is not good only for the healthy, but for all such as are already infected; take Treacle three quarters of an ounce, Saffron and Camphire, of each ten grains, the juyce of Lemons and Vinegar, of each a like much, or as much as is needful to make a salve.

Or in the stead of these, he may wear the cordial shield which is described not long since with the cordial bag in this manner: Take Burrage, &c. It is also very good to wear gold rings wherein are set precious stones, as Rubies, Carbuncles, Saphires and Jacincts, both within the house and without doors.

It is also much forbidden that any stir out of doores before the Sun rising, as also before the going down thereof to repair and keep himself in his perfumed house or chamber.

Further, is very good to carry some odoriferous thing in their hands, when one must deal with other folk, that through this pleasant smell the brains and the heart may be comforted and defended from all pestilent and contagious vapours.

It is also not amisse for the common people that they carry in their hand a little box of Juniper made full of holes, wherein a little sponge moistened with vinegar and Rosewater, and strewed with the powder of Cloves, be held in the hand all the Sommer time, whereunto also some leaves of Rue may be added daily refreshing them, and that they continually smell to the same. In this manner also maist thou hold some fruits in thine hand, as Apples, Pears, Quinces, Orenge, and such like; but if it be in winter, then take Marjoram gentle, Rue, Balm, *Valeriana*, Juniper berries, or some other thing steeped in vinegar, put it into thy box, and use it as is aforesaid. Also thou maiest bestrew thy moist sponge with Saunders, Camphire, and Saffron, Paradise wood, Cloves, or Ireos. But the rich and able folk do use *Poma Ambra*, which we call Pomanders, whereof there are made many sorts, as here may appear.

Yet men must note here that all such strong odours, whereas there is any pain of the head proceeding either of heat or cold, then are they neither so good nor so often to be used, but in such sort as hereafter followeth, whereby the same pain as it often falleth out, be not augmented: and women must beware of these smels, and especially those that are vexed with the suffocation of the Mother. And if it be in winter, and the patient be cold of complexion, then are you to prepare these Pomanders: Take *Gallia Muscata*, Roses, Cloves, Zeduary, Mace, Nutmegs, and Paradise wood, of each one drachme, Saffron a scruple, red Storax a drach. and a half, *Ambra* and *Muscus*, of each 5. grains, pownd them all together except the two last, and then make hereof with prepared Dragagant a Pomander, even as is taught in the first Part and the 2. Chapter.

Item, take yellow Saunders a quarter of an ounce, Paradise wood a drachme and a half, Roses, Cloves, Zeduary, Mace, and Nutmegs, of each half a drach. Cloves, Cardamom, Coriander, and black Coriander, of each a drach. all of them beaten to fine powder, *Laudanum* one ounce, *Benzoin* half an ounce, dissolve them with Rosewater and make thereof an odoriferous Apple or Pomander: and if then you put thereto Musk and Amber, it is at your choyse and pleasure. This Pomander is special good against a bad foggy ayr, and this following may also be used in winter: Take *Laudanum*, and red Storax, of each half an ounce, Cloves and Cinamom, of each a drachme and a half, Nutmegs, yellow Saunders, Roses, Basil, and yellow Amber, of each half a drachme, pownd them all together, but dissolve the *Laudanum* in warm Rosewater, and then make thereof a Pomander. Also the mortar (wherein these things have been tempered) must be wiped about with a little kemmed sheeps wool, and then wrap the Pomander therein, afterwards bind it up in red Sarsnet; and then they will keep their scent the longer.

Another: take clean *Laudanum* half an ounce, *Benzoin*, a quarter of an ounce, red Storax, 3. drach. Paradise wood, yellow Saunders, white Frankincense, and yellow Amber, of each a drach. Rosemary flowers, Marjoram gentle, garden Mints, and Basil of each half a drach. Cloves, Nutmegs, Cardamom, Cucubes and Coriander, of each a drach. temper them all together, and form it into a Pomander with a little liquid Storax, and at the last put a little Musk and Amber unto it.

But if it be in the Sommer, or that person be of a hot complexion: then take water Lillie flowers, Mints, Violets, wild Vine leaves, Roses, Myrtle seed, white and yellow Saunders, Citron peels, dried Quinces, dried Prunes, of each half a drachme, Saffron and Camphir, of each a scruple, *Gallie Muscata* 10. grains, make them up to into a Pomander, with vinegar wherein fine Bolus is dissolved: with this mayst thou also use vinegar and Rosewater.

Item, take Roses, Violets, Buglosse, and Burrage flowers, of each half a drach. yellow and white Saunders, of each 1. drach. Ireos 3. drach. Balm, Citron shels, of each 2. drach. dissolved *Laudanum*, scant as much that it may be tempered with the rest and made up into a pomander with Dragagant dissolved in Rosewater, and at the last add a little Musk. There are also divers pomanders prepared that are good at all times: amongst which first these 4. following are to be used in the time of the plague.

Take Roses a quarter of an ounce, red and white Saunders, of each a drach. and a half, Camphir one scruple, *Ambra* half a drach. Musk 4. grains, Paradise wood two scruples, Citron peels half a drach. Cinamom, Mace, and Nutmegs, of each a scruple, red Storax half an ounce, *Laudanum* one ounce, beat them very small, but dissolve the *Laudanum* with Liquid Storax, and then make thereof a pomander.

Another: take Roses, Violets, and flowers of Buglosse, of each 2. scruples, Myrrhe, Calamus, Nutmegs, Spica of Indy, *Sandaraca* and Mastick of each a scruple, Musk and Amber, of each half a scruple, red, white, and yellow Saunders, of each a drach. Roses 3. drach. juyce of Purslain and of Oranges, of each 4. ounces, water Lillies, and parched Coriander, of each one quarter of an ounce, red coral and burnt Ivory, of each half a drachme, syrup of Citrons, and fine Bolus, of each half an ounce, Sealed earth a quarter of an ounce, pownd all that are to be pownded except the Amber and Musk, set them in the Sun in a close stopped pot, or on a warm furnace until all the juyce be dried in, afterwards take 4. ounces of *Laudanum*, that is dissolved in Rosewater and vinegar, and Turpentine washed in Rosewater as much as is needful for a masse, and hereof make them Pomanders. Item, take Roses, Cloves, Mace, Spica of Indy, water Lilly flowers, Violets, Marjoram, Alarabacca and Stechas, of each half a scruple, red and white Saunders, red and white Coral, the seeds and peels of Citrons and Cucubes, of each 15. graines, Saffron, *Ambra*, of each one scruple, Camphir, Frankincense, mastick, fine Bolus and sandaraca, of each half a scruple, Paradise wood one drach. *Muscus* 3. grains, *Specierum Cordialium* half a drach. *Laudanum* 1 ounce and a half, dissolve it in Rose water, and with the rest make a Pomander. Yet another, at all furnished Apothecaries you may find divers preparatives of Pomanders so that thou needest to add nothing but Musk and Amber, of the which we will describe 4. sundry sorts.

Take *Laudanum* three ounces, red Storax 3. drach. Marjoram gentle, Roses, Camphire, red, white, and yellow Saunders, of each a drach. and a half, Cinamom, Nutmegs, Cloves and Mace, of each a drach. Paradise wood 2. scruples, dissolve the *Laudanum* (as is aforesaid) and then make thereof Pomanders, until such time as you would add some other thing to it. The second is made as followeth: take *Laudanum* and *Benzoin*, of each three drach. Paradise wood, and Cinamom, of each a drach. and a half, Cloves, Nutmegs, and Cucubes, of each half a drach. red, white, and yellow Saunders of each a drach. Saffron a scruple, pownd all that is to be pownded, and form thereof a Pomander as before, and if you list you may prepare it with *Muscus*, *Ambra*, and Camphir.

Thirdly, take red Storax, and flowers of Buglosse, of each 2. scruples, Cloves 1. drach. white and red Behen, of each a scruple, Paradise wood, 2. scrup. Myrrh, Calamus, Nutmegs, Ssica of Indy, Frankincense, Juniper gum, and Mastick, of each half a drach. red yellow, and white Saunders of each a drach. Roses 3. drach. Coriander a drach. and a half, make it up as aforesaid. Fourthly, take Roses 2. drach. yellow and red Saunders, of each a drach. and a half, a scruple of Camphir, Amber half a scruple, *Muscus* 4. graines Paradise wood 2. scruples, Citron peels half a drach. Cinamom, Mace, and Nutmegs, of each a drach. red Storax half an ounce, *Laudanum* an ounce, afterwards make a Pomander, thereof as before.

Some take an ounce of pure *Laudanum*, and cut the same as small as may be, and mix therewith powned Citron peels and their seeds, of each a drach. Saffron and Camphire, of each half a drach. and tye them all together in a peece of safenet, or if you will you may make a pomander of it, tempering it with the juyce of Basil.

Preservativa, or preservatives that defend men from the Plague. §. 12.

THere are divers things that men (being in health) may use in the time of the Plague, whereby they be not so soone infected of other men, for the which first of all these simples are for the most part good, to wit, Citron seeds, Scabious, Pimpernel the great, Rue, Valerian, Cicory, Sorrel, and both their waters, Elecampane, Diptamus, Gentian, Tormentil, Carduus Benedictus, Angellca, and Bayberries, one of these things holden in the mouth, taken in powder, or drunken, are all especial good against the Plague, and they may be used in many other compositions, as may be seen by these following. All famous Physitians do for this sicknesse counsel, first, that men should speedily fly far from the contagious places, and return back again with leysure; for he that is a far off from the Plague, shall not be infected therewith, even as no man is slain in the wars, that is not present there. Also it is to be noted (as hath been already said) that men ought to be loose bodied, and freed from all superfluous humidities and uncleannesse. Therefore those that are above the age of 11. yeares, are to be oftentimes purged with these common pills hereafter described. Also care must be taken that the heart and all other principal parts of the body be comforted and kept dry, which may be done by the right Bole armoniack. In like manner also with Mithridate and Treacle, if that every week, or at the Least every 10. dayes a drach. in weight be taken with the water of Sorrell, sweating after it: and keeping within doores all the day after.

Here is also to be noted, when any one would take of this Treacle or Mithridate, than he have eaten nothing afore, nor eat any thing afterwards in 5. or 6. hours. But amongst all other medicines and preservatives, these last beforementioned pills beare the prick and price, which are to be had at the Apothecaries, called *Pestilenciales Ruffi*, *Communes*, *de Tribus*, and *sine Cura*, which the principal Physitians have described and commended so highly, that it hath never been seen that such as used the same orderly were killed of the Plague, which also any one may at all times, be the person young or old, use without any danger: for like as it is with a pot beginning to seeth, it casteth up scum, and is cleansed through scumming, even so do these pills take away all superfluities and uncleannesse, which is gathered together about the principal parts, and preserve the blood from all kinds of putrifactions. These pills are made in this sort: take Aloe one ounce, Myrrhe and Saffron, of each half an ounce, beat them all together with good pleasant wine, hereof are you to take every week a drach, or every third day three pills as big as a great Pease, and thereupon drink a pretty draught of white wine that is delayed with Rosewater for with Sorrel water, yet ought women with child to abstain from them. These pills are of great force in time of the Plague, and do also drive out all superfluities of the stomach.

Others take Aloe 3. quarters of an ounce, Myrthe 3. drach. Saffron 1. drach. Rubarb a quarter of an ounce, prepared *Agaricus* 1. drach. Cloves, Citron seeds, and the peels, and Spica of Indy, of each a scruple. Tormentil and red Saunders, of each a drach. and a half, fine Bolus 3. drach. Camphire 10. graines, pownd them well all together, and make pills hereof with the syrup of Citrons.

Item, take the juyce of Sorrel, the juyce of Buglosse, and of Cicorie, of each 2. ounces, fine Bolus 1. ounce, mix them all together, and stir them often in 24. hours, afterwards add these things following. Aloe 3. ounces, Camphire 2. scruples, Saphires, Jacincts, and Smaragdes, of each half a scruple, Pearles 1. drach. Citron seeds a quarter of an ounce, Paradise wood, Basil seed, Amber, red Coral, and Zeduary, of each 8. graines, Roses, Violets, Sorrel seed, Burrage flowers, and flowers of Buglosse, of each half a scruple, stamp them all together, and mingle it well, and afterwards let it in the Sun or in any other warm place till all the juyce be dried away. This being done, then pour more juyce thereon again, and do so 3. times. Now when you desire to use hereof, then make 7. pills of one drach, with some *Aqua composita*, and take hereof every morning or evening one pill, and that before meales.

These following are also highly commended: take of the common Plague pills (that

are herebefore described 4. scruples prepared Agaricus half a drach. Zeduary and Angelica of each 1. drach. Rubarb 1. scruple. *Trochiscorum Albandali* 5. graines, then make pills hereof, with water of *Carduus Benectus*: take of these pills 1. drach. once a week 3. hours after supper, and in the morning drink a good draught of the decoction of Pease, and eat somewhat 3. hours after.

Some use these pills following: take Aloe and Agaricus of each one drach. Myrrhe and fine Bolus, of each a quarter of an ounce, Saffron a drach. then make pills hereof with Baulm water, or water of Buglosse, and so use them as hath been said.

These pills following do not purge, but defend the heart and all inward parts from all bad infections: take Paradise wood half a drach. burnt Harts horn two scruples, red Saunders one drachme, Tormentil, Citron seed, *Terra sigillata*, and red Coral, of each half a scruple, Sorrell seeds, Diptamus, and Zeduary, of each a scruple, fine Bolus three drachmes, *Species de gemmis frigidis* a drachme and a half, Lignum Balsami half a drachme, Camphire four graines; then make hereof pills with syrup of Citrons, or with the juyce, of Ribes.

These following are yet more forcible; take Paradise wood half a drach. Tormentil, 2. scruples, Diptamus 1. scruple, Zeduary, and *Lignum Balsami*, of each half a drachme, Saffron one scruple, Cloves 5. graines, Vervein half a drach. burnt Harts horn 2. scruples, red Saunders 1. scruple, red Coral and Sorrell seeds, of each half a drach. fine Bolus three ounces, *Species de gemmis frigidis* 3. drach. Camphire 4. graines, make pills thereof with syrup of Citrons, or with the juyce of Ribes.

Others that are good for the heart: take Citron seeds 2. drach. Jacincts, Smaragdes, Doronicum, and bones of a Stags heart, of each 1. scruple, Zeduary, wood of Paradise, of each 2. scruples, the rootes of five leaved grass, or Cinquefoile, of each a quarter of an ounce; then make pills hereof with the syrup of Citrons.

Of all these foresaid pills may be used which you please, and when you please, therewith to comfort the heart, and defend it from all ill ayre.

There are also divers confections prepared for preservatives, that you may use instead of pills, to wit, morning and evening, whereby nature is ayded, thereby the better to withstand the pestilent ayre.

For these: take *Terra Sigillata*, white Diptamus, fine Bolus, Myrrhe, Wormwood, Rue, Scabious, Pimpernel, Sorrell, and Zeduary, of each a drachme, Aristology, Tormentil, and Bayberries, of each a drachme and a half, 5. or 6. kernels of Walnuts, ten or twelve new Figs, Mithridate and Treacle, of each one ounce, Saffron and Camphire, of each a scruple, Unicornes horn, prepared Pearles, bones of a Stags heart, burnt Harts horn, and Smaragds of each one drach. and a half, peeled seeds of Citrons half an ounce, Mace one drachme: pownd all that is to be pownded, and then temper all together with syrup of Citrons, to the consistence of a confection. This confection killeth all venom of the Plague, and preserveth men very marvellously from her infections, if they take thereof in the morning and evening, to wit, in winter time with a draught of Malmsey, and in Sommer with Rose water. But if you have not these confections, then use that of Nuts and Rue, that herebefore is described in the 11. §.

Another confection that is most excellent: take Juniper berries, Cloves, Elecampane rootes, and Nutmegs, of each one drach. Aristology, and Gentian, of each 3. quarters of an ounce, Purslaine and Sorrell seeds, *Doronicum*, red and white Behen, *Spodium de Cannia*, bones of a Stags heart, Paradise wood, red and white Coral, shavings of Ivory, Bayberries, Mastick and Rue, of each 2. scruples, Figs, Raisins, and Dates, of each one ounce, Saffron two scruples, Cinamom and Licorice, of each half an ounce, Tormentil, and rootes of Avence, of each three drachmes, white Diptamus, Almonds, Pingles, peeled Melon seed, Gourd seeds, Citrus seeds, and peeled Cucumber seeds, of each one ounce, prepared Agaricus three quarters of an ounce, the root of *Pencedanus*, *Terra sigillata terra S. Pauli*, and fine Bolus, of each two drach. Mommy and Zeduary, of each one drach. Camphire, half a drach. *Species Diatriasantalium*, and Diarrhodon, of each two drach. Citron peels, Smaragdes, of each a drach. Muscus, a scruple, Treacle, *Diateffaron* and *Mithridatum*, of each an ounce, pownd all that is to be pownded, and hereof make a confection with syrup of Citrons. Item, take conserve of Roses, of Violets, of Burrage and of Buglosse, of each half an ounce, Smaragdes, Jacincts, and Pearles, of each one drachme, bones of a Stags heart, field Gold, Citron seeds, fine Bolus, and sealed Earth, of each half a drach. pownd all that is to be pownded, and then make thereof a confection with syrup of Citrons.

Another;

Another ; take conserve of Roses, of Buglosse, of each an ounce, and half, *Doronicum*, bones of a Stags heart, Jacincts, Smaragdes, Saphirs, of each half a scruple, yellow Saunders, Cinquefoil and Paradise wood of each 3. drach. Sugar one ounce, wine of Granada, and syrup of Limons, of each half an ounce, 10. or 12. gold leaves; then mingle all together to the consistence of a confection.

Another that is very good and approved : take Conserve of Roses, of Buglosse, and of Burrage, of each six ounces, *Doronicum*, Zeduary, Basil seed, Mace, Saffron, and Adiantum, of each one drach. bones of a Stags heart, Jacincts, Smaragdes, and Saphires, of each a scruple, Pearles one drach. 6. leaves of beaten gold, syrup of Apples, and of Citron peels, of each 2. ounces, Violet water three quarters of an ounce, white Sugar four ounces ; seeth the syrup and Sugar with water enough, till it be as thick as Hony, and afterwards temper the spices therewith ; then beat it well together, and put thereto Rubarb one quarter of an ounce, that hath been steeped 24. hours in Malmsey ; Lastly add thereto Musk and Amber, of each 4. grains ; this being done, mingle them all together, and keep it safe (being well stoppt) in a glasse.

Item, take Mithridate and Treacle, (that at the least is 10. yeares old) of each half an ounce, Citron seed, and fine Bolus of each half a drach. Rose water, (with the which *Muscus* is dissolved) as much as is needful for a confection ; hereof may you use every day 1. drachme.

All that are sound and whole, as also those that are infected, may use the weight of a quarter of an ounce of this confection following, morning and evening, without any danger ; take Jacincts, Granadoes, Smaragdes, Saphires, Pearles, bones of a Stags heart, and Paradise wood, of each half a drach. red and white Saunders, red and white Coral, burnt Ivory, Tormentil, fine Bolus *Terra sigillata*, Camphire, and small field gold, of each one scruple, beat them all together very small and then take Sugar six ounces, that is sodden with Rosewater to a syrup, then temper it so thick as you will have it, with syrup of Citrons. Men may use also otherwhiles in stead of this confection, two or three dayes together of this drink following, which is also a wonderful preservative against the Plague, and may be used as well of young as of old folk, yea also of young children, and women with child ; take fine Bolus a drach. and a half, beat it to fine powder, and drink it with white wine and Rosewater, very warm in the morning ; and eight dayes after you must take a drach. of Treacle or Mithridate, in the winter with wine, and in the Sommer with Rose water.

These foresaid medicines are not good against the Plague to come, but also against that that hath already infected.

And forasmuch as those foresaid confections are made of many costly things that may be too deare for the common people ; for this cause have we of purpose described the the confection of Nuts and Rue, which they may use in stead of these. Or take the kernels of Nuts, Rue, and Juniper leaves, of each a like quantity, pownd them all well together, and with vinegar make thereof a confection, whereof every morning you may take the bignesse of a Nutmeg.

In like manner may one also prepare this following ; take 28. or 30. Nut kernels, and 40. or 42. Figs, Wormwood, Rue, Scabious, and Sorrel of each half a M. Aristology 2. drachmes and a half, Tormentil, Pimpernel, and white Diptamus, of each one drach. fine Bolus half a drachme, red and white Coral, Sorrel seeds, of each half a drach. Citron seeds one drachme, Juniper berries three drachmes, chop and stamp all that must be stampd, and hereof with clarified Hony make a confection ; hereof may one take at one time the bignesse of a Walnut.

Also make another, which is called the confection of Juniper berries as followeth ; take Nut kernels, Juniper berries, of each two ounces, beat them well together, put thereto 4. ounces of clarified Hony, and temper with it, Cinamom, Ginger, Mace and Cloves, of each a drachme, white Diptamus, Tormentil, Zeduary, Citron peels, Rue, *Carduus Benedictus*, and Saint Johns woort, of each a quarter of an ounce, Cardamom, Paradise wood, black Coriander, *Angelica*, white and red Behen, fine Bolus, and sealed Earth, of each a drachme, then mingle them all together. If the quantity of Nut kernels, Juniper berries, and hony be too little, then may you take twice so much. And for the common sort it is also excellent good, that every morning he do take eight or ten Juniper berries that have been steeped in vinegar.

Now follow certain powders that preserve men from the Plague ; but (as hath been

said before) great regard is to be taken in time of the Plague, that the heart may be defended from all pestilent infections as much as is possible. To the end are all the above-said medicines, as many powders, confections, cordial waters, and other such like as hereafter follow prescribed: Take Rubies, Granats, Jacincts, Smaragdes, and Saphires, of each half an ounce, white and red Coral, and shavings of Ivory, of each 3. quarters of an ounce, shaven Harts horn, and Sorrel seeds, of each half an ounce, prepared Pearles a quarter of an ounce, Saffron ten grains, beaten gold four leaves; mingle them all together.

Item, take prepared Rubies, Saphires, Jacincts, Emrodes, and Pearles, of each half a drach. red Coral, burnt Ivory, shaven Ivory, Unicorns horn, Diptamus, Zeduary, Cinamom, and Tormentil of each 2. scruples, Doronicum, Aristologie, red, white and yellow Saunders, Citron peels, and Sorrel seeds, of each half a drach. Saffron 2. scruples, white Amber one scruple, red and white Behen, of each two scruples and a half, Sugar, six ounces, and a half: mingle them all together, and then take half an ounce thereof every time.

These following do the Apothecaries call Species liberantes, that are very much esteemed, and much used at Aausburg, by reason they defend the heart and all inward parts very marvellously against all venomous ayre; they are made in this manner; take prepared Bolus and sealed Earth, of each 3. quarters of an ounce, Tormentil, Sorrel seed, seed of Endive, peeled seeds of Citron, and prepared Coriander, of each 3. drach. red, white, and yellow Saunders, prepared Pearles, red and white Coral, yellow Amber, shaven Ivory, bones of a Stags heart, (that hath been steeped a while in Rosewater) red and white Behen, Doronicum, Cardamom, Mace, Paradise wood, Cinamom, Saffron, Zeduary, and Cassie wood of each a drach. Emrodes, Saphires, Granates, and silk Wormes nests, chopped as small as may be) of each a scruple, Camphire, 14. grains, Musk, and Amber of each six grains, Sugarcandie, and Sugar pennets, of each a quarter of an ounce beat all very small, and mingle it together; ye shall give one drach. of this powder in the Winter with wine, and in Sommer with Sorrel water.

The Emperours powder against the Plague: take Pimpernel, Gentian, Tormentil, Dragon, Rue, Wormwood, Nut kernels, prepared Granats, and Juniper berries, of each a like much: make them into powder, and use it upon a tosted peece of bread. If you will make a confection of this powder, then put thereto Rose vinegar, and Treacle, as much as shall suffice.

Another powder: take fine prepared Bolus 1. ounce and a half, Cinamom 1. ounce, Tormentil, and white Diptamus of each half an ounce, Pimpernel, Angelica, and Gentian, of each a quarter of an ounce, prepared Coriander 3. drach. Saffron, Sealed earth, Citron peels, red and white Behen, red Coral, yellow Saunders, shaven Ivory, and prepared Pearles, of each a quarter of an ounce, burnt Ivory, Paradise wood, and bones of a Stags heart, of each 2. scruples, Granates, Saphires, Jacincts, Emrodes, and Rubies, of each half a drach. Spike, of Indy 3. grains, Amber 6. grains, Musk 2. grains, Camphir 6. grains, Sugar as much as all the rest do weigh; temper then well together and make them into a subtil powder, and use it as before.

Another like unto this; take fine Bolus very small beaten 2. ounces, Tormentil, Doronicum, Diptamus, and red Saunders, of each one drach. shaven Ivory, burnt Ivory, and Citron peels, of each half a drach. Pearles 2. scruples, Rubies, Emrodes, Granates, Saphires and Jacincts, of each one scruple, bone of a Stags heart a drach. Unicorns horn, half a scruple: temper them together and give half a drach. hereof at once. You may if you will put Sugar unto it.

Item; take Citron seeds, and Sorrel seeds, of each 2. drach. Diptamus, Gentian, and Tormentil, of each 2. drach. and a half, fine Bolus, and Cinamom of each 1. ounce, Pearls, Saphires, and bones of a Stags heart, of each one drach. red, white, and yellow Saunders, and small Basil seeds, of each a drach. and a half, make powder thereof. But if you will make a confection of it, then take an ounce and a half of the foresaid powder, and twelve ounces of Sugar; and when you have taken of it, then drink a draught of Sorrel water after it.

Montagnana writeth, that he never saw any that ever dyed of the Plague, which diligently used this medicine.

Of all these foresaid powders may also Manus Christi, or Sugar cakes be made. The common

common custome is to take one ounce and a half of powder, and 12. ounces of Sugar.

When the Arch Duke *Maximilian* that now is Emperour of Rome, took his journey into Spain, then was this powder following ordained for him as a preservative against all bad air: take Zeduary, Cloves, Nutmegs, Myrtle kernels, Cinamom, and Ginger, of each a quarter of an ounce, Gentian, Diptamus, Tormentil, Elecampane roots, and Aristologie, of each a drachme and a half, Nutmegs, Sage, Rue, Balm, Piony seeds, Citron seeds, Sorrel seeds, Basil seeds, Bayberries, Mastick, *Doronicum*, Frankincense, fine Bolus, sealed earth, and burnt Ivory, of each half a drachme, bones of a Stags hart, red Coral, and Pearls, of each one scruple, conserve of Buglosse, and of Burrage, of each 3. ss. Rosewater and Scabious water, of each three ounces; then mix with them ten grains of Camphire, and boil them with 28. ounces of white Sugar to the consistence of a confection: and when the same beginneth to be cold, then temper the species with it, and so make *Mannus Christi* of it.

These Sugar cakes following are very common at *Heydelborough* in high Germanie: Take Species *Diamargariton* a quarter of an ounce, *Liberantes* 4. scruples, Zeduary, and Citron peels, of each one drachme, *Doronicum*, *Angelica*, and Pimpernel, of each half a drachme, Couchenele two scruples, Cinamom a drachme and a half, Cloves one drachme, Unicorns horn half a drachme, Smaragdes ten grains *Muscus*, two grains, beaten gold 3. leaves, white Sugar 9. ounces; dissolve the Sugar in water wherein red crimson, silk is sodden, and make hereof *Mannus Christi*.

This following do the Physitians call *Alexipharumacum*, that is, such a medicine that can expel all manner of venome, and whatsoever else is hurtful to the body: Take Salad oyl of one hundred years old or more, and if you cannot get such oyl, then boyl it until it waxeth eager and sharpish, 30 ounces, Turpentine 3. ounces, *Euphorbium*, and Bevercod, of each half a drachme, dew or rain Worms (washed in wine) half an ounce; afterwards put therein 80. or 90. Scorpions, and in the Dog dayes take the Adder that is called *Vipera* cut in in pieces, and let the oyl seethe in boyling water the space of four hours, afterwards set it ten dayes in the hot Sun. This being all done, add to it Zeduary, Gentian, Tormentil, white *Diptamus*, Aristologie, and Rubarb, of each half an ounce, Hollihock leaves, St Johns wort, and Daneweed, and Rosemary of each half a handful, Treacle and Mithridate, of each half an ounce, then pownd all that is to be pownded, and temper them together; and then being close stopt, bury it in horse dung for the space of 3. moneths. Lastly, presse it through a strong strainer, and all that you can get out shall reserve in a pelter bottel.

This medicine must be used in manner as followeth: to wit, that you take it cold, and not warm. It sufficeth also to anoint the heart, the pulses, and the temples of the head but thrice a day, leaving two hours onely between every inunction.

At Pisa is a custome that the Magistrates every year give to the University two prisoners that have deserved death for to Anatomize, which is a good means to prove this medicine. When as they give unto one of these prisoners one scruple of Rats-bane, and 8. hours before his death anoint him with this salve as is aforesaid; then find they indeed that such men might afterwards live 5. dayes longer. These foresaid receipts have been of others described but falsly.

This mixture following is highly commended to anoint withal: Take Amber half a drachme, Annis seed half a scruple, Paradise wood, Laudanum, red and white Behen, of each a quarter of an ounce, Mace, and Citron peels, of each two drachmes and a half Nutmegs, white Coral, red and white Saunders, of each one drachme, beaten Gold six leaves, Basil water, water of Saffron flowers, and Rose water wherein Musk is dissolved, of each 5. ounces, Vinegar two spoonfuls, Malmsey two ounces; temper them well together a great while, and anoint oftentimes the pulses therewith, the temples of the head and the face, and reserve it being stopt very close.

In Saxonie they have a salt of Wormwood called *Sal Absynthii*, which will free and defend men from the plague without any further care.

We will also here describe certain drinks against the plague: First, it is not unknown what power there is in the compounded Aqua vitae against the plague, and against all venomes, as is sufficiently rehearsed in the eight Part.

An approved water: Take Tormentil, Valerian, Pimpernel, Dragon, Diptamus, Sealed earth, fine Bolus, dry Vinegar dregs, and long Pepper, of each half an ounce, Saffron a drachm, Amber half a drachm, Treacle one ounce, *Nux vomica*, and *Carduus Benedictus*, of each

each three quarters of an ounce; pound them all small together, and pour as much thin white wine upon them as you please; let it so stand 4. dayes, and of this drink a spoonful at once, sweat upon it, and fast five hours after it.

For the common people you may prepare this following; Take Valerian, the roots of great Burres, *Bardana*, *Diptamus* of Candy, Gentian, *Bistorta*, Tormentil, and Pimpernel, of each alike much: beat all together grossly, and pour Aqua vitæ upon it as much as will cover it; infolate it 14. dayes long, stirring it about every day. This being done, then must you not take above a spoonful of it at once. Also you may distil it, and use it by it self: but by my counsel this should not be used in Summer.

This drink following hath been approved of many thousands: Take in May the roots of great Burs, called *Bardana* 16. ounces, of the middle rind of the Ash tree two M. chop it small together and distil it: give of this water to drink 3. or 4. ounces, to wit, when he is thought to be infected of the Plague: it is also wonderful good against all byting of mad Dogs.

Another: Take Rue, Wormwood, Roses, and Juniper berries, of each a handful, 20. or 25. kernels of Nuts; stamp these all together to pap, pour wine and vinegar thereon of each one pint and stop it tight: then let it see the in *Balneo* four and twenty hours: this being done, then strain it, and of this give every morning fasting two spoonfuls to drink. Item, take 15. or 16. heads of Leeks, peel off the uppermost shales, and stamp them small, and afterwards mix thin white wine with them, and vinegar of Rue, of each a good pint or a pint and a half, and good Treacle one ounce, and keep it close stopt in a glasse. And when you will use it, then give thereof a spoonful or twain to drink in the morning betimes. It driveth out sweat, and expelleth venomous air. This sirup following is highly commended: Take Citron peels, roots of Capers, Vervein, red Saunders, and burnt Ivory, of each a quarter of an ounce, Cloves, Buglosse, Balm, Burrage, Calamus of each half an ounce, Sorrel, Liverwort, and Mallows, of each three drach. Cicory seeds, Melon seeds, seeds of Pompeons, Gourds, of Cucumbers, and Violets, of each two ounces, *Thymus*, *Epithymus*, *Of* Polipody, *Mirebalani*, *Chebuli*, and yellow Mirebalanes, of each one ounce, *Agaricus* and Rubarb, of each half an ounce, the juyce of Fumitory, of Wormwood, of Daneweed, and of broad Plantain, of each six ounces, the juyce of Quinces 18. ounces, *Diagridium* a quarter of an ounce, white Sugar 24. ounces; make hereof a sirup: and when it is almost sufficiently decocted, then pour thereto 4. ounces of the juyce of Quinces, and then let it boyl till his consistence. This sirup is marvellous good in the time of the Plague; for it drieth the body moderately, and cleanseth also the same of all superfluous humours; it strengtheneth the heart, the liver, and also the inward parts; you may take of it one ounce and a half, or two ounces every week with the water of Buglosse, early in the morning, and then to sleep thereupon a while, or at the least to lye still an hour after it.

Hitherto have we described many medicines, whereby the healthy (in time of the plague) may be preserved. All these things must be used in good order, like as these medicines following also, to wit, that you use sometimes the one, and sometimes the other, and not alwayes one, and the self same, that nature not accustome her self to it, and in the end do think the remedy to be rather a food than a medicine, so that it by that means cannot have her operation.

The sixteenth Chapter.

When any are infected with the Plague.

NOW this Chapter shall onely intreate of those that are already infected with the Plague, be it by what means soever they have first gotten the same; as with Agues, swellings, plague fore, or such like.

Of the Ague in the Plague. §. 1.

THE Plague commonly cometh alwayes first with an ague, whereupon presently followeth the Tokens or Carbuncles.

Of the causes of these twain hath been spoken before; whereby it hath also been said, that

that in time of heat, as in the dogge daies (when the heat of man is drawn inward) that the heart as then is inflamed through an unnatural manner of heat: then also the outward ayre (wherein we continually abide) increaseth the heat, and the heart is so set on fire, that the heat spreadeth over the whole body, and thereby quickly causeth a pestilent Ague, especially if there be such humours in the body that are subject to inflammation, but if the body be not thereto inclined, then can there be no cause how violent soever it be) of such infection.

Of the signs whereby this sickness is known. §. 2.

EVEN as all other sicknesses have their certain signs whereby they are known, so is it with this venomous Ague, which manifesteth her self with 7. kinds of accidents; whereof the first is, an unnatural cold and shaking, whereupon straight way followeth a great heat; albeit the same oftentimes altereth, so that sometimes first the heat and afterwards the cold ensueth. Secondly, let this happen howsoever it will, there followeth alwayes after it a great and intollerable thirst. Thirdly, bitternesse and unsavorinesse of the mouth. Fourthly, losse of appetite. Fifthly, heavinesse of all parts of the body, with wearisomenesse and sleep. Sixtly, a binding of the body and the going to stoole by constraint, and with great stench: the urine also cometh with great quantity and stinketh much: lastly, bereaving of sleep. And albeit these foresaid signs manifest sufficiently the violence that nature suffereth, it is to be wondered at neverthelesse, that at the first neither by the nature and quality of the ague, nor by the pulse, nor by the urine this infection is to be discerned, for it often happeneth that the urine of all men so infected is very like the urine of the sound, and that the heat is also much slower and obscurer then that of any other agues, and the pulse also quiet and scant to be felt.

Now when all these signs or any of them shall appear, or that there be a Plague sore, or other signs more, then all ancient and later Physitians conclude with one consent, that there is nothing more profitable and requisite then that the Patient do sweat well, and be dealt withal, as hereafter followeth.

By what means the Patient is provoked to sleep. §. 3.

FIRST they ordain these confections following whereof shall be taken the quantity of a hassell nut: Take one ounce of Treacle, Pimpernel, Gentian, *Bistoria*, Tormentil, Sage, Rue, Wormwood, Juniper berries, and Nut kernels, of each one drachme, stamp them all together, and then with vinegar make it into a confection. Or use this confection following, called *Bezoartica*, one drachme, warmed in Sorrel water, or in water of *Cardus Benedictus*, at what time soever you will, and then cover him very well, and let him sweat three or four hours (if he be able) for the more he sweateth the better hope is there of his recovery. But if the Patient be under the age of twelve yeares, yet above five yeares, then must you give him half a drachme, and further deale as is above said. It is also needful if the patient may abide it, that he sweat morning and evening: this confection is made as followeth: take of the best Treacle and Mithridate, of each half an ounce, Pimpernel and Angelica, of each ten graines, Cardamom five graines, Camphir three grains, Cinamom ten graines, put them all together. But if you have none of this confection at hand, then a drachme of Treacle or Mithridate with any of the foresaid waters, or take of the golden egg, which is described after two manner of waies, as followeth.

Take a new laid Hen egg, and make a little hole in the top that the white may issue out, and the yolk tarrie within, then fill it up with good powdered Saffron, and shut to the whole on the top again with the white of the egg, and egshell, then rost it by a mild fire so long as the shell will hold, and that it be a clean brown. This being done, take off the shell, and pown the inner part very small, then mingle it with white mustard seeds, *Diptamus*, and Tormentil of each a quarter of an ounce, *Nux vomica* a drach. lastly add good Treacle to it in weight as heavy as all the rest, then temper it all together two or three hours together, and make hereof a hard confection, which men call the golden egg, and will remain good twenty or thirty yeares.

The second; take all that is before rehearsed except the quantity of the Treacle, and put thereto Angelica, Pimpernel, Zeduary, Camphir, and good Treacle, of each as much

as of the other, and that in weight; but I think that there is too much Camphir, and too little Treacle.

Whereas it is not a little available to know how this confection is to be used, therefore you shall understand, that whensoever this sicknesse first beginneth with cold, then must you (if it be a man) before that twelve hours be past, give to him the weight of a duck-at, to a woman as much as a Rhenish gildern weigheth, and a child or a boy half as much, with a small wine. But if this sicknesse taketh one with heat, then take in the place of wine water of Cicory, or if you cannot get it, then take half wine half Vinegar, and sweat upon it. This confection may be used at all times against all bad humours and venom, yet then must the *Nux vomica* be left out.

In the fift part the twelfth chapter 1. §. is likewise shewed how to provok sweat. The antient Physitians accustomed to use this powder following for to cause sweat: Take Valerian rootes three quarters of an ounce, Gentian, white *Diptamus*, and dry Rue, of each one ounce, good Saffron one drach. red Coral and Mace, of each a drach. and a half, temper it and pownd it all together, and give one drach. thereof with a draught of wine.

A marvellous oyl for to procure sweat: take a glasse bottel as big as you will, fill the same half full of Elder flowers, and put thereon the third part of Hollihock flowers, or flowers of *Ebulus*, and again thereupon a third part of flowers of Saint Johns wort, so that with these three things the glasse be full; this being done, pour thereon old Sallad oyl (the older the better) and at last stop it very close, and so let it stand all the Sommer a sunning, with this oyl must you rub the body very warm three or four times a day. It hath been approved, that this oyl through the abundant sweat that it provoketh, expelleth all contagion of the Plague.

Here follow now Diaphoretical potions; take Rue, Wormwood, and the uppermost tops of the black Berries, of each a handful, Celendine a handful and a half; pour, thereon a pint of vinegar, afterwards stop the pot very close that there come out no vapour, and then let the third part seeth away; then strain it out, and keep it close stoppt, and when any are infected with the Plague, or in any wise poysoned, then give him of this drink to wit, 2. or 3. ounces and let him sweat after it, and not sleep at all.

The water of *Geranium* is also very good against all venom, and therefore good to be used in time of the Plague whethere there appear any swelling or any other accidents or not. Some also commend this composition following to be an especial remedie, and it is indeed not to be disdained. Take a great Onion, cut off the top, and make a hole therein, and then fill him with Treacle and the juyce of Rue and vinegar, of each one drach. then close the top too againe with the peece which you clipt and cut off, and fasten it with two stickes, and wind it in wet tow: this being done, rost it in the hot ashes till it be very mellow, afterwards stamp it to pap, and then strain it through a cloth, and it will be a broth, then preserve this broth, till time of need. If one then be found that he be poysoned, then give him a drachme thereof, and hold tosted bread sprinkled with vinegar before his nose that he cast it not up again, and let him lye down upon the bed that he may sweat. But it is to be noted, that sleep in sweating is forbidden and hurtful, wherefore the Patient shall not sleep till the sweat be gone, that the venom hasten not towards the vitall parts, afterwards he may sleep, that he wax not impotent and weak, yet he is otherwhiles to be awaked. And if the age or might of the Patient will permit it, then ought he to be let blood, that the contagious matter which corrupteth the blood, and hurteth the principal parts, might be let out, and the inflammation lessened.

Herein do many Physitians and Barbers dote and erre very absurdly, which straight way as soon as they suppose it to be the Plague, not perceiving any sign thereof, begin their cure with letting of blood. For albeit that it may not be delayed too long, yet ought it not rashly to be done by reason of the former causes.

When the patient thus sweateth, then must the same be wiped from his face with a cloth, and hold before his nose Rose vinegar, Rose water, and such like: also let the ayre of the chamber be cleansed and perfumed with fire or sprinkled with vinegar; but especially heed must be taken that the sweat strike not again into the body. As he hath now sweat well and is wiped clean, then must he be layd in another bed; for the exchange of beds is very good; for thereby they are the lesse infectious, which otherwise increaseth still more and more, and is more hurtful for the diseased person.

Some are of opinion that the Patient should not take any thing within an houre after his

his sweat, that nature first might be able to indure and beare it the better.

Besides the aying and sprinkling of the chamber, it is good counsel for the rich, that there be a cloth wetted in Rosewater, and hanged in the night before the bed of the Patient: and when it is dry that it be moystened again.

How to comfort those that are infected with the Plague. S. 4.

FOrasmuch as there are many causes in this sicknesse whereby the Patient may be weakened, which the disease of it self bringeth with it, as great heat, much watching, thirst, pain, sweat, and such like things more: wherefore good regard must be had how the heart might be comforted, and natural strength be maintained: for the which this water following is ordained for the common sort of people, which not onely strengtheneth, but also driveth out the sweat: Take now the distilled water of kernels of Nuts 4. ounces, powdered Vervein one drach. good Treacle 2. scruples, Saffron 7. graines, then mingle it all together, and so give it warm.

It profiteth much also that the Patient alwayes have in his hand odoriferous things, wherewith the heart, the braines, and all inward parts may be comforted, and the bad vapours taken away; for the which this Pomander following is very commodious.

Take red, white, and yellow Saunders, and Roses, of each one drach. Saffron and Camphir, of each one scruple, Musk, and Amber, of each 5. graines; then make thereof a Pomander with Dragagant that is dissolved in Rose water, and then bind it in red sarsnet as is before mentioned.

Of these Pomanders, as well hot as cold of nature are here before divers described, where we have treated of the preservation of the healthy. And these sweating Patients must not abstain from meat, for that the emptinesse of the stomach is very hurtful for them; and what meat and drink is good for them, that shall be shewed hereafter. If the sick person be so weak and feeble that he may not be let blood nor purged, then give unto him this drink following, that shall do him good: take white *Diptamus*, Tormentil, white Coral, Gentian, fine Bolus, Sealed earth, and Vervein, of each one drach. beat them all very small together, and take thereof one quarter of an ounce, good Treacle one drach. juyce of Scabious 4. ounces, vinegar half an ounce, but if you cannot get the juyce, then take the water of Nut kernels, and let him drink it warm: yet in Winter give him wine instead of these waters. The next day give to the Patient fine Bolus tempered with as much conserve of Roses, and 4. ounces, of Scabious water after it. Sometimes also must the common pills be used.

There is also to be made this cordial confection as followeth; take prepared Rubies, Jacinets, Granates, Smaragdes, fine Bolus, Pearles, bones of Stags heart, fine field gold, and small field Unicorne horn, of each one scruple, raw silk that is cut very small, Roses, Amber, Citron peels, and shaven Ivory, of each half a drach. white Sugar dissolved in the juice of Limons as much as you please, seeth the same as thick as Hony, and mingle the rest amongst it to a confection. give this to the Patient 2. or 3. drach. with fresh broth, for it strengtheneth marvellous much all the vital parts, it resisteth all vapours and breaketh the force of the ague.

In like manner there are cordial waters to be outwardly applyed, whereof some shall be shewed hereafter.

Take Rose water 16. ounces, water of Endive, Buglosse, Nightshade, Baulm, and of Sorrel, of each 8. ounces, vinegar, and good white Wine, of each three ounces, red, white, and yellow Saunders, of each 1. quarter of an ounce, Coral, and Roses, of each 1. drach. burnt Ivory, Saffron and Camphir, of each half a drach. then mingle them all together and so wetting in it a double cloth, lay it over the heart.

Or take water of Buglosse, and of Sorrel, of each 3. ounces, water of Willow leaves, Roses, Wormwood, Grasse, Baulm, and of the wild Vine leaves, of each 2. ounces. *Spec-Cordialium temperatarum* a drach. and a half, Saffron 8. greins, Myrrhe, *Diptamus*, Gentian and Paradise wood, yellow Saunders, Basil seed, red and white Behen, Jacinets, and Smaragdes, of each half a scruple, juice of Limons 3. ounces, vinegar one ounce, Malmsey 5. ounces, put them all together.

Item, take the water of Buglosse, of Scabious, Violets, and of Burrage, of each six ounces, Rose water wherein Musk is dissolved eight ounces, *Specierum Cordialium* one ounce and a half, Camphir half a scruple, white Corral four scruples, prepared Pearles, a drachme

drachme and a half, beaten Gold 8. leaves, Malmsey 4. ounces.

Note that you must temper the water and the Malmsey together, and when you have taken 12. ounces of the same, then must you take a drach. of this powder and mix it with it, and use it as is before rehearsed.

Another: take Sorrel water, and *Carduus Benedictus* water 4. ounces, vinegar of Gilloflowers one ounce, *Species de gemmis frigides* a quarter of an ounce, Saffron two grains, Camphir 5. grains, Malmsey half an ounce, temper them all together.

When as these Cordial waters are layd on the heart, then may you anoint the sick bodies left breast pap with this salve following: take 1. ounce of the best Treacle, juyce of Limons and vinegar, of each half an ounce, Saffron and Camphir, of each 1. scruple; then mingle them together, and spread it on a cloth or on a red crimson clout.

This following is stronger: take good Treacle 2. ounces, Rubarb and *Carlina*, of each one drach. and a half, old oyl of Olives 12 ounces, forty or 45. Scorpions: pownd all that is to be pownded, and then let it seeth in water in a pot alone five or 6. hours long; afterwards strain it through a cloth, and first anoint the heart, the pulses, and the temples of the head. Afterwards he must be anointed upon all outward signs or sores of the Plague, and at the last round about the neck: and this anointing must be done once every six hours very warm: the chamber must also be kept and continually sprinkled.

We have also made mention here before in the sixt part, the second Chapter, and tenth §. and shortly after in the ague *Heltica*, of many things wherewith sick folks are to be comforted and revived,

What is to be done after sweating §. 5.

When as the Patient hath sweat, is wiped, and layd in fresh bedding, then do some counsel to give him out of hand one drachme of fine Bolus, to wit, with Rose water if a great heat be adjoynd, or with wine if without heat, and that not at one time onely, but every day; but it importeth very much whether you have the right fine and orient Bolus or not, for there are many kinds of earths used in stead of it.

Further, let him take immediately after this sweating, to wit, three mornings (one after another) of these syrups following, for the cooling of these hot agues, to warm the same first in hot water, and in case that he afterwards feel a sweating again, then let him forthwith continue in his sweat if he can abide it.

Take syrups of Limons one ounce, syrup of Cirons half an ounce, water of *Carduus Benedictus*, of Sorrel, and of Burrage, of each one ounce, mix them all together for a potion.

And if so be that after the use of these 3. potions the Patient should be purged (which in the ague is seldome needful) then must it be done with this following.

Take of the common Plague pils ten graines lesse then a drachme, and ten grains of *Agaricus*, Rubarb one scruple, then make hereof small pils, and give them to the Patient at one time.

Another regiment when any one is infected with the Plague. §. 6.

First these pils following are to be given to the patient in the morning betimes; take of the common plague pils a drachme and a half, that are formed with syrup of Citrons, and then let the patient (if the infirmity may beare it) sleep afterwards a little; the next day after shall he three or four dayes after other alwayes in the morning betimes, take a drach. and a half of fine Bolus powdered either with wine or with Rose water, as the time of the year requireth.

This is a marvellous good medicine and without all danger, but onely that it somewhat bindeth the body, which may be prevented with mild clifters, which must be made of oyl onely. It is not amisse for this intent to use these confections following every other day, which strengthen the body, and make it sound; take good Treacle one drach. prepared Smaragdes 7. graines, then mingle it with wine, and so give it him.

But if the party can hardly take this, then let him use one of these Sugar plates following; take Jacincts, Granates, Rubies, Smaragdes, and Saphires, and bones of the Stags heart of each one drach. red and white Saunders, and red Coral of each one scruple, burnt Ivory, fine Bolus, prepared Pearles, Sealed earth, and Unicornes horne, of each

four

four scruples, field gold one drach. Sugar sod in Rosewater 16. ounces, make it up into *Mannus Christi*, or Sugar plates, and take 2. or 3. drach. of them at once.

As soone as the patient feelth himself infected, let him presently take this potion following, and if he vomit not the same up again, but sweateth after it, then is it a good sign of amendment, and a manifest token of health.

Take white *Diptamnus*, Tormentil, white Coral, Gentian, fine Bolus, sealed Earth, and burnt Harts horn, of each one drach. Smaragdes, Camphir, and prepared Pearles, of each half a drach. Myrrhe, Saffron, and Citron seeds, of each one scruple, beat them very small and take of it a quarter of an ounce, Treacle a drach. and a half, Sorrel water, and good white Wine, of each one ounce and a half, mix them for a potion, and give it to the Patient warm lying in his bed, that he may sweat well, and that as long as he may suffer it: afterwards wipe him well, and lay him in another bed. But if the time of the year be cold, and the ague not very hot then may you put the more wine to the foresaid potion: and contrariwise, if it be hot weather, and the ague hot also, then let Sorrel water be mingled therewith.

But special care must be had that the patient cast not up the potion again, for the which it is good, that there be a great cup under his stomach, without opening the skin, and some good savour be holden before his nose, his hands dipt in cold water, or smell to toasted bread that is moystned with vinegar, and such like things more.

Some forbid that men in sweating shall neither eat nor drink, which were somewhat indeed if the Patient be strong enough: but when he is feeble, then have you for this a good direction before.

How to purge those that are infected with the Plague. §. 7.

IN the end of the foresaid fist §. we have declared, that purging for this sicknesse is not greatly commended: nevertheless if great need require, then is there nothing more fit then the common Plague pills, with somewhat tempered therewith. This potion following may also be given him with all safety, for that it doth cleanse the blood of all superfluities: Take of the confection *Triphora Persica* and *Manna*, of each three quarters of an ounce, Rubarbe one drachme, then mingle them together in four ounces of Sorrel water. Or take Casie and sower Dates, of each three quarters of an ounce, Confection of the iuyce of Roses one drachme, then temper them together with Sorrell water.

Item, take *Triphoram Persicam* half an ounce, prepared Agarick and Rubarb, of each 1. drachme, and mingle them as before.

Another. Take the confection *Diafena* and *Triphora Persica* of each three drach. Confectionis *Hamech* a quarter of an ounce, de succo *Rosarum* half a drachme, mingle them with the decoction of fruits, or with Buglosse water.

But if the Patient be so feeble that you dare not give him a purging medicine, then let him have a Clister of fresh broth or herbs, with Cassy, the yolk of an egge, course Sugar, oyl of Violets and salt. For all such diseases are the conserve of Burrage, and Buglosse, very commodious, even as they are also for all pestilent agues, for they are both very comfortable; they revive the heart, resist venom, take away all weaknesse, make men glad, and cleanse the blood.

We have before in the 4. §. written of other things more that also do comfort the patient. This shall suffice that we have spoken of the beginning of the Plague: we will now proceed and make mention of other accidents of these diseases, and teach their due remedies.

Of the unnatural heat in the Plague. §. 8.

AMongst the other seven accidents of this contagion (that we have heretofore spoken of, and are alwayes permanent with the pestilent agues) there is commonly great headach adjoynd. Now to strengthen the head and braines, have we set down many goodly instructions and directions, in the first part, the first chapter, 2. §. and also afterwards in the headach of heat.

This potion following may you use for the same; take Tormentil, burnt Harts horn, red Coral, and fine Bolus, of each one drachme, prepared Pearles half a drachme, Camphire four graines, beat them all together to powder, and then give thereof the weight

weight of a drachme, tempered with Sorrel water. For this also serveth this Julep following; take the juice of Balm, of Burrage, Buglosse, Sorrel and of Cicorie, of each one ounce and a half, Rosewater and white Vinegar, of each 3. quarters of an ounce, the juice of Citrons or Limons half an ounce, Sugar as much as you please: seeth the Sugar to a sirup, and when you will use the same, temper it with Barly water unto a Julep. Or take Conserve of Roses four ounces, conserve of Buglosse two ounces, *Species Triasantali* one ounce and a half, burnt Ivorie, Sorrel, Melon seeds, peeled Gourd seeds, Citron seeds and Cucumber seeds peeled, and chopt small, of each one ounce and a half, Sugar one ounce, Pearles four scruples, and six leaves of beaten gold; then temper them well together for a confection: hereof may the Patient use as often as he will.

For this also is good the Conserves of Burrage and Buglosse, of water Lillies, of the juice of Oranges, and all that therewith may be made.

Of the unsatiable and great thirst. §. 9.

THe second accident of these pestilent Agues is thirst, that by little and little getteth the upper hand, so that the diseased falling into a frenziesse thereby, seek to leap into the water, or into Wells, thereby to cool themselves, and quench their thirst.

To cool the same, and to allay it, you may use this Julep following; Take water of Sorrel, of Scabious, of water Lillies, and of Endive, of each six ounces, Granado wine four ounces, Vinegar two ounces, the juice of Limons two ounces and a half, white Sugar as much as you will; seeth it for a Julep, and then let the Patient drink hereof as much as he thinketh good.

Another; Take Buglosse water, and of Sorrel, of each six ounces, water of Cicory, Endive, and Willow leaves, of each four ounces, sirup of Citrons two ounces, sirupe of Vinegar, and of *Oxyacchaba*, of each one ounce, Granado wine eight ounces: let them boyle a little all together, except the Granado wine: this being clarified, put the Granado wine unto it. In like manner is also good the sirup of Citrons, Limons, S. Johns grapes, or berries, Roses, and Endive, being mingled with some cooling water; or else with Well water or Barley water. Item, Well water which hath been once distilled: but above all things that can be devised, is nothing better to quench the thirst, to withstand poyson, to comfort the heart, then the juice of Limons, or the same being pared, and cut in slices, and strewed over with Sugar, and so to use them, and to take the liquor of them with a Spoon.

Item, take Quince kernels one ounce, let them mollifie one whole night in eight ounces of Sugar water, then strain them: this being done, then temper therewith one ounce of the sirup of water Lillies, and oftentimes use it.

As for the thirst, you have divers remedies thereto in the third Part, the 12. Chapter, and 10. §. which are altogether very good. And afterwards yet more, to wit, in the 17. Chapter in *Diabete*, and also in the description of the Agues.

Of the bitterness in the mouth. §. 10.

THe third accident is the bitterness of the mouth, which proceedeth of an inflammation of the Gall, whereof we have written more at large in three other places, to wit, in the third Part, the eleventh Chapter, and sixth Section. Also in the 15. Chapter, and 10. §. Item again, in the third Part, the 12. Chapter, and 16. §. in which places you may read it.

All such Patients must often hold the leaves of Sorrel in their mouthes, or chew the seeds of the same.

They may also very well hold in their mouth Gum Arabick, and swallow it down by little and little.

Of the Want of Appetite to meat. §. 11.

THe fourth accident in this Ague is the losse of appetite: whereas this sickness requireth that the Patient in this malady, more then in any other, should be fed and kept in full strength and power; therefore it is needful in this disease, that the appetite be stirred up: whereof we in the third Chapter, and fifth §. and before that in the third Part, the 11. Chapter, and 9. §. have treated at length.

Especially

Especially you may prepare this stomachical unguent for it. Take Marmalade two ounces, Mastic, Spica of Indy, Roses, red Coral, of each one drachme, *Agaricus* one drach. and a half, beat them well all together, and then anoint the stomach therewith, or lay it on plaisterwise. Make also these Sugar plates following; take Marmalade made with Sugar two ounces, burnt Ivory, Mastic, water Lillie flowers, and Roses, of each one scruple; rub the Marmalade in a mortar with sirup of Citrons, and form the cakes of the weight of half an ounce: then take thereof at all times, to wit, morning and evening.

Of the weaknesse and sleepeinesse. §. 11.

THe fifth accident: Albeit we know well that nature grievously striveth with this malady, and thereby is wearied, weakned, and void of all strength, that is no wonder: for that cause it is highly commanded that men must have especial regard to the strength of the Patient, for the which also are divers means set down how to preserve his strength: so that it is needlesse to rehearse the same at this present. Also it hath been shewed in the fifth Part, the 17. Chapter, and in more other places.

Of the binding in the body. §. 13.

THe sixt accident is the binding of the body, which is augmented by the heat. And to remedy the same, are no strong things required, for strong purgations are not good in this sicknesse; yet if great need be, you have had before in the seventh §. also in the third Part, the 11. Chapter, and 20. §. of the binding in the body divers fit remedies, amongst which many easie and cooling purgations may be chosen: wherefore those that will cure this sicknesse, let them bear 4. ounces of *Sebestes*, and steep them in water, and then give to the Patient many times of it to drink. But if you will have it more forcible, then steep with them the leaves of the lesser Ivie.

Of the losse of sleep. §. 14.

Now the seventh accident of these pestilent Agues is losse of sleep. For this must you take Violets, water Lilly and Elecampane roots, of each one drachme, seeds of Dill and Saffron, of each one scruple; make them into powder, then bind them up in silk, and hold it continually before the nose, and smell to it. But of this have you further discourse in the fifth Part, the twelfth Chapter, and sixth Section; the which you may read over, and use it for this purpose.

When a Plague sore appeareth. §. 15.

VHen these foresaid means have been used, and that there appear a Plague sore, then must you follow such things as hereafter shall be set down: bnt before we intreat of that, it is not demanded in vain whence this Plague sore *Anthrax* proceedeth, and of what nature it is; whereof the learned do write in this manner.

Anthrax proceedeth of grosse and hot humours: which when they begin to putrifie, then do they alter into a very hurtful poyson: sometimes it is red, otherwhiles yellow, and sometimes black, which is the very worst and most venemous. For this manifesteth that nature is not strong enough to expel the venemous matter into the utmost and furthest parts, whence of necessity followeth, that the foresaid venemous humours are dispersed in the noble parts of the body inwardly. To remedy the same you shall begin with the letting of blood, and that upon the same side where the Plague sore is: Afterwards you must use boxing and prick the same deep, whereby the grosse blood may be drawn out. Lastly, you must purge the Patient with some of these foresaid purgations that are set down before in the 7. §. And especial heed is to be taken, that for this Plague sore men lye not thereon (as men use to do in other swellings, that the matter might be expelled) but attractive things are to be used in this, for to draw the matter outwards, and that chiefly in the only place of the Plague sore.

In like manner you must lay no hot nor moyst thing thereon, that ingender matter or corruption, but rather such things as dry greatly, and are reasonable cold by nature, that they may flake the heat, and hinder the vapour thereof.

But if that there appear any rednesse in any place of the body that would not impostumate, then are you to use these things following: Take the inside of a Radish, the Radish leaves, Eldern flowers, and Bayberries, of each half a handful, seeth them all together to pap, and then put half an ounce of white Mustard seed amongst it, afterwards make a soft plaister thereof, and lay it on the rednesse. Item, take a black Cockrel, pluck him alive over all his belly, and then bind his belly over the rednesse, or over the swelling, for the natural warmth of the bird will draw out the venome into him. Other slit his belly alive, and so lay it thereon living. Or take a living Pullet, cut him up underneath, and so bind him open against the swelling: hold the head in thy hand, and so let him die. Then shortly after take another, and do as before. Further, lay thereon ripening things and cure it, as the other swellings. Some lay thereon live Frogs.

Or take beaten Tormentil and Ginger, of each a like quantity, and put thereto as much Treacle: afterwards put it into an Onion made hollow, and rost the same in a mild fire, or among the ashes: lastly, stamp it to pap, and stir three yolks of Eggs amongst it, and then lay it thereon.

And the better to draw out the rednesse and swelling, the old Physitians accustomed to make a plaister of Eldern leaves, of Scabious with the root, (to wit, of each alike) and to mingle the same with leaven, and so lay it thereon.

Some do counsel also that you may temper therewith Salt, Salt-Peter and Comfrey. And if you will have it yet stronger, then are you to put powdered Mustard seed thereto, and in like manner Pigeon dung, for that draweth out the swelling exceedingly, and maketh it great; all which aforesaid things you must often cause to be renewed.

This next following hath very great force to draw out the venome: Take coals of the Tillet tree, and make them glowing hot, afterwards sprinkle them with wine and vinegar; when as they are flaked, then bind them warm in a cloth that is wetted in the foresaid vinegar and wine, and wrung out again, then lay these coals warm thereon, and when as the cloth is waxen yellow, then put it away, and take another.

Item, take the roots of Crowfoot bruised small, and apply it on the place where the pain is, and the venom shall be drawn out very much. Others do use this thing following, which is also marvellous good to draw out the Anthrax, that is, the Plague sore. Take a great Onion wherein Treacle is rosted (as is lately taught) or lay thereon a plaister of *Oxyroceum*, which is alwaies found ready at the Apothecaries, and temper as much *Diachilon cum gummi* thereto. You may also make this plaister of leaven, Eldern flowers, and Treacle tempered together: for as it is admonished, this Treacle is above all other things to be commended for this sicknesse, both inward and outward. Also all Chirurgions are here to be admonished, that they have care to open these swellings before they be matured, be it by the actual cautery, or by incision, and that they hold open the same as long as is possible.

Item, the foresaid plaister of *Diachilon* only is also very good for to mature and ripen it.

Or take the common plaister *Diachilon* 3. drach. and the juice of Celendine, and make thereof a salve with a little Wax. Or seeth Coleworts with a little Bacon, and lay that thereon, and when you see that the swelling beginneth to impostumate, then are you to use these plaisters, salves, and other things following; Take Hollihock roots, Scabious, and Mallowses, as much as need requireth, seeth it, and stamp it all together to pap, and make thereof with Barrowes grease a mild plaister. Or temper wheat meal with Sallad oyl till it be a pap, and lay the same thereon.

Another. Take Mallowses, Hollihock roots, Linseed, beaten all together, and wheaten meal, of each a like much; seeth them all together, and pown it to grout; then mingle it well with Saffron, and so lay it warm thereon. Now when as the swelling is once matured, then you must open it out of hand, be it with an actual or potential cautery, or by incision, and so keep the same open. In the mean time while this swelling is a healing and runneth as yet, you must daily give the Patient a spoonful or twain of Scabious water, or Rosewater with fine Bolus, and sometimes *de Species liberantes*, that thereby the poyson may be expelled from the heart. This plaister following doth also ripen very much: Take the middlemost rinds of Eldern, stamp them very small, and temper them with white Vinegar, afterwards strain them through a cloth, and put thereto white Mustard seed beaten, but not too much, for it is very sharp, and make a pap thereof, and lay it on the swelling. Some suppose that this swelling of the Plague doth ripen much if one rub it

over

over by day and night with a Saphire stone: but they that have proved it, and found it to be true, may write. *probatum est.*

If the Plague sore be of a very bad nature, then must the same be burnt out of hand, or a corrasive layd thereon; but if it be of no malignant nature, and not too hard, then must you use drying things that corrode not.

Others bind Pullets or young Pigeons upon it: and after that they have set cups or Horseleaches thereon, wherewith they intend to draw out the venom, to strengthen the part, and to allay the pain.

Some have also for a custome, when as the Plague sore doth shew it self any where, that they make an issue with a corrosive on some place of the patients leg, and keep the same open, whereby all venomous matters thereby might have their course. When as now the Plague raigneth throughout a whole realme or countrey, then is it no bad counsel to do the same, when the patient hath first been purged: and the same might be done on the right leg, four fingers broad under the knee, on the outside of the leg. And this is also good for them that are troubled with the Gout. You may use also in stead of the actual or potential cauterie these salves following: take Cantharides two ounces and a half (the heads and wings pluckt thereof) pownd them small to powder, and temper it with one ounce of Barrowes grease, molten wax, and hony, of each half an ounce, Camphir and Dragons blood of each a drach. and a half. This being well mingled, you must then spread thereof as much as will cover half a Doller upon a cloth, and lay it over the place where the plague sore appeareth, and it will in six or seven hours draw a blister, then open the same that the matter may run out. This being done, let not the patient sleep in 10. or 12. hours, nor drink wine in 3. dayes. And for as much as through these accidents there is commonly great anguish and paine, then you must for allaying thereof use this potion: take Treacle and Mithridate, of each halfa drach. juyce of Scabious four ounces, temper them all together, and give it the patient to drink meetly warm.

Now to kill the Plague sore: take 2. or 3. yolks of new laid eggs, and temper therewith about half an ounce of powdered salt, and lay it thereon new every quarter of an hour. This reiterating must be so often done, because these plaisters are infected themselves through the venom, specially when the sore is broken. And if this be not enough, then take therewith Scabious, Comfrey, and Mallowses, of each as much as you please, and thereof make a plaister. And if that the sore would corrode further, then take fine Bolus, Dragons blood, vinegar, Rosewater, and the whites of eggs, as much as you please, and spread or lay the same plaisterwise round about the sore.

Another; take soot of the chimney, beaten salt, Sage, and Wheat that is chewed in the mouth, of each a like much, and make a plaister thereof with black Sope. And if so be that this Plague sore will not be killed through these foresaid things, then put thereto some Scabious and Comfrey, and then cleanse afterwards the sore with *Mundificativum de Apio*. Take Lovage 1. ounce, Barly meal 2. ounces, seeth them together in water to pap, and put thereto Sallad oyl. You must also often wash this Plague sore, to wit, with water of *Cardus Benedictus*, for that cleanseth and healeth. These ulcers do many times spread wide abroad, whereby the flesh about is spoyled; for this, you must use stronger remedies, as the salve of Egypt, *Mercurium precipitatum*, or that which is better, burning with an hot iron or gold, whereby all putrifying is taken away, and the part fortified: for the actual cauterie is an effectuall remedy that strengtheneth the parts that be of a cold nature, and doth defend them from putrification. Some also do scarify the ulcers round about with a razor, and then spread fine Treacle therein. But as the black edges of these ulcers increase notwithstanding all these applications, then is it a sign that this venom is very strong, wherfore must you burn it deeper, and anoint the scars with sweet Butter, or with pap of Hollihock rootes, or of Mallowses, and Butter together. But when the swelling or ulcers do yeeld matter, then must you lay no more maturatives thereon; that thereby the matter augment not, and the healing be the more hindered. Lastly, you must have care to ingender flesh and skin, whereof we will write and treat further in their due place.

When as this Anthrax or Plague sore is thoroughly killed, then take Scabious, Comfrey, of each a handful, and a little Salt, then temper it together with fresh Barrowes grease, and lay it warm thereon, and charge it new 3. or 4. times in a day and a night.

Another; take Scabious four handfuls, Treacle one ounce, Barrowes grease one ounce, and a half, stamp the herbs and make a plaister thereof, and refresh it often, even as is

aforesaid. You are to cleanse the ulcers with salve of Turpentine, juyce of Scabious, also the yolks of eggs especially when all other accidents are past. This plaister following is also especial good; Take green Rue one handfull, leaven half an ounce, Pepper one drach. Salt a drach. and a half, three or four dry Figs, pownd them all well together, and make a plaister thereof, and refresh it twice a day. It is of a wonderful operation: for it will separate the bad flesh from the good, and that in the space of 2. dayes.

When these swellings come to impostumate, and have need of cleansing, then are you to use the salve *de Apio*, and therewithal you may prepare these things following: take Turpentine (that hath been often washed with water and Scabious) 1. ounce, Saffron 7. graines, and temper amongst it the yolks of 2. eggs.

Or use this thing following to cleanse and ingender new flesh: take Turpentine that is washed with the juyce or water of Scabious 4. ounces, Barley meale one ounce, 2. yolks of eggs, Saffron, *Sarcocolla*, Mastick and Frankincense, of each half a drachme, temper it all together. Thirdly, take small beaten *Sarcocolla* half an ounce, and hony of Roses as much as need requireth for to make a mild salve thereof, and use it so long till it be thoroughly whole. For this also may you see what hath been written in the 5. part the first chapter, 16. §. and further in the 5. part. the 7. chapter, and 14. §. where this matter hath been treated of at large.

When as there is no Plague sore perceived. §. 16.

IF there appeareth no Anthrax or Plague sore, and yet neverthelesse the pulse and the urine sufficiently shewed that a pestilent Feaver were at hand, and that the patient by reason of his age and power may suffer well the letting of blood, then must his Liver vein be opened in the right arme. Other do counsel when as the ague endureth, and his strength good, that the *Salvatella* on his left hand should be opened and to let out 4. ounces of blood.

For letting of blood in the Plague. §. 17.

WE have before declared that amongst all other remedies for this swelling the letting of blood is beneficial, but to the end when need requireth it be not omitted, you shall observe these instructions following. When as after sweating you find that any thing appeare be it a black blister, or any thing else) and that the patient is above 13. yeares old and be strong, then must you let him blood on the same side, and underneath the swelling, and make a good issue that the blood may issue forth the better. If the swelling appeare behind the ears, which the Physitians do call *Parotidas*, or *Gemellos*, even as we in the 1. part, the 9. chapter, 4. §. have shewed, then must you open the head vein on the same side in the arme, and if it will not bleed, then must you open that vein in the other arme. Or if the swelling appeare in the armpits, on the breast, or on the ribs, then must you open his Liver vein in the arme on the same side. Some give counsel that there should be put thereto 3. or 4. Leeches one hour after, that they might suck out a good deale of that venomous blood. But if this Anthrax or Plague sore be any where about the privities or in the groynes, then must you let him blood in the vein upon the foot, or between the great Toe and the next unto it. And if that will not bleed, then must you open the vein in the other foot, and let out more or lesse according to the age and ability of the patient. Some have also anointed the swelling behind the eares with Hens grease: afterwards you must give him the confection *Philonium Persicum*, yet at all times by the counsel of a learned Physitian: also in like manner the *Trochiscoi de Carabe*, and herewith we will conclude.

The government of life in the Plague. §. 18.

AS much as first belongeth to the meat: you must note, that it is not needful that one need in a pestilential Feaver to forbear meat, as in other hot and strong agues, as in the Pleurisie, or continual Ague, and other such like; but that need requireth here, that there may be often given to the patient (yea as some suppose every three or four hours) to eat and drink in the time of the Plague. And it hath indeed been found, that all those that have forced themselves, to eat, were much sooner cured then the other; wherefore do they well, that feed such a patient often with light meates, that are dry

and cold by nature, whereby they may withstand the heat of the ague by their cold, and the moysture of the bad and slimy humours by their drith. These are strained Pease, Barly pap, Oaten pap, Hasel nuts, Capon broth, Hen broth, or of any other young flesh, wherewith Buglosse, Burrage, and such like herbs are sodden, whereof you may make *Panadella* with grated bread. And it is to be generally noted, that you may dresse all his meat with sower things, as with vinegar, Verjuice, juyce of Limons, and such like. But if the fresh broth be too sweet, then may you therewith temper two yolks of eggs, which are first to be beaten with Rose water, and so make thereof a sowerish broth. All sower things are also good for it, for that they provoke appetite, which presently is taken away in these agues by the putrifaction in these diseases, which specially feebleth the stomach, in so much as very often they are addicted to vomit, whereby the patient will also be weakened; for if the patient can keep no meat in his stomach, then can the body retain no nourishment of the meat that is taken. But to return again to the wholesome meat for the Plague, there are also good small Damask Prunes, Conserves of Cherries, Conserves of Raspes, and such like. Also all green herbs are to be stewed, to wit, Burrage, Lettice, Sorrel, with a little beaten Sanders added thereto. The juyce of Limons, of Oranges, and of Citrons, is a special sauce for all his meates.

The most commodious drink that he may drink is Barley water, the juyce of Limons, Oranges, Sorrel, Pomgranats, or tempered with the syrup of the same. Also it may be sodden like a Julep, and the syrup tempered amongst it. The common sort may seeth amongst it Berberries, Sorrell with the rootes, or Quinces chopt small. But when the patient is wearie of this drink, then may he use a draught of Almond milk, or thin beer; and he may also drink for this sicknesse Well water tempered with Rose vinegar, Distilled waters of Carduus Benedictus, Sorrel, Burrage, or water of Buglosse are very good for him. Item, water wherein unripe Grapes are sodden, or mixed with Verjuice; also the syrups of Roses, of water Lillies, Violets, and of Cicorie, and their Juleps, are much commended for this sicknesse. And with all these foresaid meates and drinks is *Manna Christi* prepared with Pearles, for this maladie much commended. Item, conserve of Violets, of Roses, of Gilloflowers, and specially conserves of Cuckowbread, taking the bignesse of a Walnut of it.

Contrariwise, the patient must utterly forsake Wine, and all meates that are dressed with Spices, Fish, Milk, and all rost meat are hurtful unto him, and after meat the patient must keep himself very quiet.

Of a convenient ayre for the Plague. §. 19.

THE ayre that is good for such folkes, must be cold and dry, because the sicknesse requireth all coole things, and that by the drouth all putrifaction may be withstood. Therefore must the chamber (as is said) be sprinkled with Rosewater, and with Vinegar wherein Saunders and Camphire are tempered. Item, the chamber must be sprinkled with all cold and fragrant herbs and flowers, and in case there be any bad favors or vapors in the chamber, then are the fuming candles, or odoriferous cakes to be used; whereof we have largely written before and shewed how they are to be made. Besides these, it is also good counsel that there be kept a good fire burning in the same house, to wit, of Juniper wood, or any other sweet wood. But if so be there be no bad ayre in the patients chamber, then are you not to kindle any fire in that chamber, but use any cold and odoriferous things, and you may hang clothes that are made wet in Rose water, or Rose vinegar, and wrung out again here and there about his bed or couch.

How they shall govern themselves that escape this sicknesse. §. 20.

AS for all them that recover from this Plague or any other lingering sicknesse, all things are good that strengthen the stomach, and provoke appetite to meat, and mildly open the body, and these confections following; take *Mirbalani Chebni, Indi, Rubarb, Cinamom, Carduus Benedictus, and Cloves*, of each one drach. Mastick a quarter of an ounce, Aloe 3. drach. mingle them all together with the juyce of Mints wherein half a drach. of Agarick hath been steeped, then take thereof morning and evening the bignesse of a Chestnut. For this may you also look the foresaid third Chapter,

and twelfth §. where you may find a further discourse of these causes: and further if it be needful (as is rehearsed) then look into the second Part, the 11. Chapter, where touching these things a perfect direction is given.

The seventeenth Chapter.

An Exhortation for them that keep these Patients.

First, they that assist and keep them that are infected with the Plague, must have care that the Patient be laid upon a high couch or bed, that the venomous damps and stench may rest above, and be the lesse hurtful to the standers by. And it were also not amisse that there be a burning fire alwaies between the Patient and the standers by. If there be a chimney in the chamber, then look what is spoken thereof before.

Secondly, when one cometh near or toucheth the Patient, then must his mouth be kept close shut, and draw his breath only at his nose.

He shall anoint his nostrils with Wine wherewith fine Treacle is tempered. The standers by are also to use every other day the Plague pills every time a drachme, or a drachme and a half. He must also take oftentimes Mithridate.

Thirdly, fine Bolus preserveth men from all infection of the Plague, if a drachme and a half of it be taken with Wine and Rosewater.

Fourthly, if you take as much of the golden Egge as the bignesse of a Hasel nut one day one, and another day another; to wit, pills, or any such like. All they that visit them that be sick of the Plague must wash their mouthes with Vinegar, wherein Wormwood and Rue is sodden, before they come at them, and eat some Garlick with a bit of bread. Further, they shall alway hold a Pomander in their hand before their nose.

All what is described in the beginning of the Plague, to wit, how the healthy are to govern themselves with them that have the Plague, is also very requisite for this purpose.

All that is hitherto set forth for this disease are very passing and good means, which God through his gracious goodnesse hath ordained and created for the good and welfare of man, wherefore he will of us for these his benefits be praised, and be acknowledged for the only Physitian both of the body and of the soul: and especially to pray unto him for his blessings, and thank him for the gifts received, for without him all Physick is in vain, and of no effect.

The eighteenth Chapter.

of the Scurvie, Scorbuticus Morbus.

He Scurvie which is called in Latine *Icteria nigra*, or *Scorbuticus Morbus*, is none other but a spreading abroad of melancholick humours throughout the whole body, chiefly caused and proceeding of the obstruction of the spleen. These sicknesses are for the most part incident unto them that lead an idle life, and feed on grosse meats and drinks.

They that are burthened with this disease have commonly a bleak and leadish colour, their breath short with an oppression at the heart, and a lost appetite, wearisomnesse of the whole body, the gums are blew and swollen, quickly provoked to bleed and putrifie; otherwhiles blew or greenish spots over all the body, stiffness in the knees, and most commonly they have black small speckles like Fleabites upon the shins, and above that their urine is commonly brown red.

Thus to cure this sickness the Patient is first to receive an easie purgation, as the potion made of *Decoctum laxativum*, of *Benedicta laxativa*, or of Sene leaves: this being done, then

then may one open his Median vein and let him bleed well, if he otherwise be full enough of blood.

The next day after you must prepare for him this green potion following, whereof we must every day three or four times take a good draught; to wit, in the morning and before noon one time, after dinner two times, and after supper and going to bed a good draught more.

Take *Becabunga* and Watercresses, of each two handfuls, stamp them in a stone or wooden mortar to pap, pour thereto a pint of wine, and a pint of small Beer; afterwards stirre them all together, and strain them through a cloth, then give thereof to the Patient to drink as is abovesaid; and you must continue this till that the Patient be thorough whole.

Another; Take the roots of Horseradish, which is called *Raphanus sylvestris*, as much as you think good, grate the same, or beat it small to pap, and pour unto it the moyty Whay of milk, and the other half Rhenish wine; or you may take some small beer as much as you please, and then mingle it with stamped Horseradishes: afterwards strain it through a cloth, and drink thereof three or four times a day, as is abovesaid.

Item, take Scurvigrasse two handfuls, or as much as you please, stamp it to grout in a stone or wooden mortar, temper it with as much small beer and wine as you think meet, or after as you can drink it, for the stronger the better; lastly, strain it through a cloth, and drink thereof as above.

And if it come to passe, that in this sicknesse of the Scurvy, the gums of the Patients mouth were utterly spoiled and putrified; then wash the mouth with wine, and anoint the gums with sirup of Mulberries and with Hony of Roses; and if need so require, then must you anoint your gums with the salve of Egypt, called *Unguentum Egyptiacum*. This may suffice for the cure of the Scurvy.

The nineteenth Chapter.

Of the detestable sicknesse, Drunkenesse.

IT will perchance offend the gentlemen drunkards, that I have here put their sicknesse of drunkenesse after the infectious Plague, and Agues, and that I have compared their sicknesse to those: but I will omit here the losse of everlasting life, disdain of humanity, and credit, consumption of worldly wealth, strife, murder, blasphemy of God, disclosing of secrets, whoredom, and many more ungodly works that ensue thereof: wherefore we will here only treat of the hurt that the body may hereby take thereof, and let other judge afterwards, whether this sicknesse be not worse then the Plague it self. For Solomon speaketh not in vain, that Drunkenesse hindreth all wisdom, which cannot be otherwise confirmed then that it maketh a man a fool; darkneth it not the understanding? infeebleth it not the brains, the memory, and all the senses? bringeth it not more forgetfulness with it, then is perceived in young children? Behold only how the hands, the feet, the head, yea the whole body tremble and quake; how the sight is darkned, the tongue stammereth, and how that there is not one member of the body that is able to discharge his duty aright. Yea, say they, this sicknesse hath neither need of the Physicians nor Apothecaries counsel, make thereof as weighty a sicknesse as you can, it may be holpen with a very pleasant medicine, that is, with a sweet sleep. Whereunto I say and answer; Oh good drunkard, there followeth with the time some other thing thereof, to wit, that thereby the good complexion of your Liver is spoyled, so that it doth not ingender any good blood, but other bad humors whereby the dropsie afterwards ensueth, or it doth so inflame the same with his sliminesse, that the whole body will be filled with *Cholera*, that lastly spoyleth and fireth the whole masse of blood, whereof then is caused fearfulness, frightings, speaking in the sleep, heavy dreams, the losse of all good colour, of natural seed, unfruitfulness, leprosie, and lastly, a madnesse it self.

Item, the Palsie, Lethargy, the falling sicknesse, and divers such cold diseases. Is there not provoked through this drunkenesse a corruption of the stomach? the parbreaking of slimy and grosse humours? weakening of all the members, the gout? and to conclude, an untimely death? so that it hath been seen, that some in their drunkenesse have remained

remained dead. Who is it then that doth not take this drunkenesse and swelling or gulling, for the most contagious, perilous, and sodainest sicknesse? Wherefore to help this extreame sicknesse, there is no certainer nor speedier remedy, then *Sobrietas*, which is sobriety, and fasting or abstinence; and albeit that this receipt seem to be altogether bitter, sour and unpleasant for these Ale knights, yet notwithstanding it will expel the foresaid malady, it sharpeneth the understanding and wits, it maketh a good stomach, whereby good blood is ingendred, and bringeth to the body none other but health. I conceive that it strengtheneth the vital spirits of all healthy bodyes, causeth godlinesse to serve their Creator, to seek his glory in holinesse and righteousnesse, and to obey his commandements.

Whereas then some have so weak a stomach, that they are of necessity constrained to drink Wine; notwithstanding are so feeble of brain, that how soberly soever they drink it, it disturbeth their heads and maketh them drunken. For this purpose may these things following be used; to wit, juyce of Quinces, or raw Quinces well chewed, and the juyce taken down; likewise the juyce of Citrons, and Lemons, or of their sirups, do hinder drunkenesse: Honey is also much commended if it be taken after much drinking of Wine; for thereby will the vapours of the wine be so driven downwards, that it cannot weaken the understanding nor the brains. Bitter Almonds confected, Conserve of Gilloflowers; after that you have drunken much, do prevent drunkenesse. In the old time men did make a Garland of Saffron flowers and did wear about it on their heads; the same vertue is ascribed to the blew Violets. And it is said that white Coleworts cut into Sallads and the same eaten, or the seeds thereof chewed in the mouth should hinder drunkenesse: for the juyce of Coleworts, or the pith of the stalks doth stay the vapours of the wine from ascending into the head. The precious stone Amethyst should also preserve man from drunkenesse.

But for to defend and prevent all contagions that proceed of drunkenesse, we will add some things more. First, he must be urged to vomit with *Oxymel* of Squils, with Radish seed, with a feather dipped in oyl and put into the throat, and thereupon he must fast and sleep; and after he awaketh again, you must froth his members, to wit, his hands and feet, with warm water, wherein is sodden Roses, Cammomil and a little salt, and tempered with some oyl of Violets, whereby the vapours may be drawn downwards.

Item, lay a cloth upon the head that is made wet with the juyce of Cucumbers, Purslain, or in any of their waters; the Patient must keep himself herein very sober, and use light meats, Coleworts, Lentils, young Pullets, and young Pigeons drest with the juyce of Lemons, and Pomgranats: the prepared and confected Coriander is also very good, and sleeping thereupon until all the wine be digested, which may be seen by the concoction of the urine. It chanceth oftentimes that drunken folks have great thirst, which if it cometh not through the abundance of wine, then give them fair fountain water to drink, and sour fruites to eat.

You have also an especial thing in the first Part, the 12. Chapter, and 4. §. which is good for drunkenesse and thirst after drunkenesse. There is also a great difference in drunkenesse; and that according to the nature of them that are drunken.

He that is sanguine doth sing, dance, laugh, and is merry; he may be compared to children that soon laugh, and for the most part know not why nor wherefore: and when as a long time they have been merry, then begin they to sleep till they have slept it out.

The Cholerick man is in his drunkenesse angry, raging, clamorous, addicted to fighting, and will not be corrected nor admonished of any body, one cannot bring them to bed, they have much babbling, and are much bragging.

The *Phlegmatici*, they will be weary, Lazie, sleepy, and keep themselves quiet.

The *Melancholici* are sorrowful; bewaile sometimes their sins, their friends disease, and that is the greatest impfection of their drunkenesse: they are therein like to the Apes, but in this they are all alike, that they stammer with their tongue, they reel, and tarry not by their right wits.

How hurtful also drunkenesse is, doth appear in many places of this our Book of Physick; where we admonish all men to refrain it; and that not onely of this unmeasurable drinking, whereof we now make mention, but also where all expert Physitians do forbid wine. And we will for a conclusion add this to the rest, that the Rape wine and Beer, wine drunken after meat, doth make one more drunken and sleepy, then any other kind of

Rhenish

Rhenish wine. And it is a common opinion that watered wine doth sooner infect the head, then pure wine. But this is to be understood of grosse and thick wine, which by the putting to of a little water is the more subtiler, whereby the vapour sooner fumeth into the head.

You have also many remedies before in the first Part, the first Chapter, and 8. §. that are commodious for the pain of the head through drunkenness.

The 20. Chapter.

Of Frighing and Fe. r.

Let no man wonder that we speak of Frighing amongst other sicknesses; for it is not onely found by experience, that through many sorts of distemperature of the blood many sundry sicknesses are provoked, but also a sudden death it self; whereof cometh not onely the forementioned, but also thereby is caused an inestimable fear and faintnesse of heart, whereby they become most unfit for all worthy and knightly prowesse, and are deprived of all counsel and indeavours. Of this faint heartednesse and fear, the Philosophers do write, that the same for the most part do raige and dwell in the heart of such as are of a cold nature, which being sodainly and hastily set upon, their subtillest blood runneth with such a stream to the inward parts of the body, and towards the heart, that it seemeth, that the natural heat should be suffocated; whereby cometh such bleaknesse and quaking, yea sometimes swoonings, debility of the sinews and muscles, that it makes frighed persons very feeble and weak, whereby also the motions of the muscles are so disturbed, that both ordure and urine slides from them, their teeth chatter for cold, they are thirsty, and the whole body shivering and shaking.

For this are two principal and also certain remedies (even as *Horatius* saith) to wit, that one should build a wall of steel about him, that is, shall alwayes have an upright conscience, that cannot accuse him of any misdealing.

Secondly, that he fear God, and have righteousness alwayes before his eyes; which medicines do so free men of all frighing, that (like as *David* saith) it will alwayes go well with him: and know for certain, that God of his goodnesse hath with his holy Angels (as it were a strong tower) compassed him round about, whereby he will defend him.

But the faintnesse of heart is also to be holpen with natural medicines. Note therefore, that when the blood through frighing is stirred, and runneth towards the heart (as it indeed hapneth) then must of necessity the trembling and quaking follow after it: for which you have in the second Part, the sixt Chapter and seventh §. a very good Eldern water, and many other things described. When a woman (with child especially) is frighed, then do some bid, that there should be taken a quarter of an ounce of clarified hony, and therewith some scraped Nutmeg, and so eat it all together.

Wine moderately drunken, maketh the fearful and faint hearted men, stout and courageous.

And it is a common custome, if any be fore frighed, that he be admonished to make water, and if there be any that after such frighing can come hardly to himself, and fall into a swoone, then is he to use those things that strengthen the heart, for which there are many remedies described in the second Part, the sixt Chapter, and first §. and also afterwards in the description of the heart.

The 21. Chapter.

Of Trembling.

Orasmuch as the trembling or quaking is a sign or token of fear, (yea for the most part is caused thereby) therefore it might be needful to write somewhat amply thereof: But we have made in the first Part, the twelfth Chapter, and 12. §. a long discourse thereof, and therewith also shewed, that this is a disease of the Brains.

Also of the trembling and panting of the heart, hath been spoken at large in the second Part, the sixt Chapter, from the third §. unto the sixt §. Wherefore I do suppose, that it were needlesse to discourse any further thereof at this present.

The 22. Chapter.

Of the Impediments that come of Falls.

Into what diseases men may fall, by falls, stumblings, blowes, pinches, and such like, is sufficiently known to all men; whereof we have also written in divers places, and especially in the second Part, the 5. Chapter, of the vomiting of blood; and also in the 18. §. of the clotted blood, where very good remedies are described, and therefore here but a few declared.

But if any be bruised much through a fall, then have the Chirur gi- ons a special experiment, that they speedily flea off the skin, of a Wea- ther, the which they must lay warm round about the bruised or wrenched member; and keep it warm; and this should help in one day.

Brimstone sodden in strong Wine, is also very good: In like manner pownded Gar- lick tempered with Barrowes grease.

Item, take Bran of Rye meal, the roots of *Ebulus*, of each a like quantity, seeth them together in a little Vinegar, and so bind it upon the wrenched or bruised part.

There was once a child fallen out of his Cradle, who thereby had got a swelling on his arm, which was healed by anointing it with oyl and salve of Roses.

For this also do serve all golden and waters of life, principally if any swooning were at hand, the same waters drunken and laid upon the bruised member, and anointed doth heal.

And if the dead Palsey or falling sicknesse joyn with it, then look into the first Part, the 12. Chapter, in the end of the 13. §. where are shewed some good remedies commo- dious for this purpose.

And if the joynts be removed from their natural places, then read the description of the Crook back in the second Part, the fourth Chapter, and 2. §. In like manner also of the dislocation in the fourth Part, the 7. Chapter, and 1. §: where very good remedies are described.

The end of the sixth Part.

The

The seventh Part of this Book speaketh of certain Poysons, and Venoms, of Plants, Mettals, and Beasts.

He miserable life of man is not subject to sicknesses and diseases enough, as well inwardly as outwardly, but there must be divers venomous things to hurt and annoy the same, which are almost among all creatures, and with such hurtful quality indued, that they bereave men of their lives, some sooner, and some later. But God of his goodnesse hath ordained innumerable and wholsome means for it, and that almost in the smallest creatures, as in Herbs, Roots, Earths, and other: amongst which the simplest in sight have otherwhiles the most vertue to resist the strongest poyson; preserving both man and beast from death, even as hereafter may be seen in many places, which ought to admonish us to praise and thank God Almighty for our health, and to acknowledge him to be the fountain of all goodnesse. And to speak and treat thereof in this our Book of Physick, we purpose to rehearse them in this seventh Part, wherein shall be only admonished of such poysons as are known in *Germany*, and (as one may speak) are every day before our eyes. For what poysons are or may be found in the East, and in *Africa*, it were superfluous to speak of them at this present.

We will part these poysons or venoms into three kinds; whereof the first shall be the vegetables, as Herbs, roots, Plants, Seeds, Juices, and such like: the second sort are the venomous Mettals; the third sort are certain Beasts, and whatsoever else cometh from them, whereby men are harmed: so that the summe of this seventh Part consisteth in two things.

First, to know all the venoms whereby heed may be taken to eschew them:

Secondly, if it so chance that any one have taken any of them unwittingly, or were ministred unto him by another; how that one may help him, and shew how that venom might be withstood, and how to extinguish his deadly quality. For it is very needful that every Physitian or householder be provided with good remedies against all manner of venome, whereby he as soon as need requireth, may have somewhat in readinesse that he may minister against the venome so taken. For in all such causes there serveth no delay; as there be but a few venomous beasts and other, which if they be not remedied out of hand, do so infect, that afterwards they remain irremediable, as we have also shewed in other places.

And therefore must we watch and meet with these venomous and hurtful things, imitating the first rule, if any man be poysoned by meat or drink, then is a vomit the principallest remedy. Or if he have received any venom through thrusts or biting, then must you set cups or boxes with pricking thereon, scarifying or cauterizing the sound flesh about the wounds, and at the last if need be, cut off the whole joynt or member. And those thrusts and bits are to be cured by some injection and application, so to hinder the violence and operation of the poyson. The poyson taken inwardly is subdued through tart and sharp wine, and other means: and lastly through purging, sweating, and such like, as hereafter shall be taught. Regard is also to be had of the quality of the venom, and of the strength of them that have taken it; that the strongest poysons may be expelled with the strongest remedies: and the smallest venoms with mild medicines and remedies. Also regard must be had to the time of the year, and to the age of the poysoned person. This is now briefly prefixed for a Preface; we will now proceed to the remedies.

The first Chapter.

All those things that are good against Poyson.

ALL that by the learned may be used against Poyson, shall here be described and specified; and we will shew and name those things that are well known, and easily gotten. For what may it profit us to counsel any man to take the gall of an Elephant, the blood of a Crocodile, and the Eggs of a Tortoise in the Sea?

First, Verjuice (which is of himself good alone) or sirup made thereof, is very good, for it withstandeth all Poyson.

The roots of Valerian, brown Betony, and Rue, of each a drachme, taken with Wine, is also good against poyson. Conserves of Gilloflowers and their Wine are also good for the same: the Bevered, the conserves and wine of Burrage do also withstand poyson. In like manner also the juyce and the sirup of Citrons, and all that is made thereof.

Carduus Benedictus leaves are also marvellous good against all venom (it is said that Frederick the Emperour was the first that brought the same herb out of Greece into Germany) for the juyce, water, powder, and seed of it are all good against poyson.

Fennel seed is also much commended, Sealed earth (if it be right) is of all Physitians accompted for a noble medicine against all venom.

Pencedanus and wild Radish are also much commended.

Wine of Harts tongue is also used for the same, albeit the ancient Physitians do make no mention thereof.

The Conserves of Eldern flowers is also very good, and is accounted a conserve for the common people.

The Conserves of Hyslop, and the wine of the same, doth also contend with venome. Nep, Comin, and Caraway, are more strong then the Fennel seed, *Agaricus* is good if a man will purge.

Angelica is of all Physitians accounted good against all manner of venom, and recommended by the name *Laserpitium*.

Eringas withstandeth all venom. The *Oleander* which the Greeks call *Nerion* and *Rhododendron* is also commended. The long Hartwort is also good. Rue hath an especial efficacy against all poyson: and in like manner the seeds of wild Rue; Rosemary is also praised of some: the learned write not any thing thereof. *Sagapenum* and *Serapinum* is also accounted good for it.

Wormwood, and all that is made of Wormwood is marvellous good against all venom. The compounded things that are commodious against all venom, shall hereafter follow.

An Exhortation for all those that are afraid to be poysoned. §. 2.

ANCIENT Physitians were wont to have an old Proverb, and to say, that Venome is so proud that it dwelleth commonly in Gold and Silver: whereby they meant, that great personages that eat and drink out of Gold and Silver, are in greater danger to be poysoned, then the common people that do eat and drink out of earthen dishes; wherefore must such high personages that are afraid to be poysoned, diligently take heed of the meat and drink that they eat, and that are drest of divers things.

Also they must not take too much of all sweet, salt, and fowr drinks; and they must not eat too eagerly nor too hastily, and they must at all times have great regard of the first taste of their meat and drink.

But the most surest way is, that before the mealtide he take somewhat that may resist venom, as Figs, Rue, or Nuts; each by himself or tempered together. The Citrons, Rape seed, Nep, or any of those that are described before, the weight of a drach. taken with wine, now one, and then another, is very much commended. Sometimes also two Figs with a little Salt, then again Mithridate or Treacle, and such like more may he use before the mealtide.

When any body perceiveth that he hath taken Poyson. §. 3.

BUt if one be sure and perceive, or certainly know that he hath taken poyson, then must there be no long disputing what is to be done: for in case that one will be long a counselling what shall be done, then will the venom in the mean time infect his blood and other vital parts: whereby the party may be neglected, and afterwards also remain incurable. Therefore must the common means be used (as is said before) to provoke him to vomit and cast, and that through the taking of luke-warm water tempered with Sallad oyl, or with sweet Butter.

There are here and there in this Book divers remedies expressed, whereby vomiting is to be furthered, which may be used for this purpose, and you may seek for them in the Table. And as soon as the Patient hath vomited, then are you to cause him to have a loose and open body, which may soon be brought to passe with a strong Clister, whereby the remaining sharpnesse of the venom, that might remain behind in the stomach, or in the bowels, might be driven out and expelled.

The signes when one is poysoned. §. 4.

ALbeit that the signs of those that be poysoned, and the nature of the Poyson taken, or the biting of a venomous beast are divers (as shall hereafter be more at large declared:) neverthelesse can it not be but good and requisite to comprehend them all under one.

First they get a vehement pain in the stomach, in the belly, and in the bowels, pain of the Liver, the kidneys, and the bladder. Often they get a hoarsenesse, gnawing and biting, shivering, cold, dumbnesse, and convulsion of the sinews, feeblenesse of the pulse, the Lethargie, swimming of the head, darknesse of sight, and a shortnesse of breath, yea that they seem to choke, great thirst, bleeding, lack of appetite, great heat, feeblenesse of the face, losse of understanding, of might, and more such like symptoms; yet hereby cannot sufficiently be known the nature of the poyson that hath been taken.

For example, if any man hath taken *Cantharides* (which are Spanish Flies) he getteth diseases in the tongue, in the stomach, and in the kidneies, the bladder is inflamed, he can scarcely make water, to wit, without infinite pain, blood, and great sharpnesse. The Caterpillers of the Fir tree called *Buprestes*, and the *Salamandra*, do also cause the fore-said accidents.

Item, all those that have taken *Opium* do fall into a very deep sleep, or altogether into a malady, that is called *Lethargus*, to wit, the sleepy sicknesse, they get bleak spots, they wax sluggish, cold and stiffe, and are deprived of all their senses.

The like chanceth to them that have taken the juice of *Mandragora*, or the juice of Hemlock.

The Henbane seed maketh men not onely foolish and raging, but as it were mad, or as if they had taken *Aconitum*: they be not onely choaked that have taken *Aconitum*, but also those that do take Toadstooles, Ceruse, Gippes, and Oxe blood: but (as it is said) we shall hereafter further discourse and admonish at large of this matter.

Here we will most of all intreat of those poysons especially that grow, and whatsoever also proceedeth thereof, and adde unto them their Latine and Greek names.

The

The second Chapter.

Of the venemous Plants and such like.

THe *Mandragora* is not otherwise in Latine, nor in Greek, and is by good reason placed amongst the venoms, for that by her nature which is cold in the 3. degree, it otht oboke one: and when one taketh too much of the juyce, then causeth it a sleep unto death. It is also very dry, yet may with discretion the weight of a drach. be given thereof as need requireth; for the learned write, that if any man be too sore frighted or feared, so that he must be cut or burnt, then must there be given 1. drach. of this root unto him, and he shall then fall into so deep a sleep, that he shall 3. or 4. hours long remain unsensible, in which space the Chirurgions have time enough to do their work.

But what the Toothdrawers or Mountebanks do with this root of *Mandragora*, (making the people beleve that they grow under the gallowses of the urin of the hanged theeves, having the form of a man) is known to all men.

Henbane is called of the Greeks *Hyosiamus*, and at the Apothecaries *Iusquiamus*, which is almost as much to say, as hogs beanes, and that by reason that this herb is deadly poyson for swine, if they be not presently well washed, and drink much, or do eat Creuets, which have a special operation against this poyson.

This Henbane is of three kinds: the one hath red flowers and black seed; the 2. hath yellow flowers and yellow seeds, and are both by their very cold nature venemous; the third hath white flowers and white seeds, and is also cold in the third degree, which of the Physitians is very aptly used in some causes; but if you cannot get the white, then take the yellow, and leave the black. You may make of the new seed a juyce, which is dried in the sun, but it may not be kept above one year. When you have taken this juyce, then will it make one frantick, and as he were drunken, but by certain medicines the same will quickly away. You must take therefore the milk of an Asse, or in stead thereof Goates milk, or Cowes milk.

Item, Hony water is very good for it, if he drink much thereof; when you are weary thereof, then cease, and then drinke again afresh. Water wherein Figs were sodden, is also very good for this. Cucumber seeds or Pingles sodden in wine and so used, are good for this purpose. Item, wine that is somewhat salted, and tempered with Barrowes grease, is also good.

Item, there is very commodious, for it Nettle seed, Cicorie rootes, white Mustard seed Creses, Radishes, Onions, or Garlick, any one of these taken with wine, and then afterwards the patient laid to sleep, even as one that is drunken.

Coriander is a known seed, called in Latine *Coriandrum*, and in Greek *Corion* or *Coriannon*. The learned have divers opinions of it, *Dioscorides* writeth, that it is cold, but *Galenus* and his followers do reject this opinion, and saith, that it is hot, or at least somewhat warming. And albeit this seed be somewhat venemous, yet may the same easily be corrected, to wit, when it hath been steeped in Vinegar, and is dried again, and then may it be used in many medicines as you may find every where, &c. Take prepared coriander &c. The nature of his venom is, that when one eateth too much of this seed, or drinketh too much of the juyce, then will the head be thereby so out of frame, as if a man were drunk; it maketh one hoarse, and as if he were dumbe, or if he speak, yet are they but unreverent words. In fine, it is not without great danger; for it hath been often found, that after the taking of the juyce death hath followed, therefore it is good counsel that you use of this a little, and but seldome: yea some will correct the Physitians that daily use this seed for strengthening of the head, by reason that it is much contrary to the head, and noysome. Now to take away the venom of the seede, you are first to cause the patient to vomit, and that with oyl called *Irinum*, or in stead thereof with oyl of Olives, both of them taken with the warm decoction of Wormwood. Also you may fry an egge or two in this oyl, and mix it with pickle of salt fish, and so drink it, or the pickle alone, well salted Henbroth, or Goose broth. In like sort sodden wine mingled with lee, are very good for it.

Nardus seeds or *Nigella* seeds, called in Greek *Melanthion*, and in Latin *Nigella*, by reason

reason of his blacknesse. There are four kinds of it, two black, the which (by reason of their pleasant smell) are planted in the gardens: another which groweth of himself in the fields; the 4. sort is yellowish and hath no difference from the black kinds. The nature of them all is hot and dry, which maketh them venemous, when one taketh too much thereof he is in danger of death. And herein is a wonderous work of nature, that contrariwise it resisteth poyson and in old time (by reason of his pleasantnesse) was baked in bread. For what diseases then this seed is good, that is shewed and taught in more other places.

Milk thistle. This root the Greeks call *Camaleonta*, for that the leaves do alter their colour after divers sorts, according to the nature of the ground, now black, and then green, now blew, and then yellow, and into divers other colours: In Latine this herb is called *Carduus Suarinus*, that is Sowthistle, for that it killeth hogs if they eat this herb mingled with Barly meale. In like manner it killeth Rats and Mice if they eat thereof, and drink not thereafter immediately. The Apothecaries call this herb *Cardopatum*. Because that this is hurtful to the said beasts, therefore cannot it be but hurtful to men if they eat too much thereof. And the same is manifested by his nature, for that it is hot in the second degree, and dry in the third, yet this root is often used for many things, and highly commended, and that most of all against the venom of the Plague. There are two sorts, black and white Milkthistle, both of one nature; notwithstanding there is here to be noted, that the black is to be used onely outwardly.

The Yewtree do the Greeks call *Smilax*, and the Latinists *Taxus*. This tree is well known, it groweth prosperously in cold and shadowie places, for such is his nature. That he is placed amongst the venoms, is not without cause; for it hath been tried, that if bottles be made of it, and the wine kept therein a certain time, it killeth a man. In like manner doth the fruit of the same tree which groweth in Spain. Moreover it is said that who-soever sleepeth under the shadow of this tree, or upon the leaves, and specially upon his blossomes, must die, for that the whole body will thereby be overcold, that a man must die sodainely. His leaves are not hurtful for the wild beasts, but onely for such beasts as do not chew their cud, as the swine, Horses, Asses, &c. they are killed with it. It is said also, that if a copper naile be strook into his stem or body, then will this venom vanish away. His smoake should kill Mice, and his venom will also be taken away by the same means that hereafter is prescribed against the venom of Hemlock, where you may seek and finde the same.

Wild Cucumbers and their juyce *Elaterium*, whereof is so many times admonished that men must deale with it warily, and use but a very little at one time, except it be in grievous sicknesses, as the Dropsie, and such like, the Greeks do call this herb *Sicyagrium* which is wild Cucumbers, for that the same are like to the tame Cucumbers. When these wild Cucumbers are ripe, and softly handled or wrung, then break they open, wherefore you must look to your eyes for they are hurtful. In Latine it is called *Cucumis Anguinus* and *Erratius*. The Apothecaries and common people call it a wild Cucumber. His juyce is *Elaterium*: it is made as well of the roots as of the leaves: but it is not so forcible as that which is made of the fruit. Of all medicines, there is none that continueth longer good then the same: for *Theophrastus* writeth, that it hath been found good and forcible 200. yeares, and it ought not to be used until it be 3. yeares old; it is hot and dry by nature, for which cause *Dioscorides* doth place it amongst poysons. It is so vehement, that when a woman useth it in pessaries it killeth the fruit. But we have written of it also in the Introduction.

Fleawort. The Greeks do call the seed of this herb *Psyllium*, and the Latinists *Pulicarium*, by reason that the seed is like to Fleas, or that it hindereth the breeding of such vermin: the Apothecaries do keep both the Latin and the Greek names. It is (as some say) cold in the second degree, and is measurably dry and moyst. Others do ascribe great cold unto it, wherewith this following doth agree. Albeit this seed be comodiously used, as many places of this book may witness, yet hath it neverthelesse his venom, to wit, when one useth too much thereof, for that it maketh the whole body cold, sluggish, feeble and unapt. Against this may be used that which is prescribed for Coriander.

Crowfoot the Greeks do call *Batrachion*, the Latinists *Ranunculum*, that is Frogwort, either because it willingly groweth (as Frogs do) in moyst places, or for that the Frogs gladly hide themselves under it. Some call this herb *Flammulam* by reason of his burning nature: for being applyed green, it doth not onely excoiate the place with pain

but also if the flowers ly long thereon, it maketh a hard escar: the beggers have learned this so well, that therewith they open their legs, and make them sore, that they are loathsome to behold, to the end that thereby they may get the greater almes. As much as appertaineth to the venom of this herb, it is by nature hot and dry, so that it burneth not onely the outward parts, but also the inward parts, when it is taken inward. The root dried provoketh needling, if one hold it a good while at a tooth, it dryeth so much that it falleth to peeces.

Apiastrum, which the Apothecaries do call *Apium risus*, is also of the same nature. We call it water Crowfoot: it is with us very sharp, but much sharper and more venemous in the Iland *Sardinia*. All that eat thereof are deprived of their understanding, the sinewes of their mouth and their lips are so mightily convulsed that the patient seemeth alwayes to laugh, when neverthelesse he dyeth; whereof the vulgar proverb is sprung, *Sardinia risus*, which is, *Sardinias laughing*, that is as much as when one laugheth where he had more need to weep.

Now to cure this venom, you are to give to the harmed abundance of hony water and milk to drink, and anoint the body with some warming salve, or to put the patient into a bath of warm water, among which oyl is tempered; and in fine to use all things for this purpose that is to be used for the cramp and convulsion of the sinewes.

Nightshade do the Greeks call *Strichinos* or *Trichnos*, and the Latinists *Solanum*, the which name the Apothecaries have turned into *Solatrum*. Hereof are 4. kinds described by the learned, whereof the first is garden Nightshade, which may be eaten among other pot herbs. The 2. sort are the winter Cherries, whereof we will not write any thing. The 3. sort provoketh sleep. The 4. sort maketh men mad and out of their wits, wherefore it is called in low Dutch, *Dulcruyt*, that is *Maddingwoort*. The Nightshade that provoketh sleep, is cold in the third degree, like to *Opium*, whereof we will speak shortly, but it is not altogether so cold; and albeit that sometimes the root of this herb is taken for the drop-sie, yet notwithstanding shall the same be forborn; for it hath often happened, that when one hath taken too many of the berries that he thereby is become raging and mad, yea stiff over all his body, as though all his joynts were dislocated. This stiffness accustometh commonly to endure three dayes, so that some deceivers accustom to use the same to bring men into a misbeleef, as *Plinie* writeth. If one take the weight of a drach. of this root, it maketh a man lusty, friendly, and causeth wonderful fantasies, so that they seeme to be foolish, and to have forgot all shamesfastnesse. And such as take two drach. thereof, they will be wholly mad and raging; and if one take half an ounce, then will death follow. for the said *Plinie* writeth, that the Greeks with such like meriments have plaid the fooles: whereby may easily be noted, that these two species of Nightshade ought not to be used for any medicine inwardly. And this foresaid making mad is none other then the Greeks call *Dorycnion*, which was used in old time for the poysoning of arrowes. The tast of this herb is like milk, it provoketh hoarsnesse, it hurteth the tongue by his moysture, it expelleth blood by vomit, driveth out matter and filth by stoole, even as they that have a red or bloody flux. Thus before those and such like accidents do appear, you may use these remedies following, to wit, that the patient take much Hony water, wherein Violets are sodden, and then vomit it out again. In like manner are you to use the milk of an Asse, Goates milk, or new warm wine, wherein Annis seed is tempered, or wherewith bitter almonds are mingled. The water wherein Mussels, Crabs, and such like are sodden is very commodious to be drunken for it, yea mussels, themselves eaten raw, and likewise clifters: and in fine all that may draw the venom out of the body.

Needlingwort is of two sorts, to wit, white and black Needsworts: the Greeks call it *Elleborus*, and the Latinists *veratrum nigrum*, whereof we have at large discoursed in the Introduction. We take this herbs name of the operation, because it urgeth needling. The ancient Physitians make much ado with it, and committed many follies by it. Both these rootes are in use, yet it is with them as with other things, that whosoever taketh thereof too much it is poyson, and bringeth him into the peril of death.

These rootes are hereby known to be venemous, when as they are digged up, and that the vapour of them riseth into the face of the digger, that thereby he hath great pain in the head, and swelleth much: wherefore it must be digged up speedily, and the digger ought to stand with his back to the wind, and to eat some Garlick before, and then drink a good draught of wine after it. Black needling wort killeth horses, oxen, and swine, and purgeth downwards. White needlingwort is not so hurtful for cattel, and purgeth upwards.

The

The Physitians specially forbid that none of these rootes should be used in women, old folks, nor children, nor in them that have a short breath.

Poppie heads, and the juyce of them, called *Opium*, the which is known with us very well, is called of the Greeks *Mecon*, and of the Latinists *Papaver*. Some of them have red flowers, which are *Corneroses*, the which if one plant, they bear white, gray, and black seeds, of which the white are the best, and the black the worst. All their natures are cold until the fourth degree, therefore not onely the seed, but also the whole herb provoketh sleep. There is also a yellow sort; but the same is hot and dry by nature. And by reason of the extreame cold, is this herb numbered amongst venoms, (not if it be measurably used) that bringeth any hurt with it, for that the seed thereof is baked in bread, but onely when one taketh too much thereof, and that chiefly of the black, which is much stronger then the white, in provoking sleep, for thereby is the sleepe sicknesse *Lethargus* caused. And of that black Poppie seed, or of these heads (the which grow not in this countrey, but elsewhere) is the juyce made; dried, and afterwards is called *Opium*, which is used in many places of this book. But if you are to use it inwardly, then must it (as we have often admonished) be warily taken in hand: for if there be too much given thereof at once, then doth it cause a man to sleep so long till he die; therefore there are a number of ancient Physitians that affirm that none ought to use little or much of it, to wit, inwardly, but to leave and refuse it as a very hurtful poyson; but if it happen that any have taken thereof too much, then are you to give unto him salt with *Oxymel* to drink, even as is to be done when any body is poysoned with Toadstooles.

Toadestooles do the greeks call *Mycites*, the Latinists *Fungi*; whereof are many kinds and some when they are drest cannot hurt, yet at all times give no good nourishment, for that they are hard of digestion, and are avoided downwards, as they were taken. In fine, all learned men agree in this poynt, that some through a secret nature and other through their quantity, kill one no otherwise then as if they were strangled with a cord or rope. Wherefore it is rather a bravery and an intollerable lickerishnesse of them that eat the same, and put their health in danger, then any part of wisdom.

Do not we read of the Emperour *Claudius*, and of whole families, that meeting together at bankquets, and eating of Toadstooles, have dyed instantly; Wee speak not here of those that eat the same moderately, and onely for pleasure, and yet that they do no great good to those that use them: for they augment the cholerick humours, and inflame all other bad humours of the body. One may know them hereby, that in dressing they wax hard; they also get a venemous nature if they grow about rustie iron, or any foul thing. Item, by any venemous beasts, as Adders, Snakes, Toades, and such like, when they have their holes thereabout, and so infect the same.

Wherefore it is to be well noted, that when any have taken thereof, and find any hinderance of the breath, or otherwise find himself ill at ease, that then the patient must immediatly be caused to vomit, whereby the poyson may be cast up; which may be done by the taking of the pickle of fish and lee mingled together, for by the decoction of *Marjoram* and *Hyslope*. The force of this venom may also be allayed by Hens dung taken with vinegar.

Esula, all the venemous herbs that give milk, are 7. in number described by the ancient Physitians, and all of them are called of the Greeks by one name, *Tithymalon*, and of the Latinists *Herba lactaria* as milk herbs, the Apothecaries call it *Esula*: of these herbs there are some species unknown, wherefore we will not wast much time in describing them: all together (yet the one more then the other) are hot in the fourth degree, and dry above measure; so that if one break a sprig thereof, and holdeth the same to his tongue the space of many hours, he cannot be rid of the burning. Also if you lay the powdered herb on the whole skin, then beginneth the same forthwith to inflame and burn, so that it seemeth that a cole fire lyeth thereon.

In like manner also doth this roote manifest his venom first in the digging up, whereby the digger and also the preparer are to expect more danger then hath been told of neefingwort, and by reason of her great venom, is this root but feldome used by famous Physitians for the purging of superfluous *Cholera* and *Melancholia*, even as you may see in some places of this book: but how a man shall prepare this root, that have you before in the Introduction.

The herb *Wolfsbane*, and specially the root, is of the ancient Physitians and Poets accounted

accounted the most venemous Plant; so that when they will once talk of Poyson, they call it *Aconiton*, with which name the Greeks and the Latinists call Wolfs-bane, which is of two sorts, whereof the one is called *Perdalianches*, for that it choketh the Panthers, and hath a root that at the end is like the tayl of a Scorpion, which is called of the Apothecaries *vna versa* or *Lupina*. The other sort is called of the Greeks *Lycottonon*, which is Wolfs bane, for that specially more then any other beasts, it straightway stranglenth the Wolf, notwithstanding that it also killeth the Foxes, Swine, and all other wild beasts, if the powder of this root be strewed upon any thing that they come to eat. In fine, of all venomes there is none that sooner killeth and taketh out of the world, and that not onely when one taketh it inwardly, but also when one toucheth it. For if one touch any she cattel therewith about their members, then must they die the same day. His nature is to corrode continually inward, and maketh the parts that it toucheth stinking. Both of these sorts grow much in Germany in the vallies and on high hils. And verily there is another wonder of nature with it, to wit, that this venom most mightily withstandeth all other venomes: as for example, when one taketh this Wolfsbane or Monkes hood, then must he expect none other but present death, unlesse there be a another poyson before in the same body, as if one were stung before with a Scorpion.

Wolfs bane finding another poyson in a mans body, opposeth it self against it after a most yehement manner, and expelleth it, yea and combateth against it no otherwise but as a warrior that omitteth all other things, and setteth onely upon his enemy, in which strif they remain both slain, and the man retaineth his life. As soon as one hath received this poyson of Wolfsbane there cometh a swimming upon him: chiefly if he would arise his eyes will run, he feeleth great anguish in the breast, and in all inward parts: his breath will be short and grievous, therefore it is needful that you endeavour to expel this poyson by vomits and Clifters. First, there is good for it sodden Marjoram, Rue, Horehound, Wormwood, and Wormwood wine, Housleek, Southernwood, Milk thistle, wild Cypres, and more such like. In like manner also the right Balsam, if you give it with the weight of one drachme, with Hony, or with milk, Bevercod, Pepper, and Rue of each one scruple, may be taken with wine for this purpose.

Also the rennet of a young kid, of a young hare, or young Roebuck drunken with vinegar, is also very good.

The wine wherein a peece of glowing gold, a peece of silyer, or a glowing iron is quenched, is also highly commended for it. Or lee and wine, wherein a hen is sodden. Fresh broth made with Beef, mingled with wine and drunken. The herb of wild Cypres is also very requisite for it.

Hemlock is well known every where, and is called of the Greeks *Conion*, of the Latinists and Apothecaries *Cicuta*, but by us it is called Hemlock. It killeth men, and that very extreemly, if any one take of his juyce. It is a very cold herb, and therefore very venemous. With this herb have the Athenians gotten the name of Tyrants, for that there-with amongst many other they murdered *Socrates*.

Against this poyson it is very good that one do drink much strong wine, and that be-times before the poyson passeth to the parts of life.

It is also taken to be certain and sure, that if his juyce be tempered with wine and drunk, that there is no counsel nor help to be expected against it.

Outwardly the Hemlock is to be used in some accidents with advantage, as hath been shewed in divers places of this booke.

Of all they that receive this poyson, their head seemeth to run round, and their sight so darkned, that at last they can see no more, they wax hoarse, they lose their understanding, the outward parts wax cold, and are convulsed as if they had the Cramp, the pulse will be still, the breath tarieth behind, and they dei miserably. Wherefore (as in all other venomes) the patient is straightway to be made to cast and vomit, to minister Clifters, and continually ply him with wine, giving him Asses milk, Cow milk, Wormwood, and pepper, tempered with wine and Rue. Item, juyce of Mints tempered with wine, is here much commended. In like manner also *Ameos*, Cardamom, or Storax, the weight of half an ounce, Pepper with Nettle seed, and Bayberries drunk with wine. Item, Vine-cuist excessively drunken and vomited up again, is against this sort of poyson much commended.

Dogs bane is called of the Greeks *Ephemeron*, for that it killeth a man in one day. And

that we may make difference of this root from such as are not venemous; namely from the Liriconfanie, we will add Colchinon with it; by reason of the countrey where it groweth in great abundance, and most venemous, the Latinists call the same Bulbum agrestem, and the Apothecaries Hermodactylum. They grow almost in all meadows in Germany, and are sweet in the mouth, whereby the ignorant (by reason of their pleasant tast) may be easily deceived, and allured to eat thereof, whereby they are in danger of death: for as soon as they come into the stomach, by and by they feel a burning and a pain over all the whole body, as if they had been burnt with Nettles, they feel also a gnawing in the bowels, the stomach will be hot and oppressed, and in time there cometh a lask after it, so that the scrapings of the bowels and blood doth follow, and lastly death it self. For this are all remedies good that are prescribed against the venom of roadstooles, to wit, vomiting and Clisters. It is good before the venom get the mastery to drink water wherein is sodden Oaken buds, Acorns, Pomgranates peels, or wild Thyme, and is mingled with milk. Item, you may also use one of these juyces following, as the juyce of Cicory, of Blackberry leaf, of Myrtles tempered with wine, the inward parts of Chestnuts powdered and mingled amongst it is also very good. In like manner it is especial good to drink Marjoram with Lee. And above all things, there is nothing better then Cow milk, or the milk of a Buffel drunken in great abundance, and held in the mouth: for if one have such milk: it is no counsel to seek any further for any other things.

The third Chapter.

Of the venemous Mettals, and such like.

As we have spoken in the description of the foresaid venemous plants onely of such as are well known in this countrey, so we will here treat of certain mettals, and of all that commeth thereof and teach also thereby when any body is poysoned therewith, how that venom is to be resisted. Ceruse, the Latinists call it Cerrusiam, and is taught by Dioscorides that the same is made of lead by the vapour of the vinegar. That art was found long ago, but now at this time is it made more easie. The Ceruse taken inwardly, is deadly. Through the taking of Ceruse followeth hoarsenesse, cough, drouth of the tongue, coldnesse in the outward parts, losse of understanding, and the members will be thereby weary, sluggish, and feeble. These accidents are to be holpen by these meanes following, as with Hony water, with sodden Violets, or Mallowes water, with warm milk, with beaten seed of Sesamum sodden in wine, with Lee that is made of Vine ashes, with oyl of Marjoram, or with Oleo Irino, or with water wherein Peach kernels are sodden, Pigeons eggs with Frankincense, sodden Barly and Prunes, you may give any of these these things which you will, and as often as you will, and cast them out again. In like manner there is good for this Scammonea sodden with hony water.

Gips is very like unto Chalk, for it is made of many stones by Calcination, and also digged out of the Earth. His nature is, that when it is made soft with water, it is immediately altered againe into a hard stone; the same doth it also in the body of man whereby it strangleth presently: wherefore all that is prescribed against the venom of the roadstooles, is also good for this. Item, oyl that is sodden with Mallowes in stead of water, by reason that it is fat, provoketh a slippery passage for vomiting, and hindereth also the exulceration of the passages. Likewise there is also good the oyl of hony water, or dry Figs sodden therein and so drunken. The lee which is made with the ashes of the fig tree is marvellous good for it: or in the place thereof you may take the ashes of Oaken wood, and eat figs. Also you may use the ashes of the Vine, and temper the same with wine and drink much thereof, and then cast it or vomit it out again.

Lime and Gips are very like one to another, and they match one another with their venom. The red myne, whereby some do understand the red lead, and some simple, or mine of the Quicksilver, Sandaraca, Auripigmentum, which is Orpiment, they are for the most part all of one nature, that they torment the intrailles with an intollerable pain, and in case that there be no remedie had for the same in time, then doth it kill him. We will also add to the former the yellow, red, and white Ratsbane or Arsenicum. For this is

commodious all that expelleth venom, abateth his sharpnesse and looseth the belly, whereof there is much written before. The iuyce of Hollihocks and of Mallowes is special good for it, by reason that they are both of them mollifying. For this also you are to give him a potion wherein Linseed, and Rue are sodden, or milk tempered with hony water must he drink unmeasurably. In like manner also all fat flesh broth.

Quicksilver is called in Greek *Hydrargyron*, which is water silver, and in Latin *Argentum vivum*, we call it in this countrey Quicksilver, and is of Plinie, called a venom exceeding all other venoms. It doth also manifest the same in mans body, not onely taken inwardly, but also anoynted over the outside. That it is such a poyson not onely of the blood but also of the venemous pocks, and of other maladies more, as you may see and read before in divers places of this book. Some do say, if one drink it, it presently runs through the body: but if any such thing happen, yet notwithstanding there remaineth somewhat thereof behind in the body that doth hurt the same and the intrailles. For the remedy of this poyson, one must drink much milk, and then vomit the it again: or instead thereof Wormwood wine, or water wherein Smallage, the seeds Clary, and Marjoram, or Hyssope are sodden. For this is also very requisite small field gold, which doth draw the Quicksilver unto it in a wonderful manner, as by experience may daily be seen at the goldsmiths and other, how quickly it cleaveth to the gold, and when it is warm it mingleth it self with the gold, where neverthelesse all other things that are cast upon it are expelled from it, and swim on the top of it, and letteth them not fall to the bottome. There may also be well used, against the venom of Quicksilver all that standeth written against the litharge of gold. Further it is well known to all the world that there is no stronger venom then the Mercurius sublimatus, like as all Chirurgions and Pokmasters do find by experience, when as they do use the same in any ulcer. How one shall prepare the litharge of silver, Plinie doth teach the same diversly, we will here admonish of his poyson: when the same is drunken, then doth it make in the body, and in all the intrailles, not onely an anguish, but also an extreame pricking and pain, it pierceth the inward parts, by his weight, it stayeth urine, it swelleth the body, and procureth a leaden colour. When as the patient hath vomited exceedingly, then are you to give him wine to drink with the seeds of Clary sodden in it, Myrrhe, Wormwood, Isop, seeds of Smallage, pepper, Ligustrum or dried Pigeons dung.

The fourth Chapter.

Of the venomes that come of Beasts.

WHat great commodities Almighty God hath given unto us in Beasts is sufficiently known unto all the world, and the same is to be seen in the foresaid parts, of this book, and in divers medicines. For behold what is more base and lesse esteemed then the Earth-worms that breed in the stinking dunghils, and also live therein, neverthelesse they are used in grievous sicknesses both inwardly and outwardly with great good. The venemous Scorpions and Vipers are wholsome medicines against venom and other diseases, and yet more such like, whereof one might write whole books, as the books of all Physitians and Philosophers do testify; yea it hath been found oftentimes that the ordure of some beasts hath holpen in deadly sicknesses.

But to the contrary, there are four little beasts not fearful but hurtful, against which hurts and harms there are here very good remedies taught to defend and preserve one from them. For what is more frendlier beast towards men then the dog; what beast is more obedient, and can be lesse without the company of men; Yet it is not unknown to all men how hurtful and perilous the biting of a mad dog is; for if there be not presently very good remedies used against it, then will the same man be mad also, and all other men that shall be bitten by the said mad man. Wherefore we will in this fourth chapter speak of certain venemous beasts and worms, whereof by the grace of God (in regard of the South countries) have but a few in Germany. Wherefore we will omit *Basiliscus*, *Amphisabna*, *Cerastes*, *Dipsades*, and such like venemous beasts more, which are to be found onely in Africa, and admonish of those that are known of us, and add unto them the remedies that are requisite against their venom.

The first are the Ants or Pismires, which truly are provident and laborious little beasts, whereof we will not here describe the nature, but will discourse so much as serveth to

our purpose. Then it is found, that men through their pissing feel in their skin, that which is greater than is the stinging of Nettles, for the place thereof swelleth. They annoy also thereby all herbs and trees. And for to drive away the same from thence, you are to take Cow dung, and temper it with vinegar, and therewith annoint the body of the tree, or take Pitch or Rosin for it. They shun also the smoak of Brimstone, and the fume of Marjeram in such sort, that thereby they forsake their holes. Some affirm the same also of Cicory, or (that is better to be believed) of *Esula*, which herbes and the smoak of the sulphur doth not onely hunt them away, but also killeth them. These Ants and their eggs are also used in phyfick.

When any man is stung with Bees, Wasps, or Hornets, then doth he not onely complain of great pain and heat, but also of great swelling of the place where he is stung, whereto you may use this following most commodiously: or stamp Hollihock leaves and lay them moist thereon. You may also do the same with the flowers of Baulm. The same doth wild and tame Rue, the milk of new Figs, salt fish, and the pickle of the same.

Item, sea water, when the place is often moistened therewith. Take Treacle or Mithridate as big as a hemp seed, and annoint it thereon, or if you have nothing else, then take the moist earth out of the garden, and annoint it therewith. It is said that if one be once bitten of a scorpion, that then never afterwards neither Bee nor Wasp will bite him. The same is also written of the worms that grow on Coleworts, when they are tempered with oyl, and annointed therewith. This is also worthy to be thought upon, that when one beareth any odoriferous things, that then the Bees are the readier and greedier to sting the same party than otherwise. Although that there be no *Cantharides* or Spanish flies in Germany, yet are they common at all Apothecaries. They are also very much used of the Chirurgions, and of other, as may be seen before in many places: but by reason that some most unproviently take the same in hand, and also will use them inwardly, therefore I cannot conceal their poyson. These Spanish flies breed of the Caterpillers or little worms of the figtree, Pear tree, Fir tree, and Rose tree, &c. and when one drinketh them, then follow there afterwards all manner of painful symptomes, for that one may feel from the mouth even to the neck of the bladder a sharpnesse and a great exulceration: and he supposeth that he alwaies smelleth pitch, the right side swelleth inwardly, the urine will hardly voyd, and passeth away with blood, and in going to the stool there avoideth the scrapings of the bowels, like to them that have the bloody flux. They lye in great smart, are also feeble and impotent. The head swimmeth so much, that otherwhiles they fall to the earth, until at the very last they are bereft of their understanding. And to remedy these grievous accidents, there must be given to the patient Sallad oyl or some such thing to drink for to bring him to vomit: and when this is done, then are you to minister unto him a clister that is sodden with Rice, Hollihock roots, Fenegreek, Linseed, Mallows, and such like. If one may get the right *Nitrum*, then is it very commodiously used with *Oxymel* (our Salt-peter is not right *Nitrum*) whereby the rest that remain sticking in the stomach and in the bowels might be washed off and expelled. Afterward you are to give him wine and sodden Must to drink, wherein sodden Pingles or Cucumber seed. This may also be effected with milk or honey water: and in like manner also Goosegrease and sodden wine. There is a pap of Barley meal to be laid upon the swollen place, made with hony water. It is also to be noted, that at the first there must no plaister be laid thereon, for that will do more hurt than good.

When all hath been done that is abovesaid, then are you to annoint the body with oyls that be warm by nature, and then to bathe after it, so that thereby all that may hurt the body might be drawn out. You must also see that the patient have alwaies a loose body. He may eat Cockrels, young Bucks or Kids, and Swines flesh that is very fat: And he shall also seeth Linseed with it, for that mollifieth and dampeth the eagernes of the poyson. He shall drink excessively sweet wine. The rinds of Frankincense and sealed earth, the one or the other, the weight of a quarter of an ounce taken with Must, is also much commended. Item, there is good for it the decoction of Penniroyal. Item, Orage, stamped Rue, and the juice of the same drunken with wine. In like manner also Cow milk, that is described in the third part, the twelfth Chapter, and eleventh Section beginning thus, Take *Gentian*, &c.

But above all these are the Antidota good, as also both the Treacles, the Mithridate, *Alexipharmacon*, and such like.

It hapneth also oftentimes, that the people that travel through the country do unawares drink an Horsleeche, which according to the old wont without interceasing sucketh blood, within the body: but if it remain hanging within the throat, then may it be seen. But when this hapneth, then must good heed be taken that you venture not to get it out with any tongs or other things, for that commonly they leave their teeth sticking in the flesh, whereby afterwards grow grievous impostumes; and it booteth not thereto that they be cut off, they leave not therefore their sucking: and if they fall deeper into the body, and come to hang at the mouth of the stomach, that is easie to be known by their drawing. Thus for to cure that accident, he is to drink pickle of fish, or any other salt water holding it in the mouth and to gargarize therewith. Item, Angelica sodden with Beets. Further take Rue, seethe it in vinegar, and drink it, or hold it in the mouth, according to the place where the worm is fastened. Or take vinegar that is heated with a glowing iron, melt Butter therein, and give the Patient to drink of this vinegar: For this is also very good the meal of Lupines tempered with water, and the same holden in the mouth. The Woodlice are a filthy stinking vermine, nevertheless they are said to be good against all venome, which if they be burnt, and the fume of them received, they cause the Horsleeches to fall off.

The Flea is a vile troublesome and bloodthirsty little beast, which vexeth both man and beast: To drive them away or to kill them, there is no fitter means then that you keep the chamber alwayes very cleanly, sprinkle it with water, and sweepe out the same clean, for that they do grow out of dry dust. Item, you may also use these things following: Seethe Coriander in water, and therewith besprinkle the chamber, and also let the linnen be washed therein: This same driveth also lice away: yet note that of late was written of the Coriander, that thereby the head take no hurt. Item, take Coriander, wilde Thyme, seed of Tribulus Aquaticus: and Eldern leaves, seethe them in water enough, and besprinkle the chamber therewith; this driveth away and killeth the Fleas. The same vertue is ascribed to the smoak of Penniroyal, and the powder of Rue strowed in the chamber; and all those things that may be used for Lice and Woodlice.

The Italians and other nations more have a mind to eat Frogs, which other nations do abhor, but we will dissuade all the world from them, and especially such as breed in stinking ponds and waters, and are dun, which are not like the right frogs, for they provoke a swelling of the whole body, with a bleak and yellow colour, like unto the Holly tree: thereupon followeth a short stinking heavy breath, hoarsnesse, and effluxion of the natural seed. Now then for to remedy this mischance, you must let the Patient vomit mightily, and drink over much wine. For this also may you give him of the Cipres root beaten a quarter of an ounce.

Further, you are then to admonish the Patient that he endeavour himself mightily to run, and walk much, or take some other exercise in hand, thereby to sharpen the body; and he shall bathe every day.

We have said before, that there is no more perillous venome then that of a mad dog. And concerning the madnesse of a dog, it is most perillous in hot times; as when the Sun entreth into *Leo*, to wit, in the moneths of July and August; which 30. dayes we do not onely call the Dogg dayes of the Dogg star, but also for that dogs in those dayes are most inclined to madnesse, and then hurt men most of all: wherefore the hunters during these 30. dayes ought to give to their hounds meat tempered with hens dung. This madnesse ceaseth also of it self when it beginneth to freze, and that but seldom.

The signs of a mad dog are these, he will neither eat nor drink; and he someth at the mouth and nose, beholdeth every one overthwartly, and with a heavy look, and biteth as well men as beasts.

If a man be bitten by him, then is there at the first no other accident perceived; but onely that the wound cleaseth it self, and is very painful.

Afterwards there followeth thereby a marvellous extremity, which the Greeks do call *Hydrophobas*, which is the fear and fright of the water, which oftentimes in the dogs and in men is so forcible, that they come out of their wits. Notwithstanding that they fear most of all the water, yet nevertheless they throw themselves into it and drown themselves.

This fear of the water they get not all at one prefixed time, but they get chiefly the same (that neglect the bite most) about the 40 day, some after the sixt moneth, yea some also very well a year afterwards.

The ancient Physitians do write that this franticknesse of the biting of mad dogs hath manifested it self 7. years after that they were hurt by them.

They that are infected with this disease, do also get a convulsion in all the sinews of the whole body, and chiefly of the face, it will be red, and thereby cometh a great sweat, and extream feeblenesse.

Some can abide no light, and others are vexed with intolerable headach, many howl like Dogs, and bite all others that they can come by, who will be afterwards as mad as they. The ancient Physitians write also that they be very few that do recover.

Yet for this hath been found many wholesome remedies, whereof we shall speak hereafter.

There are two kinds of means; the one common, which is good against all bytings and stinging of all venomous beasts: the second, that is good alone against all byting of mad Dogs, if one do but presently put in practise. But if it be deferred too long, it is used in vain. First, there are some things that a body must provide to have alwayes in a readinesse, that the same may immediately be adhibited.

Take for this Crevets, and burn them with as much of the roots of Briony to ashes; then pownd them small and preserve them. Secondly, have alwayes in a readinesse some small beaten roots of Gentian; and then if there be any bitten, cast in 12. ounces of strong Wine, two spoonful of the Ashes of Crevets, and a spoonful of the foresaid roots, and then drink this at 4. times, to wit, in the morning early.

Item, for this is also commended the shels of the Lobster if they be powdered in drink.

Item, one other more that is made of Crevets, and is very like to the former, to wit, as hereafter followeth. Take Crevets that are taken in July and August, burn them alive to powder in a luted pot, and then give the powder in drink with Treacle, to wit, one drachme and a half with water of Scabious.

Take also 2. or 3. drachmes of this powder, and drink it certain dayes together with the water of Fumitory.

Another; Take Gentian, and Myrrhe, of each one drachme, Ashes of Crabs a quarter of an ounce, give thereof every morning with Wine: or if the Patient be full of heat, then take fountain water instead of wine.

Item, the juyce of Balm is also very good for this; or to beat the leaves to powder and drunken with wine. In like manner one may also twice a week take a drachme in weight of the great Treacle, or of the Treacle *Dintessaron*, be it with Wine or any other distilled water.

You have also in the sixt Part, the 15. Chapter, and 12. S. a water of the great Bur, which is also wonderful good against the byting of a mad dog.

Now a dayes is much commended (and that by experience) the juyce of Quinces if one take thereof once a day 3. or 4. ounces, that the same will marvellously preserve one from this venome.

And now to preserve this juyce, you must let it seethe so long by a milde fire till that the skum is separated and taken away; then you may preserve it in a glasse with a narrow mouth, and pour thereto a little Sallad oyl: it is also good for all other venomes.

It is also written that clarified Hony taken daily, should preserve one that he cannot be annoyed with the byting of mad dogs. In like manner if one eat the Liver of the same mad dog, that the same should preserve the bitten person from all symptoms.

The wilde Roses powdered and drunken, are also found very good for it.

Besides all these foresaid remedies, one may use things that cleanse the infected blood, which one may do with these medicines following, if the same be drunken 14. dayes together; Take sirup of Fumitory, of sweet Apples, and of Pomgranats, of each half an ounce, water of Fumitory, Buglosse, and Cicory, of each one ounce, mingle them together and drink it fasting. Afterwards use this purgation; take new Cassie three quarters of an ounce, confection of Hamech one quarter of an ounce, Inda one drachme, make a Bolus or bit thereof with Cinamom and sugar, swallow it down in the morning, and fast six hours after it. For this is specially commended, *Hiera* with Coloquint: for this is also good thick milk; called *Lac scistum*, for that it looseth, and doth withstand the venome. And as soon as the body is purged, and after that all the foresaid remedies have been used, it is then requisite, that one think upon the byting or wound. First, the byting is not to be healed, but it must be well rubbed with Garlick, vinegar and salt, so long till it come to bleed apace.

Some

Some bind thereon living Hens and Pullers; but look what is written thereof in the description of the Plague, whereas we have spoken of the Plague sore.

Make also a salve of the juyce of Onions, juyce of Rue, Vinegar, and Hony, wherewith anoint the wound 3. or 4. dayes together keeping it clean, the which will bring all things in security.

This doth also Garlick fryed with Butter and layed thereon. Or an Onion made hollow and filled up with Treacle, and roasted in the ashes, whereof we have before admonished. And you may also take two handfuls of Rue, fry it twice in Butter, and apply it twice a day to the wound. Others take Garlick, Rue, salt, Frankincense, Myrrhe, of each a like much beaten all together, and a plaister made thereof with wine.

Take Chervil seed, see the it in fair water and drink thereof, wash the wound also therewith: this is good without and within.

The powder of Vervein is also commended for it that is gathered between both our Lady dayes for to strew on the wound.

There is also good for it all Nettle waters drunken; likewise the Nettle seed stamped to grout and laid upon the wound. The Fennel root is used after the same manner. These are now things that may be used outwardly, and that not onely 3. or 4. dayes as some suppose, but also some dayes together with other things more.

For as we have admonished before, this venome doth otherwhiles not appear in a twelve moneth after it: as may be seen, if one be bitten with a mad dog, and handleth a Raven within a year after, that the same foul will be mad, or the man will be mad again.

It is also especially good that the wound be anointed within and round about with Treacle or Mithridate. For this also are requisite the peel of new Melons and Pompeons beaten and mingled with wine, and laid over the wound.

Item, new Onions tempered with Vinegar, or if the same cannot be had new, then are the same to be sod, and to drink the decoction, and lay it also on the wound, or tempered with hony and wine, and so let it lie three dayes thereon.

The kernels of nuts being chewed by not fasting and laid upon the wound, should do marvellous much good.

Or take great roots of Smallage, see the them in water and drink the decoction thereof: stamp the roots and lay them on the wound.

Item, Rue mingled with Salt, these and the like things may be used at the first without all danger. But in case that the venome of this mad beast lyeth hidden and dead a while, and the Patient thereby supposeth to have escaped all peril, the which neverthelesse yet sheweth it self afterwards, wherefore there are divers that have a manly heart, and had rather live a painful life, then to die a painful death.

Of the actual cantery and Incision.

Some that will play surely, and will prevent all these before mentioned mischiefs, do begin this cure at the first by incision and adustion, so that they cut out the sound flesh round about the wound according to the situation of the member, and also draw out the blood, and make the wound much wider; for how much larger the wound is, so much the better will the blood be drawn out, and the better is the wound to be handled, which is to be committed to the expert Chirurgions: but burning is better then cutting for it, and it is commended to be more surer and more forcible, because the fire tameth all venomes, and letteth not the same pearce any deeper into the body; and also the wounds heal not so fast, which must be kept open so long as may be.

These things following are very requisite for to keep the wounds open, as all salt things, powdered wild Garlick, juyce of Onions, and powdered Wheat that is made moist. These things make the wound wider; and after such kind of incision or adustion set on boxes, and scarifie the sound flesh, that thereby the infected blood may be sucked out. And if it be perceived that the wound heal too fast, then must the same of necessity be opened again with fire or with incision, that there be no venome included. How the wounds are to be cured, that is known to all Chirurgions.

To conclude, this is to be added in case that neither the easie remedies now mentioned, neither yet the incision nor adustion had been used at the first, then are they to be omitted and left altogether, and not put the Patient to such pain in vain, for then cannot the venome that is spread over all the whole body, be drawn any more to the wound, neither be drawn out.

An order of dyet for them that are bitten by a mad Dog.

ALL they that are bitten with a mad Dog, must use those things that do withstand poyson, and interrupt the violence thereof, that the same penetrate not to the inward parts. For this doth first of all serve strong wine sodden throughly, and Milk for his drink; it is also good that you put into his meat, Garlick, Onions, and Leeks: let him use Treacle and Mithridate sometimes. He shall feed every day upon eger and four meats that do hinder the venome. Sweating before and after meat is also very good for him. But above all things is the Ellebore highly commended, if he use the same but once in 40. dayes; for it is proved already that those that were vexed with the fear of the water, that they were onely cured by the taking of Ellebore, when as they had used all other means and remedies before.

Toads are beasts well known, that are full of cold venome. Against this is to be used all that which is described against the venome of the Frogs that haunt stinking pools.

That Lice be loathsome and filthy vermine and beasts, is known to the whole world, and hath sufficiently been shewed in the first part, the third Chapter, and eight §.

Milk that is turned doth sometimes very quickly strangle them that do drink the same, for that through her letting it stoppeth the pipes of the Lights. Against this must the Whay of milk be tempered with Vinegar, and given to the patient to drink, and the patient compelled to take it. The same doth also dried Nep, and the juyce thereof. In like manner also Angelica tempered with vinegar and water.

Item, Thymus with wine and lee, and some ashes with it. All salt things must be shunned, for thereby will the milk be turned more. In like manner must heed be taken from vomiting, for the clots might very well strangle one.

Oxe blood is very grosse when it cometh first from the Oxe, it will be soon hard and clotted: this stifeth a man also if he drink thereof, for it setleth it self at the *Vula*, and strangleth a man, it refrigerateth the sinews of the throat, whereby the same is stopt, the tongue will be red, and one may see some part of the blood sticking between the teeth. He must also be kept from vomiting, for the clotted blood remaineth in the throat. In this must the blood be resolved and the body opened. And for this are special good great Figs that are not very ripe, and yet full of milk, when they are given with Vinegar and water. The juyce of Bean straw with Vinegar, and Goose grease eaten, or used otherwise is also very good. All they that do recover of it, do avoid much filth and other matter through their stooles, and the belly and stomach must be often anointed with Barly meal and Hony tempered together.

Caterpillers (which are the right destruction and spoil of all Plants and Gardens) are also in some sort venomous, yet the one more then the other; but they that live on the Fir trees are the most venomous. If it chanced that any body swallow one of these, then presently doth he get a great pain throughout the whole mouth, and therewith a swelling of the belly, of the tongue and the stomach, with a pain in the belly, that it seemeth that his belly is full of Worms, his whole body will be burning, and getteth a great distemperature in the stomach. This venome is to be remedied with those things that are ordained against the venome of the Spanish Flies; but in the stead of Sallad oyl, the oyl of Quinces is much better.

Snakes and Adders are of divers sorts throughout the world, and Africa, Media, Ecbatana, and Trpoglodytis are marvellous much Plagued therewith, even as now adayes Italy is in some places. Wherefore may Duch men and English men account it for a blessing of God, that they cannot say as men do of Africa, that there are more men slain by venome then by the sword. And because this seventh Part discourseth onely of poyson of venomous beasts, we will add here to the rest all the principallest things that are set forth by the learned against the byting of snakes and such like venomous beasts.

Wherefore we will speak first of the root of Aron, that is, Cuckopit; when Snakes are smoked therewith, then will they be all as if they were drunken, and remain stiffe. In like manner, when this root is beaten to powder, mingled with oyl of Bayes, anointing the place therewith where they do use, then will they be hunted away. This root is also to be drunken in red wine against all venome.

If the fruit of the tree Platanus be taken with Wine, then doth it withstand all stings of Snakes and Scorpions.

Elecampane roots drunken in Wine, are also good against the stinging of venomous beasts.

The root of *Mandragora* is also good for it, principally if any must be cut or adusted, for these venomous beasts bitings, for it bringeth the Patient into a deep sleep, and maketh him wholly insensible, even as before we have taught.

If *Ebulus* be set on fire, then doth the smell of the same drive away all manner of Snakes. The leaves thereof layed in wine, and drunken thereof, are also good against all kinds of poysons.

The leaves of the Ash tree wrung out, and the juyce thereof drunken, and laid upon the biting, withstandeth the poyson of Snakes as vehemently as any thing in the world: For this tree hath such antipathy with the venom of Snakes, that the Snakes shun the shadow of this tree. *Plinius* writeth also, that if one compasse them in one place with fire, and another place with Ashen wood, that they had rather run into the fire then be touched with that wood. This bad worm doth also not creep out of his winter hole, before and until that the Ash tree beginneth to blow, the which is a marvellous work of nature. Moreover, the Ash tree shall not let his leaves fall before and until that the Snakes be cropen again into their holes.

Right Balsam is commended against all venom of Snakes: but by reason that we have not the same, there are many kinds thereof distilled, wherein every one is to use all diligence that he can to attain to the right Balsam as neer as he can possibly: whereof you shall find divers descriptions in the last Part, where you shall also have living and golden waters which are very commodious for it. And for that England and Dutchland (as is already said) are almost free from these bad beasts; we rest contented with the easiest and best known things: in like manner leave the Balsamum artificiale to the charge of the Chirurgions. *Tencrimum* do the ancient Physitians say to be the most precious remedy against the venom of Snakes, whether it be taken in drink or laid upon the bite. In like sort the great *Tencrimum*, whether the same be taken green, dry, decocted, or the juyce thereof.

Mugwort is also taken to be very good for the byting of Snakes, if the same be laid in wine, and some thereof drunken and laid upon the wound.

Betony and all herbs of that vertue, as Gilloflowers, &c. the ancient Physitians do write to have such power against the biting of a Snake, that if this herb be laid round about her, she had rather be killed then creep over the same herb: for which cause the wine and conserve of this herb are highly esteemed: so is also the powder and seeds of the same.

Bevercod is good for many things, as is sufficiently before declared in the description of other sicknesses. And amongst other it is also good against the biting of Snakes, and biting of other venomous beasts, if the same be mingled with other things, according to the importance of the beast that hath so bitten. This if it be used in time of need, you may take thereof half an ounce with wine.

Bucks and Goats hair set on fire driveth away all Snakes.

Pennyroyal withstandeth all Snakes by nature, by reason of the favour or smell: wherefore it is to be strewed upon the place whereas the Snakes have bitten one, and to be drunken with Wine.

Purslain eaten and applyed also upon the sore, draweth out the venom. It is also good for all other kinds of poyson if one drink the sap thereof with Wine or Hony: but the wild Purslain is the best.

The juyce of the flowers of Selfheal drunken with Wine, should be good for all the venom of beasts.

The nuts of the great and small Cypres trees, which may be had at every Apothecaries, stamped and drunken with Wine, are also good for this. In like manner the same Cypres herb (which is to be found in many gardens) is very highly commended, for that it withstandeth all poyson of Snakes if it be drunken with Wine.

Nardus seed is renowned to drive away Snakes by his smell and favor.

Dill mingled with Rue and Swines bread, with Pepper, and so given to eat, is good against the byting of Snakes.

Acorns are also good to be drunken against this venom.

Hens eggs hard sodden, and tempered with Cresses are good, being laid upon the byting of Snakes.

Vervein steeped in wine and drunken, is very good likewise if it be laid thereupon.

The

The root of Gentian is in divers manners good against venom, as before hath been declared, but chiefly against byting of Snakes; it is commended above all others if one take a quarter of an ounce thereof with wine.

Pease meal tempered with Vinegar, drunken and laid upon it, is also very good.

The smoke or fume of Asses lights will also drive away venomous beasts.

Venomous beasts cannot abide the smoke of Ferne, wherefore it is good that it be strewed upon the places where they haunt.

Fennel, and especially the seed of wild Fennel drunken with wine, is much commended for it.

Hair of Womens heads burnt, hath a marvellous power to drive away Snakes and Spiders.

Galbanum is a gum that driveth away all venomous worms. The herb Cuckowbread, the weight of a drachme drunken with Wine, hath many times been approved.

Barly meal laid on with vinegar, withstandeth venom. Some do give the root of Celendine, the weight of 3. drach. with Wine, or make thereof a salve, and lay it on the venomous biting of a Snake.

The brains of a Cock or Capon are also a good for this being used in meat.

The seeds of Mew is amongst other seeds most commended if the same be drunk with bitter Almonds, or the juyce of this herb with bitter Almonds and with wine. In like manner also, if one be anointed with the oyl thereof, then doth it preserve him against the biting of Snakes.

Hares rennet is very forcible against the venom of Snakes, and also for more other things.

Heath *Erica* is much commended against the venom of Snakes.

Harts horn hunteth them also away through his smell.

The round and long Hartwort, the weight of two drachmes drunk with Wine, or tempered with vinegar and laid thereon, is also much commended.

Dogs Garlick that groweth in Vineyards, is also very forcible against the venom of Snakes.

Clevers have also a special force against Snakes and their venom, if one drink the weight of a drach. of them.

Melilot hath this nature also, that it is said, that there was never seen a Snake to have come near this herb. In like manner the seed of it is much commended being taken with wine.

Garlick driveth away all Snakes through his savour and smell: it is also very good against all venomous stings of beasts; and if one mingle it with bread and Hony, then may it be eaten for that intent.

Coleworts with Barly meal laid thereon, or the juyce thereof tempered with Vinegar and Fenegreek seed, is also very commodious.

Corn Mints do also drive Snakes away.

The dung of all four footed beasts tempered with Wine, and laid thereon, is also commended.

Crabs that are caught in fresh water, and in the Sea, are also very commodious for this, as we have admonished in other places more.

Wild Thyme hath also great vertue for it when the leaves thereof be drunk with wine: and the smoke thereof driveth them also away.

All pickle of salt fish is also highly praised for this use, as hath been taught elsewhere.

The roots of Lovage with Barly meal, or tempered with wild Baulm and laid thereon, is also very commodious.

Bayberries tempered with Wine and drunken, is good against all cold venom.

Eringus the weight of a drachme drunken, tempered with water, and layed thereon, is also good.

A live Mouse applyed to the place hath a special vertue for to draw out the venom; howbeit Hens, Pullets and Frogs are also very commodious for it, as we have oftentimes shewed before.

Must drunken is an utter enemy to Snakes; so is also sodden and falsified wine.

How forcible Nuts be, not onely against Snakes, but also against all venom, if one use

use them with Figs and Rue, we have oftentimes declared before.

Oleander which the Greeks call *Rhododendron*, is marvellous, for his leaves are venom to all fourfooted beasts, and yet a medicine for men against the venom of Snakes sodden with Rue in wine.

Earwax rubbed on the byting asswageth the pain out of hand.

Piony roots, whereof there are two sorts, are both of them good for this purpose.

Pepper is for all cold poisons measurably used, taken for a special medicine, even as we have declared in other places more.

Pistacies are also very good against all poyson.

That Rue is good against all venom, and against the byting of Snakes, we have already said in many places.

The rennet of Faunes that die in their dams bellies, is commended to be marvellous forcible for it.

For this is likewise commended the Madder.

Radishes sodden with water and vinegar, and laid thereon, are accounted very good.

Great Centorie, which is called *Rapontica*, the weight of a drachme of it given with Wine.

The Water of Larks spurs is said (being drunken) to be good against the byting of all venomous beasts, if the byting be washed with it. The same is also to be used against the Plague.

The juyce of white water Mints a quarter of an ounce drunken with three or four ounces of Wine, and the byting washed therewith is much commended.

The seeds of yellow Rapes or Turneps, and also the roots and the herb carried about one, will preserve him from the byting of Snakes: and if any body be bitten, then must the seed with the grease of any birds be stamped and laid thereon. The seed of the common Rapes is very good against venom, being taken in the stead of Treacle.

Salt is very good against all poison.

Sugar is to be tempered with oyl, and laid thereon.

Swines bread hath a great vertue against all venom, as we have admonished in more other places.

The juyce of Scabious is also taken to be very good against all venom of Snakes and Scorpions.

The three sorts of Dragons do drive away all venomous beasts if one carry the root about him. It is also good (being drunken) for them that are bitten of them.

Leeks are also good when they are tempered with vinegar.

Mustard seed is to be mingled with vinegar, and applyed thereon.

They flye from the fasting spittle of man, and if they get it in their mouth, they must die thereof.

Southernwood strewed on the place where the Snakes haunt, or where fume and smoke thereof is, driverth them away. Also Southernwood is good against all venom, being taken inwardly and applyed outwardly.

Codwort (which in Latine is called *Asper*) is also for this highly renowned.

Syrax Calamita, as the sent thereof is very acceptable to all men, so contrariwise there is nothing that Snakes may lesse abide.

Tamariscus is good against all poyson.

Woodlice (albeit they be loathsome worms) neverthelesse they are above all things commended of the renowned Physitians against the poyson of Snakes, and also against all other poyson.

If the venomous Snakes ever come to sent or smell the leaves or wood of Juniper, then creep they away: they are also good against all venomous beasts.

Lysimachia is also commodious for all these things.

The juyce of Onions applyed to the biting of a Snake and tempered with Hony, is very good against all venome.

The Gnats that plague beasts and men with their sting in Sommer, and in like manner all plants are depelled by the smoke of Pomgranate peeles, and of *Galbanum*, also by the smoke of *Nardus* seed, and Lupins.

But for as much as (through the grace of God) we have no Scorpions here in England nor in Dutchland, therefore it is no great need to write much thereof, by reason that all that

that is written against Snakes. is also requisite for the same; yet cannot we conceal this miracle, that the Scorpions themselves are a remedy against their own poyson, if the same be beaten and laid thereon, or if they be roasted and eaten.

In like manner you have their oyl, and other their vertues more described here and there throughout this whole book.

Spiders are well known beasts, whereof there are many sorts described by the ancient Physitians, which as they do differ in fashion, colour, and in weaving their webs, so they do also differ in poyson.

Albertus doth describe eight kinds of them, which we have all here in this Countrey. Some do live by catching of Flies: others by catching of water Worms and small fishes. Some are also enemies to the Toad and Snake; for that it hath been seen that such Spiders have lettten themselves down by one of their threds upon the heads of such beasts, and leave them not before and until they have killed them.

Other are deadly enemies to the young Evets, which through their spinning do bind the mouth too, and do smother them, and hale them into their nets, that thereby they might suck out all the moysture of them; and by the diversity of the venemous nourishment altereth also their venemous nature, whereby the same is sometimes more forcible or more mild.

And also their manner of dwelling is not all one: there dwell many in houses, other in the fields and in the hedges: some dwell willingly by the water sides, but we will not write here any more of their natures, but discover their venomes.

Of all the venomes of the Spiders, that which the Greeks call *Phalangium* is the most renowned, and albeit that the same is not known in England nor Dutchland, yet we will describe the nature of this venome, whereby one may be taught to assuage all the lesser stings, and the harm that may come thereby, and how the same may be cured. The Greeks call this species of Spiders the Wolf, for a difference from all other Spiders that are not so noysome.

These Spiders are hairy, and have a great head. The she Spider (which only spinneeth) bringeth three hundred young ones at one time, and she receiveth also the reward of her noisome fruitfulness, to wit, that she is killed of her own young ones, and afterwards sucked out, which they would also do to their father if he with might did not withstand them.

If then any body be stung, with this *Phalangio*, then will the place of the stinging be red, neverthelesse without pain or heat, howbeit that it yeeldeth some moysture, and as soon as there is used any medicine against it, then beginneth the body to shake, the sinews of the knees and the inward parts will be feeble, and they will be convulsed as if it were the cramp, they take a great anguish in the members, the Patient can scarcely make water nor go to stool, he getteth a sweat throughout all his body, his eyes run and are dimme.

Against this must the ashes be used that are burnt of the Figg tree, tempered with salt and wine, and so laid thereon. Item, Hartwort, Barly meal, and Vinegar, tempered to pap.

You are also to wash the sting with some water wherein Smallage was sodden. To bathe often is also very good. For this one is to take a quarter of an ounce of any of these seeds following with Wine, to wit, the seed of Southernwood, Annis seed, Hartwort seeds, the rindes of the tree *Platanus*, or the seed of Melilot. Item, the fruit or rinde of *Tamariscus*, or wild Cypres sodden in Wine.

Some will say, if one take the juyce that is strained out of Crabs with milk and seeds of Smallage, that thereby the Patient will immediately be whole.

Plinius writeth of the water of Smallage, that the same hath a special vertue against the stinging of the Spider.

And there may be used against the Spider Marjoram, *Nardus* seed, Southernwood, *Hycinthum*, juice of Mulberries, field berries, and Framboys, being tempered with hony and Wine, or each also alone.

Woodlice, albeit that they be good against divers other venoms, yet neverthelesse are they very loathsome to all men, shrewdly byting, and bloodthirsty, whereby they take away a bodies sweet sleep, and especially vex the young children, for which there hath been much counsell sought to drive them away.

For this is very good the smoke of the great Fern. Item, if Horfeleeches be cast on the fire, and they be fumed with it. Birchboyes set in the chamber drive them also away.

The water that we use daily for our necessity hath by nature no venom in it, yet if one drink it too cold, likewise strong Wine, and by and by after bathing, or after that one hath run hard, then doth there ensue great pain and stiches, which diseases may be expelled thorough letting of blood and purging.

Of the Worms that breed in the belly grow divers diseases. In like manner also of such that grow in the fingers, in the arsegut, in the wounds, and other places more. What is to be done thereto, that have we sufficiently declared elsewhere.

Thus for a conclusion of these venoms of beasts, and of the seventh Part of this book, there is yet somewhat to be added that some account for witchery, to wit, when there is given to any body that which excitateth love, by which commonly such miseries do follow, that they that receive the same become mad and foolish, like as daily experience doth teach us.

Ovidius writeth, that *Philtra* do weaken the wits, and by their vertues they make men foolish and mad. This do we call the lovers herb, as if witchery had power to command one to love another.

This witchery (or rather this poysoning) do women use most of all, intending thereby to constrain men that they should love them. The ungodly heathen that have excelled therein, and chiefly the *Thessalonians*, have taken great delight therein, and also strange misbelief, that are rather to be concealed then disclosed.

It is very difficult to ordain any certain remedy for it, because it cannot well be known (for that there be so many kinds of them) by what means it hath been put in practise, so that the same must rather be judged by the signs apparent to the eyes, then by any other signs: yet have I found out two things described by famous Physitians, which are very good for this purpose: but the first thereof is very strong, and is not to be used without counsel, but the other is somewhat safer and easily approved.

Take a Valerian root with the herb, five or six roots of *Gentiana Cruciata*, a small handful of the roots of wild Cucumbers, and a quart of Wine with half as much water: afterwards seeth it softly about a quarter of an hour, and drink thereof morning and evening: And you are to seeth therewith a little Cinquefoyl.

The other: Take the middlemost green rindes of Eldern shread small one handful, let it dry well, afterwards seeth it in a pint and a half of Goats milk till about the half, strain it, and drink it as aforesaid. Hereof will some say, that the same purgeth all things whatsoever hath been given unto any body, by women to this intent, although it had been done three years before.

The end of the seventh Part.

The

The eight and last Part of this Book, containeth
sundry things.

THE eight and last part of this general practise of Physick is ordained for those things that do not concern any special diseases, which are before sufficiently described, but that are meet and good for to help sick persons, to strengthen the weak, and to maintain health; which also may be used in the kitchen for pleasure, and for other purposes more; as Electuaries, Potions, conserves, and confections, of all kinds of fruites, of Flowers, of Roots, and of other Plants, Oyles, Syrups, and Juyces; Golden and vital waters; Herbed and Aromatical wines, and such like; whereof otherwhiles hath been admonished, how that the same may be prepared, to the end that the vertue of them all might be known. Wherefore we will also declare their vertues and operations.

The first Chapters

The Confection of Calamus.

THIS very precious and necessary confection, is prepared after sundry manners; for besides this, that it is very common, it is also very pleasant and acceptable. But first of all there is to be noted, that the ancient Physitians had another root, and not the yellow Lilly root, which we have now in use; ye a ours is not to be compared to the old Acoro neither in vertue nor in operation. The learned do esteeme the Calamus to be the right Acorus, which is also very requisite for this confection. Other be of opinion, that it is the great Galangal, which is also good for it; wherefore (in mine opinion) this first confection is to be used rather then the other following. And if so be that you had rather have it with the taste of Sugar then of hony, then boyle Sugar to a syrup. First, we will describe one of the confections of Mesua: whereof there is alwayes one found ready in all well furnished Apothecaries shops, and afterward, one other sort more, whereof each one may take that liketh him best: take the roote of Secacul, or in the stead of it, take of our powned Calamus, and prepared Pingles, of each six ounces: seeth the rootes in faire well water, and stamp them to grout; afterwards put six poud of the best well scummed hony unto it, and then seeth it all together by a soft or gentle fire, untill the moysture of the rootes be all consumed, and stir it about, to the end that the roots burn not; when as it is decocted enough, then take it from the fire, and temper these things following amongst them, powned very small; to wit, Pepper one ounce, long Pepper, Cloves, Ginger, Roses, and Mace, of each half an ounce, Nutmegs, Galangal, and Cardamom, of each three drach. temper them well together. This confection is marvellous good against all diseases of the sinewes, it sharpeneth the wit, it asswageth the head-ach, and is also good against all old sicknesses, but especially against all rheumes, which fall out of the head into the breaſt.

The second, take Calamus which beareth the yellow Lillies, which groweth in moyſt places, and is faire and of a horseflesh colour, 16. ounces, make it very faire and cleane; afterwards cut it in thin slices, and seeth it so long in faire water until they be mellow,

A a a

then

then strain the water well from it, and pour a pot of red wine unto it, and let it boyle well, then pour the wine from it, and stamp it all unto grout and put six pound of clarified hony unto it, and let it seeth well with the wine to a confection, at last put unto it 6. ounces of Ginger, Cloves Nutmegs, Mace, Cardamom, long Pepper, and Galangal, of each one ounce and a half, Pepper three quarters of an ounce, beaten all together very small.

The third, take Calamus prepared as before, and chopt small two pound, clarified hony 4. pound, seeth the rootes very well in red wine, afterwards put them to the hony, and let it so seeth by a mild fire until it be very thick, then temper therewith small chopt Almonds 11. ounces, Ginger 4. ounces, Pepper half an ounce, long Pepper and Cloves of each one quarter of an ounce, Cinamom one drach. and a half, Galangal, Cucubes, Cardamom, Nutmegs and Mace, of each one drach. stir them so long together with a wooden pestle until that it be cold.

The fourth; take dry sliced Calamus one pound, and seeth it in two quarts of small wine; afterwards pould it to grout, and take hony or Sugar two pound, let it seeth till it be thick, when it is a little cold, then temper with it small cut Ginger six ounces, poulded Cloves, Nutmegs, Mace, and Cardamom, of each one drach. and a half, long and common Pepper, of each 3. quarters of an ounce, Galangal one drachme and a half, Greines one quarter of an ounce, temper them all together.

The fift; take Calamus, cut it in shives, and take twenty ounces of it, seeth it in three pints of red wine, so long until all the wine be consumed; stamp it, but not too small, then take a pint of clarified hony, and let it boyle by a small fire, afterwards put the prepared roots unto it, and 8. ounces of small sliced Ginger, then let it boyle again by a mild fire, unto a confection, when it is luke-warm, then temper with it common and long Pepper, Cloves, Cinamom, Nutmegs, and Ginger, of each half an ounce, Galangal, Mace, Cardamom, Cucubes, and Greines, of each a quarter of an ounce, beaten small together, temper them so long until they be all waxen cold.

The sixt with Sugar: take Calamus as before 12. ounces, seeth it in Muscadell until that the wine be wasted, stamp it to grout, and put thereto 4. pounds of common clarified Sugar, with as much wine or water, then put the rootes unto it, and let it seeth until it be thick; when it is a little cold, then temper amongst it Ginger very small 4. ounces, Cinamom, Cardamom, Nutmegs, Mace, Cloves, Calamus, and Cucubes, of each three drachmes, temper them well, and let them seeth so long as one will seeth eggs hard, then keep it in a gally pot.

How to make Verjuyce for the Kitchin, and for Physick. S. 1.

Verjuyce is to be prest out of the best Grapes a good while before they be ripe, and if so be that one will keep it long, then must the same be sodden; but if so be that you will use this Verjuyce in the kitchin, then temper a good deale of Salt amongst it, and stir it the space of a whole hour, afterwards put it into a small vessel, and cast some unripe Medlars into it, then shake it well about, to the end it may work and be clear. But if so be that you will keep the Verjuyce for Physick and without Salt, then fill a glasse with a narrow neck, and pour upon it some Sallad oyl, then will it remain good the space of a whole yeare.

There may also be made of this unsalted Verjuyce a syrup called de Agresta, to wit, in this manner; take the juyce of unripe Grapes, when it is first prest out, 5. parts, white Sugar 3. parts, and let it seeth softly unto a syrup; further, then clarifie it with the white of an ege. This syrup is marvellous good in great heat, it swageth thirst, allayeth all wambling, parbraking, and lask, which is caused of the gall; it is also very meet in all hot cholerick agues, and above all measure good for all women with child, which be inclined to vomiting, for that it strengtheneth the stomach, and withstandeth all venom.

The second chapter.

Of the artificial Balm which may be used in stead of the right Balsam.

BEcause that the right balsam is no where to be gotten, or although it be brought unto us, yet common people cannot have the same, by reason of the dearenesse; wherefore have many Physitians endeavoured themselves for to distil such an oyl, which might have the same efficacie and vertue; and verily the Physitians and Chirurgions have found therein an especial operation, wherefore I cannot permit the description of some of them.

First, this ensuing is a very precious remedie against the pox, against all diseases of the mother, and of the stomach.

Take faire clean oyl of Turpentine $\frac{3}{4}$. 16. stop it very close; afterwards take Lavander, Sage, Betony, Roses, Rosemary, Mints, and Bayleaves of each a small handful, rootes of Angelica, of Ireas, of Valerian, Elecampane rootes, and Diptamus of Candy, of each one drach. flowers of Burrage, of Buglosse, of Lavander, and flowers of Spike, of Sage, flowers of Camomil and Stechas, of each, one quarter of an ounce, Annis one drach. and a half, Piony roots, Licorice and Spica of Indy, of each one drach. peels of Citrons, and of Oranges of each two scruples, stamp them all small together, and then pour unto it the oyl of Turpentine, and let it steep the space of a whole day, with meetly much water with it, that it be covered therein; afterwards distil it out again in water, at the first with a gentle fire, until it be warm, and that so long as any oyl or water doth come out of it, afterwards separate the oyl from the water.

Secondly, if you will distil it once again, then put to the foresaid water and oyl three ounces of liquid Storax, and distil it as before.

Thirdly, take red Storax two ounces, Frankincense, Myrrhe, Lacca, Mastick, Bdelium, and Benzoin, of each one ounce and a half, stamp them all together and distil it as before. Fourthly, take Ginger, Galangal, Zeduary, and Gentian, of each one quarter of an ounce, Cucubes, Cardamom, Greins, and Pepper, of each one drach. and a half, selected Rubarb and Saffron, of each half a drach. Nutmegs, Mace, Cloves, and Calamus, of each one ounce, stamp them all small together, and put it into a glasse bottle; then put unto it again the foresaid oyl and water, let it so stand and steep, and distil it afterwards, then separate the oyl from the water, and keep it well stopt.

You have also in like manner in the 2. Part, the 6. chapter, and 3. §. an artificiall Balm, which was ordained for the Emperour Ferdinandus, and another in the 1. Part, the 12. chapter, called *Hypobalsamum*.

This following is also highly renowned; take selected Myrrhe, Aloe, Indy Spica, Dragons blood, Frankincense, Bdelium, Balsam fruit, Saffron, Mastick, Gum, Stechas, red Styra, Laudanum, and Bevercod, of each one quarter of an ounce, Turpentine $\frac{3}{4}$. 3 and a half, yellow Cowslips half a handful; further, distil them all together as is before said.

These three last be very forcible against all Palseyes, if the lame members be anointed therewith, and if that one do drink a drop or twain thereof with wine, it is also very good. These Balmis be also good for all fresh wounds, so that they may be healed in two or three dayes therewith. They be also very good against all diseases of the sinewes.

Another which is common with all Chirugions; take selected Myrrhe, Aloe, Spica, of Indy, Dragons blood, Frankincense, Momy, *Opopanaxum*, Bdelium, *Ammoniacum*, *Sarcocolla*, Laudanum, Balsam fruits, Saffron, Mastick, Gum, and liquid Storax, of each 1. quarter of an ounce, fresh Bevercod 2. drach. and a half, Muscus half a drach. Turpentine 4. ounces and a half, pownd all that which is to be powned, and add the Turpentine unto them with a little water, and distil all together in seething water, as is said before.

Of Beer. §. 1. Common beer is made in the country of many kinds of Grain, as of Oates, of Barly,

and of Wheat; whereby it is also of sundry natures: that which is made of Barly is cold of nature, in a comparison of wine, that which is made of Barly and Oates, is lesse binding, and maketh also fewer winds, and doth also nourish lesse; that which is brewed of Wheat or of any other grain, is hotter, warmer, and more binding, the thicker it is the worse; the thinner the better; that which is well Hopt, causeth one to pisse freely, and looseth the body, but it is not wholsome for them that

have a weak braines; and that is unwholsome wherein the seeds of Rue be decocted, for that the drunkenesse of such beer weareth away much slower then the drunkenesse of wine, for that it maketh grosse vapours in the head, and a tough slime, which will hardly be digested. If it be not well sodden, then doth it cause much wind, puffeth up the belly. But very old and well sodden beer doth make people fat, increaseth the blood, and (in women that give suck) the milk, and that specially if the same be brewed of good corn. Thus for to keep beer long, take about half a pound of prepared Coriander unto a barrel of beer, and seeth the same in 2. quarts of the same beer, afterwards strain it, and wring it out, and pour it warm into the vessel, yet make it tight, and let it stand so still a day and a night. Some do take a new earthen pot, knock the same in peeces, and cast it into the vessel, and put also unto it a new layd egge.

The third Chapter.

Of Claret Wine, Hyppocras, and Herbwinnes.

Hese aromaticall wines and such like have no ceratin description for that each one maketh them according to his one good liking and pleasure, that one putteth much spice unto it, the other much Sugar, and another lesse of the one or of the other. Some do also make them with hony, like as hereafter some do follow for an example.

Take elected Cinamom three ounces, cleansed and small cut Ginger and Greins, of each one ounce, Galangal one ounce and a half, Nutmegs, Cloves, Cardamom, and Cucubes, of each one quarter of an ounce, being pownded all together grossly, pour a quart of wine upon it, and stop it tight, afterwards set it a whole night in a warm place. This being all done, then take four quarts of wine, and one quart of clear scummed hony, pour the hony unto a little wine, and so let it seeth softly together: afterwards then pour the four quarts of wine unto it, and all the steeped Spices, and let it coole a little, then pour it through a straining bag, and that so oftentimes together untill the wine run clean through it. This Clarret wine may be put into a little vessel, and the spices through which the wine hath run, are to be hanged in the vessel in a long bag, then will it remain good a long time. This potion is very good against all cold and moyst diseases of the head, of the braines, and the stomach. It is also good for all cold women, and for all old people: it strengtheneth the digestive vertue, provoketh natural heat, and consumeth the Phlegma.

Another: take Species de gemmis frigidis 3. drachmes, Aromatici Rosati 1. drachme, Cinamom one quarter of an ounce, white Sugar 7. ounces, good strong wine one quart, steep them therein, and pour it oftentimes thorough, as is said before. Of this Clarret wine are they to drink oftentimes which have a weak stomach, and an obstructed Liver, or to steep sometimes therein a peece of bread.

A common Clarret wine: take Cinamom, Pepper, and Greins, as much as you please, clarified hony also as much as you list, pour it all then together thorough a wollen bag, as before. You may also take Cloves, Nutmegs, and other Spices, in like manner also Sugar in stead of the hony.

You have also in the third Part, the 11. chapter and 5. §. a Clarret wine called Stelladia which is much used in Italy. There is also another sort made which is almost like unto some of the former, but there be not so many Spices taken for it; to wit, but half an ounce of pownded Ginger, Cardamom one drachme, and Sugar half a pound or more, unto a quart of wine, and so filtred together.

There is also an aromatical wine which is called Hyppocras, made thus; take Cinamom 2. ounces, sliced Ginger one ounce, Greins one quarter of an ounce, Galangal, Cloves, Nutmegs, Cucubes, and Cardamom, of each one drachme, of these grosse pownded spices you shall take unto a quart of wine one ounce and a half, according to that you will have the Hyppocras strong, Sugar half a pound or more; then set it in a warme place to steep a whole night, and afterwards pour it through the bage as all the rest. There is commonly taken for this, red wine.

Cap. 3. Part 8. The general Practise of Physick.

739

This Hippocras hath the same vertue as the Claret wine hath : yet are all young people to refrain from such like drink, and from Malmsey and Muscadell, to the end that they do not increase heat by heat. This Hippocras and Claret wine may also be well made for all weak bodies, that it be somewhat laxative.

But if so be that there be any sick persons which be forbidden wine, or if that he drink not the same willingly by nature, and that neverthelesse the decoctions did not agree with him, then may this potion following be made, called *Hippocras fontis* : Take Cinnamon, Figs, Cloves, and Ginger, of each one quarter of an ounce, Grains one drachme, good Well water a quart, which is coloured well with red Saunders, and then put the spices beaten grosse into it, and let it boyl a little. If you will have this potion sweeter, then put in some Sugar in the seething, or some Hony, and then let it distil through the bag, as is said before.

You have also in the third part, the 12. Chap. and 4. §. another aromatical Wine, which might be placed among these.

In the end of this part shall more aromatical wines be described.

Of Clusters and their use. §. 1.

IF one know how to use these Clusters aright, and to prepare them, then can there be no more profitable, nor yet safer medicine invented. Therefore there be before and almost in all sicknesses so many kinds ordained, and thereby taught how that the same shall be prepared, that it is almost needlesse to write any more of them. Neverthelesse to prosecute this our method, we will here discover certain common and milde Clusters. In small Agues, and when the Patient is weak or scant as yet recovered of some long sickness, then are these ensuing to be used.

Take Mallows, and Violet leaves, of each one handful, boyl them well together : take of this decoction 12. or 16. ounces, mingle Cassie, Hony, and course Sugar of each three quarters of an ounce with it, oyl of Olives three ounces, Salt one drach. or somewhat more, temper them all together, and minister it reasonable warm : for such like Clusters may you take Hen or Mutton broth.

Another that relaxeth and cooleth : Take Violet leaves and Mallows, of each one handful, Mercury, Beets, and water Lillies, of each half a handful, Lettice and Purslain, of each somewhat lesse : seethe them in sufficient water, and take thereof as much as is before, oyl of Violets four ounces, Salt one quarter of an ounce, and minister it meetly warm.

In hot Agues : Take Beets, Mallows, Mercury, and Violet leaves, of each one handful, boyl them all together in sufficient water, and then take thereof twelve or sixteen ounces of Cassie, Hony, Salt and Oyl, as is said before.

When the Patient doth complain of great pain and wind in the belly, then boyl there with grosse powdered Fennel seed, Annis, Cumin, and Caraway.

There is also an especial Cassie prepared for a Cluster, in this manner following : Take Violet leaves with the flowers, Mallows, Mercury, Beets, and Melilot, of each half a handful, seethe the same in a little water, strain it and wring it out, then wash therewith the Cassie out of the Pipes, for to get all the black out of them, and then afterwards seeth it short, until it be thick, when as then you have six ounces thereof, then put nine ounces of Sugar unto it, and let it seethe until it be thick enough. This Cassie doth loose very mildly.

Of confectioned seeds. §. 2.

Here we will now speak onely of all seeds which be confectioned with Sugar, as Coriander seed, Fennel seed, Annis, Cumin, Caraway, and such like. Item, of some Fruits, as Almonds, Pingles, Pistacies, Hasel nuts, Cucubes, and of other more confectioned roots, which may be confectioned with Sugar : and because the same by reason of the Sugar and otherwise are very pleasant, whereby they will not onely serve for the Kitchen, but also for Physick, wherefore we will here describe the nature and operation of them all.

We have in the seventh Part often admonished of Coriander, and given a caveat of his venom, that the same ought not to be used unprepared ; otherwise it is by all Physitians advised, that morning and evening confectioned Coriander should be used ; for it dryeth up

the ascending vapors of the stomach, it strengtheneth and dryeth the brains, it is good against all swimming of the head, and against the Palsie; it is good for the stomach, and procureth sleep, insomuch as then these vertues be ascribed to the Coriander, to which the Sugar addeth only the pleasantnesse: you may look what the Table saith of all the other seeds.

The confected Annis seeds are good for them which have a stinking breath and cannot sleep, it provoketh urine, it quencheth natural thirst, it taketh away the windinesse of the belly, it is good for all pains of the stomach, against all diseases of the Liver, of the Lights, of the Matrix, and it helpeth the digestion. It is also good against all hoarsnesse, shortnesse of breath, and especially for all cold diseases of women, and for all them which be much plagued with the Whites. Lastly, it augmenteth also much the milk in women.

The confected Fennel seed is good against all poyson, and especially against the venom of Snakes, it moveth womens terms, it warmeth the back, it asswageth the pain of the same, it breaketh the stone, it expelleth urine, the stone, gravel, and the slime whereof the gravel is ingendred: it increaseth womens milk, it cureth four belchings of the stomach, it is good against all wambling and vomiting, it allayeth the Cough, and all hoarsnesse of the throat. But above all is this Fennel seed commended against the darknes of the eyes, for it preserveth people from all velms on the eyes, it sharpneth the sight if one take the same morning and evening, to wit, after meals, and cheweth the same long.

Comin doth grow much in Apulia, it hath the same vertue with the Caraway. It is also very good for them which be plagued with the gravel, and can hardly make their water.

The Caraway seed is hotter and dryer by nature than the Annis or Fennel, therefore it is stronger and more forcible; and especially doth it warm the stomach, and all inward parts, it openeth all obstructions, it forceth urine, it breaketh the stone, it expelleth sand and gravel, it driveth out winds, and it taketh away all pain and chollick of the belly.

The confected Almonds are good against all diseases of the Lights, and the throat, against all dry Coughs, and narrownesse of the brest, it strengtheneth all weak people, and all them which do consume away. The bitter Almonds do expel urine and gravel, they do dry the brains, and do hinder the ascending vapors, they withstand all drunkennesse, and be good against many diseases of the brest, and of the lights.

The hasel nuts have in some sort the same nature with the Almonds: but they with the red shales have an especial operation and vertue for all scowrings and lasks, and especially to staunch the bloody Flux. All sorts of hasel nuts be more wholesome confected with Sugar than otherwise, as one may see and read in many places of this book.

The Pingles be also of the same nature with the Almonds: and be especial good for all lean folks, for that they strengthen much: yet are the kernels to be laid 24. hours before to steep in Rosewater, and then to be dried again, for they augment much humane seed.

Of the confected Spices, Peels, Roots, and such like. S. 3.

THe Ginger, the Cinnamom, the Cloves, the Nutmegs, the Mace, Cucubes, Orange peels, Citron peels, Marjoram, and the sliced Licorice, are likewise confected with Sugar. These foresaid do keep all alike the properties of their natures, and be special good in time of the Plague, for that they make good breath, which will not lightly be infected.

It is also to be noted, that all that which is to be confected for Physick, must be covered very thin with sugar, but onely the spices may well be confected somewhat thicker.

The common baked Ginger sugar is thus prepared: Take one pound of Sugar, and seeth it with Well water, clarifie it as the sugar is wont to be boyled for baked sugar, and when it beginneth to be cold, then mix five drachmes of powned Ginger amongst it, and when you see that it beginneth to be thick, then pour it upon a stone or a table, which is made fat with a little fallad oyl.

Yet another baked Sugar: Take Ginger two drachmes and a half, Cinnamom one quarter of an ounce, Cloves one drachme, Mace and Nutmegs, of each half a drachme, Sugar one pound, seeth it, and do as before. You have in like manner also in the third part, the 11. Chap. and 20. S. a baked sugar, which purgeth mildely, whereof one may take a quarter of an ounce at once.

The

The fourth Chapter.

Of preserved Fruits, Flowers, and other things.

TO the end that all Fruits, Flowers, Rindes, and in fine, all that is preserved with Sugar or with Hony, be not parted from the former, therefore we will in this Chapter comprehend all that is preserved in Sugar, or decocted, as Conserve, and also declare their virtues.

How to conserve the Elecampane root. S. 1.

IN the spring of the year is this root to be digged out of the ground, and the outermost peels to be cut off, the root made very clean, afterwards cut it in somewhat thick shives or slices: this being done, then seethe the same very softly in two kinds of water one after the other, to the end the bitternesse may be taken away, and be very mellow. Then lay them on a clean cloth, to the end they may wax somewhat dry. Put them in a leaded pot, and pour meetly hard sodden Sugar upon them (but that it be not too hot) until the roots be covered. This shall stand so a day and a night, then shall the Sugar draw all the moisture unto it, which as yet is in the root, and afterwards pour the Sugar off again, and boil it unto a sirupe: this being done, then pour it lukewarm upon it, and do this so often as the roots give any moisture from them.

These preserved Elecampane roots be a very good medicine for all cold diseases of the bladder. They take away the piping of the breast, and the shortnesse of breath. They be also good against the Cough, the spetting of blood, against the pain of the sides: they strengthen the stomach, and the digestion: they cleanse also the same from all unclean humours: they break the stone, and move womens terms: they separate also all tough phlegme of the breast, they heal the ulcers of the Lights, and all inward parts, and especially they warm the stomach and the Matrix.

To preserve black Cherries. S. 2.

TAke black Cherries as they come from the tree, and then cut off the stalks, for two pound of Cherries take one pound of Sugar, and seeth the same and clarifie it: when it is then half boiled, put in the Cherries, and then let them seeth all together softly, to the end the Cherries do not break, and that so long, until that the Sugar be drawn between the fingers with small threds. And when as now the broth is almost cold, then put the Cherries in a leaded pot with the stalks upwards, for so they will remain good a whole year. And in this manner shall red Cherries also be preserved.

These Cherries be not onely acceptable for them that be sick, but also good for all kind of heat, they moisten the dry mouth, the tongue and the throat, they quench thirst, they make appetite, and refresh debility. The conserve of Cherries is thus prepared.

Take black Cherries as many as you please, let them seeth well in wine, wring them through a cloth, or through an hairen strainer, and afterwards let it seeth again until it be thick, stirring it alwaies well about. Unto three pounds of this juice put two pounds of Sugar, and afterwards seeth them together to the full thicknesse. There may also a Conserve of Cherries be made with spices, as hereafter followeth:

Take of the foresaid Conserve whilst that it is yet warm one pound, and temper pounded Cinnamon amongst it, and Nutmegs, of each one quarter of an ounce, Ginger and Galangal, of each one drachme, Cardamom, Cloves, Mace, and Lignum Aloes, of each half a drachme. This latter conserve doth strengthen the heart more than the former.

Conserve of Eyebright. S. 3.

TAke Eyebright in July with the white flowers, strip the flowers and leaves from the stalkes; afterwards chop them small, and take one pound thereof, and stamp amongst it two pound and a half of Sugar, and then set it in the Sun and stirre it well oftentimes

oftentimes about. This is the conserve of Eyebright, which is very commodious for the eyes, as in the first part is sufficiently declared. It sharpeneth also all dark sight, it dryeth the braines of all cold superfluous humours, it strengtheneth the Liver, and openeth all obstructions, it expelleth the yellow Jaundise, and the ague that proceeds of an unclean stomach. In conserving of all flowers and herbs is to be noted, that all they that are hot and dry, as Lavander, Marjoram, Balm, Sage, Mints, and such like, one is to take to one pound of them, two pounds, and a half of Sugar; but to all that is moyst, as Burrage flowers, and Buglosse flowers, &c. is but two pound to be taken.

Conserve of Betony §. 4.

Betony is very highly and worthily reputed of all Physitians, whereof there be three kinds, to wit, brown Betony which is the upright Betony, and also the conserve which we will here describe: The 2. kind are our Gilloflowers. The 3. sort be the Cowslips, whereof we will speak hereafter in their due place. The conserve of Betony is therefore not unjustly commended, seeing their vertues ensuing be ascribed unto it. Some do write that it is good against the cramp, against the palsie, and against the falling sicknesse. It is also good against madnesse, against spitting of blood, and against the Sciatica: this herb is also good against all pain of the stomach, of the kidnyes, and of the bladder, of the Liver, milt, and all inward parts, it expelleth urine, it looseth, and it helpeth digestion: it is also good against belching, it cleanseth the breast, it withstandeth the dropisie, the ague, it moveth womens termes. In fine, it is especial good for all inward sicknesses: lastly, it is also good against all venom. If that one desire to make a conserve of it, then take onely the flowers for it, which are to be pownded together with Sugar like as is taught at the first.

How the greater Pimpernel roots are to be preserved §. 5.

Take the rootes of the greater Pimpernel which be about one finger thick, wash them well, scrape them, and cut them in peeces about the length of a finger: but cut them longwise, and take out the heart of it, then pour fresh Well water upon it, and let them steeth like as is said of the Elecampane rootes, but they must not utterly lose their bitterness. This being done, pour decocted Sugar, or hony unto it, and when it is waterish, then boyle it again, and that so often as is needful. These rootes expel urin, gravel, and the stone, they strengthen the kidnyes and the bladder, they cleanse them from all uncleannesse, they assuage all paines of the bowels, which do come through cold causes, and they be good against the suffocation of the mother in time of the Plague, they be good against all bad ayre if they be holden in the mouth.

How Peares are to be preserved after two wayes. §. 6.

You may take such Peares as you think good which be new gathered from the tree, but none other but those that be sound. If they be too hard, then let them lye in a warm place the space of 3. or 4. weeks, until they begin to be somewhat mellow: but handle them not too much, for that thereby, will they quickly rot. If so be you will preserve them, then have an earthen pot ready and lay in the bottom of this pot some dried Vine leaves or Nut leaves, and thereon lay of Peares, &c. leaves and Peares until that the pot be full: afterwards fill up the pot with old wine, and lay some heavy thing upon the top of it that the Peares may not swim. These Peares may be used for meat, and also for sick persons for a comforting. The common People which have no wine may do it after the same manner with water. But if you desire to have them of a better tast, then take Ginger which is made very fair, cut the same small and strew it between each row. Item, take a new pot and put Peares into it (like as is said before) make the pot close too as is possible; afterwards lay it so in a vessel with wine, then will they remain fresh and good the space of a whole year. These Peares may otherwhiles be roasted in the ashes, and strew them with Fennel seed; and also after supper to eat them, thereby to close up the stomach, to the end the bad vapours may not ascend towards the head: they strengthen also the braines, and be special good for the sight.

Cap. 4. Part 8. The general Practise of Physick.

743

If one will preserve Musk Pears, then are they to be gathered in fair dry weather, and in the decreafe of the Moon, and when they be very ripe, then take of the very fairest and soundest of them, pare them very thin, cut off the stalks and the flower on the top: then make ready a clean sirup of white Sugar which is well boyled: when you will take the same off from the fire, then lay the prepared Pears therein, and let them see the two or three waxes together, afterwards cool a day and a night. This being done, see the Sugar once again, and then luke warm pour it upon the Pears, and do that so long until that you see that the sirup waxeth no moister, otherwise they cannot continue. If you will have them pleasanter, then put Cinamom unto them, and they will be the better for the stomach. These do comfort and refresh all sick folks that do loath meat, and they do close up the stomach against the ascending of all bad vapours; if they be eaten at the first sitting down to meat, then do they bind the belly. But if one can get no musk Pears, then may other be taken in their stead which be likeliest of all unto musk Pears in smel and taste, and to prepare them as is expressed.

How Oranges are to be preserved. §. 7.

This Apple is wont very seldom to be confectioned, but his peels very often, the which are thus prepared; Take fresh Orange peels, cut the white out, and cut the yellow longwise: afterwards let it see the so long as one would see the an Egg hard, and afterwards let the broth run off. This being done, then pour Sugar upon it which is well boyled until that be well covered, and so let them stand the space of eight dayes in the same, then be they prepared. Oranges are prepared as followeth: Take the outtermost of fresh Orange peels, and cut the yellow the longest way; afterwards see the same in water until that the bitterness may come out of it. Pour the liquor from it, and then let it see the again until that they be through mellow (to wit in good wine) then stamp them to grout, and at last put good Malmsey unto it, and so much Sugar as you please, and so let see the well together stirring it alwayes well about. Some do lay them to steep in a lee, and afterwards steep them in water. But it is not so good, for that their force will be thereby much abated; so that it is better, to see the them in two or three waters, to the end that they may lose their bitterness: they strengthen the heart and the vital spirits, and therewith also the stomach; they do help the consumption, and dry the brains.

Conserve of Burrage. §. 8.

Amongst the learned there is a debate, whether the name between Burrage and Buglosse, be exchanged, but therein is no great importance, by reason that both of them are of one nature, to wit, that the same are to be used in all venomous and pestilential Agues; they do strengthen the heart and all vital spirits: they withstand all venome, and all heaviness of mind, and they do also cleanse the blood from all melancholy. In fine, they cool all inward parts. This conserve is made of the blew flowers, as we have taught before.

How Calamus is to be preserved. §. 9.

Take fair perfect Calamus, pour fair Well water upon it, and let it see the together, until it be through mellow, and that it lose some of his bitterness: afterwards make these roots fair from the outwardmost peels, and from all other uncleanness. If so be that some do swell too thick, then cut them longwise; and in case that they be too bitter, then let them see the once again in water: and then afterwards lay them to dry in a sieve. The Sugar is certain times to be decocted, like as is taught before, until that all the moisture be wasted. This confectioned Calamus is most in all his force like unto the Ginger, and especially it is very good for all debility of the stomach that is burthened with some cold humour, for that it consumeth the same humours, and besides this, strengtheneth the stomach; if it be taken in the morning, then doth it keep folks from all pestilential air, and maketh a sweet breath; it expelleth water, and is especially good for all diseases of the bladder and the kidneyes; it forceth the stone, and the gravel, and it provoketh womens terms: it is warm and dry by nature, and hath an especial operation for to open all obstructions, &c.

How Citrons are to be preserved. §. 10.

A Common manner to preserve Citrons in Sugar or in hony, is this, that one peelee off the yellow rinds, and cut the white pith in round or long peeces, and then to saperate the four with the seeds from it. Further, the same is to be boyled in a water or twain, to the end that the bitterneffe come from it, and therewith may be mellow and soft; afterwards is boyled Sugar to be powred luke-warm upon it, and deal with them, like as is taught of the Elecampane roots. This preserve is very good against all venome, it strengtheneth the heart, and all vital powers; it is moist and cold in the first degree, and it is very safe to be taken.

How Citron peels are to be preserved. §. 11.

Take the peels of Citrons, which be not peeled too thin, but that there remain some of the white with it, and do therewith as is said of the Orange peels. These peels be warm and dry unto the third degree, wherefore they are but seldom to be used; but in cold sicknesses they do help digesture, they withstand all melancholick humours, and also all diseases which may proceed thereof.

How Berberies be preserved. §. 12.

You must take of the very fairest Berberies that you can get, and wash the same very clean, afterwards see the them in a sirup of good Sugar, and when the sirup is sodden short enough, then cast the Berberies unto it, and let it see the so softly a short time, so that the berries do not break, and then preserve them in a glassed pot. They be good against al heat and al other inflammation of the blood, and especially of the stomach and Liver; they comfort sick persons in great thirst, they moisten the dry tongue, the throat and al the mouth. There is also a conserve made of this fruit, and that in this manner following; take Berberies as before, and see the the same in wine; afterwards strain them through a sieve, or searce, or through a cloth, and then let it be sodden unto a conserve, stirring it alwayes about. This confection stoppeth the bloody flux, and cooleth the blood which is inflamed of Cholera, it obstructeth womens terms, and maketh appetite to meat, it is alwayes somewhat stronger then the conserve of Raspes. Otherwise hath it the same vertue or operation: the Apothecaries do call it *Rob de Berberis*.

Conserve of Fumitory. §. 13.

This bitter herb Fumitory, is very wel known; if you wil make a conserve of it, then take the flowers of it, and pownd the same with Sugar, as other Conserves, and as we have taught of Eyebright. This confection is especial good for all them which be full of unclean blood, and also for all them that be plagued with scurfe, with the Pox, and with such like uncleanneffe; it keepeth men in health, and also from all venomous air. Of this Conserve may freely be taken as much as the quantity of a great nut, before that men will bathe, for that it expelleth out the sweat, and all bad humours of the body: therefore it is also good in the beginning of the Dropsie, for that it openeth the liver and all obstructions of the inward parts; it driveth out the yellow Jaundise by the urine, and is very commodious for many other things.

How the Conserve of the fruit of the Wilde Rose tree is to be made. §. 14.

Vhen as the fruits of these wilde Roses (which be called Priestpintle) begin to be ripe, then take as many as you please, and see the the same with red Wine unto pap; afterwards wring it through a sieve, or searce, and so let it see the well without putting any other thing unto it, with a continual stirring about, as other Conserve. This Conserve, hath a marvellous operation for to stop the scouring or lask, it is also good for all wambling of the stomach: others do make it to a Conserve, with Must half decocted, wherewith they see the it again, and cast certain slices of Marmalade unto it, which is especial good for a cold stomach.

This

Cap. 4. Part 8. The general Practise of Physick:

749

This conserve is more in use with the common people, then at the Apothecaries, wherefore we will speak the lesse thereof.

How Apricocks are to be preserved. §. 13.

THe skins of these Apricocks are to be pluckt off softly, then pour upon them Sugar decocted hard, not over hot; then let it stand so the space of one day, or somewhat longer, afterwards see the Sugar again, and that so long as the Apricocks do yeeld any moisture from them. Their vertue and operation are like to Peaches.

Conserve of Eldern berries §. 16.

First for to write of the Conserve of Eldern berries, the same is holden by the ancient Physitians, and also amongst the common people, almost instead of Treacle, and that not without cause, as you shall hear hereafter, and is thus prepared: Take ripe Eldern berries, strip them with a caul from the stalks, wring out the juyce and let it see the by a milde fire unto a pap. This Conserve is to be taken against all inward venome, it cureth all ulcers and swellings, it expelleth by sweat all bad humours and corruptions: wherefore it is to be taken before that one go to the bath; but this cannot be done but onely after purging, and that fasting. If this be so used, then doth it consume the Dropsie at the beginning. It hath also been found, if that this conserve be spread upon the Rose, that thereby it will immediately wear away.

If thou wilt make Conserve of the flowers, then take the flowers when they be very ripe, shake them from the stalks, and let them dry between two clothes; afterwards shread them small unto a pound of flowers, take two pound and a half of Sugar, pounce them well together; afterwards set them in the Sun, and stir them oftentimes about. This Conserve openeth the Liver, driveth away all swelling of the belly, and all beginning of Dropsies, &c.

How Ginger is to be preserved. §. 17.

Take fair white Ginger, of the fairest races, and lay the same to steep the space of certain dayes, or so long until that the uppermost peels will be pared off, then take them off, and make them very clean, afterwards pour fresh lee upon them, and let them steep to the end that they may swell throughly: and when as they be waxen very mellow (which may be perceived by cutting them through) then pour off the lee, & wash them well with fresh water, prick them oftentimes with a small knife overthwart, and afterwards lay them a day and a night in sweet water, to the end that the sharpnesse of the lee may be taken away, and do this so long until you can perceive no sharpnesse of the lee any longer; then spread the Ginger upon a four cornered linnen cloth, that the linnen may draw the moisture out of it; but if so be that the cloth be through wet, then lay it on another dry cloth again. Some do spare this labour, and lay it upon sieves; when it is very dry, then have a dry sirup ready, which is made of Sugar, or clarified Hony, and then do therewith like as is taught of the Elecampane roots, but above all have good regard that the sirup be not powred too hot upon it, for that thereby the Ginger will shrink, yea be hard and unpleasant: then keep this Ginger in a gallee pot. This confected Ginger is very good for all cold phlegmatick sicknesses, and for a cold weak stomach: it taketh away all vapours that do ascend from the stomach towards the head; it warmeth all the body, and all inward parts. At evening when one goeth to bed a good peece taken of it doth dry marvellous much the brains: Thereby will also the parts of generation in men and women be strengthened. But this may be gotten preserved green out of the Indies, which is much better then that which is preserved in this country. The same was wont before times to be preserved after an easier manner, to wit, in this manner following: Take white Ginger as much as you please, bury it the space of 14. dayes in moist sand and wash it afterwards with a sharpe lee, lay it afterwards again the space of 14. dayes in Rosewater; this being done, make a sirup of Sugar, or of hony, or both of them tempered together, cleansed and scummed well, and then lay the Ginger in this sirup: but I cannot commend this manner of doing.

How

How Raspes are to be preserved. §. 18.

YOU must take the Raspes as they do hang upon the hedg, wash the same very clean, and make them fair, if there be any uncleannesse with them, then make ready a clarified sirup of Sugar, and when as now the sirup is almost boyled, then cast in the berries, and let them see the softly therein a good while that they may not break, and do not also cool. Their conserve is made as followeth: when the berries be very ripe, then strip them from the stalks, and wring the juyce through a clean cloth; afterwards let it see the softly stirring it alwayes about until it begin to be thick, then put as much Sugar unto it as you please, and see the it away like as all other Conserve. You may also boyl this juyce without Sugar, and it is also better for Physick. The Apothecaries do call the same *Rob de Ribert*. This conserve hath an especial vertue to slake thirst, and to moisten the dry tongue, and all other inward parts, it maketh appetite, and that especially in hot times. In like manner may also this decocted juyce be tempered with wine, and used as a sauce amongst other meats.

How the Conserve of Hyssop is to be made. §. 19.

IN July, take the flowers of the herb, and Sugar also with it, pownd them well together, like as we have taught of Eyebright. This conserve is very good for the breast, the lights, and such like parts; it is also good against the cough, the narrownesse of the breast, and against the short breath; it consumeth and dryeth all cold rheumes: it exceedingly warmeth the breast, it strengtheneth the stomach, the head, and the brains: it taketh away all ascending vapours; and is good against all poyson, and also very meet against all coldnesse of the inward parts.

Of the Conserve of Lavander and of Spikenard. §. 20.

BOTH these herbs are found to agree so near in operation that the Spica is called the male, because it hath bigger leaves and ears, and the Lavander the female. Of both these herbs are the flowers onely taken, and for every pound of flowers two and a half of Sugar, or otherwhiles three pound of Sugar, because they be strong: beat them well together. This Conserve is very good for all cold diseases of the stomach, and for all windinesse of the same, it easeth the pain in the belly, and the ascension of the Mother, it openeth all obstructions of the Liver, it maketh urine, it dryeth the cold and moist brains, it is good for the sinews, Palsey, and lamenesse that proceedeth of them, it restoreth the lost speech, it taketh away all cold rheumes that fall out of the head into the eyes, teeth, and other parts, and this conserve is especial good against the corruption of the gums.

How to preserve the Eryngus root. §. 21.

THIS herb is called of the Physitians *Eryngium*, the roots onely of this herb be preserved: The same are digged up in the spring time or in harvest, wash and scrape the same well; afterwards cleave them in the length and take out the heart, then cut them in mean peeces, see the them and prepare them as you did Calamus and the great Pimpernel roots; or you may leave them long, put onely the pith of them out and stick it about with Cinamom and cloves, which giveth it a pleasantnesse. These roots be also very good for them that have any disease in the Liver, they do take away all pain of the Milt, the kidneys, and back, they drive away the Chollick, they move urine and womens terms; they be also good against all venome, and against all pursivenesse in the breast, they free one from the cramp, and of the falling sicknesse, they do warm the parts of generation, and be especial good for a cold stomach.

Conserve of Marjoram. §. 22.

OF this herb are the leaves onely to be taken, and pownd them with Sugar like the Eyebright: This Conserve is of a dry and of a warm nature, it is especial good for all moist and cold diseases of the brains, of the head, and of the stomach, it openeth

openeth all obstructions of the Liver, and all inward parts, it doth strengthen the heart, and it hath the same vertue with the conserve of Lavander and of Spikenard.

Conserve of Balm. §. 23.

A Conserve of this herb is especial good for all byting of Scorpions, of Spiders, and of Wasps, and is also good for all byting of mad dogs, the same eaten or layd upon it: it moveth womens termes, it asswageth all tooth-ach and pain of the joynts, it freeth one from the poyson of Toadstooles, it stayeth the scouring *Dysenteria*, and taketh away all collicks, it driveth away all pensivenesse, it strengtheneth a cold stomach, it warmeth the breast, and giveth a light breath, it cleanseth all ulcers, and it is good against all dark sight: of the white flowers of this herb is also a conserve made like as of all other flowers, which neverthelesse is not much in use.

How Nutmegs are to be confected. §. 24.

OF Nutmegs take the very best, lay them to steep in sharp lee which is made of woodashes, and let them lye so long therein, until they be thoroughly steeped, yea mellow and soft, afterwards pour away the lee, and peelee off the uppermost gray skins. This being done, pour fresh water oftentimes upon it, to the end that the sharpnesse of the lee may be drawn away again; then let them dry in the shadow in a Sieve; prepare afterwards a syrup of Sugar which is well decocted, and so pour it luke warm upon them; and if it wax waterish, then seeth the same again, and that once every three or four dayes until that the syrup continue thick. These Nutmegs be of a dry and warm nature, they strengthen the head, the braines, the heart, and all vital spirits, they increase natural heat, and all natural powers, if so be that one take the same in the morning fasting, and in the evening after meat. They do consume all noysome and superfluous humours of the inward parts, they do strengthen the stomach and make fresh blood, they yeeld a good and odoriferous breath, they ease all swellings and hardnesse of the Spleen, and they be especial good against all cold diseases of the Liver: but they be not so good for the Lights: they have great power for to dry a moyst head. Now a dayes be they brought out of Indy preserved green, which be much better and forcible then they which be preserved in this country.

Conserve of Gillowflowers. §. 25.

DIvers kinds there be of these well known flowers, the red well savouring be the best to make a conserve of: cut the undermost white from it, and use the leaves alone, and the white are you to cast away: the same is to be powned with Sugar like to other conserves. This conserve hath the same vertue that the conserve of Betony hath, for they are also a kind of Betony. These Gillowflowers are especially commended against all venom: this conserve is also very good for the head and braines, drying and warming the same, it allayeth also the shaking and shivering of the Quartaine Ague: it is also somewhat bitter, and is therefore good against all Wormes taken fasting, it is good against the pain of the teeth, it withstandeth drunkenness, and breaketh the stone. This may also be used as a preservative in time of the Plague.

How Walnuts are preserved. §. 26.

ABout Saint Johns tide take green Walnuts and prick them through with a bodkin, and peelee off the green bitter shels from them; afterwards lay them eight or ten daies in fresh water or in running water which is more better, and they need not so much time also for it. When as now they be quite rid of their bitternesse, then let them seeth softly, untill they be somewhat mellow, but not through soft: and afterwards let them dry in a Sieve, then stick their holes with Cinamom, Cloves, Orange peeles; also seeth the Sugar somewhat short as we have taught in the preserving of the Elecampane rootes. Some do prick it without, but they put Cloves, Cinamom, Galangal, Mace, Cucubes, and Cardamom, in the syrup, each according to his good liking: but if so be that

that you will preserve them with hony, then it is not needful that one peelee them: These Nuts be commonly used at banquets, notwithstanding they be also good for Physick; they that be preserved with spices, do help digestion and warm all inward parts; they close up the stomach after meat, and do stay the ascension of the vapours, yet they are very seldome used in this book. Here we will also admonish and teach how that one shall keep ripe Walnuts a long time fresh, that the kernels may be peeled: for this are you to take good new nuts, bury them in sand, and when you will use them then wash away the sand. Or take a new pot, and strew therein a lay of dried Vine leaves, and then a lay of Nuts, and so forth, until the pot be full, wherein they will last long and keep their taste.

Conserve of Buglosse. §. 27.

WE have before admonished in the description of the conserve of Burrage, that both of these be of one nature and of one operation, wherefore it is not needful to discourse thereof more at large.

How Apples are preserved. §. 28.

Apples may be preserved as we have written of Peares, some do pour upon them wine lees, and they wash them when they will use them; Apples do coole the hot stomach, they do attenuate the tough slime and quench thirst.

Conserve of Pionie. §. 29.

Take the leaves of Piony flowers (which do blow in May) and pould them very small, unto a pound of flowers, take two pound and a half of Sugar, and set it the space of three moneths in the Sun, stirring it about every day. This conserve is very good against all fantasies, against the hag or night-mare (as some tearm it) against the falling sicknesse, and swimming of the head, against the diminishing of the sight, and all diseases of the braines; it moveth womens terms, and cleanseth them after childbirth: it is also good for the gravell, and for the yellow Jaundise, it suppresseth the vapours of the stomach, it refresheth women that be vexed with suffocation of the Matrix, it is also marvellous good against the pangs of children, and it letteth the growing of the stone in them: if so be that the children be too small, that one cannot give it them, then are the nurses that give suck to use this conserve in abundance.

How to preserve Peaches. §. 30.

When the fruit is ripe, then is the same to be plucked off with the hand that it may not be bruised; those Peaches are esteemed to be the best to preserve which be ripe about Saint Johns tide, and be somewhat smaller then the other; the uppermost skin is the first to be peeled off with a knife, and the syrup (like as is said of the musk Peares) to be sod until they be thick. They have almost the same nature that the musk peares have, they comfort and strengthen the sick persons, they be good at the first, they moysten the dried tongue, they do coole all inward parts, and be very good in all hot sicknesses. In this manner be the red and wine Peaches preserved; peelee the same and take out the stones; afterwards lay them in an earthen pot, and pour upon them clarified and thick hony. These Peaches be not so pleasant as the other, but they be well as forcible as the small, and they may also be prepared with Sugar. And because that some people may may not abide the tast of hony, it may be washed off before they be used with water; it is also in the third Part (where we speak of the bloody Flix) declared how these Peaches are to be dried and used.

Item, the hurt which these Peaches do through their cold and moysture, that will be remedied through eating of their kernels, or with a draught of wine.

The flowers and Blossomes of Peaches may also be preserved with Sugar as other flowers: this conserve is very necessary for children against the wormes, because that children can hardly use Wormseed by reason of the bitternesse: and this conserve doth not onely expel wormes, but letteth that none other can come to ingender.

And

And if one have suspicion of Wormes then it is advised that it be given, for that it strengtheneth the stomach.

For to make a Conserve of Prunes. §. 31.

TAke of the great Damask prunes or other great horse prunes which be somewhat sowrish, as many as you please, cut them open and pluck out the stones, then let them seeth in a pot, afterwards strain them through a strainer, and then let it seeth again unto a pap, this cooleth all heat and quencheth the thirst in agues. If you will have a laxative conserve, then take sweet Prunes. There is also made at the Apothecaries a laxative conserve called Diaprunum solutivum, which you are to seek in the Table. Some do take for the first described Prunes conserve of the one half of Sugar, whereby it is also pleasant, but it is in hot sicknesses much more commodious to be used without Sugar.

But if you will onely preserve Prunes, then take the foresaid Prunes of Damask, and then pour as much clarified hony upon it which is not too hot, stirring it alwayes well about. If it be seen that the hony be waterish, then must it be decocted again, like as it is oftentimes admonished before.

How Quinces and other things are to be preserved. §. 32.

OF these noble and odoriferous Quinces have many ancient and also latter Physitians written much, and used after sundry manners, whereby it is now come to passe, that there is scant any household of account where one findeth not alwayes something prepared of Quinces, wherefore we will discourse somewhat ampler thereof, and first of all describe divers confections.

The Apothecaries do call the one Diacydonium simplex, for that there is none other but Sugar or hony in it, and is thus made; take Quinces as many as you please, whereof the kernels be put out, and cut them very small, afterwards seeth them in Well water to the end they may be soft; then strain them through a Strainer or Sieve, so that there remain nothing but the parings in the Sieve. Then take three pound thereof, Sugar or hony that is well clarified about four pound, or as much as you please, then seeth them together unto a conserve or confection, stirring it about continually.

Another; take cut Quinces which be cleansed from the seed, put them into a pot and cover it on the top with a pewter potlid, turn it afterwards about into another pot which is full of water, and let the same seeth, that the vapour may ascend, and the Quinces, through the vapour of the neathermost pot, may be mellow that they, afterwards may be driven through a Sieve; take 4. pound thereof, Sugar three pound, and let it seeth so together to a conserve. Some do take but half so much Sugar as Quinces, but therein may each one do his pleasure, how lesse Sugar that there is with it, so much the better be they for Physick. Other do boyle or foment the Quinces with good old wine, which is also not to be rejected. This following is more forcible; take as many Quinces as you will, grate them very small, and presse out the juyce, afterwards pour it upon other sliced or cut Quinces, and then let them all together seeth thoroughly with Sugar or hony. This is an especial medicine for to strengthen the stomach, it stoppeth all scowring and wambling, it strengtheneth the inward weak parts, besides the digestive and retentive vertues, and it provoketh appetite. But note this well, if one will stop the scowring, that one must take it before meat, and against the vomiting after meat.

At the Apothecaries is prepared a Dyacydonium compositum, or cum speciebus, as hereafter followeth; take thick sodden juyce of Quinces, wherein is neither Sugar nor hony 18. ounces, clarified hony one pound and a half, seeth it meetly thick. When it is now waxen luke warm, then temper these spices following (pownded small) amongst it; to wit, Cinamom three quarters of an ounce, Ginger half an ounce, Pepper and Galangal, of each one quarter of an ounce, Cloves and Nutmegs, of each one drach. and a half, Indy Spica, Lignum Aloes, Mace, and Cardamom, of each one drach. Zeduary half a drach. afterwards pour it into boxes, and make a hole or twain above on the top. It is also well advised that one take Sugar in stead of hony.

If you will have a purging conserve of Quinces or Marmalade, then take of this foresaid conserve (whilst that it is yet warm) with the spices 22. ounces, and temper half an ounce of pownded Diagridion amongst it, and stir it very long, to the end it will be tempered:

pered. This foresaid conserve of Quinces with the spices is more forcible for all the foresaid diseases, then the other, it causeth the winds to avoid, it expelleth all bad smells, it maketh a good colour, it strengtheneth the naturall powers. For the kitchin and for housekeeping may this ensuing be prepared, pare as many Quinces as you please, grate them even to the coare, and put all that is grated into a strong cloth, afterwards wring the juyce well out, and keep it in a pot. This being done, take other Quinces, pare them and cut them in 4. peeces, put out the seed, and seethe the same in water until it be almost as mellow as a pap, and all the water consumed, but put out the seeds clean, and put it in a pot apart, and pour water upon it, then let it seeth well, and strain it through a cloth. Tye also a course cloth over an earthen pan, and lay therein a good deale of mellow Quinces, and rub them through it, so that the best may go thorough, then take afterwards faire white Sugar, and pour thereon some of the decoction of Quinces, let it seeth meetly hard, (then needeth not the conserve of Quinces to seeth so much, then take of this decoction of Quinces one part, and 2. parts of the other, and let it seeth until it be half thick enough, afterwards put the Sugar unto it, and then let it seeth thick enough, stirring it continually; when as it beginneth to be cold, then put it into the poxes. And if this Marmalade be not faire enough, then take off the uppermost skin with a knife. It is also to be noted, that if it be not decocted drie enough, then can it not last above a yeare.

Now for to make a cleare and perspicuous Marmalade; take faire great Quinces, wash them vey clean, grate them very small, wring out as much juyce as you please; take afterwards other Quinces, cut them in six peeces, put them into a pot, let them be vapoured with hot water, like as we have taught before, until that they be through mellow; then take half a potful of the former juyce, and pour it upon the former stewed and cut peeces, break it well together, and then put the rest of the juyce amongst it, wring it through a thin cloth, until it be clear; of this Juyce shall you not seeth more at once, then for to fill a box therewith, and put white Sugar unto it (beaten very small) as much as you please. If the juyce be troubled, then let it passe once or twice through a cloth, or so long untill it be through cleare; afterwards seeth it speedily away over a slight fire; when it is boyled enough, then pour it into the box or wherein you will, which might be made wet as before: and when they have stood one night, then may they be taken out. Note also here, that you must not take too little of the pap of the vapoured Quinces; for that the Marmalade should be very tough, and if one let the same seeth long, then would it be very brown.

If you make course Marmalade, then take the Quinces that remain, whereof the best is strained out and rub it through a haire Sieve, and afterwards put more vapoured Quinces unto it, and let it seeth away with hony or Sugar. This serveth to dresse withal or otherwise.

A Marmalade not sodden; take 20. or 25 Quinces, pare them, and cut the half thereof in small peeces, the rest grate small, and presse the juyce well out; pour that unto the cut peeces, and strew them until all be soft: afterwards wring them through a cloth, and stir as much powned Sugar amongst it, as you please, and then put them in a box, and so let it dry upon an oven.

Item, take ripe Quinces which be not stony, pare them, and cut out round peeces so deep, till you come to the stones. You are to grate these Quinces, and to wring out the juyce, to the end that you may have a good deale of it, then pour this juyce upon the peeces that you cut out, and then let it seeth until it be through mellow; then put cleare decocted Sugar unto it as much as you please, and then dry them by a soft fire, then put them in the boxes, and let them dry well.

Another: take 4. ounces of fresh Quince kernels, let them steep a day and a night in Well water, or in the juyce of Quinces, in a warm place, afterwards wring out the slime through a clean cloth, and then put thereto 4. pounds of the juyce of Quinces in a leaded pot, and let it seeth all together by a soft fire; yet it is to be strained then through a cloth again, and afterwards also take 2. pounds of Sugar, and seeth it until it be thick enough.

Yet another course Marmalade: take of the pith whence the best juyce is wrung out, and put warm water unto it, and seeth it well, then rub thereof through as much you can, and put cleare hony unto it as much as you please, and then put Pepper unto it and seeth it very thick.

If you will know when these Marmalades be decocted enough, then let some fall upon cold Iron, and be cold, if it be enough, then will it easily part from the Iron, and remaineth not hanging on the fingers, but it goeth clean and dry off.

All these sorts and marmalades, or conserves of Quinces are very good for the stomach, and help the digestive power. The same may moreover be tempered in Malmsey, in Claret Wine, and Hypocras, and may also be used instead of a sauce with meat.

It is also here to be noted, that all Marmalades, which are prepared with Wine, Spices, and such like, are good onely for old folks, and for cold women, and for all them which be cold by nature. Contrariwise, they that be prepared with water and juyce of Quinces, be meetly hot, because the fruit is cold in the first, and dry in the second degree: wherefore they be meet for all people which be hot by nature, and for them whose gall overfloweth much in the stomach.

Snow-white Marmalade, is also to be made in this manner; Take pared Quinces, cut them in four or five peeces, and cut them out within: afterwards put hony unto them, and let them stew in a pot, until that they be mellow: then take them out, and let them be cold, and stick them about with cut Cinamom and Cloves, put hony unto it again, and then set it so in a cellar that it may remain moyst, and lay some heavy thing upon it, that they swim not.

Item, take Quinces as many as you please, prepare them as before, pour wine unto it, but let them not be stewed too mellow, especially if one will keep them a certain time: let them afterwards dry upon a cloth: if you will stick them about as before, that is wholly in your power; if not, bind in a cloth Cinamom, Cloves, Mace, and lay it in the decoction; afterwards take one part of wine, and two parts of hony, and let it seeth so long until that all the wine be wasted, then afterwards pour hony upon it, but not too hot, to the end that thereby they be not too hard.

Before times, these were wont to be made in this manner following; take a rough cloth, and rub off therewith the uppermost parings of the Quinces, or pare them very thin, and then cut them in four peeces, and take out the coare within, afterward pour upon them two parts of wine, and one part of hony which is clarified, then seeth them so long until the skin do wrinkle, then be they enough; put them out, and let them be cold, lay in a pot, and strew some spice upon each row; afterwards pour the decoction (sodden short) luke warm upon it. Item, take Quinces, take out the coares; and lay them in a pot close one to another, and let them stand stewing in an oven, until that they be mellow, so that they may easily be pricked through with bodkins; afterwards let them be cold, and then put them again into another pot, and pour clarified hony upon it, lay some heavy thing upon it, that they swim not about, then will they remain good a whole yeare, and have the same vertue of the common Marmalade. You have also before in the description of Peares, how that they shall be made close in a pot, and should then be laid in a fat of Wine, you may also put the same in practise with the Quinces.

Lay the Quinces all the winter in small chopt straw, and cover them well, but lay none other fruit with it, and keep them from the ayre. Other do take Flocks, some bran, or hay, but the very surest is, if one will keep them the whole yeare, that they be covered in their leaves, and afterwards cover them with Lome, let them dry, and set them somewhere in a cold dry place. There may also be made many kinds of things of Quinces, viz. the syrup of Miva, and oyl, and also the seeds thereof be used and the peeles.

Conserve of Roses.

Conserve of Roses which is ready at all Apothecaries and common in all houses is thus prepared; Take red Rose buds, which be pluckt in dry weather, as many as you please, strip them off under the white with a pare of scitars, then lay them on a clean cloth, and one double cloth over them, that they may be well covered; let them lye so still upon a table two or three dayes, that they may weather a little, and afterwards stamp them in a mortar to grout; and to one part of the powdered Roses, take two parts of Sugar, and stamp them well together: afterwards put this conserve in a glasse, and stop it close the space of three moneths in the Sun, yet stir them about once every day, with a wooden spatine; if so be that you think that they will be too hard, then set them afterwards in a cellar, that they relent somewhat.

It is here also to be noted, that if so be you cannot get the right red Roses, then take the Carnation coloured, yea also the wild Roses, of the which I have found my self, that the conserve it self is of very good taste, and moreover very forcible in working. This conserve of Roses hath an especial vertue to strengthen a weak stomach, and to allay all cholerick humours; it strengtheneth the brains, it quickeneth and strengtheneth the heart, it cooleth the heat, and all inflammation of the inward parts. This Conserve of Roses may well be tempered with Rosewater or Well water, and be wrung thorough a cloth, and so in all hot agues to comfort the sick persons with it: it moisteneth also the dry tongue, the throat, the breast, and the lights, and especially that which is new made; that which is oldish hath another nature of binding in all scourings and fluxes, it swageth the pain and sharpnesse of the same.

The purging Conserve of Roses is made thus: Take 12. ounces of Sugar of Roses, and temper amongst it at the least half an ounce of small powned *Diagridion*. This conserve of Roses is also very good in sundry sicknesses, and especially in lingering diseases. There is half an ounce thereof given, or at the most three quarters of an ounce at once, when as the *Diagridion* hath been tempered amongst it at the least two moneths before.

The white Conserve of Roses is made like to the red. Some do make all Conserves of Roses with Hony instead of Sugar, but this Conserve is hotter, and is seldom used.

There is also Conserves made of Damask Roses, after the foresaid manner, which is very pleasant, and looseth mildly.

Conserve of Rosemary. S. 34.

THis Conserve is very pleasant, not only for Physick, but the flowers and the herb is also used in the Kitchen, with wine and otherwise. But as much as concerneth the Conserve, the Apothecaries do call it *Conserua Anthos*, and is made thus: Take flowers of Rosemary which are to be gathered in the spring, and in harvest, pown them to pap, and to one part of these flowers, take three parts of Sugar, and pown it very well together, then set it in the Sun, stirring it oftentimes about.

This Conserve is warm by nature, it attenuateth also all tough, grosse, and flegmatick matter of the inward parts, it dryeth and strengtheneth the brains, it refresheth the heart, and maketh it merry; it strengtheneth the mortified natural heat, it expelleth the yellow Jaundise, and withstandeth the Dropsie, it warmeth and cleanseth the breast, it maketh a good breath, it driveth out phlegme, and strengtheneth digestion, it withstandeth all venome that might hurt the heart, it taketh away the Cholick or griping of the belly, it causeth one to sweat well; whereby it expelleth all bad humours out of the body, it cleanseth the blood, hunteth away all heavinesse and pensivenesse, and strengtheneth all weaknesse.

To preserve the roots of all red Beets. S. 35.

YOU are to stew these roots with a little water, when they be mellow, then put thereto little peeces of Horseradish, and put them in a pot, and strew it with Caraway: afterwards pour half wine and half Vinegar upon it, until that they be well covered, and then lay some heavy thing upon them, that they may not swim.

In the same manner you may also prepare all the roots that serve for Sallads: the roots which are too great are to be cut overthwart. These and such like roots are not to be used for Physick, but for meat.

Conserve of Sage. S. 36.

Conserve of Sage is also made of the flowers, like unto all other; it doth strengthen the stomach, it openeth all obstructions, it consumeth all bad humours of the stomach, it strengtheneth all members, and is very good for all diseases of the head, which proceed of cold, it is good against all Palsies and lamenesse, it is meet for all diseases of the sinewes.

How Sloes are to be preserved. §. 27.

TAKE very ripe Sloes with their stalks, and put thereto two parts of Honey, and one part of wine, and let them seeth so long until the wine be thoroughly sodden away, afterwards lay the Sloes in a por, with the stalks on high, and pour the same Honey upon it, and cover it with a trencher, and lay some heavy thing on them, to the end that they may be covered with the liquor, and then set them in a Cellar. Another way to preserve Sloes: Take unripe Medlars, ripe Sloes, ripe and pared Quinces, when the coares be cut out, of each as much as you please: if you will you may stick rhem about with spice: likewise also the Medlars, which you shall seeth with the Quinces in Honey, like as is first of all said of Sloes, and lay some heavy thing on the top of it.

Conserve of Cowslips. §. 38.

THERE be two kinds of these flowers, whereof the one is wild, and without smell, which is meet for nothing: but take of the yellow that smells well, and cut thereof behind the long pipe, and with Sugar make a Conserve thereof.

This conserve is of a warm and dry nature, it is very good for the head, it strengtheneth and warmeth the brains, it is also good for the Palsey, for which cause it is also called *Herba Paralysis*. This conserve is also of all them (which be inclined to the Palsey) much used, and it strengtheneth also the heart: but it is perchance not much used, for that it is a kind of Betony or of Gilloflowers, which be more acceptable.

Conserve of Water Lillies. §. 39.

Likewise there be two sorts of these flowers, to wit, yellow and white; take thereof the white, and the white leaves only of the flowers, make a conserve thereof, like unto all other conserves. This conserve strengtheneth much, and cooleth in very hot Agues, and also in pestilential agues. It is also very good for them that consume away, and that have the Pleurisie. It taketh away all dry coughes, for that it cooleth and moisteneth the breast, the throat, and the dry tongue: it quenbeth thirst, it cooleth through her cold the Liver, the milt, and all inward parts, and it provoketh sleep. All hail people, and they that be cold of nature may not use the same, for that if the same be used too much, then taketh it away the fleshly desire, and it obstructeth also the spermatical flux if it be heat.

Conserve of Violets. §. 40.

TAKE blew odoriferous Violet flowers, pluck the flowers from their husks, and pound them to pap. Unto a pound of flowers put two pound of Sugar, and then stamp them well together, and so set them in the Sun. This conserve is cold in the first, and moist in the second degree. It cooleth and moistneth with mildnesse, and it asswageth also the pain of the guts, but it is not so good for the stomach. It allayerh also the cholerick heat which cometh through moisture. It looseth and also taketh away thirst. It may well be given to young children (in all heat) very freely, for that it is good against their pangs; it keepeth the belly open, it strengtheneth the braines and the heart, and it taketh away all stiches. The yellow Violets are also preserved otherwhiles.

Conserve of the flowers of Cicorie. §. 41.

TAKE the leaves of Cicorie flowers, and make a conserve thereof like as is taught of all other. This conserve is especial good for the Liver, it openeth the obstructions of the same, it cleanseth all inward parts, and also the intrailles of all cholerick humours, it expelleth them out through stool, and withstandeth thereby all putrifying agues, therefore this conserve is also to be used in the beginning of the Dropsie, it reviveth the weak and overheated heart, and also the stomach. In fine, it is very good in all hot sicknesses. The roots of Cicorie are also preserved, which are digged up before that they begin to sprout out. Being digged up make them cleane, and cut them the long way, and then take the innermost heart of it.

Afterwards cut it in peeces the length of a finger, and then let them boyl well in fresh water, that the bitternesse may come out, and the roots may be mellow. When as they be meetly dry, then pour thick boyled Sugar upon it, and if the roots be still somewhat hard, then let them boyl in the Sugar until they be mellow, and then let them be cold. But if that the sirup be thin through the moisture of the roots, then seethe the same thick again, and that so often until it remain stiffe. These roots be of a cold and dry nature, and they have the same vertues with the conserve.

How red Cherries are preserved. §. 42. *Take picked red Cherries which be*

Red Cherries be preserved like as we have taught before of the black. They have also one kind of operation, and are thus preserved: Take picked red Cherries which be not bruised, put them in a small Oaken vessel, afterwards take clarified Hony, and let it seeth with a little wine, until all the moisture be consumed, and pour then this Hony warm upon it, otherwise would they break through heat. This being now done, then stop the vessel tight, and lay it in a Cellar, and roll it daily from one place to another, and do this the space of 14. dayes, or three weeks.

There is also made of these Cherries a Conserve, as hereafter followeth:

Take Cherries as many as you please, stamp them a little, and then pour yet more other Cherries unto it, and boyl it without any other moisture: all that which will remain thick, is to be rubbed through a sieve, to the end that there do not remain any other thing in the sieve, then skins and stones; then seeth it in an earthen pot. You may also put Sugar unto it as much as you please, and then seeth it unto a conserve. For this, is no kind of Spice meet, if so be that one desire not to put a little Cinamom unto it.

This conserve is very good against all dryth of the mouth, throat, and tongue, if sick persons be washed with it. It quencheth thirst in all hot Agues, and otherwise. It is also good for all Cholera of the stomach, it maketh appetite to meat, and it cooleth the hot reins; the kernels do expel gravel. In Summer time is wine to be mingled with this conserve, and to be used for sauce with rost meat.

If one desire to keep Cherries long fresh, then are picked Cherries to be taken for it, and to dip the same in molten wax, viz. when it beginneth to be cold; and to let them be well closed in Wax, and afterwards to fement the same with Lome until it be thoroughly closed, then are they to be hanged up in a cool place, and they will remain fresh a very long time.

How ripe and unripe Grapes are to be preserved. §. 43.

THe unripe Grapes shall be confected like to all Barberries, but you must cut every Berry from the Clifter, to the end that they may keep their stalks, and put therewith like as is said of the black Cherries: then let them not seeth long, that they do not break and get a bad taste. They have the same power as the Barberries, the ripe Grapes are to be confected, like as we have written of Pears.

Of that which commonly keepeth all fruits fresh. §. 44.

ALl that is laid in Hony, whether it be Flesh, Fruit, and Plants, or any other thing, doth remain a long time before it spoyle, therefore have dead carcases before time been poured full of Hony. If you have then any Fruit, Fowles, Venison, or any other such like things that you will keep good the space of a year, or any Plants, or Flowers, and such like throughout the Winter, then look into M. Tristrams water, whereof all ancient Physicians have had a good opinion. The same also do all vital and golden waters, which follow immediately hereafter.

The roots of Cicoria are also preserved, which are digged up before they begin to grow. Being digged up make them cleane, and cut them the long way, and then take the

The sixt Chapter.

Of the Golden and vital waters, and Elixirs of life.

Hese kinds of potions and artificial waters, are ordained most to this end, for that they should strengthen the most principal parts of the body, as the head and the heart, to keep them from debility and swooning, especially if the same proceed of cold. Thus we will describe some of them, whereof there be 2. which the ancient Physitians call golden waters for their special vertues. Take fine Sage 7. ounces, Nutmegs, Clove, Ginger, and Greins, of each half an ounce, Cinamom, peeled Bayberries, and Bevercod, of each one ounce, Spikenard one drachme, peeles of Citrons one quarter of an ounce, temper them all together grossly beaten, then pour 2. quarts of wine upon it, and so let all together stand the space of 14. dayes stopped close, stirring it well about every day. Afterward distil it in water in an helm luted well and tight. This water doth keep all manner of meates by their natural tast and vertue, it expelleth all bad humours of the body, it maketh all wine clean and of a good tast, if one temper a little amongst it, anoynted outwardly upon one, or used. It is very good for all inward parts, as the Stomach, the Spleen, the Liver, and the Lights. It is also good for all bruises and to anoynt the bruises with it. In like manner it is good for all falles, for all byles, and all paine of the head. It is good (namely at the first) against all Dropfies, against the Palsey, and also against all venom. If one have any thing in the stomach that he cannot digest, then will it be consumed thereby, it maketh a good memory, and withstandeth the Leprosie, it healeth all scabbednesse, and also all ulcers, if one drinke it, or lay it upon them.

Another: take Lavander flowers, Hyssope and Sage, of each 4. ounces, cut them very small, Nutmegs, Ginger, Cinamom, and Cloves, of each half an ounce, Greins 2. drach. beat all small, afterwards pour upon it three quarts of the best wine, and set it the space of 14. dayes in the Sun stopped very close. Thus may you use the first. Item, take good Malmsey 2. quarts, and steep these things ensuing in it, being stoppt very close, and then set it in a dunghil which lyeth in the East the space of thirty dayes, afterwards distil it, as is before said. Take fine Sage with the flowers, of each half an ounce, Burrage flowers one ounce, one Orange, Rue three drach. Rosemary 3. ounces and a half, Rosemary flowers half an ounce, the tops of Marjoram gentle four ounces, the flowers of Buglosse 3. quarters of an ounce, red Roses two ounces and one quarter, Hyssope half an ounce, Carduus Benedictus half an ounce, Ireos three drachmes, Camphire three quarters of an ounce, prepared Pearles half a drachme, oyl of Spike and liquid Storax, of each half a drachme, powdered Cinamom four ounces, Galangal three drachmes, long Pepper, and Greins, of each half an ounce, Cucubes, and Cardamom, of each one ounce and a quarter, Zeduary three drachmes, Ginger one ounce, beat this all together grosse. Here is to be noted, that there will be too little wine, and that freely there may three or four quarts of wine be taken for it. Now followeth here a water, called the elixir of life, and is thus made.

Take Cinamom and Cloves, of each one ounce and a half, Nutmegs one ounce, red Roses ten handfuls, white Roses as many, Hyssope two handfuls, Lavander flowers seven handfuls, pour unto it a quart of Malmsey, and so let it stand the space of nine dayes, and distil it afterwards, as is said before. Now for to distill a common vital water is thus to be done. Take Cinamom one ounce and a half, Ginger one ounce, Cloves, Nutmegs and Greins, of each half an ounce, Lignum Aloes, Mastick, Mace, and long Pepper of each 2. drachmes Sage sixteene ounces, Cardamom, Cucubes, and Galangal, of each two drach. and a half, Roses one quarter of an ounce, Balm three drachmes, Citron peels three quarters of an ounce, Rue, Bayberrie, and Stechas, of each half an ounce, Rosemary, Marjoram, Lavander, and Betony, of each three quarters of an ounce, Spica, and Bevercod, of each one drachme, steep it in three quarts of Malmsey, and so let stand the space of ten dayes, then distil it as is taught of the other. Some have also an especial water, which is called Aqua spiritualis, for that it strengtheneth much the vitall spirits: Take the herb Lavander with the flowers, and Liriconfancie, of each two ounces, Rosemary flowers, and Betony of each three drachmes

Sage, and Marjoram gentle, of each one ounce, Balm half an ounce, Hyssope, Mints, the greater Pimpernel, Tormentil, *Rapontica*, *Angelica*, and *Bistorta*, of each one quarter of an ounce, Piony roots, and of Valerian, of each one drach. Avence, and Juniper berries, of each half an ounce, Bayberries, and Bevercod, of each one drach. cut the roots, and pownd them grossly. The herbs are you to take dry, and to cut them small, and then put them in a glasse, which is narrow above, afterwards pour 5. pints of the spirit of wine upon it, and stop it tight, then set it the space of 8. dayes in the Sun, or in another warm place, and distil it afterwards, as is said in the beginning. In all that which is distilled out are you to lay in steep, Ginger and Galangal, of each one quarter of an ounce, Cloves half an ounce, Cucubes 1. quarter of an ounce, Cardamom and Nutmegs, of each half a drach. Greins 1. scruple, Citron peels one quarter of an ounce, Pomgranate peels half a drachme, *Lignum Aloes*, and white Mustard seed of each one scruple, Saffron half a drachme, Indie Spica one scruple, Annis half an ounce Fennel one quarter of an ounce, Treacle one ounce, Turpentine 3. drach. prepared red Corral 1. drach. *Mannus Christi* with Pearles half an ounce, conserves of Roses one ounce, clarified Hony four ounces, then pownd it all grosse that is to be pownded, and so let it stand the space of four dayes in a warm place, afterwards you shall distill it and then temper amongst it *Muscus* and *Ambr*, of each one scruple, *Spermatici* one drachme, good Rubarb one quarter of an ounce, Camphire ten greins, Sugercandy one ounce, then wring it out oftentimes and keep it stoppt close.

Another. Take dry red Rose leaves half an ounce, flowers of Sage, of Rosemary, of Burrage and Buglosse, of each one quarter of an ounce, Liricosanfy one ounce, and a half, Balm, Citron peels, Betony, and red Gilloflowers, of each one ounce, Nutmegs and Mace of each one drach. Cardamom and Cucubes, of each half a drach. white and yellow Saunders, of each one quarter of an ounce, pownd all these things very small, then take a pint of good spirit of wine, and put therein 2. ounces of Cucubes, the stones taken out, and then cast them to the foresaid small beaten herbs, and let them all stand to steep in a warm place, untill that the wine hath drawn the vertue of these herbs unto it, the which will be done in the space of two moneths. You may also set it in the Sun all the whole Sommer, strain it at last through a fine cloth. You may also put unto this Musk precious stones, Amber, Pearles, Unicornes horn, and such like things, for to strengthen the same therewith. These foresaid vital waters be special good against all swooning, against all debility of the braines and of the heart, they strengthen also the sinewes, and the memory, they warm the chilled and bad digesting stomach, wherein is much slime, if they be taken fasting. If one perceive any losse of his memory, then is he to anoynt therewith the forehead, the hinder part of the head, and the temples of the same. They be also good against all lameness of the Palsey: they be good also against trembling and shaking, against swimming in the head, and such like diseases. But note, that here will be too little burnt wine, but one may take more. In like manner, you have also in the 1. part the 12. chapter and 5. §. a very good water of May Lillies. This following is also an elixir of life: and is thus prepared; take Rose water 4. ounces, water of Burrage and of Buglosse, of each 3. ounces: *Mannus Christi* one ounce and a half prepared Pearles one drach. and a half, temper them all together, and so give it him that hath great heat of the head and of the Liver, and where as is great fatnesse of the heart. This vital water ensuing is very common at *Angusta* in Germany.

Take culled Cinamom 3. quarters of an ounce, Ginger half an ounce, Cloves, Nutmegs, and Greines, of each one quarter of an ounce, Mace, *Lignum Aloes*, and long Peppe, of each one drach. Cardamom, Mastick, Cucubes, Galangal, and Calamus, of each half a drach. Balm flowers 6. ounces, Citron peels three drachmes, peeled Bayberries and Stechas, of each one quarter of an ounce, Rue, Rosemary, Marjoram, Lavander, Balm, and Betony of each half a handful, Indy Spica, and Bevercod, of each half a drach. steep them all together in two quartes of Muscadell, or in any other strong wine, and let it stand so 10. or 12. hours space; afterwards distil it in seething waver, then are you to hang Musk and Amber of each 15. grains, to wit, in a fine linnen cloth, and then keep it close stoppt.

This following is a very odoriferous water to be used for what one will; take the flowers of Spike, and Lavander flowers, of each one handful, Cloves, Cinamom, Nutmegs, Mace, of each one drachme and a half, Musk the quantity of a pease, then pour unto it three pints of Rosewater, and so set it in the Sun.

There

Cap. 7. Part 8. The general Practise of Physick.

There is yet another odoriferous water in the sixth Part, in the 15. Chap. and 5. §. which may also be used for divers purposes.

Cinamom water is also exhibited to sick folks for a strengthening, and they are anointed therewith, and is to be further used for many Confections, March panes, and other pleasantries, the which is thus to be made: Take four ounces of good Cinamom, pownd it very small and put it into an helm, afterwards pour a pint of water upon it and lute it close; then distil it in seething water, and that which cometh out first is whitish, and strongest, and is only to be kept, and the rest to be received in another glasse.

The seventh Chapter.

Of Hand water.

TAke Lavander or Spikenard whereout the water is distilled, and pour as much rain water unto it until the helm be more then half full: afterwards distil it in seething water and set it in the Sun, it smelleth strong enough, and it remaineth good certain moneths.

For to make May Cheese. §. 1.

TAke a new earthen pot, wash it well with hot water and rub it with Salt within, afterwards make a hole in the bottom and put in a small tap; then take fresh milked milk and rennet it like as a Cheese is wont to be rennetted, and so let it stand from Morning to Evening: then pluck out the tap that the whay may run out: afterwards put every day a faucer full of new milk with it, according to that there is much or little in the pot: stirre it well about, and then let every evening the whay run it: besides all this, you are to salt the milk a little in rennetting of it.

How to make Wafers of Sugar. §. 2.

WHat the Wafers be (which are wont to be set upon the table a nights) is well known to all men; thus for to confect them and to make them only of Sugar, is to be done: Take fair white Sugar powned very small, and sifted thorow a fine sieve, make paste thereof with Dragagant dissolved in Rosewater: the which is to be stamped in a mortar, to the end you may make thereof thin flat wafers: this being done, then is the same beneath and above to be renewed with well powned Sugar that it cleave not too, then wind them on a round stick and lay them upon a sieve to dry, to wit, in a warm place, but not in the Sun: if you will, you may also put *Muscus* unto it. In like manner you may take for it powned Sugar, and Cinamom tempered together, and roul the same also upon a round staffe with dissolved Dragagant: the which being bound to the space of 14. dayes may remain good, and they are made like Cinamom pipes.

Honey water, Hydromel. §. 3.

Honey water or our course Meade do the Grecians call *Hydromel*, and the Latinists *Aquam mulsam*; this water is to be used for many things, and especially in Physick for two kinds of things: the first, if one will loose the belly or procure vomit, then temper the same with two parts of old rain water, and one part of Hony, and so let it stand in the Sun. This Hony water is to be tempered with oyl if the cause require it, and being luke-warm used for vomiting: the other Hony water is to be sodden and used also for many kinds of things, as we in this book have in many places declared.

The eight Chapter.

For to make Juleps.

Juleps are made after divers manners, and most of all of distilled waters, but the commonest and most known are to be boyled of Rosewater, and Violet water with Sugar, as both these in the third Part, the 12. Chapter, and 10. S. be described: both these Juleps be very much used in hot and dry causes.

The ninth Chapter.

For to take Spots out of all Clothes.

For to take spots out of all clothes, take two parts of Beechen ashes, and one part of Lime, and make Lee thereof with rain water, filter it oftentimes, and therewith wash the Spots. Item, take Argal one handful, three Oxe galls, Venice sope two ounces, Allum half an ounce, and a pint and a half of water: seeth it all together untill that the fourth part be wasted, and then wash the spots therewith. But above all should distilled water of Toadstooles be very good to take all spots out of clothes, they may try that will. For to take the spots out of Chamlet and Silks, rub it out with Turpentine oyl.

Spice cakes which be excellent good. S. 1.

OF fine Hony take a quart, clarifie it well, and half a pint of Malmsey, Cloves two ounces and a half, Ginger two ounces, Nutmegs one ounce, fine meal or flower 5. pound; let the Hony and Malmsey seeth together, then knead the Meal in it and make Cakes of it as you desire to have them, then bake them in an oven.

The tenth Chapter.

Hereafter follow Confections.

Here shall follow now all kind of purging Confections which are commended to be used in this book, to the end that not only the bare unknown name, but also their vertues and operations might be declared: therefore we will comprehend them in a short sum, and use the names that are best known at the Apothecaries; and besides that we will interpret and english their names the best we can.

Confectio Anacardina. S. 1.

First of all we will speak of the *Anacardina*. This confection doth sharpen the understanding and the memory, and is also good against all pain of the stomach which cometh through cold, it cleanseth the blood, and maketh good colour: it is also called a confection of the Sage men.

Antidotum Hamagogum. S. 2.

This Confection hath her name of the blood wherein it doth also reign; the which also the Greek name doth give to understand.

Electuarium de Baccis Lauri. S. 3.

This is a confection of Bayberries: this confection is for the griping and pain of the belly which is caused of wind, the very best medicine that may be devised, and moreover against all inward maladies which proceed of cold.

Benedicta

Benedicta laxativa. §. 4.

THis confection is called a blessed Laxative, it is very much used and found ready at all Apothecaries; it is made of many simples, wherefore we omit her description: it is very good to purge all tough slimy matter, and especially that which lyeth in the joynts, as in them which have the joynt disease or the gout, it cleanseth much, and purgeth also slimy matter of the Kidneys, and of the bladder, &c.

Bezoartica. §. 5.

Such like confections there are very many prepared in time of the Plague for to provoke sweat, of which we have described one in the 6. Part, the 16. Chapter, §. 3.

Electuarium de Calamintha. §. 6.

A Confection of the field Mints is described after three wayes by the Physitians; and when we make it, which hapneth seldom, it is in form of Tabulates: but that which *Galenus* describeth is made as followeth: Take the seeds of field Mints, of Penniroyal, of Parsly, and Silver mountain, of each one 3. the seeds of Smallage, and of Thyme, of each one quarter of an ounce; the seed of Lovage one ounce, Pepper three ounces: make thereof Species. You are to take Sugar according as you will make a confection or tabulates, and that in such quantity as thereto belongeth. This confection is very good for all them that have a wambling of their meat, for them that have a bad breath, and a bad stomach, and be much plagued with the wind of the stomach.

Confection of Cassie after three wayes. §. 7.

How highly that the Cassie is commended in Physick, and especially in hot sicknesses it is discovered in many places of this Book, and especially in the Introduction; where it is also taught how the same is to be driven through a sieve. Secondly, there is a confection made thereof, to wit, *Diacassia cum Manna*, which is to be used against the binding of the belly. The third is here before in the third Chapter described, in the first §. where we did discourse of Clusters, and in other places more.

Electuarium de Castoreo. §. 8.

This is the confection of Bevercod which one findeth very seldom, unlesse it were prepared of purpose for any body.

Catharticum Imperiale. §. 9.

This is as much to say, as an imperial purgation, for that especially it is a purger of the head, maketh sweet breath, and expelleth black melancholy, and gall out of the stomach: this confection is not common at all Apothecaries.

Catholicon. §. 10.

THis Greek name is as much to say, as universal, and the ancient Physitians have given that name unto this confection, for that it is meet for all diseases: therefore it is also kept prepared at all Apothecaries. And because that the same can be made by no householder, therefore we will not set down her description. It is not onely good for all strong diseases, but also for all the extreme sicknesses, it assaileth and altereth the same; it strengtheneth all them that have any infirmity of the Liver, or in the Spleen; it purgeth melancholy, cholerick, and phlegmatick humours, and is a safe medicine; as it is also used in many places of this Book.

Electuarium de Cineribus. §. 11.

THis Confection of Ashes is hardly to be found ready at any Apothecaries, but by reason of her profitableness, to shew that the ancient Physitians have not pretermitted to make it known; therefore it is described in the third Part, and hath an especial vertue in expelling of the stone, and of the gravel.

Electuaria varia de Cidonius. §. 12.

THere be sundry Conserves of Quinces, of Marmalade, like as you find them before in the 4. Chapter, and 32. §.

Electuarium de Corticibus Aurantiarum. §. 13.

THe preserved peeles of Oranges, doth one find ready at all Apothecaries, and are good for all pains of the stomach.

Electuarium Ducis. §. 14.

THis Confection was prepared for a Duke, and is compounded of many things together; wherefore we will not describe the same here, [for it is found commonly at all well furnished Apothecaries; it is also very good for all windy and bad digesting stomachs, and against all cold of the inward parts: it is also good against all griping of the belly, and especially for the stone: for which cause it is principally ordained in this our Book of Physick.

Electuarium de Epythymo. §. 15.

THis confection is very seldom used, but the flowers and the Thymus is very common in Physick. This confection should be very necessary, and helping women unto fruitfulness, like as is also prescribed in this Book for the same.

Electuarium de Gallia. §. 16.

THis for the profitableness and commodity that it hath in the pain of the guts, and in Phlegma, and for that it is easie to be made, is described in the third Part, the 15. chap and 6. §. for it is not known at the Apothecaries.

Confectio Hamech. §. 17.

THis confection is of two sorts, and is compounded of many things, and is very common at all Apothecaries: wherewith the humours of the Gall, especially the salt humours which cause scabbiness, the Leprosie, the Canker, and all other diseases which excoriate and inflame the skin by their sharpness are holpen. The lesser confection *Hamech*, purgeth Melancholy, and is also good against all frenzie, giddiness, forgetfulness and all infections of the skin.

Hiera Picra simplex. §. 18.

THis confection is at all Apothecaries every where prepared, and is not onely very well known to the Physitians, but also to the common people: Take Cinamom, Balsame wood, Asarabacca, Spica Indica, Saffron and Mastick, of each one drachme and a half, Aloe 25. drach. clarified and scummed Hony thirteen ounces; make a confection thereof. But if you will have it to strengthen rather than to purge, then take washed Aloes, instead of other. This confection is very good against all rotting and stinking humours, which do keep themselves in the mouth of the stomach, and in the bowels. In like manner it is also good for all them that have lost their natural colour, and against all inward diseases of the sight; it looseth very mildly, and her operation penetrateth no further, but into the Liver, it strengtheneth the stomach, neverthelesse that it is partly hurtful for them that have a hot liver, but because of her great vertue, it is much used.

Hieralogodion

Hieralogodion. §. 19.

THis confection is also found at the Apothecaries, the which is made out of many sundry things, wherefore we will not describe the same here: it is as good against all old madnesse, against all old melancholy, against all falling sicknesse, and all other raging or madnesse, against the giddinesse, and all pain of the head. Item, it is very good against all Palseys, against all shaking, and against all heart beating. It is also good in the Pleurisie, in all sicknesses of the Liver and of the Spleen, it provoketh womens terms; and is also good against all Gouts, against all poyson, Leprosie, and scurfe. Of this confection may one take a drachme at once with Wine, if there be tempered a little salt with it.

Hiera Pachii Ruffini. §. 20.

THe first *Hiera* is now of late come again in use amongst the Physitians, it is marvellous good for many kinds of things, not unlike to the aforementioned. In this our Book of Physick is otherwhiles mention made of it.

Electuarium Indum. §. 21.

OF this confection there be two sorts, a greater, and a lesser; yet both do expel bad humours, especially such as breed wind in the stomach, and other nutritive parts; they amend also the bad accidents which arise thereby, as swelling up of the stomach, the griping of the belly, pain of the kidneys, and such like.

Electuarium Lenituum. §. 22.

THis is a laxative confection, which expelleth gently, without any pain, the phlegmatick, cholerick, and melancholick humors. It is also good against all Agues, and it is found ready at the Apothecaries, howbeit that it is very seldom used in this our book of Physick.

Electuarium de Lepore combusto. §. 23.

THere is also a confection prepared of the burnt Hares head, which is marvellous good against gravel, and is described in the third Part, the 12. Chap. and 4. §.

Latificans Almanforis. §. 24.

THis pleasant confection is now adayes made rather in Losinges, then in form of a confection: but how the Species be made, that you do find described in the first part, the twelfth Chapter, and eight §.

Electuarium de Manna. §. 25.

THis Electuarie of Manna, is a very noble Confection, wherein come many easie laxative things; it cleanseth the blood, withstandeth Cholera, and Melancholia; it is very good for a hot Liver, and cleanseth also the body.

Electuarium ad Melancholiam. §. 26.

THis Confection is not made, if it were not that it is especially ordained, and it is also but once used in this Book.

Mechleta. §. 27.

THis Confection Mechleta is prepared at all furnished Apothecaries; it is especial good against all superfluous bleeding of the Piles, and against the griping of the belly, and it is exceeding good in all lasks, as in Lyenteria and Dysenteria. It is also used in Diarrhea

Mithridatum. §. 28.

THis high renowned and very well known confection, hath next to Treacle, the highest commendation and price above all other confections and compounded medicines, the which of very many and divers simples is composed together: wherefore we will pretermitt her description here. It is also older then the Treacle, and was found out by *Mithridates* King of *Pontus* three hundred years before Christs birth, and so named after him. This foresaid Confection did the King use against all venom, and with such commodity, that when he was in greatest extremity and had taken poyson, he could not die of it. Wherefore and because that the same is oftentimes ordained in this book, therefore we will briefly rehearse her vertue and vigour.

First, it hath almost in all things the same power of the Treacle; but that onely the Treacle is somewhat hotter and more forcible against all venom of Snakes; otherwise it is good against all pain of the head which proceedeth out of cold, and chiefly against all melancholick diseases, and also for them that live in great heavinesse without cause. It is also good against all heavy fancies and madnesse: and further it is also good against the Falling sicknesse, against the giddinesse, and all old pain of the head. Likewise it is a very good medicine against all running and diseased eyes, it sharpeneth the sight, and it is good against all fisling of the ears, and against all pain and falling of the gums if the same be laid upon it. Besides that, it is much commended for the Squinancy, it cleanseth and healeth all ulcers of the throat. It is a special medicine for all them that be taken with the Palsey, and them that have a disease in the lights: as it is also for all them that cough much, spet blood, and complain of purfivenessse. It is also especial good for all cold and moyst stomachs, it maketh appetite, it strengtheneth the digestive vertue, and maketh a good colour. It asswageth all gripings, all scourings, and the bloody flux, it openeth the obstruction of the liver and the milt: and it is a medicine for all inward parts; it driveth also the cramp away, and all convulsions of the sinews, it expelleth the gravel, and the stone of the bladder, it swageth all pain and ulcers of the same, it expelleth water, and moveth Womens terms: it is very necessary for all maladies of the Matrix, it is also especially commodious for all them that be plagued with the gout in the hands and feet; but especially it is given against all poyson: this doth it not onely taken inwardly, but also laid upon the outside. In like manner doth it apparently work in the tertian and quartain Ague, if that the same be taken an hour before or ere the Ague cometh, with Wine. The common weight that one taketh thereof is a drachme: the which neverthelesse according to the ability of the person and of the sicknesse, may be augmented or diminished, or also omitted all together.

Electuarium Oculifera. §. 29.

THis is a Confection for the eyes, whereof you shall find two sorts in the first Part, the seventh Chapter, and 20. §.

Electuarium de Olibano. §. 30.

THis present Confection of Frankincense is seldom used and prepared, but it is good against all pain and rheumes of the head, and also of the eyes, it swageth all bad throats which proceed of defluxions, it is also available against the Cough and spitting of blood, it stayeth all wambling and vomiting. Further, it is also good for all diseases of the Lights, and for the Pleurisie, whereas the matter is coughed up; it stayeth the running of the Reins, and womens terms, it is also used against the scouring:

Electuarium de Ovo. §. 31.

How that this precious Confection of the golden Egge is to be made, is after two wayes described in the sixt Part, the 16. Chapter, and §. 3. and also taught thereby, how that all hail and sick folks ought to use the same.

Electuarium Diaphenicon. §. 32.

THis Confection of Dates is also to be made in Tabulates. It is meetly strong for to purge therewith in the Quotidian and Tertian Agues. It purgeth *Phlegma* and *Cholera*. It hath a marvellous efficacie against all pain of the stomach, and other like pains of the guts, which are caused through any rough slimy humour, therefore it is also oftentimes prescribed in this book.

Electuarium Philonium. §. 33.

THis Confection is also called according to them which have found it out, to wit, after *Philon*. It is made after sundry manners, whereof there be twain, which be accounted the chief, *Romanum* and *Persicum*. The first is good against the Cough, and against all distastes of the Lights, viz. heavy breath, spitting blood, distemperance of the stomach, pain of the Liver, of the Spleen, and against all infirmities of the privities, and of the bladder.

The other, to wit, *Persicum*, is very good to staunch blood, like as womens termes, or when the Pyles run too sore: also in all scourings and bloody flux, and whereas blood is avoided then is it an especial medicine. It is also exceeding good for women which have first conceived for to preserve and keep the fruit.

Electuarium Diaprunis. §. 34.

Here before in the fourth Chapter, in the description of the preserved Prunes, is expressed of her power, and how it is made:

Electuarium de Psyllio. §. 35.

This is also one of the commonest Confections, which one findeth ready at all Apothecaries; it expelleth the cholerick matter, and is very good for all hot Agues, which otherwise are hardly to be expelled. Moreover, it is good against the giddinesse and all pain of the head, which is caused by the vapours of *Cholera*, and mixed with other humours. Item, for the falling sicknesse, and for enflaming of the Liver, &c.

Electuarium de Raphano Sylvestri. §. 36.

How this is to be prepared, and of what power it is, that is to be seen in the third Part, the 17. Chapter, and fourth Section.

Electuarium Regium. §. 37.

Albeit that it is called a Kingly Confection, and is very good, yet it is nevertheless no where in this book used, but only in the spetting of blood.

Electuarium de succo Rosarum. §. 38.

This present Confection named, of the juyce of Roses, is one of the chiefeft purging Confections, and because that it is very easie to be made, therefore we will describe it here. Take the juyce of red Roses and white Sugar, of each eight ounces, *Diagridi* three quarters of an ounce, red, white, and yellow Saunders, of each three drachmes, burnt Ivory one drachme and a half, Camphire half a scruple: the juyce and Sugar is to be sodden unto a meet thicknesse, and when it is almost cold then temper the rest amongst it, being all beaten very small. This may also well be made after the form of lozenges. This Confection purgeth *Cholera* without any anguish, and it is also good for all pain of the members, which be caused through hot cholerick rheumes, also for the tertian Ague, and for other more such like hot accidents.

Diasatyron. §. 39.

THis is a Confection of Ragwort roots; how the same is prepared and used for the increase of humane nature, you may read in the third Part, the sixth Chapter, and 4. §.

Electuarium de Scoria Ferri. §. 40.

THe Confection of the refuse of Iron doth *Rafis* describe. It is seldom made or used. It stoppeth the Flux and all blood.

Electuarium de Sebesten. §. 41.

THis is also a very usual confection, how that the same is to be prepared, and what it hath for an operation or power, you may read that in the third Part, the 11. Chapter, and 20. §.

Dia Sene. §. 42.

THis Confection of Sene, is also very common at the Apothecaries. It is good used in all melancholick, frantick, pensive, and such like sicknesses, which proceed of melancholick blood; and it cureth them that complain of the Spleen.

Theriaca magna. §. 43.

THe occasion wherefore that this high commended Confection is not here described, is, for that it is made of so many things. Also because there is a contention as yet amongst the learned, then for that certain things (which must be used in it) be not to be gotten, and especially in this Country, as the flesh of the Snake *Tyrus*, whereof this Treacle hath the name: but it is neverthelesse needful and well worthy that we here describe her operation and vigour.

This Treacle and the Mithridate be amongst all other confections the most renowned and worthiest. The first was by *Andromacho*, *Neroes* Physitian found out first, but afterwards by *Galen* brought into a better order, and in such manner amended, that it may very well be kept for so precious a Jewel, which is neither with gold nor silver to be compared: thus for to speak of her vertue.

First, it is good against all poyson, whether it be of beasts or otherwise, for to the same end it is given: and it is laid upon the byting of mad Doggs. In like manner, it hath an especial power against all bad ayr, against the Plague, and all pestilential Agues. It is also good against all old pains of the head, against the falling sicknesse, the giddinesse, and all darknesse of the eyes. Item, it is commended for all infirmities of hearing, and for losse of sent. And briefly to speak thereof, it doth also amend all debilities, the infirmities of the mind, and also of the brain. Moreover, it strengtheneth also all weakness and swoonings of the heart, it openeth all obstructions of the Liver, and of the Spleen, and mollifieth or supplieth all their hardnesse, it openeth the breast, and is good against the wheasings, and also against the short breath. It allayeth the cough, and supplieth all rawnesse of the throat; it doth provoke the rough humours to be coughed up, it withstandeth spetting of blood, and swelling up of the veins. It expelleth the yellow *Cholera* and the Dropfie, it healeth all inward diseases and ulcers, it asswageth all inward diseases where there is no heat nor ague instant, if the same be taken with Wine, or otherwise the same must be taken with some other distilled water.

Likewise it is also good for all bad stomachs, it caseth the Consumption, it expelleth the Worms, and all windinesse of the guts: also it is good against all gripings and pain of the guts, it is also very fit for all diseases of the Reins, it is very commodious and helping to all them which be vexed with the gravel or the stone, for that it expelleth the same; it healeth all ulcers of the bladder, and all conduits of the urine; it expelleth urine and womens terms; in like manner also dead children out of their mothers bodies. To all melancholick, which be full of anguish and pensiveness without cause, and half distract of their wits, is this given with great advancement. In fine, it is very good for all lingring sicknesses, as the Leprosie, old Agues, and chiefly Quartain Agues.

Where-

Wherefore it is advised to such as are to travel in the cold, that every morning fasting they should take somewhat thereof, for that it warmeth the inward parts, and defendeth them from all cold. It strengtheneth all the lame members, and bringeth them again to their power, and when the greatest pain of the gout is past, then is it taken with great advantage, so that it preserveth the body from all corruption.

But here is especially to be noted, that this Treacle is not good for young people, especially in Sommer time, or when it is hot weather, if so be that great need do not require, and then shall not above half a drach. be given at once, for that is too strong for such young natures. All they that be of middle age it is good for, used oftentimes, so that it cannot here be told, how much thereof may be given at once. The commonest weight is a drachme, and if so be that need require not the same, then is seldom any more to be given; yet according to the importance and ability of the person, the sicknesse, and such like, is the same to be augmented or diminished with wine or any other water.

Theriac Diatesaroni §. 44.

THis confection hath her name of the Grecians, for that it is made of four kinds of things, namely in this manner following: take Gentian, fresh Bayberries, Myrrha, and the right Hart wort, of each 2. ounces, stamp all together very small, with one pound and a half of well scummed hony, then keep it well where you please. This Treacle may the common people commodiously use in stead of the great Treacle, for that it withstandeth all pestilential agues, and all venom, therefore do the people of the country also give ti to sick cattle, and that with very great advantage. It is also good against all diseases of the braines, of the sinewes, and all sicknesse, which proceed of cold, as Falling sicknesse, Palsey, lameness, and the Cramp, it strengtheneth the stomach and her digestive power, it openeth the Liver, the Spleen, and the Kidneyes, therefore it is also good for the yellow Jaundise, the drop sic, it expelleth windinesse, and all pain of the guts. There may one drachme and a half be taken thereof, to wit, in the morning fasting, but cattel must take more of it.

Triphera §. 45.

OF such like confections are many kinds described of the Physicians, like as we shall shew hereafter. The first is *Fænonis*, and is the lesser. It is good for all excessive fluxes, for womens termes, for the pyles, and against all debility of the stomach, it causeth all grosse and tough humours to avoid, it amendeth the nautral colour, it strengtheneth the bladder, and stayeth the scourings.

The other is *Triphera magna*, that is the greater. The same is used for all cold pain of the stomach, as soone as one hath taken thereof, then sweat doth break out upon one. It is good for all melancholick women, which cannot sleep, and that they have gotten this anguish and vexation through any disease of the Matrix. Likewise also for those which be burthened with any slimy matter in the Lights, and for all them that spet blood, whether it be beneath or above; and if one leave out the *Opium*, then should the same be good for to advance the fruitfulness of women.

The third is *Triphera Persica*, which is made of many kinds of things; it is good against all agues, which proceed out of the stomach, and also against the yellow Jaundise; which proceed of great heat, it openeth all obstructions, it amendeth the sight which is infirmed through cholerick vapours, it quencheth thirst, and defendeth one from all the sicknesses.

The fourth is, *Triphera Saracenica*, which with her heat strengtheneth the digestion of the stomach and of the Liver, it consumeth all windinesse of the same, it maketh good breath, and is very commodious for the whole body; it keepeth a body healthy, it provoketh desire of venery, and it obstructeth all the bleeding of the Pyles, whereof is from one drachme to three drachmes to be taken, and that according to the importance of his person.

Electuarium vite §. 47.

THis is called a confection of life, and is described in the first part, the second chapter, and first §.

Of Lee. §. 47.

THe ancient Physitians, as they were very diligent and curious in searching out the vertues of all things, thereby to withstand all diseases of mankind, so have they not omitted to search out the nature of ashes, for to discern (of whatsoever wood that the same be burnt) which should be the most commodious and fit, and they have in truth found no small efficacy and power in them, as is shewed here and there in this book.

For to make excellent spice or Sugar Cakes. §. 48.

Albeit that these cakes may be used for the strengthening of the stomach and of the head in Physick, neverthelesse they be more eaten of licorousnesse; but for their abuse we will not omit their description. First, take wheat and Rye flower, of each about a pound and a half, clarified hony as much as is needful for to knead this flower to dough, then temper amongst it these spices following, all beaten small, to wit, Cinamom two ounces, Greins, Nutmegs, and Cloves of each half an ounce, long Pepper one quarter of an ounce, Mace and Galangal, of each one drachme, Cucubes one quarter of an ounce, prepared Coriander one ounce and a half; and then make thereof round or long Cakes, and let them be slowly baked; when they be then almost baked, then anoint them oftentimes with wine, then do they get above an orient or pleasant colour.

The right Sugar cakes be made thus; take a pound of Sugar, which is decocted to a syrup, and when you have taken it from the fire, then temper amongst it four ounces of Wheat flower, and about four ounces of Rye flower, and make a paste thereof: at last put these spices unto it, viz. Ginger two ounces and a half, Cinamom two ounces, Cloves half an ounce, Nutmegs, long Pepper, of each one quarter of an ounce, prepared powdered Coriander half an ounce, Annis (also beaten) three quarters of an ounce, and so let them dry together.

Other which be daily used: Take Sugar two pound, and pour a quart of water unto it, let it seeth together, and clarifie it well with the whites of eggs, when as now the water is foddren to the half, then knead amongst it five pound of flower, two ounces of Ginger, two ounces and a half of Cinamom, Nutmegs and Cloves, of each one ounce, Pepper one drachme, and let them dry. If you will make them of hony, then take three pintes of Hony, and a quart of water, let it seeth, and clarifie it, then put therewith as is before rehearsed.

The Bisket cakes be thus made: take of the old baked cakes, as many as you please, and grate them on a grater, then put hony and spices unto it, and then bake them once again.

The Noremberger Sugar cakes be made after this manner; take one pound and a half of Sugar, Cinamom 3. ounces and a half, Nutmegs 2. ounces, Ginger 3. ounces, Cloves and Cardamom, of each half an ounce, cut them, but not too grosse, and then take thereto one pint of hony, set it on the fire that the hony may melt, and afterwards take the Sugar, stir the same beaten very small amongst it, and so let it seeth very softly, that it do not burn nor run over, stirring it alwayes well about, then mix therein as much flower and spice as is needful, and work it upon a table; at last make cakes thereof about the weight of 6. ounces, and work each apart, and bake them afterward as behooveth.

Loch, Lohot. 49.

THus do the Apothecaries name certain mild confections, which have but little difference from other confections and therefore be they separated from the other, that one might know how to ask for them.

Loch ad Asthma, that is, for a heavy breath; this Loch is not much in use, it is good for a heavy wheeving breath, for an old cough, and it doth cause all tough matter of the Lights to avoid.

De Cancris, of Crabs; this Loch is very good in the Consumption.

De Farfara of Folefoot leaves; this Loch is to be used as all the rest.

De Papaver: this Loch is somewhat troublesome to be made, and is commonly made at all Apothecaries; it is good against all coughs, and roughnesse of the throat, which be caused

caused of a hot defluxion, which may be perceived by the thin and subtile spittle, and it maketh the same thick.

There be two other Confections more made of Poppies, under the name of *Diacodion*; amongst which that is which *Mesua* describeth, and is thus made: Take green Poppy heads, that be somewhat withered, five or six in number, and fair rain water 10. ounces; let them seeth together, so that there remain a third part; unto this colature adde wine, and when the two third parts be wasted, then put unto it one ounce and a half of good Hony, half an ounce of salt, *Acatia*, Saffron, Myrrhe, and Pomgranate blossoms, of each half a drach. *Trochisci Ramich* one quarter of an ounce: temper them all together, as appertaineth; but there will be too little Hony, therefore must more be taken. It is to be noted, that this may also be made into lofinges; they be very good for them that have any subtile defluxion falling on the breast, great coughes, and other diseases more.

De Passulis, of Currans; how it is to be prepared, and what his vertues are, look in the first Part, the fifth Chapter, and 12. §.

De Pino, of Pingles; this is to be sought for in the first Part, the fifth Chapter, and 6. §. which is good for all old conghes, and for the short breath; it causeth all tough steame of the Lights to avoid.

De Pursulaca, of Purslain; this is not often used by us, but there are two kinds made in Italy, which follow hereafter; take the clarified juyce of Purslain 12. ounces, *Trochisci* of sealed earth, and *Opium*, of each one drach. *Trochisci de Carobe*, and Dragon bloud, of each half a drachme, burnt Hares hair, and Bloudstone, of each one scrup. white Sugar six ounces, then seeth it like other *Loch*. This is especial good against spetting of blood, especially if it be tempered with this confection following; Take Henbane seed, white Poppy seed, of each 10. drach. red and white sealed earth, of each five drach. Conserve of Roses 4. ounces; temper them together, give it in the morning and evening, each time half a drach. The other; Take of the aforesaid three quarters of an ounce, *Philonis Persici* three drach. *Trochisci de Carobe* one drach. and a half, *Species Triatragacanthæ frigidæ* half an ounce, temper them together with Purslain water as before.

De pulmone Vulpis, of the Lights of a Fox; how highly the same is to be praised, and how the same is to be prepared, is to be read in the first Part, the 5. Chap. and §. 12.

Sanum expertum, that is as much to say, as healthy and approved, viz. for all old coughes and shortnesse of the breath, &c.

De Scilla, of Squils; how the same is to be prepared and used for all old coughes, that may you read in the first Part, the fifth Chapter, and 7. §.

The eleventh Chapter.

VWE will discourse in this eleventh Chapter of many sundry causes, as followeth hereafter.

Almond milk. §. 1.

ALmond milk is prepared after many manners, and that according to the quality of the sickness. If so be that one will strengthen nature, then is the same to be made the stronger and the thicker, and one must take the more Almonds, and lesse water. But this is the common fashion to make it: Take Almonds as many as you please, put them in hot water, and let them steep so long therein, until one can peel them: then pour cold water upon them, that through the heat of the water, they lose no vertue; afterwards pown the peeled Almonds very small, and take them in a very clean cloth, pour 3. or 4. spoonfuls of fair water upon it, and then with a spoon rub out the strength, and so pouring only more and more fair water upon it: you are to continue this straining, viz. so long as you suppose that there cometh out any whitenesse, then put as much Sugar unto it as you think good. If you will use it for sleep, then pown a little white Poppy seeds, and rub that through with the Almonds. If you desire that the Almond milk be more cooling, then stamp a little Melon seed with it: if one will use it against the fluxe, then is the water to be steeled; for the breast be Currans and Licoras to be sodden in it: there be also Pingles otherwhiles powned, Hasel nuts, and such like things with it, all according to the quality of the malady. And albeit that this Almond milk be used for the Kitchen, yet it is also good for many kinds of infirmities and sicknesses.

Manus Christi. S. 2.

How these Lofinges are to be prepared after two manner of sorts, with Pearles, and also without Pearls; that is in the first Part, the third Chapter, and 9. S. described, and they be very much in use, so that the common people esteem them onely to be a strengthening of the heart, although there are more forcible things prepared for it.

Marchpane. S. 3.

Take good fresh Almonds, as many as you please, and peel them, as we have taught of Almond milk: or if one have so much leisure, lay them a whole night to steep in cold water, then will the peels go off; afterwards pownd them small in a stone mortar, and pour a little Rosewater unto it: at last you are to pownd amongst it as much Sugar as you please, whether it be much or little, this dough or paste is to be spread on wafers. But if the dough be too moist, then hasten not with baking; otherwise will it be full of bladders. These Marchpanes be most meetly baked in an oven, the top and bottome covered with a mild fire, laying the Marchpane very dry therein, and there is laid for the more certainty a paper beneath upon the bottom of the pan or oven. Will you have the Marchpane very white? then must you make the fire very slow. But if you will make a Marchpane to strengthen one (for which it was first of all found out) then must you add Pingles, Pistacies, and other spices unto it, and also water of Spike, of Lavander, of Endive, or take any other waters, as Cinamom water, and such like. The Sugar is also to be soe meetly hard; and when it is well clarified, then stir it, and mix afterwards the powned Almonds amongst it.

For to counterfeit Marrow of bones. S. 4.

Take peeled Almonds, pownd them very small, and make them often wet with Rosewater, afterwards then temper four ounces of beaten Sugar amongst it; and to the end it may be harder, in rolling it, put two ounces more of Sugar unto it, and strew that on the outside upon it, then form it as you think good, and bake it like Marchpane.

Medicamen de Turbith. S. 5.

The manner to make both these powders, and their vertues, have we declared in the third Part, the 11. Chapter, and 26. S.

Melicraton. S. 6.

This do we call in English Wine Meade, whereof the ancient Physitians do make two sorts, for the one they took two parts of sower Wine, and one part of Hony. When this is waxen old, then it is nourishing; when it is meetly old, then it is very requisite for the stomach and the belly, and it expelleth also urine: but after meat it is not very wholsome to be drunken. If one will use the same quickly, then must these two things be boyled together. Other do take six parts of Must, and let the same be hot, then do they pour a quart of Hony unto it, and when it hath boyled a while, then do they preserve the same. This *Melicraton* is beforetime much more usual, then now adades, and especially with the Romans, which called the same *Vinum Muscum*.

Of Meade, a common drink. S. 7.

The Hony water and the Meade are not onely invented for their vertue, but also for necessity, chiefly in such Countreies where no Wine groweth, or may not be used: And it is very true, that this drink is more wholsome then sulphured Wine; for although the Mead be hot by nature, yet it is tempered with moisture, wherefore it cannot overheate nor overdry one. And albeit that this Mead may be made according to the fashion of every Countrey, diversly; yet nevertheless is this the commonest manner, viz. that one take 8. quarts of water unto one quart of hony, and so let it seeth by a gentle fire, scumming it so long until it begin to be clear. It

It is also here to be noted, that how much longer you think to keep the Mead, so much the longer are you to seeth the same. When it is cold, then put it into a vessel, and let it be three fingers empty, to the end it may work. If so be that you desire to have the same stronger and more forcible, then hang these spices following in it, viz, Ginger, Cinamom, Cloves, Galangal, Nutmegs, and such like, and that in weight, as we shall write hereafter, of the aromatical wines. Some do take also Saffron unto it, not onely for the colour, but also for his vertue, and for that it yeeldeth a good savour to the Mead. When it hath sparged or wrought, then is the same to be lettē lie stopped the space of three moneths. But in case you desire to use it presently, then seeth the same not long, and expect not her working, but drink it freely as soon as it is cold, and then the next day make new again. In Liefeland they have in some places a custome, that they hoope their vessels with Iron, and so bury the Mead under the earth, and this will be stronger then any wine, but we will permit such countries to keep their customes. If you desire to make quickly a good Mead, then take a good Nutmeg, and one ounce of Cinamom cut small, and pour thereon three quarts of water, then let the third part seeth away, and then put unto it half a pound of clarified hony, this being done, let it seeth again together, until that there remain about a good quart.

In old time was this Mead following to be made; take hony combs, wash the same well with luke-warm water, and afterwards let it seeth well. But if it be not sweet enough, then put more hony unto it, and scum it well; afterwards put thereto prepared Coriander half a pound, Sage and Hops, of each one handful, let a third part seeth away, and so keep it in a firre fat, at last hang Valerian, Cinamom, Cloves, Nutmegs, and, Mace therein.

Another sort: take as much scummed hony as you please, put the same into a clean leaded pot, and pour as much water unto it as you please, then take Sugar and Marjoram (according as you desire it to be strong. If you will put any Cinamom unto it, that is also not amisse, then let it seeth together, and skum it well. If so be that you desire to have it brown, then take 2. or 3. spoonfuls of hony, and let the same seeth well, and stir it well about until that it be strong, as soon as you take it from the fire, then pour presently water upon it, it will boyle together, and then pour the rest unto it, strain out the herbs, and then keep it in a cellar.

The common vertues of these Meads be, that they quench thirst. It is also good for all cold diseases of the braines, of the backbone, of the sinewes, and for all other diseases, for which wine is hurtful, by his penetrating vertue and force, it cleanseth and openeth the breast, it taketh away the cold dry cough, it cleanseth the Kidneyes, the reines, the conduits of urine, and the bladder, of all cold slimy matter whereof the gravel and the stone doth grow, and it expelleth also all hurtful matter out of the guts, wherefore the same is to be used in all diseases of the braines, as in the giddinesse, in the falling sicknesse, and in lamenesse which is caused thereby. In like manner it is very good for them that be Plagued with the Cramp, and the hot Podagra.

The twelfth Chapter.

THis twelfth chapter hath no more then two sorts of compounded things, as oyles and some other which be made with vinegar, which be therefore called Oxymel, Oxycraton, Oxysacchara, and such like. First we will write of Oyles, whereof there is much declared, and add thereto, for what they are to be used: amongst which there be some 1. of Plants, of Fruits, and of seeds, as well prest as beaten out: other by addition of certain herbs, flowers, roots, and other things which be decocted therewith. Some are distilled, and by force of the fire be drawn out of roots, out of Mints; out of Mettals, and such like things, and the manner of making them is divers, whereof we will write hereafter, and also declare thereby for what each of them shall be good.

Oyl of Poplar buds. §. 1.

BEcause that in the making of all Oyles there must heed be taken that the herbs, flowers, roots, and such like be not put too moyst into the oyl, the same must first of all be weathered a little and afterwards be chopt small, to the end the vertue and force may

come the better out of it. If you have not the hot Sun, then let it seeth in a narrow pot in hot water. If so be that you renew the herbs or the flowers two or three times, then is the oyl the more forcible. And now to come to our oyl of Poplar buds: take Sallad oyl 12. ounces, white wine 12. ounces, fresh Poplar buds (which be pownded) nine ounces, then let them steep the space of seven dayes in the wine and oyl, and stir them oftentimes about, afterwards boyl it in a narrow pot in water until all the wine be wasted, and afterwards wring it through a cloth. It is also to be noted, like as is before said, that if so be that you renew the Poplar buds two or three times, that then the oyl will be the more forcible, which may also be well done. This oyl is very good against the head-ach, pain of the joynts, of the reins, of the Kidneyes, and against the paine of the Gout, with other paines more.

Oyl of Mandragora. §. 2.

IT is oftentimes before declared, what force the Mandragora hath, to wit, that it causeth sleep, and causeth insensibleness. This oyl is prepared and made in the same manner as all oyles of other roots are made, but it is very seldome used but when great need doth require.

Oyl of Amber. §. 3.

ALL they that delight in distillation, and have endeavoured themselves to draw out the purest and cleanest out of all things, they have also found great vertue in the oyl of Amber; for which there hath been made special ovens, glasses, and other preparatives, &c. which were here too long to discourse, but we will onely declare her vertue and use. First, there is nothing more forcible against all venomous ayre, if one rub a drop thereof in the nostrils. In like manner the losinges are also good, amongst which two or three drops of this oyl is tempered. The same is good against all sicknesses of the head, as against the Palfey, and against the falling sicknesse, if one take it with Betony water, or with any such like water, and anoint it outwardly upon the neck; but that is especial good which is distilled of the white Amber. It is also very good for all diseases of the sinewes, as for the cramp, the lamenesse, and such like, it expelleth the stone, and the gravel, if the same be given with the water of parly; it furthereth also Childbirth if it be given with water of Vervein, so doth it also if one anoint the navel on the outside with Snakes grease and it together. It is also very commodious against the suffocation of the mother, if one anoint the same in the nostrils, and upon the pit of the heart. The losings wherein this oyl is baked, be special good against all cold rheumes, they strengthen the braines, they be good against all swooning and heart-beating, and they do also strengthen the digestive power of the stomach. In fine, this oyl may be used in stead of the true and natural Balm.

Artificial Balm. §. 4.

OF this artificiall Balm, and how the same is made after divers manners, and distilled, we have declared before in the second chapter sufficiently.

Sallad oyl, or oyl of Olives. §. 5.

THIS Sallad oyl is of all people so well known, that whereas oyl standeth without any surname, thereby alwayes Sallad oyl is understood; and it is also a gracious gift of God, that people may use the same for sundry necessities, which were too long to discourse; for how many kinds of Plaisters, Salves, Oyles and clisters, &c. be prepared of this oyl; but as much as concerneth this Sallad oyl, there be three sorts of the same used for Physick, to wit, one that is thorow ripe, the second that which is not thorow ripe; the third which is very old, for that each one of the three hath his proper nature; that which is clean ripe is of a warm nature, so that it defendeth the body from all cold being anointed thereon, it refresheth all the members, and maketh them fit for labour, it suppleth all the whole body and the skin, it asswageth all pain of the joynts, it cleareth the sight, it is good against all venom if one drink the same often and vomiteth it up againe.

again : so that the ancient Physitians have left a proverb behind them ; Wine sustaineth the body within, and Oyl outwardly. When the oyl is above a year old, then doth it lose much of her pleasantnesse, and the best driveth alway above, which is contrary in Hony, wherein the best doth lye alwayes underneath, and the best of the wine is alwaies in the middle. The oyl which is prest out of the unripe Olives, that is called *Omphacinum*, the same hath power for many kind of things, and especially in Salves : it is also very meet for the stomach through her astringent vertue, likewise it doth fasten the gums and the teeth. The old oyl is hotter then the other, and hath also more vertue to digest, it strengtheneth much the sight if it be anointed under the eyes, if one can get no old oyl, then look before into the Introduction how that the oyl is to be prepared.

Oyl of Behen. §. 6.

THis oyl of the roots of red and white Behen is not very much usual, howbeit that we do sometimes remember it in this book.

Oyl of Pyrethrum. §. 7.

IT is an oyl which is very hot, and that is not made at the Apothecaries but onely if the same be prescribed to be made, therefore we will write no further thereof.

Oyl of Bevercod. §. 8.

THE Apothecaries do make a certain oyl of Bevercod, which is made of many kinde of things for all cold diseases, and especially for all diseases of the sinewes, and pain of the joynts. It is very good for the Palsey, and stiffnesse of the neck. It allayeth the cold in Agues if the back bone be anointed with it. But we will here describe that which is easie to be made : Take Bevercod one ounce, *Euphorbium* three drachmes, *Myrrha* one quarter of an ounce, white strong wine eight ounces, Sallad oyl 12. ounces : let it seethe so long together until the wine be thoroughly consumed, afterwards strain it and keep it.

Oyl of Lead. §. 9.

THis oyl of Lead is thus made : Take dry Ceruse one pound, Vinegar which is two times distilled, one quart or more, and seethe it in a narrow pot in seething water an hours space, but stir it often about, and let it settle : afterwards distil it through a Filter, to the end the vinegar may run through it, and the oyl tarry in it : do this two or three times ; then set this oyl in sand, and distil it slowly, then will come out of it that which is fair and clean. This oyl healeth all ulcers marvellous well, as we in the fifth Part, the fourth Chapter, and 4. §. have taught. Another. Take Lead as much as you please, and beat it very thin, then pour as much distilled vineger upon it until it be well covered, then will it be lead white. When it is now clean consumed, then set it certain dayes in the hot sun, or in horsedung, and afterwards distil it in sand, until that the water which distilleth do alter, then set another receiver before it, and there cometh a ruddy oyl out of it,

Oyl of Penniroyal. §. 10.

THis oyl is made like oyl of Cammomil. You may adjudge the vertue by the property of the herb, yet it is not much used.

Oyl of Purslain. §. 11.

This oyl is prepared as the oyles of other herbs, but it is made very seldom.

Oyl of Cammomil. §. 12.

THis oyl is thus made : Take well favouring Cammomil as much as you please, put it into a pot, and pour upon it as much old Sallad oyl, until all the Cammomil be well covered, and then set it the space of fourteen dayes in the Sunne, or in some

other warm place: afterwards let them see the in a narrow pot in seething water, and then put out the Cammomil, and put in fresh again, and let it see the again, then wring it out well, and do this three times one after another, and then keep it until you have occasion to use it. This oyl is good for many kinds of things, it openeth the pores and sweat vents, it expelleth vapors, it allayeth rheumes, it is good for the sinewes, or all pain of the joynts; and asswageth also the pain of the guts.

Oyl of Capers. §. 13.

THe oyl of Capers is most commonly made at the Apothecaries in this manner: Take Capers roots one ounce, rinds and leaves of Tamarisk, the seeds of *Agnus Castus*, Harts tongue, and Cipers roots, of each one quarter of an ounce, Rue one drachme, Vinegar and good wine, of each one quarter of an ounce, ripe Sallad oyl twelve ounces, pound the roots grossly, and let them steep a whole night, afterwards see the them in an especial pot in boyling water, strain and keep it. This oyl is especially good for all hardnesse, obstructions, and pain of the Spleen, but you may in seething put some more wine and vinegar.

Oyl of Costus. §. 14.

TAKE of the very true & good roots of Costus one ounce, Cassie wood, or Elecampane roots in stead of it, half an ounce, sprigs of Marjoram gentle four ounces, oyl of *Sesamum* eighteen ounces, and wine as much as sufficeth. Let it steep two dayes and two nights, afterwards let it see the all together in water until the wine be thoroughly wasted, which you may perceive hereby, if that you let one drop fall into the fire, and that it hisse no more. This oyl is of a warm nature, it openeth the obstruction of the stomach and of the Liver. It is good against all diseases of the sinewes, it avoideth the growing of gray hairs, it preserveth the body in his natural colour.

In the first Part you have two other sorts of oyl of Costus, which may also be used for advantage, and they be also hotter than this present oyl is.

Oyl of Dill. §. 15.

THe oyl of Dill is made of the herb, of the flowers, and of old oyl, like as oyl of Cammomil is made. This oyl asswageth all pain, it openeth the pores, it consumeth wind, also all cold and hard swellings, it taketh away the shaking of the ague, it maketh one to sleep, and taketh away all pain of the head in hot Agues, if the back bone be therewith anointed.

Oyl of Eggs. §. 16.

HOW this oyl is made, and what it hath for efficacy and power, is taught in the first part the third Chapter, and sixt §.

Oyl of Annis. §. 17.

THIS oyl of Annis is made by distilling in this manner: Take one pound of small beaten Annis, and put it into a glassed helm, and pour so much water upon it until the helm be half full: but distil it the first time with a milde or slow fire in boyling water, until it begin to be hot, afterwards make a good fire, until that the oyl and the water do go over together. Now being distilled, then separate the water and the oyl one from another with a glassen funnel, for that the oyl swimmeth alwaies on the top. This oyl hath a great force against the giddinesse of the head, and against the Collick, and is also highly commended against the falling sicknesse, if one give thereof three or four drops. It is here to be noted, that if one will distil any such like, that one is alwayes to take for one pound, two or three pound of water.

Oyl of wild Cucumbers. §. 18.

THIS oyl is not usual in this countrey: But for what it is meet, look for that in the Table.

Oyl of Euphorbium. §. 19.

THis oyl is made thus: Take Euphorbium half an ounce, oyl of yellow Violets, and good wine, of each five ounces, let it seeth so long until that all the wine be consumed; afterwards wring it through a cloth: it is especial good for the cold braines and sinewes. In like manner it is also good against the pains of the head Cephalalgia, Hemisrania, and against the sleepey sicknesse if one annoint it in the nostrils. Item, for all pain of the joynts, of the Liver, and of the Spleen, if it proceed of cold.

Oyl of Foxes. §. 20.

BEfore in the second Part, the fourth Chapter, and 15. §. there is found this oyl of Foxes, and therewithal also his operation.

Oyl of Lillies. §. 21.

TAKE the white leaves of Lillies, and prepare the oyl like as is said of the Cammomils. This oyl healeth all cold pain of the breast, of the reins and the bladder, and especially of the Matrix, and also all pain of the guts. For that it is of a hot nature, it hath power to digest, it asswageth the cough it ripeneth all impostumations, it dryeth all bad sores of the head, and it diminisheth also all swellings, if one temper a little Saffron amongst it.

Oyl of Hemp seed. §. 22.

Out of Hemp seed is this oyl beaten: it warmeth and dryeth much, therefore it doth consume natural seed: yea if one eat too much of the same, then doth it the same hurt that Coriander doth: wherefore the same is very seldom, and that very little used in Physick, as also thereof but twice hath been spoken in this Book.

Oyl of the kernels of Apr. cocks. §. 23.

Out of the kernels of this fruit is oyl prest, like as is done of Almonds, but is is very seldom prepared in this countrey.

Oyl of Eldern flowers. §. 24.

YOU are to make oyl of Eldern flowers and of old Sallad oyl, as oyl of Cammomil is made. It asswageth the pain, it cleanseth, and is very good for the yellow Jaundies, and all diseases of the Liver, and also for their obstructions: likewise it doth also take away all pain of the joynts.

Oyl of Saint Johns wort. §. 25.

OF this herb, you must take the tops when it beginneth to ripen, to wit, the uppermost sprigs three ounces, steep them three dayes long in good Wine: afterwards wring them out well, and then put other in again and let it seeth together. Being sodden, wring it again even to the third time: and if the wine were sod away, then put more unto it. Lastly take three ounces of Turpentine, old Sallad oyl six ounces, Saffron one scruple: put this altogether in a seveal pot, and so let it seethe in seething water, so long until the wine be consumed: then wring it hard through a cloth, and let it settle: so do the Apothecaries make it. The Chirurgians do make it in this manner: Take four pound of the uppermost sprigs of Saint Johns wort, put them into a pot of the quantity of the five quarts, and pour two pound of Sallad oyl upon it, and as much white until the herbs be covered: then stop the pot tight, and so let it stand the space of six weeks: afterwards make it open, and put one drachme of Saffron unto it, but stop the pot by and by very close, and set it in a kettle with seething water, and so let it seethe the space of ten hours. This being all done, then pour it all together in a linnen bag, and bind it very fast unto it, and presse it hard out whilest that it is yet warm, put it in a glasse and

set it in the sun, or in another warm place; then will the oyl come on the top, lade it off then continually, and keep it well stoppt in a glasse. This oyl is hot and dry, and hath an especial astringent vertue: therefore it doth also heal all wounds and all wounded sinewes; yea all burning of fire, it asswageth all pain of the hips, of the bladder, and doth expel urine, &c.

Oleum Irinum. §. 26.

There are two kinds described, and are both very troublesome to be made, they be also not much used.

Oyl of Cherry kernels. §. 27.

This oyl is also very seldom used, and is made like as oyl of Almonds by pressing, and is much commended for moving of urine.

Oyl of Melilot. §. 28.

So is it also with this oyl of Melilot, it is also seldom made, and also very seldom used.

Oyl of Cresses. §. 29.

This oyl is also very seldom made, yet it is made like all oyls of herbes.

Oyl of Copper. §. 30.

This oyl do the Achymists distil, like the oyl of Lead, whereof there be two kinds described before, and there is no other difference between them, but that the Copper is somewhat smaller to be cut, and must be beaten somewhat thinner.

Oyl of Gourd seed. §. 31.

This oyl is not usual with us, and is very seldom used.

Oyl of Linseed. §. 32.

The vertue of this oyl may be gathered by the properties of the seed out of which it is beaten, and also out of many places of this book, wherein they be commanded to be used.

Oyl of white Sefamum. §. 33.

This oyl is made of the seed *Sefamum*, and it is also beaten out of the foresaid seed, like as the Linseed oyl, it hath a special power to ease all rough throats, to take away all hoarsenesse, and to make one have a good voyce: wherefore it is used in many parts of Physick.

Oyl of Linnen cloth. §. 34.

How this oyl is to be used, we have told in the first Part, and also taught therewith how the same is to be made. It is to be used for all running eyes.

Oyl of Bay. §. 35.

This oyl is brought unto us by thy Merchants in great quantity out of Italy: it is warm by nature, it openeth all obstructions, and asswageth all pains of the bowels, also all cold pains of the belly, of the Liver and of the Milt, the Kidneyes, the Matrix, of the sinewes, and of the joynts, and is also very good for all cold sicknesses.

Oyl of Mace. §. 36.

This oyl is brought unto us out of Indy, and used for divers cold accidents.

Oyl of the seeds and flowers of Poppy. §. 37.

First of, all there will be made of this plant and of the white flowers an oyl, which is more mild then the red and carnation flowers be, and will be made with Sallad oyl, like as Cammomil oyl is wont to be made, yet at sundry times renewing the infusing of the flowers, according to that one desireth to have it strong. This oyl asswageth all hot pain, it cooleth much, and is very good for all them that cannot sleep well, if the temples of the head be anointed therewith; and as the hot vapours do draw to the head, in any hot sicknesses, also the nostrels, the ears, and the temples of the head may be anointed with it.

The oyl which is made of the seeds of this herb, is made of the white, gray, and black seed, and beaten out of it, as the oyl of Linseed is made; it maketh fat, it asswageth the pain of the throat, heat of the Agues, and all heavy dreams.

Oyl of sweet Almonds. §. 38.

THere be two kinds made thereof (of sweet and bitter Almonds.) This oyl is pressed out or beaten out upon a pownding mil, like as the oyl of Linseed is beaten out. But if one will drink the oyl, then take Almonds well dried, which have a fresh and sweet taste, as much as you please, pownd them very small, and parch them a little, afterwards put Rosewater unto it, and presse it well out with a strong presse. But the oyl of sweet Almonds is much used. The oyl of sweet Almonds is good against the roughnesse of the throat, of the breast, of the Lights, and against all drought of the same. Further, it asswageth all pain of the joynts, it is also very pleasant for to be occupied in all meats, and good for all them which begin to consume, it maketh fat, and augmenteth human nature, it quencherh thirst, it allayeth the heat of the urine, and all pain of the bladder, together all ulcers of the womanhood, if the same be anointed thereon or injected therein. The oyl of bitter Almonds doth assuage all hardnesse of the sinews, it openeth all obstructions, it consumeth wind and all bad vapours, and it is especial good for all deafnesse, and all bad hearing, for all siffing of the ears, and it taketh also away all spots.

Oyl of Marjoram gentle.

TAke the herb Marjoram gentle 4. handfuls, wilde Thyme 2. handfuls, Myrtle leaves one handful, Southernwood and Mints, of each half a handful, Cassie wood two ounces, unripe Sallad oyl as much as will suffice for to cover all the foresaid; then stop it tight, and so let stand the space of 8. dayes in the Sun: afterwards wring it out hard, and lay fresh again therein: do this thus three times together. This oyl is special good for all diseases of the brains and of the sinews, and it is especial good in bathing against all lamenesse, or convulsion of the Palsey *Paralysis*; if the same be anointed in the ears and in the nose it taketh away all hissing: it moveth womans terms, and it withstandeth all venome of Scorpions. Some do make this oyl onely of the leaves, like as Camomil oyl is made, and it is made most so.

Oyl of Mastick. §. 40.

THe manner to make this oyl, and also his vertue is described in the third Part, the 11. Chapter, and 5. §.

Oyl of Narcissus. §. 41.

THis oyl is called by the Physicians *Oleum Narcissum*, and is made like as the oyl of Cammomil is wont to be made. This oyl is very good for the hardening of the womanhood, or if the same be shut too close: it is also used for the Palsey that cometh of falls.

Oyl of Myrtles. §. 42.

OF this oyl be two kinds made; that which is made of the seed hath an astringent vertue, wherefore it is also good for all hot ulcers, and for the chaps of the Arse-gut; it strengtheneth the slacknesse or loosenesse of the sinews, and it stayeth sweat. But that which is made of the leaves, strengtheneth onely the brains, the sinewes, the heart, and the stomach: but because that we can get no fresh, they are first to be infused in good wine, and to put unripe Sallad oyl unto it.

Oyl of Mints. §. 43.

THis oyl is made of Mints and unripe Sallad oyl, like as the oyl of Cammomil is wont to be made. This oyl warmeth the cold stomach, it taketh away vomiting, it maketh appetite to meat, it helpeth the Consumption, and it consumeth all hard swellings.

Oyl of Motherwort. §. 44.

THis oyl is very seldom used, and is made as other oyles, yet in this Book it is but once ordained.

Oyl of Nutmegs. §. 45.

THis oyl is made like as the oyl of Almonds is wont to be made, that it, by pressing it out.

Oyl of Cloves. §. 46.

TAKE good fat Cloves half a pound, pownd them very small, and distil it, like as be- for in the 18. § hath been said of Annis seed. A pound of Cloves doth seldom yeeld more then an ounce and a half of oyl. In the same manner may oyl of Nutmegs be also distilled, and there is hardly more gotten out of it then five drachmes out of a pound: both these oyles are more forcible then the same spices.

Oyl of Walnuts. §. 47.

THis oyl of Walnuts is prest out of old Nuts, like as oyl of Almonds; his vertue do we find described in sundry places of this Book.

Oyl of Pepper. §. 48.

WE will refer the preparing of this oyl to the Apothecaries; but it is good for all cold diseases of the sinews, as for the Palsey, the cramp, the convulsion of the mouth, shaking, falling sicknesse, pains of the hips, and other diseases more of the joynts. In like manner it is also good for a cold stomach, for the guts, for the reins, and for the cold bladder; for that it warmeth, it avoideth all sliminesse, it openeth all obstructions, it breaketh the stone of the bladder, and also of the kidneys.

There is also oyl distilled out of Pepper, like as is said of the Annis.

Oyl of Peach Kernels. §. 49.

This oyl is also prest out like to the oyl of Almonds.

Oyl of Quinces §. 50.

THe vertue and nature of this oyl, and also the manner of making it, is described in the third Part, the 15. Chap. and 5. §.

Oyl of Rue. §. 51.

THis oyl is to be made of fresh Rue, like as oyl of Cammomil is made; it is warm by nature, it openeth and asswageth the pain, it is good for all cold kidneyes, for a cold Matrix, and for the pain of the same, if the belly be anointed therewith, or if one set a clister with it. It is very meet for the sinewes, for the crampe, and it expelleth all cold humors.

Oyl of Earthworms. §. 52.

IN the fourth Part, the fourth Chap. is the vertue of one of these oyls shewed and the manner how to make it. But there is also another made, which doth warm more, doth penetrate more, and strengtheneth all the joynts: Take Cammomil, Sage, Agrimony, and field Cipres, of each half handful, Rosemary half as much, Juniper berries one quarter of an ounce, Earthworms decocted in Wine six ounces, white Wine one pint, Sallad oyl 15. ounces: let it seethe together until the Wine be thoroughly consumed, and then wring it out through a cloth.

Oyl of Privet. §. 53.

THe Physitians and Apothecaries do name this privet *Ligustrum*: This oyl is made as the oyl of Cammomil, it strengtheneth all sinewie parts, and hindreth the hair to be gray.

Oyl of Rubarb. §. 54.

TAke Rubarb 9. ounces, Agaricus three ounces, Turbith three ounces and a half, roots of Polipody 4. ounces, Cinamom and Juniper berries, of each half an ounce, red, white, and yellow Saunders, of each 4. scruples, long and round Hartwort, Gentian, roots of blew Flower-deluce, of Costus, *Asarabacca*, Zeduary, Ginger, Galangal, Elecampane roots, and Calamus, of each one quarter of an ounce, Tormentil, and roots of Carduus Benedictus, of each one drachme and a half, Nutmegs, Cloves, Bayberries, Mace, and Cucubes, of each one drach, the seed of Sorrel, of Purslain, red and white Behen, and Doronicum, of each half a drachme, Lignum Aloes, red and white Coral, scraped Ivory, Mastick, Spica, and Camphire, of each one scruple, burnt Ivory one drach. pound them all grosse, then pour upon it the clarified juyce of Burrage, and of Balm, of each 6. ounces, the juyce of Oranges, 3. ounces; let it steep certain dayes together, stirring it oftentimes about to the end it do not stink: afterwards you are to distil it in seething water, then doth it first of all yeeld a water: but as soon as you perceive that it begins to get another colour, and that it beginneth to drop slowly, then augment your fire and receive oyl in another receiver, and keep it well stoppt, at the last set it the space of 20. dayes in the Sun. This oyl is somewhat ruddy, and smelleth very well; so that if one put a drop in a great deal of Well water, then getteth it a savour accordingly. This oyl doth purge very mildly if one give half a drachme thereof more or lesse, according to the quality or importance of the Patient. This oyl is most meetly given with Goats milk; it is also especial good against the Quartana, if the Patient have governed himself well before in his order of dyet. In like manner it is also good in all other Agues, which the Physitians do coll *Puridas*: it killeth and driveth out the Worms if it be given with Purslain water or with Wine. This oyl is also especial good given once every 6. dayes against the Pox: it is also good against the rheumes, against the pain in the head *Cephalalgia*, against the giddinesse, and against the pain of the kidneyes, it obstructeth womens terms, and the flux of humane seed. It is good against the gout of the feet, if once every 14. dayes two or 3. drops of this oyl be given with the decoction of field Cipres. It is also very good against all running Fistulas, against all ulcers, and against the Canker: also for all diseases of the places in women women, and of the matrix, if one inject half a drach. thereof with the decoction of Feverfew, it provoketh also fruitfulness. The water that cometh out before the oyl hath his vertue also, for that it prepareth all humours which cause any sickness in the body, if one once or twice a day take thereof half an ounce at each time with three ounces of Endive water.

Oyl of Roses. §. 55.

After the common fashion is this oyl of Roses prepared, and is very meet for divers matters. It is made of Rose buds as the oyl of Cammomil. This oyl cooleth much, and hath an astringent vertue; it is good for all manner of heat of whatsoever occasion that the same may be caused, used outwardly, or in clisters inwardly, and it strengtheneth also the joynts which be anointed therewith, like as they be ordained for it throughout the whole Book.

This oyl is made very seldom of the white Roses; and it cooleth also more, then that which is made of red Roses.

Oyl of Saffron. §. 56.

The oyl of Saffron is not used by us, but yet is prescribed in some places of this Book.

Oyl of Sandarach. §. 57.

This oyl is also utterly unknown, it is but once prescribed in this Book.

Oyl of Sulphur. §. 58.

This oyl of Sulphur is an Alchymistical Oyl, and is made in divers manners: some do put one quarter of Amber unto it; other do put Petroleum unto it. In Italy do they take Sulphur vive, and pour the urine of a man childe unto it, and so bury it in horse dung and afterwards distil the oyl out of it. But after these two manners following is this oyl chiefly made; Take 5. pounds of small beaten Sulphur, and temper oyl Tyles amongst it: afterwards lute the helm very tight, and at the first make a small fire, and afterwards increase it. There is gotten out of the foresaid 5. pounds of Sulphur, no more then about one ounce of oyl: this oyl must with great providence be given, to wit, in winter time two drops with vital waters or Malmsey, and in sommer time with Endive water. This oyl doth assuage all griping of the belly, whether it be in the undermost or in the uppermost guts: as also all pain of the stomach which proceedeth of wind and cold humours: the same may also well be used outwardly. It is likewise very good anointed in the childrens mouthes when they have the Canker, or any stinking ulcer in the mouth. Further, Warts are also taken away with it, and it maketh the teeth white.

To make the other oyl of Sulphur: Take Sallad oyl and pour therein a good deal of small powned Sulphur, and let it stand so long upon the fire until that al the Sulphur be clean melted stirring it well about, then are you to quench gloing peeces of coals in it, untill the oyl be thoroughly sunken into the Tyle stones. This being done, pownd these stones, and put them alone in the helme; the rest that overfloweth, and also the Sulphur is to be done away, and then distil further all that is put into the helm.

The first oyl that cometh out of it doth appear somewhat bleak in the helm; and when it beginneth to be white, then set another receiver under it. This oyl seemeth to guild if it be anointed upon Iron, or upon any other thing.

Oyl of blew Flower-deluce. §. 59.

This oyl is to be made like the oyl of Lillies, but it will be somewhat strengthened through the roots; it is somewhat strong, but it asswageth all pain, and melloweth all swellings, it is especial good against all hardnesse of the joynts, it warmeth the Matrix, driveth away the cramps and taketh away all pain and hissing of the ears: lastly, it doth withstand the Canker of the nose.

Oyl of Scorpions. §. 60.

Because that we (God be praised) have no Scorpions in England, therefore is the oyl brought unto us out of Italy, and is made thus; Take ten or 12. Scorpions, cast them in twelve ounces of oyl of bitter Almonds, and so set it five or six weekes in the Sun; after-

afterwards strain it and keep it for to use. This oyl breaketh the stone of the bladder, and of the reins, and it driveth the same also out, if it be anointed upon the reins, and upon the privities, or if it be injected into the bladder; lastly, it is also good for many other things more.

Oyl of water Lillies. §. 61.

THis oyl is made as well of the yellow as of the white water Lillies, but unripe Sallad oyl is taken for it, and it is made of the oyl of Violets. The oyl of the white water Lillies hath also the same vertue with the oyl of Violets, but that it is somewhat colder, but not altogether as cold as that of Poppie heads; wherefore these oyles are commonly tempered with other oyles, according to the quality of the disease. It is also very good for them that cannot rest, and for the pain of the Kidnyes of heat; also it is passing good against all venereal lusts, if the privities be anoynted with it. It is also used for divers matters, as may appear in divers places of this Book.

Oyl of Mustard seed. §. 62.

This oyl is very seldome used for that it is so hot.

Oyl of Spikenard. §. 63.

Under the name of Oleum Nardinum be there two sorts described; we will commend the greater to the Apothecaries, because it containeth divers doubtful things, but the smallest is thus prepared; take good Spikenard three ounces, wine and water of each two ounces and a half, oyl of white Sesamum eighteen ounces seeth, them together in hot water until that all the moysture be consumed, then strain it. This oyl doth heat, digesteth, and refineth all that is thick and grosse, and is somewhat astringent; it is good for all cold diseases of the braines, of the stomach, of the Liver, of the Spleen, of the Kidnyes, and of the Bladder, it cleanseth the head if it be anointed in the nose, it maketh a good colour, and also a good savour. It is brought now adaies meetly good and reasonable cheap out of France.

Oyl of Antimonie. §. 64.

THis oyl is thus prepared; take a pound of Antimony, pownd it grosse, and set it in the fire in a melting crust, when it beginneth to smoke, then cast half a drach. of Boreas unto it; when it is molten, then pour it upon a flat stone and let it be cold, then stamp and melt it again, like as before, and so do three times; afterwards pownd it to fine powder, and pour vinegar upon it which is distilled two or three times, then put it into a glasse being stopp'd very close, yet stir it often about, and that so long, until the vinegar begin to be red, which is wont to happen in the space of a moneth or twain. This being done, put all together into an helme, luted very close, and distil it with a mild fire so long until the rednesse be discerned, and as soone as that is perceived, then augment your fire, and fasten another receiver unto it, and make a good fire as long as one drop of oyl comes out of it. Out of a pound of Antimony you cannot have above one drach. or twain, according to the goodnesse of it, or the oyl is well made. This oyl hath a red brown colour, it is also used for the healing of wounds, and of old ulcers, like as is also for all Fistulaes, Leprosie, and for the Pocks, yet neverthelesse according to the importance of each sicknesse, if there be a drop or twain taken tempered with any thing else. The ulcers are washed with the water, but it is very sharp. Another; take one pound of Antimony, pownd it small, and put unto it one quarter of an ounce of Mercurium Sublimatum, put it then into a glasse retort, and give it presently a good fire; there doth come no water out of it, but onely (five or six hours after) cleare oyl.

Oyl of Steele, or oyl of Irons §. 65.

TAke small field Steele or iron, and white Flint, pownded very small, of each half a pound, put it in a glasse helm, and distil it in sand, first with a mild fire, and afterwards alwayes gretter, it giveth first water, & afterwards red oyl, which hath a very pleasant

fant smell, even like to Balsam. Now for to distill this oyl, then are you to make an oven after the fashion of a Retort, as the Alchimyists do know, these things are the rather searching out of the secrets of nature, then necessary for Physick.

Rocke or Peteroyl. §. 66.

Some of these oyles be white, some yellow, and there are also some black, which is Scalled Naphta. Peteroyl doth run in Italy, and also in other places out of the rock: it doth heat, dry and consume; it is also good for the falling sicknesse, for the Palsey, for doting, and for the enfeebled memory.

Oyl of Turpentine. §. 67.

The manner to distill this oyl have we shewed in the first Part, the thirteenth chapter and fourth §.

Oyl of Violets. §. 68.

This oyl is made of blew Violets and unripe Sallad oyl, it is somewhat colder then the oyl of Roses; therefore doth it the more coole all heat, especially the heat of the reines, and of the kidnyes; in like manner it doth asswage the drie heated breast, and is moreover good for many things.

The oyl of Wal-flowers is prepared also of the flowers, and of old oyl, it is very good against the convulsion of the sinewes, it driveth away all diseases of the breast, the kidneyes, and the bladder, and it is also good against all pain of the sinewes and of the Matrix; also it asswageth and melloweth all other diseases.

Oyl of Ireas.

The oyl of Ireas is utterly unknown unto us.

Oyl of Virriol or of Copperas. §. 69.

This oyl is very highly commended, it getteth an especial sweetnesse, which is a miraculous work of nature, and is made thus; take four pound of Hungary Copperas, stamp it very small, and then put it in a great body, then let it dry certain dayes; afterwards pounnd it again, and so set it in a warm place covered with a fine cloth, to the end that the favor of Copper may thereby avoid. This being done, pour four pound of the best spirit of wine upon it which is well rectified; lute it well, and so keep it 40. dayes in a warm place, or dunghil, and afterwards distill it, then shall you see the oyle swim on the top of the wine. There be yet more longer and more other meanes for to distil this oyl, but this is the commonest manner. Concerning the vertue of this oyl, and her force, it is very needful that it be providently dealt withal, it must alwayes be mixt with somewhat else, for that it is too sharp, that it will inflame the intrailles; otherwise hath it the same force of the oyl of Sulphur, but it is much stronger and penetrating; it is very good against all filth, and infection, and against the Plague it is especial good; it hath also great power to cause the matter of the Pleurisie to avoid out of the breast, it is good for all though phlegm and corruption of the breast to fetch it out, it suffereth also no stone to grow in the bladder, and healeth the bruised or perished bladder. There is no more but 3. or 4. drops to be given with wine. There may also losinges be made of it. Also this oyl is used by some according to the importance of the cause, like as is admonished in certain places of this book. This oyl doth strengthen the cold stomach, it consumeth Phlegma, it causeth all rough and slimie matter to avoid, it is good for the griping of the guts, and against all red fluxes, it quencheth thirst, it withstandeth all wambling and parbraking.

Because that these oyles must be driven through strong fire, it doth happen otherwhiles that the glasses leap in peeces, by which all the cost, the trouble, and labour is lost. Now for to prevent that, are the glasses to be hardened in this manner following: first are the bodies to be luted very well with lome, and before that you will use the same, anoint them oftentimes with Allum water, and so let them dry: and if so be that they happen for

all

all that to break, yet may they afterwards be soldered together, that they may hold water in this manner: Take Venice glasse, red Lead, Linseed oyl, Mill dust, and the white of an Egg, mix it well together, and then spread it meetly thick upon the cracks, and let it dry afterwards.

Oyl of Wheat. §. 70.

The Oyl of Wheat is made like as the oyl of Annis seed is made.

Oyl of Juniper berries. §. 71.

This oyl is drawn out of the powdered berries: It may also be distilled like as the oyl of Annis seeds, but because that there is very much brought to sell of it, the same may be bought better cheap then made. That which is distilled out of the wood is made as followeth: Bury a pot in the ground that it stand about three fingers out of it, then take another pot, which fitteth well the undermost, and fill the same with small chips of Juniper wood; then make over it a fatoch lid with many small holes, that the moisture may drop through it, and that the chips fall not into the undermost pot. This being done, then whelm both these pots one over the other, and then make a fire round about the upper pot a good while, then gather the oyl together which is dropt into the undermost pot.

This oyl is very good against all that doth outwardly infect the skin, as old ulcers and cankers, but especially against the Varices: The oyl which is drawn out of the wood hath an unpleasant savour, but that which is drawn out of the berries, hath a very pleasant savour and smell. They have both of them one operation.

Oyl of Willow leaves. §. 72.

The leaves, flowers, and fruits of this tree have an astringent vertue, whereby they draw the wounds together and heal them, withstand the spitting of blood, and take away all spots of the face. The oyl thereof is good being dropt in the ears, against the pain of the ears: and if the same be anointed on the outside, then it is very good against the Gout, and it taketh away all unchastnesse. There may also oyl be drawn out of Willow wood, as it is drawn out of Juniper wood.

Oyl of Argal. §. 73.

Take four pound of Argal, pown it very small, and set it to burn in a pot bakers oven; afterwards pown it again, and then put it into a woollen bag, and so hang it in a cellar, then will there drop out cleer moysture, which is rather a water then an oyl.

Oyl of Wormwood. §. 74.

Ancient Physitians do make this oyl, of Wormwood which groweth in Ponto, and with unripe oyl, like as is said of the oyl of Camomil: but because that we have not that Wormwood, therefore are we to take that of ours; and one must take half so much Roses as Wormwood. This oyl hath an especial power to warm, it strengtheneth also all that is cold, and especially the stomach, it maketh an appetite to meat, it openeth all inward parts; and if one anoint the Navel, it killeth the Worms, without any hurt: wherefore it is more profitable for young and old people, then the Wormseed.

Oyl of Tyles. §. 75.

This oyl is to be distilled after two wayes, as the same is to be seen in the Table.

Oxycraton. §. 76.

These things following do keep the Greek name with the Physitians and with the Apothecaries, for Oxy is Vinegar: afterwards do they add somewhat unto it, which is tempered with the foresaid Vinegar, like as with the Oxycraton; where Wine water

water and vinegar are tempered together, which of the Latinists is called *Posca*: for which the same is now to be used; that is to be seen in many places of this Book.

Oxymel Simplex. §. 77.

This Oxymel is described in the first Part, the second Chapter, and sixt §. It is very often used, and praised for many things.

Oxymel Compositum. §. 78.

This is therefore named so, for that it is made of sundry things, which is also described in the first Part, the second Chapter.

Oxymel Scillinum. §. 79.

This is also described in the same place, and used oftentimes.

Oxyrrhodinum. §. 80.

It is another compound then the former. It is much used against the pain of the head, laid upon it on the outside, there be two kinds of it; as is taught in the second Part.

Oxyfaccinum. §. 81.

This compound, and her vertue and operation, is described in the first Part, the eighth Chapter, and 2. §.

The thirteenth Chapter.

This Chapter is a gathering together of all kinds of Plaisters and Pils, which be described in this Book.

Emplastrum album Colatum. §. 1.

VVe do commonly call this, the white Plaister. How it is made, is to be sought for in the Table.

Apollicon Plaister. §. 2.

After two wayes is this plaister made; whereof one is called *Triapharmacum*, for that there cometh not above three things into it: You may look for both of them in the Latine Table.

Emplastrum de Baccis Lauri. §. 3.

The manner how to make this plaister, and also her vertue, is described in the third Part, and the eleventh Chapter.

Basilicon. §. 4.

Her preparation and use is described in the fifth Part, the first Chapter and fifteenth Section.

A Plaister for the Rupture. §. 5.

There be divers specified of these in the third Part, the third Chapter, and §. 1.

The Plaister Ceroneum. §. 6.

If there be any that desire to make this Plaister, he may look for the same in *Nicolas*, for that it is very seldom used.

Diachilon.

Diachilon. §. 7.

OF this *Diachilon* there be three kinds made; the common *Diachilon* is described in the third Part, the 20. Chapter, and 20. §. The great *Diachilon* is found at the Apothecaries, it melloweth and ripeneth all hard swellings.

The Plaister de Galbano. §. 8.

HOW this Plaister is made, and also her operation, is to be sought for in the Latine Table, under the name of *Galbannum*.

Gratia Dei Plaister. §. 9.

THAT is as much to say as Gods graces Plaister. The manner to make the same is found in the fifth Part, the first Chapter, and 16. §.

Emplastrum Griseum de Lapide Calaminari. §. 10.

VW E call this the gray Plaister: it is also made after two wayes, and it is described in the fifth Part, the seventh Chapter, and 12. §.

Hyssopi Cerotum, sive Philagii. §. 11.

This Plaister is made very seldom, and used but three times in this Book.

Emplastrum de Melito. §. 12.

THIS is a Plaister of the flowers of Melilot, and is made of many kinds of things; wherefore we will pretermitt her description, and whereto it is to be used, shall you find here and there in this Book.

Emplastrum de Muscilaginibus. §. 13.

FOR what this Plaister is to be used, and how the same is made, that is found in the first Part, the sixt Chapter, and seventh §.

Emplastrum Oxyroceum. §. 14.

AFTER three manners is this Plaister described; it hath her name of the Vinegar, and of the Saffron. Of her excellent operation may you read here and there in this Book.

Emplastrum de Pelle Arietinis. §. 15.

LOOK for this in the third Part, the third Chapter, and first §. how highly the same is commended for all manner of ruptures.

Emplastrum de Radicibus. §. 16.

THIS Plaister of roots is but once used in this book, and that in the third Part, the twentieth Chapter, and eleventh §.

The Plaister of Sandalini. §. 17.

THIS Plaister is called at the Apothecaries, *Ceratium Sandalinum*, which may be made to a salve, as it is described in the third Part, the 11. Chapter, and 16. §.

The black Plaster. §. 18.

WHereof there be two sorts described, to wit, in the first Part, the fourth Chapter, and second §. and in the fifth Part, the seventh Chapter, and sixth §. for that they be very much used of the Chyrurgions.

Sparadropen. §. 19.

These Sparadrap are described in the fourth Part, the second Chapter, and second §.

Emplastrum Viride. §. 20.

THis Plaster do the Chyrurgions use much in old stinking ulcers, as the same is described in the first Part, the first Chapter, and fiftenth §. And because that now all the Plaisters must be boyled, therefore it is taught in the first Part, the fourth Chapter, and third §. how to make a proof, whereby it may be known, when the same are sodden enough, and must be taken from the fire.

The second Part of this Chapter speaketh of Pils.

THe most of all compounds and mixtures of Pils, be composed together of many things, and they be used but one drachme alone at one time, and not with whole or half ounces, as the Confections or Conserve are, wherefore it is not needful for to adde their description here: and also seeing that each housholder may buy the same for a small sum of money at the Apothecaries: but we will nevertheless discover the virtues and commodities of all the Pils which be in this book commemorated, and for what sicknesse that they are to be used.

Pillula de Agarico. §. 1.

Pills of *Agaricus* be good for all them that be short on the breast, or be vexed with any cold cough, and much tough phlegme.

Pillula Aggregativa. §. 2.

THese Pils be very good in all lingering Agues, in all diseases of the head, of the stomach, and of the Liver, they expel *Cholera*, and all slimy matter.

Pillula Elephantina. §. 3.

THese Pills do cleanse the stomach, the brains, and the head, from all tough, grosse, and slimy humours; they do strengthen the stomach, and her digestive virtue: they be also very common and safe.

Pillula de Aloe lata. §. 4.

How that *Aloe* is to be washed, and Pils prepared of it, you may see in the Introduction of this Book.

Pillula Azajareth. §. 5.

THese do expel the *Cholera* and the *Phlegma*, and are good for all rheumes which cause the Cough.

Pillula Aurica. §. 6.

THese cleanse the head, sharpen the sight, expel wind out of the guts, and do loose without pain.

Pillula de Bdelio. §. 7.

THese Pils be very good against much bleeding of the Pyles, and against womens flow-
ers.

Pillula Benedicta. §. 8.

They do purge the *Phlegma*, and especially that that falleth into the joynts. They do also cleanse the kidneys and the bladder.

Pillula Cochia. §. 9.

THese do purge the head very mightily of all grosse, tough, and slimie matter, in like sort also the sinews, therefore they are also much used.

Pillula de Cynoglossa. §. 10.

THese Pils have a marvellous operation in staying all kind of thin and subtile defluxions that fall into any part of the body, and to ease one of all manner of pain; but they are very seldom used, unlesse it were in great extremities.

Pillula de Euphorbia. §. 11.

THese Pils have a mighty power to expel the water in the Dropfie, and all other matter which is caused of any tumour. They be also good for all pain of the reins, and for the *Podagra*, which is caused of any humour: but they be not much used.

Pillula Fasida. §. 12.

THese purge all grosse, tough, and slimy humours; therefore they be also good for all Species of the Gout.

Pillula de fumo Terra. §. 13.

THese Pils of Fumitory, do purge all salt and sharp humours of the gall, therefore they be also good for all diseases of the Skin.

Pillula de Hermodactilis. §. 14.

These Pils be especial good for all diseases of the Gout, and for other causes more.

Pillula de Hiera simplici. §. 15.

THese be very good for all diseases of the stomach, that be caused of any manner of slimy humours.

Pillula de Hiera composita. §. 16.

THese are good for all infirmities of the head and sinews, which are caused of slimy humours, and for other matters more.

Pillula de Hiera cum Agarico. §. 17.

TO these Pils of *Hiera* is a little *Agaricus* added. They do empty the stomach and the breast from all grosse and tough humours, and they be good against the sissing of the ears.

Pillula de Inda. §. 18.

BEcause these Pils are made with small trouble, viz. for all pain of the guts, therefore be they described in the third Part, the fifteenth Chapter, and 6. §.

Pillula de Inda. §. 19.

THese sorts of Pils be described, where we do treat of the hardnesse of the Spleen, for that they be especial good for it, as they be also very necessary for the Melancholy, against the Canker, the Leprosie, bad ulcers, heavinesse of the mind, and against the Quartain Ague.

Pillula de Lapide Armeno. §. 20.

THese do purge Melancholy, and the burnt *Cholera* very mildly, they be also good for all maladies which do proceed out of them.

Pillula de Lapide Lazuli. §. 21.

THese Pils of Lazure stone be used against all diseases of Melancholy, and also for all others which be caused through burnt gall.

Pillula laci. §. 22.

They do cleanse the head of all *Phlegma*, and strengthen the sight, like as their name doth testifie.

Pillula Masticina. §. 23.

THese Pils do defend the stomach from all sicknesse, they loose mildly, they do strengthen much, and let not the humours putrifie; they do great pleasure and vertue unto all them that use the same, against all pain of the stomach, of the head, of the belly, and the Matrix. Item, for all pensivenesse be they also especial good.

Pillula de Meserco. §. 24.

THese Pils do expel very vehemently the Dropsie, wherefore they are also used in *Anasarca* and *Ascite*.

Pillula de Opopanaco. §. 25.

THese be good for the Palsey, against the convulsion of the mouth, against the weakness of the knees, against the *Podagra*, and more other pains of the joynts, and also for all diseases of the sinewie parts.

Pillula pestilenciales, sive Ruffi. §. 26.

How these common pils and other more be prepared, we have declared in the sixth Part, the fifteenth Chapter, and 12. §. and admonished also thereby how that the same hath an excellent vertue for to preserve one from the Plague, and to expel all stinking humours from the stomach.

Pillula de quinque generibus Myrobalanorum. §. 27.

THese purge the Melancholy, the *Phlegma*, and the *Cholera*, and do also cleanse the blood.

Pillula Rhabarbaro. §. 28.

THese pils be especial good in the beginning of the Dropsie, in the obstruction of the Liver, in like manner also in all lingering Agues. Look further *Rhabarbarum*.

Pillula de Sandaracha. §. 29.

These Pils be seldom made, and also scant used.

Pillula de Sarcocolla. §. 30.
Take each one ounce white Wax seven ounces and a half, Salts oyl 24. ounces, take them and write them and write them to melt the Wax in this decoction. This salve They expel the *Phlegma*, and all sicknesses which are caused of it.
Pillula de Scirpina. §. 31.

These pills have an especial power in the pain of the hips, the gout of the feet, and of the joynts: they be also very good for the stomach, and further womens terms:

Pillula sine quibus esse nolo. §. 32.

These pills do marvellously purge Cholera, Phlegma, and the Melancholy, and are especial good for all Rheumes, and be especial good for all dark sight. They are also good for the pain of the ears, and for all pain of the guts.

Pillula stomachica. §. 33.

These pills expel *Phlegma*, and the *Cholera* out of the stomach, and moreover out of the head, and they be also good for many more diseases.

The fourteenth Chapter.

The Physicians and Apothecaries have certain conserves in use of some fruits, and other things, whereas they temper nothing but Sugar with it, which they call *Rob*: amongst which the commonest is the *Rob de Berberis*, and *de Citionis*, that is, *Rob of Quinces*, and *De Cornubus*, that is, of *Gauriles*, *Rob Nucum*, that is, of Nuts, *De Ribes*, that is, of Raspes, &c.

Hony of Roses. §. 1.

Hony of Roses is made after divers manners, like as such is taught in the first part; the third Chapter, and 4. §. whereas his use and vertue is declared.

Vinegar of Roses. §. 2.

Take red Rose buds, cut off the white beneath, and pour red wine Vinegar upon it, to the end that they be well covered with it, and then let them stand so the space of two months in the hot Sun. In this manner also is made all manner of vinegar of herbs, and other flowers.

Vinegar of Rue. §. 3.

This Vinegar is made after the same manner as the Vinegar of Roses.

The fifteenth Chapter.

This Chapter is none other, but a gathering together of certain Salves, Siefs (which be Eye powders) Syrupes, and Species, which be remembred in this book, and used daily at the Apothecaries.

Egyptiacum. §. 1.

WE will now speak first of the salve of Egypt, whose preparation is described in the fifth Part, the first Chapter, and 16. §.

Salve of Agrippa. §. 2.

Take Bryony roots 12. ounces, roots of wilde Cucumbers six ounces, Squills three ounces, Ireas one ounce and a half, roots of Fern, of wilde Eldern, and water
D d d 3

nuts, of each one ounce, white Wax seven ounces and a half, Sallad oyl 24. ounces; take the roots all fresh, and let them steep the space of eight dayes in oyl, afterwards seethe them and wring them out, you are then to melt the Wax in this decoction. This salve is marvellous good for the Dropsie, and all swelling of the body, it is also good for all diseases of the sinewes, it driveth out the water, and if it be anointed on the outside, then doth it loose the belly, and is especial good for all pain of the kidneys.

Salve of Alabaster. §. 3.
This salve is also very seldom used, and in this book was it spoken of but once.

Unguentum album. §. 4.

IN the fourth part of this book be described five kinds of these white salves, and therein declared for what they be meet. These white salves are so rife and common, that the skin can scarce get any disease for which the same are not used.

Unguentum de Alibaa. §. 5.

THis salve of Hollihock roots is very common, whereof there be four kinds, and also their vertues described in the third part, the 14. Chap. and 1. §.

Unguentum Anodynum. §. 6.

THe Grecians do call those salves Anodyna, which do assuage all manner of pain, whereof there be sundry described in this book, which you may look for in the Register.

Unguentum mundificativum de Apio. §. 7.

THis is a mundifying salve, made of Smallage, her preparation is described in the third part, the third Chapter, and 9. §.

Unguentum Apostolorum. §. 8.

THis salve of the Apostles and her efficacy is described in the third part, the eighth Chapter, and third §.

Vnguentum Aragon. §. 9.

THis salve is much used, but is very troublesome to be made, it helpeth all cold diseases of the body, all convulsions of the sinewes, the weaknesse of the joynts, and all pain of the same.

Vnguentum de Artanita. §. 10.

OF Mesua, there be two kinds of this salve described which are very seldom made, they be especial good against the dropsie, they kill worms, and expel the same, they loose the stomach very mildly, if one anoint it very fat underneath the navel, like as is wont to be done in vomiting.

Vnguentum de Cerussa. §. 11.

This salve is described in the fourth part amongst other white salves.

Vnguentum Citrinum. §. 12.

AT all Apothecaries this salve is alwaies ready, but it is somewhat troublesome to be made: it driveth away the spots in the face, it is good against all roughnesse, against all rednesse of the eyes, and it softneth all hardnesse, but is not much used in this book.

Vnguentum

Cap. 15. Part 8. The general Practise of Physick.

Unguentum Comissurae. §. 13.

THIS salve is very good against all mischances of women, it stoppeth the bleeding of the Piles: and it is also very good for the Kidneyes, but it is very hard and troublesome to be made.

Salves for Scabs. §. 14.

Sundry of these salves are described in the first Part, the third Chapter, and ninth §.

Unguentum Infrigidans Galei. §. 15.

THIS cooling salve is in the first Part, the first Chapter, and 1. §. described, and therewithal also her vertue and operation.

Unguentum Martianum, vel Martiatum. §. 16.

THERE are three kinds of them described by the Physicians which be compounded of many things together, and are also of sundry operations, yet here too long to discourse.

Unguentum Mercuriale. §. 17.

THIS salve of Quicksilver is much used for the Pocks, and is described in the first part, third Chapter, and fift §.

Unguentum Nervinum. §. 18.

The description of this sinew salve do you find in first Part, the 13. Chapter, and 2. §.

Vnguentum Nibili. §. 19.

Her preparation is to be found in the first part, the seventh Chapter, and 4. §.

Vnguentum Pectorale. §. 20.

Whereof be two sorts described in the second part, the fift Chapter, and fift §.

Pomada, Pomadoes. §. 21.

The manner to make this salve shall you find in the first part, the eleventh Chap. and 1. §.

Vnguentum Pompholigos. §. 22.

THE preparing of this Tuty salve is described in the second part, the second Chapter, and second §. and her vertue is to be found in the table of the Tuty.

Vnguentum Populeonis. §. 23.

THIS Poplar salve is rise at all Apothecaries, and is very troublesome to be made: wherefore is the same to be fetched at the Apothecaries; it is good against all unnatural heat; and if it be anointed upon the temples of the head, then procurerth it sleep.

Vnguentum Rosatum. §. 24.

THE preparation of this salve is described in the first part, the first Chapter, and second §. and is there also taught how that it is good against all hot pain of the head, and other pains which be caused through heat.

Vnguentum Sandalinum. §. 25.

THis salve of Saunders is much used in effluxion of humane seed, and is described in the third part, the sixt Chapter, and fift §. This and other salves be used for many other things, which (as the cause shall require) are to be sought in the table.

The second Part of this Chapter, of Sief.

WE have discovered before, that the Physitians understand through this Arabian name *Sief*, all manner of fine and impalpable eye-powders, whereof some have been described in this book.

Sief Album Rafis. §. 1.

THis *Sief* is used for all red, sore, and waterish eyes, and is described in the first part, the 7. Chap. and 1. §. for what it is further to be used, look for that in the second table upon the name *Sief*.

Sief de Fellibus. §. 2.

The manner to prepare this *Sief*, is to be found in the first part, the 7. Chap. and 15. §.

Sief Memishe. §. 3.

His preparation is in the first part, the seventh Chapter and tenth §.

Sief de Plumbo. §. 4.

This is described in the first part, the seventh Chapter, and tenth §.

Sief de Rosis. §. 5.

This *Sief* of Roses is described against sore eyes in the first part, the 7. Chap. and sixt §.

Sief de Thure. §. 6.

This *Sief* of Frankincense is set down in the first part, and seventh Chapter.

Sief viride. §. 7.

This *Sief* shall you find in the first part of this book, the sixt Chapter, and first §.

The third Part of this Chapter of Sirupes.

Of the Sirupes and juices in general.

BOTH of these things, as Sirupes and Juices, be almost innumerable that be used in Physick, to wit, the juices of fruits, herbs, flowers, roots, and such like things, sometimes alone, but tempered for the most part alwaies with other things, according as each pleaseth, as may be discerned throughout all this Book. Wherefore it is not our purpose to gather here together such things, but onely those which are most used: but we will as much as is possible, most truly expound and translate their names into English, and also adjoyn therewith their operations and powers. First, you have in the Introduction how all Juices are to be clarified. Secondly, it is also a general rule, that no four juices, as the juice of unripe Grapes, Barberries, neither wine nor vinegar are to be sodden in Copper vessels, for that they may get an hurtful taste; but the same are to be decocted in earthen leaden pots. Thirdly, you have also in the first part, the first Chap. and 6. §. how that the compounded sirupes are to be decocted. Fourthly, because that it importeth much that the sirupes be decocted too hard, to the end they come not to candise, and that they be not sodden too thin, and come not to be moldy: wherefore the proof also is described in the Introduction, whereby may certainly be understood when as they be enough: like as is also sufficiently admonished of each sirupe that they may be clarified.

Sirupes

Syrupus de Absinthio, that is, of Wormwood. §. 1.

TAKE Romish Wormwood, or if you can get it, then take of the common wormwood 6. ounces, red Roses two ounces, Indy Spical 3. drachmes, good white wine, and the juyce of Quinces, of each 24. ounces, let them steep all together in an earthen pot the space of one whole night, and afterwards see the it to the half; this being done, strain it, then put four and twenty ounces of clear hony or Sugar unto it, and then let it see the to a sirupe. This sirup is also especial good for the Romach, for the Liver, and for all nourishing parts: it maketh appetite to meat, and helpeth to digest the meat: it is good for the falling sicknesse, it expelleth wind and driveth out all bad humours by the urine. In the table under the name of Wormwood is her vertue described at large.

Syrupus de Acetosa, of Sorrel. §. 2.

TAKE the juyce of Sorrel three parts, Sugar two parts; let it see the together, scum, and clarifie it well until it be sufficiently decocted. This sirup is good for all hot pestilential Agues: it quencth the thirst, and the inflaming heat of the heart, and also of the stomach, and it strengtheneth the same. See further in the table of the Sorrel.

Syrupus Acetosus, of Vinegar. §. 3.

IN the third Part, the 11. Chap. and 9. §. is taught how that this sirup is to be made, and one may also read her use there.

Syrupus Acetosus compositus, also of Vinegar. §. 4.

HOW this sirup, and also *de Radicibus*, is to be made, is to be seen in the third Part, the 11. Chap. and 9. §. where both their operations be described.

Syrupus acetosus de Cytoniis, which is of four Quinces. §. 5.

Her preparation is described in the third Part, the eleventh Chapter, and sixt §.

Syrupus Acetosus Diarrhodon, that is, of Vinegar of Roses. §. 6.

THIS sirup is very seldom used, but for what it is good, you may read that in the table of the Roses.

Syrupus de Acetofitate Citri, of the juyce of Citrons. §. 7.

TAKE the juyce of Citrons, which is strained through a cloth without wringing, otherwise the juyce will be thick when it is cold, like as pap; then see the away this juyce, with half so much Sugar. This sirup hath the same vertue as the sirup of Oranges, whereof we will speak shortly, but that it is more forcible. This sirup is made thus in Cipro, like as hereafter followeth; Take clear juyce, Sugar half so much, then stop it tight and and set it in the Sun. This sirup remaineth alwayes clear. Both these sirups be good against all venome, but especially for the Plague and all other putrified humours: it strengtheneth the stomach, it cooleth the heart, and all other inward parts, it quencth thirst, it bringeth sleep, it stayeth all vapours of the stomach, especially if one drink too much. Read further in the Table of the Citrons, and their vertues.

Syrupus de Agresta, of Verjuyce. §. 8.

FOR what Verjuyce is good, and how the same is to be made, we have taught in the first Chap. of this 8. Part: for the sirup are you to take 5. ounces, short sodden and unsalted Verjuyce, and 3. ounces and a half of Sugar; then let them see the together unto a sirup.

Syrupus

Syrupus de Aurantii, of Oranges. §. 9.

TAKE the juyce of sweet Oranges, which is wrung through a cloth, and well cleansed, two parts, Sugar one part; see the them together unto a sirup. This sirup is very good for all heat caused of Cholera. Likewise it is also good in all pestilential Agues, and it asswageth the thirst singular well: it may also be made of four Oranges, for that the same is much more forcible then that of Citrons.

Syrupus de Artemisia, of Mugwort. §. 10.

THIS sirup is very troublesome to be made, wherefore we will commend it to the Apothecaries: it is very good for all diseases of the Matrix, it keepeth it in her due place, it expelleth all wind, and all pain of the same, it strengtheneth the sinews, it openeth the pores, it maketh good blood, and it forceth womens terms. For what purpose else it may be used, look in the Table of the Barberries.

Syrupus de Berberis, of Barberries. §. 11.

TAKE Barberries which be very ripe, and let them see the well in wine until that they be mellow, then wring it through a cloth, and boyl the colature with Sugar, as before. Item, take the juyce of ripe Barberries, and let it see the apart, afterwards scum it well: when it is well cleansed, take as much Sugar as juyce, see the it all together unto a sirup: her vertue is to be read in the Table of the Barberries.

Syrupus de Betonica, of Betony. §. 12.

THE description of this sirup is very long, wherefore we will pretermitt her vertue may be judged by the description of the herb Betony in the Table.

Syrupus Byzantius. §. 13.

TAKE the juyce of Endive and of Barberries, of each six ounces, the juyce of Hops and of Buglosse, of each three ounces, see the all together, clarifying it until there remain 12. ounces, then put 7. ounces and a half of Sugar unto it, and let them see the all together to a sirup. This sirup maketh all the tough slimy matter to avoide, and it openeth all obstructions, wherefore it is also good for all yellow Jaundise, like as there be many other sirups.

Syrupus de Boragine, of Burrage. §. 14.

WE have before admonished in the fourth Chap. in the description of the conserve of Burrage, that there is none, nor indeed very small difference, between the Burrage and the Buglosse: nevertheless there be made at the Apothecaries two kinds of sirups, and commonly mixed with other medicines: wherefore is an householder to prepare it thus, Take the juyce of both these herbs, of each 8. ounces, the juyce of both these flowers, of each one ounce, see the the same with 4. ounces of Sugar, and scum it as behoveth, and ought to be; you may suffer the flowers to see the in some water, and pour the juyce unto it. This sirup is good against all diseases of the heart, and it maketh a merry mind: and of her power you may read further in the Register of Burrage.

Syrupus de Buglosa. §. 15.

Of this sirup is sufficiently written in this foresaid sirup of Burrage.

Syrupus de Calamintha, of field Mints.

TAKE of the filed Mints and white water of Mints, of each two ounces, the seed of Lovage, of the greater Pimpernel (instead of *Danci Cretici*) and Squinant, of each five drach. Rafins 6. ounces, hony 24. ounces, let them see the all that is to see the, scum and wring

wring it out well; then make with hony, or with as much Sugar a sirup of it. This sirup is especial good for a hard Spleen, and all hard intrails, and also for an old Cough, of all old people, which be Plagued with a feeble and short breath: like as you may read further of the Mints in the table.

Syrupus Capillarum Veneris, or of Maiden-hair. §. 17.

This sirup doth cost very much labour before the same may be made, like as we have admonished under the name of Maydenhair in the Table.

Syrupus de Cichoria cum Rhabarbaro, of Cicory. §. 18.

At all Apothecaries this sirup is very rise: it cleanseth and withstandeth all poyson, and especially the Carbuncle, and such like: it strengtheneth the heart, and all nutritive parts: it is also good for all pestilent Agues, it expelleth all bad matter by the stool, and by the urine: it causeth also appetite to sleep.

Syrupus de Cytonis, of Quinces. §. 19.

This sirup is like to all the other sirups, made of Sugar and juyce of Quinces: you shall read of her vertue and efficacy in the Register in the description of Quinces. There is another sirup described before of four Quinces, called *Mixa Cytoniarum*. Further, there are juyces or thick sirups prepared under the name of *Mixa*, whereof there be some described in the third Part, the 11. Chapter, and 17. §.

Syrupus de Citro, of Citrons. §. 20.

Some do take not onely the sournesse of the Citrons, but also the juyce of the white Strinds, so that not onely the outwardmost peeles and the seeds are separated; but this sirup is not so forcible as that which is prescribed: yet they be both made and used in all hot sicknesses.

Syrupus de corticibus Citri, of Citron peels. §. 21.

Take the outwardmost fresh peels of Citrons, cut in small peeces, one pound, pour thereon five times as much water, and let it seeth to the half; then wring it through a cloth, afterwards put a pound of Sugar unto it. When it is almost sodden to a sirup, then put 4. grains of Musk unto it, broken in Rosewater. This sirup cooleth not like the former, but it warmeth and strengtheneth the heart, and the brains, all inward parts, and the vital spirits. It strengtheneth the weak stomach, maketh a good breath, and defendeth from the Plague, &c.

Syrupus de Cucurbita, of Gourds. §. 22.

This sirup is seldom used, and in this Book but onely in two places.

Syrupus de Endivia, of Endive. §. 23.

Of this herb be many sundry sirups made. That which is called *Simplex*, is made thus: take the juyce of green Endive one pound, and when it is clarified through seething, then put ten ounces of Sugar unto it, seethe it away, like as all other sirups be. This sirup is good against all inward heat of the Liver, and other nutritive parts, it is used for many kinds of things, as may be seen in the Register.

Syrupus de Epithymo. §. 24.

At well furnished Apothecaries this sirup is rise, whereas the same is to be fetched: it expelleth the burnt cholerick humours, it doth therefore withstand all sicknesses which spring or come thereof, viz. the Leprosie, Canker, bad ulcers, and Fistulaes: like as his name shall shew in the Table.

Syrupus de Eupatorio, of Agrimony. §. 25.

THe opinion of many learned men is, that our Agrimony is the true *Eupatorium*; of this is also a sirup made, which is very troublesome to be made: wherefore we will not describe the same here. It hath a special power for to help the cold and obstructed liver, to expel all Dropsies and such like sicknesses, for to make all grosse slime thin, and to strengthen the liver: it also moveth urine. Look further of her vertue in the table of Agrimony.

Syrupus de fumo Terræ of Fumitory. §. 26.

TAke the juyce of Fumitory, and of the sprouts of Hops, of each one pound, clarifie it and temper it like as we have taught, and then decoct it unto a sirup with one pound of Sugar. At the Apothecaries there is another made of many sundry things, which here we will not describe. These sirups be both good for to open all obstructions of the stomach, and of the liver; for to strengthen the same also and to cleanse the blood, that thereby all scabbednesse, all bad sores, and such like accidents may be suppressed, and avoided. Wherefore they be also good against the Pocks, against all old ulcers, Leprosie, and other such like diseases more.

Syrupus de Glycyrriza, of Licorice. §. 27.

THe common people do make this sirup thus: Take a pound of small sliced Licorice, and pour thereon two pots of water, afterwards let it see the so long, until the vertue come out; then strain it, and put to this decoction one ounce of Dragagant, and let it see the together until it be thick enough. This sirup is very good for the Cough, and for all toughnesse of the breast. But this following is the right sirup of Licorice: Take small sliced Licorice one ounce, Maidenhair half an ounce, Hyssop one quarter of an ounce, put a quart of water unto it, and let it all together infuse the space of 24. hours, afterwards put unto it clear hony, Sugar pennets, and white Sugar. of each 4. ounces, Rose water 3. ounces, see the it together unto a sirup. This sirup cleanseth the breast, and the lights, it is very good for all cold coughs, and also for the Pleurisie, as you may read in the table of Licorice.

Syrupus Granatorum, of Pomgranats. §. 28.

IT is a great abuse to wring out the sour and sweet Pomgranats together, by reason that the sour and the sweet each apart are meet for sundry diseases, but the foresaid mixture we will leave alone for Cookery: thus, take two quarts of Pomgranate wine, and see the it so long until it be well clarified, then temper amongst it half a pound of Sugar, and so set it in the Sun until it come to work, and then afterwards preserve it in a cellar.

And for to write apart of the sour Pomgranats: Take thereof five pound of the juyce, and white Sugar three pound, see the it together to a sirup, scumming it alwayes about. This sirup is very forcible in all hot Agues which be caused of Cholera.

The sirup of sweet Pomgranats is prepared in all sorts as the former, like as the same is taught in the table at large of the Pomgranats, and every one may direct himself accordingly.

Syrupus de Hyssope, of Hyssop. §. 29.

YOU must take dry Hyssop, the roots of Smallage, of Fennel, Parsly, and of Licorice; of each 5. drach. peeled Barly one quarter of an ounce, the seed of Mallows, of Quince kernels and of Dragagant, of each one drach. and a half, Maidenhair three drach. Jujubes and Sebestes, of each 14. or 15. Currans 3. quarters of an ounce, Figs, and Dates, of each 5. or 6. Sugar pennets 12. ounces, then make a sirup thereof. This sirup is very forcible for all the diseases of the breast, and of the lights: it causeth all tough slime to avoide which may hardly be coughed up, like as shall be more at large taught thereof in the English Register, under the name of Hyssop.

Syrupus

Syrupus de Ireos, of Ireas. §. 30.

THis sirup is made, as in the third Part, the 10. Chapter, and 9. §. is taught, where as it is ordained against the Dropsie *Tympanus*, like as also the Table under the name of Ireos doth give to understand.

Syrupus de Iujubis. §. 31.

Of Iujubes take thirty or thirty six, the seed of Violets, and of Mallowes, of each two drachmes and a half, Maiden hair, peeled Barley, and Licorice, of each half an ounce, Quince kernels, white Poppy seed, the seed of Melons, of Lettice, and Dragagant, of each one drachme and a half; seeth them together in Well water, and to this decoction strained put twelve ounces of Sugar, and then let it seeth to a sirup. The same sirup is good against all hoarsenesse against the Cough, and against the Plenrifie, and also to other diseases more, like as the Table doth expresse.

Syrupus de Limonibus, of Limons. §. 32.

THis sirup is made of fresh Limons, even as the sirup of Oranges is made; but it is far stronger then the sirup of Citrons, like as the same may be seen in the Register under the name of Limons.

Syrupus de Lupulo, of Hops. §. 33.

TAke the juice of the sprigs of young Hops one pound, and the juice of Fumitory half a pound, which be both very clear decocted, and scummed, afterwards seeth them with a pound and a half of Sugar unto a sirup. The juice of Hops may also be taken alone. This sirup cooleth much, it expelleth the yellow Jaundise; moreover all sliminesse and also the Dropsie through the stool, and is also good for all other things, like as is sufficiently declared under the name of Hops in the Table.

Syrupus de Menta, of Mints. §. 34.

THere be two kinds of Sirups of Mints, as the same and also their virtues are described in the third Part, the 11. Chapter, and 17. §. where it is also admonished, that it is especial meet for the Laxe. For what causes more the same is profitable, that may you read in the Table under the name of Mints.

Syrupus de Myrto, of Mirtle seed. §. 35.

IN the third Part, the 11. Chapter, and 17. §. is this Sirup also specified, which is very commodious for many things, like as you may read in the Table.

Syrupus de Nymphæis, of water Lillies. §. 36.

TAke of the white leaves of water Lilly flowers one pound; let them waume up in water, afterwards wring them hard out through a cloth, and then seeth this decoction, skimming it, with a pound of Sugar to a sirup. This sirup is very meetly used for all hot sicknesses, like as before is taught in the fourth Chapter, and 39. §. It moisteneth, it cooleth, and furthers sleep. Another, which is commonly prepared at all Apothecaries: Take the leaves of white water Lillies one ounce, yellow water Lillies half an ounce, seeds of Fleawort and of Sorrel, of each half an ounce, the seeds of Melons, of Citruls, of Gourds, and of Cucumbers, (all together peeled) of each one quarter of an ounce; the seeds of Lettice, of Endive, of small Endive, and of Purslain, of each one drachme, Fennel roots half an ounce; shred it all together very small, and let it seeth in Barley water: afterwards strain it thorow, and wring it out hard. Now being clarified, then put six ounces of white Sugar unto it, Vinegar and the juice of sown Pomgranates, of each one ounce, then let them seeth altogether again unto a sirup, at last temper yellow Saunders with it, and Indi Spica, of each two scruples.

This sirup doth marvellous much withstand the hot *Cholera*, and besides all hot Agues, and procureth also sleep: it is also to be used for more other things, like as the Table under the name of water Lillies doth set forth.

Syrupus de Papavere, of Poppy heads. §. 37.

There be two kinds of these sirups made, the one called *Compositum*, is thus made: Take black and white Poppy heads which be very fresh, of each 25. drachmes, Maiden hair seven drachmes and a half, Licorice 22. drachmes, Jujubes 15. drachmes, Lettice seed two ounces and a half, Mallowes seed and Quince kernels, of each three drachmes, seeth them altogether in a pot of water even to the half: afterwards wring it out, and seeth this decoction again with Sugar and Sugar pennets, of each four ounces, unto a sirup. This sirup is very good against all dry Coughes, against the Consumption *Phthisis*, and against all rheumes: it maketh sleep, and is also good for more other causes, like as the Table maketh mention.

Syrupus de Persicis, of Peaches. §. 38.

This sirup is made of the juice of the self-same fruits, her virtues are described in the fourth Chapter; and wherefore it is further good, look for that in the Table of the Peaches.

Syrupus de Plantagine, of Plantain. §. 39.

This sirup is very seldom used, and besides made with greater trouble; it is also used but once, to wit, in the obstruction of the Pyles; it is made onely of the juice like as all other sirupes.

Syrupus de Pomis, of Apples. §. 40.

Of Apples there be two kinds of sirupes made, like as the same be described in the second Part, the sixt Chapter, and fourth §. their use is declared in the Register under the name or title of Apples.

Syrupus de Portulaca, of Purslain, §. 41.

This sirup is also made of the juice of the herb, but used very seldom, like as one may read in the Register under the name of Purslain.

Syrupus de Prassio, of Horehound. §. 42.

Take Horehound one ounce, Licorice half an ounce, Maidenhair, and Hyssop, of each three drachmes, Currans, Annis, Roots of Smallage, and of Fennel, of each 2. drach. and a half, of the greater Pimpernel seed, of Fenegreek, and Ireos, of each one drach. and a half, Linseed, and Quince kernels, of each one drachme, Currans one ounce, eight or ten Figs, Sugar pennets, and Sugar, or Hony, of each twelve ounces; then make a sirup thereof like as is taught before. This sirup is very good against all diseases of the breast, and of the lights, which be caused of cold tough sliminesse, and be hard to be expelled; but it is especial good for all old ancient people which have stuffed breasts. The register teacheth further for what this sirup is meet.

Syrupus de Pyris, of Pears. §. 43.

This sirup hath the same power which the sirup of Peaches hath; it is also made and used for the self-same sicknesses.

Syrupus de Radicibus, of Roots. §. 44.

There be also two sorts made of this, the one of twain, and the other of five kinds of roots, like as the same in the third Part, the 20. Chap. and 20. §. are described, where be also their virtues discovered. But whereto the same be further meet, look for that in the register under the name of the sirup of Roots.

Syrupus

Syrupus de Ribes, of Raspes. §. 45.

TAKE three pounds of the juice of Raspes, and two pounds of good Sugar, seeth the same unto a sirup. For what it is good, look before in the fourth Chapter, where it is described how that the same is to be made after sundry fashions.

Syrupus infusionis Rosarum, of Roses. §. 46.

TAKE fresh Rose leaves twelve ounces, put them in a pot, and pour upon it 30. ounces of hot Rose water; afterwards stop the pot close, and so let it stand a steep the space of eight hours; this being done, then wring it out and put fresh Roses unto it again, then let it stand a steep as before, then being wrung out again, put twenty ounces of Sugar unto it, and seeth it together softly unto a sirup; this sirup is especial good for to slake thirst, to cool all heat, and hot Agues, and also to strengthen the stomach: It withstandeth all rotten humours; wherefore it is also very good for the Plague; it withstandeth winds and other diseases more, like as the Table maketh mention at large.

Syrupus de Rosis siccis, of dry Roses. §. 47.

ALso there is a sirup made of dry Roses which looseth not, but bindeth, but it is not much used, and is made like as in the first Part, the 13. Chapter, and 4. §. is shewed; look for this in the Table under the title of Hony of Roses.

Syrupus Rosatus solutus, purging sirup of Roses. §. 48.

ALso there be sundry sirupes of Roses laxative prepared, as liketh each Physitian best; whereof in the first Part, the second Chapter, and seventh §. are described the two commonest sorts, and their vertues and operation added unto it. For what they be now further to be used, look into the Table under the name of Roses.

Syrupus de Rosis albis, of white Roses. §. 49.

ALthough this sirup be very profitable, neverthelesse it is much used; it cooleth much more then the red sirup. Some do commonly take onely the juice wrung out of the flowers, and they seeth it short, with Sugar unto a sirupe, to the end, that it might the better retain his virtue. Look further into the Register of white Roses.

Syrupus Sapor Regum. §. 50.

TAKE the juice of Buglosse and of Burrage, of each six ounces, the juice of sweet Apples nine ounces, let them stand and settle, and afterwards put one ounce of Sene husks unto it, let them so infuse 24. houres; and then let it seeth a waume or twain, and afterwards seeth it with nine ounces of Sugar, unto a sirupe; further, hang with a little bag, half a drachme of Saffron in it, and wring it oftentimes out. This sirup is onely occupied in *Melancholia*.

Syrupus de Stechade, of Stechas flowers. §. 51.

Hereof be two kinds described, but we will commend them unto the Apothecaries: they be also good for all cold diseases of the brains, and of the sinews, also for the Palsey, for the falling sicknesse, for the Cramp, for the convulsion of the mouth, for the Shaking: they do strengthen the stomach, and all other inward parts, like as the Register further declareth, under the name of Stechas.

Syrupus de Thymo, of Thyme. §. 52.

This sirup is also very seldom, and in this Book it is onely used against the Leprosie.

Syrupus Violarum, of Violets. §. 53.

THis present sirup is also described after three kinds of sorts: The first is made by infusion, like the sirup of Roses; the same is good against all inward burning, against all heat of Agues, of the Liver, of the Heart, against all roughnesse of the throat, against thirst, and against the obstruction of the belly.

The purging sirup of Violets is made laxative like the sirup of Roses, which is described in the first Part.

The third sirupe is made as hereafter followeth: Take one ounce of fresh Violets, Quince kernels, the seed of Mallowes, of each half an ounce, Jujubes and Sebestes, of each ten or twelve, water of Gourds as much as will suffice, let it then seeth together until the third part be boyled away. This sirup doth open the breast, the obstruction of the lights, it asswageth all roughnesse of the throat, and all cough which is caused of heat, it is also good for the Pleurisie, and for all dryth: it is very much used, like as the Register maketh mention under the name of Violets.

The fourth part of this Chapter, of the Species, and of Loosings.

Horoughtout all this Book, there be many kinds of Powders or Species used, which at all furnished Apothecaries be composed together and prepared of sundry things, of which all kinds of cordial waters, confections, and other things be made. But because the same be tempered together of many sundry things, and by reason that there cannot be made many at one time, therefore we have refrained from writing much of them.

Species de Ambra, of Amber. §. 1.

Because that this powder and Confection that is made of it, is very much used and requisite, therefore we will here describe the same: Take Cinamom, *Doronicum*, Cloves, Mace, Nutmegs, Clove leaves, and Galangal, of each 3. drachmes, Indi Spica, Cardamom, and Greins, of each one drachme, Ginger one drach. and a half, yellow Saunders, *Lignum Aloes*, and long Pepper, of each one quarter of an ounce, Amber one drachme, Musk half a drachme; then temper them, and pownd them all together very small: it is very forcible for all debility of the head, and of the whole body, it provoketh natural heat, it is also very good for all them that be vexed with cold humours, and in like manner for the joynts, and against the wambling of the stomach that can keep no meat or food, it causeth appetite and strengtheneth the heart. For what this powder or this Confection may be further used, that is here and there to be found throughout the whole book.

Species de Aniso, of Annis. §. 2.

These Species be very troublesome to be made, and they be not very much used. For what they be further good, look into the Table under the name of Annis.

Species de Anthus, of Rosemary. §. 3.

Of the flowers of Rosemary take half an ounce, Violets, Roses, and Licorice, of each 3. drachmes, Cloves, Indi Spica, Nutmegs, Galangal, Cinamom, Ginger, Zeduary, Mace, *Lignum Aloes*, Cardamom, Annis and Dill seed, of each two scruples, temper them all together. If you will have Tabulats of it, then take 8. ounces of Sugar, and make them up, these Species and loosinges be especiall good for all melancholick and feeble persons, it maketh merry, it strengtheneth the stomach, and is very meet for many more other things, like as the Table under the name of Rosemary doth specifie.

Species aromaticum Rosarum. §. 4.

THese Species are used for the debility of the stomach, and is described in the third Part, the 11. Chapter, and 5. §. You shall further find their virtues in the Register of Roses.

Species de Calaminta, of field Mints. §. 5.

BEfore is declared in the tenth Chapter, and 6. §. how that three kinds of mixtures be described by the Physitians, which be all made of Mints, but by reason their Species be much more usual then their Confection: therefore we will here notifie them, like *Mesua* describeth them. Take field Mints, Marjoram, the seeds of Silvermountain, and of Parsley of *Macedony*, of each three drachmes, Ginger one drachme and a half, the seeds of Smallage and sprigs of Thyme, of each one drachme, Lovage seed three drach. Pepper three quarters of an ounce, then temper them together: These Species be very good against all cold stomachs, lost appetite, those which be vexed with wind, and against shortnesse of breath, and also for other causes more, like as the Table maketh mention under the name of Mints.

Species de Cappariz, of Caper roots. §. 6.

THese Species are used very seldome, but the loosings thereof be onely once in this book ordained, *viz.* against the Spleen.

Species de Caryophyllis, of Cloves. §. 7.

THese Species be also called at the Apothecaries *Aromaticum Caryophyllatum*, and be made of many sundry things, they do strengthen the heart and the stomach, they expell the wambling and parbreacking, and do separate all tough sliminesse of the stomach, they do warm all nourishing parts, and also expel all winds: look further in the Table under the name of Cloves.

Species de Cinamomo, of Cinamom. §. 8.

IN the third Part, the 11. Chapter, and 5. §. be these Species described after two waies, and also their vertue thereby declared. For what they be further good, look in the Table under the name of Cinamom.

Species Cordiales, for the heart. §. 9.

OF these Species be sundry prepared, like as *De Gemmis*, and *Diamargariton*, and others more, which be altogether made for the heart. There be also a certain sort of these Species in the second Part, the sixth Chapter, and 8. §. described.

Species Diacostu, of Costus roots. §. 10.

THese Species be very seldom prepared, for that there come certain doubtful things into it. But they be good for all inward pain, and for the beginning of the Dropsie: but they be not more then once ordained in this book, against a diseased Liver.

Species de Croco, or Crocoma, of Saffron. §. 11.

THese Species be commonly called with a wrong name, *Diacurcuma*: They be (because of certain things which be put into them) very troublesome to be made, and be also not much used. Their vertue is to correct all lingring sicknesses of the Spleen and the Liver, as when a body is inclined to the Dropsie: they be very good against all slimy cold humours of the stomach, they do cause wind to avoid, and also all pains of the Kidneys, and of the bladder; but especially they expel water. Look further for it in the Register, under the name of Saffron.

Species de Cymino, of Comin. §. 12.

TAKE Comin seed one ounce and one scruple, let them steep in vinegar the space of 24. hours and dry again; Cinamom and Cloves, of each two drachmes and a half, Pepper and Ginger, of each one quarter of an ounce and five greins, Galangal, Savery, and field Mints, of each half a scruple; the seed of *Ameos* and of Lovage, of each one drachme, and eighteen greins, long Pepper one drachme, Indi Spica, Cardamom, and Nutmegs, of each two scruples and a half, make a powder of it. This powder is good for the diseases of the sinews, for a heavy breath, for the Cough, for the Stomach, and it openeth all obstructions; but it is most used in losinges, like as the Table teacheth the same under the name of Comin.

Species de Tragacantha, of Dragagant. §. 13.

THERE be also two kinds made thereof, to wit, cold and hot species of Dragagant; the hot you may find in the first Part, the fourteenth Chapter, and 4. §. and the cold be also described there, and there be declared their properties, and uses, like as you may see in the Table under the name of Dragagant.

Species Ducis. §. 14.

THESE be tempered together of many kinds of things; they be very good for a cold windy stomach, and for all inward cold parts. Item, for all cramping and pain of the uppermost bowels, and also for the Stone.

Species de Galanga, of Galangal. §. 15.

THIS Species and Confections are also made every where and used: Take Galangal, and *Lignum Aloes*, of each seven drachmes, Cloves, Mace, and Lovage seed, of each one quarter of an ounce, Ginger, long and white Pepper, Calamus, and Cinamom, of each one drachme and a half, garden Mints, Cardamom, Indi Spica, the seed of Smallage, of Fennel, Annis, and Comin, of each one drachme, pownd them very small unto a powder. This Powder is especial good for all wind, for all belchings of the stomach, it helpeth much for the digestion of the stomach, it warmeth the Liver and also the Stomach. For what this, as well in powder, as also in losinges is used, that is to be found in the Table under the name of Galangal.

Species de Gemmis, of pretious stone. §. 16.

BEFORE in the Cordial Species is admonished, that these may be called cordial species, whereof we have written down five kinds, viz. in the second Part of this Book, the sixth Chapter, and 9. §. And for what the same is used in Physick, that is declared in the Table under the name of precious stones.

Species Hiera simplicis. §. 17.

THESE Species be made like as in the third Part, the 11. Chapter, and 20. §. is shewed; and for what they be further good, is sufficiently taught and declared throughout all this Book.

Species de Ireas, of Ireas. §. 18.

THESE Species be described in the first Part, the 14. Chapter, and 2. §. their power and operation is to be found in the Register under the name of Ireas.

Species Justini. §. 19.

FORASMUCH as the description of this species is very long, we will omit here to describe the same, as also for that they are not much used. These Species and the losinges which

which be made thereof, be very good against all pain of the Kidnyes, they break the stone, expell gravel, and open the passage of urine. For what they may be yet further used, that is taught sufficiently here and there, where is discoursed especially of the pain of the bowels, and of the gravel.

Species de Lacca. §. 200

THese Species be made of many kind of things, but yet very seldome used: they be good against all obstructions, and against all swellings, they do mollify the hardnesse of the Kidnyes and the Liver, they expel all causes of the Dropsies, they move womens menses, and be good for all old yellow Jaundise, like as the Table doth shew at large under the name of *Lacca*.

Species Latificantes, and Latitia Galeni. §. 22.

BOth of these species have the names, to make merry. The first is described in the first Part, the twelfth Chapter and 8. §. But we do not describe the other, because that both of them have the same vertue. They both do strengthen the inward parts, they refresh the vital spirits, they do help natural heat, they expel all bad cogitations, they make a good colour, they ease the digestion of the stomach, they make merry, and they stay gray haire, like as is admonished in more other places.

Species Liberantes. §. 221

THese Species are used in the time of the Plague, like as the same are described in sixt Part, the fiftenth Chapter, and 12. §.

Species Lithonirion. §. 23.

THese Species be expressly ordained for the Stone and the gravel, wherein they be indeed fifty kinds of things mixed together, as the table doth shew.

Species de Margaritis, of Pearles. §. 24.

THese are two kinds of these Species, to wit, cold and hot, the hot Species are described in the first Part, the twelfth Chapter and 12. §. the cold sort which are most used are made in this manner: take the Peeled seeds of Pompeons, Gourds, Citruls, and Cucumbers, Purslain seed, white Poppy seed, white, yellow, and red Sanders, Ginger, Roses, Burrage flowers, Water Lillie flowers, and Myrtle seed, of each one drach. make them all to powder; this powder comforterth all feeble bodies that are readie still to swoon, whether the cause of swooning be in the heart, or in the stomach. It strengtheneth all inward parts, it is also good against the Cough, against the consumption, for those that by long sicknesses are greatly weakned. But regard must be had to hot and cold diseases, as this also severally is noted under the name of Pearls in the Table.

Species de Mentha, of Mints. §. 25.

THese Species are prepared at the Hypothecaries, but they are seldome used; and you may see their vertues in the name of Mints.

Species de Moschu, of Musk. §. 26.

THese Species are described after two wayes, to wit, under the name of sweet, and bitter Species of Musk, and because their composition is not a little troublesome, we have here omitted to recite them. They are good for the panting of the heart, against all bad dreames, against the tumors of the joynts, against a cold brain, against giddinesse, falling sicknesse, and against the shortnesse of breath. The bitter Species are much stronger then the sweet, and that especially for the moysture and corruption of the stomach, &c.

Species Nere. §. 27.

THese species are for the most part mixed with other compositions and made as followeth; Take Amber one ounce, *Lignum Aloes* three drachmes, Musk half a scruple, Camphire five greins, mix and beat them altogether.

Species de Olibano, of Frankincense. §. 28.

THese species, by reason of the Opium and Henbane seed which be put unto it) are seldome used inwardly, and therefore made but seldome. Whether they be made in powder or in a confection, yer be they alwayes good for all pain of the head, they stay all rheumes, they be good against the Cough, and spetting of blood, and they do also expel all wambling of the stomach, they be also good for all those that have any impediment in the Lights, and them that have the Pleurisie and spet matter, they stay the effluxion of natural seed, and *Satyriasis*, besides that all womens terms, if they run too much, for which in this book they be commended to be used: further look into the Table under the title of Frankincense.

Species de Papavere, of Poppie seed. §. 29.

TAKE the juyce of Licorice, Dragagant and Gum, of each five drachmes, white Poppie seed, and Sugar Pennets, of each ten drachmes, peeled Almonds five drachmes, Starch, Quince kernels, and Purslain seed, of each two drachmes and a half, peeled Gourds seed, the seeds of Pompeons, Cucumbers, and Lettice, and of Mallowes, of each one drach. and a half shred them, and stamp them very small: of this may commonly be made a confection with Sugar like as they are also in the Table under the name of loosings to be found.

Species de Penidio. of Sugar Pennets. §. 30.

THese species be also described in the second Part, the fift chapter, and 6. §. and also therewith declared for what the same is wont to be used.

Species Paonia, of Piony. §. 31.

These species be very seldome used, and that but once in this whole book.

Species Diapheniconis, of Dates. §. 32.

THIS mixture and her operation is described in the the third Part, the eleventh Chapter, and fift §. For what the same is now to be used, that is to be seen in the Table under the name of Dates.

Species Philanthropen. §. 33.

THIS is a very great composition, so that there come indeed some fifty things into it. It is seldome made, and is used in this booke but once, viz. in the obstruction of the kidneys.

Species Pliris Arcticon. §. 34.

IN these kinds of Species there are put many kinds of things; they be very good against all melancholick and pensive people, against weak stomachs, and also against all swoonings which proceed of any debility of the heart, they quicken the understanding and the memory, they be also very good for all them which have the falling sicknesse and a short breath, and also for other things more.

Species de Prassio, of Horehound. §. 25.

THIS is also one of the very greatest compounds, for that it is made of some 70. things. It is made in manner of a confection, and also in form of loosings. It is good against all dazeling and darknesse of the eyes, it cleanseth the throat, and all parts adjacent

cent, it dryeth the moisture of the *Vulva* in the throat, it asswageth the toothach, and it is especial good good for the heavy breath, and for all that which causeth the same, it expelleth the pain of the Liver, and strengtheneth the same, it strengtheneth the stomach and the Milt, it expelleth all pain and also all winde of the bowels, it clenseth the Kidneys and passages of urine from all gravel, and when the same is often used, then doth it make a good colour, it furthereth womens Terms, and also is good against the Tertian and Quartan agues. In fine, all they which often use these Losinges or Confections, they are freed and defended from many kindes of sicknesses, but because of their unpleasantnesse, they be seldom used, as in the Register you may see under the title of Horehound.

Species Diarrhodon Abbatis, of Roses. §. 36.

Albeit that this composition be made of many things, yet it is neverthelesse oftentimes used, wherefore will here discribe the same : Take red and white Saunders, ana. ʒ. 2. ʒ. Dragagant, Gum, and burnt Ivory, ana. ʒ. 2. *Sarabacca*, Mastick, Indy Spica, Cardamom, the juice of Licorice, Saffron, *Lignum Aloes*, Cloves, *Gallia Muscata*, Annis, Fennel, Cinamom, Rubarb, Basil, Barberries, the seeds of small Endive, of Purslain, peeled Melon seed, Gourd seed, the seeds of Cucumbers, of Pompeons, and of white Poppy seed, ana. ʒ. 1. Pearls and bones of the Stags heart, ana. ʒ. ʒ. ʒ. Sugarcandy and Roses, of each one ounce and three drach. Camphire, ʒ. 7. *Muscus*, G. 3. ʒ. pound each apart, and then temper them all together. These species be especial good for all hot Stomacks, for the heat of the Liver, the Milt, of the Lights, and for all pain of the intrailles, and of the whole body. For what these species or their confection be meet, look for that in the Register, under the name of Roses.

Species Electuarii de succo Rosarum, of Roses. §. 37.

These Species be before in the tenth Chapter, described amongst the Confections : out of which Species there be purging losinges wont to be made. In the Register shall you also finde (under the name of Roses) for what the same are to be used.

Species Rosate Novella. §. 38.

These kindes of Species be very seldom prepared ; they be especially meet for all hot and dry stomachs, Hearts, Lights, and Livers. They do quench thirst, stay vomiting, they fortifie the Stomach, they draw the resolved inward parts together, and they be very necessary for all that have any panting or beating of the heart, they do withstand sweat, and strengthen them also which be recovered from a long lingering sickness.

Species de Seminibus. §. 39.

These be also very seldom used, and be made of these seeds following, viz. of Annis, Fennel, Caraway, Cumin, Parsley seed, *Ameos*, seed of Smallage, *Amonum*, of each a like quantity : let all these steep together in Vinegar, and dry again, and afterwards be powdered to powder. They are used in all cold pains of the Kidneyes, in the gravel, and it moveth also urine.

Species Triasantalum, of Saunders. §. 40.

Take red, white, and yellow Saunders, Rose sugar, and Sugar, of each three drach. Rubarb, burnt Ivory, and the juice of Licorice, of each one quarter of an ounce, and 15. Greins, Dragagant, Starch, Gum, peeled Melon seed, Pompeon seed, seeds of Gourds, of Cucumbers, and of small Endive, of each one drachme and a half, Camphire one scruple, temper them altogether powdered very small. This is especial good against all heat of the Liver, and of the stomach ; it is also good against giddinesse, and the yellow Jaundies.

Species Trion-Pipercon, of Pepper. S. 41.

Take long, white, and black Pepper, of each five drachmes, Ginger, Thyme, and Annis, of each one quarter of an ounce, *Indy Spica*, *Ameos*, *Ammoniacum*, (or in stead thereof, *Cucubes*, or *Calamus*) Cinamom, one drachme, Cassie wood, the seeds of Smallage, of Silver mountain, *Asarabacca*, and Elecampane roots, of each half a drachme, make a powder thereof. This is very good against all cold stomacks, against all belchings, against the quartain ague, against all diseases of the liver, and also against the cough.

Species dia Turbith, of Turbith. S. 42.

These species be described after two waies, to wit, as they be ordained in the third part, the 11. Chap. and 20. S. against the obstruction of the body.

Species de Xyloaloe. S. 43.

Now for as much these species be very common, therefore we will not pretermit to describe them here: Take *Lignum Aloes*, and Roses, ana. \mathfrak{z} . i. Cloves, *Indy Spica*, Mace, *Gallia*, *Muscata*, *Cucubes*, Cardamom, Greins, Mastick, Cinamom, Cipers roots, Squinant, red and white Behen, Spikenard, red Silk, Pearls, red Coral, Amber, Citron leaves, *Basilicum*, Mints, Garden Mints, Marjoram, long Pepper, and Ginger, ana. \mathfrak{z} . β . Musk, \mathfrak{z} . i. Amber, \mathfrak{z} . i. β . pownd it small, and then temper them together. These species be good against all infirmities of the stomach, of the heart, of the liver, and also against all other inward diseases which be caused of cold. Item, for all swoonings, for the bad digestion, and for a stinking breath; they do also make merry, as you shall find described in the Table under the name of *Lignum Aloes*.

To make strong water. S. 44.

For a conclusion of this former Chapter, we will add unto it this strong water; Take Allom, and Copperas, ana. \mathfrak{z} . i. Saltpeter, \mathfrak{z} . β . put them all together pounded small into a body, and then distil it in sand. Make first a milde fire, and so a little stronger and stronger: and when the fume in the glasse receiver beginneth to be red, then give it a stronger fire; and when the rednesse beginneth to be done, then draw out the fire and let it be cold, then keep it stopt very close. though not onely the Chirurgions, but also the Goldsmithes, and other more do use this water; yet it is nevertheless very good against the pain of the teeth, but it must be wisely taken in hand, or else the Quicksilver must be wholly omitted whereof the powder precipittate is made, and also is calcined with it.

Species Berchtoldi. S. 45.

The occasion wherefore we have not adjoynd this Species with other, is therefore, for that these Species are onely used in the Kitchen and for fish: the same is tempered with some good Wine; they be not onely pleasant, but also very healthy. And to allay the moistnesse of the fish: Take Ginger, \mathfrak{z} . β . long Pepper one quarter of an ounce, Cinamom three three quarters of an ounce, Greins, \mathfrak{z} . i. β . Galangal, \mathfrak{z} . i. Saffron, \mathfrak{z} . β . Sugar, \mathfrak{z} . \mathfrak{z} . pownd them all small, and then temper them together.

Another: Take Cinamom, \mathfrak{z} . β . Ginger, \mathfrak{z} . 3. Greins, \mathfrak{z} . β . Cloves, Galangal, and Cardamom, ana. \mathfrak{z} . i. Saffron, \mathfrak{z} . β . Sugar, \mathfrak{z} . 2. pound them all together and make it moist with Wine: afterwards temper it in a mortar, and let it dry in a warm place, then bruise it at last to powder again.

The sixteenth Chapter.

IN this Chapter be certain Potions described, as also certain powders for meat, and Trochisks, which here and there be ordained in this present Practise of Physick: wherefore we will first begin with the Potions.

Decoctiones Aperitiue, Potions that do obstruct. §. 1.

HERE be some of these described in the third Part the 11. Chapter, and 20. §. viz. called the common, and with Rubarb, which be very necessary for to keep an open body: notwithstanding that one may use the same commonly, for to mix other Confections with it.

Decoctio Epithymi, of Dodder. §. 2.

THIS Potion is prepared as it is described in the first Part, the 12. Chapter, and 8. §. viz. in three kindes of waies. Her operation may you read in the Register under the name of Dodder.

Decoctio fructuum, A potion of certain fruits. §. 3.

THIS Potion is described in the third Part, the third Chapter, and fift §. where we do speak and discourse of the Rupture.

Decoctio pectoralis, The pectoral Potion. §. 4.

THIS Potion is very good for all them which have a short breath, For the Cough, and for the rheume, whereof there be two discovered in the second Part the 2. Chapter, and 2. §. and in the second Part, the 5. Chapter, and 5. §. For what the same is further used, is to be found in the Register, under the name of the pectoral potion.

Decoctio & infusio Senæ, A potion of Sene leaves. §. 5.

THIS Potion is described in the third Part, the 11. Chapter, and 20. §. where it is ordained for the obstruction of the belly, as the Register doth witnesse the same, under the name of Sene leaves.

A water of Mans blood. §. 6.

AFTER the discourse of these foresaid potions, I cannot pretermitt to adjoyn with this a new invention, whereof some Princes have very great estimation, and have also used otherwhiles for to remain thereby in their force, and to live long (as they thought:) which was this, viz. that one should chuse a young strong man, which was as yet in his flourishing youth, like as of 25. years, which was somewhat cholerick by nature: the same is to be fed the space of one moneth, and be well dyeted with light and healthy meats, also with all kindes of spices, and with good strong wine, who also is to be kept with mirth: this being so done, then are both his veins to be opened in his arms, and so much blood to be let out as he may tolerate and abide; and unto six pound of blood mix one handfull of salt: then put these together in a glasse body, stopp well and tight, and set it a whole moneth in horse dung, yet every eight daies in fresh horse dung: afterwards distill this blood in ashes, when the water is distilled out of it, then pour it again in the body, by all that which remained therein, to the end it may be soft again, and in this manner distill it seven times together. Other be of opinion, that as often as it is distilled, that then it is to be set again in horse dung. Some suppose that it ought to be but three times distilled, and that at the most: put the dry feces into a Retort, and distill it with moderate fire, and then will it yield a stinking oyl. Afterwards pour oftentimes water unto it, and distill this oyl as many times with the water, until it lose her savour or stench. This water is to be given in three or four times a year, each time one ounce: but not above three or four drops of the oyl, Each one may believe this as far as he will.

Concerning all other drinks, as Beer, Claret wine, Aromatical wines, Barly water, Ju-
leps, Almond milk, Mead, and such like: of them we have written elsewhere. In the end
of this book we will admonish and discourfe of more other herbed wines.

The second part of this Chapter, of certain powders for meat.

E will not here admonish of any powders, which be serviceable and
meet for any sicknesses: but we will onely speak of them that are used
for pleasure, and for to warm the stomach, or that may be strowed up-
on wine sops, as this ensuing: Take elected Cinnamom, ʒ. i. ʒ. Ginger,
ʒ. 3. Greins and Pepper, ana. ʒ. i. ʒ. Nutmegs, Cloves, and Mace,
ana. ʒ. 3. pownd all very small together, Sugar as much as you please,
and according as that you desire to have it strong.

Item, take Cinnamom one quarter of an ounce, Nutmegs, ʒ. i. Mace, Greins, and Cloves,
ana. ʒ. ʒ. Sugar as much as you please: Or take Cinamom one quarter of an ounce, Nut-
megs, ʒ. i. Mace and Greins, ana. ʒ. ʒ. prepared Coriander and red Roses, ana. ʒ. 2. Sugar
as much as you please, but not too much. These powders be very good, used as well at
meals, as afterwards.

Another, take black, white, and long Pepper, ana. ʒ. ʒ. Thyme, Annis, and Ginger, of
each five greins, Sugar five ounces, then temper them altogether. This is special good
for all cold stomacks.

The third part of this Chapter.

Trochiscus is a Greek name, and is as much to say as a round thive, or
round Cake, like as these *Trochisci* be made: but the Apothecaries
do commonly make them now adays four square, and about the
waight of one drachme, which is of small importance. These
Trochisks be made diversly, of which be many mentioned in this
our book: whereof we will onely describe the name and force of
them that be too troublesome to make, to the end the same may be
asked for at the Apothecaries, when there is use for them.

Trochisci de Absinthio, of Wormword. §. 2.

These be ordained onely against the obstruction of the Liver, and be described in the
third Part, the 12. Chapter and 4. §.

Trochisci Adulphi. §. 1.

These do take their name of the Sulphur, like as you may finde written in the second
Part, the fift Chapter, and fifteenth §.

Trochisci de Agarico, of Agarick. §. 2.

These Trochisks are found prepared at the Apothecaries, to the end that the bad qua-
lity of the Agarick may be taken away thereby. The manner to prepare them is
described in the Introduction. Their use shall you find in the Table under the name Aga-
rick.

Trochisci Alhandel, of Coloquint. §. 4.

The preparation of these Trochisks, is also described in the Introduction of this book,
for to strengthen other purgations with it, like as stands admonished in the Register,
under the name of Coloquint.

Trochisci Alkakengi, of winter Cherries. §. 5.

These be also troublesome to be made, they be good for all diseases of the Reins, and the bladder, and for Dysuria. Look further in the Register under the name of winter Cherries.

Trochisci de Barberis, of Barberries. §. 6.

Of the juyce of Barberries, take one quarter of an ounce, burnt Ivory, Lignum Aloes, Sorrel seed, Mastick, Gallia Muscata, and Indy Spica, of each one ounce, Gum three drach. Roses five drach. and Rosewater as much as is needful for to temper them together. You shall find their use under the name of Barberries.

Trochisci de Bolo Armeno §. 7.

These Trochisks be in no use, but they are advised to be used for a cold stomach.

Trochisci de Camphora, of Camphire. §. 8.

For that these Trochisks be very much used, therefore we will describe the same: take Roses half an ounce, burnt Ivory and Licorice, of each one quarter of an ounce, peeled seeds of Melons, of Pompeons, of Gourds, and of Cucumbers, Dragagant, Saffron, Gum, and Indy Spica, of each one drachme, yellow Saunders two drachmes and a half, Lignum Aloes, Cardamom, Starch, and Camphire, of each two scruples, white Sugar and Manna, of each three drachmes; then fashion them with the muscilage of Fleawort, which is made with Rosewater. These Trochisks be very good against all hot Agues, against all inflaming of the blood, and Cholera, against a bad stomach and bad liver, and also against thirst, which is caused thereby, they be also good against the yellow Jaundise, against the Consumption, and against the Dizzines of the head: like as you may further perceive in the Register, under the name of Camphire.

Trochisci de Capparis, of Caper roots. §. 9.

These Trochisks be very seldom made: they be good against the hardened milt, like as you may further read in the same place of the hardened Spleen.

Trochisci de Carabe, of Amber. §. 10.

Take a quarter of an ounce of yellow Amber, burnt Harts horn, parched Gum, burnt Coral, Dragagant, the juyce of Sloes, *Hypocistis*, blossomes of Pomgranats, Mastick, Lacca, and parched black Poppy seed, of each two scruples, Frankincense, Saffron, and *Opium*, of each half a drachme, then make thereof Trochisks with the slime of Fleawort. These Trochisks stop the blood; out of whatsoever place it should flow: as womens terms, the Piles, and excessive making of water: it healeth also all inward exulceration, viz. of the Liver, and of the Lights; look further in the table of Amber.

Trochisci de Chelidonia, of Chelidony. §. 11.

These Trochisks are used alone in this Book, for foul flesh in ulcers.

Trochisci de Corallis, of Corral. §. 12.

They be very troublesome to be made, and be very seldom used; they be onely good against the Piles.

Trochisci de Eupatorio, of Agrimony. §. 13.

Take the juyce of Agrimony, and of Manna, of each one ounce, Roses half an ounce, burnt Ivory three drachmes and a half, Indy Spica three drachmes, Rubarb, Asarabacca, and Annis, of each two drachmes and a half; pound them very small to powder, and

and temper them together with water of Cuscuta, then dry them in the shadow. These be especial good for all obstructions of the liver and of the Spleen, and also for all agues which proceed of it. Item, for the yellow Jaundise, and Dropsie; look in the Register for Agrimony.

Trochisci de Lacca. §. 14.

They are very troublesome to be prepared; they open the obstructions of the liver and Spleen, and cure the agues that are caused thereby; they do also expell the Dropsie *Ascites* by urine, as hath been shewed in the name *Lacca*.

Trochisci de Myrrha. §. 15.

Take *Myrrha* one drachme and a half, Lupines two drachmes and a half, Rue, white water Mints, Diptamus of Candy, Comin, Madder, *Asa Fœtida*, *Sagapenum*, and *Opopanax*, of each one drachme, then make thereof Trochisks with the juyce of Feverfew. These Trochisks do move womens terms, and assuage all pain, which may be caused by their obstructions; such like Trochisks of *Myrrha* have you described in the third Part, the 19. Chapter, and 2. §. look further in the table of *Myrrha*.

Trochisci de Olibano, of Frankincense. §. 16.

The description of these Trochisks you have in the third Part, the 11. Chap. and 12. §. look further in the table under the name of Frankincense.

Trochisci de Rhabarbaro. §. 17.

Take good Rubarb five drachmes, the juyce of Agrimony, and bitter Almonds, of each one quarter of an ounce, Roses, Indy Spica, Annis, Madder, the seed of Smal-lage, Wormwood, and Afarabacca, of each half a drachme; then make Trochisks thereof with water of Fleawort. These open the obstructions of the liver, they take away all pain and swelling of the same; they be good against the Dropsie, and the yellow Jaundise, and also against all distemperance of the body, like as you may read in the Register under the name of Rubarb.

Trochisci Diarrhodon. §. 18.

These Trochisks doth *Nicholaus* describe, and they be easily made: Take fresh Rose leaves half an ounce, burnt Ivory, and red Saunders, of each one drach, and a half, and 7. grains, white Saunders one drachme and 12. grains, Saffron two scruples and 7. grains, Camphire two grains: make Trochisks of them with Rosewater. They be very little used, like as is admonished in the table of Roses.

Trochisci de Rosæ, of Roses. §. 19.

By *Rasis* these be described in this manner following: Take Roses half an ounce, Lignum Aloes one quarter of an ounce, Mastick one drachme and a half, Wormwood, Cinamom, Indy Spica, Cassie wood, Squinant flowers, of each one drachme; fashion them with old Wine. They be very good against all pain and bad digestion of the stomach, against all cold agues, and the beginning of the Dropsie; but especially they be very good for all them which lose their natural colour: look further for this in the table of Roses.

Trochisce di Santalis, of Saunders. §. 20.

These be not made but when the same be prescribed of the purpose; they be very good against the diseases of the liver, and against the Dropsie, like as our table of Saunders doth shew.

Trochisci de Spica. §. 21.

THese Trochisks be not used, and there is mention made but ounce of them in this Book, and that onely against the pursviveness of the breast.

Trochisci de Spodio, of Ivory. §. 22.

THese be prepared as they are described in the third Part, the 11. Chapter, 12. §. and ordained for the Lask Lienteria: for what they be further necessary, that doth the Register make mention of Ivory.

Trochisci de Terra sigillata. §. 23.

OF more then twenty things be these Trochisks made; wherefore we do leave them to the Apothecaries. They be very much used, for that they be forcible against spitting blood, if the same be given with the water of Knotgrasse: they be also good against the bleeding at the nose if the same be anointed on the forehead: and also for womens flowers if they passe away too excessive fast: likewise for the bleeding of the Piles, and for pissing of blood, if it be spouted into the yard, like as the same is mentioned in the Register under the title of sealed Earth.

Trochisci de Violis, of Violets. §. 24.

You must take Violet leaves which be somewhat withered, one ounce and a half, Turbith one ounce, the juyce of Licorice, Manna, and Diagridion. of each half an ounce: make Trochisks thereof with the sirup of Violets. They are very seldom used alone, but sharpened with three grains, or with any other pills, if they be given to any body that is hard to be purged. They are made also without Diagridio, and they be also otherwhiles mixed with some other Trochisks: look further for it in the Register in Violets.

For to make writing Inke. §. 25.

WE must not pretermitt the description of this Inke (being a necessary matter.) It is also made in sundry manners; but this is the commonest manner for to make Inke: Take powdered Gall nuts one pound, Copperas half a pound, rain water 5. quarts; seethe them all together until the third part be wasted; then let it settle, afterwards strain it through a cloth: put 4. ounces of Gum unto it; and stir it oftentimes about. Some do not boil it but let it stand and steep, stirring it very often and well: but take for it no more but three quarts of water, and let the Gum be first dissolved in good wine Vinegar until it be all dissolved, and then put the other substance unto it, and thus it is also best of all, and doth remain alwayes without moulding.

For to make common Vernish. §. 26.

Vernish is made after sundry wayes, and there are also sundry sorts of them, each for an especial use; the one is made thus, and the other so. But we will here describe onely and teach how that it shall be most fitly made, and for what it shall be requisite for each one. First, take old Linseed oyl, and seeth it so long until it be as thick that if you do take a drop of it out and let it be cold, when you presse upon it with your finger it spinneth two or three threads, or glueth to the finger. This oyl being now so sodden, put Rosin unto it as much as shall suffice for to make the Vernish thick enough: then let the Rosin decoct together with oyl so long until it do stand wholly still. This vernish is good for the smiths, for the Trencher-makers, for the Trunck-makers; and further for to Vernish all slight things.

Of Painters Vernish. §. 27.

Take old Linseed oyl and see the same as is aforesaid; afterwards put amongst one pound of the oyl, half a pound of Mastick or somewhat more, and so let it see the together a good while. This being done, then set it in the Sun, in a leaden Bason, and pour one part of water upon it, and stir it well together; then will the oyl come upon the top, and let it stand so clarifying in the Sun and air the space of two or three moneths. But it is to be noted that you must alwayes take good heed of the fair weather, and of the rain, and also of the night; for if so be that it did rain, then would your oyl run over, and so you lose the same: wherefore must you have alwayes ready a board or planck for to cover the same oyl, as well from the rain, as from the night, upon adventure least that it should rain at night, &c. You may make also a fair Vernish of the oyl alone, to wit, through the seething it away, and then let it clarify as is before said.

For to make odoriferous Vernish. §. 28.

For to make this odoriferous Vernish you are to take a new earthen pot which is well leaded, and put into it one pound of oyl of Spike, and let the same be boyling hot: afterwards you are to take half a pound of Sandaraca, or somewhat more, and strew the same amongst it being beaten small, alwayes with a little at once, and stirring it well about; then set this Vernish to clarify as is said before. This Vernish dryeth very hard and with a fair glosse: it hath an especial good savour, and may be used for all things that you please.

The 17 Chapter.

In this Chapter do come no compositions, but onely those which be tempered with blew Violets and wall flowers, whereof we have oftentimes written before, whereof each is to be found in the Register; as the Julep of Violets, that you shall find in the third Part, the 12. chap. and 10. §. The sirup of Violets in the 15. Chapter, and fifty third §. The conserve before in the 4. Chapter. The oyl of Violets in the 12. Chapter, 69. §. viz. in this Eight Part. The vinegar of Violets is made, like as the vinegar of Roses is wont be made.

The 18. Chapter.

Of all kinds of Wines.

In this Chapter be all Wines contained, which be made with any kind of herbs, and such like things, viz. all such as may be accounted amongst the Physical remedies; and because they are commonly prepared with Wine or Must, therefore we will write first of them, and that in the briefest sort: for that to write of all kind of wines were matter without end.

Of Wine in general. §. 1.

It is most true, that this noble Plant is made of God for divers necessities of mankind, notwithstanding that man doth daily abuse this noble gift of God so shamefully, and so instead of doing good thereby. harmeth his body, and provoketh sicknesse, wherefore we must discourse and treat somewhat of both these things.

In this do all learned agree, and daily experience doth teach us, that Wine is so commodious and necessary for mans life, and for his health, that there can no better drink be devised. Moreover it withstandeth all poyson, and is especial good for all sorenesse of the
Kidneyes

Kidneyes, and for all pain of the Bladder. But especially fowr wine strengtheneth the stomach; further, it doth provoke digestion, it sustaineth natural power, it strengtheneth all inward and outward parts, it keepeth a body with a good colour, it maketh fresh and healthie blood, it maketh the languishing merry, the dismayed couragious, it carrieth the well digested meate into the inward parts, it consumeth the slimy humours, it strengtheneth and dryeth the brains, it refresheth the heart, it sharpneth the wits and the understanding, wherefore it is of the heathen endued with a godly name, and is called *Liber*, that is free. Further, it bringeth with it the pleasant sleep, it provoketh venery, it maketh women fruitful. In fine, wine hath so many vertues, that *Asclepiades* said, that the power of wine may well be compared with the Gods. *Esdra*s doth write (which I cannot pretermitt) that wine is stronger then men that drink it, that it altereth the wits, that it maketh Kings wise, poore, and rich men, it assureth and sharpneth the understanding, it causeth all pain to be forgotten, it satisfyeth all concupiscence, it careth neither for Kings, nor Princes, and it uttereth all that it listeth and pleaseth. These be now the commodities and avails which wine can bring with it.

But what shall I say to the contrary of those things which it doth if it be superfluously used? but we have enough spoken thereof in the six Part and eighteenth chapter, where we discourse of the Plague: but we will proceed with those things that are more fit for our purpose. We have before admonished, that there can no more commodious nor healthier potion be found for mans nature then wine, and of all other are best the fair, clean, light red, and they that have colour like Geese feet. But for to have a full and perfect instruction of wine, and for what Sicknesse each wine is prescribed or forbidden, that is to be seen in the table of the Vine. In like manner, there is also found here a perfect instruction of Must, of vine cuick, and of spirit of Wine: also in vinegar, and for what the same is good within and without, for what it is also hurtful. Lastly, we will describe sundry herbed wines, to wit, how that they be made, and also what operation they have.

Of sundry names of Wine. §. 12.

IT is also very needful, that one do know the nature of wine, for that some of them do alter their nature, according as they be young, old, white, red, thick, subtile, small, or strong. The white wine is warm in the first degree: the very old wine in the third degree; but the wine of a yeare old keepeth a middle mean. The thick red wine maketh much blood, because it needeth no great alteration, but the thin, white, and fowr wine giveth little nourishment. The thick and troubled wine obstructeth the belly, the Liver, the Spleen and the Kidneyes, so that all they which use the same too much, are wont to be troubled with the Dropsie, and Gravel, and especially the old folks. Out of this may each one choose such wines which be most meet.

Of Must. §. 13.

THE wine which we call Must, that is new Wine which is first prest out, and not long cellered, and hath not as yet wrought thorowly, like as the same is known unto all men: this must have his proper nature, but there is almost no Must which doth any good, but many that are hurtful. But Must it commonly used when one will make any herbed wines.

Of Vine cuick, or decocted wine. §. 14.

THE Physitians do call this wine Sapam, it is commonly decocted so long of Must and other strong wine, until that of three quarts there remain but one. The decocted wine is used in Physick very much inwardly and outwardly.

Of burnt wine. §. 15.

THE burnt wine is for the most part burnt of drosse, or lees of wine, which is not used so much for Physick, as that which is distilled of clear wine, and is rectified two or three times over again.

Of Vinegar. §. 6.

That vinegar is made of sower wine, is apparent to every body. It is also a marvellous work of nature that it spoyleth wine, and altereth it out of his natural course, and maketh some other thing thereof which is a thing by it self, and used as well in Cookery as for Physick, which is no lesse pleasant then wine it self. For Dioscorides, and other more learned ascribe to vinegar many innumerable vertues, like as we find by daily experience, therefore is also the red as well as the white vinegar ordained in Physick for many kind of causes, as it is also in some diseases forbidden. The lees of the vinegar is also otherwhiles mentioned in this book.

The ninth Chapter.

Of Herbed wines and such like.

First, we will teach here how this Wine is here to be prepared, the which is effected after sundry manners, and as liketh each one best. The common manner is, that the herbs are to be gathered between the middest of August, and the middest of September: but the fittest time is when they beare their flowers. These herbs are to be dried in the shaddow, or at least in a luke-warm Chamber where it doth not dust, until you will use the same. If now you will make any herbed Wine, then take a small vessel as big as you will, and put therein Beechen or Hasel chips into it, strow upon it a good deale of dried herbs, without wringing, and afterwards one part of chips again and herbs: do this so long until that all the whole vessel be full, and afterwards fill it up with Must. If so be that it be strong, then may you drink of it the sooner, and fill it full again. But to procure further advice thereof, therefore we will add unto this how to make other sorts of herbed wines.

If one will keep these wines sweet, then is one part of the Must to be decocted away with a light fire, and that according as the Must is strong, or thin. Other do prepare the herbed wine, by a certain distillation with such herbs as they will themselves, so that they keep their smell, power, and vertue, that if so be that one put but two or three drops of it into a quart of wine, that then all the wine will taste of it, so that thereby many experiences, labour and travel is spared. But because that such experiments be not known unto all men, therefore may they use these things following: take such herbs as you will, whether they be flowers or rootes, which be very dry, pownd them, and pour upon them good burnt wine: afterwards stop it tight, and let it stand so as steep the space of certain dayes; afterwards strain them out thorough a cloth, and then preserve it in a glasse. When as then you would have such wine, then pour thereof whether it be much or little into it; and if so be that you have no burnt wine, then take good old strong wine in stead thereof. But excepting the boyling or distilling of it, the wine it self is of that nature, that very shortly it draweth to it the power, smatch, savor, and vertue of those things which are infused therein. Some suppose, that one must cast into the vessel onely the herbs, roots, seeds, flowers, or any thing else that one will, and to pour new Must upon it, whether it be much or little, according to that the wine or any thing that is in it be strong or weak. Other do cast the roots, herbs, and other things in it when the wine is a year old. Some do take the herbs or roots &c. green: some dry. Some do shred the herbs, some do stamp them to powder, and so hang them in a bag. Each may take out of this that liketh him best. Let this suffice for the making of wines.

Wine of Elecampane roots. §. 1.

THis wine is prepared after divers sorts, but the best manner is which also needeth not much trouble, as hereafter followeth, take Must first trodden out of the Grapes, and let it seeth without any smoak about it even to the half, if that you desire to have it sweet. In this you are to seeth Elecampane rootes which be digged up in the spring time, and cut into slices, and dried on a threed. Seeth them so long in it until they have

lost

lost all their bitter taste: and if one will often use this wine, then are the roots so much the oftener to be sod with new wine, that the Wine may abide by his power, and the vessel is alwaies to be filled up againe with Wine. This is a very profitable potion for the head and the brains; in like manner also for to warm and strengthen the sinews if the same be vexed with rheumes. This Wine is also good against all cold diseases of the lights and of the breast, it cleanseth the same, it strengtheneth all bad digestive stomachs, it refresheth natural warmth, it warmeth the sinews, it openeth the passages of urine, it is good against all winds, it strengtheneth the Matrix, and it cleanseth the same of all cold phlegmatick moisture; and it provoketh also the terms.

Eyebright Wine. §. 2.

THis Wine is made of the herb, as we have taught before, his vertues are described in the first Part, the 7. Chapter, and 20. §. and in other places more.

Wine of whole Grapes. §. 3.

IF one will make this Wine as it ought to be, then take whole red or white Grapes taken from the stalks and well cleansed, and put them into a vessel with chips (as we have taught before) fill the white with white Must, or with Fern wine, and the red with red wine. Some do boyl it in Must, and that according to each ones pleasure, as also some there be which put no chips unto it, but they do put Sage leaves unto it, and let them lie a certain time in it. There be spices also wont to be hanged therein, so that the wine may get thereby not only a pleasant, but also a strong and good taste.

These Wines are first of all very commodious for all hosts and householders, so that all that which remaineth of other Wines, and is not drunken, may be poured unto it. Such Wines be very acceptable, but if one do drink too much thereof, then do they hurt the head, for they do distemper the brains, and that chiefly in the evening after supper, for that they be much subtiler, and more ascending then other wines: they make a body quickly very sleepy, they provoke vomiting against evening, but in the morning they make merrry: and amongst all other there be none that hurt the brains more then this, wherefore they are both drunken more for lust and pleasure then for commodity of health.

Wine of Avence. §. 4.

THese odoriferous roots do the Apothecaries and Physitians call *Garyophyllata*, the same is to be digged up in the spring time, but chiefly in *March*, in which time the roots be most forcible: let these roots dry well, and when they be cleansed, then hang them afterwards in the Wine, it will get thereby a very pleasant savour and taste, which refresheth the heart and strengtheneth it: openeth the obstruction of the Liver, warmeth the cold and moist brains, dryeth and strengtheneth the cold slimy stomach, it asswageth also all pain of the Matrix.

Betony Wine. §. 5.

THis Wine is made of brown Betonie, as all other herbed Wines be; it is especial good against all belching and wambling of the stomach, it withstandeth the overflowing of the gall, it is many times approved in a cold Matrix, and against all suffocation of the same, it strengtheneth all inward parts, it warmeth and healeth also the same, it openeth the obstructions, it consumeth all cold humours, it expelleth all venemous matter by the urine and by the stool, and in like manner also the yellow Jaundise: and if the same be oftentimes used, then it is very requisite against the falling sicknesse, against the *Sciatica*, against the sicknesse of the Lights, and against the Consumption: It is also very necessary against the cough, against short breath, and it expelleth also all agues which do come out of a foul stomach. The same power have the red Gilloflowers, like as the same be also a kind of Betony, whereof hereafter we shall speak further. This Wines use and operation you shall find described in other places more.

Burrage Wine. §. 6.

WE have admonished before of the description of the Conserve and Sirup of Burrage, how there is a small difference between this herb and the Buglosse, wherefore also both these herbs may be taken for this Wine, like as we have taught before, or the juice of the same may also well be used with this Wine, which wine doth drive away all poison from the heart, it cleanseth the blood, it maketh merry, it refresheth the vitall spirit, it driveth away pensivenesse and all bad thoughts, it is also very necessary for all them which do fall easily into any swooning, and is of a full temperate nature, &c.

Wine of Asarabacca. §. 7.

THis Wine and other more be prepared against the gravel, like as in the third Part, the 17. Chapter, and 4. §. is described; and you shall further find in other places more for what it is more commodious.

Wine of Framboyes. §. 8.

THis Wine is made like as the wine of the whole Grapes is made, it hath the nature of the same berries, it is much commended in the Plague and Squinancie, but if one put none other wine unto it, then is it not very pleasant, wherefore it is not commanded to be used in any other places of this Book.

Wine of Harts tongue. §. 9.

THere be two kinds of Harts tongues, viz. the *Ceterach*, which is the right Harts tongue, and the long Harts tongue, which is hairy about the stalks, they may be taken both together, and to make this wine as all other wines: it is not very pleasant of taste, but it is of great force, for that it openeth and strengtheneth the Spleen, it is good against all poison of Snakes, and being drunk warm, it asswageth all cramps and scouring of the belly, it taketh away the yellow Jaundise, and also obstructions of the Liver; it is also very good for all them which be vexed with the stone and with the gravel: it is also good against all melancholy, and expelleth the Quartain Ague, it consumeth all clotted blood which is caused in the breast through falls, it openeth also the conduits of urine, and healeth all diseases of the same. For what this wine is further meet, that is to be found described in other places of this Book.

Wine of Hyssop. §. 10.

THis herb is hot and dry by nature, which vertue the Wine also hath, wherefore it is good for all old persons, for it warmeth all inward parts, it asswageth the cold and moist cough; it is also good against the falling sicknesse, for when the same is used often and long, then doth it take away the same, and that especially in young folks. It is also good for the breast and the lights, for it warmeth the same, and consumeth all tough slimy matter, and also all agues which may spring out of the same: it openeth the pipes of the lights, and it maketh a clear voice, for it cleanseth the breast, and healeth all anguishes of the same: it taketh away the shortnesse of breath, and is especial good against the Dropsie, like as is admonished and described in more other places of this Book.

Winter Cherry wine. §. 11.

THis Wine is also made like as the wine of whole Grapes, it is very much used against the stone, the gravel, and is also especial good for all them which can hardly make water.

Cherry Wine. §. 12.

UPon the River of *Rhene*, and every where else, all wines which be made of red or black Cherries, are called Cherry Wines, and they make the same as hereafter followeth. Pluck the Cherries from the stalks, and pould them in a stone mortar with

with stones and all, and then pour red or white Wine upon it: but this wine will be very small, wherefore it is prepared after another manner with whole Cherries as followeth: Lay in a vessel of beechen or hasel chips as many as you please, and then one part of Cherries upon it, and so further until it be full, like as we have said and taught of the Wine of Grapes; fill then the vessel full of wine, and so let it lie three or four daies; then shall it be sufficiently coloured. This wine is of a good tempered nature, is very requisite in sommer time in great heat for to assuage therewith thirst, and to moisten the inward parts. It openeth also the liver, it expelleth urine, especially if the kernels with the stones be broken in it, for these kernels expel the gravel. Some do hang spices therein, which cannot be good, because his nature is altered thereby. Look into the Table of the Cherries.

Of Lavender Wine. §. 13.

There is but little made at once thereof in a small vessel, whereof may not be drunken long. There is a long bag hanged in it with Lavender flowers, and interbattered or quilted, to the end that not all the flowers fall in a heap. This wine is especial good for a cold head, and for moist brains, for the giddinesse, for the falling sicknesse, and such like diseases.

Of Malmsey. §. 14.

Albeit that this Wine be tempered neither with herbs nor with spices, but by nature, and of it self is a noble and pleasant wine, which is brought unto us out of Grecia, and other Countries adjacent, yet shall it neverthelesse not be against our purpose, because that the same is very much used in Physick, that his power and vertue be shewed at this present, look for it in the second Part, in the sixt Chapter; and in the third Part, the 11. Chapter, and 14. §.

Wine of Marjoram. §. 15.

This Wine is prepared as all other herbed wines are, it strengtheneth the brains, and warmeth all inward parts: it is very good for all them which be inclined to the drop-sie, it assuageth the pain of the belly, it expelleth urine, and moveth womens termes: it is a very good potion for to warm the head, and to strengthen the memory, as you find described in divers places of this Book.

Wine of Cinamon. §. 16.

This aromatical Wine is so called and placed amongst Claret Wine, whereof we have admonished before in the eight Part, in the third Chapter. This Wine is to be prepared in the harvest, and will keep good throughout the whole year; it hath all the virtues of Hypocrasse: Take one and a half, or two barrels of Must, seeth the same as we have taught of the wine of Elecampane roots; when it is cold, then put it into a clean vessel, and put thereto as many whole Grapes pluckt from the stalk as will go into the third part of the vessel: afterwards make a linnen bag, and put therein two pound of Cinamon, Ginger one ounce, Galangal one ounce and a half, Pepper and Greins, of each half an ounce, Cloves and Nutmegs, of each one quarter of an ounce, Cucubes, Cardamom and long Pepper, of each one drachme, Mace three drachmes, pownd all grosse, and hang these herbs in it. This Cinamon wine may be used for all cold diseases of the head, as all other Aromatical wines are to be used.

Item, for all cold and unfruitful women; but to the contrary, all young and hot people, and all they that be burthened with hot Agues, must shun this wine as poyson. Of this foresaid wine is admonished in many places of this book.

Muscadel Wine. §. 17.

This Wine groweth in Candy, from whence it is brought to Venice, and brought thence unto us, and is often used in Physick, like as is admonished in many places.

Wine of Gilloflowers.

S. 18.

THis Wine is made of red Gillofer flowers, and made after the same manner as the Wine of Betonic is made, which hath also the same force, like as both of these herbs taken to be of one efficacie, and is commended in sundry places of this book.

Wine of Buglosse.

S. 19.

Look for it before in the sixth S. of the Wine of Burrage.

Wine that purgeth.

S. 20.

These purging Wines be made after many kinds of waies, like as you find them described in their places, whereof you have one for an example in the third Part, the 11. Chapter, in the end of the 20. S. which may be used for a common opening of the body.

Wine of whole Grapes.

S. 21.

It is before described in the third S. wherefore we will not here discourse any further thereof.

Vinum Puniceum.

S. 22.

This is no artificial Wine, but it is a Wine which is of itself so grown without the addition of any thing unto it. It is very healthy, and also good of taste. The same is drunken in Germany, not only at great feasts, but also used for Physick, like as is sufficiently admonished thereof in the Table.

Rosemary Wine.

S. 23.

This Rosemary Wine is marvellous much commended, and taken for a very whole some potion, especially in all cold sicknesses. It strengtheneth the digestive vertue of the stomach, it causeth appetite, it fortifieth the heart, the brains, and the sinewes, it giveth a fair pleasant colour, not onely drunken, but also the face washed therewith, it consumeth all inward putrified humours, and it preserveth the body from all sicknesses. If the mouth be often washed therewith, then doth it make a well savouring breath, it strengtheneth the teeth, and the flesh of the teeth: wherefore it is also very good that all outward ulcers, viz. the Canker, fresh wounds, and such like sores be washed therewith. Further, this Wine is good for all diseases of the lights, for the consumption, and especially for all them that are rheumatick, and moist of brains. It is also good against the Palsey, against the falling sickness, against the lameness, and against the cold Matrix, it heateth and dryeth the same, and maketh it also meet for conception. Thus if this wine must be made in haste, and not be kept long, then may you take Rosemary flowers, Harts tongue, and also rindes of Tamarisk, of each half a handful, then pour upon it seven pots of Must, and then let it so stand and work or run over, and fill up the vessel alwayes with other good Wine. Item, take Rosemary and Harts tongue, lay it all a night to steep in wine, and then use this Wine instead of the foresaid Wine if the same cannot be gotten: his vertue and power is described in many sundry places.

Wine of Sage.

S. 24.

This Wine doth heal all soreness of the mouth, it setteth fast the teeth and also the gums, it strengtheneth the sinews and all lame joynts, it dryeth the moist brains which are hurt through Phlegma, it freeth from the cramp, trembling and shaking, and also from the falling sickness, the same being drunken, and the liver anointed therewith, or the hot vapour thereof received; for what it is further meet, that is admonished here and there in this Book.

Wine of Clarie. §. 25.

THe deceitful falsifiers of Wine have made this precious herb (which is a species of wild Sage) very suspicious, so that it is esteemed hurtful: but it is in truth not so, for if with this herb (as with all other herbs) the wine be prepared, then it is very fit for the head and for the stomach, for that it dryeth and warmeth the cold moist brains. It is also much to be compared with the wine of Sage and of Rosemary for his vertue, and this is also the cause wherefore we make so little mention thereof in this book.

Wine of Water Lillie flowers. §. 26.

THis wine is prepared very seldome, as also it is but once remembred in this Book, and that in the Consumption.

Tamarisk Wine. §. 27.

THis Plant doth willingly grow in moist places, and to this Wine is alwaies used the middlemost rindes, it hath the same power of the Wine of Harts tongue, wherefore they are commonly used together, as may be seen in many places of this book. This wine may also well be drunken for to cleanse the blood with it, and to consume melancholick humours which do cause the quartain Ague and the Scurvie, and such like sicknesses. What vertues this wine hath more, look for that in the Table, in the description of the wine of Harts tongue.

Wine of Wormwood. §. 28.

Although that this wine hath a bitter and unpleasant taste, yet hath it neverthelesse a marvellous great vertue, and is used above all other herbed wines. First of all it killeth the Worms, it withstandeth poyson, and it expelleth the hurtful phlegme; and if one drink the same often, it cleanseth and strengtheneth all inward parts that they cannot receive such matter, it dryeth the vapours of the stomach that they cannot ascend into the head, it maketh appetite, it openeth all obstructions of the inward parts, viz. of the liver and the spleen, and it taketh away also the yellow Jaundise which is caused thereby; it freeth from the Palsey, the falling sicknesse, and all lamenesse, it restoreth lost speech, it strengtheneth the weakned joynts if the same be well rubbed and fomented with it; and if mens or beasts wounds be washed with it, then is the same kept fair and clean, and suffereth no foul flesh to grow in them, but healeth them: it cureth also all scald heads if the same be washed with it.

If any one would go to Sea, then is he to drink certain daies before some of this wine, for that thereby shall he be freed of the Sea sicknesse. Moreover, this wine is an especial preservative against the Plague, and against all venemous ayr, if one take a good draught thereof before that such Patients be visited, it bringeth also sleep with it, and taketh away heavy dreams. But by reason the common people have not alwaies this wine in a readinesse, the juice of Wormwood may be tempered amongst Wine, and be used instead of the Wormwood wine. This Wine is meet for many more other diseases, like as may be read here and there in this book.

Wine of Zeduary. §. 29.

Take in the beginning of winter one barrel and a half of Must, let it seeth softly, like as is described of Elecampane Wine, afterwards put it into a clean vessel, and then put these spices following unto it: Take good Cinamom one ounce, Zeduary half an ounce, Ginger, Galangal, greins and long Pepper, of each one drach. pound them all together grosse, to the end that when the power of the Zeduary is gone, the spices may dry, and take out the Zeduary of it and put fresh unto it: if so be that you desire to keep this wine long, then is the same to be filled up with decocted wine, and not with common wine. This wine hath the same efficacie and power with all aromatical wines, and may also be used instead of them.

How the infirmities of all Wines are to be amended. §. 30.

WE are here not to write too largely how all the infirmities of wine are to be amended, but are to commend that to the Wine sellers, by reason that thereof divers books are written: for amendment of all Wines doth serve very well M. Tristrams water, which is described in the fifth Chapter, and 1. §. In like manner also all golden and vital waters which before in the eight Part, and sixt Chapter are described, if there be poured a little of them in Wine which is dead or low, and stirred well about.

Item, in the moneth of May you are to take a branch of a young green tree, shave off the uppermost rindes, and lay them the space of three dayes in fresh water: afterwards wash them well, and then pour fresh water again upon them. This being done, let them lie the space of three daies, wash them well again, and then dry them in the shadow. If you have now any Wine which beginneth to be dead, then take three or four of these rindes all of a length, and bind them to a threed, and hang them in the wine, it will thereby be very good and cleer.

There be here and there described divers sorts of Wine, which be prepared for sundry sicknesses and parts of mans body, viz. for the Head, for the Liver, for the Milt, for the Heart, and for the Reins, &c. each one may look for them in their places for which they will use them. Herewith we will in the name of God finish this our

Book of Physick, and commend the same unto our most true Father,

through Jesus Christ our Lord, the most true Physitian of

all our diseases, that he will most graciously

extend his blessings over it.

Amen.

The end of the Eight and last Part of this Book.

The

The first Table containeth all the names of all diseases,
accidents and infirmities: Also all manner of Compositions,
Conserve, Confections, Electuaries, Sirupes, Juleps, Trochisks, Pills,
Potions, Salves, Plaisters, Oyles, Baulmes, Waters, and Aromatical
Wines, with divers other things more, which are mentioned in
this Book.

A <i>Bortus</i> , abortion.	540	<i>Aloe</i> prepared.	
Abricocks how preserved.	745	<i>Ammoniacum</i> prepared.	
Accidents that may follow after childbirth.	551	Ancome, look Fellon.	
Accidents caused through pain in the hips.	570	Appetite unsatiable to meat.	412
Accidents divers in the Plague.	705, 706	Appetite lost, look hunger lost.	366
Aegilops.	195	Appetite lost in hot Agues.	664
After-birth how to expel.	549	Apples preserved.	748
After-throwes how to be eased.	550	Apoplexie.	166, 191
<i>Agaricus</i> prepared.	15	Apricocks preserved. look Abricocks.	
<i>Agaricus</i> used.	<i>ibid.</i>	<i>Aqua Johannis.</i>	195
Agues description in general.	655	Armes description.	552
Ague of one day called <i>Ephmera</i> .	657	Armpits description and stench.	<i>ibid.</i>
Ague pestilential.	700, 705	Arseguts canker, look Canker.	
Ague quotidian.	675	Arseguts descent or prociencie.	334
Ague quartain.	676	Arseguts description.	<i>ibid.</i>
Ague <i>Hepialos</i> .	637	Arseguts impostume.	335, 346
Ague <i>Hemitritaa</i> .	667	Arseguts itch, look itch of the Fundament.	
Agues wandering.	657	Arseguts pain.	336
Ague <i>Hectica</i> .	679	Arseguts relaxation.	338
Agues continual.	661, 662	Arteries description.	637
Ague Tertian exquisite.	667	Artificial Baulm.	737
Ague Tertian bastard.	670	Ascension of the Matrix.	521
Ague burning called <i>Canson</i> .	671	Asthma, purfivenessse.	269
Ague called <i>Synochus</i> .	673		
Ague <i>Synochus</i> of putrifacted blood.	674	B ack, and back pain.	243, 244
Ague <i>Hectica</i> , with an ulcer in the breast.	682	Bagg to be used in the falling sicknesse.	186
Ague <i>Marasmode</i> .	679, 684	Bags to be laid upon the stomach.	361, 365
Ague long lingering.	685	Barley water.	259
Ayr convenient for the sick of the Plague.	711	Barley parched in broth.	289
<i>Alcola</i> and clifts of the tongue.	203	Baulm precious to comfort the heart.	294
<i>Alipta muscata</i> prepared.	373	Barrennesse description.	327
Allom calcined, or burnt.	740	Barrennesse through cold and moistnesse.	329
Almonds confected.	740	Barrennesse through dryth.	<i>ibid.</i>
Almonds swolne.	195	Barrennesse through heat.	328
Almond milk prepared.	768	Barrennesse through overmuch fattenesse.	326
<i>Aloe</i> how to know in.		Barrennesse through superfluity of blood, and obstruction of the terms.	331

The first Table.

Bathes for sweating.	644	Bones fracture.	582
Baulme prepared.	737	Bones corruption or putrifaction.	584
Baulmes diversly prepared.	<i>ibid.</i>	Bones description.	636
Beards description.	149	Botches.	593
Beards falling out prevented.	<i>ibid.</i>	Bowels pain in general.	452
Beards growth procured.	<i>ibid.</i>	Bowels pain in young children.	463
Beeres description.	739	Bowels description.	452
Belching up of Gall, or boyling in the stomach.	400	Bowels pain in the uppermost part of them, called <i>Iliaca passio</i> .	453
Bellies pain, of all manner.	460	Bowels pain called <i>Colica</i> .	454
Belly bound or obstructed.	456	Bowels pains difference.	455
Biles of the Pox.	613	Bowels pain of binding in the belly.	<i>ibid.</i>
Biles, look Tumours, Nodes, &c.		Bowels pain of sliminesse in the guts.	556
Binding in the body.	390	Bowels pain of windinesse.	457
Birth how to advance.	547	Bowels or belly pains remedies.	458, 459, 460
Birth untimely.	541	Bowels pain of an impostume.	<i>ibid.</i>
Birth unnatural called <i>Mola</i> in the mother.	533	Bowels pain with heat.	462
How remedied.	534	Bowels pain with gravel.	<i>ibid.</i>
Birth her signs.	548	Brains description.	150
Bladders description.	496	Brains the beginning of sinews.	<i>ibid.</i>
Bladder or neck of the bladders infection.	505	Brains how to dry them.	151
Bladders neck impostume.	<i>ibid.</i>	Breath which is short and wheeasing.	273
Bleeding before and after what ought to be done.	25	Breaths shortnesse, look Lungs obstruction.	
Bleeding too much how to be prevented.	26, 640	Breath that is stinking.	287

Electuarium de Sebesten. 392
Electuarium vita. 765
Electuarium de Manna. 761
 Electuaries more. 760, 762, &c.
 Eluxation of the joynts. 570
 Emperour *Charles* his prescriptions and rules in the Gout. 580
Epithymus or Dodder prepared. 14
 Eryngus roots preserved. 746
Esula prepared. *ibid.*
Euphorbium used. *ibid.*
 Excoriation of the bladder. 505
 Extraction for all obstructions and binding of the body. 420
 Exhortation to the keepers of the infected with the Plague. 680
 Exulceration in the Kidneys. 478, 754
 Exulceration in the stomach. 407

F

Faces description. 77
 Faces rednesse. 78
 Faces pushes and heat. 79
 Face how to clear it. 66
 Falls, blowes, and bruises, cause many sicknesses. 716
 Falling sicknesse *Epilepsia*. 183
 Falling sicknesse in children. 184
 Fat of mans body described. 649
 Fats of divers beasts prepared. 14
 look Marrowes.
 Fatnesse, her troublesomnesse to man. 649
 Fear and frightening. 414
 Feets diseases how cured. 559
 Felon or Ancome of the fingers. 557
 Fever burning called *Causon*. 671
 Fingers described. 555
 Fingers numbed. 556
 Fingers numbed through bruises. 557
 Fistulaes causes and signs. 602
 Fistulaes description. 601
 Fistula in the corner of the eye. 105
 Fistula in the gums. 207
 Fistula in the breasts. 242
 Fistula in the arse gut. 348
 To cause flesh to grow in wounde. 634

Fleashes description. 448
 Flix and red flix. 375, 381
 Flood too abundant after delivery of the child. 550
 Flowers how long they may be kept. 8
 Flowers in women, look Termes.
 Flowers of women in general. 507
 Flowers how to prefer them. 509
 Flowers obstruction how remedied. 510, 511, 512, 513
 Flowers excessive course how to be stopped. 516
 Flux of seed through heat, look running of the reines.
 Flux of seed in sleep. 325
 Flux of seed through cold. *ibid.*
 Flux white in women how to be remedied. 520
 Fomentations for the stomach. 365
 Fractures of bones. 582
 Frensinesse. 157
 Frensinesse of blood. 159
 Frensinesse with a hot ague. 158
 Friction in the falling evil. 180
 Fruits of all sorts, how to keep them fresh. 754
 Fruits increase in the womb. 535
 Fruits in weaknesse in the mothers womb. 538
 Fruitfulnesse how it is caused in man and woman. 300
 Fruitfulnesse her signs. 535
 Fruitfulnesse in women how furthered. 328

G

Galbannum plaister prescribed. 519
 Galbanum plaister *Galen*. *ibid.*
 Gals description. 436
Gallia Muscata prepared. 373
 Gargarismes for all infirmities of the mouth. 196
 Gargarisme for giddinesse of the head. 156
 Gargarisme for losse of speech. 204
 Gargarisme for rheumes. 227
 Generation members. 305
 Giddinesse of the head. 154
 Ginger prepared. 745
 Glifters diversly prepared. 740
 Golden Egg prepared. 339
 Gloves how to perfume. 557
 Going ill after the gout in the feet, how to remedy it. 582
 Gout. 560
 Gout signs. *ibid.*
 Gout rules that are to be observed. 562, 563

The first Table.

Gout of the hands called <i>Chiragra</i> .	564
Gout in the feet.	573
Gout of the feet his preservatives.	575
Gout of the feet how to prevent it.	<i>ibid.</i>
Gout of the feet or <i>Podagra</i> , how purged.	576
Gout of the feet which is cold.	578
Gout of the feet his remedies.	576, 577
Gout of the hips called <i>Sciatica</i> .	565
Grapes preserved.	753
<i>Gratia Dei</i> plaister.	680
Gravel, sand, or stone of the Kidneyes.	482
Gravels increafe hindered.	483
To expel gravel.	486
Outward remedies for the gravel.	492
Gravels pain delayed.	485
Gravel remedied.	486, 487
Griping of the heart.	301
Groynes swolne.	305
Gumme Ammoniack, look <i>Ammoniacum</i> .	205
Gums of the teeth.	<i>ibid.</i>
Gums bleeding.	193
Gums ulcer.	207
Gums fistuled.	<i>ibid.</i>
Gums resolving.	<i>ibid.</i>
Gums putrifying.	205
Gums impostumating.	526
Gunpowder burning.	
Guts pain, look Bowels pain.	

H

H Agge or mare.	182
Hairs description.	61
Hair to make it grow.	<i>ibid.</i>
Hair made yellow.	62
Hair made black.	<i>ibid.</i>
Hair made to curl.	<i>ibid.</i>
Hair that it wax not gray.	<i>ibid.</i>
Hair taken away.	63
Hair drawn out.	<i>ibid.</i>
Hair infected diversly.	<i>ibid.</i>
Haires falling out prevented.	64
Haire on the breasts what it signifieth.	243
Hands end and use.	553
Hands description.	<i>ibid.</i>
Hands how to keep them clean.	<i>ibid.</i>
Hands how to make them sweet.	554
Hands that are scabbed.	<i>ibid.</i>
Hands that are chapped.	<i>ibid.</i>
Hand waters, or lotion for the hands.	555, 556
Hardnesse of the Matrix or Mother.	527
Heart-burning.	366
Hearts heavinesse.	302
Hearts panting or beating.	294

Hearts panting through heat.	295
Hearts panting through a bad stomach.	302
Hearts panting through cold.	299
Hearts panting through frightening.	302
Hearts oppression.	291
Hearts description.	288
Heart infirmities in general.	289
Headach.	37
Head-ache <i>Hemicrania</i> .	45
Head-ache <i>Congelatio</i> .	37, 168
Head-aches causes.	38
Head-ache with an ague and a lask.	42
Head-ache of inanition.	45
Head-aches <i>Hemicrania</i> and <i>Cephalaea</i> cured.	<i>ibid.</i>
Head-aches remedies.	<i>ibid.</i>
Head-ache of the Sun.	46
Head-ache of drunkennesse.	<i>ibid.</i>
Head-ache of blowes or falls.	47
Head-ache of cold.	<i>ibid.</i>
Head-ache of cold, and an especial remedy for it.	50
Head-aches that be old.	227
Head which is cold, how to purge it.	47
Head broken out.	67
Head broken out healed.	67, 68
Heads giddinesse, look giddinesse of the head.	
Head veins use in opening of it.	27
Head wounded.	59, 70
Hearing that is bad.	140
Hearing diminished.	146
Healthy how preserved from infection of the Plague.	687
What exercise is to be used of them.	689
How their dwellings ought to be.	<i>ibid.</i>
Their government without doors.	692
Heat of urine, look Urine that scaldeth.	
Heat of ulcers, see Inflammation.	
Heat unnatural in the Plague.	705
Heat unnatural.	712
Heat of the head with Melancholy.	44
Herbs, roots, and flowers, how to preserve them.	7
Herbs when they ought to be gathered.	<i>ibid.</i>
Herbs and roots how to be reserved.	<i>ibid.</i>
Herbed wines prepared.	738, 812
Hermodactyles used.	14
Hickcoughes in general.	409
Hickcoughes description.	<i>ibid.</i>
Hickcough of repletion and windinesse.	410
Hickcough of inanition.	411
<i>Hieralogodion</i> .	761
<i>Hiera Picra</i> prepared.	760
Hippocras or Claret wine how to make it.	

The first Table.

Hippocras fontis. 739
Hoarsenesse. 117
Honywater prepared. 757
Hony of Roses. 196
Horsleaches prepared. 413
Horsleaches used. 30
**Humane seeds unnatural effluxion, look run-
 ning of the reins.** 325
Humane seed increased. 446
Humours melancholick how to purge. 413
Hunger, Cow-hunger or *Bulimos*. 412
Hunger called Hounds hunger. 366
Hunger lost remedied. 415
Hunger with swooning, called *Syncopalis*. 311
Hunger unsatiable. 453
***Iliaca passio*, a griping in the uppermost
 small guts.** 205
Impostumation of the gums. 528
Impostume of the Matrix, hard to be cured. 476
An hard impostume of the Kidneys. 128
Impostumes in the nose. 406
Impostumes of the stomach of cold nature. 505
Impostume of the bladder. 404
**Impostume of the Liver, look Livers im-
 postume.** 505
Impostume of the neck of the bladder. 404
**Impostume of the neck of the Mother, look
 Mothers impostume.** 404
**Impostume of the Spleen, look Spleenes im-
 postume.** 404
Impostume of the stomach. 404
Inappetencie or lost appetite, how remedied 366
Ink how to make it. 809
Infections of the liver diversly cured. 426
Infection of the Plague. 700
Signs thereof. *ibid.*
Infected with the Plague how to comfort. 703
And what things else are to be observed. 704
Infected how to be purged. 705
Inflammation in womens places. 320
Inflammation of ulcers. 607
Inflammation of *Erysipelas*. 395
The signs and remedies thereof. *ibid.*
Joynts hardnesse. 575
Joynt disease called *Arthritis*. 562, 563
Joynt-ache, or pain in general. 566
***Ischia* the hips Gout.** 565
Itchednesse or scabbednesse. 390
Itch in the fundament. 348
Itch of the hands. 555

Juice of wild Cucumbers prepared. 714
Juices of herbs, flowers and roots prepared 16
Juice of Sloes prepared. 717
Julep prepared. 758
Julep of Roses how made. 427
Julep of Violets. *ibid.*
Julep for the obstructed Liver through heat. 417, 418
Ivory prepared. 14

K **Keepers of the infected with the Plague,**
 what to observe. 712
Kidneyes description. 470
Kidneyes exulcerated. 476, 478
Kidneyes exulcerated outwardly. 482
Kidneyes impostume. 476
Kidneyes impostume through cold. 478
Kidneyes impostume through heat. 477
Kidneyes obstructed. 473
Kidneyes pain of heat. *ibid.*
Kidneyes pain of cold. 471
Kidneys pain of heat eased. 474, 475
Kidneys pain of winds. 472
Knees description. 558

L ***Lactis Virginis*, that is, Maiden milk prepared.** 77
Lacca prepared. 15
***Lactiscans Almanforis*.** 165
Lamenesse, look Palsey. 607, 608
Lamenesse caused by the Pox. 375
Lask. 396
Lask called *Tenasmus*. 396
**Lask with parbreaking, look vomiting with
 a scouring.** 375
Lask *Lienteria* proceeding of choler. 378
Lask *Diarrhea*. 382
Lask of the liver. 382
Lask that is bloody, look Bloudy flux. 389
Lask that is bloody, another kind. 375, 376, 378
Lask remedied. 18
Laurels use. 650
Lead prepared. 617, 618, 619, &c.
Leanneffe remedied. 624
Leprosies description, signs and causes. 558
Leprosies remedies. 617, 618, 619, &c.
Leprosies of all sorts, what is requisite. 558
Legs described. 558
Legs *Varices*. 558
Letting of blood, look Blood letting. 65
Lice killed. 66
Lice, a water for them. 66
Lice salve, look Salve for lice. 66
Lights

The first Table.

Lights description, see Lungs
 Lights obstructed. 237, 258
 Limbs extenuated or withered. 570
 Limbs unsensiblenesse. 584
 Limbs shaking or nummednesse, look Members.
 Lips chapped. 148
 Lips described. *ibid.*
 Lips trembling. 149
 Liver description. 415
 Liver diversly remedied. 416
 Liver of a Wolf prepared. 18
 Liver of a Buck prepared. 124
 Livers diseases in general. 416
 Livers obstruction in general. *ibid.*
 Livers obstruction of cold. 420
 Livers obstruction of heat. 420
 Livers hardnesse or schirrosity. 423
 Liver over-cold. *ibid.*
 Livers impostume. 424
 Livers pain. 416
 Loathing of meat. 668
 Loathing of meat in Agues. 665
 Loch de Pulmone vulpis described. 270
 Loch de Cancris. 285
 Loch of Squils. 262
 Loch de Pino. *ibid.*
 Loch sanum & expertum. *ibid.*
 Longings of women with child. 537
 Losinges diversly prepared. 232
 Losinges for the cough and rheume diversly prepared. *ibid.*
 Losse of tasting. 200
 Losse of speech. 204
 Loufie evil. 66
 Lungs description. 279
 Lungs exulceration called Empiema. 279
 Lungs infection called Peripneumonia. 279
 Lungs stopped. 257, 258
 Luxation of the joynts. 538
 M
 Madnesse. 157, 162
 Madnesse called Mania. 157
 Madnesse called Melancholia. 157
 Mad-mens dwelling place. 160
 Mans body divided into four parts. 628
 Maidens milke. 577
 May cheefe. 577
 Maia used. 18
 Maia Christi, with Pearls. 18
 Marchpane prepared. 268
 Marks and spots in the skin. 634, 635
 Marmalade diversly prepared. 750
 Marrow of divers beasts prepared. 514
 Matrix description. 506, 507
 Matrix canker and ulcer. 530

Matrix use in women. 506
 Matrix suffocation or ascension. 522
 Matrix impostume how remedied. 528
 Matter made with urine. 148
 Meade for the oppression of the breast. 268
 Meade how to make it. 566, 768
 Measles or the Red-gumme in children. 587
 Medicamen de Turbith. 393
 Melancholy. 573, 163
 Melancholick humours how to be purged. 451
 Melancholia hath in the body a certain place. 636, 638
 Melicraton. 768
 Members accidents. 581
 Members extenuated. 573
 Members luxation, look Luxation.
 Members lamed. 633
 Members numbed. 586
 Members shaking. *ibid.*
 Members strained or bruised. 581
 Memories description. 151
 Memory strengthened. 153
 Mettals that are venomous, look Venomous mettals.
 Mithridate. 764
 Mezereon her description. 17
 Milks abundance. 234
 Milk curded or clotted. 238
 Milks description. 236
 Milk in women defect. *ibid.*
 Milks superfluity. 238, 450
 Milt, see Spleen.
 Miobalans prepared. 55
 Miobalans used. 55
 Mischance in women with child. 540
 Mischance prevented. 541
 Misery of mankind, three causes. 3
 Miseries of mans life. 2
 Miseries of new born babes. 2
 Miva. 386
 Miva Citioniorum aromatica. *ibid.*
 Mola, an unshapen peece of flesh in the mother. 532
 Moles or marks children are born withal. 635
 Mothers canker or ulcer. 530
 Mothers descension. 523
 Mothers description. 506, 507
 Mothers impostume. 427
 Mothers neck convulsed. *ibid.*
 Mothers pain of winds. 525
 Mothers pain of cold. 527
 Mothers pain of heat. 527
 Mothers schirrosity or hardnesse. *ibid.*
 Mothers

The first Table.

Mothers suffocation, look suffocation of the Matrix.	
Mothers use in women.	506
Mouthes description.	493
Mouthes convulsion.	177
Mouthes exulceration.	193, 194
Mouth stinking.	195
Murre described.	130
Murre cured.	<i>ibid.</i>
Muscilage, look Slime.	
Muscles and lacerts described.	648
Mustard seed prepared.	17

N

N Ailes of hands and feet described.	558
<i>Napra.</i>	636
<i>Narcotica</i> used.	460
Natural warmth of man described.	640
Navels descriptions.	304
Necks description.	218
Neefing of a cold rheumatick head.	58
Neefing what it is.	<i>ibid.</i>
Neefing causes.	<i>ibid.</i>
Neefing powder.	<i>ibid.</i>
Neefing wort, or Hellebors use.	16
Nipples chapped.	243
Noses canker.	127, 128, 129
Noses description.	126
Noses exulcerated.	126, 128
Noses obstructed.	126
Nose obstructed in children.	128
Noses excrecence of flesh.	<i>ibid.</i>
Noses impostume.	<i>ibid.</i>
Noses infection called <i>Polipus.</i>	130
Numbednesse.	168
Nutmegs preserved.	747

O

O Yl of Saint Johns wort.	773
Oyles for the stomach in vomiting and scouring.	372, 375
Oyle of Antimonie, of Steele, and Iron.	779

Sirup of Mints.	386		

The first Table.

Spleens obstruction with heat and Agues. 441
 Spleens impostume. 442
 Spleens obstruction without Agues, but with pain. 443
 Spleen pained. 441, 443.
 Spleens schirrositie. 444
 Spleens external remedies. 447
 Spleens melancholike humours. 449, 452
 Splinter, look Thorn. 635
 Spots of falls. 758
 Spots taken out of cloth. 634
 Spots of the skin. 635
 Spots of heat remedied. 77
 Spots of the face cured. 77
 Squinancy, look Tumor in the throat. 77
 Squintnesse, look Eyes squintnesse. 77
 Stains of the face. 77
 Steel prepared. 552
 Stench of the arme-holes, how remedied. 552
 Stinking breath, look breath. 356
 Strich in the breast, look Pleurisie. 357
 Stomachical confections. 349
 Stomachical powders. 351
 Stomachs description. 354
 Stomachs mouthes description. 355
 Stomachs digestion preserved. 363
 Stomachs debility in general. 365
 Stomachs debility of cold. 398
 Stomachs debility of heat. 399
 Stomachs debility of dryth. 400
 Stomachs wambling, look Wambling. 400, 401
 Stomachs pain in general. 402
 Stomachs pain of heat. 404
 Stomachs pain of cold. 404, 406
 Stomachs pain of wind. 403
 Stomach swolne. 407
 Stomach pained of melancholy. 408
 Stomachs impostume. 482
 Stomachs pain through *Phlegma*. 403, 484
 Stomach exulcerated. 486
 Stomachs schirrosity or hardnesse. 804
 Stone of the kidneys. 521
 Stone of the bladder hindred from growing. 766
 Stone of the bladder. 19
 To break and expel the Stone. 391
 Strong Water. 401
 Suffocation of the Matrix. 436
 Sugar cakes made. 701
 Sugar pennets prepared. 701
 Sugar clarified. 701
 Sugar plates. 701
 Suppositories. 701
 Suppositories for windinesse. 701
 Sweating good for all Dropsies. 701
 Sweat in the Plague how to be procured. 701

Sweat described. 642
 Sweat provoked. 643, 644
 Swellings after an Ague. 675
 Swellings hard. 593
 Swellings of the Groins, Arm-pits, and ears. 597
 Swelling of womens places. 320
 Swine Pox. 588
 Swooning. 289
 Swooning called *Syncope*. 291
Synovia how to stay it. 634

T

TAbulates how to make them, look Cakes.
 Terms in women, their description. 507
 Terms in women procured. 509
 Terms in women to be stayed. 516
 Teeth that stand on edge. 213
 Teeth kept good. 215

Wombs description and use.	506, 507		
Wombs descension, look Mother.			
Good for childbearing Women.	534		
How to know whether a Woman be with child.	<i>ibid.</i>		

The end of the first Table.

This

This second *Index* containeth all the Simples that are Specified in this Work, as Roots, Herbs, Flowers, Fruits, Plants, Juices, Gummes, Woods, Stones, Barks, Mettals, Minerals, and Earths. Also all the parts of Beasts, and of the Body of man; that are or may be used in Physick.

Brecocks or Peaches, are called in Latine *Mala armeniaca*, *Mala praecocia*, and *Bericocia*: others do call them *mala praecocina*, and the common sort name them *Chrysemela*, but this is the right and true Latine name of the Orange: it is a fruit sufficiently known, and growing in this our countrey.

Adders tongue, is called of *Plinie* *Lingua*, and *Lingulaca*, of the Herbarists, *Echioglossum*, *Ophioglossum*, *Lingua viperina*, *Lingua serpentina*, and *Lingua dialeratica*. This herb is to be gathered only in April and in May, it groweth in moist meadows and low grounds, and that at no other time then in the above said moneths. It is used in vulneral porcions, oyles and salves.

Alcock, or *Indish Pepper*, in Latine *Peperidum*, *Piperis*.

Alchoof, or (as some say) *Hatchoo*, is called in Greek and in Latine *Chamaecissus*, *Selinia*, *Hederabimilis*, and *Coronaria*, by the Herbarists, *Hedera pluvialis*, and by the Apothecaries, *Hedera terrestris*.

Allium alpinum, it is also called *Allium reticulatum*, *Victorialis*, and *Victorialis longa*, to distinguish it from *Gladiolus segetalis*, which by divers authors is called *Victorialis rotunda*, although in very deed they differ greatly. The leaf of this herb is not much unlike to that of Neesewort, the root is long and hairy, twisted together, as if it had been done of purpose with the hand, whereof two of them are laid cross one over another, as the legs of man or woman otherwhiles are placed. This root do the rosening Merchants (I mean the Mounti-

banks and Quacksalvers) sell for the right *Mandragora* or *Mandrake*, saying, that they have digged it up under the Gallows with great hazard of their lives: thus do they beguile and seduce the common sort of men with untruths, which ought by the Magistrates to be severely punished, and not for a small peece of silver to be permitted, otherwise, I fear they shall be called to an account for it, when it shall be said, *Redde nationem villicationis tuae*.

Allum, *Alumen*, *Alumen liquidum*, *Alumen stiparinum*, *Alumen rubeum*, the Apothecaries do call it, *Alumen de Rocha*.

Amber in Latine, *Ambarum*, *Ambar*, *Ampar*, *Ussuccinum orientale*, and at the Apothecaries, *Ambra*, it is a precious liquor, or a kind of sweet smelling earth.

Amethyst, *Amethystus*, a precious stone.

Anmie, *Ameos*, *Anmum*, *Anmi*, *Cuminum regium Hippocratis*, *Cuminum Alexandrinum*, and *Cuminum Ethiopicum*, it is a kind of plant which beareth a sharp and sweet seed, which the Apothecaries do call *Ameos*.

Anacardus or *Anacardium*, is a strange fruit so called.

Angelica is called by divers and sundry names, for that there be divers sorts of it, as *Hippiatricis*, *Lasaron Gallaticon*, in Greek *Lasar Gallicum*, *Lacerpitium Gallicum*, and of the Herbarists, *Imperatoria*, *Ostracium*, and *Astracium*, the Apothecaries do call it *Astracium*, and *Magistratum*.

Anthora, is called of *Paulus Aegineta*, *Ar-nabo*, and of the Arabian writers *Zurumbet*, of the Simplicists *Zurumbetum*. It is a sweet smelling root like to Ginger, but it is bitter in taste. It is commonly called *Zedoaria*, but unjustly: for there is no small difference between *Zurumbet*, that

The second Table.

is, *Anthora*, and *Zedoaria* of the Arabians, as manifestly appeareth by the words of *Avicen* and *Serapio*, who do write of these two in sundry chapters, severally: wherefore the *Zedoaria* of the Arabians is not our *Anthora*, although that it hath bin falsly used in many compositions for it, but it is the root of *Zeduary*; *Anthora* is an herb, not much unlike the lesser *Wolfsbane*, but that it groweth somewhat higher, and the flowers are a little lesse and yellow. It hath two black roots round like unto an Olive; blackish without and as it were withered; within white and solid. It groweth in great quantity on the hills in *Savoy*, and about *Geneva*, all about *Salmes*, in high *Burgundy*, and on the hills of *Switzerland*. The latter Greek Writers call it *Zadura*, *Zaduaria*, *Zedura*, *Zudar*, *Zaduara*, *Zadur*, *Zadera*, *Zaduär*, and *Zadar*: *Serapio* calleth it *Zedoaria*; *Avicen* *Zeduar*, *Gieduar*, and *Napellus Moysi*. The *Simplicists* name it *Anthora*, *Antithora*, and *Anthullia*: wherefore whensoever you shall find *Zurumbet* in any composition, then be sure to take *Anthora*; but if you read *Zedoaria*, then take *Doronicum*.

Antimony, in Greek *Stribi*, *Stribium*, or *Stimmi*; of *Galen* *Gynacium*, and of *Plinie* *Platiophthalmos*: it is called at the Apothecaries by the barbarous name *Antimonium*. *Plinie* also calleth it *Alabastrum*, which name is proper onely to *Alabaster*; it is a mineral like to lead, and known of all men.

Argentine, *Argemone altera*, *Inguinaria Plinii*, *Anserina*, *Argentina*, *Tenacetum sylvestre*, *Agrimonia sylvestris*, *Potentilla*, and *Potentilla*. This herb is sufficiently known, and much used for all pains and gripings in the belly which are without any binding.

Aristologie the round, vide *Hartwort*.

Aromatical wine, is a wine made with spice, and a kind of *Hippocras*, *Aromatites Hippocras* is called in Latine *Vinum Hippocraticum*, the *Claret wine* *Clarea*, *vinum Claritum*, and at the Apothecaries *Claro-batum*.

Artichokes, are called in Greek and in Latine *Scolymus*, *Cinara*, *Cinarus*, *Acantha*, *Cactus*, *Cardus altiss*, *Strobilus*, *Carchophilus*, *Articacalus* and *Articoca*.

Ars-smart, in Greek and in Latine *Hydropiper*, *Piper aquaticum*, *Piper caninum*, *Herba pavonis*, *Pavonaria* and *Periscaria*, of *Hippocras*, *Polycraton* or *Polycriton*. It is a well known and contemned herb, but very good for wounds; it is hot and dry. The other

kind, which by the unskilful without any regard is used for the true *Ars-smart*, is somewhat bigger, and hath blewish spots on the leaves, it is also something colder and dryer by nature then the former, and it is called *Periscaria major*, and *Periscaria maculata*, and of *Plinie* *Plumbago*, and *Molybdæna*. The first sort is the right *Ars-smart*, which is not only used in wounds, but also for the *Piles*, and the juyce of it for the worms.

Asarabacca, *Asarum*, *Nardus rustica*, *Vulgaro*, and as some say *Vulvago*: the Apothecaries call it *Asarum*, and some *Asarabaccara*.

Ash tree, in Greek and in Latine *Melia*, and *Fraxinus*, it is a common and well known tree.

Azure stone, *Cyanon*, in Latine *Lapis Cyanus*, *Lapis caruleus*, and *Lapis stellatus*, at the Apothecaries *Lapis lazuli*.

Avenge, or herb bennet, *Garyophyllata*, *Avantia*, *Sanamunda*, *Oculus leporis*, and of *Plinie* *Geum*.

Axungia vehicularis, or *Unguentum vehiculare*, is a composition of Tarre and Tallow that countrey men do use to grease their Cart wheels withal, it is used for Ruptures or Hernies.

B

Bacon, is called of *Plinie* in Latine *Lardum*, and of *Plantus* *Laridum*.

Badger, *Meles*, *Taxus*, *Tassus*, *Taxo*, it is a well known beast.

Barberry tree, in Greek and Latine *Oxyacantha Galeni*, *Crespinus*, and at the Apothecaries *Berberus* and *Berberis*.

Barley, in Greek and Latine *Criso* and *Hordeum*.

Bay tree, in Greek *Daphne*, in Latine *Laurus*. There are two sorts of Baies, the male and female kind. The female is the common Bay tree which beareth the berry: the male is altogether like to the former, but that it beareth no berries: the female is called of *Plinie* *Laurus baccalia*, and of the Herbarists *Laurus foemina*, *Laurus baccifera*, and *Laurus foecunda*. The male is called *Laurus mas*, and *Laurus sterilis*. Both kinds are planted in gardens with us.

Balme, *Melissophyllon*, *Meliphylon*, *Melittæum*, and *Melittæna*, in Latine *Apiastrum*, *Citrargo*, and *Citraria*, of the Herbarists *Citronella*, *Melissolium*, & *Cedronella*, at the Apothecaries *Melissa*. *Nicolaus Myrepsus* calleth it in Greek *Melissochorium*, that is,

The second Table.

Herba apium. Our Baulm undoubtedly is the right *Melampyllum* of the ancient Physicians, although divers will gainsay it, for both in form, vertues and operation do they agree. There be also two kinds of this herb, the one which is common and daily used; of the which in this place we speak. The other hath long and jagged leaves, and brown flowers, and it beareth the smell of a strong and odoriferous Limon, and it is called *Melissa cretica*, and *Melissa Turca*, to distinguish it from the other; both kinds are in use.

Bearfoot, *Acanthus seu Acantha*, *Herba Topiaria*, *Herbapacantha*, *Pæderos*, or *Pædorotes*, *Melampyllum*; of the Simplicists *Branca Originalitica*, to sever it from our common Bearfoot, which is the right *Spondylium* of our ancestors. The wild Bearfoot or *Acanthus* is very common every where in Germany, it groweth willingly in low and moist meadows, and is there called of the common people *Graskol*. It is there ordinarily used in the pot amongst other pot-herbs. *Dioscorides* calleth it *Acanthus sylvestris*, the Simplicists call it *Carduus pratensis*, and *Brassica pratensis*.

Beere, *Cervisia*, *Zithum*.

Beetes are called of the Grecians *Tenillon*, *Tenilis* and *Seutlon*, of the Latinists *Beta*, and at the Apothecaries *Cicla*. There are two kinds of it, the white and red Beetes: the white Beetes are called *Beta candida*, and *Beta Sicula*, whence the barbarous names *Cicla* and *Sicla* first began. The red Beetes are called *Beta rubra*, in English red Beets, of which there are also another sort with a dark red coloured leaf, called *Beta nigra*. The white is used in Physick, and the other in the Kitchen.

Beestings, in Greek *Trophalia*, in Latine *Colostrum* and *Colostrum*.

Behen or Ben, are two roots, the white and the red, they are seldom used severally. The white is known of all Simplicists, and it is called *Cardianthemum*, of *Dioscorides* *Ocymastrum*, we know no other name for it but Behen or white Ben. The other sort which is brought unto us from forraign Countries, is called the red Behen, and but little accounted of with us. Some do use the roots of Tormentil or of Pimpernel for it, and that indeed not amisse, for that the roots of the red Ben is both without smell and taste, and also uncertain.

Benzoin, *Beniovinum*, *Belzoinum*, *Benzoinum*, and *Benzuinum*, is a sweet smelling juice, which is called at the Apothecaries

Asa dulcis, it is very seldom used alone, but is alwayes used in compositions, whether it be by fuming candles or sope balls.

Beril, *Berillus* or *Beryllus*, it is a precious stone, pale green coloured. There is another kind of it that is somewhat yellowish, and is called *Chrysoberillus*, that is, a yellow Beril. The Beril is used for all infirmities of the heart, being mixed with other things.

Betony, in Greek and Latine *Cestron*, *Psychotrophon*, *Betonica*, *Vetonica*, *Serratula*, and *Scribonius* doth call it *Hierobotane*, that is, *Sacra herba*, otherwise is Vervein, called *Hierobotane*.

Bevercod, *Castoreum*.

Bisket, *Panis nauticus*, *Biscoctus*, *Bucellatum*, *pyrus Hippocratis*, it is a bread twice baked.

Birdlime, in Greek *Cleos*, in Latine *Viscum*, *Gluten aviarum*, and *Gluten aucupum*.

Bistorta, in Greek and Latine *Bisanica*, *Bisanica*; of the Herbarists *Serpentaria rubra*, *Bistorta*, and at the Apothecaries *Serpentaria* or *Colubrina*.

Blackberry bush, or Bryer: *Batus*, *Rubus*, *Morus Vaticana*. The fruit of this shrub is called the Blackberry, in Greek and Latine *Mora horti*, *Mora rubi*.

Blites, in Latine *Blitum*; of the Herbarists *Beta insipida*, and *Beta farinacea*. There be four kinds of it; the first is the common Blites, and known by that name *Blitum*, *Blitum album*. The second kind hath red leaves, and is well known and common in every garden, called red Blites: the Simplicists do call it *Blitum rubrum*, and *Olas rubrum*. The third groweth on every dunghil, it is much lesse, and is called wild Blites. The fourth kind is brought unto us from forraign Countries, but now it is common in all gardens, and it is called Hungarian or Indian Blites; the Herbarists do call it *Blitum Indicum*, *Blitum Ungaricum*, and *Blitum Topiarium*. The common Blites shall be used in all compositions, to wit, where blites is named without any addition.

Borrage, or Burrage, *Buglossum*, *Euphrosynum*, *Nepenthes*, *Borago*, *Lingua bovis*, *Lingua bubula*, and *Corago*.

Borras, *Chrysocolia factitia*, and at the Apothecaries *Borax*. There is another kind of *Chrysocolia*, which the Goldsmiths were wont to use in soddering, this is called of the Grecians *Chrysocolia*, and in Latine

The second Table.

Auriglutinum, *Gluten auri*, and *Chrysocola nativa*, but that is not taken inwardly as the common Borrax is.

Bran, *Furfur*, *Cantabrum*.

Brimstone, in Latine *Sulfer*, *Sulphur*: there are two kinds of it, the one as it is digged out of the myne, which is called *Sulfer vife*, in Greek *Theon Apyron*, and in Latine *Sulphur ignem non expertum*, and *Sulphur vivum*. The other kind is the common Sulphur or dead Sulphur, in Greek *Theon pepyromenon*, in Latine *Sulphur ignem expertum*, *Sulphur factitium*, and *Sulphur mortuum*: but whensoever Sulphur or brimstone is found in any composition, then shalt thou understand Sulphur vife.

Bryony, in Greek *Ampelos Leuca*, *Bryonia Leuca*, *Psilothrum*, *Ophystaphilos*, *Meloirum*, *Archisotrus*, *Cedrostis*; *Hippocrates* calleth it *Echetrofis*; *Plinie*, *Maadon*. In Latine *Bryonia*, *Vitis alba*, and *Bryonia alba*, *Vua serpentina*, *Vua anguina*, *Rorastrium*, of *Apuleius*, *Dentaria* and *Apiastellum*, in the Arabian tongue *Alphescera* and *Fescera*. The other kind is called the black Bryony, but it is not so common with us as the white: the leaves of this are not much unlike to the long Hartwort leaves, but they are somewhat longer and tenderer, fashioned like a Hart: it runneth up into the hedges like the white. This black Bryony is called of *Dioscorides* *Ampelos melana*, *Chironios ampelos*, *Bucranium*, and *Plinie* calleth it *Cynacanthus*. In Latine *Bryonia nigra*, *Vitis nigra*, *Vitis Chironia*, *Bacantha*, *Betisalca*, and of *Plinie*, *Apronia*; The Herbarists call it *Tamarus*, *Taminus*, *Tamus*, and *Vua taminia*; the Arabians *Alfescresin*, and *Fescresin*, yet it is altogether unknown to our Physitians and Apothecaries. It groweth very much about *Lauterberge* in the woods and hedges thereabout. Whensoever thou dost find Bryony in any composition without any addition, then shalt thou understand the white Bryony onely.

Broom, is altogether unknown to the Grecians, *Plinie* calleth it *Genista*; at the Apothecaries *Genesta* and *Genestra*. The Simplicists call it *Spartium scoparium*, and *Genesta scoparia*, for a difference of the Spanish broom which *Dioscorides* calleth *Spartium*.

Buck, *Hircus*, of this beast are many things and parts used in Physick.

Buffle, *Bubalus*.

Buglosse, Oxetongue, Lang de beuf, in Latine and Greek *Buglossa*, *Buglossum*, *Lingua bovis*, *Lingua bubula*, the Greeks do also

call it, *Euphrosinon*, or *Nepenthes*: these are the true names of the Buglosse of the ancient Physitians. The herbs that now adaies are called Buglosses, are in number 8. whereof three are tame or garden Buglosses, and five wild. The first kind is called the Spanish Buglosse, which is the true Buglosse of *Dioscorides*, as every one doth acknowledge that compareth it with the description: the Simplicists call it Spanish Buglos, *Buglossum semper virens*, and *Mesues* calleth it *Buglossa domestica*. The second kind is called Burrage, *Borago* and *Corago*, it is both common and well known. Many do take this to be the right Buglosse, but indeed the former is to be taken for the right. The third is our small Oxetongue, or Lang de beuf, which the Apothecaries do daily use, and is called the lesser Buglosse; and of the Herbarists, *Buglossa minor*, *Buglossa officinarum*. The fourth kind of Buglosse, although with us it be planted in gardens, yet notwithstanding it is a wild Buglosse, for by *Merborge* in *Lottering*, and also in *France* it groweth very common in every field. It is called the greater Buglosse; Italian Buglosse, *Buglossum Italicum*, *Buglossum Gallicum*, and at the Apothecaries *Buglossa major*, *Mesues* doth call it *Buglossa sylvestris*, and other will make a kind of *Echium* of it. The first kind (and the second among the wild Buglosses) groweth not above one foot in height. it beareth a purple flower admixed with blew, it is commonly found in woods, and in sandy grounds: it is both in smell and taste like the lesser Buglosse, and is called also the lesser wild Buglosse. The Simplicists call this fifth kind of Buglosse, *Buglossa sylvatica*, *lingua Ovina*, and *Cynoglossa minor*. The sixth kind (and the third wild Oxetongue) groweth not above a span and a half in height, it is very sharp and pricking, it beareth a light blew flower, it is found in gardens, and in other we'll tilled places of it self: the Herbarists call it *Buglossum Echiotis*, and *Buglossum sylvestre spinosum*. The seventh Buglosse (and the fourth amongst the wild ones) is also commonly so called, it groweth every where by the high way sides, and dry places, it is well known to every man under the name of Buglosse, it is called in Greek and Latine *Echium*, *Alcibiadium*, and of *Aegineta* *Alcibiadium* and *Dorias*, of the Simplicists *Buglossum viperinum*, *Buglossum sylvestre*. The eight kind and fifth wild Buglosse, is called red Buglosse, because it hath red roots, it is called in Greek and Latine

The second Table.

Latine *Anchusa*, but *Matthias Sylvaticus* doth call it *Lactuca asinina*; the Herbarists call it *Buglossa rabra*, and the Apothecaries *Alcana*, but *Alcana* is otherwhiles taken for *Ligustrum*. The first six kinds of tame and wild Buglosses are moyst, and meetly warm, in time of need they may be used one for another.

Bull, *Taurus*.

Burre the greater, in Greek *Prosopia*, *Prosopium*, in Latine *Acrium*, *Personata*, *Personatia*, *Bardana*, and at the Apothecaries *Lappa major*.

Butchers broom, or Kneeholm, in Greek *Oxymyrine*, *Myrsine Agria*, *Myriacantha*, *Myacantha*, *Schinchus*, *Sciagus*, *Catangelas*, *Gyrenia*, *Ocneron*, *Cine*, and *Chamemyrsus*. In Latine *Myrsus sylvestris*, *Myrsus Aculeata*, *Myrsus acuminata*, *Myrsus humilis*, *Myrsus terrestris*, *Genitura Herculis*, *Ruscus*, and *Spina murina*. The Herbarists do call it *Spina vesperilionis*, *Palma murina*; the Apothecaries *Bruscus*; and *Dioscorides*, *Hiera myrsus*, that is, *sacra myrsus*. This Butchers broom is onely planted in gardens in Germany, although his roots and red berries be daily used of the Apothecaries. In France it groweth very common in divers places, to wit, about *Orleans* and *Montargis*.

Cabbage, or Coleworts, a Cabbage is called in Greek *Crambe*, *Cephalote*; and *Nicander* doth call it *Gaster*: In Latine *Caulis imperialis*, *Brassica capitata*, *Brassica tritiana*, *Caulis capitatus*, *Caulis albus*, *Brassica alba*, and the Apothecaries name it *Capitium*; this is most common of all other kinds of Coleworts, we call it a Cabbage. The other sort of Cabbages is called of *Plinie* *Lacuturris*, and of the Simplicists *Brassica lacuturria*, or *Brassica sabaudica*, of some Savoy Coleworts. The third kind is called the red Cabbage, in Greek *Caulodes*; in Latine, *Brassica cumana*, *Brassica levis*, and *Brassica rubra*. The fourth sort is named crisped, or crumpled Coleworts, this is much sweeter then any of the rest, and it hath crumpled or wrinkled leaves, like to the headed Lettice, for which cause it is called in Dutch *Laitoncoole*, that is, Lettice Coleworts; and by *Plinie*, *Brassica fabellica*; and by the Herbarists, *Brassica crispa major*, and *Brassica dulcis*. The fifth sort is the lesser crumpled Cabbage, in Greek *Selinoides* or *Selinusia*; and by *Athenius*, *Brassica crispa minor*, *Brassica Apia-*

na, and *Caulis crispus minor*. The sixth kind is the common Coleworts, and is also used in Physick, it is called *Crambe*, *Caulis*, or *Brassica* without any addition. The seventh sort is the Cauliflorie or flowered Cabbage; *Plinie* calleth it *Brassica Pompeiana*; and the Simplicists, *Brassica cypriana*, and *Florecaulis*. The eighth kind is called Rapecole, or *Rapocaulis*, but this sort was altogether unknown to our predecessors.

Calamine is the oar of brasfe, *Cadmia*, *Cadmia fossilis*, *Cadmia nativa*, for a difference of *Cadmia factitia*, or *Tuttie*; *Plinie* nameth it *Lapidemaresum*, the Apothecaries barbarously call it *Climiam*, *Cathimiam*, and *Lapidem Calaminarem*, and those that work in mines name it *Cobaltum*. This mineral stone is much used amongst Chirurgions, and is the very best of all the sorts of *Cadmia*, as *Galen* witnesseth.

Calcedonie, *Calcedonius* is a precious stone, and a kind of *Onyx*.

Calamus was by the ancient Physitians called *Acorus*: some do take the great Galangal for it, and although the same be not the right *Acorus*, yet is their error more tolerable then of those that use the *Irea* root instead of *Calamus*.

Calamus Aromaticus, is the right *Calamus* of the ancient Physitians, and it is called *Acorus* and *Piperatum*: but the right *Calamus Aromaticus* is a sweet smelling reed, which is never brought unto us, and therefore we do use *Acorus*, that is, *Calamus*, which doth now supply the place both of *Calamus*, and of *Calamus Aromaticus*.

Camelina is called of *Dioscorides* *Myagrum*, of *Theophrastus* *Erysimum*, of Herbarists *Camelina*, of the Apothecaries *Sesamum*. And although it be not the right *Sesamum* of the ancient Physitians, yet doubtlesse it may safely be used instead thereof, because as yet the right *Sesamum* is not known. It hath power to warm reasonably, and to ease all manner of pain: wherefore it is much better to use a thing in place of the true *Sesamum* which is well known, then a thing altogether unknown and uncertain.

Camel, *Camelus*.

Camomils, in Greek and Latine *Chameamelum*, *Anthemis*, *Leucanthemus*, and *Leucanthemum*, the Apothecaries do call it *Chamemilla* and *Camomilla*. Chamemils are hot and dry in the first degree.

Campher, *Caphora*, *Camphora*, in Latine, and in Greek *Caphura*; it is a strong smelling juyce or sap of a tree in Indie: it is cold and

The second Table.

and dry in the third degree, and it is much used in physick. There is yet another kind of Camphire, which is a kind of mineral or of Amber, called Camphire of the mine, that is hot and dry by nature. This kind of Camphire is altogether unknown to the Physitians, for which cause also it is not in use.

Canker, in Latine and Greek *Carcinoma*, *Carcinus* and *Cancer*, a virulent and corroding ulcer.

Canterbury bells, in Latine *Smilax levis*, *Volubilis*, *Campanula*, *Convolvulus*, *Campanella*, *Sandulaca*, *Conjugulum Catenis*, and *Funis arborum*. This herb is known every where.

Capers, in Greek and Latine *Capars* and *Puturis*.

Capon, *Capus*, *Capo*, and *Gallus spado*.

Caraway, in Greek and Latine *Carum*: *Ætius* calleth it *Carcum*, *Carium*: *Simeon* termeth it *Carnabadium*; others call it *Caroum* and *Careosemen*; the Apothecaries call it *Carui*: and *Athenæus* *Pastinaca* major.

Carbuncle, in Greek and in Latine *Anthracites*, and *Carbunculus*.

Carduus *Benedictus*, *Astræylis hirsuta*, *Carduus sanctus*, and *Carduus Benedictus*.

Carpe, in Greek in Latine *Cyprinus*, *Carpo*, and *Carpio*: *Erasmus* doth call it *Carpa*.

Carot, *Carota*, *Pastinaca Rubra*.

Cassie canes or pipes, in Latine and in Greek *Cassia*, *Casia*, *Cassia fistula* is, *Siliqua Egyptia*, and *Cassia Carthartica*.

Cassie wood, look for *Cassia lignea*, or *Xylocassia* in the Latine Table.

Caterpillers, in Greek and in Latine *Campe*, *Erucha* and *Brachns*; some men do call them *Erucula*; they are worms sufficiently known, that eat and spoyle all green herbs, as Cabbages, leaves of hedges and trees. They that live on the Pine trees and Firre trees are called in Latine *Erucæ Pinorum*, and *Erucæ Picæarum*; in Greek *Pityo-campe*.

Cats Mints, field Mints, wild Pennyroyal, *Calamintha agrestis*, or *Arvensis*; and *Pulegium agreste*. Of *Mesua*, *Calamintha domestica*, *Calamintha felina*, and *Cattaria*.

Celendine, in Greek and Latine *Chelidonium majus*, *Cræta*, *Philomedium*, *Orthonium*, *Radix Pandionia*, *Aubium*, *Fabium*, and of the Alchimyists *Celidonium*, of Serapio *Curock*, *Curcuma*, and of the Apothecaries *Celidonia*. It is an herb common and well

known, the Simplicists do call it *Herba hircundinaria major*. The second kind is called the lesser Celendine, *Pilewort*, or *Figwort*: in Greek and in Latine *Chelidonium minus*, and *Triticum sylvestre*, of the Herbarists *Herba hircundinaria minor*, *Tetraculus Sacerdotis*, *Scrophularia*, or *Scrofularia*, and at the Apothecaries *Celidonia minor*. The former kind is alwaies understood if it be without any addition.

Centorie, in Greek and Latine *Centaurium minus*, *Lymæstium*, *Lymnæum*, *Libadium*, *febrisuga*, and *Fel terra*.

Cerase, in Greek and Latine *Psymnithium*, *Cerussa*.

Ceterach both great and small. The lesser Ceterach is called in Greek and in Latine *Scolopendrium*, *Hemionon*, *Asplenium*, of *Scribonius Largus*, *Calcifraga*; of the Herbarists *Scolopendria vera*, and *Scolopendria minor*, *Splenium*, *Asplenium* and *Ceterachum*. The Apothecaries do call it *Ceterach* as the Arabians do; it is the true *Scolopendrium* of the ancients: *Theodorus Gaza* calleth it *Mula*, or *Herba Mula*. Our unskillful Physitians and Apothecaries do use the Harts tongue *Phyllis*, for the true *Scolopendrium* without any regard or care. If Rosemary were not so common, they would take the Juniper tree for it, and Nettles for Marjoram: wherefore it is a great grace that old women do so well know the herbs, otherwise they would often be deceived, seeing their whole trust and credit relyeth on the Herb Wives. The other kind of Ceterach is also called Harts tongue, of *Dioscorides*, *Dorchitis altera*; of the Simplicists *Scolopendrium majus*, *Scolopendrium major*, *Asplenium*, *Asplenium majus*, *Spicantum*, *Scolopendrium* or *Asplenium sylvestre*, because it groweth in dark and moist places. Both these herbs do take their names of the worm *Scolopendra*, which is called an Earwig, or worm with many legs; because the leaves seem to be noted with it. Both these herbs have the same operation, for they are both hot in the first, and dry in the second degree: they are the best splenetical herbs that are to be found, for they are good for all maladies of the spleen.

Chaste tree is called in Greek and in Latine *Amittonianum*, *Agnos*, *Lygus*, *Agonus*, *Tridactylum*, *Lecriscicum*, *Virex*, and *Salix Armerina*: of the Herbarists, *Piper Agrestis*, *Piper Monachorum*, *Arbor casta*; and of the Apothecaries *Agnus castus*. There are two kinds of it, to wit, the greater and the lesser Chast tree. The great groweth

The second Table.

- in height like the Willow tree, and hath also leaves most like it, it smelleth very pleasantly, the flowers are white and purple coloured. The other kind hath altogether purple flowers, it is fuller of branches hath whiter leaves, and is much lesse then the former.
- Charvil, *Cerephyllon* and *Cherifolium*, and of the common Physitians and Apothecaries *Cerifolium*.
- Chestnut tree, *Castanea*, *Glans Sardiniana*, *Jovis glans*: the fruit is called *Nux Castanea*: there are divers kinds of them that are not needful to be rehearsed at this present.
- Cherries, *Cerasa*, there are two kinds of them, sweet and sowre, and each of them may be subdivided into more kinds. The hard, sweet, and great Cherries are in some places called Spanish Cherries, and in Latine *Cerasa duracina*, or *Pliniana*; they have a very sweet and pleasant taste: amongst these are the white Cherries also comprehended. The common red Cherries are called *Cerasa Mellea*, for their great and pleasant sweetness. The red and sweet Cherries that leave a bitterneffe in the mouth behind, have first been grafted on a Bay tree, whence they as yet do keep their bitterneffe, and are called *Cerasa Amarella*, and *Laurea*. The black tame Cherries are called *Cerasa alba*, *Albiana*, *Caciliana*, and *Cessiana*. The little wild and black Cherries are comprehended under the *Albiana*: and in like sort also the little wild and red, under the great red and domestical or tame Cherries. Of the sowre Cherries there be two sorts, to wit, white and red; the red are called *Aproniana cerasa*: others call them *Judiana*, and *Agrua*. The black are named *Cerasa Amarina*, and *Amarena*: but amongst all kinds of Cherries, are the wild black, the red, and the domestical black Cherries used most in Physick, and aboye all other those black ones that are called *Amarena*. Wherefore if one find the name of Cherries in any receit without any addition, then are the black Cherries or *Amarena* to be understood and taken for it.
- Chickweed, in Greek and Latine *Alfine*, at the Apothecaries *Morsus Gallinae*, of the Herbarists *Pabulum anserinum*, and *Paverrina*. This herb is cold and moist.
- Cichelings, in Greek and Latine *Labyrinthus*, and of *Plinie*, *Cicercula*; they are white four square Peason, sufficiently known of every man.
- Cichorie or Suckerie, in Latine and Greek *Picris*, *Chreston*, *Cichorium*, *Pancratium*, *Troximum*, *Intybus* or *Intubus erraticus*, *Cichorium agreste*, *Seris sylvestris*, *Amarago*, *Cicorea*, *Ambubeia*, and of *Celsus* *Ambugia*, of *Plinie*, *Cichorea*; and of the Arabians, *Taraxacon*, and *Altaraxacon*. Of the other kind of *Intybus*, look in *E.* for *Endive*: *Galen* calleth all these kinds of Cichories and Endives *Intybolachana*, that is, *Intyba-cea olera*.
- Cinamom, in Greek and Latine *Cinamomum*, *Cinnamomum*, and *Cinnamum*; it is a sweet smelling bark, and a well known spice: it is also called *Canella*. It is hot and dry in the third degree.
- Cinquefoil, in Greek and Latine *Pentaphyllon*, *Pentapetes*, *Chamezelen*, *Pentafolium*, and *Quinquesolium*.
- Ciper roots, or wild Galangal, in Greek and Latine *Cyperus*, *Erysiocentrum*, *Cyprius*, *Juncus quadratus*; it is called of *Celsus* and *Plinie*, *Juncus angulosus*, *Juncus triangulus*. There are two kinds of it, the one hath a round root, and is called *Cyperus rotundus*, the other a long root called *Cyperus longus*.
- Cipresse tree, *Cupressus*, *Cyparissus*.
- Citron tree, *malus Cipria*, *medica*, or *Persica malus*.
- Citrons, in Greek and Latine *Cidromelum*, *Cochimelon*, *Malum citrium*, *Malum medicum*, *Malum citraum*, *Malum assyrium*, *Malum Hesperium*, and *Malum citrinatum*, and at the Apothecaries *Citrinatum*.
- Citrus, *Citrullus*.
- Clarie is called of the Herbarists in Latine *Orvata*, *Orvalla*, *Sclarea*, *Scarlea*, *Maurifalvia*, *Gallicrista*, *Torabona*, and *Herbasancti Johannis*; at the Apothecaries *Gallitricum*, and *Centum Galli*: it is a kind of *Orminum* or *Horminum*, although it be neither of them that *Dioscorides* doth write of, yet may it by reason of his similitude, properties and vertues be used either with or for *Horminum*. The other kind of Clary is the wild Clary, that groweth every where in the fields, it hath deep jagged leaves with a blew purple flower, and is called *Scarlea sylvestris*, or *Sclarea sylvestris*, and *Gallitricum sylvestre*. But whensoever Clary is prescribed, then ought the garden Clary to be used.
- Clavers, look in *T.* for Three leaved grasse.
- Clay, *Argilla*: *M. Cwerd* calleth it *Terra sigillaria*, *Columella*, *Terra sigularis*. This Clay is used in this book for the bleeding at the nose.
- Cloves,

The second Table.

Cloves, in Greek *Caryophyllum*, at the Apothecaries *Cariofilus* or *Gariofilus*.

Cock, *Gallus Gallinaceus*.

Cockle, *vide* Cornerose.

Codwort, in Greek and Latine *Bubonium*, *Asterium*, *Aster Atticus*, *Asteriscus*, *Hypophthalmus*, *Herba inguinalis*, and *Inguinaria*, of the Herbarists *Stella Attica*, *Oculus suis*, and *Alibium*. There be four kinds of it, to wit, the first with the blew flower, which is commonly known by the name of Codwort. Some Simplicists do call it for a difference *Bubonium caruleum*. The second is almost like the former, but that the leaves and the flowers be somewhat bigger, and the flowers yellow, and starwise like the blew; this groweth by the river of Rhene. The Herbarists term it *Bubonium luteum*, and *Inguinaria lutea*. The third kind groweth on dry hills, whereof the leaves are lesse double, wrinkled, and bended almost like a half Moon, the flowers are very yellow, and lesse then the afore-said: the Simplicists call it *Bubonium lunatum*. The fourth kind hath long and pricked leaves, with three or four sinewes, like to the lesser Plantain, and hath a fair starlike flower, yellow every where, and every flower hath six small leaves under it, placed also like a star. This kind did we first get from *Marselles*, for which cause it is now called *Bubonium Massilioticum*, and *Stella Massiliotica*: but when and wheresoever Codwort is named with any addition, there is alwaies the common Codwort with the blew flower to be understood. This may also be called *Ramicaria*, or Rupture weed, because it is especial good for the Rupture.

Coloquint, in Greek and in Latine *Colocynthis*, *Sicyona*, *Cucurbita sylvestris*, *Cucurbita sylvatica*, and *Cucurbitula*.

Conie, in Greek *Dafnus*, of Polybins and Galen *Cunilus*, in Latine *Cuniculus*: it is a well known beast in all Countries.

Copper is called in Greek *Chalcos*, in Latine *As*, *As Cyprium*, *Cuprum*.

Coriander, in Greek and Latine *Corianon*, *Corion*, and *Coriandrum*.

Cork tree, in Greek *Phellus*, and of Theophrastus *Ipsos*, and of Theophrastus Scottaster, *Anarica*, in Latine *Suber*. It is a kind of Oake, and very common in Italy, they have a thick rind or bark, of the which our Cork is made.

Cornerose or Cockle, in Greek *Lychnis agria*, in Latine *Lychnis sylvestris*, of the Simplicists *Caryophyllum arvensis*, *Pseudomelanthium*, *Githago* and *Nigestrum*: Dioscorides

calleth it *Atocium*, *Hieracopodium*, *Tragopodium*, *Lampada*, and *Semura*: some unskilful Physitians and Apothecaries have used this herb for the *Melanthium* or *Nigella* of the ancients, the which errour divers Apothecaries and fond fellows have so imbibed, that they will rather follow their own foolish opinions, then be better instructed of others.

Coral, in Greek and Latine *Coralium*, *Coralium*, *Gorgonia*, *Lithodendron*, *Dentrites* and *Eurallium*.

Costus roots, *Costum* and *Costus*: of this root there be two kinds, to wit, the bitter and the sweet Costus roots. The bitter root is alwaies used for the Costus without any addition.

Coutsenille, in Greek and in Latine *Coccus baphica*, of Pausanias, *Hysge*, *Coccum infectorium*, *Coccum tinctorium*, *Gratum infectorium*; in the Arabian tongue *Kermes* and *Chermes*. The Silk-Diers for a difference of the crimson colour, have named it *Kermesinum granum*, for the crimson colour and *Kermes* of the Arabians is not one and the self-same. The Coutsenille is called *Kermesinum*, by reason of her brave colour, which is somewhat like unto scarlet. Also the crimson colour called *Kermesinum*, is taken from the roots of certain herbs, and it is an external thing from the roots, although it grow with them, for it is found to grow on the barks of certain trees, and hath no vertue or use in Physick at all, as the Coutsenille doth, which is the natural fruit of a little tree, not unlike to our Butchers broom, but that it is somewhat lesse, with fewer leaves and fruits: wherefore they do erre greatly that take the crimson colour *Kermesinum* for the Coutsenille, and use it for the same in their compositions and medicaments. But the Apothecaries do erre more grossly that do use the Gooseberries in stead of the Coutsenille, and (that which is worse) the unskilful Physitians do bear with it, and let it passe for good, so that it may well be said of them, that one blind man leadeth another; but woe be to the Patient, for he ought not to be jested withal, seeing the Coutsenille is not used but in extreme debility of the heart, for which neither the crimson colour, nor the Gooseberry hath any vertue at all. The Coutsenille is also used of women with child for to comfort and strengthen the child in their bodies, and to prevent all mishances, for the which it is very meet and requisite. The Gooseberry is of a quite contrary nature.

Cowslips,

The second Table.

Cowslips, Cowflops, of some Ladykeyes, or Primroses, in Greek *Phlomis*, *Arthritica*, in Latine *Verbasculum*; the Herbarists do call it *Herba paralysis*, *Primula veriflora*, *Primula vioris*, *Brachia cuculi*, and *Herba primi floris*; and the Apothecaries *Arthre-zica*, and *Betonica alba*, the which is indeed the right white Betony. There are three kinds of them: the first kind are the common Cowflops with the yellow flowers, that grow every where in dry meadows, and on grassy hills: these are called of the Herbarists *Verbasculum odoratum*, by reason of their pleasant smell. The second kind groweth in the Woods, and is much bigger then the common Cowflops, it hath a pale yellow colour, but without any smell at all, and it is called *Verbasculum sylvestre*, and *Verbasculum album*; and when this kind is set in gardens, it groweth as big again as before. The third kind are the double Cowflops, that are set in gardens, and they are much fairer, greater, and more pleasant then the common, and are called *Verbasculum multiplex*.

Crevets, in Greek and in Latine *Astacus fluviatilis*, *Gammarus*, *Gammarus*; it is a kind of shell fish very common and well known. This fish is now adaies of divers learned men called *Cancer* unjustly, for that there be no *Canceri* in Germany; for the true *Canceri* have no tail as our Crevets have, which are in all points like to the Lobsters, but that they are much lesse.

Crabs or wild Apples, *Malum sylvestre*, or *Pomum sylvestre*; they and their leaves are used for the lask.

Cresses, in Greek and Latine *Cardamum*, *Nasturtium hortense*, and of the common Herbarists *Cressio*.

Cricket, *Grillus*, a little worm very common in all brew-houses.

Cristal, *Chrysellus* and *Chrysellum*.

Crowfoot, in Greek *Batrachion* and *Batrachis*, in Latine *Ranunculus*, *Herba Sardonis*, *Herba scelerata*, *Strumea*, and *Herba Strumea*, at the Apothecaries *Flammula*, and *Pes Corni*. Plinie calleth the double Crowfoot *Polyanthemum*, it is called here Batchelors buttons, and of the Simplificists *Ranunculus multiplex*. There are divers kinds of it, but because they are not all of them used in Physick, we will only speak of the lesser sort, which by reason of the round root that it hath it is called *Ranunculus rotundus*, and at the Apothecaries *Flammula*, and of some (for to distinguish it from the other sorts) *Flammula minor*, and *Flammula rotunda*: and this kind of

Crowfoot is only to be used in Physick. Cuckoe, in Greek *Coccyx*, in Latine *Cuculus*, a bird too common and well known.

Cuckobread, in Greek and Latine *Oxys*, *Oxy-triphyllon*, *Trifolium acerosum*, *Panis Cuculi*, and at the Apothecaries *Alleluia*.

Cuckopit, Priests pintle, or Wake Robin, in Latine *Pes vituli*, *virile*, *Sacerdotis*, *Serpentaria minor*, and at the Apothecaries *Aron*.

Cucubes, in Greek *Carpesium*, of *Actuarius*, of the Arabians, and at all the Apothecaries *Cubeba*.

Cucumber, *Cucumis*, *Cucumer*, and *Cucumis sativus* in Greek and of *Aristophanes*, *Sicys* and *Sichos*.

Cumfrey, of *Dioscorides*, *Symphytum alterum*, *Symphytum majus*, and *Pecton*; of *Apuleius* *Pectis*, *Anazetesis*, *Hemostasis*, *Consolida major*, and *Alus Gallicus*, of *Scribonius* *Inula rustica*, *Consolida*, *Confirma major*, *Conserva major*, and *Solidago*: it is a common herb, whereof there be two sorts, the one with purple flowers, and the other with white. There is yet a third kind called *Symphytum pernum*, of *Apuleius* *Xylophyton* and *Anachylis*, of the Herbarists *Consolida petrea*; this groweth on hills and stony places.

Cumin, in Greek and Latine *Cuminum*, *Cuminum*, *Cuminum sativum*, *Cuminum hortitanum*, and *Cuminum Romanum*.

D.

Daffodil, it is called in Greek and Latine *Hemerocallis*, *Lilium sylvestre*, *Lilium Saracenicum*, and at the Apothecaries *Affodillus* for *Aphodelus*, but unjustly: and although it be not the true *Hemerocallis* that *Dioscorides* describeth, yet it is a kind of it, and very like it in vertues and operation. The right Daffodil is called in Greek and Latine *Aphodelus*, *Hastula regia*, *Albucum*, the flowers with the stalk *Anthericos*. It is now by the diligent and expert Physitians brought unto use again.

Damask Prunes, *Pruna Damascena*.

Dandelion, Priests crown, wild or yellow Cichory, in Greek *Hedynois*, of *Theophrastus* *Aphaca*, and of the Herbarists, *Seris urinaria*, *Herba unaria*, *Seris somnifera*, *Caput Monachi*, and *dens Leonis*. The Apothecaries and unskilful Physitians do call it *Taraxacon*, and *Altaraxacon*, which names are due to Plantain, as may be seen by *Serapius* and the Arabians. For that which *Dioscorides* calleth *Inibus sylvestre*, that

The second Table.

do they call *Taraxacon*, or *Alluraxacon*. This herb is cold by nature; it provoketh sleep, it openeth all inward obstructions, it moveth urine abundantly.

Daneweed, in Greek and Latine *Chamaeete*, *Ebulus*, *Sambucus pumila*, *Sambucus humilis*, *Sambucus arvensis*.

Dates, in Greek and Latine *Dallyli*, *Caryota*, *Caryotides*, and *Palmula*; fown Dates are called *Tamarindi*.

Date tree, in Greek *Phoenix*, and in Latine *Palma*.

Daysies, in Greek *Ballis*, in Latine *Bellis*, *Belisium*, and *Bellis flos*; by the Herbarists *Pasanthemum*, and *Herba Aethritica*, *Herba margarita*, and at the Apothecaries *Consolida minor*. The other kind is called *Bellis major*, *Bellium majus*, and of the Herbarists *Cheilantheum*, *Consolida media vulneraria*.

Diamond, *Adamas*, a well known gemme or precious stone.

Dill, *Anethum*, it is hot in the third, and dry in the second degree.

Diptamer, *Diptamus*, in Greek and Latine *Polemonia* or *Polemonium*, *Phyletaria*, *Chiodynamis*, *Fraxinus pumila*, *Fraxinula*, *Fraxinula*, *Fraxinella*, *Fraxinella*, and *Diellamus albus*. The Apothecaries call it *Diptamus*, and *Diellamus albus*. This plant hath been taken a great while for *Paeonia mascula*, but it is the true *Polemonium* of the ancients.

Dishwasher, a little bird called *Motacilla*, *Cauda Tremula*, and of *Hesichius*, *Cyrillus*, it is a common and well known bird.

Divels bit, *Morsus Diaboli*, *Succissa*, *Facenigra*, and *Fremorsa*. It is a kind of Scabious, and is not unlike the same, only that the leaves of it be not jagged as the Scabious leaves are.

Dock, in Greek *Lapathum*, in Latine *Rumex*, and at the Apothecaries *Lapathum*. There are six kinds of Docks: the first hath long piked leaves like Sorrel, but something sharper, and it is called in Greek to distinguish it from the rest, *Oxylapathum*, in Latine *Lapathum acutum*, *Lapathum acutifolium*, and at the Apothecaries *Lapathum acutivolum*. The second kind hath great broad leaves, not much unlike the former, but somewhat bigger, the Herbarists do call it *Lapathum latifolium*, *Lapathum platiphylon*, and *Lapathum non acuminatum*, which is almost altogether in use under the name of *Lapathum acutum* unjustly; but amongst the unskilful Physitians and Apothecaries a foot or twain breaks no square: this groweth in meadows and other moist places.

The third kind hath yet bigger, but softer or gentlea leaves: it is sown in gardens, especially in France, where they use it amongst other pot herbs in their porridge, the roots of it are bigger then the other, somewhat yellow, not much unlike to Rubarb: it is called in Greek *Lapathon*, *Cepaon*, in Latine *Lapathum domesticum*, *Rumex sativus*, and by the Herbarists *Rhabarbarum monachorum*, and *Patientia*: some do call it *Lapathum latifolium sativum*, to distinguish it from the former. The fourth kind hath very great leaves, and piked before, it groweth in ponds and other waters, and is called in Greek *Hydrolapathon*, and *Hippolapathon*, in Latine *Lapathum equinum*, *Rumex equinus*, *Lapathum aquaticum*, *Rumex aquaticus*, and *palustris*; the Grecians do also call it *Bulapathon*. The fifth kind hath leaves like the first and the common Dock, with many red spots and veins, and it is found in gardens, it is called of the Herbarists *Lapathum sanguineum*, *Rumex sanguineus*, and *Sanguis Draconis*. The sixth kind is Sorrel whereof shall be spoken elsewhere.

Doronicum, the Arabians do call it *Doronigi*: it is mingled with other things that serve for comforting of the heart. Some will affirm that it is venemous, because the second kind of it is such, that it killeth both man and beast: Wherefore if our *Doronicum* be poison, then must of necessity follow that the herb *Antora* or *Antitora* be also venemous, because the one is as like the other in leaf, flower, and root, that the one can hardly be known from the other. But that our *Doronicum* is no poyson, hath experience taught us many years ago.

Dragons, in Greek *Dracontium*, *Dracontea*, *Dracontia*, *Isarum*, *Biarum*, *Iarum*, *Harmigrion*, and *Sigiginalium*. *Apuleius* calleth them, *Pythonium*, *Anchomanos*, *Sanchromaton*, *Typhonium*, *Crocodilium*, *Therium*, and *Theriophonum*; in Latine *Serpentaria*, *Columbina*, *Colubrina*, *Manriaria*, *Dracontea*, and *Collum Draconis*; of the Arabian Physitians *Luf*, *Luph*, or *Alluff*: the Simplicists do call it *Dracunculum*. There are three kinds of Dragons, to wit, the first, which we do call the greater Dragons, *Dracontium majus*, *Dracunculus major*, and *Colubrina magna*, thereby to know it from the other two sorts. The second kind is somewhat lesse, and like to the Cuckopit, it is called *Dracontium minus*, *Dracunculus minor*, or *Colubrina minor*, and of *Athenaus*, *Aronia*: *Cordus* doth call it *Dracunculum*, *Henicophyllon*, and *Luph planum*.

The second Table.

num: the greater they call *Loph Crispum*. Others do call it the lesser Dragons, that is, *Serpentaria minor*. The third kind groweth near the water, upon a stubbed root, with many stalks unto it, and on every stalk one onely leaf, much like to Ivie, and every stalk bringeth a bunch of berries like Cuckopit: it is called *Dracunculus palustris*, *Dracunculus aquatilis*, *Colubrina palustris*, and *Arum palustre*. We call them water Dragons. Some simple Physicians and silly Apothecaries do use the *Bistorta* roots for the roots of Dragons: but what great distance is between them, what difference in their vertues and operations, is sufficiently known to the learned.

Dragon blood, *Cinnabaris Indica*, *Sanguis Draconis*, and *Lacryma Draconis*, it is the sap of a tree in the Indies called *Draeco*.

Duck, he or or she, *Anas*.

E.

Earth sealed, in Greek *Sphragis*, in Latine *Terra lemnia*, *Sigillum lemnium*, *Lutum lemnium*, *Rubrica lemnia*, *Minium lemnium*, *Lutum sigillatum*, and at the Apothecaries *Terra sigillata*: This earth is marvellously falsified and counterfeited, wherefore great heed must be had in the use of it. Our hedge Physicians will rather use clay, then want earth in their receipts.

Earthworms, *Lumbrici*, *Vermes terreni*, *Intestina terra*.

Eele, *Anguilla*, the well known fish, that will not be held by the tail.

Elecampane, in Latine *Heelenium*, *Enula*, *Enula campana*, and *Terminalium*.

Eldern, in Greek *Aëe*, and in Latine *Sambucus*.

Elme, in Greek *Ptelea*, in Latine *Ulmus*: there are two kinds of it, the common is called *Ulmus campestris*. The other kind groweth on hills, and is called in Greek *Oriptelea*, in Latine of *Gaza*, *Montiumus*, and of others *Ulmus Montana*.

Endive, in Greek and in Latine *Intybus*, *Intybum*, *Intybus sativus*, and *Seris*, at the Apothecaries *Endivia*: it is a kind of tame Succory, and is known at this present in every place.

Endive the white, or the lesser Endive, in Greek and Latine *Intybum sativum angustifolium*, *Seris sativa angustifolia*, *Seris sativa minor*, and *Seriola*: the Apothecaries do call it with a barbarous name *Scario-lam*.

Eryngus, in Greek and Latine *Eryngium*, of the Herbarists *Herba pleuritica*, *Acus Veneris*, *Capitulum Martis*, *Centum capita*, and at the Apothecaries *Iringus*. There are two kinds of it, the one, which is common with us, and by the name of *Eryngus* sufficiently known. The other kind hath broad leaves, and is not so prickling as the former, it hath also a fair and bigger top, and a fair skie coloured flower, it is planted in gardens, it groweth otherwise at the sea side: the Simplicists call it *Eryngium marinum*. Some unexpert Physicians and Apothecaries do use the star Thistle for *Eryngus*, but erroneously, for it is a little Thistle, much lesse then the *Eryngus*, it hath many little heads, with purple flowers, and prickles about them standing out like a starre, it hath a small root, that perissheth in Winter, it groweth every where in dry places. The Herbarists do call it *Carduus Stellatus*, *Carduus Calcitragus*, *Tribulus stellatus*, *Acanthasterion*, *Spinastella*, *Calcitrapa*, and *Calcitripola*: *Valerius Cordus* doth call it *Polyacantha*, but it is not the *Polyacantha* of *Theophrastus*. Others do call it *Eryngium minus*, that is, the lesser *Eryngus*. And although this Thistle do also move urine, or provoke the terms in women as *Eryngus* doth, yet nevertheless it is not the same, but it is much stronger then the *Eryngus*; for if one use too much of it, then doth it expel blood with the urine: wherefore the same is duly to be used, and instead of *Eryngus* use the common Thistle, or Squills for it: *Rondoletius* doth call *Eryngus* by the name of *Coronopus*.

Escharbot, in Greek *Cantharus*, in Latine *Cantherius*, *Scarabaeus*, and *Pilularius*.

F.

Fearn, in Greek and Latine *Pteris*, *Blechnon*, *Dasyclenon*, and *Filix*, a well known herb, and common in all woods & Heaths: it is called of *Nicander*, *Betris*.

Fenegreek, in Greek *Telis*, *Aegoceros*, *Cervaitis*; of *Pliny*, *Carphos*; of *Theophrastus*, *Buceras*; of *Hippocrates*, *Epiteras*; in Latine *Fœnum gracum*; of *Pliny*, *Siliva*; of *Varro*, *Silicula*, and of the Herbarists *Tersifolium gracum*; it is an herb, whose seed is onely in use.

Fennel, *Faniculum*, *Marathrum*, it is a common and well known herb.

Fesant, *Phasianus*, *Fasianus*, and *Fachis avis*. It is a common bird, which ought to be used for meat in many diseases, as hath been

The second Table.

been shewed in divers places of our Book.

Feverfew: it is called of the Herbarists *Pseudoparthenium*, *Amarella*, the practitioners and Apothecaries do call it *Matricaria*. This Feverfew hath until this present day been taken for the true *Parthenium* of the ancients, albeit that the most famous and learned Physicians *Antonius Musa*, *Brassavolus*, *Leonardus Fuchsius*, *Gulielmus Rondeletius*, and divers others have long since sufficiently shewed, that the bitter and stinking Camomils (of some called dogs Camomils) are the true *Parthenium*; for it is not only in all points correspondent to the description of it, but agreeth also to the vertues and operations with it, and he that readeth *Dioscorides*, is constrained to affirm the same: wherefore it is a great wonder, that many men will be so obstinate, that although one do shew them the truth it self, yet will they like swine tumble in their dirt, and stick to their ungrounded opinions, whereby they seem to seek the overthrow of all truths. The true *Parthenium* are the stinking Camomils, which are called of the Herbarists *Herba virginea*, *Cynanthemis*, *Busonaria*, *Anethum caninum*, *chamamelum fetidum*, and *Cotula fetida*.

Field berries, look Huckle berries.

Field Cypres, in Greek and Latine *Chamaepitys*, *Abinga*, or *Abiga*, at the Apothecaries *Iva*, and *Iva arthetica*, or *Arthetica*: of *Pliny*, *Thus terra*, of the Herbarists *Herba apoplectica*, *cucurbitularis*, and *Pinus pumila*.

Fig tree, *Ficus*.

Figs, dried figs, *Ficus*, *ficus passa*, *Carica*, there are three kinds of them brought unto us, the first are they that come in frailes, and they are the meanest: the second kind are the leaf Figs, that are brought from Candy and Cyprus, these are fatter and better then the former. They are called leaf Figs, because they are packed and made up with Bay leaves between them. The third kind are lesser and pleasanter then the rest, they are brought from Provence, they are called figs of *Marselles*, and these are the best of all for Physick.

Figwort, the great *Scrofulary*, this herb hath been unknown to the ancients, and nowadaies it is called of our Physicians *Scrophularia* or *Scrofularia*, and also *Millemorbia*, or *Castrangula*.

Firre tree, in Greek *Elite*, in Latine *Abies*, there are two kinds of it, the first is the common firre tree, which of the Simplicists

is called the white firre tree, or *abies candida*, the second kind of Firre tree is called in Greek *Pence*, in Latine *Picea*, and of the Herbarists *Abies nigra*, which is the red firre tree. But where thou findest Fir tree in any receipt without addition, there is the common Firre tree meant.

Fitches, in Greek *Bicion*, or *Aracus*, in Latine *Vicia*, there are two kinds of them, the first is that which is known to all men by the name of Fitches, the other kind groweth of it self here and there, they are called wild fitches, *Dioscorides* doth call them *Aphace*, in Latine *Vicia sylvestris*. But if the name of Fitches be found without addition, then shalt thou understand the first kind of them. Our unskilful Soothsayers and Apothecaries do take the fitches for the true *Ervum* of the ancient Writers, but it is an open deceit, which ought to be punished by the Magistrates, and to call such carelesse fellows in question for their false *quid pro quo*.

Flax, in Greek and Latine *Linum*, *Pliny* calleth all that *Linum* that may be spun.

Fleawort, in Greek and Latine *Psyllium*, *herba pulicaris*, *pulicaria*; of *Pliny* *Cynoides*, and *Cynocephalon*. The seed only of this herb is used in Physick, it is cold in the second, and dry in the first degree.

Flint or pible stone, in Greek *Chalix*, in Latine *Silex*.

Flowerdeluce, *Lilium coeleste*, and *Iris Germanica*. Although this our Flowerdeluce do not agree in every respect with the *Ireas* of Italy, yet it is a kind of it, and much stronger in purging, for which cause it is above all other kinds used in the Drop-sie.

Folefoot, in Greek *Bechium*, and *Chamelence*, in Latine *Populago*, *Tussilago*, of the Herbarists *Ungula caballina*, and *herba divi Quirini*; at the Apothecaries *Farfara*; of *Theophrastus* *Aphyllantes*, because that it bloweth without any leaves, wherefore it is also called of some *filius ante patrem*, others do likewise term it *populus humilis*, *pumila*, *farfarella*, *farfara*.

Famboys, in Greek and Latine *Batus Idæus*, *Rubus Idæus*, *Rubus Cervinus*, *Cervinus*, the whole shrub is called the Framboye hedge, the fruit Framboyes, *mora rubi Idæi*.

Frankincense, in Greek and Latine *Libanus*, or *Libanum*, *Libanotis*, *Thus*, *Tur*, *Opolibanum*, *Incesum*, & at the Apothecaries *Olibanum*. There are four kinds of it, the first is very white, round, and little cornes or grains: it is called in Greek *Siragonias*, of

The second Table.

of Pliny, *Thus masculum*, of the Simplicists *Thus testiculatum*, at the Apothecaries *Olibanum testiculatum*, in English white Frankincense, and this is the best of all the kinds. The second kind is gray, yellowish, and is that which is left after the former is picked out, and it is onely called Frankincense. The third is also used, and it is full of barks; to which the Frankincense sticketh, and it is taken from the tree; and although it be thought unclean, yet hath it his place in Physick as well as the best. This is called *Thuris cortex*, *Thuris corticosum*: and at the Apothecaries *Olibanum corticosum*, in English rindes or barks of Frankincense. The fourth kind are the reliques that are left after the former three kinds are taken out, all these kinds do come of one and the same tree: but there is yet another contemned kind of Frankincense at the Apothecaries, and also at the Druggists, that is not worthy to be numbred amongst the former kinds, because it is only a deceit and knavery used instead of good ware, wherefore it ought by good right to be thrown out of doors. This is made of the gum of the Pine tree, and so prepared deceitfully, it is called *Thus Adulterinum*, in English counterfeited Frankincense. Frankincense the black, *Timiama*, in Greek *Nascaphthum* *Narcaphthum*; of others *Thymiama*, and at the Apothecaries *Thymiama*. It is a sweet smelling bark which is used in sweet unguents, or fuming candles; some do call it *Incesum nigrum*.

French beans, *Phaseolus*, *Phasolus*, *Dolicus*, *Phaselus*.

Frogg, *Rana*.

Fumitory, in Greek and Latine *Capnos fumaria*, and *Fumus terra*, the Herbarists call it *Cerfolium felinum*, and *Columbinum*. It is a well known herb, and is hot and dry in the third degree.

G.

Gadrise tree, a tree called in Greek and Latine *Crania*, *Cornus*.

Galangal, *Cyprus Babylonius*, and *Galanga*, a well known spice, whereof there be two kinds, to wit, the great and the lesser, but the lesser is the true Galangal, and is to be used instead thereof, but the great is called *Galanga major*. This is used of some

for the true *Acorus*, that is, *Calamus*: but they erre greatly, for *Acorus* is our common *Calamus*, as hath been shewed elsewhere.

Galles, *Galla*, they that grow on the Oakes are altogether unmeet for Physick, they are called of Galen *Oxicocida*, that is, *asinina galla*.

Garlick, in Greek *Scarodon*, and in Latine *Allium*.

Gilloflowers, are called of the Herbarists *Cariophyllus flos*, *Cariophyllus hortulanus*, *Cariophyllus domesticus*, *Betonica altilis*, and of Pliny *Cantabrica*, the Apothecaries call it *flos cariophyllarum*, but there are divers other herbs that are called *Herba tunica*, but some suppose *Carduus Benedictus* to be the right *herba tunica*, where they should read *herba turca* or *turcha* and not *tunica*. *Gordonius* doth call our *Ocymastrum*, that is, Behen, *herbam tunicam*, so that almost each author hath his own *herbam tunicam*. Some do call our Gilloflowers *flos tunicus*, to distinguish it from *herba tunica*, which is Behen, and they do very well, for a thing well distinguished preventeth many errors.

Gentian, in Greek and Latine *Narce*, *Alot Gallica*, and *Gentiana*.

Gentian the lesser, in Greek *Phyteuma*, in Latine *Cruciata*, *Gentiana Cruciata*, and at the Apothecaries about the River of Rhene *Herba dei Petri*. This herb is used even at this present for them that have taken somewhat to fall in love with another body, or that are bewitched. It is also a true remedy experimented, if it be used as it ought.

Germander, in Greek and Latine *Chamedrys*, *Chameroys*, *Lyndris*, *Trixago*, *Circula*, and *Serratula*. Whensoever thou wilt use Germander, take that with the brown red flowers, which is a kinde of *Teucrium*, for that is the true Germander, and is called of some *Calamandrina*, and *Morsus muricorum*.

Ginger, *Zingiber*, a well known spice called also *Gingiber*, and at the Apothecaries *Zingiber*.

Gips, in Greek and Latine *Gypsum*, or *Gypsum*: there are divers kinds of it, but the best is that which is most like to chalk.

Gitte, in Latine and Greek *Melanthium*, *Gith*, and at the Apothecaries *Nigella Romana*. There is yet another kind of it, whereof the plant is bigger, and more pleasant.

The second Table.

pleasant to behold, but the seed is not so strong in smell, and is called *Damask Nardus*, of the Herbarists *Nigella Damascena*: but the first kind is only used in Physick. They are both of them hot and dry in the third degree.

Glew, in Greek *Colla*, and *Xylocolla*, in Latine of Virgil, *Gluten*; of Varro and Salustius, *Glutinum*, otherwise also *Glutinum taurinum*, and at the Apothecaries *Gluten ligni*.

It is used in plaisters for the rupture of the Gnat, in Greek *Gnops*, and of Hesichius, *Mo-*

pis, in Latine *Culex*.

Goat, *Capra*, in Greek *Acanthis*, in Latine *Carduelis*, and is good in meats for them that have a cold stomach.

Goose, *Anser*.

Goosegras, in Greek, *Aparine*, *Omphalocarpus*, *Philanthropus*; in Latine *Aspergula*, *Asperula*, and *Speronella*, it is a well known weed, hot and dry by nature.

Gourds, *Cucurbita esculenta*, *Cucurbita ventricosa*, *Cucurbita cameraria*, *Cucurbita peritica*, and at the Apothecaries *Cucurbita*.

Gray, look a Badger, *B*.

Gromel, in Greek and Latine *Lithospermum*, *Gorgonium*, of Theophrastus *Diosporus*, and at the Apothecaries *Milium solis*. Dioscor. calleth it *Lithospermum*, and *Semen Leoninum*. There be two kinds of it: the first groweth in the fields and untilld places: the second is like the former which is used at the Apothecaries, but it groweth not above a span in height, and the seed is also much lesse, it is called *Lithospermum arvense*: the other hath small leaves like to Flaxe, and between every leaf a little seed, not unlike to the true Gromel: the Herbarists do call it *Lingua passerina*, *Lithospermum sylvestre*, and *Lithospermum nigrum* in English black Gromel, to distinguish it from the white which is daily used. Some also do adde to the former kinds *Lachrima Jovis*, calling it *Lithospermum majus*, although it have no communion with them: the first is most used.

Greins, *Cardamomum majus*, at the Apothecaries *Granum Paradisi*; it is used commonly both at the Apothecaries, and in the Kitchen.

Grasse, in Greek and Latine *Agrostis*, and *Gramen*.

Grashopper, *Cicada*.

Greenfinch, *Acanthus*; in Greek and in Latine *Spinus*, and of Theodorus Paza *Liguvinus*: it is a well known bird, and used

commodiously in meates for all cold rheumies.

Gum, in Latine *Gummi*, at the Apothecaries *Gummi Arabicum*.

H

Are, *Lepus*, it is a common and well known beast; especially in rich mens houses.

Hares foot, in Greek and in Latine *Lagopus*, *Lagopodium*, *Perleporinus*: the Herbarists do call it *Trifolium Leporinum*, *Trifolium felinum*, and *Trifolium Trinitatis*. This herb is much used for the lask.

Harts ease, in Greek and Latine *Diosanthos*, *Phlox*, *Phlogium*, *Herba flammaea*, *Herba clavellata*, *Herba Trinitatis*, and at the Apothecaries *facea*. Gase calleth it *Flammula*: it is otherwise called of the Herbarists *Flos Jovis*. It is an herb common in all gardens and fields, it is much used, and especially the water of it.

Harts tongue, in Greek and Latine *Phyllis*, and *Lingua Cervina*. It is of divers unlearned Physitians taken and also used for the *Asplenium* of the ancients, or for the true *Scolopendrium*; where notwithstanding the true *Scolopendrium* is common enough.

Hartwort or *Aristolochy*, *Capnos Chelidonia*, *Capnos phragmites*, *Pes Gallinaceus*; of the Herbarists *Pseudoaristolochia*, and *Radix Concava*. The roots of this herb have the unskillful Physitians brought in use for the true *Aristolochy* the round, and is unto this day used for the same at many Apothecaries, which neverthelesse is nothing like it. So befalleth it commonly that we will see and discern what is done in the heavens amongst the stars, and do not know those things that are beneath on earth, and belonging to our Art. This herb is a kind of *Fumitory*, which *Erius* and *Pliny* have so described it, as may appear by their writings. Here is to be noted, that as often as you find either round Hartwort, or round *Aristolochy*, that the right round *Aristolochy* is to be taken for it. The true *Aristolochia rotunda* is called in Greek and Latine *Aristolochia* and *Me-locarpon*: otherwise it is called for a difference *Aristolochia rotunda*, and *Malum Terra*.

Hasel, or *Hasel nut*, in Greek *Carya*, in Latine *Corylus*, and *Nux avellana*. There are two kinds of it, the one that groweth every where in the Woods; and the other that

The second Table.

is planted in gardens called a Filberd tree; The Nuts are called in Greek *Leptocaryon*, *Nux avellana*, *Nux pontica*, *Nux praneftina*, *Nux Heraeleotica*, and *Avellana*. The same Hesel Nuts are called Filberds, Lombardy Nuts, that is, *Nux Longobardica*. The wood of the Hesel is cut in chips as the wood of the Ash, and also used in the making of aromatical wines.

Hawthorn is called of *Theophrast* *Cynosbatrus*, of *Plinie* *Cynospaston*, and *Nemospaston*, of *Dioscorides* *Oxyacantha*, of *Gaza* *Canirubus*, the fruits are called Hawes.

Hawke, *Accipiter*, of *Virgil* *Sacer ales*.

Heath, *Erica*, of *Theophrastus* *Tetralax*.

Hedghog, *Echinus*, a well known beast, it is full of prickles over the whole body, so that his skin will not serve to fur a pair of mittens.

Hemlock, is a very venomous herb; it is called in Greek *Conion*, *Cathechomenion*, *Abiaron*, *Aegnos*, *Aspendas*, *Eibusa*, *Ageomera*, *Apalegusa*, *Timoron*, *Dolia*, *Palyanodinos*, *Amarrofis*, *Dardanis*, *Aphras*, *Creidion*, *Catapfixis*, *Cate*, in Latine *Cicuta*: it groweth here and there by hedges, in medowes, and in other grassie places, it hath a very stinking and hurtful savour.

Hemp, in Greek and Latine *Schœnostrophon*, *Asterion*, *Canabis*, or *Cannabis*; it is but seldom used in Physick: it is oft called Halterweed.

Henbane, in Greek and Latine *Hyoscyamus*, *Dyoscyamus*, *Emmanes*, *Dithyrabion*, *Typhonium*, *Pythonium*, *Alterium*, *Apollinaris*, *Fabulum*, *Faba Jovis*, *Faba suilla*, *Herba calicularis*, *Faba lupina*, *Mania*, and at the Apothecaries *Jusquiamus*. It is cold in the third degree: especially the white, which onely is used in Physick. The gray and black Henbane seeds by reason of their great cold, are taken for poyson, wherefore neither of both ought to be used inwardly.

Herb-bennet, look Avence, *A*.

Herb twopence, is called of *Theophrastus*, *Erestedanum*: in Latine *Centimorbia*, *Centimorbum*, or *Centimorhium*: at the Apothecaries *Namularia*, *Serpentina minor*, and *Serpentinaria minor*. Some do also call it *Hirundinaria*: it is a common vulneral herb.

Hermodyctyles, in Greek *Colchicon*, in Latine *Ephemerum deleterium*, *Ephemerum lethale*, *Bulbus agrestis*; of the Herbarists *Canineca*, *Panicum Ciconia*, and *Bulbus Caninus*. Our Physicians and Apothecaries do call them *Hermodyctylum*. But because that divers other plants are called *Hermodyctyles*; it is need-

ful to distinguish them here, that no man put either himself or any body else in danger: for our common *Hermodyctylus*, is the *Hermodyctyle* root, and the true *Colchicum*, which *Galen* calleth *Ephemerum deleterium*: *Avicenna*, *Serapio*, and other Arabian Physicians do affirm the same; and it availeth nought, that some will distinguish the *Colchicum* of the Grecians, from the *Hermodyctylus* of the Arabians: their false and erroneous opinions are easily withstood; for you need but only compare the Chapter of *Hermodyctyles* of *Serapio*, with the chapter of *Colchicum* of *Dioscorides*, then shall you evidently perceive that it is one and the same root: For *Serapio* being a diligent follower of *Dioscorides*, hath taken his chapter de *Hermodyctyla* out of the chapter de *Colchico* *Dioscoridis verbatim*, word for word; as he hath also done in all other plants that are described of *Dioscorides*, as all they may perceive that have conferred both these Authors together. Wherefore it is most sure that the *Colchicum* of the Grecians, and the *Hermodyctylus* of the Arabians, which now also are used for *Hermodyctyles*, are one and the same. But *Dioscorides* and *Serapio* affirm their *Colchicum* and *Hermodyctylus* to be a poyson as well as the venomous Toadstooles, wherefore also they command, that they be in no wise used or eaten: And although *Serapio* do say, that the *Hermodyctyles* be good for the Gout, and other joynt diseases, yet he addeth, that if one use too much of them, that thereby the muscles and the stomach are marvellously weakened: but then he speaketh of the root of the white *Hermodyctyles*, and supposeth that they that are red and black should altogether kill one. Seeing then they are so dangerous, these roots ought not to be tolerated at the Apothecaries, and much lesse to be used inwardly. Whereas then we know sufficiently that our *Colchicum*, or *Hermodyctylus* is so venomous, therefore must they needs lie extreemly, that brag that they can cure all joynt diseases with it. For it is most true, that they that use these *Hermodyctyles* for the Gout, whether it be in Pilles, Potions, or any other way, do wax worse and worse every day, and at last are constrained to die an untimely death, as hath been seen in divers men, and at divers times: notwithstanding that divers learned men have warned them

H h h 2

The second Table.

them that use such dogged medicines; but no man will be taught of another, which is the onely cause that we will not leave our own opinions and errors, which thing doth not only bereave many a man of this life, but also of the life to come. Wherefore I would admonish and warn every man to take heed of them, and where he findeth *Hermodyctyles* in any receipt, that he omit them. And because that there be Pills made with *Hermodyctyles*, which would be very commodious for the Gout, if they were left out, therefore I would wish the *Hermodyctyles* to be omitted, and to put *Turbith*, or *Agarick* instead thereof, or to take *Medulla Carthami* for it: for they that have observed this order, have found great good by it. But if you take the roots of the true *Mechoacan* for it, that would be much better, for I my self have approved the same: this done, you need not fear any mishap or danger, from which I could not omit to warn every good body. It is very true that divers Grecian Writers, as *Aetnarius*, and *Nicolaus Myrepsus*, have left unto us certain compositions, wherein are both the white and the red *Hermodyctyles*, as in *Aurea Alexandrina Nicolai*, and *Diamoschu Aetnarii*, but these Authors have not meant the *Hermodyctyles* of the Arabians, or the *Colchicum Dioscoridis*, but they have meant the *Behen album*, and *rubrum*; which very well ought to be noted, that this precious confection be not defiled with the *Hermodyctyles*, *Turbith*, or with *Mechoacan*. *Dioscorides* hath also his proper *Hermodyctyles*, which he calleth otherwise *Pentaphyllum*; and it is called in English Cinquefoyl, whereof hath been spoken before.

Heron, in Latine *Erodias*, *Rhodius*, *Avis Diomedea*, and *Ardea*: it is a bird every where well known.

Hollyhocks, in Greek and in Latine *Althea*, *Aristalthea*, and *Dendron Malache*; of *Aetius* and *Galen* *Ehiscus*, *Ibiscus*, *Hibiscus*, and at the Apothecaries *Matvaviscus*, and *Bismalva*: the leaves and flowers are hot and dry in the first degree.

Hony, *Mel*.

Hony-suckle, in Greek *Periclymenum*, *Periclymenus*, *Agine*, *Carpathon*, *Splenion*, *Calycanthemum*, in Latine *Volucrum majus*, *Involucrum majus*, *Pileolus Veneris*; and of the Herbarists *Matrisylvia*, *Matersylvia*, or *Vinciboscum*; of *Scribonius Sylva mater*: the Apothecaries do call it *Caprifolium*, or *Lilium inter spinas*. There are two kinds

of it, first the common sort which is known every where by the name of Hony-suckle; the other kind is onely set in gardens, and is very like the former, but that the leaves are somewhat broader, and grow close to the stalks much like the *Thorowax*: the flowers are a little shorter then those of the former, and white of colour intermixed with purple, and smell very pleasantly. In Provence and Italy is this sort as common as the other is with us; for it groweth in every hedge, &c. The Herbarists do call it for a difference from the former, *Caprifolium Italicum*, *Caprifolium perfoliatum*, or *Periclymenum Italicum*, and *Periclymenum perfoliatum*, both these plants are hot and dry by nature: the leaves and the flowers are used for stinking ulcers, fistulaes, Canker, and Pox.

Hops, in Greek *Bryon*, in Latine *Lupulus salictarius*, *Lupulus Humulus*, and of *Mesues* *Volubilis*, or *Volubilis magna*, *Lupus reptans*, *Habiola*, and *Bruscandula*. It is hot and dry in the second degree.

Horehound, in Greek and Latine *Linostrophon*, *Phyllopharis*, *Camelopodium*, *Prasium*, and *Marrubium*.

Horse, *Equus*.

Horse Leach, *Hirudo*, *Sanguisuga*: it is a well known Water-worm, it is often used to draw out blood of the body of man.

Horse Radish, *Sinapi Persicum*, at the Apothecaries *Raphanus major*, of the Herbarists *Raphanus condimentarius*, and *Raphanus obsoniorum*: The Arabians do call it *Nasturtium album*. This root is every where well known, and is taken of divers unskillful Physitians and Apothecaries for *Armoracia*, and *Raphanus minor*, or *Sylvestris*, the which are the names of wild Radish.

Horsetail, in Greek *Hippuris*, in Latine *Equisetum*, *Cauda equina*, and *Asprella*; *Dioscorides* doth also call it *Ephedron*, and *Anabasis*. There are two kinds of it, the greater and the lesser; the greater is that whereof we have now spoken: the lesser is called *Hippuris minor*, *Equitium*.

Horsetongue, in Greek and Latine *Hypoglossum*, *Hypoglossum*, *Epiglossum*, *Epiphyllotocarpum*, *Lingua pagana*, *Bonifacia*, *Uvularia*, and *Bislingua*.

Hounds tongue, *Cynoglossum*, or *Cynoglossa*, *Lingua Canina*; it is cold and dry in the second degree.

Housleek, in Greek *Iscion*, *Hypogressum*, *Stergethron*, *Zepthalmon*, and *Aithales*;

The second Table.

in Latine *Sedum sempervivum*, and of *Apuleius*, *Vitalis*, *Caulis Jovis*, of the Herbarists *Herbatenitrus*: the Apothecaries do call it *Barba Jovis*. The second kind is the lesser Houfleeck called of the Grecians *Triphales*, *Eristhales*, *Geastitis*, and *Petrophytes*, in Latine, *Aizoum minus*, *sedum minus* *Vermicularis*, *Canda muris*, of *Plinie* *Digitellus*, of the Herbarists, *Herba vermiculata*, at the Apothecaries *Grassula minor*: both these herbs have like operations, for they do dry, coole, and are astringent, but cold in the third degree.

Huckleberries, field Berries, Bilberries, *Pseudomyrtus*, *Vitis Idea Theophrasti*, it is a plant growing on hills and in woods very common. These Blackberries are falsely taken for Myrtle seeds of the southsayers and unlearned crue, as they also do with the leaves instead of Myrtle leaves, for they could never guesse by the sign and course of the Moone, or by any other stars influence, what the right Myrtus is, for which cause they use this plant for it; but one must take heed not to use them for Myrtles, for they neither have the vertues nor operation of them.

Hyssope, or Ilope, *Hyssopus*, *Hyssopum*.

I

Jacinth, in Greek and Latine *Hyacinthus*. It is a precious stone of a light violet colour. It is called an oriental, or Bohemish Amethyst. It is dealt withal of the unskilful as is with divers other simples, for the Chrysolite hath been used many yeares for the Jacinth, but how erroneously that hath been done, may appeare by the writings of *Plinie*, who sayth, that the Jacinth is like the Amethyst. Wherefore it is apparant that the *Hyacinthus* hath his name of the violet coloured flower *Hyacinthus*, which is most like to the natural Amethyst, so that the *Chrysolithus* hath falsley been used for the *Hyacinthus*. Also the yellow stone *Prasus*, or *Chrysoprasium* hath falsely been called *Chrysolithus* by which meanes these stones have been confused and confusedly used the one for the other: wherefore *Hyacinthus* is the Bohemish or oriental Amethyst, and the Chrysolite is a false Jacinth, and *Chrysoprasus* is the false Chrysolite, this have I thought good to shew, by reason of the great errors daily committed, to the end that more warily might be dealt hereafter in the like cases.

Jasper stone, it is a precious stone, whereof there be divers kinds, to wit, green red, light red, dark blew, liver coloured, and spotted, yellow like Turpentine, and gray with smoakie colours; all these kinds are in the fields about *Nivernoy*, and also here and there in France, also in Germany in sundry places, except the green and dark green Jaspers, which onely are brought out of India, these two last kinds are the best. The dark green Jasper is called *Heliotropius*; the light green like a Smaragde is called *Iaspis viridis*, this is used for the Smaragde but unjustly. The liver coloured is called at the Apothecaries *Lapis Hepaticus*. The yellow Jasper is called of *Dioscorides* *Therakinthifula*, and the blew Jasper *Arizusa*.

Jewes lime, in Greek *Asphaltos*, in latine *Bitumen*, and at the Apothecaries *Bitumen Indicum*, it hath his name by reason that it was wont to be brought unto us from *Judea* out of the salt sea, wherein the *Jordan* doth exonerate it self, which also hath been taken for the very best of *Galen*, *Dioscorides*, and of divers other ancien writers: but that which is now adayes found at the Apothecaries, is onely a deceit and a counterfeited Jewes lime, to wit, made of Pitch, and *Oleum petrae*, which is both bought and sold of Jewes and other covetous Marchants; wherefore it is much better to use of our Dutch Pitch (which is the right *Bitumen*) then to take one that is counterfeited. Pitch or Jewes Lime is very seldome used alone, but it is alwayes mixed with other things.

Jewes stones, in Greek and Latine *Tecolithus*, *Phenicites*, *Pyrene*, and *Eureos*. All these names doth *Plinie* attribute to the Jewes stone, yet he doth also call the sponge stone *Spongites Tecolithus*, but this name is onely due to the Jewes stone. It is called of *Dioscorides* *Lapis Judaicus*, by which name it is also known at the Apothecaries.

Ink *Atramentum scriptorum*, *Atramentum librarium*, the Apothecaries do call it *Encaustum*.

Indian nut, in Greek *Caryon Indicon*, in Latine *Nux Indica*, and of *Serapio* *Nergoil*. It is a fruit like to the great Pompeons whilest it is green, but it is brought unto us dried; the shell of it is as hard as a horn, black without, and as big as a common bowl. It is also well known in this country: within it hath a white pith or kernel, it is used at all Apothecaries.

The second Table.

The kernel is hot in the second; and moyst in the first degree. *Ireas* of *Dioscorides*, *Iris*, *Unia*, *Thamastos*, or *Thelpide*, or *Thalpid*, and *Catharon*; of *Athenaus*, and *Theophrastus*, *Hieris*; in Latine *Iris*, *Opetritus*, *Radix martica*, and *Radix consecratrix*; of the Herbarist *Strapula odorata*, *Radix violacea*, and at the Apothecaries, *indeclinabiter incassu genitivo*, *Ireas*, or *Irios*. There are five kinds of it, the first is strange, and is onely planted in Gardens; it hath a faire white and odorifrous flower; the roote is also white and sweet smelling; it is called of the Herbarists *Iris alba*, *Iris domestica alba*. The second kind is also planted in gardens; it is very like the former, but the flower is blew and within of divers colours; not unlike to the the rainebow; the roote is somewhat grayer then the first, and not so odoriferous; it is called blew flower deluce, of the Herbarists *Iris carulea*, *Iris domestica carulea*, and *Lilium caruleum*. The 3. kind groweth of it self in the woods, it is much like to the last mentioned, but that the flower is bigger and somewhat declining to the Violet or purple colour, within distinguished with many colours like a raynbow. This is called wild *Ireas*, of the Herbarists *Iris sylvestris*, *Lilium coeleste sylvestre*. The fourth kind hath small, yet long and narrow leaves, and a fair blew flower without any smell; the root is somewhat lesse then of the others, but not odoriferous, yea almost without smell, but very sharp and biting in tast. It groweth commonly near the Rhene in Marshes; it is called of the Simplificists *Iris palustris angustifolia*, *Lilium caruleum palustre majus*. The fift kind groweth also in moyst places near the Rhene, it hath broader and shorter leaves then the former, with a blew flower: the root is sharp on the tongue but without any sent. It is called of the Herbarists *Chamaeiris*, *Iris pumila*, *Iris palustris minor*, *Iris palustris latifolia*, *Gladiolus palustris latifolius*, *Gladiolus palustris minor*, and *Lilium caruleum palustre minus*. *Dioscorides* commendeth the *Iris Illyrica* or *Sclauonica* above all other kinds. This is somewhat lesser then the common kind of *Ireas*; it is also somewhat reddish and of a pleasant colour, and sweet in smell. But the Italian *Ireas* and that which groweth in Apulea, doth not onely exceed the former in odoriferousnesse, but also in operation; wherefore it is also commended of all

learned physitians above that of *Illyria*. The Herbarists do call it *Iris Italica*, *Iris Florentina*, *Iris Apulca*: in English the white *Ireas* roote. If thou therefore find *Ireas* in any composition with any addition, then shalt thou take the *Iris Florentina*, which is common at all Apothecaries.

Isop look Hyssop. H.

Jujubes in greek and Latine *Sericum Zyzophum*, and at the Apothecaries *Jujuba*: it is a kind of Prunes that are well known.

Iron, *Ferrum*, it is very much used in Physick; for it is made red hot and extinguished in water, wine, milk, and many other liquors more.

Juniper tree in Greek *Arcuthos*, in Latine *Juniperus*. There are two kinds of it, the great and the lesser Juniper tree: the lesser is common on every hill and known to every man; in greek and of *Dioscorides*, it is called *Arcuthis* and *Acatthalis*, of *Theophrastus* *Oxycedros*, in Latin *Juniperus minor*, *Junipurnus*, and *Junicellus*, in English the Juniper shrub. The great Juniper tree hath bigger, stronger, and more pricking leaves, then the lesser, and it is a meetly great tree; the berries and fruits are thrice bigger then those of the former; it groweth on high hills and in woods. It is called in Greek of *Dioscorides* *Arcuthos* and *Acataera*, of others *Oxyarcuthis*, and of *Theophrastus* *Cedera*, in Latine *Juniperus major*, *Juniperus acuta* and *Cupressus sylvestris*. They are both of sundry vertues and operations in Physick, and therefore they may be used without indifferently.

Ivory, *Ebur*, *Ebor*, *Dens Elephantis* but *Juba* doth call the Ivory or Flephants tooth *Cerata*.

Ivie, in Latine and Greek, *Cissus*, *Hedera Edera* and *Hadera*.

K

Kite, *Ictinus*, in Latine *Milvus* and *Milvius*. Knotgras, in Greek *Polygonum*, in Latine *Proserpinaca*, *Herba Sanguinalis*, or *Sanguinaria*. There are three kinds of it, to wit, the male, the female, and the lesser knotgras; the male is sufficiently known by the name of knotgrasse, it groweth every where on the high waies and untilled grounds: it is called in greek *Polycarpon*, *Carcinethron*, *Tentalis*, *Myrtopetalon*, *Cnopodium*, *Pedalion*, in Latine *Polygonum mas*, *Sanguinaria*, *Herba Sanguinalis mas*,

The second Table.

mas, Seminalis. *Unguis muris, Proserpinaca*; of *Apuleius, Clinopodiontes, Scorpionaca, Statumaria, and Miserevivium.* The Herbarists do call it *Polygonum Heracleum, or Herculeum, Corrigola, Multinodia, Centumnodia, Gramen Porcinum*; of *Actius Heliobotant* that is, *Herba solis, Dioscor.* doth also call it in greek *Cynochala*; the second kind is a kind of horsetaile, and is called of the common people the lesser Horsetaile, and of *Diosc.* to distinguish it from the other *Polygonum famina, or Sanguinalis femina,* The third kind and the lesser knotgras groweth willingly in the fields amongst Turneps, and it hath a small flax like leaves and great store of seed; the Herbarists do call it *Polygonum minus, Centinodia minor, Multinodia minor, Corrigiola minor, Sanguinalis minor, Seminalis minor,* and *Ruella*; but whensoever any mention is made, then must the first kind be understood.

L

L Adymantle, the greater Sanicle of *Valerius Cordius*, is called in greek *Drosium, Drosfera, and Psiadium*: the Herbarists do call it *Alchimilla, Stellaria, Sanicula major, Pes leonis* and *Planta leonis*; it is a well known vulnerall herb, yet all together unknown to the ancient Physitians. It is hot and dry in the second degree, it is used in all manner of vulneral potions, salves and oyles.

Ladythistle in greek and Latine *Sylibum*, of the Herbarists *Cardus diva Maria, Cardus marianus*, at the Apothecaries *Cameleonta*, as they are taught by the unskilful physicians

Lark in Greek *Corydes*, and *Corydalis* of *Pliny*, in Latin *Galetita, Alauda*. The Lark is much commended for the pain of the belly and many other infirmities

Larks spur of *Dioscor.* *cuminum sylvestre alterum*, of the Herbarists *Fletrauthemum, Calcaria, Herba diva Otilia, Flos regius, Cuminum cornutum, Cuminum siliquosum, Cuminum corniculatum* and *Calcatrippa* although the starkthistles in Italy be also called *Calcatrippa*, at the Apothecaries. *Consolida regia*, and *consolida regalis*, *Ruellius* calleth it *Cornuta*.

Lavander *Lavendula, Lavandula* and *Lavendandula*. There are two kinds of it sufficiently known to every man, to wit, the great and the lesser, the lesser kind is commonly called *Lavander* and is every where

known by that name; the greater is called *Spikenard*, and of the Herbarists *Spica hortulana*, and *Pseudonardus*. In old time, as well as in this our age, have these herbs been planted near Bee hives, because the Bees do love both the smell, and the taste of lavander flowers. The ancient physitians have called this herb *Casia herba, Casia coronaria*, and *Cnaoron*; whereby they have meant both the Lavander and the Spikenard; for there are two kinds of the herb *Casia*. The use of both these herbs is very common with us in Physick; not onely used of it self, but mixed also with other things.

Laurel or Lorel, in greek *Daphnoides Eupatalon, Pelasgum Plinii, Peplein, Dioscorides*, in latine *Laureola* and *Piper montanum* of the Herbarists: it is a well known plant, that groweth in woods and dangerous to be used: some unskilful Physitians and Apothecaries do use it for the true *Mezereon* of the Arabians.

Lead Plumbum.

Leaven, in greek *Zyme*, of *Theophrastus Phryrama*, in Latine *Fermentum*.

Lemon, Lemonium malum, Limonium malum, Pomum Lemonium, and Limonium, it is sufficiently well known every where.

Lentils, in greek *Phacos*, in Latine *Lens*, and *Lenticula*. They are maen between hot and cold, but dry in the third degree.

Lettice in greek *Thridax*, in Latine *Lactuca*, a very common and well known herb. There are many kinds of it: first the common Lettice which is called broad Lettice, secondly: the crumpled Lettice, called *Lactuca crispa*, and *Lactuca cappadox*: the third kind is the headed Lettice, *Lactuca sessilis*; of *Pliny*, *Lactuca Laconica*; of *Columella*, *Lactuca Ceciliansa*; and *Lactuca medica*, of *Atheneus, Astylis*; and of *Pythagoras, Eunuchion*, because that it hindereth the generation of humane seed: the fourth kind is wild, and is called wild Lettice, in greek *Thridax agria*, in latine *Lactuca sylvestris*, of the Herbarists *Chenoglossum, Lingua anserina*, and *Cardus Hepaticus*. Some blunt Physitians do use this for *Endive*, although the *Endive* be very common and known of most men, which is no small error.

Licebane, or Stavesacre, in greek *Astaphys agria, Staphis agria*; and *Phthitioctonum*, in latine *Uva sylvestris, Pedicularis*; and *Herba Pedicularis*, of the Herbarists, *Piper murinum*, and at the Apothecaries *Staphisagria*: of the whole plant is onely the seed used.

The second Table.

Licorice, *Glycyrrhiza*, *Glyceraton*, *Glycephyton*, *Adipos*, *Syllira*, *Lybystafon*, and *Theoprast*. calleth it *Etyglycea*, in latin *Radix dulcis*: *Radix Scythica*, and at the Apothecaries *Liquiritia*: and of some barbarous people *Regulisia*: it is a well known root, and especially about Bamberge, where it groweth in that abundance, that it doth not onely serve Germany, but many other countries more.

Lighe, *Lixivium*, and *Lixivia*, *Columel*, *Spuma caustica*, of *Martialis*, *Spuma Batava*.

Lignum Aloes, in greek *Agallochum*, of *Etius*, *Simeon Serbus*, *Nicolaus*, and *Aetnarius*, *Xyloaloes*, in Latine of Pliny, *Tarum* of the latter writers *Lignum Aloes*, *Xylum aloes*, and *Xyloaloes*. The Druggists do call it *Calambucum* *Lignum Taprobanum*, *Lignum paradisi*, and *Lignum sancte crucis*. In the Bible hath it onely been called Aloes; it is an odoriferous kind of wood which is brought out of the Isles of *Sumatra*, or *Taproba*: There are many kinds of it, the heaviest is the best, and that which is hard and spotted black, and very Sappie, is also taken for the best.

Lilly, in greek and Latine *Crinon*, *Lirium*, *Lilium*, *Rosa Junonis*, or *Junonia Rosa*, *Nicander* calleth it *Crinanthemum*. The Apothecaries call it for a difference of the others, *Lilium album*, that is, the white Lilly; and by the name of the Lillies in this book are alwayes the white ones meant.

Liriconfancy or May Lillies, or Lillies of the vallies; of *Theophrastus*, *Lilium Vernum*, of the Herbarists and common Physitians, *Lilium convallium*. Some would have it to be the *Cacalia* of *Dioscorides*. But they are deceived. The flowers of this herb are onely used.

Litharge of gold or silver, *Lithargyrum*, there are two kinds of it: the first is the Litharge or dross of silver, *Argyritis*, at the Apothecaries *Lithargyrium argenti*. The second kind is the Litharge of gold and it is somewhat redder then the former. There is yet another kind called of *Pliny* *Molybditis*, and of other *Spuma plumbi*: that is the scum of Lead. Otherwise it is also called *Lythargyrium argenti*, also *Lithargyros* and of *Pliny* *Spuma argenti*, as the Litharge of gold is called of some *Spuma auri*. These three kinds have the same qualities and operations, yet is the Litharge of gold taken for the best; then the scum of Lead: Lastly the litharge of silver.

Loadestone, in greek of *Galen*, *Magnetis*, and

Heractia; of *Callimachus*, *Heracleotis*, and of *Porphyrus*, *Magnes*, and it is also called in latine. It is called of *Pliny* *Sideritis*, because it draweth Iron unto it.

Lobster, *Cancer Marinus*.

Lovage, in greek *Hippocelinum*, in latine, *Apium equinum*, of *Theodorus Gaza*, *Equapium*, of the Herbarists, *Pseudoligusticum*, of the Apothecaries and common Physitians *Levisticum*. Because they have used it many yeares for the true *Lybisticum*, or *Ligusticum*, therefore will they (according to their old custome) remain in their error, and will by no meanes be better instructed, let the poore Patient speed as he list; notwithstanding that the true *Libysticum* of the Ancients be in great abundance brought out of Italy, for it groweth very common in *Liguria*, and other provinces: but diligent and careful Physitians do plant the same in their gardens. Others that have not the true *Ligusticum* use the *Angelica* for it, or the *Oustrutium*, for both these herbs have the same virtues with the *Ligusticum*: the which all physitians and Apothecaries ought to imitate, untill such time as they attaine to the true *Ligusticum*. If we did so much trouble our selves about the knowledg of herbs and simples, as we do about the making of Calenders and Prognostications, we might have this and many simples more which now we want. The *Ligusticum* is also called *Panacea* of *Dioscorides*.

Lupines in greek and Latine *Lupinus Therminus*, and *Faba Lupina*.

M

M Ace in greek, and Latine, *Macer*, *Xylomacer* *Macis* and *Nucis myristica involucrium*, It is a well known spice, hot and dry by nature.

Madder, in greek and Latine *Erythrodanum*, of *Nicander*, *Scyron*, *Rubia*, *Rubia tinctorum*, *Rubia infectoria*, *Vena tinctoria*; at the Apothecaries *Rubia tinctorum*, and *Vena tinctorum*. There are two kinds of it, the wilde and the tame: the wilde groweth every where in the woods, and it is much better & fitter for Physick then the other, which my self have approved to be true, at sundry times; the root is onely in use, for the herb hath small vertue.

Maggie, *Pica*, and *Citta*.

Malmsey, in greek and latine *Momembrastis*, *Vinum Arvisum*, *Vinum Creticum*, *Vinum chinum*, and *Nicolaus Mirepsus* calleth it *Vinum*

The second Table.

Vinum Momembrasiaticum, the common Physicians and Apothecaries call it *Vinum malvaticum*, and *Vinum marvisianum*, or *Malvisianum*.

Mallowes in greek *Malache*, in Latine *Malva*. There are four principal kinds of it, whereof the first is the tame Mallow, which groweth in gardens and elsewhere: it is called *Malva sativa*, *Malva hortensis*, of the Herbarists, *Malva Major*, *Hippomala* and *Malva caballina*: this is the right Mallow or *Malva sativa* of the ancients, notwithstanding that it groweth in all places of it self. The second kind groweth every where by the hedges and ditches, and it is much lesser then the former; it is called in greek *Malache agria*, and in latine, *Malva sylvestris*, or *Malva agrestis*, of the Herbarists *Chenomalache*, *Malva anserina*, *Malva Leporina*, and *Malvapumila*, in English the lesser Mallowes. The 3. kind is now adayes planted in gardens, and it is called crumpled Mallowes, it is more moyst then either of the former, although that first it came from them: for by the art of Gardening it is so changed, as many other plants also are. It is called of the Herbarists *Malva Romana*, or *Malva Crispa*. The fourth kind is called a winter Rose, in greek *Moloch*, and in Latine of Apuleius, *Hastula regia*, of the Herbarists *Rosa transmarina*, *Rosa hyemalis*, *Rosa autumnalis*: the Apothecaries call it *Malva arborea*. The first two kinds are mean warm and moyst by nature, but the lesser disagreeeth somewhat from the other. The crumpled Mallowes are much moyster by nature then the other, and is but seldome used in Physick, and that because the two first are much stronger. The winter Roses are middle mean warm but astringent withal, that as the former kinds do loose the belly, so this doth bind the same, wherefore it is also used for the lask; they therefore do lie falsely that commend this kind above all the Mallowes of Dioscorides and Galen.

Mandrake, *Mandragora*, *Antimelon*: this is called of Pythagoras, *Anthropomorphos*.

Maniple is an handful, or as much as one can hold in his hand of herbs, flowers, rootes and such like things, in greek *Dracos*, *Dragma*, and of the latter Grecians *Dismidion*, in latine of Cornelius Celsus, *Manipulus*, of Scribonius and Marcellus, *Fasciculus*, of Plinie, *Fasciculus manualis*.

Manna, *Melligo*, *Saliva siderum Ros*, *Syriacus*,

Mel aerium; of Galen *Eromeli*, *Drosomeli*, at the Apothecaries *Manna* or *Manna celestis*, to distinguish it from the Frankincense which is called *Manna Libani*, and *Manna Thuris*. There are two kinds of *Manna*, the one is soft and thin, which is gathered in stone pots, and that is called of Galen lib. *tertio de alimentorum facultatibus*, the principal *Eromeli*, that is *Mel aerium*, and *Mel libani*. The Arabians do call it for a difference from the other *Teremabin*, and *Averroes Tergebinum*. The Simplificists do call it, *Manna liquida*. But now adayes it was neither found nor used any longer, as it is wont to be in the time of Galen, and of other writers. This *Manna liquida* doth Hippocrates call *Mel cedrinum*. The other kind is dry and hard like Sugar, and is differing according to the place where it is collected, so the one is called *Manna Calabrina*, and *Manna Bombycina*, this is brought out of Calabria, and it is accompted the worst kind, and it is not so sweet as the other. The other kind is called *Manna Brianzona*, it is in compacted hard, and fatty greins, it is also sweeter then the former, and more forcible in operation. The third kind is whiter, and the greins of it are not unlike to them of Mastick, it is also called *Manna granata* or *granulata*, or *Mastichina*, and it is the very best.

Marchasite, in greek and latine *Pyrites*, at the Apothecaries *Marchasita*, it is a mineral stone, it is used in Gum and Tinder boxes. There are many kinds of it, whose names do all differ according to the mineral that they contain.

Marjoram bastard, look Organy O.

Marjoram gentle in greek *Sampsychus*, in latin *Amaracus* or *Amaracum*, of *Egineta*, and at the Apothecaries *Majorana*.

Marigold, of *Virgil*, *Columella*, and *Pliny*, *Caltha*, and of the Herbarists *Solsequium aureum*, *Ferrucaria*, *Caltha poetica*, to distinguish it from the *Caltha* of Dioscorides, which is the *Chrysanthemum*: it is otherwise called *Calendula*, and there are 3. kinds of it, to wit, the common Marigold, that groweth in every garden, and is called *Calendula*. The 2. kind hath fair great and double flowers, it is called *Calenda multiplex*. The third kind is much lesse then both the former, but very like to the first kind with flowers, leaves and rootes: this kind groweth every where about worms, & also about Reingan in plowed fields, & it is much better & fitter for Physick then the former, it is called the wild Marigold,

The second Table.

Marigold *Calendula sylvestris* and *Arvensis*: some call it *Calchula*, because it is the least of the three.

Mastick, in Greek and Latine *Mastiche*, *Resina lentiscina*, and at the Apothecaries *Mastix*.

Maudlingwort, in Greek *Chrysocome*, and *Chrysis*, in Latine *Coma aurea*, *Aureola*, and *Amaranthus*, of Galen and the Herbarists *Amaranthus luteus*, *Amaranthus aureus*, *Tinearia*, *Silphalithemum*, *Stechas citrina*, *Stichas citrina*, and at the Apothecaries *Stichados vitrinum*. This herb is known to most men, and is hot and dry by nature.

Mault is prepared barley, whereof the beer is made, it is called in greek of Aetius, *Byne*, and in latine *Maltum*.

May Lillies, or flowers. look Liriconfancy. L.

Marsh garlick in greek and latine Dioscorides *Scordium*, *Scorbinum*, *difosmon* and *Mithridation*, of Apuleus *Scordilum*, *Mithridation* and *Hema Ictinos*, of the Herbarists *Trixago palustris*, *Trissago palustris*, *Trixago aquatica*, *Chamadrys aquatica* and of Apuleus *Sanguis Milvi*. There are three kinds of it; the first is very like the true Germander both in the flower and in the leaf; but that the leaves are somewhat softer and of a light green colour, and smell like Garlick; the second kind is much like to the former, but that it is in every respect somewhat greater; it hath soft leaves somewhat rough and gray, but in smell like to the former. The first kind is called of the Herbarists *Scordium minus*; and the second kind *Scordium majus*; the third kind hath a square stalk and white flowers like to the Horehound; the leaves are big and much jagged, the smell is like Garlick, but not so strong as the other two. Plinius calleth it *Scardotis*, the Herbarists *Scordium alterum Plinii*, or *Scordium Plinianum*, *Scordiastrum*, *Marrubium palustre*, or *Marrubium aquaticum*; in English water Horehound. The Apothecaries and such like Southsayers have taken the wild Garlick for the true *Scordium*, but how falsely that is apparent enough to all the learned. The first and second kind are used promiscus the one for the other but it availeth not, seeing that they are both of one operation. The water or marsh Horehound is as yet unknown at the Apothecaries, and not used at all. The *Scordium* is used in many compositions.

Maidenhaire in Greek and Latine *Adian-*

thum, *Polytricon*, *Callitrichon*, *Ebenotrichon*, *Capillus Veneris*, *Supercilium terra*, and *Herba Capillaris*. There are two kinds of it: the first is *Adiantum nigrum*, or *Adiantum gallicum* because that it is brought out of France unto us: all the English names (as *Venus haire*, *Maidenhaire*, &c.) are proper unto this kind, and whensoever you find either of them in any composition, then shall this kind alwayes be understood: the second kind is called *Adiantum album*: it is a common and well known herb here and Ielsewhere; some men call it *Onopertium*, *Filicula Affellorum*, *Ruta muraria*, and *Salvia vite*. Look in V. for *Venus haire*.

Meade or Hony water, in Greek *Hydromeli*, *Melicratum*, and in Latine *Aqua mulsæ*.

Medlar tree, *Mispilus*,

Melilot, is called of the Herbarists *Melilotus Nobilis*, *Herba flava*, *Herba leporina*, *Melilotus coronata*, *Sertula Regia*, and *Corona regia*. It is a well known herb, it groweth in high meadowes and hills, about a span and a half in height (to wit in the Low-countrys) with small Clavers; it hath a fine yellow flower which doth both smell and taste like hony, it is not much unlike the flower of peason. It is used every where instead of the true *Melilotus* of the ancients, because it hath the same vertues and operations that are described to their *Melilotus*. But in all Germany is the *Saxifragium luteum* most used, and the *Melilotus Saxifragus*, and *Trifolium ursinum*, which Dioscorides doth call *Lotus Lybica*, *Lotus sylvestris*: This is much more forcible then the common *Melilotus* as hath been approved. And although this kind be *Melilotus sylvestris* with *Dioscorides*; yet there is another kind of it to wit, *Melilotus Avicenna*, whereof he maketh two kinds, the one with white, and the other with yellow flowers: both which do smell very sweet and are altogether bitter in taste; yet doth ey digest and bind, which qualities Dioscorides and Galen do also ascribe to their *Melilot*; wherefore it is advised to take the great *Melilot Avicennæ*, and is used at the Apothecaries. The white *Melilot* is not common in all countrys, wherefore it is sown in gardens in many places. The white is called at the Apothecaries *Melilotus alba*, and the yellow *Melilotus lutea*, the Herbarists do thus distinguish it from *Lotus sativa*, they call it *Lotus alba*, *Lotus lutea* as they also call the *Lotus sativa*, and *Lotus Carulea*. *Serapio* hath also his proper

The second Table.

- proper Melilot, to wit the lesser Vitches, which after the flower is fallen away it getteth little husks like bird clawes. Some do use the lesser small Melilot that grow in meadowes, which is something lesse then the common Melilot, calling it *Melilotus minor*, wee call it the lesser Melilot. Dioscorid. calleth his Melilot that groweth in *Campania*, *Sertala Campana*, and *Cato Sertala Campana*.
- Melons, *Melon*, *Melopepon*, and *Melona*. *Mithridate*, *Antidotus Mithridatica*, *Methridatium*, and at the Apothecaries *Methridatium*. It is a precious confection against all poyson, which first was made by King Mithridates, and hath called it by his own name.
- Mewe, *Anethum sylvestre*, *Anethon ursum*, *Anethum*, *toruosum*, and *Meum*: some do call it *Sesili Creticum*, but care not for them, for it is the true *Meum* of the ancients, as every one may see and find to be without deceit, that shall confer it with the description of Dioscorid.
- Milke Thistle, in Greek and Latine *Chamaeleon niger*, and at the Apothecaries *Cardopatum*, some do call it *Carlina nigra*.
- Mill dust, in Greek *Pollen*, *Farina volatica*, at the Apothecaries *Farina volatilis*.
- Mill stone, *Lapis molaris*, of Virgil *Lapis incusus*.
- Millet in Greek, *Cenchros*, of Strabo *Cenchris*, Hipoc. *Paspale*; it is every where in Germany well known, and is daily used in meates.
- Millet of Indy, It is called in Latine *Milica*, of Plinie *Milium Indicum*, of the Herbarists *Panicum Indicum*, *Meliga*, *Sorghum*, and *Saggina*. The Portingals call it *Milium saburtum*. It is a plant not much unlike to the Sugar canes, and beareth a brown seed like a Lettice, but somewhat sharper. It is now lately sown in gardens.
- Miscledene, in greek of Plinie *Ixos*, and of Virgil *Astilis*, of Hesichus *Stear: Stelis*, in Latine, and of Virgil *Viscum*. It is an excrescence of trees, and groweth commonly on Peare and Apple trees: also on the Hawthorne tree, and Birch trees; but that which groweth on Oakes, Tillet trees, Chestnut trees, or Hasels, is commended above the rest in Physick. It is used for the falling evill and swimming of the head.
- Mosse, in Greek *Bryon*, *Spaghnon*, *Mnion*, and *Amnion* in Latine, *Muscus*, *Muscus arborum*, and *Lanugo arborum*: at the Apothecaries *Ufnea* of the Arabians.
- Mouse *Mus*, a domestical animal.
- Mouse eare, *Auricula Muris*. The hearbs that are called Mouse eare are 4. in number, although there be but one of them that is called so of the ancient writers; the first and greatest kind is called of some Mouse eare, others Lungwort; it groweth in dark Beechen woods, and old wals, it hath broad rough and hairy leaves that lie down flat on the ground, a stalk that is divided into three or four sprigs, on the top whereof are yellow flowers; this stalk being squeezed it yeeldeth a white milk juyce like to the wild Lettice; the Chirurgions do call it *Lactaria consolida*; the Herbarists *Pilosella major*, *Auricula Muris major*, and *Pulmonaria Gallica*, because it also serveth for the diseases of the Lights. The second kind is called *Pilosella media*, and *Pilosella*, or Mouse eare by which name it is every where known, as also in this Book it is called no otherwise. The third kind is called the lesser Mouse eare, of the Herbarists *Flos Angelicus*, and *Pilosella minor*. It groweth in barren grounds, it hath fair white and purple flowers. The 4. kind is called the blew Mouse eare or blew Eye-bright, of Dioscorides *Myosotis*, *Auricula muris*, and of the Herbarists, *Enphrasia carulea*, and *Auricula Muris carulea*. This herb is nothing like to the former 3. kinds in operation and vertue; for the water distilled of it is used for the dimness and bleerednes of the eyes. The ancient Physitians have onely used it for the bad eyes. But our common Mouse eare is onely used in potions for wounds and ruptures, and such like compositions; notwithstanding that it hath his proper use of it self.
- Mouse of the Apples, *Mus Aptinus*, whereof the grease is used against the lameness and extenuation of the joynts.
- Mugwort, *Artemisia*, it is an herb sufficiently known, hot and dry in the second degree.
- Mulberry tree, *Morus*, *Sycaminus* in Greek, in Latine *Morus*, and *Arbor sapiens*; the fruit is called *Morum*, or Mulberrie.
- Mummie, *Mumia*: there are two kinds of it; the one is digged out of the graves in Arabia and Syria, of those that are Balsamed, and is brought unto us; it is called *Pissasphaltus sacitium* of the Arabians *Mumia*, at the Apothecaries *Mumia*.

The second Table.

Mumia. Serapio calleth it *Mumia sepulchrorum*, to distinguish it from this kind following, the Physicians call it *Mumia Arabum*, for a difference from *Mumia Græcorum*. The second kind is onely an equal mixture of the Jewes lime, and *Bitumen* in Greek *Pissasphaltum*, in Latine *Picibitumen*, and of the Simplicists *Ceramentana*, *Cera terrestis*, *Pissasphaltum nativum*, and *Mumia nativa*; but as often as *Mummie* is named in this present work, is not the Jewes lime meant, but the *Mummie* of the Arabians, to wit *Mumia sepulchrorum*, which is found at all Apothecaries under the name of *Mumia*.

Muscadine, *Vinum Apianum*, *Vinum Muscatulum*, *Vinum Muscatellinum*, and *Muscatellum*.

Muske *Musks*, *Moschus*, *Musculus*, it is the dried matter of the impostume of a certain beast which is called of the Barbarians *Gazella*.

Must, in Greek *Gleucos*, and *Deucos*, in Latine *Mustum*, and *Vinum Musteum*; the wine first prest out of the grape is called *Columela*, *Mustum Lixivium*, of Plinie *Potropion*. This wine was wont to be inclosed in Tuns, and they well hooped, to the end it should not clarifie, and that it might continue sweet. It is called of some *Vinum coactum*; it is called of the Grecians *Aigleuces*, that is, *semper mustum*. It is often used for Physick, but very seldome alone.

Mustard, in Greek and in Latine *Sinapi*, *Napi*, and *Sinapis*. There are two kinds thereof, the wilde and the tame Mustard. They are both of them hot and dry in the fourth degree; the tame kind is more commended for Physick then the wilde.

Mustard seed the white, or *Rocket*, in Greek *Eufomus*, or *Eufomum*, in Latine *Eruca*; there are four kinds of it, the first kind is sowed in gardens, and is known every where by the name of *Rocket*, or white Mustard seed; this is the true *Eruca* and *Eufomum* of the ancients. The second kind groweth of it self in the fields, not unlike the former, but somewhat lesse; it is called of the Herbarists *Eruca sylvestris*, with us, wilde rock. The other two kinds, to wit, the third, and fourth, do grow about the water side and have much bigger leaves then the former, whereof many leaves lye downe flat on the ground about the stalke: the one beareth white the other yellow

flowers, they are called of the Herbarists *Eruca aquatica*, *Erucula marina*, in English water rocket.

Mynts crumpled, *Menta crispa*, *Mentha sativa* or *Mintha*, it is hot in the third, and dry in the second degree; the Greeks do call it *Hedyosmum*.

N

Narcissus in Greek and Latine *Narcissus*. There are three kinds of it, the first is sufficiently known by the name of *Narcissus*, the Herbarists call it *Rhodonarcissus*, and *Narcissus Roseus*, this is the true *Narcissus*. The second kind is very like the former, but it is somewhat bigger in every respect, it is called of Theophrastus *Leucoium*, that is, *vila alba*, and this kind is most of all used at the Apothecaries. The third kind is like the first in leafe and roote, but a little bigger, and the flower is yellow, the Herbarists call it *Narcissus Autumnalis* but this is onely to be understood of the flower that groweth in harvest without any leaves. The roote of it is called *Colchicum*, and *Ephemerum*; as hath been said of the *Hermodactyles*.

Nep, at the Apothecaries *Menta felina*, *Cataria*, it is used of divers men for *Calamintha montana*, because it hath the same vertues, so that it may be done without any harm.

Nettles, that do burn, or burning nettles, *Urtica pungens*, *Urtica urens*.

Nettles, in Greek *Acaliphe*, *Acalephe*, *Cnido*, in Latine *Urtica*, there are three kinds of them, first, the great and common burning nettle which is unknown to all men, this is called *Urtica mas*, or *Urtica major*. The second kind groweth not with us, but must be sowed in gardens, this bringeth her seed in heads like to Flax, and indeed it is not unlike to Linseed; but that it is somewhat lesser and whiter. This Nettle is called of Dioscorides and Plinie, *Urtica sylvestris*, and of the Herbarists *Urtica Romana*, *Urtica Italia*, *Urtica famina*. The seed of this Nettle is more fit for Physick then the former, and it is also more forcible. It is called the Italian, Romish, or garden Nettle, *Urtica hortulana*; notwithstanding that beforesometimes it hath been taken for the wild nettle. The third kind is the lesser and hotter of all, Plinie calleth it *Cania*, and the Herbarists *Urtica minor*. The seeds of all kinds of nettles are hot in the

The second Table.

the end of the first, and dry in the second degree; the roots and leaves do warm, resolve, and discusse.

Nettles; stinking or dead nettles, *Urtica iners*, *urtica mortua*, *urtica labeo*, *Anonium*; there be commonly four kinds of it, they are called in Greek of *Dioscorides Galeopsis*, and of *Pliny Galeopsis*, *Galeobdolon*, or *Galephos*; in Latine *Urtica labeo*, *urtica fetida*, in English stinking nettles. The second kind is bigger and hath yellowish flowers, it is called of the Herbarists *Archangelica*; and *archangelica lutea*, or *Anonium luteum*, it is also a kind of *Lamium*, (although *Pliny* do ascribe but one kind of *Lamium*) and is called the yellow archangel. The third kind hath white flowers, the leaves are altogether like to the nettle leaves, wherefore they are also called dead nettles; it is called of *Pliny* and of the Herbarists *Lamium album*, to distinguish it from the former, *Archangelica alba*, *urtica mortua*, *urtica iners*, *urtica lactea*, and *Anonium album*. The latter Chirurgions do call it *Herba panaritiis*; this is the right *Lamium Plinii*, and *urtica mortua*, dead Nettles, or white Archangel. The fourth kind is a pretty herb, not unlike to the nettle, with fair purple flowers, with a strong smell like to baulm; it groweth in thickets and woods, it is called of *Pliny* *urtica Herculanica*, or *urtica Herculeia*, *urtica odorata*, also *urtica scarlata*, and that by reason of her strong and pleasant smell, they are also called wood nettles, *urtica sylvestica*. Here is to be noted, that when dead nettles are any where prescribed, that you must take the white Archangel *urtica lactea*.

O.

Oak, *Quercus*, *Arbor Jovis*.
Oates, in Greek and Latine *Bromus*, and *Avena*.
Oleander, in Greek *Rhododendron*, *Nerium*, *Rhododaphne*; the Herbarists do call it in Latine *Laurus rosea*, *rosea arbor*, *Rosago*, *Oleander*, and *Oleandrum*. It is a tree with green leaves like to the Bay tree, but the leaves are somewhat longer and lesser, not much unlike to the leaves of the Olive. It beareth a pleasant horseflesh coloured rose, and is planted in gardens. It is hot in the beginning of the third, and dry in the second degree.
Olive tree, *Olea*, and *Oliva*. There are two kinds of it, the tame, and the wild Olive, the tame is named as before: the wild

is called in Greek and Latine *Agriolea*, *Cotinus*, and *olea sylvestris*: the tame Olive is called of *Virgil* *Palladia arbor*.

Onion, in Greek and Latine *Crommyum*, *Cepa*, *Cepē*, and *Cepa indeclinabiliter*. There are many kinds of it, to wit, long, round, great, and small Onions, red, brown, and yellow: the long ones are much stronger then the round, and the yellow stronger then the white. *Pliny* divideth them into two kinds, the one doth he call *Cepa condimentaria*, and hath no head at all, but the tops are only used, and it is called *Cepa pallanaca*. The other kind is called *Cepa capitata*. Amongst all Onions, are greatest accounted the best for meat, they that are flat like Turneps, they are called *Cepa Africana*. Next after them are the Spanish onions, but they are lesse, longer, and sharper, yet bigger then any onions in this Countrey. There are also two kinds of them, the one is red, the other white; but whensoever thou wilt use onion seeds in any composition, then shalt thou take the seeds of our onions, for that is much more fit for Physick, but the Spanish onions are better for meat.

Orange, in Greek *Atraphaxis*, and *Chrysolobanum*, in Latine *Atriplex*, *Atriplexum*, and *olus Aureum*, it is a common potherb cold in the first, and moist in the second degree.

Orange tree, *Narantia malus*.
Orange of *Athenens*, in Greek *Chryseon*, of *Nicander* *Nerantzion*; of *Virgil* *Aureum malum*, and of the common people *Malum Nerantium*, *pomum Arangie*, *Adamium*, and *Aurantium*.

Organe, grosse or course Marjoram, in Greek and Latine *Origanus*, or *Origanum*; *Conila*, and *Cumila gallica*, of *Apulians*. There are three kinds of it, the first is called in Spanish *Dosten*, in Latine and Greek *Origanus Heracleotica*, or *Origanum Heracleoticum*; of *Mesues* *Origanum Persicum*; and of the *Simpliciists* *Origanum Hispanicum*, because it is brought unto us out of Spain: but we needed not to fetch it in Spain, if we did but look about us here in Germany, we should find this noble herb *Dosten* in a sufficient quantity here: but our nature and disposition is such, that we must alwayes have some new-fangle, and to forsake that which is present with us. This course Marjoram, or *Dosten* hath small and smooth leaves like to the common course Marjoram; the flowers are

The second Table.

also very like it, but it groweth somewhat higher, it hath a pleasant aromatical smell, nothing like to the common course Marjoram; it groweth in great abundance neer the *Rhene* on the hills. The second kind of course Marjoram is brought unto us out of *Candia*, and it hath white leaves like the Spanish *Dosten*, it is like to the wild Marjoram, both by the stalk, flour, and also by the hairinesse, so that there is no other difference between the Spanish *Dosten* and our wild Marjoram, but that the *Dosten* of Candy is somewhat subtler in sight, and something more pleasant in smell then the other, which must be ascribed to the nature of the Country, because that the *Dosten* groweth there in the fields, and ours must be planted and sown in Gardens for we do find the same by other plants that do also grow in fields with us, that they which grow abroad are much stronger then they which are set in gardens, although they be greater and more pleasant to sight. This kind of course Marjoram or Organe is called of *Dioscorides* and others in Greek and Latine *Onitis*, *Origanum onitis*, and of the Herbarists *Majorana sylvestris*, *Sampsychus sylvestris*, *Origanum asininum*, *Ouriganum*, and at the Apothecaries *Origanum creticum*. They that use our wild Marjoram when that of Candy cannot be had, erre not at all, for it is one and the same herb. The third kind groweth also in Candy, and is set in gardens with us; it hath commonly five or six stalks growing out of one root, the leaves are very like to the wild Thyme, and the flowers like Pennyroyal, it smelleth also very well, it is called in Greek *Tragoriganus*, in Latine *Tragoriganum*, and *Origanum hircinum*. The fourth kind is our common Marjoram, sufficiently known by that name, it is called in Greek *Agrioriganus*, in Latine *Origanum sylvestre*, and of the Herbarists *Origanum panaceum*. Note, that if you find course Marjoram in any composition, then is the Spanish *Dosten* to be taken for it, which is called *Origanum Heracleoticum*.

Otter, in Greek *Enydria*, in Latine *Lutra*.

Oxe, *Bos*, in Latine *Bos*.

Oxymel, is a syrup made with Vinegar and Honey.

Oyl of Spikenard, *Oleum Spicanardi*, and *Oleum Nardinum*.

Oyster, in Greek and Latine *Ostreum*, of *Plinie*, *Ostrea*, it is a kind of shell fish.

P.

Palma Christi, in Greek *Cici*, *craton*, *sefeli cyprian*, *pentadactylon*; and of *Erodolus*, *cilicyprian*; in Latine of *Plinie*, *Ricinus*, *Trixis*, and *Sesamum agreste*; of the Herbarists *Palma Christi*, and *Alanus Christi*, of the Apothecaries *Cataputia major*. The Arabians do call it *Cherva*, *Cervat*; it is a plant common almost in every garden. The seed whereof is called *granum regium*, it is hot and dry in the second or third degree.

Panick, in Greek *Elymus*, and *Melymus*, in Latine *Panicum*, and *Panigo*.

Parchment, *Membrana*, and *charta pergamentina*.

Parfnep, in Greek *Staphylinus*, in Latine *Pastinaca*, of the Simplicists *Carotis*, and *Carota*. There are four especial kinds of it, the first hath yellow roots, and they are called yellow Carrots; of the Herbarists *Staphylinus luteus*, *Carotis lutea*, and *pastinaca lutea*, this is the most common sort of all the tame kinds, and it is the true *pastinaca sativa*, but I trouble not my self with them that seek to place another kind instead of it, thereby to cover their grosse errors, if they did look on the true signes that *Dioscorides* describeth unto it, they would soon be led from that their blindness, although they were but children in judgment. The second kind of these roots is very like to the former, but that it is altogether white, and is called of the Herbarists *Carotis alba*, *Staphylinus albus*, *pastinaca alba*; in English a Parfnep. The third kind are the garden Parfneps, these are most like to the two former in leaf, root, and flower. But the root is of a dark red colour, which yeeldeth also a juice of a dark red colour, but in taste it is altogether like the foresaid. This is the true *Pastinaca nigra* of *Theophrastus*, of the Herbarists, *Staphylinus ruber*, *Pastinaca rubra*, *Carotis rubra*, we call them red Carrots. These three kinds are comprehended under the name of *Pastinaca sativa* of *Dioscorides*: yet they that would have the tame Parfnep with the broad leafe to bee a kinde of stone Parsley, because it is sweet in taste, I could wish they would bethink themselves otherwise, for they two are as like, as the Firre tree is to the Box tree. This is the true *Elaphoglossum Dioscoridis*, as every one must confesse that readeth the

The second Table:

the description of it: *Dioscorides* doth also call it *Ophioctonum*, *Cervi ocellus*, and *Pabulum cervi*. The Herbarists do call it *Pastinaca cervina*, but especially the wild kind that groweth of it self in hilly meadows, and is most like to the tame kind, differing onely in the place where they grow: also the wild kind is fit for Physick, although they be both used for meat. The fourth kind is the wild Parsnep, and it groweth every where in the Vineyards and corn-fields, it is much like to the tame or garden Parsnep, the root is whiter, and sharper in taste then of the other, the flowers are white, and of the tame kind yellow, they that know the wild Parsnep may also know the tame kind very well, and may soon perceive the errors of others: it is called wild yellow Carrot, or Parsnep. This is that Parsnep that all authors will have used in Physick; the Herbarists do call it *Pastinaca ernatica*; *Staphilinus erraticus*, *Carolus sylvestris*: the Apothecaries do call it *Baucia*; others (but unjustly) *Daucus*, and would make *Baucia* and *Daucus* to be one and the same.

Partridge, *Perdix*.
Pauls Betonie, *Betonica Pauli*, *Veronica*, it is a common herb, and daily used.

Peach tree, *Persicus*.

Pear tree, *Pyrus*.

Pearls, in Greek *Margarites*, *Cinadus*, of *Theophrastus*, and *Lucianus*, *Erythraeus lapis*, of *Arrianus*, *lapis Indicus*; of *Stratius*, *Erythraeus lapillus*; of *Virgil*, *Bacca* and *Bacca conchea*; of *Pliny*, *Unio*; of *Cicero*, *Margarita*, and of *Saint Jerom*, *Granum maris rubri*; of others *Perla*: it is a gemme or precious stone well known unto all men.

Peafon, *Pisum*: there are divers kinds of them, but the very best are the Hastings.

Peacock, *Pavo* and *Pavus* in Latine, of *Ovidius*, *Junonia avis*.

Pellitory of Spain, in Greek and Latine *Pyrethrum*, *Pyritis*, *Pyroton*, and *Pes Alexandrinus*: it is hot and dry in the third degree.

Pellitory of the wall, in Greek *Helxine*, *Eusine*, *Eliis*, *Chanocersaq*, *Amelxine*, *Amorgine*, *Sucotachos*, *Psychuacos*, *Melampelos*, *Anatamenon*, *Polyonymon*, *Clibodion*, *Clybetis*, and *Clybatis*; in Latine *Perdicium*, *Orceolaris*, *Viriola*, of *Celsus*, *herba Muraria*, *Muralium*, *Vineago*, *herba Orceolaris*, *herba Viriaria*; and of *Avicenna*, *herba Viri*; of *Apuleius*, *Herba Pedicularis*; of the Herbarists *Helxine muraria* and *Parietaria*.

There are two kinds of it, to wit, the common *Parietaria*, which is the biggest, and groweth every where in old walls, and it is called of the Herbarists for a distinction *Parietaria major*. The second kind is somewhat lesse, and groweth not outright like the former, but creepeth onely along the walls, and hath red and thick stalks, like to Purslain; the leaves are like unto Purslain, but thin, soft, and limber. This kind groweth plentifully at *Pontemons*, on the City walls, and in many other places of France: also at *Coblence* neer the *Rhene*: It is most like unto the great Pellitory in vertues and operation, they have also an absterfive and astringent quality; they are cold and moyst.

Pennyroyal, in Greek and Latine *Glechon*, *Blechon*, *Apoleium*, *Abvolum*, and *Pulegium*, it is hot and dry in the third degree.

Pepper, in Greek *Peperi*, and in Latine *Piper*. There are three kinds of it, white, black, and long Pepper; sufficiently known to every body: the white Pepper is gathered before it be through ripe, it is much stronger and forcible then the black, it is called *Piper album*. The black is called *Piper nigrum*. The long Pepper is a thing of it self, and is called *Piper longum*.

Perwinkle, in Greek *Clematis*, *Clematis Daphnoides*, *Myrsinoides*, *Polygonoides*, *Daphnoides*; and of *Pliny*, *Camadaphne*; in Latine *Vinca pervinca*, *Unicordia*, *Palma Virginea*, *Corona Virginea*, *Pervinca*, and *Viola mortuorum*. It is a common herb, and it groweth in shadowy places. There is yet another kind of it, which is set in gardens, it hath a dark blew flower, and it is a little bigger in every respect then the common sort is. It groweth in divers places of France of it self, they are both of them hot and dry in the third degree.

Petroleum, in Greek *Naphta*, and of *Plutarchus*, *Naphtas*; of *Nicolaus Myrepsus*, *Petraleon*; of *Suidas*, *Pharmakon*; in Latine *Bitumen liquidum*, *Bituminis Colamentum*; at the Apothecaries *Petroleum*, and *Oleum Petra*. There are two kinds of it, the first is the white, which is brought unto us from Naples, and out of Italy: of the black kind we have sufficient store in Germany in the Land of *Bitische*, half a mile from *Werde*, in the Mountains, between *Haganow* and *Weysenburch*, neer the Town *Lamperts loch*: there is a spring in a valley; that in April and May yeeldeth as much of this Oyl, that the men in that place may gather as much of it as will serve them all the Winter

The second Table.

to burn in their Lamps, and to grease their Cart wheelcs with it; of which oyl the Quackfalvers & other such like impostors do gather and fill great bottles, and then sell it again in strange Countries, as if they had fetched it far, and had hazarded their lives greatly for to get it; which is little observed of divers Physitians, that will rather employ and apply themselves to the making of Prognostications, in the speculations of Astronomy, and in the presaging divers strange matters to come.

Phlegme, Slime, a waterish moisture, in Greek and Latine *Phlegma*, some do call it *Pituita*.

Pibble stone or flint, in Greek *Chalix*, and in Latine *Silex*.

Pigeon, in Greek *Peristera* and *Peristeros*; in Latine *Columba*, and of Catullus *Columbus*.

Pilewort, look Figwort in F.

Pills, in Greek *Catapodium*; of Hippocrates, *Gongylium* and *Gongylidium*; of the common Physitians *Pillula* and *Pilula*.

Pimpernel the great, *Petroselinum* and *Apium saxatile*: It is not our common Parsley, which the ancients do call *Apium*; as shall be shewed in the description of Smallege, but our great Pimpernel is nought else but the true *Petroselinum*, which groweth commonly on stony rocks or hills, and also on walls. The first kind groweth in stony fields; but in Vineyards there groweth the bigger of the two, and it yeeldeth a yellowish juice, it hath leaves like to the great Parsley; it is called of the Herbarists *Pimpinella major*, *Tragoselinum majus*, and *Pimpinella Hircina major*, and in English great Pimpernel. The second kind is somewhat lesse, and groweth on grassie hils, it is called *Pimpinella*, *Pimpinella alba*, *Tragoselinum*, and *Pimpinella hircina*, without any other addition, that is the common Pimpernel. The third kind hath small jagged leaves, almost like to the crumpled Parsley; it groweth willingly on stony hills, walls, and old trees; it hath a very sharp root, and is the least of all the other, it is called *Tragoselinum minus*, *Tragoselinum petraeum*, *Pimpinella minor*, and *Pimpinella petraea*. Some authors will accompt these herbs amongst the *Daucos*, but they do abuse them greatly, for they are the right stone Parsleys, and have the same operation with Parsley. The last kind is called the lesser Pimpernel. As often as either Parsley seed, root, or juice is mentioned in any

Composition, then is the greater Pimpernel to be understood.

Pingles, in Greek *Strobili*, *Pituydes*, *Nuclei pinet*, in Latine *Nuces pineae*, and of Hippocrates, *Coccali*.

Pistacies, in Greek and Latine *Pistacium* and *Pistaceum*, of Possidonius, *Listacium*, of Nicander, *Psittacium*, at the Apothecaries *Pistachium* and *Fisticum*. It is a strange fruit like Hasel nuts that grow in Syria. The tree that beareth these nuts is called *Pistacea* and *Pistacius*, and it is planted in gardens in Italy, France and Germany.

Pitch, *Pix*; there are two kinds of it, to wit, hard or stone pitch, and liquid pitch or tarre. The stone pitch is called *Pix arida*, *Concreta*, *sen excocta*. The other kind is called Tarre, in Latine and Greek *Pissa nygra*, *Pix liquida*, *Pix fluida*.

Plaister, in Greek *Emplastros*, in Latine *emplastrum*.

Plantain, in Greek and Latine *Arnoglossus*, *Arnoglossa*, *Arnium*, *Stelephuros*, *Probatum*, *Thesarica*, *Tarbelodatum*; of Theophrastus, *Oryx*; of Apuleius, *Tarbidolopium*, *Plantago* and *Olus Agnium*. There are sixe kinds of Plantain, whereof the first is the common great Plantain, that groweth in all highwayes and fields, it is known sufficiently, and is called for a difference *Hep- tapleuron* and *Polynuron*; in Latine *Plantago major*; of Apuleius, *Plantago lata*, and *Septinervia*; of the Herbarists, *Plantago rubra*, *Plantago latifolia*, and *Multinervia*. The second kind is called Sheeps tongue, *Pentapleuron*, *Quinquenervia*, *Plantago minor*, *Lingua Agni*, and *Lingua Ovina*, *Lingua Arietis*, and *Plantago media*. The third kind is called picked Plantain, or Hounds ribb; in Greek *Hippoleuron* and *Cynopleuron*; in Latine *Plantago acuta*, *Plantago lanceolata*, *Costa equina*, *Gosta Canina*, and *Laureola*: this kind groweth in meadows, it is well known to every body. The fourth kind hath round leaves like the great Plantain, but they are somewhat lesse and more limber, and each leaf hath but three ribs, it groweth in Woods, and is called of the Herbarists *Plantago sylvatica*, *Plantago trinervia*, and *Plantago latifolia minor*. The fifth kind is planted in gardens for pleasure, the leaves are like unto the great Plantain, on the upper end of the stalk doth it get many little green leaves, they grow double like unto a Rose, wherefore it is also called Rose plantain, or *Plantago Rosea*. Otherwise they have the same operations and vertues with the other Plantain. The sixth kind groweth in Wells and

The second Table.

waterish places; it hath long, broad, and sharp leaves at the end, it is called water plantain, of the Herbarists *Plantago aquatica*. *Plantago palustris*, and *Cochlearia palustris*. But when thou findest Plantain in any composition, then shalt thou take the first kinde, or the great Plantain.

Plane tree; it is not the tree which we call *Opulus*, but *Plantanus*, it is a tree that groweth in Italy.

Plume allume, in Greek and Latine *Aminantus*, *Boftrychites*, *linum vivum*, *linum saxatile*, and at the Apothecaries *Alumen plumosum*, which the common Physitians and Apothecaries do falsly use for *Alumen scissum*, which hath no likelihood with any kinde of Allom: I will omit the vertues and operations which it should have equal with Allom, for they are as like one to another, as an apple is like an oyster.

Polipody, in Greek and Latine *Polypodium*, *Filicula*, of Cato, *Felicula*: The root of it is onely used; and when you finde Polipody with addition, then is the root onely to be taken.

Pomegranate-tree, in Greek *Rhoa*, *Rhea* and *Sida*, in Latine *Malus punica*, and of the common Physitians *Malus granata*.

Pomegranates, *Rhea*, *Sida*, in Greek and in Latine *Malum punicum*, at the Apothecaries *Malum granatum* and *granatum*.

Pompeon, in greek *Pepo*, in Latine *Pepo*, There are many kindes of it, first the common Pompeons, known to every body: secondly, the sugar Melons, *Pepo saccharinus*, *Pepo muscatellinus*, and *Pepo Turcius*.

Poplar tree, in Greek *Lence*, and in Latine *Populus*.

Poppy, *Papaver sativum*. There are two kindes of it: to wit, the white and the black Poppy, the white is called of *Dioscorides*, *Thylacites*, and *Papaver sativum*, or *Hortense*: and at the Apothecaries *Papaver album*. The black which is also placed amongst the same kindes, is called of *Dioscorides*, *Pithiulis*, and *Papaver sylvestre*, and at the Apothecaries *Papaver nigrum*; of *Hesychius* is the white Poppy called *Cynolephalaon*. The top or head is called in Greek *Codia*, in Latine *Caput Papaveris*: the leaf of it is called of *Theophrastus* *Scoliaestes*, *Platagonion*. Note that wherefoever Poppy is named alone, to take the white.

Privet or Primprint, in Greek and Latine *Cyprus*, *Lignstrum*; *Avicenna* and *Sera-*

pio do call it *Alcanna*, *Alchenna*, *Henne*, *Alkana* and *Aloanna*: But the Drug-gists and Apothecaries do call the rootes of the red Ox-tongue *Alcanna*: *Virgil* doth call the flowers of Privet *Alba Lignstra*: and *Columella* doth call the fruit of it *Nigra Lignstra*. This plant is very common in all Europe. The leaves, flowers, and berries are in use, and they have an astringent and drying quality.

Purflaine, in greek *Andrachne*, in Latine *Portulaca*, and *Porcellana*: it is cold in the third and moist in the second degree.

Pineapple, in Greek and Latine *Strobilus* and *Conus*.

Piony, in greek and latine *Paeonia*, *Pentorobum*, *Glycyfide*, of *Apuleius Glycyss*, and *Pleonium*, *Orobolium*, *Orobax*, *Hemagonum*, *Pesade*, *Menogesium*, *Menium*, *Panthicervatos*, *Aglaophotis*, and of *Alcanna*, *Aglaophotis terrestris*, *Cynospastus*, *Dactylus Idæus*, *Theodonium*, *Selenium*, *Selenogonum*, of *Theophrastus*, *Dichomenium*, of *Apuleius Gludis*, *Rosa Faruina*, of *Dioscorides* *Herba Casta*, and of *Josephus Historicus*, *Baaras*. *Dioscorides* doth also call it *Phrisis*, and *Averroes* *Rosa Asinorum*. The Herbarists do call it *Rosa benedicta*, *Rosa sancta*, *Rosa lunaris*, or *Lunaria*, *Rosa regia*, and *Rosa basilita*. There are three kindes of it, which are all planted in gardens: of the first kind, to wit, of the female, there be two sorts, the one with fair dark red flowers, and many knottie roots, about the thicknesse of ones thumb, and some lesse, much like to Acorns: this is known every where. This kind is called of *Dioscorides*, *Paeonia femina*, and *Dactylus Idæus*. The other kinde is like to the former, but the leaves are something lesse, and jagged, not so deep, and of a light green colour, and paler then the other: the roots are also longer and paler then the other, almost like to the male Pionie, so that it seemeth to be a mixture between both male and female. *Dioscorides* maketh no mention of it, but *Pliny* calleth it *Pionia mascula*, and the Herbarists *Paeonia femina altera*, and *Paeonia promiscua*. The third kinde is like to the first, with leaves and roots, the flowers are red as blood, fair, great and double, it is called *Paeonia multiplex*. The 4th. kind hath leavs like to the Walnut tree, the flowers are like to the former in colour, but something less, the root is white, thick, long, & divided into two, it smelleth very strong

The second Table.

and pleasant. This is the true male Piony, *Paonia mascula*, of the Ancient Writers. *Atius* and others do call it *Ephialtia* and *Ephialtinum*, of the Herbarists *Paonia alba*, and *Herba Divi Valeriani*, we call it the white Piony. This kinde is alwaies to be used, or else the compounded kind before named in the Head thereof.

Q.

Quick lime, in Greek *Conia* and *Asbestos*, in Latine *Calx viva*, *Pliny* calleth it *Ferrum Cementorum*.

Quicksilver, it is called in Greek and Latine *Hydragyron*, *Argentum aqueum*, and *Argentum vivum*, of the Alchymists *Mercurius*: it is a mineral known to every body. There are two kindes of it, the one is found in the mines, which is called *Hydragyron nativum*: the second kinde is made of Sinople, and it is called *Argentum vivum*, or *Hydragyron factitium*. The Alchymists do add three other kinds unto the former, the one made of Lead, which they do call *Mercurius Saturni*: the other made of Tinne, which they do call *Mercurius Jovis*, or *Fel Dragonis*: the third kinde is made of gold, which they call *Mercurius solis*, or *Viscum solis*: But the two first are onely used in physick, and the three last kindes, to wit, of Tinne, Lead, and gold, we do commit and commend to the Alchymists.

Quinces, in greek and Latine *Cydoneum*, and of *Hesychius* *Lasiomalius*, of *Nicander*, *Chnoaum*, of *Pliny* *Malum lanatum*, of *Virgil* *Malum canum*, of others *Cotoneum*, *Malum Cotoneum*, *malum Cydonium*, and at the Apothecaries *Cydonium* and *Cittoonium*. There are three kindes of them the lesser yellow Quinces that are so odoriferous, are most common and most fit Physick. The other kinde is bigger and longer like a pear, and in colour pale yellow, much slighter both in taste and smell than the former: this kinde is called in greek and Latine *Struthiomelum*: the Simplificistes do call it *Cydonium majus*, *Cotoneum majus*, and *Pyrum Cydonium*. The third kinde is the middle sort: both the former are grafted from a tree on a stalk of another, this kinde is called of *Pliny* *malum milianum*, and of the Simplificistes *Cydoneum*, or *Cotoneum nothum*, with

us the bastard Quince. The first and least are the very best, then the bastard Quinces, and the worst are the greatest.

R.

Radish, in Greek and Latine *Raphanus*, or *Raphadis*, *Ranix* and *Radicula*. Ragwort, Dogs stones, Gandergrasse, in greek *Satyrion*, of *Apuleius* *Ranion*, in Latine *Satyrion*, of *Mesues*, *Testiculus Vulpis*, and of *Apuleius*, *Testiculus Leporinus*. There are two kindes of it known to *Dioscorides*, but we have many kindes with us which we do know, amongst which *Orchis* and *Orchis Serapias* are placed. *Theophrastus*, *Pliny* and *Apuleius* have comprehended them under the name of *Satyrion*, and confounded them together. The first and true *Satyrion* is called of *Dioscorides* in Greek *Satyrion triphyllon*, or *Satyrion trifolium*. The second kinde is called red Ragwort, of *Dioscorides* in Greek *Satyrion Erithronicon*, *Satyrion Erithracium*, and *Satyrion Erythron*, of *Apuleius*, *Entaticum*, *Priacum*, and *Satyriscus*: in Latine *Molorticulum Veneris*, *Melium aquaticum*, *Testiculus Satyri*, and *Arrectorium*. The third kinde is called *Satyrion regium*, or *Satyrion Basilicum*, of the Herbarists *Manas Christi*, *Palma Christi*, and *Palma Veneris*, the Arabians do call it *Bucheiden* and *Buzeiden*, of *Avicenna*, *Digitus crinitus*, *Satyrion Basilicum majus*. The fourth kinde is like to the former, but the leaves are full of spots, it is called of the Herbarists *Satyrion Basilicum majus femina*, and *Lacryma Maria*. The fifth kinde hath small leaves like to Saffron, it beareth a fair purple flower with a pleasant smell: the roots are also like the two other small hands. The Herbarists do call it *Satyrion Basilicum*, or *regium minus*, *Satyrion odoratum*, *Amaranthus veneris*, *Palma Christi minor*, *Palma Christi*, or *Palma Veneris*. The sixth kinde hath leaves like to the white Lilly, but narrower and lesser, it hath two kinds of flowers, the one is of a dark red colour, like to that of Hartwort, the other as white as Snow. This kinde hath two roots, of the bignesse of an Olive, and very sweet in taste: *Dioscorides* calleth it in Greek *Orchis* and *Cynosorchis*, in Latine *Testiculus*, and *Testiculus canis*: the Herbarists

The second Table.

Herbarists do call it *Orchis major mas*. The seventh kinde is somewhat like the first, but that the leaves be lesse, it beareth a flower of a Chestnut colour, it is called of the Herbarists *Orchis mas major*. The eighth kind hath soft leaves, not unlike the Lilly leaves, but somewhat lesse; the flowers are partly of a dark red colour, and partly incarnation, with many white strakes, the roots are like Cocks stones, it is called of the Herbarists *Orchis foemina major*. The ninth kind is much lesse then the former, but very like the same in flowers, leaves, and roots, it is called of the Herbarists *Orchis foemina minor*. Some do call it *Orchis odorata* or *Testiculus odoratus*, it growes on dry hills. The tenth kinde hath lesser leaves than the white Lillies, the flowers are purple, it hath three roots, much lesse than Olives, whereof two are of one bignesse, and the third lesse and longer, so that these three are like the members of a man. It is called in Greek of *Dioscorides* *Orchis serapius*, of *Egyneta* *Triorchis*, of *Apuleius* *Serapion*. Yet are three kindes more, whereof we have spoken elsewhere. Otherwise there is another kinde of this here, which is placed with the *Cynsorchis*, or *Testiculus canis*, which here for brevities sake we do omit. The Apothecaries do use all the former kindes of Ragwort for *Satyrinum*, without any difference: and although there be but a small difference between all these kinds in operation, yet it were better onely to use that which hath three leaves like Lillies for the true *Satyrinum*, for it is the *Satyrinum* of the ancient Physitians, to the end no error be committed. All these before named herbs and roots are hot and moist, and have an attractive vertue.

Raisons, in Greek *Astaphides*, and *Staphides*, in Latine *Uva passa*, at the Apothecaries *Passula*. There are three kindes of them in use: the first kinde is the best, and are called *Uva damascena*, and *Uva zibeba*, at the Apothecaries *Zibeba*, and *Passula damascena*. The second kind is somewhat lesse, they are brought from Cyprus, Spain, and Provence, they are the best in vertue and operation, and also in taste, and are called of the Physitians *Uva passa majores*, *Uva massiliotica*, at the Apothecaries, *Passula majores*. The third kinde are the Currans, and are called in Greek *Appriva*, in Latine *Uva passa Corinthiaca*, *Passula*

Cilicia, *Passula Chemefina*, that is, *Passula sine nucleis*, and at the Apothecaries *Passula minores*: but when the we finde in any composition *Passula*, then are these to be taken. The Arabian Physitians call them *Kesmes* and *Chesmes*, that is Raisons without stones.

Ram, in Greek *Crior*, in Latine *Aries*.

Rapes, in Greek *Gongyla*, *Gongylis*, in Latine *Rapa*, *Rapum*, and *Golssonium* is called in Greek *Baphys*, and *Rapyk*. These Rapes or Turneps are of four kindes, for some are found, some long, some white, some small, some great, but we need not make any long rehearsal of them, seeing they have all one kinde of operation. There are certain Turneps sown in Lottering, and in the upper Burgundy, to the end to make oyl of their seeds, but this kinde of Turneps is wilde, and altogether unfit for meat, but the seed is more fit for Physick than that of the tame Rapes. This kinde is called in Greek *Gongylis agria*, and in Latine *Rapum sylvestre*.

Rapontica, in Greek and Latine *Centaurium magnum*, *Maro*, *Maronia*, and of *Apuleius* *Maronium*, *Plectronia*, *Peletronia*, *Chironia* and of the Magicians *Sanguis Herculis*, *Limnestis*, *Nessium*, *Unefera*: the Herbarists do call it *Pseudoraponticum*, at the Apothecaries it is unto this day falsely called *Rhaponticum*, and *Rhapontica*, because their unskilful Physitians do take it to be the same, where nevertheless the true *Rhaponticum* may be had sufficiently. But these blinde bayards have so dazelled their eyes with gazing at the stars, that they are blinde though they seem to see, and they do draw and hold other men into their errors. The true Rapontica is a root outwardly dark, gray, and lesse then the common Rapontica, and spongy: also being broken, it hath many white veins much like to Rubarb, with an astringent taste, it is brought to us from Pontus. This is in use amongst curious and careful Physitians. It is called with us pontish Rubarb, to distinguish it from the root of the great Centory, which we do commonly call *Rapontica*. It is called in Greek *Rha*, *Reon*, *Reum*, in Latine, *Raponticum*, *Rapontica*, *Rheum ponticum*, *Rheon ponticum*, of *Pliny* *Rhacoma* or *Rhecoma*, of *Celsus* *Radix pontica*.

Rhaponticum, it is called of the Herbarists *Rapuntium*, *Rapontium*, *Rapunculum*, *Raponcelus*, *Raponculus*, and *Pes locusta*, it

The second Table.

is a kinde of wilde Rapes, of which there is yet another kinde, it groweth commonly in shadowy woods, it hath round leaves below, and beareth a brown purple and hairy flower, and a thick root, it is very sweet in taste as the former also is, they are both used in sallads and in meats. The second kinde is called the wilde *Rapuntium*, the Herbarists do call it *Rapontium*, *Rapunculus sylvaticus* and *Raponticum Alepocorum*.

Raspes, at the Apothecaries *Ribes*, it is a kinde of *Ceanothus Theophrasti*, which we do call Gooseberries, and they are like in every respect, but that the Raspes hath no thorns, and they may be used in stead of the Gooseberries. The Raspes are cold and dry in the second degree.

Raven, in Greek *Corax*, in Latine *Corvus*.

Red Arsenick or Orpiment, *Sandaraca Cretorum*, and at the Apothecaries *Auripigmentum rubrum*.

Red lead, in Greek *Sandix* and *Syricum*, in Latine *Minium secundarium*, of *Vitruvius Sandaracha*, at the Apothecaries *Minium*, of *Dioscorides* and *Pliny* also *Minium*. It is our Sinople *Cinnabaris Metallica*, but red lead is made of lead, which is burned or calcined until it be red. This is used most commonly in salves and plaisters, and especially in the *unguentum Syricum Mesuis*, which the unskilful sort do call *unguentum Sericinum*, and they do suppose that *Syricum* should be *Sericum*, and so in stead of red Lead they put silk into salve.

Red Poppy, Corn Roses, in Greek *Mecon Rhœas*, and *Oxygonum*, in Latine *Papaver erraticum*, of *Geza Papaver fluidum*, and of others *Papaveralis* and *Papaverina*, of the Herbarists *Papaver caducum*, *Papaver punicum*, *Papaver caninum*, *Papaver Rhœas*, *rosella*, and at the Apothecaries *Papaver rubrum*. There is another kind of it very like the former but much lesse; whereof each flower hath but four leaves, it groweth in the Rye and Wheat, and it is called the lesser red Poppy. The Herbarists do call it *Papaver erraticum minus*, *Papaveralis*, and *papaverina minor*, it hath also the same vertues with the former.

Reed, in Greek and Latine *Calamus*, *Arundo*, and *Harundo*, the Apothecaries call it *Canna*. *Pliny* in his sixteenth book, and 36. chapter, and in the 24. book and 11. chapter, accounteth 24. Kindes of them: but we do acknowledge but six

kindes of them, whereof the first is called *Nastos*, that is, hard and compact, and smooth between the joynts, whereof the arrowes were wont to be made, it is called *Sagittaria Arundo*, and *Calamus Sagittarius*. The second kinde is the female, whereof the Cornets tongues are made, and it is called of *Dioscorides* *Calamus foemina*, and of *Pliny* *Calamus Auliscus*. The third kinde is called in Greek *Syringias*, in Latine *Calamus*, and *Arundo fistularis*, and it is hollow from one end to the other: there are writing pennes made of it, and it is without knots, wherefore it is called *Harundo enodis*. The fourth kinde is also hollow and thick, it groweth in ponds and great Lakes, in Greek *Donax*, in Latine *Harundo Cypria*, *Calamus Chyrius*, *Harundo aquatica*. The fifth kinde is thick and strong, it is used for lisedges, it is called in Greek *Phragmites*, and of *Theophrastus* *Characias*, in Latine *Calamus vallis*, and *valatorius*, *Harundo vallatoria*, *Harundo sepiaria*, and *sepicularis*. The sixth kinde is planted in gardens in divers places of France and Germany, it is fair, great and pleasant to sight, it is brought unto us from *India*, and therefore it is also called *Arundo Indica*. Some call it Spanish Canes or Reed, because it was first brought unto us from Spain.

Rice, in Latine and Greek *Oriza*, *Risum*, *Rizum*, of *Theophrastus* *Orizum*, at the Apothecaries *Oriza*: it is known to every body.

Rocket, look Mustard seed the white in *M. Roebuck*, in Greek *Dors*, in Latine *Capreus*, of *Virgil* *Capreolus*.

Rose, in Greek *Rhodon*, of *Theocriti Scolia-ster*, and *Homer Thronon*, in Latine, *Rosa*. There are many Kindes of it, to wit, the tame Roses which are planted in gardens, are in number seven several Kindes: of the wilde ones are four Kindes, which is in all eleven Kindes. The first kinde is of a dark blood red colour, and are common in all gardens, some are single, some double, and are called of *Pliny* *Rosa milesia*, of the Herbarists *Rosa purpurea* and *punica*. The second kinde is of a red colour, it is called of *Pliny* *Rosa trachinea*, of the Herbarists *Rosa rubra*: at the Apothecaries and of the common people are they called *Rosa rubra*, and red Roses without any distinction, neither skills it greatly by reason they are all one in vertues and operations. The third kinde is incarnation

The second Table.

carnation Rose with a pleasant smell, and are called Provence Roses, [of Pliny *Rosa Alabandica*, of the Herbarists *Rosa provincialis*, *Rosa Persica*, *Rosa incarnata*, and at the Apothecaries *Rosa purpurea*: this kinde of Roses are laxative, and are used for the laxative sirupe of Roses. The fourth kinde are the double white garden Roses, the commonest amongst all tame kindes, and are called *Rosa alba*. The fifth kind is also white, and hath been known with us but of late yeares, but they are somewhat lesse, and pleasanter to the sight then the former white Roses are, many of them being double, grow together upon one branch, but six of them are scant so big as one of the tame ones, yet very pleasant in smell: some do call them white Musk Roses, another name as yet is not known. The fixt kinde of tame Roses is the yellow Rose, every where common and known, without any smell, and altogether unfit for Physick; the Herbarists do call it *Rosa lutea*, *rosa Egyptia*, *rosa Africana*, and *rosa Vulpini*. The seventh kinde are the pleasant Damask Roses, they are called of Pliny *Rosa coronata*, of the Herbarists *Rosa moscata*, or *rosa muscata*, *Rosa syriaca*, *rosa Damascena*, and *Rosa Alexandrina*. The first kinde of wilde Roses are called hedge Roses or wilde Roses, they are called in Greek *Cynarhodon*, of Hesichius *Cynocentron*, of Galen *Cynomon*, in Latine *Caninus*, and *Rosa canina*: some do call it *Eglentaria* and *Eglenteia*. The second kind of wilde Roses are much less then the first, and are of a carnation colour like the former, but they are very fragrant, as well the Rose as the leaf of it: it groweth in hedges and on hills, and is called of the Herbarists *Rosa diva Maria*, *Spina diva Maria*, *Qexarrhodon*, *vintrosa*, and *rosa cinamomina*. The third kinde of wilde Roses groweth here and there in tilled fields, and especially in fields of Oates neer the Rhenne, it is the very least kind of all wilde Roses, but it hath bigger leaves, inwardly purple coloured, it is called of the Herbarists *Chamarhodon*, *Rosa Arvensis*, and *Rosa avenaria*. This kinde of Roses is so odoriferous, that it seemeth to excel all tame kindes. The fourth kinde of wilde Roses is very like the former, they are also white Roses without any smell, they blow very late, to wit, in June, they grow on dry hills and fields, and are called white field Roses: the Herbarists do call them *Rosa*

campestris, it is most contemptible of all other kindes. Amongst all these kindes are the double and single red Roses, the very best that may be used for Physick, and in like manner also the Oaten Roses: wherefore if one finde Roses without any addition in any mixture, then are the red or Oaten Roses to be taken for it.

Rosemary in Greek and Latine *Libanotis coronaria*, of Apuleius, *Elecris*, *Herba Salutaris*, and *libanotis coronalis*, of the Herbarists, *Dendrolibannum*, *Rosmarinus*, *coronarius*, and *libanotis coronaria*, to distinguish it from the other kinde of *libanotis*, which is called by them *Libanotis umbellifera*: the Apothecaries call it *Rosmarinus*: it is a well known plant, and so common in the Provinces that they make bavons of it to heat their Ovens withal, and here with us it groweth onely in gardens.

Rosin, *Resina pinus*, and *resina*: but *Resina* is a common name for all Gums, but because that Rosin is daily in use, it is called *resina*: the other Gums are named with additions: wherefore wheresoever you finde Rosin in any composition, then shall you understand the *resina pinus*.

Rubarb, in Greek *Rhaon barbaricon*, and *Rhaon barbarum*, *Rheum barbarum*, *Rhaecenicum*, *Remuscenicum*, and *Radix barbarica*.

Ruby, there are six kindes of it, the first and most precious is the Carbuncle, which is clear, fiery, and perspicuous above all other gemmes, it is called in Greek *Apyron*, and *Anthraxites*, in Latine *Carbunculus*. The other kinde of Carbuncle is the Ruby, a well known precious stone, and it is called *Carbunculus*, *Amethystizon*, in Greek *Anthax Amethystizon*, and *Pyropus*, and at the Apothecaries *Rubinus*: this is next the Carbuncle, and very much used. The third kinde is somewhat paler then the other former kindes, it is of a light red colour, it is called in high Dutch *Ballas*, in Greek *Astrios*, or *Asterios*, of Augustin in the 21. book *de civitate Dei*, *Aster*: of the Druggists *Balagius*, *Ballasius*, *Pallasius*, *Pallenea gemma*, *Ballenea gemma*, *Carbunculus candidus*, and *Spinalus*. The fifth kinde is of a yellowish red and light in colour, it is called in Greek and Latine *Lychnis*, *Lychnites*, *Carbunculus gilvus* and *Carbunculus pallidus*. The sixth kinde is called *Carbunculus alabandicus*, and *Lapis alabandicus*.

The second Table.

laba dicens. Amongst all these kinds are onely the Ruby and the Granate in use for Physick.

Rue, in Greek and Latine *Peganum*, *Rhyte*, and *Ruta*. There are four kinds of it; to wit, two tame, and two wilde: the two tame kinds are so like that they can hardly be distinguished, if one look not well upon them, and they are used without any difference one for the other. The first kinde of wilde Rue is called Rue of the Mountaines, of *Dioscorides*, *Ruta montana*, or *Rhyte montana*: this is most like to the garden Rue, but that it is much lesse, it groweth here and there on the hills in Italy, but with us it is set in gardens. The second kinde of Rue groweth in divers places of Germany of it self, and it is also otherwhiles set in gardens: it hath longish leaves, a strong and unpleasant smell, and white flowers, out of which three square heads do grow that contain the seed, somewhat bigger then those of the common Rue, and by the name of wilde Rue is this commonly understood. The other wilde or Mountain Rue, is onely called Rue: this last kinde is called in Greek *Peganum agrion*, of *Galen*, *Moly*, *Armala*, *Hamala*, and *Besasa*: but *Moly* is another plant, with *Dioscorides* and *Hippocrates*. The Herbarists do call this wilde Rue with *Dioscorides*, *Ruta sylvestris*, *Avicenna* and the Arabians do call it *Alharmel*, *Armel*, and *Harmel*. Some unskillful Physitians do take Hemlock for *Harmel*, or *Ruta sylvestris*, and so do they follow their blinde leaders *Mathaeus Sylvaticus*, and *Jacobus Mantius*, that have composed the *Lumen majus*, and have translated *Harmel* for *Cicuta*, and have expounded *Armel* to be the wilde Rue, all which is most false: for it is most true that *Armala* and *Harmala* of the Greeks, and *Alharmel*, *Alarmel*, *Armel*, and *harmel* of the Arabians is one and the same plant, to wit, wilde Rue, which *Galen* doth call *Moly*; wherefore these fellowes do lye falsly, and shall not be able to make answer for it hereafter, that they do mix the seeds of Hemlock in the *pillula foetida* and *aggregativa* in stead of the seeds of wilde Rue, thereby not onely deceiving people but hurting and spoiling them; so that great heed ought to be taken in all places where these pills are prepared with the seed of Hemlock in stead of the seed of wilde Rue: which I could not omit at

this present to shew and make known to the Reader; for to use venome in stead of Rue seed is no small error.

S

Saffron, in Greek and in Latine *Crocus*, *Crocum*, and *Cynomorphus*, of the Magicians *Sanguis Herculis*, of *Serapius* and *Avicenna* *Sabaferam*. It is called barbarously *Saffranum*. The very best Saffron that is to be had in Europe, is the Dutch Saffron which is set about *Vitrua* and *Spier* in Germany.

Sage, in Greek *Elelaphatos* and *Crosmis*, in Latine *Salvia*, of *Apuleius* *Corsalvium*. There are four kinds of it, two tame, and two wilde: the first is called great Sage, or broad Sage, in Latine *Salvia Major*. The second kinde is the lesser or eared Sage, in Latine *Salvia Cruciata*, *Salvia Auriculata*, *Salvia minor*, *Salvia Acuta*, and *Salvia nobilis*. The third kinde is the first of the wilde Sages, which *Theophrastus* called *Sphacelus*: it groweth commonly among Chestnut trees, and upon woody hills, it hath greater, rougher, and more wrinkled leaves than the great garden Sage hath, and it looketh as if it were withered with drought, it hath a pretty blew flower. The fourth kinde is the second wilde Sage, which is known to divers by that name, and is called *Salvia Sylvestris*, *Salvia Bosis*, *Bosifalvia*, *Scordiana*, *Scordiana*, of *Cordus* *Scorodiana*. By Sage without any addition shalt thou understand the garden Sage.

Saint Johns worts *Hypericon*, *Perforata* and *Fuga demonum*, of the Herbarists, *Ruta Solis*, *herba Solis*, it is a common and well known herbe, hot and dry by nature.

Saint Johns bread, in Greek *Xylocerata*, or *Xylocrasta*, at the Apothecaries, and of *Aethna* *ius Carrubia*: Others do call it *panis divi Johannis*, it is the fruit of a tree, longish and sweet, and hath certain kernels within it.

Sal Armoniac, it is called *Sal Armoniacus*, or *Sal Harmoniacus*, and at the Apothecaries *Sal Armoniacum*. This salt was wont to be digged out of the Sands in *Africa*, and was thence brought unto us, which now adayes we want: But there is another Chymical Salt, made of pisse and other things, used in stead of the former, the which of many unskillful men is taken and used as well inwardly as outwardly for the right

Sal

The second Table.

Sal Armoniack; but wo to them that take it inwardly. But because that we cannot get of the right *Sal Armoniack* any more, we may use in this place the stone Salt, or Salt of the mines, which is a kinde of the true *Sal Armoniack* and hath also the same vertue and operation. I would wish no man to use the common *Sal Armoniack* inwardly.

Salamander, in Greek *Molge*, in Latine *Salamandra*: it is a very venomous worm like to a great Evert, with black and yellow spots, it liveth commonly in the water, and poysoneth the same.

Salt, *Sal*. There are four kindes of it: the common salt is called of *Cato Sal popularis*. The second, called *Sal Marinus*, is made of the Sea water, in English bay Salt. The third kind is *Sal palustris*. The fourth is stone salt, *Sal Fossilius*, *Sal Crystallinus*, or *Sal Montanus*.

Saltpeter, *Nitrum*, *Niter*, and *Sal Petra*: the Arabians do call it *Barauch*, it is a kinde of natural Salt. Some do falsely use the common Saltpeter for it, which is a great deceit.

Sanicle, in Latine *Sanicula*, and *Sennicula*. There are three kindes of it, which now adayes are called by the names of Sanicle. The first kinde and their true Sanicle, hath leaves like to the Vine, but somewhat lesse, and divided into five severall parts: it continueth green all the winter time, and is known of many men by the name of Sanicle, and is properly called *Sanicula*, otherwhiles to distinguish it from the other kindes, *Dianthis*, *Sanicula Quinquifolia*, *Sanicula Virginica*, and *Feraria Minor*. The second kinde groweth on high snowie hills, and hath fat leaves, not much unlike to Plantain: The flowers are somewhat like to Cowslips, some blew, some purple coloured: The Herbarists do call it *Arctocium*, *Auricula Ursi*, *Paralytica Alpina*, *Sanicula Alpina*, and *Arthritica Alpina*. The third kinde of Sanicle groweth on high, wooddie, and cold hills; it hath leaves almost like *Angelica*, and a black hairy roor. It is called of the Simplicists *Sanicula Fœmina*, or *Astrantia nigra*, in English she or female Sanicle. But this hath an other operation than the Sanicle, for the roor of it purgeth like Ellebore, for which cause it is of some called *Sanicula Cathartica*. The Herbarists call

it wilde *Angelica*. But where and whensoever Sanicle is found in any Composition without any addition, then shalt thou understand the first kinde of it.

Saphire stone, in greek and Latine *Sapphirus*, by *Marbodens Syrites*, and at the Apothecaries *Saphirus*. There are four kindes of it, of the blew which is known by that name, we have spoken before. And to distinguish it from the others, it is called *Sapphirus Caruleus*; and *Dionysius Afer* calleth it *Cyanæus Saphirus*. The second kinde declineth somewhat from the blew to the green, and is called in Greek *Prasitis*, and *Saphirus prasitis*. The Druggists do call it *Saphirus viridis*, in English, a green Saphire. The third kinde declineth from the blew to the yellow: and is called in greek *Chrysis*, and *Saphirus Chrysis*: of the Simplicists *Saphirus Aureus*, in English the yellow Saphire. The fourth kinde is between blew and white, in colour like Buttermilk, altogether perspicuous and clear, called *Saphirus Candidus*, in English the white Saphire.

Sarcocolla, in Latine *Sarcocolla*, or *Caruglutinum*, at the Apothecaries *Gummi Sarcocolla*, of *Serapins* and other Arabian writers *Anzarot* or *Anzarut*, it is a gum of a thorn in Persia much like to *Frankincense*.

Savery, in Greek and Latine *Thymbra*, *Cunila*, and *Satureia*: there are two kindes of it, and there is no difference between them both, but that the wilde kinde groweth of it self, and is called *Thymbra*, and *Cunila Rustica*. The other kinde is planted in gardens, and is more savory and acceptable to meat than the former: but for Physick, the wilde hath more vertue than the other. It is hot and dry in the third degree.

Savine, or Savine tree, in greek *Bathy*, *Brathus*, *Barathrum*, and *Barithon*: in latine *Sabina* and *Savina*: It is a well known shrub. There are two kindes of it; the one hath rough leaves like to the Cypress tree: the other like the leaves of the Tamarisk; they are both of them planted in the gardens with us, they are both attenuating and drying in the third degree.

Saunders, in Greek and Latine *Santalum*, *Santalus*, and of *Aetnarius Xylon Santalon*; that is, *Lignum Santalum*. There are three kindes of it, that are all brought

The second Table.

unto us from the Indies, to wit) yellow, white, and red Saunders, all of them very common and wel known at all Apothecaries. The yellow kinde is called *Santalum Flavum*, and at the Apothecaries *Santalum citrinum*. The Arabians call it *Santalum Machoziri*, *Mazahari*, and *Machazary*, that is, *Santalum Aromaticum*, or *Santalum odoriferum*, because it is the very best and most fragrant of all the kinds. The red Saunders are called *Santalum Rubrum*, of others *Rhodasantalum*, that is, *Santalum Rosaceum*, and at the Apothecaries *Santalum Rubrum*. The white Saunders are called *Santalum album*. The best Saunders amongst all of them is the yellow kinde, next to that the white, and last of all the red. Whensoever one findeth Saunders in any receipt without addition, then is there the yellow Saunders alwaies understood. There is also a false kinde of red Saunders found at some Apothecaries, not unlike to the true red Saunders, yet without any smell at all: this is a kinde of Brasil, but it hath a darker red colour; the Druggists call it *Santalum Spurium*; it may be called in English, bastard Saunders, neither ought it by any means to be used in Physick.

Scabious, of the Herbarists in Latine *Scabiosa*, and *Herba Apotematisa*. There are five kinds of it, all of one vertue and operation. *Pfora Etii* is that common Scabious used at all Apothecaries.

Scammony, in greek and Latine *Scammonium*, or *Sebamonia*, *Apopleumenon*, *Dactylion*, and *Sanilum*, of the Simplificists *Volubilis Syriaca*, *Volubilis Antiochena*, and *Volubilis Colophonica*. *Dioscorides* calleth it *Colophonium*, and *Sanilum*: At the Apothecaries *Schamonea*, and of the Arabians *Sachmunia*. It is a plant that groweth in Syria near Antiochia. It hath long sappy stalks, three square leaves, and white flowers like bells. It hath also a long sappy root as thick as ones arms, and white in colour. *Dioscorides* calleth this root, *Radix Colophonica*, and *Radix Schambonica*. The juice which is prest out of this root, is also called as the plant *Sebamonia*, or *Scammonium*. Some do call this juice in Greek onely *Diacyrdion*, that is, *Lacrymula*, and at the Apothecaries *Schamonea*. But our Physitians now adates do understand by *Diacyrdion* onely the prepared Scammonie, which the common Apothecaries and Physitians do call *Dagridium*, or *Diagridium*, and *Schamonia preparata*.

Scorpion, *Scorpus*, *Scorpio*, a marvellous venomous little beast, in Italy and other Countries very common. If it bite or sting a man, and that he useth no present remedy for it, he is constrained to dye.

Sea balles, in greek *Sphera thalassia*, or *Galos*; in latine *Sphera Marina*, *Pila marina*, at the Apothecaries *Balla marina*, and *Nicolaus Myrepsus* calleth it *Palla marina*; *Dioscorides* doth name it *Prunum Genus Alcioni*. It is a kind of a Sea sponge dryed and round like a ball, whence it hath the name *pila marina*.

Sea Mussels *Concha marina*, *Conchiliu marinu*.

Sea Wormwood, in Greek and Latine *Ab-sinthium thalassium*, *Ab-sinthium marinum*, *Ab-sinthium Scipium*, *Helmintobotane*, *Helmintopaea*, *Scriphon* and *Serisuum*, at the Apothecaries *Sementina*, or *Zina*. The seed of it is onely used at the Apothecaries to kill and expel the Worms of the belly, they call it *Semen Zina*, *Semen Lumbricorum*, *Semen Alexandrinum*, and *Semen Zedoaria*. In Provence, that is in France, is another kind of sea Wormwood or Wormseed found, which is very like the garden Cypers, but it hath lesse store of seed then the former, and in the expulsion of Worms altogether as forcible. This plant is called *Santonicum*, *Ab-sinthium Santonicum*, at the Apothecaries *Sandonicum*, *Sanctonicum*, *Ab-sinthium Sanctonicum*, *Centonica*, and *Herba centonica*. By all these names do they also understand the Wormseed, or sea Wormwood, for they do confound these and many others more. They do call the seed *Semen Sandonicum*, and *Semen Sanctum*, by which they do understand both the former seeds.

Selfheal, *Prunella* and *Herba Divi Anthonii*. Sene leaves, are called in greek, Latine, and in the Arabian tongue *Sena*, and *Senua*. *Mesues* called them with a Persian name *Abulkemer*. There are two kinds of them, the lesser groweth in Syria and Egypt, and are called (to distinguish them from the others) *Sena Syriaca*, *Sena Egyptiaca*, and at the Apothecaries *Sena Alexandrina*, and *Sena Orientalis*. The greater Sene leaves do grow in Italy and elsewhere; these are called of the Simplificists *Sena Italica*, or *Sena Provincialis*, and at the Apothecaries *Sena Florentina*. They are much weaker in operation and vertue then the lesser kinde, and therefore more unfit for Physical uses. Some there are that

The second Table.

that affirm *Sena* to be a kind of *Colutea*. Others would have the *Colutea Theophrasti* to be *Sena*, or at the least a kind of the same, but both of them do err. Look also in the Introduction of this Book for *Sene* leaves.

Service tree, in greek *Oa* or *Oe*, in Latine *Sorbus*: it is a wel known tree, whereof the fruit is called in Latine *Sorbum*, and it is like to a little pear.

Sebestes, are little black berries, called in Greek *Myxa* or *Myxaria*, of *Actuarius* in latine *Sebestena*, and at the Apothecaries *Sebesten*. They are black berries, as big as hazel nuts, or little small dried prunes, they are well known at all Apothecaries.

Sheep, *Ovis*.

Sheepheards purse, *Bursa pastoris*, and *Pera pastoris*.

Silkworms neast, *Folliculus Bombycis*, they are called in latine *Sericum crudum*, or *Sera cruda*, at the Apothecaries *Sera cruda*.

Silver, in greek *Argyros* and *Argyron*, and in Latine *Argentum*.

Silvermountain, in Greek and Latine *Seseli*, and of *Pliny* *Seselis* and *Sili*, of the Herbarists *Seselinum*, at the Apothecaries *Sisaleos*, and *Seselios* indeclinabiliter. There are five kinds of it, the first hath leaves like Fennel, but somewhat bigger, with a smooth stalk, the flowers are not unlike to them of Dill, and after them followeth a little sharp seed: the root is long and odoriferous, and it groweth on stony hills. It is called in Greek *Seseli Massilioticum* and *Platycyminum*, in Latine *Seseli Massiliense*. The Herbarists do call it *Seselinum Massiliense*: at the Apothecaries *Sisaleos*, *Siler montanum*, in English *Silyer mountain*, or *Siler mountain*. The second kind is called *Silvermountain* of *Ethiopia*, the stalk is of the thickeſſe of a finger, woody and of a dark red colour. The leaves of it are very like to them of Honisuckles: they are smooth, and pale green in colour. It hath upon it four or five good yellow tops like Fennel, but the seed is somewhat bigger then that of Fennel. It is called in Greek and Latine *Cynophrycon*, *Seseli Ethiopicum*, and of the Simplicists *Seseli Ethiopicum Fruticans*. The third kind is our common black *Silvermountain*, which of many is taken for *Seseli Ethiopicum*, because it hath the same vertues and operations. But the Herbarists do call it *Seseli*, or *Seselinum Ethiopicum Herbaceum*, thereby to diginguish it from the aforementioned. The fourth kind is our white *Silvermountain*, called in Greek and Latine *Seseli Pe-*

laponnesiacum, *Seseli Peloponnese*, and of the Herbarists *Seselinum Cervinum album*. The fifth kind is the *Tordylium* of *Dioscorides*. This herb as yet is not thoroughly known, because the description of it is so briefly set down by the ancient writers, which do onely make mention of the seed of it. This is called in Greek *Tordylon*, *Tordylon*, of *Pliny* *Syreon*, of *Paulus* *Agineta Gorgylon*, and in Latine *Seseli Creticum*. But when and wheresoever thou findest *Silvermountain* or *Seselios* in any composition, then and there shalt thou alwayes understand and use the first kind of *Silvermountain*.

Sinober or *Sinople*, *Vermillion*, in Greek *Cinnabaris*, in Latine *Cinnabrium*. There are two kinds of it, the first is natural, and digged out of the Mine: it is called in Greek *Miltos Ammon*, in Latine of *Dioscorides* and *Pliny*, *Cinnabaris Fossilis*, *Minium Nativum*, in English *Sinober* of the Myne. The other kind is made by the Alchimyſtes of *Quickſilver* and *Brimstone* and it is called of the Simplicists *Cinnabaris Factitia*; *Cinnabrium Artificiale*, and *Minium Artificiale*, with us *Vermillion*.

Sivet, in greek of *Actuarius* *Zapetion*, in Latine of the Simplicists *Zibethum*, *Zibethum*, *Algalia*, and at the Apothecaries *Zibeta*: It is the fat or suet which is taken from the cods of the *Sivet* or *musk Cat*: at the first it smelleth very badly, but afterwards turneth to so fragrant an odour that it far surpasseth the *Musk* and *Ambergreece*: it is hot and moist by nature. It is used for increase of humane seed, and for the infirmities of the Matrix.

Sloe tree, or *black Thorne*, in Greek *Agriococymelek*, and *Cocymela agria*. In Latine *Prunus Sylvestris*, and of *Virgil* *Spinus*.

Smallage, in Greek and Latine *Eleoselinum*, *Hydroselinum*, *Apium Palustre*, and *Paludapium*. Here is to be noted, that as often as any mention is made in this Book of *Smallage* seeds, leaves, juyce, or roots, that the greater *Pimpernel* roots are alwayes to be understood for it, for that is the right *Apium* of the ancient *Physicians*.

Smarage, in Latine and Greek *Smaragdus*, of *Horatius*, *Lapis viridis*: it is a green precious stone.

Snake, *Sepens*; *Anguis*.

Snail, *Cochlea terrestris*, a *Snail house* and all the house of the *Snail* is called in Greek by *Dioscorides* *Celyphos*, of *Galen* *Ostrakon*, of *Scammonicus* *Cochleatomus*, and of *Pliny* *Calyx*. The vine snails and garden snails are called *Cochlea opercularis*. The dew snails

The second Table.

snails are called *Limax* and *Cochlea nuda*.

Solidago media, Sengreen, in Latine *Symphitum medium*, *Solidago media*, *Consolida media*, *Consolidago media*.

Soot of the chimney, *Fuligo caminorum*.

Sophia, in Greek and Latine *Thalietrum*, and *Thalistrum*, of the Chirurgeons and Herbarists *Sophia*, and *Herba Sophia*. Some authors would have this herb to be *Absinthium Seriphium*, but they shall never approve it to be true, for although they were the greatest Alchimists in the world, yet should they never transmute the one into the other. This Sophia I will not deny to be very good for the Worms of the belly, yet doth it not thereby follow that it is *Absinthium Seriphium*, for if all the herbs should be of *Sinchia Seriphia* that should expel worms, then should we have an infinite company of them. Of this *Absinthium Seriphium* look under the title of sea Wormwood.

Sope, in Greek and Latine *Smegma*, or *Sapo*, of *Martialis*, *Mattiaca*, *Pila*. Sope is prepared diversly, but amongst all others is the black sope best for Physick.

Sorrel, in Greek of *Dioscorides* *Oxalis*, *Anaxyris*, and *Lapathon*, of *Galen* *Oxylapathum*, *Dioscoridos* doth otherwhiles call the Dock *Oxylapathum*, because it hath picked leaves: But *Galen* doth not call Sorrel by this name, because it hath picked leaves, but that it is ampler and sowre: for *Oxylapathum* is *Lapathum Acidum*, four Dock: the Apothecaries do call it *Acetosa*. There are four kinds of it; the first, is that which groweth every where in Gardens. The second kind is as big again as the common Sorrel, and groweth very plentifully in the Vineyards neer Rhene: It is also planted in Gardens for Sallads, and is called *Oxalis sativa*, or *Acetosa sativa*. The third kind is set in the gardens in France, and high Burgundy, it hath round leaves, and is much sowrer then the common Sorrel, it might be called round Sorrel, of the Herbarists *Oxalis Rotundifolia*, *Acetosa rotunda*, *Oxalis Francia*, and *Oxalis Gallica*. The fourth kind of Sorrel groweth in the common fields, and in dry places, it hath small narrow leaves, and may be called Sheeps or wilde Sorrel: of the Herbarists *Oxalis Tenuifolia*, *Oxalis minor*, *Oxalis Vervicina*, and *Oxalis Arvensis*: at the Apothecaries *Acetosa minor*, and *Acetosa ovina*. But as often as you read Sorrel in any composition, thou shalt always understand the common sor-

rel, although the round be the best.

Sour Milk, in greek of *Pliny* *Oxygala*, in Latine *Lac Acidum*, or *Lac Acetosum*.

Sowes bread, or Swines bread, in Greek *Cyclaminus*, *Ichthyotheron*, and *Chelontum*, that is, *Icestudinaria*, and *Chylme* in Latine *Cyclamen*, *Umbilicus terra*, *Rapum terra*, *Rapum porci*, *Orbicularis*, and *Herba orbicularis*, *Triumphalites*, *panis Terra*, *Arthanisa*, and *Hartbanita*. Of the barbarous writers, *Panis Alcurst*, *Panis fauni*, *Cassanum*, *Cassanum*, and *Quassanum*. Of the Arabian Physitians *Bothor Maria*. It is a root, whose leafe is like to Hartwort, but somewhat litherer, and fuller of spots. There is yet another kind of Sowes bread which is very like to the former, but somewhat lesse, no bigger then a gall; this groweth in *Apulia*, on the hill *Garganum*, it is called *Cyclaminus minor*.

Southernwood, *Auroesne*, or *Wardrobe*, in Latine *Abrotonum*, *Thelyphortum*. The female kind of southernwood is called garden Cipres, *Abrotonum foemina*, it is called *Chamaecyparissus*, but untruly: for *Chamaecyparissus Plinii* is not great and woody as the garden Cipres is, but it is a little herb, about one span in height, otherwise it is very like to the garden Cipres; it is also called with us the female Southernwood: the Herbarists do call it *Abrotonum foemina*, *Cyparissus*, and *Cypressus hortulanus*, and *Sandolina*.

Sparrow, in Greek *Psar*, *Struthos*, *Colmis*, and in Latine *Passer*: as a well known bird.

Sparrowhauke, in Greek *Spizias* and *Spizites*, in Latine *Accipiter*, *Fringellarius*, and *Nisus*: it is a bird common and well known.

Sperage, in Greek and Latine *Asparagus* or *Aspharagus*, at the Apothecaries *Sparagus*. There be two kinds of it, to wit, the wilde and the tame Sperage: the tame kind groweth every where near the Rhein: the wilde sperage hath lesser leaves and seeds, this groweth on the hills, for which cause it is called *Asparagus petraeus*.

Sperma Ceti, in Greek *Halos anthos*, in Latine *Maris flos*, of the Herbarists *Sperma balnearum*, and at the Apothecaries *Sperma Ceti*: It is used for clotted blood, being mixed with other things.

Spider, in Greek *Arachne*, in Latine *Aranea*, *Araneus*: there is yet another kind, called of *Pliny*, *Phalangium*: this is big, and poysoneth in biting or stinging, it is onely found in hot countries, and especially in Italy, where it is called *Tarantula*.

Spike

The second Table.

Spike of Rome, *Salinuca*, *Nardus Celtica*, *Nardus Romana*, *Spica Celtica*, *Spica Romana*, *Nardus Gallica*, and *Spica Gallica*: the Herbarists do call it *flos diva Magdalene*: it is a well known herb, warm in the first, and dry in the second degree.

Spikenard oyl, oyl of Spikenard.

Spinage, in Greek *Seutlomalache* and *Tentlomalach*, in Latine *Beta Maluatica*, *Spinaceum*, or *Spinacea*, *Spanachia* and *Spinachia*, *Olus Spinaceum*, and *Olus Hispanicum*. It is cold and moist in the first degree.

Sponge, in greek *Spongos*, and in Latine *Spongia*.

Spurge, in Greek *Tithymalus*, in Latine *Lactaria herba*, of Celsus and Columella, *Lactuca marina*, of Pliny *Lactuca caprina*, and at the Apothecaries *Esula*, or *Ezula*. The Arabians do call it *Xauser*. There are eight kinds of it, the first is called in Greek and Latine *Characias*, *Tithymalus characias*, *Tithymalus vallis*, *Amygdaloides*, *Cometes*, *Tithymalus cometes*, *Cobius*, *Tithymalus cobius*, of Apuleius, *Alipus*, *Gobius* and *Meconites*, *Tithymalus mafculus*, *Lactuca marina*, and *Genitura Martis*, of the Herbarists *Esula*, or *Esula Papaveracea*, *Esulovallis*, *Esula amygdalina*, and *Esula comosa*. It is a very big kind of Spurge, it hath great long leaves, not unlike to the Almond tree, red stalks and branches, it is called *Lathyrus sylvestris*, and *Carpata sylvestris*. The second kind of Spurge hath thick and picked leaves, like to the Mirtle; it is called in Greek and Latine *Myrtilites*, *Tithymalus myrtilites*, *Tithymalus semina*, *Carytes*, *Tithymalus Caryites*, of Apuleius, *Caryon*, of Theophrastus and the Simplicists *Tithymalus myrtifolius*, *Tithymalus myrtiphillus*, *Tithymalus myrtaceus*, of Apuleius, *Multilago Capraria*, of the common Herbarists *Esula*, or *Esula myrtifolia*, and *Esula myrtacea*. This kind of Spurge groweth not with us of it self, but is planted in gardens. The third kind of Spurge groweth about one span in height, and hath red branches, round leaves, white flowers, and seeds as big as small peason, it is called sea Spurge, in Greek and Latine *Paralius*, *Tithymalus Paralius*, *Tithymalus maritimus*, *Tithymalus lactariolus*, *Tithymalis*, and of Theophrastus, *Coccus*: of the Herbarists *Lactariola*, *Herba*, *Lactariola*, and *Esula*, or *Esula marina*. The fourth kind of Spurge groweth every where in gardens, and near hedges, it is an herb not altogether a span in height, with red stalks and branches, it

hath round leaves like Purslain, and it beareth a yellow flower, and turneth with the Sun, in Greek and Latine *Helioscopius*, *Tithymalus helioscapius*, *Tithymalus Solisequus*, or *Solisequius*, *Dentritus Apuleii* (ob *Arbusculæ similitudinem*) *Cicer Columbinum*, *Caprago*, of the Herbarists *Lactaria solisequia*, *Esula*, or *Esula solisequia*, or *Solisequia*. The fift kind of Spurge is the lesser kind of Spurge, which is like to the small kind field Cipres, it groweth here and there in sundy gardens, and in tilled ground, and it is called the lesser Spurge, in Greek and Latine *Cyparissias*, *Tithymalus Cyparissias*, *Tithymalus Cupressinus*: of the Herbarists *Esula*, or *Esula cupressina*, and at the Apothecaries *Esula minor*: this plant is called of *Mesues* *Scebram minus*, and *Alscebram minus*. The sixt kind of Spurge is the greatest of all, it groweth on rocks or stony places: it is like to a little tree, the leaves are narrower then they of *Esula Myrtacea*: it is called in greek and latine *Dendrodes*, *Dendroides*, *Tithymalus dendrodes*, *Tithymalus leptophyllus*, *Tithymalus tenuifolius*, *Tithymalus Petreus*, *Tithymalus arborecens*: of the Simplicists *Esula*, or *Esula Arborecens* and *Petræa*. The seventh kind hath great broad leaves, and is called great Spurge, and sweet Spurge, in Greek and Latine *Tithymalus platyphyllus*, *Tithymalus laifolius*, *Corymbitis*, and of Apuleius, *Perfites*, in Latine of the Herbarists *Tritum* or *Titum*, at the Apothecaries *Esula*, or *Esula latifolia*, and *Esula dulcis*. The eight kind is the *Esula*, which is called *Pityusa*, of *Mesues*, *Alscebram*, or *Alscebram majus*, of Avicenna, *Mehezeheregi*, at the Apothecaries *Esula major*: there hath been spoken of this kind in the title of Turbith T. Also if *Esula* or Spurge be named in this book, then is the *Esula Cyparissia* to be used.

Squinnanth, in Latine and Greek *Schoenus*, *Schoenanthum*, *Juncus odoratus*, *Rastus Camelorum*, at the Apothecaries *Squinnanthum*, the flowers are called in greek *Schoenanthos*, that is, *Junci flores*: they are now brought unto us again, although they be not common every where.

Stag Cervus.

Stavesacre, look for Licebane in L.

Stechados or Stechas, it is called of *Dioscorides* in Greek *Stichas*, of *Galen* *Stechas*, of others *Sincilopa*, *Alcibiades*, *Stiphonia* and *Stiphonia*, in Latine *Stichas*, *Stechas*, *Stæchas*, *Oculus Pythonis*, or *Sciolebin*, and at the Apothecaries *Stichados indeclinabiliter*.

The second Table.

nabiler. There are two kinds of it, the one cometh from Arabia, which hath leaves very like to Lavander, but they are somewhat jagged, and to each stalk are there or four compacted Pares, and each one hath a little stalk, with pretty little purple flowers, of a very pleasant and fragrant smell, and it is now adayes with us planted in gardens: this kind is called *Stichas Arabica*, and at the Apothecaries *Stichados Arabicum*. The other kind groweth in Spain, Italy, and in other places: it is not much unlike the former, but that it is somewhat bigger, and the leaves are not jagged: the Herbarists do call this kind *Stechados Europaea*, it hath also oftentimes a name of the place where it groweth, as that of France is called *Stichas Gallica*: the Italians do call their *Stichados*, *Stichadem montanam*: the Portuguese do call that which groweth in Arabia *Rosmarinum Mauritaneum*. The Authors do commend that of Arabia above all the other kinds, but because it is brought so far, and that it loseth his vertue by the way, do the learned Physicians use onely that which groweth in Europe.

Steel, in Greek *Calyps*, and of Pollux, *Stomoma*, in Latine *Chalybi*, of Pliny, *Nucleus ferri*, and *Acies ferri*.

Stonecrop, *Illecebra*, *Piper murinum*, and of Dioscorides, *Sedi tertium genus*.

Stone Parsly, or Parsly of Macedon, *Petroselinum Macedonicum*: they that have great store of small skill in simples, have hitherto used the Parsly of Alexandria for that of Macedonia: Others because they had no Stone Parsly, have used the greater Pimpernel instead of it; of which opinion Hieronimus Tragus (my master) was the first, because that kind of Pimpernel is stronger, and agreeth better with the Stone Parsly then the other. But now have gotten the true Stone Parsly and planted it in divers gardens, it is not needful to use any other thing for it: The Parsly of Alexandria hath also her proper use in Physick, and it is called of Dioscorides *Symnium*: of the Herbarists *Petroselinum Alexandrinum*, *Petroselinum Ciliacum*, *Apium Alexandrinum*, *Apium grande* and *Olusatrum*: these herbs are seldom used alone.

Storax, look *Styrax* in the Latine Index or Table.

Storke, in Greek *Pelargus* in Latine *Ciconia*: it is a bird common enough beyond the sea.

Storks bill, of Dioscorides *Geranium alterum*, of the Herbarists *Pes Columbinus*, and *Peristopodium*, it is one of the smallest kinds of Storks bill, with round leaves like to the lesser Mallow.

Strawberry, *Fragum*.

Sturghion, *Actipenser*, *Sturio*, it is a common and well known fish.

Succory, look Cicory in C.

Sugar, in greek *Sacchar*, *Saccharon*, *Meli*, of Arrianus, *Calaminon*, in Latine of Pliny, *Satindus* and *Saccharum*, at the Apothecaries: *Zuccarum*. There are six kinds of it: the first kind is refined Sugar, which artificially hath been purified, and is called of the Simplicists *Saccharum valentinum*, *Saccharum finum*, *Saccharum refinatum*, and *Saccharum Tabaceth*. The second kind is Madery sugar, which is brought from the Island *Madera*, this is the second in goodnesse, and is called in Latine *Saccharum Maderiense* or *Mederiense*. The third kind is Canary Sugar, which is next in goodnesse to the Madery Sugar, in Latine *Saccharum Canarium*. The fourth kind is the Malta or powder Sugar, it is brought from *Malta*, and it is called of the Simplicists *Saccharum Maltanum*. The fifth kind is a brown and soft Sugar, it is brought from the Island *S. Thomas*, and it is the very worst of all the kinds: it is called of the Simplicists *Saccharum Thomassinum*, *Saccharum Thomaum*, and at the Apothecaries *Saccharum rubrum*. The 6. kind is the sirupe that floweth from the Sugar in refining, it is known every where by the name of Sirupe, *Mel Saccharinum* and *Remel*. Whensoever any mention is made of Sugar, then is either the Madery Sugar, or the Malta Sugar to be taken and used.

Sugar parsnep, in Greek and Latine *Sisarum* and *Siser*: this is the true *Sisarum* or *Siser* of the ancient writers, and not our common parsnep, as some suppose; for the parsnep with the broad leafe is the true *Elaphoboscum Dioscoridis*. If we did alwayes distinguish our herbs after the best manner, we should not fall and run into so many confusions and errors.

Sulphur, look for Brimstone in B.

Suppositories is used to procure stools, and is called in Greek and Latine *Balanus glans*, and at the Apothecaries *Suppositorium*.

Swallow, in Greek *Chilidon*, in Latine *Hirundo*.

The second Table.

T

Tamarisk, in Greek *Myrica*. in Latine *Tamarix*, of the Herbarists *Bryaria*, and at the Apothecaries *Tamariscus*: it is a well known tree, and groweth abundantly in many places of Germany.

Tansie, the Herbarists do call it *Tanacetum*, and *Athanasia*.

Tassel, in Greek and Latine *Dipsacus*, *Onocardium*, *Labrum Veneris*, *Carduus Veneris*, *Virga Pastoris*, *Carduus Fullonius*, and *Lavacrum Veneris*.

Three leaved grasse, look for Clavers in C. Thoroughwax, *perfoliata*.

Thunderbolt, *Phrygius lapis* of *Dioscorides*, and at the Apothecaries *Lapis Lyncis*. The gentle Reader is here to be admonished of the great abuse, harm and deceit that hath hapned these many years at the Apothecaries in the use of this simple. For the unskilful Physitians which do not much trouble themselves with the true knowledge of simples, are as yet of opinion that the Thunderbolt should be engendred in the air; and they do use it in their compositions to expel urine, gravel, and stone, and especially in the *Lithontribon magnum* Nicolai. But the stone which they call *Lapis Lyncis* or *Lyncurium*, is called of *Galen* and *Dioscorides* *Lapis phrygius* do use it in their dyings. This foresaid stone (as *Dioscorides* witnesseth) groweth in *Cappadocia*; but neither *Galen* nor yet *Dioscorides* doth say, that this stone should be engendred in the air, for it is a thing that groweth of it self, as the *Calamine* doth, and (as *Galen* saith) it hath the same vertues with the *Flint*, but that this may not be used inwardly. By this may appear how greatly they have erred that have called this stone *Lapis Lyncis* or *Lyncurium*; also how diversly men have been deceived, and their infirmities increased, in ministring unto them divers compositions, wherein this stone is put. Wherefore every careful Physitian ought diligently to read the Books of *Dioscorides*, *Galen*, *Pliny*, *Atius*, and of *Nicolaus Myrepsus*, that he might thereby perceive his own defaults, and turn back from his errors. *Dioscorides* in his second book *de re Medica*, and the 74 Chapter writeth after this manner of the Thunderbolt: It hath been thought that the water of the air, which is called *Lyncurium*, should congeal into a stone, but it hath been found false, and all whatsoever else hath

been said of it; for the *Lyncurium* is that which is called of some *Electrum Pterigophoron*. Amber, or white Amber, and is brought unto us in great abundance from *Prussia*: these are the very words of *Dioscorides*. The like false opinion doth *Pliny* detect, *lib. 137. cap. 3*. Here may you evidently perceive, that neither ancient writers have held any thing of that false and fained opinion; for they do all affirm that *Electrum*, *Succinum*, and *Lyncurium*, is one and the same thing, which have been sufficiently seen by the words of *Dioscorides*. It doth also appear in the writings of *Atius*, and *Nicolaus Myrepsus*, that they meant nothing else by their Thunderbolt *Lyncurium* or *Lapis Lyncis*, but onely *Succinum*, that is the Amber. Also that the Amber cometh not out of the air, but out of the sea, that is sufficiently known to all the world. But whether that unskilfull cure had said that it were engendred of a certain water in the air, or that it is the urine of a beast congealed into a stone, that were a small error, if they had used the right Amber in their compositions. That Amber hath power to expel the stone, urine, and gravel, (which vertues are ascribed to the *Lyncurium*) that is sufficiently known to every expert Physitian: and that the white Amber is the right *Lyncurium* or *Lyncurium*, and that may be shewed by the words of *Atius*, who calleth it *Electrum*, *Lyncurium*, and *Succinum*, and distinguisheth the yellow Amber from it, calling it *Chryseletrum*, that is, *Aureum Electrum*. And *Dioscorides* in the former chapter calleth the white Amber *Electrum Pterigophoron*, and in the first Book *de medica materia*, doth he call the yellow Amber *Chrysophorum*. Hereby do we conclude that *Lapis Lyncis*, *Lyncurium* or *Lyncurium* (as the *Gretians* term it) is nought else but the white Amber: wherefore heed must be taken that thou use the white Amber in all compositions that have the *Lapis Lyncis* in them. Of the vertues of the Thunderbolt, look for Amber.

Thyme, in Greek and Latine *Thymum*, *Thymus*, *Serpillum Romanum*, or *herba Thymiana*, at the Apothecaries *Tymus*. There are two kinds of it, and both of them are set in gardens, but in hot countries they do grow every where of themselves. The first kind is white, and hath long ears or heads like to *Stechados*, it hath a very pleasant smell, it is called in Greek and Latine *Thymum Capitatum*, *Thymum Candidum*, *Thymum*

The second Table.

Thymum creticum, *Thymum Spicatum*, and *Thymum aromaticum*: we call it white Thyme. The second kind is rougher, and of a darke green colour, and it is common in all gardens, and well known by the name of Thyme, the first kind is much better for Physick then the other if it may be gotten: they are both of them hot and dry in the third degree.

Tillet tree, in Greek *Philyra*, in Latine *Tilia*; there are two kinds of it, the common Tillet tree, and the wilde Tillet tree, which groweth in the shadowy wood and hills, it is very like to the tame kind, but that it is much lesse; it bloweth also slower, and at the last the blossoms fall off without any fruit. It is called the wild Tillet tree, or stone Tillet, because the wood of it is harder and more compacted then the tame: it is called in Latine *Tilia sylvestris* and *Tiliamas*. The blossoms and the fruits of it are used in Physick.

Toad, in Greek *Phrynus*, of *Virgil*, *Bufo*, and of *Pliny*, *Rubeta*. Some unskillfull Physicians do take *Rubeta* to be the leafe Frog, which is a great error, for they are as like as an apple is like to an oyster, because the Toad is hurtful and venemous, and the Leafe-frog without all hurt or harm.

Tormentil, is called of *Dioscorides*, *Chrysogonon*, and of others *Heptaphylon*, of the Herbarists *Septifolium*, *Betularia*, and at the Apothecaries *Tormentilla*.

Tortoyse, in Greek *Chelone* or *Emys*; of *Hesichius* and *Aristoteles*, *My*; in Latine *Testudo*: the shell of it is called in Greek *Chelonium*, and of *Nicander*, *Chelium*, in Latine *Testudinis operimentum*.

Treacle, in Greek and Latine *Theriaca*: at the Apothecaries *Teriaca*. We have mentioned in this Book of two kinds of Treacle, to wit, of *Theriaca Andromachi* or *Theriaca magna*, and the common Treacle called *Theriaca Diatesaron*: but where-soever Treacle is named without any addition, there must the great *Theriaca Andromachi* be taken and used.

Turbith, of *Aetnarius*, *Turpetum*, in latine, of the Herbarists *Turbetum*, of the Arabians *Turbith* and *Turbeth*. There are four kinds of it; the first is the white Turbith, very common at all Apothecaries, this kind is called of *Dioscorides* in Greek *Alpum*, of *Aetnarius*, *Alypias*, and *Turpetum album*, at the Apothecaries *Turpetum Orientale*, or *Turpetum Alexandrinum*, and in English white Turbith. The second kind is called of *Dioscorides* and *Aetnarius*, *Pitynsa*, *Clema*, *Crabion*, and *Canopicon*, of

the Herbarists *Turpetum nigrum*, and *Estula major*: also of the Arabians *Alscebram majus* or *Scebram majus*, in English black Turbith. The third kind is called in greek *Thapsia*, *Hypopium*, and *Pancranium*, in Latine *Ferulago*, and *Ferula sylvestris*, of the Herbarists *Turpetum cineritium*, and *Turpetum Mesuis*, and *Mesues* hath understood by his Turbith nothing else but *Thapsia*. The fourth kind is the *Turpetum Serapionis*, who also hath his several Turbith. *Dioscorides* calleth it *Tripolium*, *Psyche Meris*, *Stachyites*, of the Herbarists *Turpetum Serapionis*, and *Aster marinus*: but when thou findest Turbith in any composition with any addition, then is the white Turbith to be understood for it.

Turmerick, *Cyperus Indicus*, the Apothecaries call it *Curcuma*, and *Terra merita*, *Rasis* calleth it *Vena ciirina*.

Turneps, look for Rapes in R.

Turpentine is called *Resina Terebinthi*, *Terebinthina*, or *Terminthina*, of the Arabians and Apothecaries *Turpentina*, *Turbentina*, and *Turmentina*. It is not the common Turpentine that floweth from the Fir tree, as the unskillful suppose, but it is the true Turpentine of the Turpentine tree.

Turpentine tree, in Greek *Terminthos*, of *Nicander*, *Trimithos*, in Latine *Terebinthus*, of *Avicenna*, *Arbor granivivides*.

Turtle Dove, in greek *Trygon*, in Latine *Turtur*.

Tutty, at the Apothecaries *Tutia factitia*, *Cadmibotryitis*, or *Cadmia Acinosa*, and *Cadmia officinarum*.

V

VAlerian, in greek and Latine *Phu Valeriana*, *Genicularis*, *Herba benedicta* and *Marinella*. There are four kinds of it, and two of them onely in use; the first is the common Valerian, which onely ought to have that name. The second kind is planted in gardens, although it be otherwhiles found in woods and on hills: it hath much greater leaves then the common Valerian, and also a bigger root, of the thickenesse of a finger, and this is the true *Phu* of the ancient writers. It is called *Phu Ponticum*, in English great Valerian; the Herbarists do call it *Theriacara*, *Herba divi Georgii*, *Georgiana*, and *Herba divæ Mariæ*. This is commended before the former Valerian, if it may be gotten. They are hot in the first, and dry in the second degree.

Venus

The second Table.

Venus hair, in Greek *Trichomanes*, *Callitrichon*, *Euprepon*, of Hippocrates, *Calliphylon*, of Apuleius, *Tricophyl*, *Selinophylon*, *Dyphyes*, *Scholisbrochon*, *Amianthon*, and *Adianton*: although Dioscorides do describe another kind of *Adianton*, to wit, Maiden hair, yet notwithstanding is Venus hair the true *Adiantum Apuleii*: in Latine *Herba Capillaris*, *Barba Herculis* and *Pinnula*, of Apuleius, *Herba crinita*, *Capillus Veneris*: the Apothecaries call it *Polytrichum*. There are yet two kinds more of it, to wit, the greater and the lesser Maiden hair: the greater kind is called of the Herbarists *Polytrichum aureum*, *Adiantum aureum*, and *Capillaris aurea*. The lesser is called *Adiantum aureum minus*. Some have taken both these kinds for *Polytrichon Apuleii*; but they err greatly, as doth appear by the description of it. But when thou readest Venus hair in any composition, then shalt thou take the common Venus hair.

Verdigrease, in Greek *Chalcon anthos*, in latine *Flos aris*, or *Arugo*, at the Apothecaries *Viride aris*.

Vinum punicum, or *Vinum Histricum*, *Vinum punicum*.

Violets, in greek *Ion*, and *Ion porphyreon*, of Theophrastus, *Ion Melen*, and *Melanion*, of Dioscorides *Dasipodium*, *Priapeion*, *Cybelion*, in Latine *Viola purpurea*, *Viola muraria*, *Viola nigra*, and *Setialis*: of the Herbarists *Viola Martia*, and *Viola Quadragesimalis*: it is also sometimes called onely *Viola*, in English a *Violet*: the Apothecaries call it *Flos Viola*. The leaves of the Violets are called *Violaria*, and *Mater Violarum*. There are five kinds of them, that are all of one and the same operation. The first kind is common every where, and know to all men. The second kind are the white Violes, which are very like to former, but that they be very white; they are set in gardens, notwithstanding that they are found in the fields: the Herbarists do call it *Viola alba*, and *Viola Martia alba*. The third and fourth kinds are the white and blew double Violets, that grow in gardens: the blew double Violets are called *Viola multiplex*, *Ion Polyphyllon*, and *Viola purpurea multiplex*. The white double Violets are called *Viola alba multiplex*. The fift kind of Violets are the wilde Violets, which are like to the tame Violets in every respect, but that the leaves are somewhat lesse and longer, and the flowers are of a light or purple blew, like the other, but without any smell, where

neverthelesse, all the other kinds are very fragrant. The sixth kind is called *Ion agria*, *Viola sylvestris*, of the Herbarists *Viola fatua*, or *Viola canina*.

Viper or Adder, in Greek *Echis*, and *Echidna*, in Latine *Vipera*, and of Cicero, *Excerpta*: the Italians do call it *Marassus*. It is a venemous Snake, unknown with us, but very common in Italy.

Virga aurea, *Solidago saracenic*, *Consolida saracenic*, *Herba fortis*, and *Virga aurea*.

Unicorn, *Unicornium*, *Cornu Monocerotis*.

Unripe Grapes, in Greek *Omphax*, in Latine *Uva immatura*, and *Uva acerba*.

Vulture, *Vultur*, and of Plautus, *Vulturinus*, it is a well know ravening bird.

W

WAlflowers, in Greeke *Leuconium*, *Viola lutea*, *Hesperis*, at the Apothecaries *Keyri*, *Keiri*, and *Cheyri*.

WAlnut tree, in greek *Caryon*, *Caryon baslicon*, and of Pollux, *Caryon Persicon*, *Nux baslica*, *Nux regia*, *Juglans*, and *Nux Persica*. There are three kinds of it, to wit, great, middle, and lesser nuts: the lesser may be called stony nuts, because they have such hard shels. The second kind are the common WWalnuts, *Nuces media*, or *juglandes media*. The third kind are the biggest, and are called *Nuces equina*, or *juglandes equina*.

Watercresse, in greek and Latine *Sisymbrium aquaticum*, *Nasturtium aquaticum*, and *Caramine*.

Water Lentils, *Lens palustris*, or *Lenticula aquatica*.

Water Lillies, in greek *Nymphaea Rhopalon*, *Heraclicon*, *Androgynus*; of Apuleius, *Lotometra Madon*; of Theophrastus, *Madonias*: in Latine *Clavus Veneris*, *Digitus Veneris*, *Alga palustris*, *Lilium palustre*, *Papaver palustre*, *Clava Herculis*, *Rosa palustris*, of Apuleius, *Protea*, and *Mater herculanea*: The Arabians and Apothecaries do call it *Nenusar*, or *Nenuphar*. There are four kinds of it: the first kind groweth in Ponds, they are very common and bear a fair white flower, known to every man: it is called *Nymphaea alba*, of Pliny, *Nymphaea Heraclic*, with us white water Lillies. The other kind is like the former, but not so common, it beareth a yellow flower, and is called of the Herbarists *Nymphaea lutea*, of Dioscorides, *Nymphon*, the flowers *Blepharon*, and *Blephara*; with us yellow water

The second Table.

water Lillies. The 3. kind hath small leaves, like to Crowfoot flowers, and small white flowers, it groweth commonly in sweet and running streams, and it is called of the Herbarists *Nymphaea minor*, in English the lesser white water Lillie. The fourth kind is like to the great water Lillie, but that it is somewhat lesse, it beareth a pretty yellow starrie flower, it is called of the Herbarists *Nymphaea lutea minor*, we call it the lesser yellow water lillie.

Water Torch, in greek and latine *Typha*: the Herbarists do call it *Typha aquatica*, and *Typha palustris*, to distinguish it from the Turkish Corn, and the Ginny wheat, both which are also called *Typha*: whereof shall be spoken more at large when opportunity shall serve. The water Torch is but once mentioned in this whole work.

Water Willow, in greek and latine *Lyfimachium*, or *Lyfimachia*, *Litrum*, of the Herbarists *Salicaria*. There are three kinds of it, the first is the common water Willow, which is called the yellow water Willow, in latine *Lyfimachia lutea*, or *Lyfimachia melina*. The second kind groweth in moist places, it hath narrow and picked leaves, with a pretty purple flower: it is called of *Pliny* *Lyfimachia*, for the first kind is *Lyfimachia Dioscorides*: of the Herbarists *Lyfimachia Pliniana*, *Lyfimachia purpurea*, or *Punicea*, *Lyfimachia spicata*, and *Salicaria purpurea*, in English the purple water Willow. The third kind groweth about the running waters or streams, it hath small leaves, like to the Willow, but a little jagged, it beareth a pretty small purple flower, like to the lesser Roses, out of which commeth afterwards a little cup, which containeth some small seeds. It is called of the Herbarists *Lyfimachia siliquosa*, and *Filix ante patrem*, in English horned water Willows, that is, *Salicaria cornuta*, *Salicaria siliquosa*, and *Lyfimachia cornuta*. But if thou find water Willows without any addition, then shalt thou understand the yellow water Willow, or *Lyfimachia Dioscoridis*.

Wax, in greek *Ceros*, in Latine *Cera*.

Whay, *Serum*, *Aqua lactis*, and *Aqua Castanea*.

Wheafie, in greek *Gale*, *Spondyle*, in latine *Mustela*.

Wheat, in greek *Pyros*, in latine *Triticum*. There are three kinds of it, the first kind do we call Wheat, without any addition,

of *Columella Robus*, of the Simplicists *Triticum robum*. This is the very best in weight and whitenesse. The second is a kind of ruffeared Wheat, in greek *Pyros Trimenos*, or *Setarias*, in latine *Triticum Trimestre*, and *Halicastrum*, of *Columella*, *Setarium*, or *Sitarianum*, of the Herbarists *Triticum sitianum*. The third kind is called in Greek *Silignis*, in latine *Siligo*, and *Triticum Siligineum*.

Wheat ruffeared, in greek *Zea*, in latine *Zemen*, of *Columella* *Fav clysinum*, and of others *Spleta*. There are two kinds of it, the first is the common ruffeared Wheat, it bringeth two husks close together, with two grains in them: this is called *Spelt*, and *Zea diatoccos*. The second kind is called *S. Peters corn*, it bringeth but one seed or grain, to wit, in a row, as the former bringeth the two: it is called in greek *Zea monococos*, and in latine *Zea simplex*, and *Semen simplex*: it is a kind of grain which is a mean between Barly and Wheat.

Wheat ruffeared prepared *Alica* or *Halica* in greek *Chondrus*, *Zea deglubita*, ruffeared wheat peeled.

White water Mints, in greek *Mintha agria*, *Hediosmos agrios*, in Latine *Mentastrium*, and *Mentha sylvestris*, of the Herbarists *Mentha equina*, *Mentha caballina*, and *Balsamita fessina*. There are two kinds of it: the first hath rough, white, and round leaves, and a hairy and rough stalk, this is the true *Mentastrium Dioscoridis*. The second kinde is not rough, but hath long prickled leaves, and a brown hairy flower; they grow neer to the water side; this second kinde is called *Mentastrium acutum*, and they have both one and the same operation. *Apuleius* and *Pliny* have also their severall *Mentastrium*, which they do call *Glechon agrion*, and *Pulegium agreste*: It is the second *Calamintha Dioscoridis*, which we have called *Calamintha arvensis* before.

Wilde Beets, of the Herbarists *Apiophyllon*, *Herba pyrifolia* or *Pyrifolia*, *Consolida Pyrifolia*, *Pyrola*, and *Pyrula*: It is a vulneral herb, having leaves like a Pear tree. it groweth in the shadowie woods, and continueth green both winter and summer. There is yet another kind of it, which groweth in medowes, near hills, which is like to the former, but that it hath longer leves and stalks, wheron there be white flowers: the Herbarists do call it *Pyrola*, or *Pyrula pratensis*: they are both of one nature and operation: they are dry

The second Table.

dry in the third degree, they do consolidate mightly: but by wilde Beets shalt thou understand that which groweth in woods.

V Wilde Cucumbers, *Cucumer Aspinus*, *Cucumer sylvestris*, *Cucumer anguinus*, and *Cucumer erraticus*. It is a well known herb, but it groweth not with us unlesse it be sowed in gardens. There is a iuyce prest out of the fruit of it and prepared, which is called *Elaterium*, whereof shall be spoken else-where.

Wilde Flax, in greek and latine *Oxyris* of the Herbarists *Herba urinalis*, and *Linum beatæ Mariae*, at the Apothecaries *Lina ria*.

Wilde Grapes, in Greek *Ampelos agria*, in latine *Labrusca*: the blossomes of the wild Vine is called in greek *Oenanthe*, in latine *Flos labrusca*, *Flos vitis sylvestris*, and at the Apothecaries *Flos lambrusca*.

Wilde Pears, *Pyrum sylvestre*: the tree is called in greek *Archas*, in latine *Pyraster*, in English a wilde Pear tree. these Pears, their leaves, and the water distilled of them is used for the Lask.

Wilde Radish, *Armoracia*, *Raphanus sylvestris*, at the Apothecaries *Rapistrum*: There are two kinds of it, both of them do grow in fields that are sown. The first kind is that whereof now hath been spoken. The second kind is like the first, but it hath fewer and broader leaves, the flowers are white, and is commonly cald white wilde Radish, *Rapistrum album*, that is, *Lapsana*, *Dioscoridis* & *Galen*. They that call our Horse-radish *Armoracia*, do err greatly; for *Armoracia* is *Raphanus sylvestris*, a wild Radish. Look for this in the description of *Dioscoridis*, and the truth will soon appear.

Wilde Saffron, in greek *Cnicus*, *Cnecus*, *Gnicus*, and *Gnecus*, in Latine *Cyrtamus*, or *Chartamus*. There are two kinds of it, the first is the wilde wel known Saffron, which groweth in many gardens: this is called *Cartamus domesticus*; of *Serapio*, *Kartan*, of *Averroes*, *Elcratis*, of the Herbarists *Crocus bartulanus*, *Crocus sylvestris*, *Crocus saracenicus*, *Crocus fatuus*, it is barbarously called *Zaffranum sylvestre* and *Saffranum fatuum*. *Averroes* calleth the seed of it *Semen de Papaga*. The second kind groweth on dry hils and untilled and dry fields, it is called wilde fiede Saffron, in greek *Atractylis*, and *Cnicus agria*, in latine *Colus rustica*, *Fusus agrestis*, and of the

Herbarists *Cnicus sylvestris*, *Cnicus campestris*, *Cartamus sylvestris*, *Eracantha*, and *Carduus amoris*; but the tame kinde is onely used in Physick, to wit, the flowers and seed of it, which is also called *Semen papagallæ*, or *Semen Psittacii*. Note that *Cartamus* with *c*, doth signifie wilde Saffron, and *Carduus* with *d*, Cresses and seeds, *Nasturtium*: wherefore great heed is to be given of it.

Wilde Thyme, *Serpillum*, *Cunilago*, and in greek *Herpyllum*.

Willow tree, in greek *Hea*, in latine *Salix*, of *Homerus*, *Frugiperda*: There are five kinds of it; the first is called with us the red Willow, of *Theophrastus*, *Salix nigra*, or *Punicæ*, of *Pliny*, *Salix viminalis*, of *Columella*, *Salix Sabina*, and *Salix Amerina*: this is the very best kind of all the rest. The second kind is the white Willow, and of the Herbarists *Salix Candida*. The third kind is called of *Pliny*, *Salix vitillina*, of *Columella*, *Salix Græca*, with us water Willow tree. The fourth kind is called of the Herbarists *Salix platyphyllos*, *Salix latifolia*, and *Salix cinerea*. The fift kind is the least of all, called of *Theophrastus*, *Salix helix*, of *Pliny*, and *Columella*, *Salix Gallica*: of the Simplicists *Salix pumila*. These five kinds of Willows are sufficiently known to all men.

Wine, in greek *Oenos*, of *Cratinus*, *Tryx*. There are four kinds, each according to the country, to wit, the least, smallest, middle, and strong Wine: but we will speak but of two kinds at this present, to wit, of strong and of small wine: the strong wine is called *Vinum Oenodes*, *Vinum polyphorum*, and *Vinum multiferum*. The common wine is called *Vinum oligophorum*, *Vinum pauciferum*, *vinum aquosum*, and *Vinum Cibarium*, this is onely spoken and meant of Rhenish wine.

Winter Cherries, in greek, *Halicacabus*, *Physalis*, in Latine *Solanum vesicarium*, of *Pliny* *Vesicaria*, of the Herbarists *Solanum rubeum*, or *Solatrut rubrum*, *Cerasium Judæorum*, *Cerasum terræ*, in the Arabian tongue *Alkekengi*, or *Alkekengi*: they are cold and astringent in the second degree, but mean moist.

Weather, *Castro*, *Vervex*.

Woad, in greek and latine *Isatis*, of *Pliny* *Glastrum*, of the Herbarists *Guadum*, and *Pastillum*, it is an herb well know to divers. There are two kinde of it, one tame, and one wilde; the tame Woad groweth in France, and in Daring, with

The second Table.

us onely in gardens for Physical uses: it is called *Isatis sativa*, *Eghe*, and *Glastum sativum*. The second is the wilde kind, it is lesser then the former, it groweth here and there in the woods and fields; it is called *Isatis sylvestris*, *Isatis minor*, *Glastum sylvestre*, and *Glastum minus*. They are both drying and astringent, but the wilde Woad is much stronger then the tame.

Woodcock, in greek *Scolopax*, of *Hesychius*, *Varino*, *Nemeshano*, in Latine of *Gaza*, *Gallinago*, of *Heradianus*, *Perdix sylvestris*, of other *Perdix rustica* or *Rusticula*, of *Niphus* and *Volaterranus*, *Gallinella*, of the simplifiers *Rostrulula*, and *Gallinacea*.

Woodpecker, *Picus Martins*, *Turba*, in greek *Driocolaptes*; of *Arist.* *Driocolaps*; of *Hesych.* it is a well known bird; it is mentioned otherwhiles in some dyets in this work.

Woolblade; or Longwort, in greek *Phlomis* or *Phlomis*, of *Apuleius*, *Pycnitis*, in Latine *Verbascum*, *fœminalis*, *Lucumbra*, *Candelaregis* *Candelaria Lanaria*, at the Apothecaries *Tapsus barbatus*. There are four kinds of it, whereof the first is the common Woolblade, with the white woolly leaves, and yellow flowers; it is called *Verbascum albisolium*, and in greek *Leucophyllon*. The second kind is like the former, but that the leaves are blacker and broader; it is called black woolblade, in greek *Phlomis melanophyllos*, in Latine *Verbascum nigrum*. The third kind is the wilde Woolblade, it hath a long stalk with great leaves, much like to the great Sage, it hath yellow flowers, in greek *Phlomis agrios*, in Latine *Verbascum sylvestre*: of the Herbarists, *Verbascum salvifolium*. The fourth kind is most like to the first, but that the flowers are white, and it is called white Woolblade *Verbascum album*, and *Verbascum fœmina*.

Woolfsbane, in greek and Latine *Aconitum*, There are six kinds of it, the first hath round leaves not much unlike to the lesser Cucumbers, with pretty yellow flowers, not unlike to them of *Doronicum*. The roots are round, with many joynts, the little roots about it are very like a Scorpion, it is called in greek and latine *Pardalianthes* *Thelyphorum*, *Aconitum Thelyphorum*, *Therionophorum*, *Aconitum Therionophorum*, *Myoctonum*, *aconitum Myoctonum*, and *Scorpion*. The second kind of Woolfsbane hath leaves like to the Italian Plane tree, but somewhat deeper jagged:

the root is blackt with many hairs about it. This Plant is sufficiently known by the name Woolfsbane, it groweth on high hills, and is called in greek and latine *Lycoctonum*, *Aconitum Lycoctonum*, *Cynoctonum*, and *aconitum Cynoctonum*. The Herbarists do call it *Aconitum Lycoctonum luteum*: the Apothecaries *Luparia*. The third kind is called of the Herbarists *Aconitum Lycoctonum Caruleum*, there are also three kinds of it, and it is common in all gardens. The fourth kind of Woolfsbane is *Aconitum Lycoctonum caruleum magnum*: *Avicenna* calleth it *Napellus*; it is a very venomous herb. The fifth kind hath yellow flowers, and is called yellow Woolfsbane, of the Herbarists *Aconitum Lycoctonum luteum minus*. The sixth kind groweth in darke and shadowie woods, the stalk is about one span and a half in height, and about the midst of the same are 4. dark green leaves, standing opposite one against the other: it getteth a black berry, under which many little leaves are placed each opposite to other. It is called of the Herbarists *Aconitum salutiferum*, *Sigillum Christi*, *Crux Christi*, *Sigillum Veneris*, and *Herba Paris*. It is a very wholesome herb, and may be used inwardly very well against many diseases. Many learned men would have it to be *Aconitum pardalianches*, but it is as like it as an apple is like an oyster. By Woolfsbane shalt thou understand the yellow Woolfsbane.

Wormwood, in Latine and Greek *Abstinium*, *Aloina*: there are three kinds of it: The first, is the common Wormwood that groweth every where, called *Barthypicron*, *Barypicron*, and *Abstinium rusticum*. The second kind is like to the former in leaves and flowers, but it is somewhat lesse, and it groweth not above a span and a half in height: it is also bitter like the foresaid, yet somewhat more pleasant to be used; it groweth on hilly places: This kind will never be greater although it grow in fertil gounds. This is the same Wormwood which *Dioscorides* doth call *Abstinium ponticum*, *Mesues*, *Abstinium Romanum*, of the Simplifiers *Abstinium montanum*, and *Pliny*, *Abstinium Italicum*. The third kind is very like the great Wormwood, but it hath lesser leaves and stalks then the mountain wormwood, it groweth also somewhat higher: the leaves are white & soft. This groweth on sandy ditches. It is called *Romish*

The second Table.

Wormwood, to avoid all errors, and we leave the name of mountain Wormwood unto the second kind. This Wormwood is called of *Galen Absinthium ponticum*. But *Mesues* and other Authors do take the second kind to be the true *Absinthium ponticum*. Whensoever thou findest Wormwood by it self in any composition, then is the mountain Wormwood to be taken and used; and if that cannot be had, then must you take the common wormwood that groweth in the fields, and

not that which groweth in gardens; for the garden Wormwood is not so strong, neither can it perform that which the wilde Wormwood doth that groweth on dry grounds. Wormwood is hot in the first, and dry in the third degree.

Yarrow, Nosebleed, Millfoyle, in Greek *Stratiotes*, *Chiliophyllos*, *Supercilium Veneris*, *Herba militaris*, and *Millefolium*. It is a common herb, it is drying and astringent.

Yewe, *Taxus*, *Smilax*, *Milos*.

The end of the second Table.

Kkk 2

This

This third and Latine Index, containeth all the Latine, Greek, and other strange names of old Simples, and especially of those things which are mentioned in this Book, as Roots, Herbs, Flowers, Fruits, Plants, Juices, Gums, Woods, Stones, Barks, Metals, Minerals, Earths, Deer; and whatsoever else is used in Physick: Also all mixed and compounded Medicines, as Electuaries, Confectures, Syrups, Juleps, Conserves, Cakes, Pils, Salves, Oyls, Potions, and distilled waters, with their names, not only as they are called by the ancient Greek and Latine Physicians, but also as they are now named amongst the common Physicians and Apothecaries: In like sort also all inward and outward parts and members of the body, with all the diseases that every one of them is subject unto.

A

A Balzener Arabum, *Sena, Sene.*
 Abies, *a Fir tree.*
 Abies candida, *a white Fir tree.*
 Abies nigra *a black Fir tree.*
 Abiga, Chamæpitys, *small Cipres, or wilde Cipres.*
 Abioten, Abiotos, *Hemlock.*
 Abortus, *an untimely birth.*
 Abrotonum, *Southernwood.*
 Abrotonum fœmina, *Southernwood female.*
 Abscessus, *an impostume, or botch.*
 Absinthium, *Wormwood.*
 Absinthium bathypicron, *common Wormwood.*
 Absinthium Italicum, *Italian wormwood.*
 Absinthium ponticum, *Wormwood gentle, or Wormwood pontick.*
 Absinthium montanum, *Wormwood of the hill.*
 Absinthium Romanum, *Wormwood Roman.*
 Absinthium rusticum, *common, or rurall Wormwood.*
 Absinthium thalassium, *Sea wormwood.*
 Absinthites, *Wormwood Vine.*
 Abvolum Plinii, Pulegium, *Penniroyal.*
 Acacia, *the juyc of a thorns in Egypt, instead whereof we use the juycs of Sloes.*
 Acalephe, urtica, *Nettles.*
 Acalypha, *a nettle.*
 Acanthus, or Acantha, *Branke ursine, or Bearbreech.*

Acanthus sylvestris, *Wilde branke or ursine.*
 Acantha Germanica, *branke ursine.*
 Acatalis, Juniperus minor, *a little Juniper.*
 Acatera, Juniperus major, *a great Juniper.*
 Acetosa, *Sorrel.*
 Acetosa sativa, *Garden Sorrel.*
 Acetosa rotunda, *round Sorrel.*
 Acetosa Gallica, *French Sorrel.*
 Acetosa minor, *the lesser Sorrel.*
 Acetosa ovina, *sheeps Sorrel.*
 Acetum *Vingar.*
 Acetum scillinum, or Scilliticum, *Vinegar of Sea Onions.*
 Acetum rosaceum, *Rose Vinegar.*
 Acetum rutaceum, *Vinegar of Rue.*
 Acinus, *Wilde or small Basil.*
 Achras, Pyrafter, *a Wilde Pear tree.*
 Aconitum, *Wolfsbane.*
 Aconitum cynoctonum, or Aconitum cynoctonum luteum, *yellow Wolfebane.*
 Aconitum lycoctonum, or Aconitum lycoctonum caruleum, *blew wolfsbane.*
 Aconitum lycoctonum magnum caruleum, *blew wolfsbane the great.*
 Aconitum lycoctonum luteum minus the lesser yellow wolfsbane.
 Aconicum Myoctonum, *a certain kind of Wolfsbane.*
 Aconitum Pardalianches, *Lybards bane.*
 Aconitum salutiferum Herbariorum, *one berry.*
 Aconitum Thelyphonom, *a kind of wolfsbane.*
 Aconitum Theriophonum, *another kind of Wolfsbane.*

Acorum

The third Index.

- Acorum or Acorus, Calamus, the great Ga-
langal.
 Aëte, Sambucus, Elder.
 Acylos Aristotelis, Glans quercina, an A-
corn.
 Adamas, a Diamond.
 Adiantum, Venus hair, or Well Fern.
 Adiantum album, the white Venus hair.
 Adiantum Apuleii, Trichomanes Dioscori-
dis.
 Adiantum Aureum Herbariorum.
 Adiantum Gallicum, French Venus hair.
 Adiantum nigrum, black Venus hair.
 Adiposus, Glycyrrhiza, Licorice.
 Aëzusa a Jasper like the air.
 Aëris flos, Viride æris, Verdegreece.
 Agoceros, Fœnum græcum Fenegreek.
 Agayne, Caprifolium.
 Agynos, Cicuta, Hemlock.
 Aromeli, Manna, a manner of dew congea-
led on trees and plants.
 Erugo, viride æris, Verdegreece.
 As usium, burnt Copper.
 Affectus animi, affections, motions, or passions of
the mind.
 Affodillus officinarum, Daffodil.
 Agallochum, Lignum Aloes, a sweet wood so
named.
 Agaricum, or agaricus, a Musbrum growing
on trees.
 Agasilis, scutex qui Hammoniacum, Thymi-
ama gignit, the herb whereof Hammonia-
cum is made.
 Ageomoron, Cicuta, Hemlock.
 Aglaophoris, Apuleii, Pæonia is named of
 Alianus Aglaophoris terrestris, Piony.
 Agnus vitæ, Agnus castus, Chast tree.
 Agnus castus officinarum, the same.
 Agonus vitæ, Agnus castus the same.
 Agresta officinarum, Verjuice.
 Agrickæ, Olea sylvestris, wilde Olive tree.
 Agrimonia officinarum, Eupatorium Græ-
 coni, Egrimony, or Agrimony.
 Agrimonia sylvestris Herbariorum, Roten-
 tilla, wilde Agrimony.
 Agriocinara, Cipara sylvestris, wilde Harti-
 chuck.
 Agriococcymela, Prunus sylvestria, Sloes.
 Agriococymelea, prunus sylvestris, Slo tree, or
sloe bush.
 Agrioriganos, Origanum sylvestre, wilde
 Organe.
 Agrostis, gramen, Grasse.
 Aigleucis, Sempervivum, Wine, always
musty.
 Aithales, Sengreen, or Honsleek.
 Aizoon agrion, Sedum sylvestre, wilde Sen-
 green.
 Aizoon Sempervivum, Sengreen, or Hons-
 leek.
 Aizoon minus, Sempervivum minus, the les-
 ser Sengreen, or Prickmadame.
 Alabandicus lapis, a red stone mixt with
blew.
 Ala, Axilla, the arm pit.
 Alarmel Arabum, wilde Rue.
 Alarum fœtor, Tragonia, sinking of the
arm-pits.
 Alabastrum Plinii, a Marble stone.
 Albucum, asphodelus, Daffodil.
 Album coctum officinarum & Chirurgorum,
a plaister of Ceruse, or white Lead.
 Album græcum officinarum, Stereus canin-
 um album, a white dogs turd.
 Alcanna Arabum, Ligustrum, Privet, or Prim-
 print.
 Alkakengi Arabum, Alkakengi, or Winter
 Cherrie.
 Alchenna Arabum, Cipres Privet.
 Alcibiadium, wilde Langde beese, or Ox tongue,
 or wilde Buglosse.
 Alcibiadium Aeginetæ, Echium, wilde Bu-
 glosse the lesser.
 Alchimilla, Ladies mantle.
 Alcibiades, Stœchas, French Lavender.
 Alcopalus, Scolymus, a Hartichok.
 Alcyonium primum Dioscoridis, Balla ma-
 rina officinarum, the some of the Sea indurate,
 or a Sea ball.
 Alcyonium quintum Dioscor. Spuma marina
 officinarum, the some of the sea.
 Alexander, or Alexandrum officinarum, Par-
 sly, or Alexandria.
 Alexipharmacum unguentum, a medicine
 against poyson.
 Alfescera Arabum, Vitis alba, wilde Brie-
 ny.
 Alfesiresin, vitis nigra, black Briony.
 Algatio, Zibetum, Sivet.
 Alga palustris, Reites, or a Sea Weed so na-
 med.
 Alharmel, wilde Rue.
 Alibium, Aster Atticus, an herb so called,
 Codwort.
 Alica, or Halica, a meat made of wheate.
 Alipta muscata.
 Alhandal Arabum, Colocynthis, Colo-
 quin.
 Alkanna Arabum, Ligustrum, Privet.
 Alkekengi, winter Cherries.
 Allium, Garlick.
 Allium Alpinum, Victorialis.
 Allium caninum, Dogs garlick.
 Allium reticulatum, Allium Alpinum.
 Allium sylvestre, wilde garlick.
 K k k 3 Alcluya

The third Index.

Alleluya officinarum, wood Sorrel.
 Alluf Arabum, Dracontium, Dragonwort, or Dragons.
 Aloe, sempervivum marinum, a very bitter herb.
 Aloe caballina, the greater kind of Aloes.
 Aloepatica, and Aloepaticum officinarum, the same.
 Aloe Gallica, Gentian.
 Aloe lignum, Lignum Aloes, a sweet and precious Wood.
 Alonia, Absinthium, Wormwood.
 Alopecia, Capillorum defluvium, a disease causing the hair of the head or beard to fall off by the roots.
 Alfesera Mauritanorum, Vitis alba, white Briony.
 Alsebram, or Alsebram majus Arabum, Pityusa, Esula, Spurge.
 Alsebram minus Arabum, Esula minor officinarum.
 Alsiue, paverina, Chickweed.
 Altaraxacon officinarum, Aphaca Theophrasti, of some a kind of Tar, of others a kind of Cicory.
 Althæa, Malvaviscus, Hollihock.
 Altercum, Henbane.
 Alumen, Allom.
 Alumen fecis, dregs of wine, or wine lees.
 Alumen jamenum officinarum, Alumen capillare,
 Alumen capillare, the same.
 Alumen liquidum.
 Alumen liparium.
 Alumen plumosum officinarum, Alumen tupeum.
 Alus Gallicus Scribonii, Symphytum.
 Alypias Actuarii, Turpetum album.
 Alypus Apuleii, Tithymalus Dioscor. Esula.
 Alypum, Turpetum album Actuarii.
 Amara Dulcis.
 Amaranthus aureus, gold flower.
 Amaranthus Galeni, Mandlen wort, or Balfasar.
 Amaranthus Luteus, the same.
 Amaranthus Veneris, flower gentle of some Ragwort.
 Amaracus Dioscoridis, Marjoram.
 Amaracus Galeni, Feverfew.
 Amarena Cerasa, black Cherries.
 Amarena passa, dried Cherries.
 Amarella, Parthenium adulterinum, Feverfew.
 Amourosis, Cicuta, Hemlock.
 Amber, five Ambarum, Amber.
 Ambarum, Amber.
 Amber, the same.
 Ambragrisea officinarum, Ambergreese.

Ameos officinarum, Ammi, Amy.
 Amethystus, a gem, or precious stone, called an Amethyst.
 Amianton Apuleii, Trichomanes, Maiden-hair.
 Amiantus, Linum saxatile, Plume Allom.
 Amictomianum, vitex, Agnus castus, chaste tree.
 Ammi, five Ammum, Amy, the herb and seed.
 Ammoniacum, or Hammoniacum, is called of the Apothecaries Armoniacum. It is the juyce or gum of a tree growing in Africa, called Agassilis. Of this gum there are two kinds, the one fair and clean, very like Frankincense; this sort of the ancient Physitians hath been used for a sweet savour or smell, it is named of *Ætius*, of *Paulus Aegineta*, and the other Greek writers, *Ammoniacum Thymiana*, or *Hammoniacum Thymiana*, and this is the best for Physick, *Plinius* calleth it Thrauston, and Thrausma. The other kind is foul and unclean, such is very common in the Apothecaries shops, and is called of *Plinius*, Apyrama.
 Amnion, Bryon, Mosse.
 Amnion *Plinii*, Cinnabaris fossilis, a soft red stone in mynes called Cinoper.
 Amomum, a strange shrub as yet unknown, although the unskilful Physitians use it not, for they instead of this have in their common shops a dead and wilde Parsly seed (when indeed the right *Amomum* hath alwayes been a pleasant and sweet smelling shrub accounted of the ancient Physitians) which is as like the right *Amomum* as an apple is like an Oyster. Let every one therefore take heed of this *Amomum*, also of all such medicines which are mixed with it. Some take the Rose of Jerico for the right *Amomum*, which the Herbarists call *Rosa Hierichuntæ* and *Rosa Diva Maria*, but they are deceived. *Galen* saith, that *Amomum* and *Calamus* in vertue are very like, and therefore seeing that we have not the right *Amomum*, we may use *Calamus* very well in his place.
 Amorgine, Perdicium, Pellitory of the wall.
 Ampar, Ambarum, Amber.
 Ampelos, vitis, the Vine.
 Ampelos agria, vitis sylvestris, a wilde Vine.
 Ampelos leuce, vitis alba, white Briony.
 Ampelos melana, vitis nigra, black Briony.
 Ampelo-

The third Index.

Ampeloprasum, Porrom vineale wilde
Leek.

Amydum officinarum, Sea ch.

Amygdalum an Almon.

Amygdalus, the Almon tree.

Amygdala amara, better Almons.

Amygdalogala, Amygdalinum lac Almon-
milk.

Amygdaloides, Spurge.

Amylum, Starch.

Anacardium, sive Anacardus, a tree (grow-
ing in India, and on the fire mountaines
of Sicily) so named.

Anabasis, Horse tail.

Anagallis, Chorchorus Theophrasti Sapania,
Macia, Niſteritis, Zelianrus, Chick-
weed.

There are three sundry kinds of Chick-
weed, whose leaves are all alike, but dif-
fer in flower: the one hath pretty little
purple flowers: and is called in Greek
Anagallis phæneca, *Anagallis punicea*, *Ana-
gallis rubea*, *Anagallis purpurea*: *Paulus
Agineta*, calleth it *Corallium*, or *Coral-
lia*, this is Chickweed with the red flower.
The other is called *Anagallis carulea*, *Ana-
gallis foemina*, that is, Chickweed with the
blew flower. The third hath yellow flow-
ers: this groweth not about us except it
be set or sown. It is found in the upper
Burdandy, in a field between *Dolen* and
Befanson. This is called *Anagallis lutea*,
Chickweed with the yellow flower.
They are all hot and dry, and may be used
in wounds and fractures.

Anagallis mas, Chickweed with the red flow-
er or Chickweed male.

Anagallis foemina, Chickweed with the blew
flower or Chickweed female.

Anagallis phænicea, Chickweed with red
flower.

Anagallis punicea, *Purpurea*, the same.

Anagallis lutea, yellow Chickweed.

Anactorium Theophrasti, wide flags.

Anangelos, *Ruscus*, *Kneehul kneehulme*, pe-
tigre.

Anastrophe, *Inversio ventriculi*, an inversion
of the stomach.

Anasarca, *Hyposarca*, the dropse.

Anatetamenon, *Pelitory of the wall*.

Anaxyris, *Oxalis*, *Sorrel*.

Anasetesis, *Comfry*.

Anchmanes Apuleii, *Dracontium*, *Dragon-
wort*, or *Dragons*.

Androgynos Apuleii, *Nymphæa*, a water
Lilly, or a water Rose.

Andrachne Portulaca, *Purslain*.

Anesum, *Anisum*, *Annis*.

Anetum *Dill*.

Anetum caninum *Cotula foetida*, an herb like
Camomil.

Anetum sylvestre, wilde *Dill*.

Anetum tortuosum, the same.

Anetum urfinum, the same.

Angelica, *Angelica*, or *Imperial*.

Angina, *Inflammatio faucium*, a swelling in
the throat. The *Angine*.

Achusa, wilde *Buglosse*, or *Orchaner*.

Animi accidentia, troubles of the mind.

Anisum, *Anise*.

Anonium, a dead nettle.

Anonium album, the white dead nettle, or
Archangel.

Anorexia, a disease of the stomach.

Arnium, *Plantain*.

Arnoglossa, *Arnoglossus*, a kind of *Plan-
tain*.

Arnachylis, *Plantain*.

Anthemis, *Chamamelum*, *Camomil*.

Anthericos, the flowers and stalks of *Mar-
tagon*.

Anthera, the yellow seed that is within the
Roses.

Anthraxes, a gem, or precious stone.

Anthrax, *Carbunculus*, a Cole.

Anthrax, *Amethystion*, *Carbunculus lapis*,
a precious stone, a *Carbuncle*.

Anthora, is taken of some for the right *Ze-
dair* root, but it is not so.

Antullia, hath no English name, it is called
in Greek *Anarbo*, in high Dutch *Zu-
wan*.

Antidotus, or *Antidotum*, is *Alexipharmacum*.
a medicine against poyson: but there are
other medicines so likewise named.

Antidotus Miridatica, *Mithridate*, a medicine
like Treacle against poyson.

Antimelon, *Mandragora*, *Mandrage*.

Antimonium officinarum, a kind of *Mini-
ral*.

Antiphthora, or *Antitora*, *Napellus salutife-
rus*, *Monks hood*.

Anthophyllus officinarum, refuse of *Claves*.

Antora, *Monks hood*.

Anthropomorphos, *Mandrage*.

Anzarot, sive *Auzerut Arabum*, *Sarcocolla*,
a gum of a tree in *Persia* like the powder
of *Incense*.

Apepsia, bad digestion of the stomach.

Aprine, *Aspergula*, *Clivers*, or *Goose-
grasse*.

Aphaca Theophrasti, a kind of *Cichory*.

Aphaca Dioscoridis, *vicia sylvestris*, wilde
taves.

Aphrosicuta, *Hemlock*.

Aphyllantes, *Tussilago*, *Fole foot*, *Colts foot*
or *Horse hoof*.

The third Index.

- Apiastrum, Melissophyllon, *Balm.*
 Apiastellum Apuleii, Bryonia, Bryony, or the wilde Vine.
 Apium, *Smallage.*
 Apium Alexandrinum, *stone Parsly.*
 Apium Equium, *Lovage.*
 Apium grande, called also Smyrnium.
 Apium palustre, Paludapium, *Smallage.*
 Apium risus, *water Crowfoot.*
 Apium saxatile, the greater Pimpernel.
 Apiophyllon, Pyrola, *wilde Beets.*
 Apoleium, Pulegium, *Penniroyal.*
 Apolegusa, Cicuta, *Hemlock.*
 Apolaris Henbane.
 Apoplecticus, one that hath the *Palsey.*
 Apopleumenum, *Scammony.*
 Apoplexia, the *Palsey.*
 Apostema, Abscessus, an impostume or *Boyl.*
 Appetitus syncopalis, appetite with a swoning.
 Appetitus Caninus, an immoderate hunger, or dogs hunger.
 Apronia Plinii, Vitis nigra, *black Briony.*
 Apsudes, Cicuta, *Hemlock.*
 Apyreni, *Corrans.*
 Apyrotus, Carbunculus, a *Carbuncle.*
 Aqua ærofa, or Aqua ærea, water of Copper, or that hath the vertues of Copper.
 Aqua extinctionis Argenti, water in which silver hath been quenched.
 Aqua extinctionis Auri candentis, water in the which gold hath been quenched.
 Aqua casei, *Cheese-whay.*
 Aqua extinctionis Chalybis, water in which steel hath been quenched.
 Aqua Chalybata, *steeld Water.*
 Aqua decoctionis Cinamomi, *sodden Cinamom water.*
 Aqua florum omnium officinarum, Aqua stillatitia stercoris vaccini, the *Water of Cowdung.*
 Aqua decoctionis Glycyrrhizæ, the decoction of *Licorice.*
 Aqua lactis, *Milk-whay.*
 Aqua marina, *Seawater.*
 Aqua mulsa, *Mead, or Hony Water.*
 Aqua pluvia, or aqua pluvialis, *Rain water.*
 Aqua fortis, *Goldsmiths Water.*
 Aqua salsa, *Salt water.*
 Aqua saccharata, aqua decoctionis sacchari, Sugared water, or the decoction of *Sugar.*
 Aqua extinctionis filicum candentium, water in the which hot Flint stones have been quenched.
 Aqua sulphurea, *Brimstone water, or that hath the vertues of Brimstone in it.*
 Aqua vitæ, in this Book by Aqua vitæ, are meant the compounded waters, or *Aqua vitæ composita.*
 Aqua vitis, Lachryma vitis, the water that droppeth out of *Vines being cut.*
 Aquilegia, a *Columbine.*
 Aquilina, the same.
 Arantium, an *Orange.*
 Arbor casta, Agnus castus, *Chast tree.*
 Arbor Jovis, Quercus, *Oake.*
 Arbor sapiens, Morus, the *Mulberry tree.*
 Arceuthos, Juniperus, *Juniper.*
 Arceuthis.
 Arceuthides, Baccæ Juniperi, *Juniper berries.*
 Arceuthites, Juniperinum vinum, *Juniper wine.*
 Archangelica, or Archangelica lutea, *Archangel with the yellow flower.*
 Archangelica alba, Lamium album, *white Archangel.*
 Archezostis, vitis alba, *Briony.*
 Arction, or actium, the great *Burr.*
 Arctotium, seu Auricula urssi Herbariorum, *Sanicle the great.*
 Area, Alopecia, the fallings off of the hair by the roots.
 Argentina Herbariorum, *wilde Tansie.*
 Argentum aqueum, *Quick silver.*
 Argentum vivum, *Quick silver.*
 Argilla, *Clay.*
 Argyritis, Lythargyrum, *Lytharge.*
 Aristaltea, Bismalua.
 Aristolochia longa, long *Hartwort, or Birtwort.*
 Aristolochia rotunda, round *Hartwort.*
 Aristolochia officinarum, *Hartwort.*
 Armoniacum officinarum, *Armoniack.*
 Armala Geleni, Ruta sylvestris, *wilde Rue.*
 Armorcia, Raphanus sylvestris wilde or horse *Radish.*
 Arnel Avicennæ, Ruta sylvestris, *wilde Rue.*
 Arnabo Pauli Æginetæ, Zurumbetum, *Seduar.*
 Aromaticum gariophyllatum, a confection of *Cloves so termed.*
 Aromaticum Rosatum, a confection of *Roses.*
 Aromatites, an aromatical or *spiced wine.*
 Aron, Cuccopit, *Priests pintle, or wake Robin.*
 Aronia Athenzi, *Dragons.*
 Arquatus morbus, the yellow *Jaundise.*
 Arsenicum,

The third Index.

Arsenicum, *Arsenick, or Ratsbane.*
 Aretorium.
 Arthenicum, *Ratsbane.*
 Artechocha, *Artichoke.*
 Artemisia, *Mugwort.*
 Arteria, *artery, or vein.*
 Arteria aspera, *the winde pipe.*
 Arthanita, Cyclaminus, Panis porcinus,
sowes bread, or Swines bread.
 Arthetica officinarum, Arthritica, *Cow-*
slips.
 Arthrica alpina Herbariorum, *Sanicle the*
great.
 Arthritis, Morbus articularis, *the gout.*
 Articoca, Artichock.
 Articocalus, *the same.*
 Arum, *Cucopis.*
 Arum palustre, *the same.*
 Arundo sagittaria, *a great Reed to make*
darts.
 Asa dulcis, *Benjoin.*
 Asa foetida, *a stinking gum,*
 Asara baccara, Officinarum, Asarum, Asara-
 bacca.
 Asbestos, *look Conia.*
 Ascalis, *Palmes, the branch of a vine.*
 Asclepias, Vincetoxicum, *Swallowes*
wort.
 Ascites Barbarorum, Ascites, *that kinde of*
Dropsie that maketh the legs and belly swell
onely.
 Asparagus, Sparage.
 Asparagus altilis, *common Sperage.*
 Asparagus Horelaceus, Asparagus alti-
 lis.
 Asparagus regius, *common Sparage.*
 Asparagus petreus, *wilde Sperage.*
 Asparagus myacanthinus, *wilde Sparage.*
 Asparagus palustris Galeni, *wilde Spar-*
age.
 Asparagus sylvestris, *the same.*
 Asparagia, Corrudago, *wilde Sperage.*
 Aspera arteria, Canna pulmonis, *the Winde-*
pipe.
 Aspergula, Aparine, *Clivers or Goose-*
grasse.
 Aspergula, Asperula, *the same,*
 Aspaltum.
 Aspaltus, *five Aspaltum.*
 Asphodelus, *Daffodil.*
 Aspis, *a little serpent.*
 Asplenos, Asplenium, or Asplenum, *Scale-*
fern, or Fingerfern.
 Asplenium sylvestre Herbariorum, *the*
same.
 Aspella, Hippuris, *Horsetail.*
 Asa dulcis officinarum, *Bensoine.*
 Asa foetida officinarum.
 Astaphydes, *Raisins,*

Astaphisagria, *an herb called Staphis*
Agria.
 Aster atticus, *an herb also called Inguinalis,*
or Codwort.
 Aster Augustini, *a Ruby.*
 Asterion, Cannabis, *Hemp.*
 Asterios, Ballasius, *a Ruby.*
 Asterium Bubonium, *Share, Starre, or Cod-*
wort.
 Astericus, Inguinalis, *the same.*
 Asthma, *a stopping of the breath with whea-*
sing.
 Astilis, viscum, *Birdlime.*
 Astrantia officinarum, Imperatoria, *Ange-*
lica.
 Astrantia nigra, *Sanicle.*
 Astrios, Ballasius, *a Ruby.*
 Astrutium officinarum, *Angelica.*
 Astylis, *headed Lettice.*
 Aza dulcis, *Benzoin.*
 Aza foetida officinarum, *a stinking gum.*
 Azara baccara officinarum, *Asarabacke.*
 Athanasia, Tanacetum, *Tansie.*
 Atosium, Lychnis sylvestris, *wild Saf-*
fron.
 Attractylis hirsuta, Carduus benedi-
 ctus.
 Atramentum Coriariorum, *Copperas.*
 Atramentum Librarum, *Ink.*
 Atraphaxis, Atriplex, *Orage, or Orache.*
 Atriplex sylvestris, *the wilde Orage.*
 Atriplex, *five Atriplexum, Orage.*
 Atrophia, Nutrimenti cessatio, *a Consump-*
tion.
 Attonitus, *astonished.*
 Avandia Herbariorum, *Herb Avance, or herb*
Blessed.
 Aubium, Chelidonium majus, *Celandine the*
greater, or swallowes herb.
 Avena, *Oats.*
 Avellana, *basel Nut.*
 Aurantium, *an Orange.*
 Aurea Alexandrina, *a confection so cal-*
led.
 Aureola Herbariorum, *Amaranthus luteus,*
Maudlenwort, or Baltasar.
 Aureum malum, *an Orange.*
 Auricula muris, *the herb Monse ear.*
 Auricula muris major, *Monsear the*
great.
 Auricula muris minor, *Flos angelicus the*
lesser Monsear.
 Auricula muris cerulea, *blew Monsear.*
 Auricula muris, Dioscoridis Myosotis,
Monsear.
 Auricula urfi, *Sanicle the great.*
 Aurigo, *the yellow Jaundise.*
 Auripigmentum, Arsenicum luteum, *Orpi-*
ment.

Axilla

The third Index.

Axilla, Ala, the armpit.

B

B Aaras Iosephi Historici, Pæonia, Py-
ony.
Bacca, and Baccha conchea Virgilii, la
Pearls.
Bacca Lauri, a Bay Berry.
Balanus, Glans quercina, an Acorn.
Balanus, Suppositorium officinarum, a
Suppository.
Balanus, Egyptia, Miobalanus, it is the
fruit of a tree, and is called Ben.
Balanus myrepica, Glans unguentaria, the
of a tree much like Myrice.
Balauftium, the flower of a Pomgranate.
Ballagius, or Balafius, a Ruby.
Balla marina, Alcyonii primum genus a sea
ball.
Ballanæa gemma, Curbunculus candidus, a
Ruby.
Ballis, Bellis Daises.
Balneum Sulphureum, a bath that hath the
vertues of Brimstone.
Balsamica, Felina Herbariorum, Mountain
Mints.
Balsamum Judaicum, Opobalsamum, Balm
natural.
Barba Herculis Apuleii, Trichomanes, Mai-
den hair.
Barba Jovis, sempervivum, Sengreen.
Bardana, the great Bur.
Baratrum, Sabina, Savine.
Batypicron, Bathypicron, common Worm-
wood.
Baryton, Sabina, Savine.
Basilica dextra, the Liver vein.
Basilica sinistra, the vein of the Milt, or
Spleen.
Basilica herba, Basilicum, Basil.
Basilicum minus, the lesser Basil.
Basilicum crispum, a kinde of Basil.
Basilicum aquaticum, water Basil.
Bathypicron, Absinthium rusticum, Worm-
wood.
Batitura æris, refuse of Brasse.
Batanuta, Vitis nigra, black Briony.
Batrachis, Ranunculus, Crowfoot.
Batrachium, Crowfoot.
Batus, Rubus, Bramble, Blackberry, or Bryer-
bush.
Batus Idæus, Rubus Idæus Framboise, Raspis,
or Hindbury.
Baucia, Pastinaca sylvestris, wilde Pars-
nep.
Bechicæ officinarum, a medicine for the
cough.
Bechion, Bechium, Folefoot, or Horsehoofe.

Bedegar, or Bedeguar, the white bryer.

Beletzici, Bellirici, one kinde of Mioba-
lans.

Bellerici, Miobalani bellerici, the
same.

Bellis, Ballis, a Daise.

Bellismajor, the great Daise.

Bellium, a Daise.

Bellios flos, the same.

Bellirici, one kinde of Miobalans.

Benedicta Laxativa, a purging Elec-
tary.

Benioninum, Bensoin.

Benzoinum, or Benzuinum, the same.

Berberis, or Berberus, Berberry tree.

Berberus, the same.

Bericocia, Mala præcocia, Abrecock
tree.

Beryllus, a precious stone called Beryl.

Besafa, Ruta montana.

Beta, Beets.

Beta sicula, white Beets.

Beta fatua, Blitum, wilde fine Orage, or
Blite.

Beta insipida, Blitum, Blites.

Beta nigra, Black Beets.

Beta rubra, red Beets.

Beta maluacea, Spinacea, Spinage.

Betifalca, Brionia nigra, black Briony.

Betonica, Betony.

Betonica alba officinarum, Cowslips.

Betonica, alba vera, white Betony.

Betonica altalis, Betony.

Betonica Pauli, Veronica, Pauls Betony.

Betula, Birchtree.

Betularia, Tormentilla, Tormentil.

Bdella, Hirudo, a Horseleech.

Bdellion, or Bdellium, the name of a
gum.

Biarum, Drocontium, Dragons.

Bibinella, Pimpinella, Pimpernel. Theodorus
Gaza taketh Bibinella for a kinde of wool-
blade, which is called Thryallis of Diosco-
rides and Theophrast.

Bicion, Vicia, Veiches.

Billis, Gall.

Bilingua, Uvularia, Horse tongue.

Bismalua, Althæa, marsh Mallow.

Bistorta.

Bitumen, a kinde of naturall Lime or
clay.

Bitumen Judaicum, Jews Lime.

Bitumen liquidum, Naphta, a kinde of
clay.

Blacca byzantia, or Blacta byzantia, or Blat-
ta byzantia officinarum, in Greek Onix:
it is called of Actuarius, and Nicolaus
Mirepsus, and the other new Grecians Blat-
tion, Conchyla Indica, Unguila odo-
rata

The third Index.

- rata, Unguis Aromaticus, Ostrutium Indicum, and Conchylia Indici operculum, a Musse shell of India. This is brought hither out of India, as they are taken up out of the pooles, in the which the sweet smelling leaves Malabathra grow. Of these there be two sorts, the best are white and fat, these are found in the red sea. The other are black, and are brought from Babylon. They are both well smelling, and while they be burning, they scent as strong as the Bevercod.
- Blechon, Pulegium, Pennyroyal.
 Blechion, Filix, Fern.
 Bletus Nicandri, Felix, Fern.
 Bletum, Blitum, Blites.
 Blitum album, white Blites.
 Blitum Indicum, Blites of India.
 Blitum rubrum, red Blites.
 Blitum sylvestre, wilde Blites.
 Blitum Ungaricum, Blites of Hungary.
 Boletus, or Boletus cervi, a Musstrum that may be eaten.
 Boletus cervi, the same.
 Bolus Armenus, Bole Armenack.
 Bombasum, five Bombax officinarum, Cotton.
 Bombax, Bombasum, the same.
 Bonifacia Herbariorum, Uvularia, Horse-tongue.
 Borrage, Borrage.
 Borax officinarum, Borradel.
 Brax officinarum, Chrysocolla factitia, the same.
 Boscifalvia, Salvia sylvestris, wilde Sage.
 Botor Maris Arabum, Cyclaminus, Sowbread.
 Brabela, Pruna Damascena, Damask Prunes, Dammosens.
 Brabyla Theocriti, the same.
 Bracha cuculi Herbariorum, arthitica, Cowslips.
 Bradypepsia, a long digestive.
 Brancha ursina officinarum, Branch urfine.
 Branca ursina Italica, Italian Branch urfine.
 Brassica, Cabbage or Colewort.
 Brassica alba, white Cabbage.
 Bassica apiana, a wrinkled Cabbage.
 Brassica crispa major, the great wrinkled Cabbage.
 Brassica cumana, the broad red Cabbage.
 Brassica cypria, flowered Coleworts.
 Brassica pratensis, Acanthus sylvestris, wilde Bearbeech, or Branch urfine.
 Brassica marina, Sea cole.
 Brassica rubra, a red Cabbage.
 Brassica Sabaudica, Savoy Coleworts.
 Brassica fabellica, crisped Coleworts.
 Brassica tritina, headed Coleworts.
 Brathy, or Brathys, Savine.
 Britannica, Scruvygrasse.
 Brisa Galeni, Secale, Rye.
 Bromus, Avena, Oates.
 Brucus, Eruca, Rocket.
 Brusca officinarum, Ruscus Kneeholm.
 Bruscandula Herbariorum, Lupulus, Hop.
 Bryaria, Tamarix, the Tamarisk tree.
 Bryon, Lupulus, Hop.
 Bryon, Muscus, Mosse.
 Bryonia, Bryony.
 Bryonia alba, white Bryony.
 Bryonia melana, black Bryony.
 Bryonia leuce, Vitis alba, white Bryony.
 Bubonium, After atticus, Codwort.
 Bubonium caeruleum, blew Codwort.
 Bubonium luteum, yellow Codwort.
 Bubonium Massilioticum, Codwort of Massilia.
 Buceras, Fœnum græcum, Fenegreek.
 Bucheiden Arabum, Palma Christi.
 Buchormarien Arabum, Cyclaminus, Panis porcinus, Sow bread.
 Bufonaria, Parthenium, Maiden weed.
 Buglossa, Buglossum, Buglosse.
 Buglossa domestica, Mesues, Burrage.
 Buglossa Major, the lesser Buglosse.
 Buglossa major officinarum, the great Buglosse.
 Buglossa officinarum, Buglosse.
 Buglossa sylvestris, wilde Buglosse.
 Buglossa sylvatica Herbariorum, the same.
 Buglossum, buglossa, Buglosse.
 Buglossum Dioscoridis, Buglosse.
 Buglossum Gallicum, French Buglosse.
 Buglossum Hispanicum, Spanish Buglosse.
 Buglossum Italicum, Italian or great Buglosse.
 Buglossa sempervivens, same Buglosse.
 Buglossum sylvestre spinosum, Herbariorum Echium, wilde Buglosse.
 Buglossum viperinum, Herbariorum Echium, wilde Buglosse.
 Buglossum rubrum, Herbariorum, Anthusa, red Buglosse.
 Buglossices, Vinum buglossatum, Wine made of Buglosse.
 Bulbus agrestis, our Ladies Cowslip.
 Bulimus, Bulismos, Cowhunger, or an unnatural appetite of meat.
 Bulimia, bulimus, an unnatural hunger.
 Bunias, Napus, Rape, or Navet.
 Bulapathum, Lapathum palustre, Dock.
 Buris, a kinde of sore proceeding from Melancholy.

The third Index.

Bursa pastoris, *Shepherds purse.*
 Butermariem or Buthomariem Arabum, Cy-
 claminus, *Sow bread.*
 Butyrum, *Butter.*
 Buxus, *Box.*
 Buzeicon Arabum, Palma Christi.
 Byne, Maltum, *Mault.*

C.

Cacoehymia, *a corruption of all the hu-
 mors in the body.*
 Cacoete, ulcus malignum, *an ulceration hard
 to be cured, a roding ulcer.*
 Cactus, cinara, *Hartichock.*
 Cadmia, *Tutty.*
 Cadmia, Botrytis, *Tutty.*
 Cadmia fossilis, Lapis calaminaris.
 Cadmia nativa, *a kind of Mineral.*
 Cadmia officinarum, Cadmia ocina, *Tutty.*
 Caducus morbus, *the falling sicknesse.*
 Calamandrina, *Germander.*
 Calamentum, *Mint.*
 Calamintha agrestis, *wilde Mint.*
 Calamintha arvensis, *the same.*
 Calamintha felina, *Cattaria, Cats Mint.*
 Calamintha montana, *wilde Mountain
 Mints.*
 Calamites, Rana viridis, *a green Frog.*
 Calamus aromaticus, Calamus, *a sweet
 smelling Reed, which is brought out of India:
 We use the common Calamus root in stead of
 it.*
 Calamus odortus, or Calamus unguentarius,
the same.
 Calcaria, Consolida regalis, *Larks spur.*
 Calcatrepola, *Star thistle the lesser.*
 Calcedonius, *a precious stone.*
 Calcifraga, Saxifraga, *Saxifrage.*
 Calcifraga Scribonii Largi, Asplenium,
Fearne.
 Calendula, Caltha, *Marigold.*
 Calendula arvensis, *wilde Marigold.*
 Calendula multiplex, *double Marigold.*
 Calendula sylvestris, *wilde Marigold.*
 Carenum, *seek carenum.*
 Calliphillum Hippocratis, Trichomanes,
Maidenhair.
 Callitrichum, Adiantum, *the same.*
 Caltha of Virgil, Columel, and Pliny, Calen-
 dula, *Marigold.*
 Caltha poetica, Calendula, *Marigold.*
 Caltha Dioscoridis, Chrysanthemum, *Golden
 knap.*
 Caltha Plinii, See Caltha Virgilii.
 Calycanthemum, Caprifolium, *Woodbinde.*
 Calyx Plinii, Cochlear domus, *a Snails shell.*
 Calycopia, *Lime.*
 Calx viva, *Quick lime.*

Calomelopodium, Prassium, *Horehound.*
 Camomilla officinarum, *Cammomil.*
 Campe, Eruca, *Rocket.*
 Campanella, Volubilis, Campanula, *the
 flower called Canterbury Bels.*
 Campanula marina, Soldanella, *sea sole-
 foot.*
 Cammarus, Gammarus, *a Crab.*
 Camphora, Camphura, *Camphire.*
 Cannabis, *Hemp.*
 Cancer, *a Crab.*
 Cancer carcionma, *the canker.*
 Cancer marinus, *a sea crab.*
 Candela regis, Verbascum, *Woolblade, or
 Torch herb, or Longwort.*
 Candelaria, *the same.*
 Canella, cinamomum, *Cinamom.*
 Canineca, colchicum, *Hermodactyles.*
 Canina fames Cynorexia, *unnatural hun-
 ger.*
 Canirubus Dioscoridis, Cynosbatus, *Egla-
 tine, or sweet bryer.*
 Canirsbus Theodori Gaza, Cynosbatus
 Theophrasti, *the Hawthorn tree.*
 Cania Plinii, Urtica minor, *the little net-
 tle.*
 Canna, Calamus, Arundo, *a reed.*
 Canophicon, *Turbit.*
 Canthabrica Plinii, Caryophyllus hortula-
 nus, *a Gilloflower, a Gelsuer.*
 Canthabrum, Furfur, *Bran.*
 Cantharides, *Cantharides, or Spanish flies.*
 Cantharus, or Catherius, *a black Bee-
 tle.*
 Caphura, Camphora, *Camphire.*
 Capillaris, Capillus Veneris, *Venus
 hair.*
 Capillus Terræ, Adiantum, *Maiden
 hair.*
 Capillus Veneris Apuleii, *our Lady
 hair.*
 Capillaris aurea Herbariorum, *yellow Mai-
 den hair.*
 Capnos, Capnus, Fumaria, *Fumitory.*
 Capnos chelidonia, Pseudaristolochia ro-
 tunda officinarum, *Hartwort, or Aristo-
 logy.*
 Capnos phragmites, *the same.*
 Caprago Apuleii, Esula, *Spurge.*
 Capparis, *Capers.*
 Caprifolium, *Woodbinde.*
 Caprifolium Italicum, Caprifolium perfo-
 ratum, *Woodbinde of Italy.*
 Caput monachi, Hedypnois, *yellow Ci-
 cory.*
 Caput papaveris, Codia, *Pappy seed.*
 Caputium barbarorum, *headed Coleworts,
 Cabbage.*
 Carabe, Succinum, *yellow or white Amber.*
 Carbo,

The third Index.

- Carbo, Carbunculus; a Plague sore, or botch.
- Carbunculus, Anthracites, a Carbuncle stone.
- Carbunculus amethystizon, Anthrax, a Ruby.
- Carbunculus candidus, Spinalus, Spinal.
- Carbunculus Alabandicus, Lapis Alabandicus, a kinde of Ruby.
- Carbunculus gilvus, or Carbunculus pallidus, a yellow Carbuncle.
- Carbunculus carchedonicus, or Carbunculus Garamanticus, Granatus, a Granate.
- Carchedonius, Gemma, the same.
- Carchophilus, Carduus altilis, Artichock.
- Carcinethron, Polygonum, Knotgrasse.
- Carcinoma, Cancer, the Canker.
- Cardamine, Nasturtium, aquaticum, Water cresse.
- Cardamomum, a spice comming out of India. There be two sorts of this Cardamomum, the greater, and the small or lesser. The greater we call grains, Nicolaus Myrepsus calleth it Menigeta: Serapio tearmeth it Sacola, and in Apothecaries shops it is Granum Paradisi: the Arabians name the common Cardamomum, Cacola, Heilbague, and is the lesser Cardamomum of the Arabians. The lesser sort is that which we commonly call Cardamom, it is called both in Greek and in Latine Cardamomum, of the simplists Cardamomum Indicum, of the Apothecaries Cardamomum minus, of the Arabians Cardumenum, or Cordumenum. If any one will use Cardamomum, let him alwaies take the lesser.
- Cardamomum majus officinarum, Granum Paradisi, Greins.
- Cardamomum minus, Cardamome.
- Cardamomum Indicum, the same.
- Cardanum, Nasturtium, Cresse.
- Cardiaca, Mediana, the Median, or Liver vein.
- Cardiaca, Motherwort.
- Cardialgia, grief or pain at the heart.
- Cardianthemum Herbariorum, Ocimastrum, Behen.
- Cardopatium officinarum, Chameleon niger, Milk Thistle.
- Cardumenum, See Cardamomum:
- Carduus Altilis, Cinara, Hartichock.
- Carduus amoris, Atractylis, an herb called Cnecus sylvestris, bastard Saffron, or wilde Saffron.
- Carduus benedictus, blessed thistle.
- Carduus Fullonius, Dipsacus, Fullers Thistle, or Teasel.
- Carduus hepaticus, Lactuca sylvestris, Lettice.
- Carduus marianus, our Lady thistle.
- Carduus niger, Milk thistle.
- Carduus prætensis, Cinara sylvestris, wilde Artichock.
- Carduus sanctus, blessed thistle.
- Carduus strobilus, Cinara sativa, Artichocke.
- Carduus sativus, Chameleon niger, milk thistle.
- Carduus varius, the lesser milk thistle.
- Carduus Veneris, Dipsacus, Teasel.
- Carenum, or as Brassavolus saith, Calenum mustum ad tertias coctum, Must or new Wine that hath been sod till the third part remain.
- Cariosemen, Semen Carvi, Caraway seed.
- Caricæ, Ficus passæ, dried Figs.
- Carium, Carum, Caraway.
- Carnabadum, Carnabum, Carum, Caraway.
- Carnabum, the same.
- Carniglutinium, flesh lime.
- Carolina, Gentian.
- Carota, Carotis, Parsnep.
- Carotis lutea, a yellow Carrot.
- Carotis rubra, a red Carrot.
- Carotis sylvestris, Pastinaca vera, a wilde Carrot.
- Carpathon, Caprifolium, Woodbinde.
- Carpobalsamum, Fructus Balsami, the fruit of Balsamum. But that which is now commonly used in the Apothecaries shops, is not the fruit of the true Balsamum, but it is the seed of Hypericon petraeum, which also in the time of Dioscorides was used for true seed of Balsamum: and the unskilful Physitians as yet use it for the same in their compositions: but indeed with them all is one, for so it beare the name onely, it is good enough.
- Carphos, Fenegreek.
- Cartamus, Cnicus, wilde Saffron.
- Cartamus domesticus, Saffron.
- Cartamus sylvestris, wilde Saffron.
- Cartilago, Chondrus, a Cartilage or gristle.
- Carvi officinarum, Carawaies.
- Carya, Nux avellana, a Hasel nut tree.
- Caryon, Juglans, a Walnut tree.
- Caryon basilicon, Nux regia, the same.
- Caryon Indicum, Nux Indica, An Indian nut.
- Caryon Persicum, Nux Persica, A Nut tree.
- Caryon Theophr. Tithymalus myrtaceos, Spurge.
- Carytes Apulei, Spurge.
- Caryophyllum, Cloves.
- Cariophyllata, Avence.

The third Index.

- Caryophyllus flos, Carnations, and double
Gilloflowers.
 Caryophyllus Arvensis, Carnations.
 Caryophyllus domesticus, Carnations.
 Caryophyllus hortulanus, the same.
 Cassamum officinarum, Cyclaminus, Sows
 bread.
 Cassia, Cassie.
 Cassia Alexandrina, Cassia fistularis,
 Cassie.
 Cassia flos, or Cassia medulla, or Cassia cri-
 brata, prepared Cassie.
 Cassia lignea, Xylocassia, a sweet smelling
 rind like Cinamom.
 Cassia herba, Lavendula, Lavender.
 Cassuta, or cassica, Bindweed, or wind.
 Cassia coronata, Lavender.
 Castanea, a Chestnut.
 Castanea aquatica, Tribulus aquaticus, wa-
 ter Nuts.
 Castoreum, the Bevercod.
 Castrangula, Pilewort the great.
 Catagma, Ossium fractura, a fracture of the
 bone.
 Catapotium, Pillula, a Pill, or a little
 ball.
 Catangelus, Ruscus, Kneeholm.
 Catarrhus, a Rheume.
 Catharticum imperiale, is a purging medi-
 cine so called.
 Cataputia major, Ricinus, a tree called Palma
 Christi.
 Cataputia minor, Lathyrus, Spug.
 Cataputia sylvestris, wilde Spurge.
 Cathæron, Iris, Flowerdeluce.
 Cataploris, Cicuta, Hemlock.
 Catechomenium, the same.
 Cathimia officinarum, Cadmia, Tutty.
 Caucasus, bastard Parsly.
 Cauda muris, Crassula minor, Blood
 strange.
 Caulis, a Colewort.
 Caulis Jovis, Housleek, or Senegreen.
 Causon, or Causus, a hot burning Fever.
 Ceanothus Theophrasti, Gooseberry.
 Ceanothus asper, the same.
 Ceanothus levis, Rasps.
 Cedria Theophr. the great Juniper tree.
 Cedromelum, malum Citreum, A Ci-
 tron.
 Cedronella, Citraria, Baum.
 Cedrostis, vitis alba, Bryony.
 Celidonia officinarum, Celandine the greater,
 or Swallow.
 Celidonia minor, Chelidonium minus, Pile-
 wort, or Figwort.
 Celyphos, Cochlex domus, a Snails
 shell.
 Cenchros or Cenchris Milium, Mild or Mil-
 let.
 Centaurium magnum, the greater Centory.
 Centaurium minus, the little Centory.
 Centimorbia, Centimorbium, Herb two-
 pence.
 Centinodia, Polygonum, Knotgrasse.
 Centinodia minor, Ruella, Knotgrasse the
 lesser.
 Centumcapita, Eryngium, Sealolm, or Sea
 holly.
 Centonica, Wormseed.
 Centumnodia, Polygonum, Knotgrasse.
 Cepa, Crommium, an Onion.
 Cepe, the same.
 Cepa Pallacana Plinii, Leeks.
 Cepæ Africanæ, Onions of Africa.
 Cepæ Hispanicæ, Spanish Onions.
 Cephalæa, capitis dolor, diurnus, a continu-
 al headach.
 Cephalalgia, capitis dolor, headach.
 Cepa maris, Sea onion.
 Cephalica, the head vein.
 Cepuli, Chebuli, a kinde of Mirobalans.
 Cera, Wax.
 Cera montana, Pisasphaltum, a kinde of Lime
 or Clay like Pitch.
 Cera terrestris, Picibitumen, the same.
 Ceraitis, Fœnum græcum, Fenegreek.
 Cerasa, or cerasia, Cherries.
 Cersia amarella, or Laurea, bitter Cherries.
 Cera Theophrasti, or Ceria, A certain drink.
 Cerasites, vinum ex cerasis confectum, Wine
 made of Cherries.
 Cerasum, a Cherry.
 Cerasum Judæorum, or Cerasum terræ, A
 winter Cherry.
 Cerasus, a Cherry tree.
 Ceratia, and Ceratonia, the fruit of the tree
 Siliqua.
 Ceratum, or Cerotum, it is called of Galen
 Cerotum, or Cerote: This is a plaister
 made of oyl and wax, and is prepared di-
 versly.
 Ceratum album Galeni, a cold or cooling plai-
 ster of Galen.
 Ceratum Sandalinum, a salve made of Sann-
 ders.
 Cerebrum, the brain.
 Cerefolium officinarum, Chervil.
 Cerefolium columbinum, Herbariorum fu-
 maria, Fumitory.
 Cerefolium Felinum, Herbariorum capros,
 Fumitory.
 Cerefolium Hispanicum, Charephyllon,
 Spanish Chervil.
 Cerefolium sylvestre, Pseudomirrhiss, wilde
 Chervil.
 Cervi cellus, Ophiostomum, a kinde of
 Parsenep.
 Cervicornula tenella, Harts Horn.
 Cervina

The third Index.

- Cervina radix, *Silvermountain*.
 Cervirubus, Rubus Idæus, *Raspis or Frambois*.
 Cervus volans, *Escarbot*.
 Cerusa or Cerussa, Psymmithium, *Ceruse or white Lead*.
 Cestrum, Betonica, *Betony*.
 Ceterach, or Ceterachum Arabum, Scolopendrium, *Harts tongue*.
 Chærephyllon, or Cherefolium, *Chervil*.
 Chaechite Serapionis, *sea Folefoot*.
 Chalcantum, Vitriolum, *Coperas or Vitriol*.
 Chalix, Silex, *a Flint*.
 Chalybs, or Chalyps, *Steel*.
 Chalyps, *the same*.
 Chameacte, Ebulus, *Danewort, Bloodwort, or Wallwort*.
 Chamæcissus, Hædera terrestris, *Alchoofe, or Harchoof*.
 Chamæcyparissus, *Heath Cypers, or dwarf Cypers*.
 Chamædaphne Plinii, Pervinca, *Perwinkle*.
 Chamedaphne Dioscoridis, Laureola, *Laurel, Lowry, or Lorel*.
 Chamædrys aquatica, Scordium, *water Germander*.
 Chamædrys, Triflago, *Germander*.
 Chameleuce, Populago alba, *Colts hoof*.
 Chamæmelum Cammomil.
 Chamæmelum foetidum Herbariorum, Parthenium, *Feverfew, Maidenweed, or Motherwort*.
 Chamæmyrtus, Ruscus, *A prickled shrub, of some Butchers Broom; of others Kneeholm*.
 Chamærhodon, *a certain wilde Rose*.
 Chamæpitys, *field Cypers*.
 Chamærops, Chamædrys, *Germander*.
 Chamæplatanus, Spondylium, *Bearfoot*.
 Chamæleon niger, *the black thistle*.
 Chamæleon albus, earlina, *the white or milk Thistle*.
 Carabe, Succinum, *Amber*.
 Characias Dioscoridis, *wilde Spurge*.
 Chartamus, or Cartamus, *bastard Saffron*.
 Chebuli, *a kinde of Mirobalaus*.
 Cheiri vel Cheyri, Leucoium, *a Wallflower*.
 Chelidon, Hirundo, *a Swallow*.
 Chelidonium minus, *Pilewort, or Figwort*.
 Chelidonium majus, *Celandine*.
 Chelone, Testudo, *a Tortoise*.
 Chelonium herba, Cyclaminus, *Sowes bread*.
 Chenanthenum Herbariorum, Bellium majus, *the greater Daisie*.
 Chenoglossum Lactuca sylvestris, *wild Lettice*.
 Chenomalacha, Malua anserina, *Goose mallows*.
 Chermes, Granum tinctorum, *Couchenil*.
 Chermesinum, *Crimson*.
 Cherva Arabum, Ricinus, *Palma Christi*.
 Cheyri, *Seek Cheiri*.
 Chiliophyllus, Supercilium Veneris, *Tarrow*.
 Chiragra, *the Gent in the fingers*.
 Chironia, Centaurium magnum, *great Centory*.
 Chironios, Ampelos, vitis chironia, *Bryony*.
 Cholera, Cholericæ passio, *is called of Aurelian Felliſua passio, that is, a great pain in the belly with pricking and shooting, and avoiding of Choler both by vomit and stool. The unskilful Physicians and others take Cholera for Bilis: and over all this book Bilis is taken for Cholera*.
 Chondrus, Cartilago, *a gristle*.
 Chrysanthemum, *Goldknap*.
 Chryseletrum, Electrum aureum, *yellow Amber*.
 Chryſitis Plinii, Chryſocome, *Goldknaps*.
 Chryſitis, Lithargyrium auri, *Litharge or burnt Lead*.
 Chryſitis gemma, Saphyrus aureus, *a yellow Sapphire*.
 Chryſocolla, *Boras*.
 Chryſocolla aurifabrorum factitia, *Boras*.
 Chryſocome, Amaranthus Galeni, *Goldknap*.
 Chryſolachanum, *Orange*.
 Chryſomela, or Chryſonulla, *yellow Quince*.
 Chryſolithus, *a kinde of Jasper*.
 Chryſogonum Tormentilla, *Tormentil*.
 Chryſophorum Dioscoridis, Electrum aureum, *yellow Amber*.
 Chyline, Cyclaminus, *Sowes bread*.
 Chylus, *a certain white juice that cometh of meat and drink digested in the stomach*.
 Cicada, *Grashoppers*.
 Cicer, *Cich or Cich pease*.
 Cicer columbinum Apuleii, Tithymalus foliſequus, *Spurge*.
 Cicer columbinum Dioscoridis, *the white Ciche*.
 Cicer caudidum, or album *the same*.
 Cicerbita, Souchus aspera, *Sow thistle*.
 Cicercula Plinii, Lathyrus, *Cicheling, Ceeres; Peason cerres, pety Ciche*.
 Cichla, Turdus, *a Blackbird, or Onſel*.
 Cici, Ricinus, *Palma Christi*.
 Cicla officinarum, Beta, *Beets*.
 Cichorea officinarum, Chichorium, *Cicory*.
 Cichorium, *the same*.

The third Index.

- Ciconia*, a Stork.
Cicuta, Hemlock.
Cicutaria, Myrrhis, wilde Cheveril, Car,
Kex, *Asepa-sey*, or mock Cheveril.
Cidonium, a Quince.
Cilia, the eyelids.
Cinex, a stinking worm breeding in wood.
Cinara or *Cynara*.
Cinarus or *Cynaëus*, an Artichoke.
Cinamomum, Cinamon.
Cine, *Ruscus*, the box tree.
Cinis, Ashes.
Cinnabaris Indica, Sanguis Draconis, A
liquor gum brought out of Africa.
Cinnabaris metallica, Cinoper.
Cinnabaris metallica nativa, a certain red
mine or Cinoper.
Cinnabaris metallica factitia, common or
counterfeited Cinoper.
Cinnabaris fossilis, Cinoper of the mine.
Cinnabaris artificialis, counterfeited Cino-
per.
Cinnabrium, *Cinnabaris*, *Cinoper*.
Cinnabrium nativum sive fossile, Cinoper of
the mine.
Cinnamomum sive.
Cinnamum, Cinamon.
Circinalis, Maiden hair.
Cission, *Aclepias*, Swallow-wort.
Cissus, *Hedera*, Ivy.
Citrea, sive *Citrus*, a Citron or Orange.
Citreum malum, the same.
Citrage, *Citraria*, *Citronella*, Balm.
Citrullus, a Citrul.
Citrus, *Citrea*, a Citron or Orange tree.
Citta, *Pica malacia*, the affection of a longing
in women with child.
Clareta or *Claretum*, Claret or spice wine.
Clava Herculis Nymphæa, water Lilly, or wa-
ter Rose, or *Nenuphar*.
Clavus Veneris Apuleii, *Nymphæa*, the
same.
Clema, Palmes, the branch of a Vine.
Clema, *Pityusa*, Spurge.
Clematis herba, and
Clematis Daphnoides, Perwinkle.
Clibodium, *Parietaria*, *Pellitory* of the
wall.
Climia officinarum, *Cadmia*, Tutty.
Clinophodiontes Apuleii, *Polygonum*, Knot-
grasse.
Clibodium, *Helxine*, *Pellitory* of the wall.
Clibatis Nicandri, or
Clibetis Nicandri, the same.
Cnicus Cartamus, wilde Saffron.
Cnecus, *Cartamus*, wilde Saffron.
Cnicus sylvestris, and
Cnecus campestris, a wilde Saffron.
Cneoron, Seek Cassia coronaria.
Cnopodium, *Polygonum*, Knotgrasse.
Coagulum, the rennet of a beast, that turneth
milk.
Coagulum capreola, A Kids maw.
Coagulum Leporis, A Hares maw.
Cobaltum metallicorum, *Cadmia*, Tutty.
Cobius, Spurge.
Coccali Hippocratis, *Nuces Pinæ*, Pin-
gles.
Cocognidium, *Grandum Thymeleæ*. In
this book you must not take it for Mezereon,
that is Lorel, but for Lathyrus, which is
Spurge.
Cocum infectorum, Grain wherewith cloth is
grained.
Coccus Theophrasti, *Paralius*, sea Spurge.
Coccus Baphica, *Grandum tinctorum*. Grain
wherewith cloth is grained.
Coccimela, A Plumtree.
Coccimelea agria, Sloes.
Cocimelon, *Prunum*, a Plum. *Diphilo* taketh
Cocimelon for a Citron.
Cochlearia, *Brassica marina*, sea Fole-
foot.
Cochlearia palustris, *Plantago aquatica*, wa-
ter Plantain.
Codia, *Papaveris caput*, Poppy husks.
Coelidonium chymistarum, *Chelidonium*.
Celandine.
Coete, *Cicuta*, Hemlock.
Colatypus avis, a Stare.
Colchicum, Dogsbane, Dogs stones, or meadow
Saffron.
Colica the Colick.
Colla, Gluten, Glue.
Collum draconis, Dragons.
Colon, or *Colum*, or *intestinum colon*, a great
gut so called.
Colocynthis, a kinde of wilde Gourd purging
phlegme.
Colophonia radix, Scammony.
Colophonium Scammonium, the same.
Colostia or *Colostrum*, Beestings.
Columbaris, *Vervena*, Vervein.
Colubrina officinarum, *Britanica* Harts
tongue.
Colubrina vera, Dragons.
Colubrina magna, great Dragons.
Colubrina minor, the lesser Dragons.
Colubrina palustris, water Cuckoe pit.
Columbrina, *Verbena*, Vervein.
Columbrina, *Dracuntium*, Dragons.
Coluthea Theophrasti, Sene.
Colus rustica, *Attractylis*, wilde Saffron.
Colycea Theophrasti, a kinde of nuts called
Pistacium.
Columbas, *Oliva conditanea*, preserved
Olives.
Coma aurea, *Chrysocome*, Gold knaps.
Comites,

The Third Index.

- Cometes, Cataputia sylvestris, *wilde spurge.*
 Comitialis morbus, Epilepsia, *the falling sicknesse.*
 Concha marina, *sea Mussels.*
 Conchillii Indici operculum or Tegumentum, *Mussel shells of India. Seek Blacca Byzantia.*
 Condiloma, *A swelling of the fundament.*
 Conion, Cicuta, *Hemlock.*
 Confectio latificans Almanforis, *A certain Confection so called.*
 Confectio latificans Galeni, *such another confection as that before.*
 Confectio Anacardina, *A confection so termed.*
 Confectio Aromatica rosata, *called also Aromaticum rosatum.*
 Confectio de gemmis, *the Confection of gems or precious stones.*
 Confectio Hamech, *A certain purge so called.*
 Confectio Justina, *A Confection so named.*
 Confectio de Xyloaloe, *A confection made of Lignum Aloes.*
 Conserva major, Symphytum alterum, *Comfrey.*
 Confirma major, *Comfrey.*
 Congelatio, Stupor, *benumbing, unsensibleness.*
 Conila Apuleii, Origanum, *Marjoram.*
 Conigiulum Catonis, *Bindweed.*
 Conserva Buglossæ, *the Conserve of Buglosse.*
 Conserva Hyssopi, *Conserve of Hyssope.*
 Conserva Melissæ, *Conserve of Baulm.*
 Conserva Nenupharis, *Conserve of water Lillies.*
 Conserva florum paralytis, *Conserve of Cowslips.*
 Conserva Pæoniæ, *Conserve of Pyony slips.*
 Conserva Rosarum, *conserve of Roses.*
 Conserva, Anthos, *Conserve of Rosemary.*
 Conserva primulae veris, *conserve of Primroses.*
 Conserva Salviae, *Conserve of Sage.*
 Conserva Spicanardi, *Conserve of Spikenard.*
 Conserva Trifolii acetosi, *conserve of wood Sorrel.*
 Conserva Violarum, *conserve of Violets.*
 Consiligo Plinii, *Longwort.*
 Consolida, Symphytum, *Comfrey.*
 Consolida lactaria, *Mousser.*
 Consolida media Herbariorum, *Seiwall or Bugle.*
 Consolida media vulneratorum, *the same.*
 Consolida minor, Bellis minor, *Daisies.*
 Consolida media, *Bugle or Seiwall.*
 Consolida petraea, *Comfrey.*
 Consolida pyrifolia, *wilde Beets.*
 Consolida regalis, *Larks spur.*
 Consolida Saracenica.
 Convolvulus, Cissampelos, *Bindweed.*
 Convolvulus marinus, *sea Windweed.*
 Convulsio, Spasmus, *A Convulsion or crampe.*
 Conysa, *wilde Mints.*
 Corrago, *Burage or Buglosse.*
 Corallia, and Corallium, Anagallis mas, *he Pimpernel.*
 Corallium, *Coral.*
 Corchorus Theophrasti, Anagallis mas, *red or he Pimpernel.*
 Cordis palpitatio, Cordis saltus, *panting or beating of the heart.*
 Corda Barbarorum, Nervus, *A Sinew.*
 Cordumenum Arabum, Cardamomum Græcorum, *Cardamom.*
 Coriandrum, *the herb Coriander.*
 Corianon, or
 Corion, *the same.*
 Corona regia, Melilotus, *Melilot.*
 Corona terræ, *Alehoof or high.*
 Corona virginica, Clematis daphnoides, *Perwinkle.*
 Cornu cervi, *Harts horn.*
 Cornus, *Dog tree, or Gad rise.*
 Corna, *the fruit of the same.*
 Cornu Monocerotis, *the horn of a Unicorn.*
 Corsalvium Apuleii, Salvia, *Sage.*
 Corrigiola, *Knotgrasse.*
 Corrigiola minor, *Knotgrasse the lesser.*
 Corruda, Asparagus sylvestris, *wilde Sperage.*
 Corruda, Gazæ, Asparagus Regius, *Sperage.*
 Corrudago Gazæ, Asparagus sylvestris, *wilde Sperage.*
 Corylus, *an Hasel or Filberd tree.*
 Cortex thuris, *the bark or rinde of Frankincense.*
 Coryza, *the pose.*
 Corymbites, *a kinde of Spurge.*
 Costa Asinina, *Plantain the lesser, Ribwort.*
 Costa equina, Plantago acuta, *the same.*
 Costum, or Costus, *commonly called herba Maria.*
 Corinus, Oleaster, *a wilde Olive tree.*
 Cotonea malus, *a Quince tree.*
 Cotoneum, *A Quince.*
 Cotoneum majus, *the greater Quince.*

The Third Index

- Cotula foetida*, *Wilde Cammomils*.
Cotum officinarum, *Cotton*.
Crambe, *Brassica*, *Cole*, or *Coleworts*.
Crambe cephalote, *Brassica capitata*, or the
headed Coleworts or *Cabbage*.
Crambion, *Pityusa*, *Spurge*.
Cranium, the *scull* or *brain pan*.
Crassamen, or *Crassamentum vini*, *wine*
Lees.
Crassula minor, *Prickmadam*.
Crassula major, *Houfleeke*.
Crataea, *Chelidonium majus*, *Celandine* the
greater, or *Swallowes herb*.
Cridion, *Cicuta*, *Hemlock*.
Cremor lactis, *Cream of milk*.
Crespinus, a *Barberry tree* or *bush*.
Cressio Barbarorum, *Cresses*.
Creta, *Chalk*.
Crinanthemum, *Lillium*, a *Lilly*.
Crinis vitis, *hairs of the Vine*.
Crinon, *Lillium*, a *Lilly*.
Crite, *Hordeum*, *Barley*.
Crocum, or
Crocus, *Saffron*.
Crocus fatuus, *Cartamus*, *Wilde Saffron*.
Crocus hortulanus, *tame* or *garden Saffron*.
Crocus Saracenicus, *Cartamus*, *wilde Saffron*.
Crocus sylvestris, *Wilde* or *field Saffron*.
Crommium, *Cepa*, an *Onion*.
Crosmis, *Salvia*, *Sage*.
Croton, *Ricinus*, *Palma Christi*.
Cruciata, *Gentian*.
Crux Christi herba, *Aconitum salutiferum*,
Wolfsbane.
Cuculus herba, *Nightshade*.
Cucumer, or
Cucumis, a *Cucumber*.
Cucumer Anguinus, or
Cucumer Asininus, the *Wilde Cucumber*.
Cucumer erraticus, or
Cucumer sylvestris, the *same*.
Cucurbita, or
Cucurbita esculenta, a *Gourd*.
Cucurbita sylvatica, *Colocinthis*, *Colo-*
quintida, or the *Wilde Gourd*.
Cuminum, or *Cuminum*, *Cumin*.
Cuminum Alexandrinum, *Ammy*.
Cumicum cornutum, *Larks spur*.
Cuminum regium Hippocratis, *Ammy*.
Cuminaum sylvestre alterum Dioscoridis,
Lark spur, or *Wilde Cumin*.
Cuminum Sativum Hortulanum Romanum,
tame or *garden Cumin*.
Cunila Satureia, *Savory*.
Cunila rustica, *wilde Savory*.
Cunila bubula, *Marjorane*.
Cunula Gallica Apuleii, the *same*.
Cunilago, *Serpillum*, *wilde* or *running*
Thyme.
Cupressus, a *Cypres tree*.
Cupressus hortulana, *Abrotanum fecmina*,
Southernwood.
Cupressus sylvestris, a *Juniper tree*.
Cupula glandis cittarus, *Acorn cups*.
Curcuma, *Cyperus Indicus*.
Curallium, *Coralium*, *Coral*.
Cuscuta officinarum, *Cassita*, *Windeweed*.
Cyanos, *lapis Cyaneus*, a *Turquoise*.
Cybelon, *Viola martia*, a *Violet*.
Cybeles, *Pomum Martialis*, *Conus*, a *Pine*
apple.
Cyclamen, *orbicularis*, *Sowes bread*, or *rape*
Violes.
Cyclaminus, *Cyclamen*, the *same*.
Cyclaminus minor, *Rape Violet the lesser*.
Cydonia malus, a *Quince tree*.
Cydonia majus, the *greater Quince*.
Cydonium nothum, a *bastard Quince*.
Cyminites, *vinum ex Cymino confectum*,
Wine made of Cumin.
Cyminum, *Cuminum*, *Cumin*.
Cyminum dulce, *Anisum*, *Annise*.
Cyminum siliquosum, a *kinde of Cu-*
min.
Cynanthemis, *Parthenium*, *Motherwort*.
Cynanche, *Angina*, the *Squincy*.
Cynobatus Theophrasti, or
Cynobatus Dioscoridis, the *Eglantine* or
Sweet bryer.
Cynocentrum Hefychii, a *wilde Rose*.
Cynocephalaon Hefychii, *Papaver nigrum*,
the *black Poppy*.
Cynocephalion Dioscoridis, *Pfillium*, *Flea-*
wort or *Fleabane*.
Cynogala, *Polygonum*, *Knotgrasse*.
Cynoglossa, or *Cynoglossum*; *Hounds*
tongue.
Cynoglossa minor, the *lesser Hounds*
tongue.
Cynomazum, *chameleon niger*, the *black*
Thistle, or *Camelion*.
Cynomorphus, *Crocus*, *Saffron*.
Cynomoron Galeni, *Rosa canina*, the *wilde*
Rose.
Cynopleuron, *Platago acuta*, *Rib wort*.
Cynosphodon, *Rosa canina*, a *Bryer Bush*.
Cynospaston Plinii, *Canirubus Gaza*, the
Hawthorn tree.
Cynospastos Aeliani, *Pæonia*, a *Pjony*.
Cynorexia, *Appetitus caninus*, a *greedinesse*
and an *unnatural appetite of meat*.
Cynozolum, *Chameleon niger*, a *stinking*
Thistle.
Cynoxylon, *Cardopaticum*, *Wolfsbane*.
Cypa-

The Third Index

Cyparissus, Cypressus, *A Cypress tree.*
 Cyparissus hortulana, *Southernwood.*
 Cyparissia, Tithymalus, Cyparissimus,
Spurge.
 Cyperus, *A kinde of Galangal.*
 Cyperus rotundus, *the round Galangal.*
 Cyperus longus, *or*
 Cyperus Romanus, *the long Galangal.*
 Cyperis Galangal.
 Cyprus, Ligustrum, *Privet.*
 Cytinus, flos mali puniceæ fativæ, *the bud or*
flower of a Pomgranate.

D

Dactyli, Palmulæ, *Dates.*
 Dactylion, Scammonium, *Scammony.*
 Dactylitis, Aristolochia magna, *Aristo-*
logy.
 Dactylus Idæus, Herba Peonia, *Py-*
ony.
 Diacrydion, Lachrymula, *is the juice of the*
herb Scammony.
 Dagridion officinarum, Dacrydion, *Scam-*
mony.
 Daphne, Laurus, *A Bay tree.*
 Daphnelæon, oleum Laurinum, *oyle of*
Bayes.
 Daphnides, Baccæ lauri, *Bay Berries.*
 Dardanis, Cicuta, *Hemlock.*
 Daphnoidium, Viola martia, *a Violet.*
 Daucus, *or Carrot.*
 Daucus, *A Carrot.*
 Decoctio officinarum, *A decoction of boyling*
of the Apothecaries.
 Decoctio aperitiva, *A decoction that openeth*
obstructions.
 Decoctio communis, *A common decoction,*
which is made of two sundry Wayes at the
Apothecaries, with the which we mix Electu-
aries or Syrupes to prepare and purge the hu-
mours.
 Decoctio fructuum, *A decoction of Fruits,*
which is commonly made of the Apotheca-
ries.
 Decoctio pectoralis, *A decoction for the*
breast.
 Decoctio Senæ, *A decoction of Sene leaves.*
 Defrutum, Mustum ad Tertias decoctum,
new Wine sod till one third part remain.
 Delirium, *doting, or raving.*
 Dementia, *Madnesse.*
 Dentrites, Corallium, *Coral.*
 Dentritis Apuleii, Tithymalus solissequus,
Spurge.
 Dendrodes, and Dendroides Dioscoridis,
 Tithymalus arborescens, *A kinde of*
Spurge.
 Dendrolibanum, *Rosemary.*

Dendromalache, Althea, *The Marsh Mal-*
low.
 Dens Elephantis, *an Elephants tooth.*
 Dens Leonis herba, Hedypnois, Dande-
 lion, *Priests crown, wilde or yellow Ci-*
cory.
 Desipientia, *foolishnesse.*
 Decuos, Mustum, *Must, or new wine.*
 Diacalamentum, *or*
 Diacalamenta, *A certain confection made of*
Mints.
 Diacaryon, *or*
 Diacarydion, Rob nucum officinarum, *A*
Conserve of Walnuts.
 Diacapparis, *or*
 Diacapparum, *A Conserve made of the roots*
of Capers.
 Diacatholicon, *a purging Confection so ter-*
med.
 Diacinnamomum, *A Confection of Cina-*
mom.
 Diacinnamomum cum Rhabbarbaro, *An*
Electuary of Cinamom and Rubarb.
 Diachylon, Emplastrum Diachylon, *a plai-*
ster or salve so termed.
 Diacitonidon officinarium, *or Diacitoniton*
simplex, Diacidonium, and Diacidoni-
tes, a conserve made of Quinces.
 Diacitoniton compositum, *or cum specie-*
bus officinarum, a compounded conserve of
Quinces.
 Diacitoniton laxativum, *or Solutinum offi-*
cinarum, a purging conserve of Quin-
ces.
 Diacodion, *a confection made of Quinces.*
 Diacostum, *a conserve so called.*
 Diacrocoma, Diacurcuma officinarum, *a*
certain confection also called Diacro-
cum.
 Diacrocum, *the same.*
 Diacurcuma, *the same.*
 Diacydonites, *seek Diacitoniton.*
 Diacydonium, *seek Diacitoniton.*
 Diacydonium Catharticum, Diacidonium
 solutivum, *seek Diacidonium laxati-*
vum.
 Diacyminum, *or Diacuminum, a confection of*
Romish Cumin.
 Diaireos or Diairis Solomonis, *a confection*
made of Ireas or the root of Flower-deluce.
It is thought that Solomon was the first au-
thor of it.
 Diaireos or Diairis simplex, *another confection*
of the root Ireas, and is also called Diaireos,
or Diairis Nicolai.
 Diairis simplex, *the same.*
 Diairis Solomonis, *seek Diaireos.*
 Dialacca, *a confection so called.*

The Third Index.

- Dianthon, or Dianthos, *A confection made of Rosemary flowers.*
 Dianthus, *the same.*
 Diabetes, Diamnes, or Diampus, *an unnatural and extreme making of urine.*
 Diagalanga, *A Confection made of Galangal.*
 Diamanna, Electuarium ex Manna, *An Electuary of Manna.*
 Diamargariton Calidum, or Diamargaritum Avicennæ, *a hot Confection of Pearls.*
 Diambra, or Diambarum, or Diampe, *A Confection of Amber grease.*
 Diahyssopum, *a confection of Hyssope.*
 Dialthea, unguentum Dialtheæ, *a plaister of mallowes.*
 Diamintha, *A conserve of Mints.*
 Diamnes, or Diampnes, *an unnatural yielding of urine.*
 Diamoron, Rob mororum, *a confection of Mulberries.*
 Diamoscum, *A confection of Musk.*
 Diamoscuma amarum, *vide Diamoscum.*
 Diampnes, *vide Diamnes.*
 Diaolibanum, or Electuarium de Olibano, *an Electuary of Frankincense.*
 Diagridium officinarum, Diacrydion Scamonea præparata, *prepared Scammony.*
 Dianisum, *A confection of Annise.*
 Diapapaver, Eclegma de papavere, or Loch de papavere, *An Electuary, or lick of Poppy.*
 Diapenidion, *A Confection of Sugar Pennets.*
 Diapenidion sine specibus, *the same without spices.*
 Diapensia, Sanicula, *Sanicle.*
 Diaplis officinarum, Electuarium plerisarcoticon, or Electuarium plerisarchigon, *a confection so named.*
 Diaphœnicon officinarum, Diaphœnicon, Electuarium ex dactylis, *a purging Electuary of Dates.*
 Diaprunis Laxativa or Lenitiva officinarum
 Diaprunum solutinum, *a purging confection of Prunes.*
 Diaprunum, *vide Diaprunis.*
 Diaprunum simplex, *the same.*
 Diaphragma, septum transversum, *the Midriffe, a skin that separateth the stomach and breast from the belly.*
 Diapompholigos officinarum, Unguentum Diapompholigos, *an ointment made of Tutty.*
 Diaprassium, *a confection of Horehound.*
 Diarrhodon abbatis, *A Confection of Roses.*
 Diarrhodon sine specibus, *A simple Confection of Roses.*
 Diaria, *vide Ephemera.*
 Diarrhæa, profluvium alvi, *a lax or flux of the belly.*
 Diasatyron, *A Confection made of Ragwort.*
 Diasenna, *a confection of Senna.*
 Diaspoliticon, *a confection so called.*
 Diathamaron, *a certain confection.*
 Diatragagantum calidum, *A warming Confection.*
 Diatrionsantalum, *A confection of Saunders, called Triasandali at the Apothecaries.*
 Diatrionpipereon, *a confection made of the three kinds of Pepper.*
 Diatragagantum frigidum, *A cooling confection.*
 Diaturbith, or Diaturbethum, *a confection of Turbith.*
 Diaturbith cum rhabbarbo, *a confection of Turbith with Rubarb.*
 Diaxyloaloes, *a confection of Lignum Aloes.*
 Diachomenum Theophrasti, Peonia, *Pyony.*
 Dictamum, or Dictamus, Dictamus alba, *French Diptamer.*
 Didymi, *the stones of men or women.*
 Digitellus Plinii, *Prickmadam.*
 Digitus citrinus Avicennæ, *Priests stones, or Ragwort.*
 Digitus Veneris, Nymphaea, *the water Lilly.*
 Dismidion, Manipulus, Fasciculus, *a handful.*
 Dyosciamus, Hyoscyamus, *Henbane.*
 Diosporus, milium solis, *Mill, or Millet.*
 Dios Anthos, Viola Trinitatis, *herb Trinity, or Harts ease.*
 Diptamus, or Diptamum officinarum, Polemonium, *white Diptamer.*
 Dipsacus, *Teasel, or Fullers Thistle.*
 Dipyrites Hippocratis, Panis biscoctus, *Biscket.*
 Discus solis Chymistarum, *A kinde of Quicksilver.*
 Dithyambrium, Hyoscyamus, *Henbane.*
 Dolia, Cicuta, *Hemlock.*
 Dolzeginæ Italarum, *sweet Galangal.*
 Domine miserere, Iliaca passio, *A pain in the small guts.*
 Dorcis, Diptamus Cretica, *Diptamer of Candia.*
 Dorycnium, *a venomous herb, with the which darts were wont to be poisoned; it groweth by the sea coast, and hath been taken for Hemlock.*
 Dracontea, or Dracontia, *Dragons.*
 Draco in insulis Maderiæ & Canariæ arbor est, ex qua sanguis draconis defluit, *the tree whose juice is called sanguis draconis.*
Dracos

The third Index.

Dacos, Fasciculus manualis, Manipulus; *a handful: it is also called Dragma.*
 Dracunculus, Dracontium, Dragons.
 Dracunculus aquaticus, water Dragons.
 Dracunculus Henicophyllos, the lesser Dragons.
 Dracunculus polyphyllos, Serpentine the greater.
 Dracunculus minor, the lesser Serpentine.
 Dracunculus major, the greater Serpentine, or Dragons.
 Dragma, *a drachme*
 Dragantum officinarum, Tragacantha, vel Tragacanthum, the gum of Tragacanth.
 Dragontea, Dragontium, Dragons.
 Drangea Nicolai Mirepsi, Tragea, Tragea, *a powder used for sauce.*
 Drosera Herbariorum, and Drosium Alchimillæ, *Savile the great.*
 Drosomeli, Honeydew.
 Dryocolaps Hefychii, and of others Dryocolaptos, Picus martius, *a Star.*
 Dulcichinum, Trasum, Cyperus esculentus, *sweet Galangal.*
 Duodenum, the stomach gut.
 Duracinum, Persicum, *a Peach.*
 Dura mater Barbatorum, Pericranium, the skin that is next to the brain pan.
 Dyspnœa, Spirandi difficultas, *purse-ness.*
 Dyspnoici, they that are purse, or have a streightness of breath.
 Dyspepsia, Concoctio depravata, ill concoction.
 Dysenteria, Cruenta alvi dejectio, the bloody flux.
 Dysofmon, Scordium, water Leeks.
 Dysuria, Urinæ difficultas, *a stopping of the urine.*

E.

E Bifcus, Althæa, marsh mallows.
 Ebenotrichon, Adiantum, Venus, Mayden, or our Lady hair.
 Ebor, dens Elephantis, Elephants tooth, or Ivory.
 Ebulus. Dane or Bloodwort.
 Ebur, Ivory.
 Echetrofis Hippocratis, Vitis alba, Bryony.
 Echidna, Vipera, *a Viper.*
 Echinus, Erinaceus, *a Hedgehog or Irchin.*
 Echis, Vipera.
 Echioglossum, Ophioglossum, *Adders tongue.*
 Echium, Buglossa sylvestris, wilde Buglosse.

Eclegma, Illinctus, Ecligma, *a lick or confession, which is licked up without any chewing.*
 Ecligma de papavere, vide Diapapaver.
 Ectamum Hippocratis, Veratrum album, the white Ellebor, or Neseewort.
 Edera, Hedera, Ivy.
 Effluxio, *a flux of the seed or sperm.*
 Egleria Herbariorum, Rosa canina, *A bryer bush, or wilde Rose.*
 Egne Dioscoridis, Igne Hippocratis, Ifatis, Wood, or new Ash of Jerusalem.
 Eilbagus Arabum, Cardamomum majus officinarum. Greins.
 Elaphoboscum, Cervicocellus, *a kinde of Parsnep.*
 Elate, Abies, *a Firr tree.*
 Elaterium, the juice of wilde Cucumbers.
 Elcratis Arabum, Cartamus, wilde Saffron.
 Electarium, Electuarium, *a Confection, an Electuary, or compounded medicine.*
 Electrum, Succinum, Amber.
 Electrum aureum, Chryseletrum, yellow Amber.
 Electuarium Arantiorum, *an Electuary of Oranges.*
 Electuarium Aureum, Electuarium de ovo, *An Electuary called the golden Egg.*
 Electuarium de baccis lauri, *An Electuary of Bayberries.*
 Electuarium Bezoarticum, Electuarium veneno resistens, *an Electuary of the Bezoar stone for poyson.*
 Electuarium de Calamintha, *an Electuary of Horse Mints.*
 Electuarium de castoreo, *A confection of the Bevercod.*
 Electuarium Catholicum, vide Diacatholicon.
 Electuarium de Citro, *an Electuary of Citrons.*
 Electuarium de corticibus Arantiarum, *An Electuary of Orange peels.*
 Electuarium de Epithymo, *A confection of Dodder.*
 Electuarium lenitivum, *A lenitive Electuary.*
 Electuarium de passulis, *An Electuary of Raisins.*
 Electuarium ad melancholiam Avicennæ, *An Electuary of Avicenne against Melancholy.*
 Elect. Mirobalanorum, *a confection of Mirobalans.*
 Elect. Montagnanæ oculistæ, *an Electuary to comfort the sight.*
 Electuarium de ovo, vide Electuarium aureum.
 Electuarium Plirisarchicon, vide Diapliris.

The third Index.

- Electuarium de Psillio, *an Electuary of Flea-wort.*
 Electuar. ex Prunis, *vide* Diaprunum.
 Electuar. de scoria ferri, *A confection of Iron.*
 Electuar. Nucum, *an Electuary of Wal-nuts.*
 Electuar. vitæ Pauli Rixii.
 Elenium, *Elecampane.*
 Eleoselinum, Paludapium, *Smallage.*
 Elitis, Parietaria, *Pellitory of the wall.*
 Elephantiasis, Elephantia, *the Lepry.*
 Elleborastrum, *a kind of Neeffwort.*
 Elleborus Veratrum, *Neeffwort.*
 Elleborus albus, *the white Ellebor, or Neeff-wort.*
 Elleborus niger, *the black Ellebor.*
 Eluxatio, Exarthrema, *luxation, or putting out of joynt.*
 Elymus, Panicum, *Panick.*
 Emblici, *vide* Mirobalani Emblici.
 Emmanes, Hyoscyamtus, *Henbane.*
 Emphysodes, *vide* Febris Emphysodes.
 Empelitici, *vide* Mirobalani Emblici.
 Emplastros, Emplastrum, *a plaister or salve.*
 Emplastrum album coctum officinarum, *or Emplastrum de Cerussa, a salve or plaister made of Ceruse or white Lead.*
 Emplastrum Apostolicum officinarum, Emplastrum tripharmacum, *vulgo Apostolicum.*
 Emplastrum Diaquilon officinarum, Emplastrum diachilon, *a salve so called.*
 Emplastrum diaquilon cum gummis officinarum, *or Emplastrum diachilon magnum, the same salve with the gums.*
 Emplastrum de crusta panis, *a salve of the crust of bread.*
 Emplastrum de baccis lauri, *a salve of Bay-berries.*
 Emplastrum de Galbano, *a salve of the gum Galbannum.*
 Emplastrum griseum, *or Emplastrum de lapide Calaminari, a Salve made of Calamine stone.*
 Emplastrum de Meliloto, *a salve of Melilote.*
 Emplastrum de Muscilaginibus, Emplastrum de muccaginibus, *a salve made of Muscilagines.*
 Emplastrum de pelle Arietis, *a salve made of a Rams-skin.*
 Emplastrum Tripharmacum, *vide* Emplastrum Apostolicum.
 Emplastrum viride Chirurgorum, *a green salve of the Chirurgeons.*
 Emprostotonos, pronus raptus, *A kind of Cramps.*
 Empneumatosis, Condensatio Spiritus plurimi in ventriculo, *ventosity or windiness in the Stomach.*
 Empyema, Purulenta excreatio, *A spitting of corrupt matter out of the chest of the body.*
 Endivia, Intubus, *Endive.*
 Eglerteria, Rosa sylvestris, *Eglantine.*
 Enneaphyllon, Consiligo.
 Entonium, Helleborus albus, *Neeffwort.*
 Ephemera Febris, *a light fever that continueth but one day.*
 Ephemerum Colchicum, *or Ephemerum deleterium, Ephemerum hethale, Hermodactyls.*
 Ephialtia, *or Ephialtum Aetii, Præonia mascula, a kinde of Piony.*
 Ephialtes, *or Epialtes, Suppressio nocturna, A disease called the Mare.*
 Ephydron, Cauda equina, *Horse tayl.*
 Epialtes, *vide* Ephialtes.
 Epiglottis, Sublinguium, *the cover of the throat, the flap.*
 Epiglossum, Uvularia, *Horse-tongue.*
 Epiceras Hippocratis, Fœnum græcum, *Fenegreek.*
 Epidemia, Pestis, *the Plague, or Pestilence.*
 Epiphyllocarpon, Hippoglosson, *double tongue.*
 Epilepsia, Comitialis morbus, *the falling sickness.*
 Epilepticus, *he that hath the Falling sickness.*
 Epithymum *or* Epithymus, Dodder, *that is, Cassia thymi.*
 Equapium, *Smallage.*
 Equicauda, Hipparis, *Horsetail.*
 Equisetum, *the same.*
 Equitium, Hippuris, *Horsetail.*
 Eracantha, Carduus amoris, *Wilde Saffron.*
 Erstedanum, Theophrasti, Centimorbia, *herb two pence.*
 Ergasima, *A kinde of Mirrhe.*
 Erica, *Heath.*
 Erisitales, Cauda muris, *stone crop.*
 Eruca, Euzonium, *white Mustard seed.*
 Eruca sylvestris, *wilde Rocket.*
 Ervum, Orobus, *Tares, or bitter Vetches.*
 Eryngium, *Sea holm, or Sea holly.*
 Erygium marinum, *Sea holm.*
 Eryngium minus, Coronopus Rondoletii, Spina Stellæ, *Eryngus the lesser.*
 Erysinum Theophrasti, Camelinea Herbariorum.
 Erysipelas, *An inflammation called the Rose.*
 Erysisceptrum, Ciperus, *wilde Galangal.*
 Erytreus, Lapis Luciani, Margarita, *a pearl.*
 Erythro-

The third Index.

Erythrodanum, Rubia, *Madder.*
 Esula, Tithymalus, *Spurge.*
 Esula, Amygdalina, Cataputia sylvestris.
wilde great Spurge.
 Esula arborefcens, *great Spurge.*
 Esula camofa, *wilde Spurge.*
 Esula lactariola, *fea Spurge.*
 Esula major, Pityufa, *the great Spurge.*
 Esula dulcis, *a kinde of Spurge.*
 Esula latifolia, *broad leaved Spurge.*
 Esula marina, *fea Spurge.*
 Esula minor, *the lesser Spurge.*
 Esula papaveracea, *a kinde of Spurge.*
 Esula petraea, *stone Spurge.*
 Esula folifequa, or folfequia, *A kinde of Spurge.*
 Esula vallis, *the common Spurge.*
 Esula, Cicuta, *Hemlock.*
 Euphrasia, *Eyebright.*
 Euphrasia carulea, *Myofitis.*
 Eunuchium, *beaded Lettice.*
 Eupatorium, *Agrimony.*
 Euphorbium, *the juice or gum of an herb also called Euphorbium.*
 Euphrosynon, Buglossa, *Buglosse.*
 Euphrosine, Euphrasia, *Eyebright.*
 Eupetalon, *Lorel, or Laury.*
 Euphrosium, *Burage, or Buglosse.*
 Eupteron Apuleii, Trichomanes, *Maden hair.*
 Eureos, lapis Judaicus, *a kinde of stone.*
 Eusine, Parietaria, *Pellitory of the wall.*
 Eutaticon, Stryrion Erythronium, *a kinde of Rugwort, or Dogs stones.*
 Eutyglycea Theophrasti, *Licorice.*
 Euzomum, or Euzomus, *Rocket.*
 Exarthrema, *luxation, vide Eluxatio.*
 Exerta, Vipera, *a Viper.*
 Exuvia Vipera, *a Vipers skin.*

F

Faba, cyanyus, *a Bean.*
 Faba Jovis, Hyoscyamus, *Henbane.*
 Faba lupina, Lupinus, *Lupines.*
 Faba fuilla, Hyoscyamus, *Henbane.*
 Fabium, Chelidonium, *Celandine.*
 Fabulum, Hyoscyamus, *Henbane.*
 Fagus, *a Beech tree.*
 Falernum, Vinum Apianum, *Muscadel.*
 Far clusinum, *ruffard wheat.*
 Farfara, Bechium, *Falefaat.*
 Farfargo, Tuffilago, *the same.*
 Farfarella, *the same.*
 Farina volatilis, *mill dust.*
 Farrago, Secale, *Rye.*
 Fasciculus manualis, *a handfull.*
 Fafeolus, *French Beans.*
 Fafeanus, *a Feasant.*

Fastidium, Fastidium stomachi Ciceroni, Ci-
 borum horror, Aureliano, Fastidium in
 cibis, Plinio, Anorexia, *loking of meat.*
 Febres effrunda, or erraticæ, *a wandring Ague.*
 Febres languidæ, *a faint or lither ague.*
 Febres phrycodes, *Agues that come with heat about the shoulders.*
 Febres putridæ, *Agues which are caused of putrifaction of the blood in the veins.*
 Febris, in Greek Pyretos, *an ague.*
 Febris ardens, Causos, Causon, Causodes, *a very hot and burning ague.*
 Febris astringens, *an ague that bindeth the body.*
 Febris continua, or continuata Seneches, *A continual Ague.*
 Febris Diaria, or Febris Ephemera, or Ephe-
 meros vide Ephemera.
 Febris Emphysodes, *An Ague, which by rea- son of heat raiseth blisters in the mouth.*
 Febris Icteriades, *An ague that bringeth the yellow Jaundise.*
 Febris Hepiala, or Epiala, by Actuarius,
 Epialus, *A flegmatick ague.*
 Febris Hemitritæa, *A bastard Tertian Ague.*
 Febris Hectica, *A Consuming Ague.*
 Febris Lippyria, *An Ague with an extreme outward cold, and violent inward heat.*
 Febris marasmodes, marcor, Febris hectica
 cum marcure, *a pining Ague.*
 Febris quartana, *A Quartane or fourth dayes Ague.*
 Febris quotidiana, *A continual Ague.*
 Febris Rhoodes, *An ague with a flux.*
 Febris tertiana, *A Tertian or third daies ague.*
 Febrifuga, fel terræ, *Centory.*
 Fecula, Alumen fecis, *Calcined wine Lees.*
 Fel Draconis, Chymistarum, *A kinde of Quick silver.*
 Felicula, Polypodium, *Polypody.*
 Ferraria minor, Sanicula, *Sanicle.*
 Ferri rubigo, *the rust of Iron.*
 Ferri sex, or Ferri scoria, or Ferri stercus, *the refuse of Iron.*
 Ferrugo, *the rust of Iron.*
 Ferrumen cementorum, *white lime.*
 Ferrula sylvestris, Thapsia, *Fennel giant, or herb Sagapene.*
 Fescera Arabum, vitis alba, *White Bryony.*
 Fesirin Arabum, vitis alba, *the same.*
 Fex vini, *wine lees.*
 Fex vini usta, vide Fecula.
 Ficulna folia, *Figtree leaves.*
 Ficus, *a Figtree.*
 Ficus passæ, *dried Figs.*
 Ficus, Marisca, Sycon and Sycolis, *the pyles or hemorrhoides in the Fundament of a man.*

The Third Index.

Felicula, Polypodium, *Polypody*.
 Filicula asellorum, Onopretium, *Maiden hair*.
 Filipendula, Oenanthe, Saxifraga rubra, *Dropwort*.
 Filius ante patrem, Lyfimachia corniculata, or Siliquosa, *loose strife, or water Willows*.
 Filix, Pteris, *Fern*.
 Fisticum, a kinde of nut called also Pistacium.
 Fistula, *A continual issue*.
 Flammula officinarum, Ranunculus rotundus, vide Flammula.
 Flammula Gazæ, Herba trinitatis, *Harts ease*.
 Florecaulis flowered Cabbage.
 Flos angelicus, auricula muris mior, the lesser *Monsear*.
 Flos anserinus Bdelium majus, *Daisies*.
 Flos divi Johannis, *S. Johns wort*.
 Flos Jovis, *Harts ease*.
 Flos Garyophyllorum officinarum, *Gillifers*.
 Flos lactis, *Creame*.
 Flos divæ Magdalene, Spica romana, herb *Magdalene*.
 Flos regius, *Larks spur*.
 Flos maris, *Parmacity*.
 Flos Rosarum, Anthera, the yellow seed within the *Rose*.
 Flos tunicus, *Gillifers*.
 Foeniculum, *Fennel*.
 Foeniculum porcinum, Peudanium, *Dog-Fennel*.
 Foenum græcum, *Fenegræke*.
 Folia lauri, *Bay leaves*.
 Folium Indicum, Malobathrum or Malabathrum, Betrum, Batrum, or Betrum Indicum, seu Batrum Indicum. This is called of the *Arabians* Tembul, or Tembutum, of the *Greeks* Malabathron, phyllon, phyllon Indicum, of *Aetius* phyllon Scylmatos, *Indian leaf*. It is a smelling leaf of *India*, which there is found in the standing pools, and driveth on the water without any root. The inhabitants there gather them, and dry them. Our *Apothecaries* use the leaf of the *Cinamon* tree in stead of it, although the right Malobathrum may easily be gotten: but the common error will hardly be amended.
 Folium Indicum, vide Folium.
 Folliculus bombycis, *Silk-worms nests*.
 Fontannella, a *Fontanel*.
 Formica, an *Ant*.
 Formica, Herpes, a *corroding ulcer*.
 Formica miliaris, Herpes miliaris, the same.
 Fragaria, *Strawberry leaves*.

Fragula, the same.
 Fragum, a *Strawberry*.
 Frassinula, or Frassinella, or Frassinella germanica, *white Diptamer*.
 Frassinula Italica, Polygonatum, *Solomons Seal*.
 Franus, an *Ash tree*.
 Fraxinus montana, the lesser *Beech*.
 Fraxinus pumila, *Diptamer*.
 Frons, the *forehead*.
 Fuga dæmonum *S. Johns wort*.
 Fuligo camini, *soot of the chimney*.
 Fumaria, *Fumitory*.
 Fumus terræ, the same.
 Fungus Abietis, *A Mushrome of the Firre tree*.
 Fungus laricis, *A Mushrome of the Turpentine tree*.
 Fungi, *Toadstooles*.
 Fungi Juniperi, the *Mushrome of the Juniper tree*.
 Funis arborum, *Ivy*.
 Furfur, *Branne*.
 Furfures capitis, the white dust of a mans head.
 Furunculus, a *byle*.
 Fuscus agrestis, Atractylis, *wilde Saffron*.

G

GAgates, *Jeat*.
 Gaiaicum lignum, vel Guaiacum, *A tree growing in the new found Iles*.
 Galbanum, or Galbanus, in *Greek* Chalbanc, of *Pliny* Stagonitis, of the *Arabians* Chene, and *Bezard*; of the *Apothecaries* Galbanum: it is the juice or gum of the herb *Metopium*, which groweth in *Syria*.
 Galanga, Cyperus Babylonicus, *Galangal*.
 Galanga major, the great *Galangal*.
 Galanga sylvestris, *wilde Galangal*.
 Galanga sylvestris rotunda, the round *wilde Galangal*.
 Galanga sylvestris longa, long *wilde Galangal*.
 Galeobdolon, Galiopsis, a kinde of dead nettles.
 Galbalus, Pilula, Nux Cupressi, a *Cipresse Nur*.
 Galia, Galls, the fruit of an oak: but those that grow on our Oaks will not be dried, they are called of *Galen* Onicicidæ, and Galæ Asininæ.
 Galli crista, *Clary*.
 Gallia muscata, a sweet smelling confection of the *Apothecaries* so called.
 Gallicus morbus, the *French Pocks*, the great disease, the *Crinkomes*, or *Venus badge*.
 Gallitricum, *Clary*.

Galli-

The Third Index.

- Galliericum sylvestre, *Wilde Clary.*
 Gammarus, *A crab.*
 Gangytes, *Gagates, feat.*
 Garyophyllata officinarum, *herb bennet, herb blessed, or hares eye.*
 Garophyllus officinarum, *Cloves.*
 Gariophyllata Herbariorum, *herb Bennet.*
 Gariophyllea Herbariorum, *little or single Gelofer.*
 Gariophyllum, or Gariophyllus, *Cloves.*
 Garemantites, Granatus, *a kinde of Ruby.*
 Gaster Nicandri, Brassica capitata, *headed Cabbage.*
 Gaster, Ventriculus, *the stomach.*
 Gararia, Napita felina, *Nep.*
 Galatina cidoniorum, *Marmalade.*
 Gemelli, Parotides, *Impostumes behinde the eares.*
 Gemma, Lapillus pretiosus, *a Gem.*
 Genicularis, *Valerian.*
 Geniculata, Polygonatum, *Solomons seal.*
 Genichella, *the same.*
 Geniculum, or Geniculus, *the same.*
 Geniculum latifolius, or Geniculus major, *the greater Solomons seal.*
 Geniculus angustifolius, or Geniculus minor, *the lesser Solomons seal.*
 Genitale cervi, *a Harts pisle.*
 Genitalis, Gladiolus, *Flags.*
 Genista, *Broom.*
 Genitura Martis, *Spurge.*
 Genitura Herculis, *a Box tree.*
 Gentiana, *Gentian or bitterwort.*
 Gentiana cruciata, *the same.*
 Georgiana, *a kind of Valerian.*
 Geositis, *the lesser Houseleek.*
 Geranium alterum Dioscoridis, *Pes columbinus, Pigeons foot.*
 Geranium Robertianum, *Storks bill, Pinknede, Shepheards bodkin.*
 Gethyllis or Getium, *Leeks.*
 Gethyum, *the same.*
 Geum Plinii, *herba benedicta, herb bennet.*
 Gieduar, Zedoaria, Anthora, *Seduary.*
 Gigartho, Vinacea, *the kernels that are in the Grapes or Raisons.*
 Gingiber, Zingiber, *Ginger.*
 Gingidium, Cerefolium Hispanicum, *a kind of Chervil.*
 Gith, Nigella, *the herb Giste.*
 Githago, Pseudomesantium, *Cockle.*
 Gladiolus, *Sedge or Gladen.*
 Gladiolus Arvensis, *the same.*
 Gladiolus luteus, Iris lutea, *the yellow Flower-deluce, or Gladen.*
 Gladiolus palustris angustifolius, *the lesser Gladen.*
 Gladiolus palustris latifolius, *the greater gladen.*
 Glæos, Viscum, *Birdlime.*
 Glandis calix, or Glandis putamen *the outward Acorn husk.*
 Glans Dryobalanus, *an Acorn.*
 Glans Ægyptiaca, or Glans unguentaria, *the fruit of a tree also called Ben.*
 Glans Jovis, *a Chestnut tree.*
 Glans sardonis, *the same.*
 Glan quercina, *an Acorn.*
 Glans unguentaria, *vida Glans Ægyptiaca.*
 Glans, *a Suppository.*
 Glastum, *Ilatis, Woad.*
 Glastum minus, *Wilde wood.*
 Glastum sativum, *woad.*
 Glastum sylvestre, *wilde woad.*
 Glancium, *is called of the Arabians Memithe: it is the iuyce of a strange herb growing in Syria, it is used onely in this in Sief Memithe, which is called of the Greeks Collyrium diaglaucion.*
 Glebra armena, *Bole Armoniack.*
 Glechon, Pulegium, *Penniroyal.*
 Glechon agrion, *Wilde Mints.*
 Glessum, Succinum, *Amber.*
 Gleucos, Mustum, *new wine.*
 Globulus Cyparissus, *a Cypress nut.*
 Gluten, *common glew.*
 Gluten avium, or Gluten aucupum, *Birdlime.*
 Gluten auri, Chrysocolia, *Boras.*
 Gluten ligni, *foyners glew.*
 Gluten taurinum, or Glutinium, *glew.*
 Gludis, Pæonia, *a Piony.*
 Glyceraton, Glycyrrhiza, *Licorice.*
 Gylephyron, *the same.*
 Glycyrrhiza, *Licorice.*
 Glycis Pausaniæ, *sodden wine.*
 Glycyside or Glycisis, *Piony.*
 Glycysites, or Glycysidites, Vinum ex Pæonia confectum, *wine made of Pionyes.*
 Glythris Althenæi, *sodden Wine.*
 Gobius Apuleii, *Wilde Spurge.*
 Golsonium, Rapum, *a Rape root.*
 Gongyle, or Gongylis, *the same.*
 Gongylis agria, Rapum sylvestre, *a wilde rape root.*
 Gonorrhæa, *the running of the reins.*
 Gorgonia, Corallium, *a Coral.*
 Gorgonium, *Millet.*
 Gorgylon, Pauli Turcylium, *the same.*
 Gossipium, or Gossipitium, *Cotten.*
 Gramen, Agrostis, *Grasse.*
 Grana, vulgo Granum tinctorium, *Conchil.*
 Granata acidodulcia, or Granata musa, *a kind of Pomgranat.*
 Grana tordorum, *Juniper-berries.*
 Granatum officinarum, or Granatum malum, *a Pomgranat.*
 Granatus officinarum, Garbunculus garbanticus, *Granum*

The third Index.

Granum chermesinum, *Couchenil.*
 Granum infectorium, *the same.*
 Granum maris rubri divi Hieronimi, *Margarita, a Pearl.*
 Granum paradisi, Cardamomum officinarum majus, *Grains.*
 Granum tinctorium, *Couchenil.*
 Guaiacum lignum, *a tree growing in the new found Isles so called.*
 Ginguedes Arabum, *the veins in the neck.*
 Gula, *the throat.*
 Guilioco, Cortex exterior nucum, *the outward shell of a Walnut.*
 Gummi Arabicum, *Gum Arabick.*
 Gummi Cerali, *the Gum of a Cherry tree.*
 Gummi Juniperi, *the gum of the juniper tree.*
 Gummi Sarcocolla, *vide Sarcocolla.*
 Gynacium, Stimmi, *Antimony.*
 Gypsum, or Gypfus, *a plaister.*
 Gkrenia, Ruscus, *Kneeholme.*

H

Habilla, or Habiola Herbariorum, *Lupulus, Hops.*
 Hamoptois, or Hamaptisis, *a spitting of blood.*
 Hamorrhoids, Sanguinis profluvium pervenas ani, *the bleeding of the Hamorrhoids, or Piles.*
 Hamorrhoides verrucalæ, *the Piles.*
 Hamorrhoides nasi, *an ulceration of the nose.*
 Hamostasis Democriti, Symphytum, *Comfrey.*
 Hamagonum, Pæonia, *a Piony.*
 Hamictinos, Scordium, *water Leeks.*
 Hamatites, sanguinarius lapis, *a blood-stone.*
 Halica, Chondrus, *a kind of Corn.*
 Halicacabites, *winter Cherries.*
 Halicastrum, *Wheat.*
 Halinectera, *Olives.*
 Halicacabus, Solanum rubeum, *winter Cherries.*
 Halipastos, Oliva conditanea, *Olives.*
 Halmas, *the same.*
 Halsionæum, and Halsionum, Spuma maris, *the froth of the sea.*
 Halos anthos, *Parmacity.*
 Harmala, Ruta sylvestris, *wild Rue.*
 Harmagion, Dracunculus, *Dragon.*
 Harmel, Befasa, *the same.*
 Harpax, Succinum, *amber.*
 Harundo Enodis, Calamus fistularis, *kind of reed without joints, which hath been used in head of quills to make pens.*
 Harundo Sepiaria, or Harundo Sepicularis, *a kind of reed.*

Hartanita officinarum, Cyclamirus, *Sowbread.*
 Hastula regia Apuleii, Rosa Autumnalis, *winter Roses.*
 Hastula Dioscoridis, Asphodelus, *the same.*
 Hedera humilis vel terrestris, *Alehoof, or hghoe.*
 Hectica, *a wasting or consuming fever.*
 Hedera pluvialis, *vide Hedera humilis.*
 Hederalis, Asclepias, *Swallow wort.*
 Hedypnois, *Dandelion, or yellow Cichory.*
 Hedyosmus, *Garden mints.*
 Heilbague, or Heilbane Arabum, Cardamomum majus officinarum, *Grains.*
 Heilbane, *the same.*
 Helenium, *Elecampane.*
 Heliobarane Etii, *Knotgrasse.*
 Heliotropius lapis, Jaspis viridis, *a Jasper stone.*
 Helix, Capreolus vitis, *the little tendrils of vines.*
 Helleborum, or Helleborus, *Neeswort.*
 Helleborum, nigrum, *the black Neeswort.*
 Helmintoborne vide Zeduaria.
 Helxine, Perditium, *Pellitory of the wall.*
 Hemerocallis, *Daffodil.*
 Hemisrania, or Hemicrane, *a kind of headach, when but one side of the head is grieved.*
 Hemionium, Asplenium, Scalfern, or Fingerfern.
 Henne, Arabum, Cyperus, *alcanna.*
 Hepar *the Liver.*
 Hepaticus, *one that is diseased in the Liver.*
 Hepatis oppilatio, *an obstruction, or oppilation of the Liver.*
 Hepatica, *the Liver vein.*
 Hepatica herba, *Agrimony.*
 Hepatica fontana, *Liverwort.*
 Hepatica saxatica, *Stone Liverwort.*
 Hepiala, *vide Febris hepiala.*
 Hepsema, Mustum coctum, *sodden new Wine.*
 Heptapluron, *broad Plantaine.*
 Heptaphyllon, Tormentilla, *Tormentil.*
 Heracleotis Calamachi, or Herachea Galeni, *the Load stone.*
 Herba divi Anthonii, *Self-heal.*
 Herba Apoplectica.
 Herba Apostematica, *Scabious.*
 Herba apum, Melissa, *Baulm.*
 Herba Arthritica, *Comflips.*
 Herba Basilica, Ocimum, *Basil.*
 Herba benedicta, Valeriana, *Valerian.*
 Herba calicularis, *Henbane.*
 Herba capillaris, *Venus, Maiden, or Lady hair.*
 Herba capillaris Apuleii, *the same.*
 Herba calta, Pæonia, *Piony.*

Herba

The third Index.

Herba clavellata, *Harts ease*.
 Herba crinita Apuleii, *Maiden hair*.
 Herba cinnamalis, *Vervein*.
 Herba columbaris, *wilde Cipresse*.
 Herba cochlearis, *Brassica marina*, *sea-Cole*.
 Herba centonica officinarum, *Abfinthium marinum*, *sea Wormwood*.
 Herba divæ Mariæ Magdalenaë, *Phu ponticum*, *a kind of Valerian*.
 Herba divæ Otiliæ, *Consolida regalis*, *Larks spur*.
 Herba divi Petri, *the lesser Gentian*.
 Herba divi Quirini, *Horsehoof*.
 Herba divi Georgii, *Phu ponticum*, *a kind of Valerian*.
 Herba divi Ruperti.
 Herba divi Valentini, *pæonia alba*, *a kind of Piony*.
 Herba flammea, *Harts ease*.
 Herba flavea, *Melilotum nobile*, *Melilote*.
 Herba fortis, *Consolida Saracenicæ*.
 Herba fullonum, *Teasel*.
 Herba cederalis, *Asclepias*, *swallow-wort*.
 Herba hircundinaria minor, *the lesser Celandine* or *Hylewort*.
 Herba inguinalis, *Bubonium*, *an herb called After*.
 Herba Jovis, *Sedum*, *Honfleeck*.
 Herba lactaria, *Tithymalus*, *Spurge*.
 Herba lanaria.
 Herba leporina, *a kind of Mallows*.
 Herba Mercurii, *Mercurialis*, *herb Mercury*.
 Herba margarita, *Daisies*.
 Herba militaris, *Millefolium*, *Yarrow*, or *Nosebleed*.
 Herba mula, *Asplenium*, *Fingerfern*.
 Herba muralis Celsi, *Pellitory of the wall*.
 Herba ocularia, *Eye-bright*.
 Herba ophthalmica, *the same*.
 Herba orbicularis, *Cyclaminus*, *Rape violet*.
 Herba panaricii, *Herbariorum*, *Lamium album*, *a kind of dead nettles*.
 Herba paralytis, *Cowslips*.
 Herba pavonis, *Perficaria*, *Ars smart*.
 Herba pedicularis, *Staphisagria*, *Licbane*.
 Herba perdicalis Apuleii, *Perdicium*, *Perficary*.
 Herba pulicaris, *Perficaria*, *Ars-smart*.
 Herba primi floris, *herba paralytica*, *Primroses*.
 Herba pyrifolia, seu perifolia *Herbariorum*, *Pyrola*, *wilde Beets*, or *Winter green*.
 Herba Roberta, and herba Ruperti, *herbe*

Robin.
 Herba regia, *Basil*.
 Herba sanguinalis, *Polygonum*, *Knotgrasse*.
 Herba sanguinalis mas, *the male Knotgrasse*.
 Herba sanguinalis fœmina, *Polygonum fœmina*, *Knotgrasse female*.
 Herba sardonis, *Ranunculus*, *Crowfoot*.
 Herba scelerata, *Idem*.
 Herba scorbuti, *Brassica marina*, *Scurvy-grasse*.
 Herba salutaris Apuleii, *Rosemary*.
 Herba solis *Herbariorum*, *St. Johns wort*.
 Herba solis, *Ætii polygonum*, *Knotgrasse*.
 Herba Sophiæ *herbariorum*.
 Herba sortis, *Consolida saracenicæ*.
 Herba stataria, *Peucedanum*, *Hogs fennel*.
 Herba sacra, *verbena*, *Vervein*.
 Herba Trinitatis, *harts ease*.
 Herba toparia, *Bearfoot*.
 Herba tonitruum, *Sedum*, *honfleeck*.
 Herba tunica officinarum, *Gelosers*.
 Herba tunica Gordonii *Ocimastrum*.
 Herba tunica Minfridi, *Gelosers*.
 Herba turca, *Carduus benedictus*, or *blessed thistle*.
 Herba Thymiana *Herbariorum*, *Thyme*.
 Herba vermicularis, *Sedum minus*, *Prick-madam*.
 Herba virginea, *Parthenium*, *Feverfew*.
 Herba vitraria, *Pellitory of the wall*.
 Herba vitri Avicennæ, *Perdicium*, *the same*.
 Herba urinaria *Herbariorum*, *Hedipnois*, *Dandelion*.
 Herba urceolaris, *Pellitory of the wall*.
 Hercules morbus, *the falling evil*.
 Hermodactylis Arabum, *Dogsbane*.
 Hermodactylus Dioscoridis, *Pentaphyllon*, *a kind of Dogsbane*.
 Hermodactylus Actuarii, *the root of Behen*.
 Hermodactylus Nicolai Myrepsi, *of the same*.
 Hermodactylus albus, *white Behen*.
 Hermodactylus Rubens, *red Behen*.
 Hernia, *Ramex*, *a rupture*.
 Hernia Osceano, *a great rupture*.
 Hernia Oscealis, *the same*.
 Herpacantha, *Acanthus* *Bearfoot*.
 Herpes, *a corroding ulcer*, or *wolf*.
 Herpes exedens, *the same*.
 Herisypila, *Erisypelas*, *an inflammation called the Rose*.
 Herpillum, *Serpillum*, *wilde tyme*, or *Ladies bedstraw*.
 Hesperis, *Viola lutea*, *Wallflowers*.

Hibiscus

The third Index.

Hibiscus, a kind of Mallow.
 Hieracopodium, *Lychnis sylvestris*.
 Hierapachii, a purging confection so called.
 Hierobotane Dioscoridis, Verbena, *Ver-*
vein.
 Hierobotane Scribonii, Betonica, *Beto-*
ny.
 Hieralogodion officinarum, or
 Hieralagadii, the name of a purging Confe-
 ction.
 Hiera picra, or
 Hiera picra simplex, a very bitter confection.
 Hiera Ruffi, a purging confection.
 Hiera Athenæi, and
 Hiera Theophrasti, the Flower-deluce.
 Hieromyrtus, Ruscus, *Kneeholme*.
 Hilbane, Granum paradisi, Grains.
 Hippocras fontis officinarum, Aqua Hip-
 pocratica, Hippocras.
 Hippocras officinarum, Vinum Hippocrati-
 cum, the same.
 Hippocraticum vinum, the same.
 Hippocistis officinarum, vide Hypoci-
 stis.
 Hippolapathium, a Water Dock.
 Hippoglossum, Adder's tongue.
 Hippomalache, Malva equina, horse Mal-
 lowes.
 Hipposelinum, Angelica.
 Hippopleuron, Hounds rib, a kind of Plan-
 tain.
 Hippuris, equisetum, Horse tail.
 Hirundinaria, Horseleech.
 Hirudo, the same.
 Hirundo, a Swallow.
 Hispanach Arabum, Spinachia, Spinage.
 Hordeum, Barly.
 Hordeum Galaticum, Rice.
 Hordei cremor, Ptisana, Barly husked and
 sodden in water.
 Humeralis vena, the shoulder vein.
 Humerus, the shoulder.
 Humor Scrupeus poetarum, Podagra, the
 Gout.
 Humulus, Lupulus, Hop.
 Hyacinthus, Helodias, Porphyranthes, a pur-
 ple flower that we call Crowtoes. There
 are four kinds of it, two of them (as the
 greater and lesser) are most in use: the
 other two sorts I will passe over for bre-
 vity sake. The first kind hath narrow
 leaves like the wilde Onion, with a stalk
 about one span in height: upon this on
 every side grow flowers of a light purple
 colour, much like the Amethyst, or Ja-
 cinct stone: on the top of all are the
 flowers somewhat lesser, and sadder in
 colour. This is the right *Hyacinthus* of

Dioscorides; it groweth commonly in
 tilled grounds, and of some is called hogs
 Onion, because Hogs greatly delight in
 eating of it: the Herbarists call it *Hy-*
acinthus major, and *Bulbus porcinus*. The
 other is somewhat lesse, and groweth in
 woods; it flowreth in March, and hath
 pretty little blew flowers, not much un-
 like the May Lillies, or Liriconfancy;
 the root is like little Onions. This is
 called in some places blew May flowers;
 of the Herbarists *Hyacinthus minor*, *Al-*
lium caninum, and *Bulbus caninus*, *Pal-*
ladius also maketh mention of a blew
Hyacinthus. In like sort is the yellow
 Lilly *Lillium luteum*, or *Hemerocallis*,
 the *Hyacinthus* of Ovid, which Theocritus
 calleth *Hyacinthus scriptus*, to make it
 differ from the right *Hyacinthus*: the
 Herbarists call it *Hyacinthus poetarum*.
Virgil calleth it *Hyacinthus suave rubens*,
 and *Hyacinthus mollis*; and Pausanias
 termeth it *Comosandalon*.
Hyacinthus major Herbariorum, or
Hyacinthus Dioscoridis, Crowtoes, vide
Hyacinthus.
Hyacinthus minor Herbariorum, vide *Hy-*
acinthus.
Hyacinthus Palladii, vide *Hyacinthus*.
Hyacinthus poetarum, *Hemerocallis*, vide
Hyacinthus.
Hyacinthus Ovidii, vide *Hyacinthus*.
Hyacinthus mollis Virgilii, yellow Lillies.
Hyacinthus scriptus Theocriti, vide *Hy-*
acinthus.
Hyacinthus suave rubens, vide *Hyacin-*
thus.
Hyacinthus, gemma, a Jacinct.
Hydrargyrum, Argentum vivum, Quick sil-
 ver.
Hydrargyrum nativum, vomica liquoris
 æterni & rerum omnium venenum Plinio
 vocatur, Quick silver of the Mine.
Hydrargyrum factitium, Quick silver which is
 made of Cinoper.
Hydrolapathum, *Lapathum palustre*, water
 Docks.
Hydromeli, aqua mulsa, Mead.
Hydrophobus, a rabido cane morsus, he that
 is bitten of a mad Dog: he that is afraid
 of water.
Hydropper, *Persicaria*, Arse-smart.
Hypposelinum, *Apium palustre*, Lovage,
Alisander.
Hyophthalmus, After atticus, the herb Ru-
 bonium.
Hyosciamus, Henbane.
 Hypericum

The Third Index.

Hypericum, *S. Johns Wort.*
 Hypericum petraeum, *is that which is now taken for Carpoblasum, but unjustly.*
 Hypochyma, *Pitch.*
 Hypocistis *is also called Barba hircina, and Orobetrum, it groweth at the root of the herb Cistus, much like the flower of the Pomgranat, and is full of juyce, which being wrung out and dryed, is also called Hypocistis, and of the Apothecaries Hippocistis or Hypoquistidos indeclinabiliter.*
 Hypogessum, *Sedum majus, Houseleek.*
 Hypopium, *Thapsia, Turbith.*
 Hysge Pausaniae, *Granum tinctorium, Couchenil.*
 Hyslopites, *wine of Hyssop.*
 Hyssopum, *or*
 Hyssopus, *Hyssop.*
 Hyssopus humida officinarum, *Oesypus, Wool of the flank of a Sheep.*
 Hysteta, *Uterus, Loci, Matrix, the mother in Women, or Matrix, or Womb.*
 Hysteralgia, *pain in the belly or matrix.*

I

Iarum, *Cuckopit.*
 Iacea, *Harts-case.*
 Iacea nigra, *Morsus Diaboli, Devils-bit.*
 Iamenum officinarum, *Alumen scissile, vide Alumen.*
 Iaspis, *a Jasper stone.*
 Iaspis, *green Iaspis.*
 Ichthiotheron, *Cyclaminus, Sows bread.*
 Ibiscus, *Althea, marsh Mallows.*
 Ictetiria, *the yellow jaundise.*
 Ictetitis Apuleii, *Libanotis coronulis, Rose-mary.*
 Icterus, *Morbus regius, the yellow jaundise.*
 Iecur, *the Liver.*
 Igne Hippocratis, *Ifatis, Wood.*
 Ignis divi Anthonii, *or*
 Ignis facer, *Erysipelas, the Rose.*
 Ileos, *or*
 Ileus, *or*
 Iliaca passio, *or*
 Iliaca, *a wringing in the small guts.*
 Illecebra, *Piper murinum, Stonecrop.*
 Illinctus, *Eclegma, a mepicine which is licked up, and not swallowed.*
 Imaginatio, *an imagination or conceit.*
 Imperatoria, *Angelica.*
 Impetigenaria arborea, *Lichen arboreus, a kind of Liverwort*
 Impetigenaria, *petraea, Lichen saxatilis, Liverwort.*
 Impetigenaria saxatilis, *Lichen, the same.*

Impetigo, *a Ringworm, or dry Scab.*
 Inanitio, *empriness of the body.*
 Incensum Thus, *Frankincense.*
 Incrementum, *the increasing of a sicknesse.*
 Incubus, *Ephialtes, Faunorum in quiete Judibrium, as Pliny saith, the Night-mare or Hag, it is a little falling sicknesse, and is a sign of madnesse to come, or of the falling evil, or Palsey, &c.*
 Infusio Senae, *the infusion or steeping of Sene leaves.*
 Inguinalis, *or*
 Inguinaria Dioscoridis, *the herb Bubonium.*
 Inguinari Plinii, *Anserina.*
 Intemperies, *untemperatnesse.*
 Intestina gracilia, *the little guts.*
 Intestina terrae, *Limbrici terrestres, Earth-Worms.*
 Intestinum duodenum, *Intestinum primum, Pylorus, the gut next to the stomach.*
 Intestinum jejunum, *Nestis, the empty gut.*
 Intestinum monoculum.
 Intestinum caecum, *the blind gut.*
 Intestinum primum, *vide Intestinum duodenum.*
 Intestinum rectum, *Longanum, the Arse-gut.*
 Intubum, *Endive.*
 Intubum sativum angustifolium, *a kind of Endive.*
 Intybus, *&c*
 Intibus sativus latifolius, *white Endive.*
 Inturis, *Copparis, Capers.*
 Inversio ventriculi, *Anastrophe, an inversion of the stomach.*
 Inula, *Helenium, Elecampase.*
 Inula rustica Apuleii, *Symphitum magnum, Comfrey.*
 Ion, *Viola, a Violet.*
 Ion porphyrium, *Viola purpurea, a marck Violet.*
 Ion melan Theophrasti, *viola nigra, the same.*
 Ion polyphyllon, *viola multiplex, double Violets.*
 Ion Agria, *Viola sylvestris, wilde Violets.*
 Ireos five Irios officinarum, *Iris, the Flower-deluce.*
 Iris, *the same.*
 Iris alba, *the white Flower-deluce.*
 Iris Apula, *the same.*
 Iris domestica, *the same.*
 Iris Florentina, *the same.*
 Iris Germanica, *the blew Flower-deluce.*
 Iris lutea, *yellow Flower-deluce.*
 Iris palustris latifolia, *a kind of Flower-deluce.*
 Iris Schlavonica, *Flower-deluce.*

The Third Index.

Isatis, Glaſtum, woad.
 Isatis minor, wilde Woad.
 Isatia ſativa, ſame Woad.
 Iſſopus humida officinarum, Oeſypus, Wool
 of the ſhank of ſheep.
 Iſchias, Coxarius morbus, Sciatica.
 Iſchiatica barbarorum, the ſame.
 Iſchuria, urinæ retentio, a ſtopping of urine.
 Itea, Salix, a Willow.
 Jujuba Arabum & officinarum Zizifum, a
 kind of fruit ſo called.
 Iva officinarum, Ajuga or Abiga, wilde Cy-
 pres.
 Juglans, a Walnut tree.
 Juglans equina, the great Walnut.
 Julebum or Julepum, a Julep.
 Junci flos, Schoenum Anthos, Squinan-
 thum.
 Juncus anguloſus Plinji, Cyperus, a kind of
 Galangal.
 Juncus odoratus, Squinanthum.
 Juncus odoratus Celſi, Cyperus, a kind of
 Galangal.
 Juncus triangulus Plinii, Cyperus, the ſame.
 Juniperus, a Juniper tree.
 Juniperus acuta, the greater Juniper tree.
 Juniperus major, the ſame.
 Juniperus minor, Juniperulus, and Jupicel-
 lus, the leſſer Juniper tree, or the Goſeber-
 rie buſh.
 Juniperi baccæ, vel,
 Juniperi grana, Goſeberries, or Juniper br-
 ries.
 Junonia, Roſa Plinii, Lilium, a Lilly.
 Juſquiama, officinarum Hyoſcyamus, Hen-
 bane

K

K Artam Arabum, Cnicus, Cartamus, wild
 Saffron.
 Kauroch Arabum, Chelidonium, Celan-
 dine.
 Keiri, Leucoium, wallflowers.
 Kerva Arabium, Ricinus, Palma Chriſti.

L

L Abrium Veneris, Diſſacus, Teaffel.
 Labruſca, vitis ſylveſtris, the wilde
 Vine.
 Labruſcæ flos, the bloſſomes of the wilde
 Vine.
 Lacamygdalinum, Almond milk.
 Lac acidum, Oxylacha, ſowre milk.
 Lac ebutteratum, Butter milk.
 Lac chalybatum, ſteeled milk.
 Lac ovillum, or ovinum, Ewes milk.
 Lactis cremor, Pingue, Flos, vel Pinguedo,
 Cream.

Lac ſciſtum, Curded milk.
 Lacca, Caucamum, a Gum ſo called.
 Lacerta, or
 Lacertus, an Eket.
 Lachryma draconis, a Gum called Sanguis
 draconis.
 Lachryma Jobi, Lithoſpermum majus, Gro-
 mil.
 Lachryma Juniperi, Sandaraca, the Gum of
 the Juniper tree.
 Lachryma Mariæ.
 Lachryma medica, Aſſa foetida, a gum ſo
 called.
 Lachryma Syriaca, the ſame.
 Lachryma vitis, Aqua vitis, Sap of a Vine.
 Lactaria Tithymalus, Spurge.
 Lactuca, Lettice.
 Lactuca cappadox Plinii, crumpled Let-
 tice.
 Lactuca aſinina, Anchufa, Orchanet.
 Lactuca Betica Columellæ, great Lettice.
 Lactuca Cæciliana, Columellæ, white Let-
 tice.
 Lactuca criſpa, curled Lettice.
 Lactuca caprina, or
 Lactuca marina, Tithymalus, Spurge.
 Lactuca marina Apuleii, Cataputia ſylve-
 ſtris, great wilde Spurge.
 Lactuca Laconia Plinii, or
 Lactuca ſeffilia, or
 Lactuca capitata, headed Lettice.
 Lacaturris Plinii, Braſſica lacuturrea, a kind
 of Cabbage.
 Lada, or
 Ladon, or
 Ladanum, or
 Laudanum, this is called of Dioſcorides, Le-
 dum, Laden, and Leden. In the Apo-
 thecaries ſhop it hath his common name Lau-
 danum. It is the dryed juyce of an herb ſo
 called. The Herbariſts call it alſo Ciſtum
 laudaniferum, and Fruticem laudanife-
 rum.
 Lætitia Galeni officinarum, vide Lætiſ-
 cans.
 Lagopodium, or Lagopus, Hares foot.
 Lagopus, the ſame.
 Lamium Plinii, dead Nettles.
 Lampſana, Rapiſtrum album, Cadlocke.
 Lampas.
 Lana ſuccida, unwashed Wool.
 Lanaria, Saponaria, the herb that Fullers uſe
 in ſcouring of cloth.
 Lana arborea, or
 Lana xylinea, Cotton.
 Lanceola, narrow Plantain.
 Lanugo arborum, Moſſe.
 Labdanum barbarorum, vide Lada.
 Lapathum Dioſcoridis, Oxalis, Sorrel.
 Lapathum

The Third Index.

- Lapathum Galeni, *Dock.*
 Lapathum acidum, *a kind of Dock.*
 Lapathum acutum, *a Dock.*
 Lapathum aquaticum, *water Dock.*
 Lapathum cepeon, *or.*
 Lapathum fativum, *Monks Rubarb.*
 Lapathum domesticum, *or*
 Lapathum latifolium fativum, *herbe patience.*
 Lapathum aquinum, *water Docks.*
 Lapathum latifolium.
 Lapathum non acuminatum.
 Lapathum platyphyllon, *the greater Dock.*
 Lapathum barbarorum, *vide Lada.*
 Lapillus Eritæus, *a Pearl.*
 Lapis calaminaris officinarum, *Cadmia nativa, the Oare of Brasse.*
 Lapis cæruleus, *an Azure stone.*
 Lapis corrosivus, *a Corrosive, or Corroding stone.*
 Lapis Cyaneus, *an Azure stone.*
 Lapis Indicus, *Margarita, a Pearl.*
 Lapis Judaicus, *a stone that purgeth Melancholly, or a Jewes stone.*
 Lapis Hepaticus, *a liver stone.*
 Lapis Lazulus officinarum, *the Azure stone.*
 Lapis Eritæus, *Margarita, a Pearl.*
 Lapis Lyncis officinarum, *Lapis phrygius, of some white Amber, of others a Thunderbolt, of others a stone that groweth in Phrygia.*
 Lapis Stellatus, *or Cæruleus, the Azure stone.*
 Lapis viridis, *an Hemeraude.*
 Lapis vini *Argyle.*
 Lappa major, *Bardana, the great Bur.*
 Lapsana, *Rapistrum album, a kind of Mustard seed.*
 Lasaron, *Galaeticon, Angelica.*
 Lascaphrum, *Naraphium, black Frankincense.*
 Laserpitium Gallicum, *Angelica.*
 Laser medicum, *or*
 Laser Syriacum, *Asa foetida.*
 Lasionalum, *Cydonium, a Quince.*
 Lathyrus, *Cataputia minor, the lesser Spurge.*
 Lathyrus sylvestris, *Wilde Spurge.*
 Lathyrus cicercula, *the fruit or seed of Spurge.*
 Lavacrum Veneris, *Teasel or Fullers Thistle.*
 Lavendula, *Lavander.*
 Laureola, *Laurel or Lovel.*
 Laurus, *a Bay tree.*
 Lauri bacca, *Bayberries.*
 Lauri folia, *Bay leaves.*
 Laurus Baccalis Plinii, *or*
 Laurus Baccifera, *or*
 Laurus femina, *the shee or female Bay tree.*
 Laurus mas, *or*
 Laurus virilis, *the he or male Bay tree.*
 Laurus rosea, *Nerion, Rose laurel, or Oleander.*
 Lecristicum, *Vitex, Agnus castus, the chaste tree.*
 Lemonium malum, *a Lemon.*
 Lens palustris, *or.*
 Lenticula aquatica, *water Lentils.*
 Lentiscus, *the Mastick tree.*
 Lentiscinum oleum, *oyle of Mastick.*
 Lentiscina, *resina, Mastick.*
 Lepra, *the Leapry, a disease that maketh the skin rough, with black wannish spots, and dry parched scales and scurffe.*
 Lepra leonina, *kind of Leapry in which the diseased groweth mad.*
 Leptocaryon, *Nux avellana, a Hasel nut.*
 Lethargus veteris, *the Lethargy, a heavy and drowsie disease, in which the senses and reason is self seemeth to sleep.*
 Leucena Galeni, *Castanea, Chestnut.*
 Leuce, *Populus alba, the white Poplar tree.*
 Leuce, *vitilago alba, of the Barbarians Morphaea alba, a white and dry and continual scurffe.*
 Leucanthemis, *or Leucanthemum, the herb Camomil.*
 Leucoicum Dioscoridis, *Viola lutea, the winter Gilloflower.*
 Leuconia, *Candidum ovi, the white of an Egg.*
 Leucophlegmatias, *Hydrops, Anasarca, a kind of Droppe.*
 Levesticum officinarum, *Levage.*
 Libadium, *Centauria minor, the lesser Centory.*
 Libanotides, *Wine made of Rosemary.*
 Libanotis Coronalis, *Rosemary.*
 Libanotis Ferulacea, *or Libanotis umbellifera Herbariorum, a kind of Rosemary.*
 Libanotis umbellifera, *the same.*
 Libysticum, *Lovnge.*
 Libanum, *or Libanus, Thus, Frankincense.*
 Libyestafon, *Glycyrrhiza, Licorice.*
 Lichen, *Hepatica, Liverwort.*
 Lichen, *infectio, & asperitas summæ cutis, cum maxima prurigine, a Tetter or Ring-worm.*
 Lichen Arboreus, *Pulmonaria officinarum, Longwort.*
 Lichen petraeus, *or Saxatilis, Liverwort.*
 Lien, *Splen, the Spleen or Milt.*
 Lienteria, *Intestinorum levitas, a kind of flux of the stomach, when the meat and drink runneth from a man as he took it, utterly without concoction or alteration.*
 Lignum Aloes, *a kind of sweet wood so called.*
 Lignum guaiacum, *or Guaiacum, a tree growing*

The Third Index.

growing in the new found Isles.
 Lignum Indicum, Lignum sanctum; a kind
 of wood so called.
 Lignum paradisi, Lignum Aloes, a kind of
 sweet wood so called.
 Ligamenta, sinewes.
 Lignum sanctæ Crucis, Agollochum, a kind
 of wood.
 Ligusticum, Lovage.
 Ligula, Uvula, a little peece of flesh in the roof
 of the mouth.
 Lignum, Cyprus, Privet, Prinprint
 tree.
 Lilium, Crinon, a Lilly.
 Lilium album, a white Lilly.
 Lilium cœleste, sylvestre, flower-deluce.
 Lilium convallium, Lirioconsancy, or May
 Lillies.
 Lilium cæruleum, the blew Flowerdeluce.
 Lilium caprinum, Percilymenum, woodbind.
 or Honyuckle.
 Lilium inter-spinas, the same.
 Lilium luteum, Hemerocallis, vide Hya-
 cinthus.
 Lilium palustre Herbariorum, a water Rose.
 Lilium Saracenicum, Lilium sylvestre, the
 Daffodil.
 Lilium vernum Theophrasti, Lilium con-
 vallium, May Lillies.
 Limnatis, Hirudo, and Horfleeche or blood suc-
 ker.
 Limnæstis Apuleii, Centaurium majus, the
 greater kind of Centory.
 Limonium malum, Lemon.
 Linctus, Eclegma lambetivum, medicine or
 confection that is not chewed, but licked in,
 and is called of the Apothecaries by an Ara-
 bian name Lohoch.
 Linæleon, Oleum Lini, oyl of Flax.
 Lanaria, wilde Flax.
 Lingavæ Anserina, Goose tongue.
 Lingua Arietis, Arnoglossum, water Plan-
 tain.
 Lingua Bovis, Buglosse.
 Lingua Canina, Cynoglossum, Hounds
 tongue.
 Lingua Cervina, Phyllitis, Harts tongue.
 Lingua Ovina, Sheeps tongue.
 Lingua pagana, Hypoglossum, a double
 tongue.
 Lingua Ophioglossum, Serpents tongue.
 Lingua Serpentina, Lingua Viperina, Echio-
 glossum, the same.
 Lingua vulneraria Herbariorum, the same.
 Lingulaca, or Lingua Plinii, the same.
 Linodys, Chamedrys, the herb Germander, or
 English Treacle.
 Linostraphon, Marrubium, Horehound.

Linozostis, Mercurialis, French Mercu-
 ry.
 Linum Flax.
 Lippitudo, Ophthalmia, blearednesse of the
 eyes.
 Lipothymia, defectus animi, Deliquium
 animi, a swooning, wherein one seemeth
 to be dead.
 Liquiritia, Officinarum Glycyrrhiza, Lico-
 rice.
 Liquor medicus, and Liquor Syriacus, Assa
 fatida.
 Lirium, Litium, a Lilly.
 Listatium, a kind of nuts commonly at the
 Apothecaries called Fistic.
 Lithargyrium, Spuma argenti, Litharge or
 white Lead.
 Lithargyrum argenti, the same.
 Lithargyrium Auri, a kind of Litharge.
 Lithiasis, Calculus renum, & Vesicæ, the di-
 sease of the stone in a mans body engen-
 dred.
 Lithodendron, Corallium, Coral.
 Lithontribon, Confectio calculum frangens,
 a confection of the Apothecaries so called,
 which driveth away, and breaketh the stone
 in a mans body.
 Lithospermum nigrum, Lithospermum syl-
 vestre, wilde Gromel, or Graymil.
 Lithospermum sylvestre, the same.
 Loch Arabum, Linctus, Lambetivum, Ecleg-
 ma, a thin confection, of the Arabians called
 Lohoch in plurali numero, which is Ecleg-
 ma.
 Loch ad Asthma, a thin confection against the
 extreame and vehement stopping of the
 breath.
 Loch de Cancris, a confection made of Crevis-
 ses.
 Loch de Farfara, a kind of Confection so cal-
 led.
 Loch de Papavere, Diapapaver, a confection
 made of Poppies.
 Loch de Passulis, a confection of Raisons.
 Loch de Pino, a certaine confection so cal-
 led.
 Loch de Portulace, a confection made of Pur-
 slain.
 Loch ad Pthisin, Confection so called.
 Loch de pulmone vulpis, a confection made
 of the Lungs or Lights of a Fox.
 Loch sanum et expertum, a confection so cal-
 led.
 Loch de Scilla, a certain confection.
 Lohoch, Eclegma, vide Loch supra, a li-
 quid confection.
 Lonchitis altera, Asplenium majus Herba-
 riorum.
 Ceterach,

The Third Index.

Ceterach, Sealfern, or Fingerfern.
 Longanum, the Arfegut.
 Lotus alba, Claver, or three leaved grasse,
 also Melilot.
 Lotus cærulea, Lotus lutea, garden or tame
 Melilot.
 Lotus lutea, the same.
 Lotus lybica Diosc. Lotus sylvestris, wilde
 Melilot.
 Letrometra Apuleij, Nymphæa, the white
 water Lilly or Rose, white Nenuphar.
 Lucumbra, Longwort Woolblade, or
 Torch herb.
 Lues, a Plague or Pestilence.
 Luf Arabum, Dracontium, Dragonwort, or
 Dragons.
 Lumbricus and Lumbricus terræ, a certain
 long worm in the earth, or in mans bo-
 dy.
 Luparia officinarum, lycoctonum, a kind of
 Aconitum.
 Luph planum Arabum, Dracontium, Dra-
 gons.
 Luph planum Herbariorum, Dracontium,
 minus, the lesser Dragonwort.
 Luph crispum Herbariorum, Dracontium
 majus, the greater sort of Dragons.
 Lupinus, a kind of pulse so called.
 Lupulus, Hops.
 Lupus reptitius, and Lupus salictarius, Lu-
 pnus, the same.
 Luscius or Luscitiosus, Nyctalops, it is one
 that seeth very little in the night or in
 the morning.
 Lutum Armenum, Bolus nrmenus, Bolear-
 menick.
 Luteum lemnium, and lutum sigillatum, is
 the right terra sigillata, which is brought
 unto us from the Isle Lemnos.
 Lychnis gemma, and Lychnites, Carbuncu-
 lus gilvus, a kind of Ruby.
 Lychnis agria, or Lychnis sylvestris, Rose
 Campion.
 Lycium, Pyxacantha, Spina buxea, and of
 Pliny Buxacanthus Chironius, medicine
 made of the juice or decoction of the
 Bramble root.
 Lycoctonum, one of the kinds of Aconi-
 tum.
 Lycoctonum cæruleum, the same.
 Lyncurium, and Lyncurius Lapis, Succinum,
 a precious stone congealed of the urine
 of the beast Lynx.
 Lymneum, and Lymnesium, Centaureum,
 Centory.
 Lypiria, vide Febris Lypiria.
 Lyfimachia, or Lyfimachium, Willow herb,
 Loofestrise, or water Willow.

Lyfimachia cernuta, a kind of water Wil-
 low.
 Lyfimachia lutea, yellow loofestrise.
 Lyfimachia Diofcoridis, the same.
 Lyfimachia Melina, the same.
 Lyfimachia Plinii, a kind of Willow herb.
 Lyfimachia purpurea, Punicea, and Spicata,
 the purple water Willow or Loofestrise.
 Lyfimachia punicea, the same.
 Lyfimachia filiquosa, brown Willow herb.
 Lytrum, Lyfimachia, Willow herb, Loofestrise,
 or water Willow.

M

M Acer, Macis, it is commonly taken for
 the spice called Macis.
 Macheronium, the Flower-deluce.
 Macia, Anagallis, white, or the Pimper-
 nel.
 Madon Plinii, Nymphæa, the white water
 Lilly or Rose.
 Madonais Theophrasti, Nymphæa, the
 same.
 Magistrantia officinarum, Masterwort, An-
 gelica.
 Magnes, and of Galen Magnetis, the Load-
 stone.
 Magudaris sive Magydaris, a certain herb so
 called.
 Majorana Sampsyches, French Marjoram.
 Mala armeniaca, an Apricock, or hasty Peach
 tree.
 Mala præcocia, the same.
 Malabathrum, vide Folium Indum.
 Malache, Malva, Mallows.
 Malache agria, Malva sylvestris, wilde Mal-
 lows.
 Malacia, Pica, a corrupt appetite by reason
 of humors gathered about the mouth of
 stomach, that is the affection of longing,
 especially in women.
 Malacocissus, a kind of herb like unto Ivy so
 called.
 Mali corium, Cortex mali punici, the outward
 shell or rinde of a Pomgranat.
 Mali punici corium, the same.
 Malobathrum, a certain Indian leaf.
 Maltum, Manlt, such as Brewers put in their
 Beer.
 Malva, Mallows.
 Malva arborea, or Malva arborescens, Hol-
 libocks or marsh Mallows.
 Malva agristis, wilde Mallows.
 Malva Anserina, Chenomalache, cut Mal-
 lows.
 Malva caballina, or
 Malva equina, wilde or Horse Mallows.

M m m

Malva

The Third Index.

Malva crispa, crisped Mallows.
Malva hortensis, or Malva sativa, garden Mallows.
Malva Leporina, a kind of Mallows.
Malva major, Malva equina, the great wilde Mallow.
Malva pumila, or
Malva minor, the lesser Mallow.
Malva Romana, Malva crispa, romish Mallows.
Malva transmarina, Hollibocks.
Malva sativa, vide Malva hortensis.
Malva sylvestris, wilde Mallows.
Malvaviscus, Althea, Hollibocks.
Malum, pomum, an Apple.
Malum Assyrium, a Citron.
Malum aureum, an Orange.
Malum canum, a Quince.
Malum Citrium, vel Citreum, a Citron.
Malum Citoneum, a Quince.
Malum granatum, a Pomgranat.
Malum Cydonium, a Quince.
Malum Hesperium, a Citron.
Malum Lanatum, a Quince.
Malum Lemomum, a Lemon.
Malum Milvianum, a Quince.
Malum punicum, a Pomgranat.
Malum sylvestre, a Crab or Wilde Apple.
Malum Nerantium, an Orange.
Malus, an Apple tree.
Malus Cidonia, or Malus Cotonia, a Quince tree.
Malus granata, a Pomgranat tree.
Malus Nerantia, an Orange tree.
Malus punica, a Pomgranat tree.
Man Arabum, a certain kind of dew.
Mania, Furor, Rabies, madnesse.
Maoia, Herba, Apollinaris, Henbane.
Mandragora, the Mandrage.
Manna, a kind of sweet dew.
Manna bomicina, or
Manna Calabrina, a kind of Manna or dew which is brought from Calabria: this is the common Manna of the Apothecaries.
Manna Brianfona, a more excellent kind of Manna then the foresaid.
Manipulus, Fasciculus manualis, a handful.
Manus Christi, Radix Palmæ Christi, a kind of Ragwort.
Manus Christi, Frutex, Ricinus, Palma Christi.
Marasmodes, vide Hectica.
Marassus, Vipera, an Adder.
Marathrum, Fœniculum, Fennel.
Marchasita officinarum, Pyrites, a kind of stone.
Margarita, or Margarites, a Pearl.
Marinella, Valeriana, Valerian.

Mariscus, Ficus, Sycosis, Turberculum in ano adfici similitudinem, the Piles.
Maro, Centaurium magnum, the greater Centory.
Marrubium, Prassium, Horehound.
Marrubium aquaticum sive palustre, water Horehound.
Maspeta, folia Silphii, the leaves of the herb Silphium.
Mastiche, Resina Lentisci, Mastick.
Mater Caryphillorum, or Caryophillorum, Mothercloves.
Mater Herculanea Apuleii, Nymphaea, wa-eer Roses.
Matricaria, Feverfew.
Matrisalvia, Scarlea, Clary.
Matrisylva Herbariorum, Caprifolium, Honyfuckle.
Matrix, Mediana vena, the Median vein.
Matrix, Uterus, the womb.
Matronaria, sive Matronella, Feverfew.
Mattiaca-pila, Matialis, Sapo, Sope.
Mauriaria, Dracontium, Dragons.
Mecon, Papaver, Poppy
Meconitis, Cataputia sylvestris, Wilde Spurge.
Meconrhœas, Papaver erraticum, a Corne rose.
Mediana, the Median vein.
Medicamen de Turbith, a purging medicine.
Medulla, Marrow.
Mehezeregi Avicennæ, Pityusa, Spurge.
Melanphyllon, Acanthus, Bears claw.
Melampodium, Veratrum nigrum, the black Neesewort.
Melampelos, Helcine, Pellitory of the wall.
Mel aerium, Hony dew.
Melancholia, Mentis alienatio ex atra bile nata, mœstitia metu conjuncta, Melancholy, kind of madnesse.
Melanium Theophr. Viola nigra, a kind of Violet.
Malanthium, Nigella, Nigel, Gitta.
Mel, Hony.
Mel Anacardinum, the Hony of Anacardium.
Mel cedrinum Hippocr. Manna liquida. Hony dew.
Mel Mirobalanorum, the Sirupe of Mirobalans.
Mel roreum, Hony dew.
Mel rosaceum, sive Mel rosarum, Hony of Roses.
Melaga, sorghum, a kind of Millet brought from India.
Meli Calaminon Arriani, Saccarum, Sugar.
Melia,

The Third Index.

- Melia Fraxinus, an Ash tree.
 Melicratum, wine and hony soddn together.
 Melica Herbariorum, Indian Miller.
 Melilotum, or Nelilotes, Melilot.
 Melilotus Avicennæ, great Melilot.
 Melilotus alba officinarum, white Melilot.
 Melilotus coronata a kind of Melilot.
 Melilotus lutea officinarum, yellow Melilot.
 Melilotus minor, the lesser Melilot.
 Melilotus nobilis Herbariorum, a kind of Melilot.
 Melilotus Serapionis, a kind of Melilot.
 Melilotus Catonis, or
 Melilotus Dioscoridis, Italian Melilot.
 Meline, or
 Melinus, Panicum, Panick.
 Meline Varronis, Melium, Mill or Millet.
 Meliphyllon, Melissa, Baulme.
 Melissa, Citrigo, the same.
 Melissa Cretica, or
 Melissa Turcica Herbariorum, Turkish Balme.
 Melisschoortes Nicolai Myrepsi, or
 Melissophyllum, Baulm.
 Melitites, honied wine.
 Melitæna, and
 Melittæa Melissa, Baulm.
 Melizoron, Mulsun, sweet wine or Mead.
 Melium aquaticum, a kind of Ragwort.
 Melligo, Manna, Hony dew.
 Melo, and.
 Melon, a Melon.
 Melocarpon, Aristolochia longa, Long Hartwort.
 Melopepo, Melo, a Melon.
 Melothrum, Vitis alba Briony the white.
 Menianthes, trifolium bituminosum, water Claver.
 Menium, Pæonia, Piony.
 Menogonium, Piony flowers.
 Meninges, involucri duo Cerebrum circum-
 quaque contegentia, quorum exterius,
 quod adversus cranii impressiones cerebri
 veluti propugnaculum est, tegumentum,
 Crassa sive dura Meninx appellatur, &
 Chirurgis dura mater. Aliud quod tenu-
 issimum est, & cerebro penitus conjun-
 ctum, Choroides appellatur, Chirurgis
 Pia mater: the two skins that compasse
 or wrap the brain.
 Menses, or
 Menstruum, the flowers, or terms in wo-
 men.
 Menstruum album, the whites in wo-
 men.
 Menthai Mintha, Mints.
 Mentha aquatica, water Mints.
 Mentha, caballina, or Mentastrum, horse
 Mints.
 Mentha crispa, rumpled Mints.
 Mentha equina, horse Mints.
 Mentha felina, Nepeta felina, Nep.
 Mentha rubra, a kind of Mints, red
 Mints.
 Mentha sativa, garden Mints.
 Mentha sylvestris, wilde or horse Mints.
 Mentagra, Menti impetigo, a scabbiness of
 the face.
 Mentastrum, Mentha sylvestris, wilde or horse
 Mints.
 Mentastrum acutum Herbariorum, a kind of
 wilde Mints.
 Mentastrum Apuleii, or
 Mentastrum Plinii, Pulegium agreste, wilde
 Mints.
 Mentis error, Madnesse.
 Mercurialis, Linosotis, herb Mercury.
 Mercurius Chimistarum, Hydrargyron,
 Quick silver.
 Mercurius præcipitatus, Precipitate.
 Mercurius sublimatus, sublimat.
 Meris, Tripolium, a kind of Turbith.
 Meri Arabum, Oesophagus, the mouth of the
 stomach.
 Meseraica vena, certain little veins in the Li-
 ver.
 Mespilum, a Medlar, or Open-arse.
 Mispilus, a Medlar or an Openarse tree.
 Metallum, Metal.
 Metopium, Ferula galbanifera, the herb of the
 which the gum Galbanum is made.
 Metra Hippocratis, Uterus, the Womb.
 Meu Arabum,
 Meon, or
 Meum, Mew.
 Mezereon Arabum, Lorel or Laurel.
 Mica thuris, Mantia thuris, the fragments of
 Frankincense.
 Micancalus, flos githaginis, a Corn rose.
 Michleta, a confectiion so called.
 Milax barbarorum, Smilax, Taxus, a tree like
 Fir.
 Milium, Millet.
 Milium Indicum, five,
 Millium saburrum, Indian Millet.
 Milium solis, Lithospermum, Gromil.
 Millifolia, or
 Millifolium, Yarrow, Noseblood, or Mil-
 foile.
 Millimorbia, or
 Millimorbium, Figwort.
 Milos, Taxus, a tree like Fir.

The Third Index.

- Miltos Plinii, Cinnabaris nativa, *natural Cinoper.*
 Milvus, *or*
 Milvus, a Kite.
 Minii gleba Celsi, Terra lemnia, Terra sigillata, *or sealed earth.*
 Minium, *red lead.*
 Minium Dioscoridis, *or*
 Minium Plinii, Cinnabaris metallica, Cinoper.
 Minium lemnium, terra lemnia, *sealed earth.*
 Minium artificiale, *artificial Cinoper.*
 Minium nativum, Cinnabaris metallica nativa, *natural Cinoper.*
 Minium officinarum, *or*
 Minium secundarium, *red or burnt lead.*
 Mintha, Mentha, *Mints.*
 Mintha agria, Mentastrum, *horse Mints.*
 Miserevivium Apuleii, Polygonum, Knot-grasse.
 Mithridatium Dioscoridis, Trixago palustris, *water Germander.*
 Mithridatium, antidotus Mithridatis, *Mithridate.*
 Mithridatium, *or Mithridatia* Apuleii, Scordium, *water Germander.*
 Miva Cydoniorum, *and Miva* Cydoniorum simplex officinarum, Syrupus Cydoniorum simplex, *the sirup of Quinces.*
 Miva Aromatica officinarum, Syrupus Cydoniorum Aromaticus.
 Mnion, Muscus, *Mosse.*
 Mola, *a piece of flesh without shape growing in a womans Womb.*
 Molge, Salamandra, *a Salamander.*
 Molocho, Malva major, *the great Mallow or Hollihock.*
 Molotriculum Veneris.
 Moly Galeni, Ruta montana, *wilde Rue.*
 Molybdæna Plinii, persicaria major, persicaria maculata, *the greater sort of Arse-smart.*
 Molybditis Plinii, Spuma plumbi, Litargium, plumbi, *Litargie, or white Lead.*
 Monembasites, Nicolai Myrepsi, Vinum Malvaticum, *wine made of Mallows.*
 Monoceros, Unicornium, *an Unicorn.*
 Montulmus Gazæ, Ulmus montana, *a kind of Elme.*
 Mora, poma sive fractus mori, Mulberries.
 Mora bati, *Bramble berries*
 Mora Celsi, *Mulberries.*
 Mora rubi, *Bramble berries.*
 Mora rubi, Idæi, *Frambois.*
 Morbus arquatus, Morbus regius, *the yellow Jaundise.*
 Morbus caducus, Morbus comitialis, Her-
- culeus, lunaticus, *the falling sicknesse.*
 Morbus comitialis, *vide Morbus caducus.*
 Morbus Divi Fiacari, Condyloma, *the Em-
rods.*
 Morella Herbariorum, Solanum, *Night-
shade.*
 Morea, *Mulberry tree.*
 Morsus Diaboli *Divels bit.*
 Morsus gallinæ, *running Bur Wheat.*
 Morsus mulierum, *Germander.*
 Moron, Morum, *a Mulberry tree.*
 Morus, Morea, *the same.*
 Morus vaticana, *Blucherry Bush.*
 Moscus, Muscus *Musk.*
 Moschocaryon, Muschocarydion, *a Nut-
meg.*
 Mucago, Mucilago, *and of the Apothecaries*
 Mucilago: *it is a slime or juyce which is
drawn either out of herbs, roots, or seeds.*
 Mula herba Gazæ, Hemionium, *Harts
tongue.*
 Mulsum, *sweet wine.*
 Multinervia, Plantago major, *the great Plan-
tain.*
 Multinodia, Polygonum, *Knotgrasse.*
 Multinodia minor, *the lesser Knotgrasse.*
 Mumia Arabum, Pissasphaltum factitium,
Mummy.
 Mumia Græcorum, Pissasphaltum, *the
same.*
 Mumia sepulchrorum, *the same.*
 Muria, *Salt water, pickle, or brine.*
 Muria Colymbadum, Muria Olivarum, *the
liquor of Olives.*
 Muria Lemoniorum, *the brine of the Lemons.*
 Muria Olivarum, *Olive brine.*
 Muralium, Helxine, *Pellitory of the Wall,*
 Muscatellum vinum, *Muscadel.*
 Muscus arborum, *Mosse.*
 Mustum, *new wine, or Must.*
 Mustum coctum, *sodden wine.*
 Myacantha, *a Palme tree.*
 Myacantha Aeginetæ, Asparagus myacanthinus, *Sperage.*
 Myces, Fungus, *a Toad stool, or Mushrome.*
 Myositis, Eufrasia cærulea, *blew Eyebright.*
 Myrmex, Formica, *an Ant, Emmet, or pis-
mire.*
 Myrapia, *or Myrapidia,* Pyra muscatella, *a
kind of pleasant and odoriferous
Pears.*
 Myrica, Tamarix, *a Tamarisk tree.*
 Miricites, Uinum Miricinum, *or Tamarici-
rum, wine made of Tamarisk.*
 Myrobalanus, Bellerica, *a kind of fruit grow-
ing in India.*

Myrobalanus

The third Index.

Myrobalanus Cepula, vel Chebula, the same.

Myrobalanus citrinus officinarum, Myrobalanus flava.

Myrobalanus Empelutica, or imblica.

Myrobalanus Inda, Myrobalanus nigra.

Myrobalanus Gæcorum, myrobalanus unguentaria, a strange fruit called Ben. Look for Ben, in the second Index.

Myrrha, a sweet gum called Myrre.

Myrrha Troglodytica, a very excellent gum so called.

Myrrhis Cicutaria, Kex Cax, Assè Parsly, mock Chervil.

Myrsine, Myrthus, or Myrtus, the Myrtle tree.

Myrsine agria, Ruscus, Kneeholme.

Myrsionides, Unieordia, Perwinckle.

Myrtillus officinarum, Bacca myrti, the berries of the Myrtle tree.

Myrthacantha, Ruscus, Kneeholme.

Myrtus, a Myrtle tree.

Myrtus aculeata, myrtus acuminata, a kind of Myrtle.

Myrtus humilis, the same.

Myrtus terrestris, Ruscus, Kneeholme.

Myxa, or Myxaria, a kind of fruit so called.

N

NAocaphton Pauli, Naocauton, Nardaphton, black or common Frankincense.

Naphta, Petroleum, Bitumen liquidum, and Bituminis Calamentum, a kind of maunde or chalkie clay.

Napellus. Tota.

Napellus Moysis, Avicennæ Napellus saluteris, Antithora, it is a root much like unto Zeduary, but yet is not the right Zeduary, but an other unknown root.

Napi, Sinapi, Mustard seed, or the herb it self.

Napus, sive Napum, a Turnep.

Narce, Gentiana, and Centaurium magnum, Gentian, Bitterwort.

Narcissus, the white of Daffodil.

Narcissus Autumnalis, Flos Colchici, a Daffodil.

Narcissus luteus, a yellow Daffodil.

Narcissus Roseus, Rhodionarcissus Herbariorum.

Narcissus verus, a Daffodil.

Narcissus officinarum, Lenconium Theophrasti, an Italian Daffodil.

Narcissus Virgilii, Narcissus Theophrasti.

Narcotica, or Narcoticapharmaca, medicamenta, quæ frigiditate torporem adferunt, it is a certain medicine which maketh people stupefactive, or some of their members insensible.

Nardinum, Oyl of the Spikenard.

Nardus, Nardus, or Spica from India, Nardus indica.

Nardus Celtica, Nardus Romana, Nardus Gallica, a kind of Spikenard.

Narcaphtum, Thymiana, a kind of Frankincense.

Nascaphtum, the same.

Nasturtium, Nasturtium hortense, towne Cresse garden Cresses, or Nosemart.

Nasturtium aquaticum, water Cresses.

Nasturtium album, Raphanus marinus, Horse-radish.

Nausea, a disposition or will to vomit.

Nebula oculorum, the dimnesse of the eyes.

Nectris, or Notris Pollucis, Oliva conditanea, an Olive.

Nephrytis, Renum dolor, a grief or sicknesse in the Reins.

Nepeta, or Nepita, Calaminta, Nep.

Nepenthes, Buglossum, Buglosse.

Nenuphar, or Nenuphar Arabum, Nymphaea the flower-deluce.

Neregil, Nux Indica, an Indian nut.

Nerantzia malus, an Orange tree.

Neranzion, or Narauzium malum, the seme.

Nerion, Nerium, Rhododendron, Rose lawrel, Bay Rose tree, Oleander.

Nervorum resolutio, or dissolutio, is a dissolving or weakening of the sinews, called Paralysis Nervus, a sinew.

Nesium Apuleii, Centaureum magnum, the grrat Centory.

Neurospaston Plinii, Oxyacantha Dioscoridis, the Berbery tree, sharp or Tartbery tree, the white Thorn tree.

Nigella, Melanthium, Coriander of Rome Narde, Pepperwort.

Nigella alba, Melanthium album, white Pepperwort.

Nigella Romana, Coriander of Rome.

Nigellastrum, Corn rose.

Nihili album officinarum, Pompholyx, Tutty

Nihili griseum officinarum, Spodium Græcorum, Tutia Arabum, gray Tutty.

Nil album officinarum, Tutty.

Nil griseum officinarum.

Nitrum, Salpeter.

Nonifolium Ennaphyllum, wild Neeswoort.

Nucis myristicae involucrum, Nucis muscatae involucrum, Macis, the spice called Mace.

Nucis regiae Juli, the blossoms of the nut tree.

Nuclei pinei, the kernel of a nut so called.

Nucleus ferri, Chalybs, Steel.

Numularia. Centummorbia, silver grassie.

Nursina, Pila Martialis, Napus, a Rape or Turnep.

Nux, Nut, and nut tree: by this word nut, is

M m m 3 under

The third Index.

understood all fruits having hard shels like
a Nut.
Nux avellana, a *Hazel nut*.
Nux aromatica, a *Nutmeg*.
Nux Basilica, a *Walnut*, or *Walnut tree*.
Nux castanea, a *Chestnut*.
Nux cyparissi, *Pilula cyparissi*, a *Cypresse nut*.
Nux equina, a *Horse nut*.
Nux Indica, an *Indian nut*.
Nux Juglans, a *Walnut*.
Nux Lungobardica, *Lombarby nuts*.
Nux Myristica, a *Nutmeg*.
Nux Moscata, or *Muschata*, a *Nutmeg*.
Nux Græca, *Amygdalus*, an *Almond*, or *Almond tree*.
Nux Heracleotica, a *Hazel nut*.
Nux Myrepica, a *Nutmeg*.
Nux Persica, a *Persian nut*, and *nut tree*.
Nux Pineæ, *Pingles*.
Nux Pontica, a *hazel nut*.
Nux Regia, the same.
Nux Tassia, an *Almond*.
Nux Vomica.
Nux ungeuntaria a *Nutmeg*.
Nyctalops, *Lusciosus*, one that is *purblind*.
Nycteris Ætii, or *Nycteritis*, a *Rearmouse* or *Bat*.
Nymphæa, the *yellow Flower-de-luce*, or *Water Lillie*.
Nymphæa alba, the *White Water Lillie*, or *Rose*.
Nymphæa Feraclea Plinii, the same.
Nymphæa lutea, *yellow water Lilly*, or *Rose*.
Nymphæa minor, the *lesser Nenuphar*.
Nymphæa lutea minor, the *lesser yellow water Lillies* or *Roses*.

O

OA, *Sorbus*, *Servis tree*.
Ocimum, vide *Ozymum*, and *Ozimum*.
Ocneron, *Ruscus*, a *kind of shrub* so called.
Oculus canis, *Conyza*, a *certain herb* so called.
Oculus leporis, *Gariophyllara*, *Avens*.
Oculus suis, *Aster Atticus*, *Share*, *Stirr*, or *Codwort*.
Ocymastrum, *Cardianthemum*, a *kind of Gil-loflowers* so called.
Ocymum, *Basilicum*, *Basil*.
Oedema, *Undinia chirurgorum* vulgo, an *impeftume* coming of *stegmatick matter* without *grief*.
Oenanthe, *Flos vitis sylvestris*, *Flos Labruscæ*, the *blossomes of the wilde Vine*.

Oenanthe herba, *Filipendula*, *Dropwort*.
Oenarum Pampinus, a *vine lease*, or *green branch*.
Oenomeli, *Mulsum*, *sweet wine*.
Oenolithos, *Lapis vini*, *Tartarus*, or *Tartarum*, *Argoyle*, or *Winestone*.
Oenorhodon, *Vina rosa*, *Wine Rose*.
Oenos, *Vinum*, *Wine*.
Oesophagus, *Stomachus*, *Orificium ventriculi*, the *mouth of the stomach*.
Oesipum, or *Oesipus*, the *filthy oyl* that is in the *flanks of a Sheep*.
Olea, *Oliva*, the *Olive tree*.
Olea sylvestris, *Oleaster*, the *wilde Olive tree*.
Oleaster, the same.
Olei sex, *Amurca Olei*, the *dregs of oyl*.
Oleander, or *Oleandrum*, *Bararorum Rhododedrum*, *Oleander*.
Oleum Olivum, *Oyl of Olives*.
Oleum Anisi, *Oyl of Annise*.
Oleum Antimonii, *Oyl of Antimony*.
Oleum Amygdalarum, or *Oleum Amygdalarum ducium*, *Oyl of Almonds*.
Oleum Amygdalarum amararum, *Oyl of bitter Almonds*.
Oleum balaninum, *Oleum glandis unguentaria*, *Oyl of Behen*.
Oleum Camelinum, *Oleum sesaminum officinarum*, *Oyl of Camomil*.
Oleum Chamemelinum, the same.
Oleum Nucleorum Persicorum, *Oyl of Peachkernels*.
Oleum Caryophyllorum, *Oyl of Cloves*.
Oleum Costinum, *Oyl of Costus*.
Oleum Cucurbitinum, *Oyl of Gourds*.
Oleum Cucumeris Asinini, *Oyl of wild Cucumbers*.
Oleum Cicinum, vide *Oleum Ricinum*.
Oleum cydoneorum, *Oyl of Quinces*.
Oleum Euphorbii.
Oleum Hyperici, *Oyl of Saint Johns wort*.
Oleum Irinum, *Oyle of the Flower-de-luce*.
Oleum florum nucis Juglandis, *Oyl of the blossome of the Walnut tree*.
Oleum de Kerva, *Oleum ricinum*, *Oyl of Palma Christi*.
Oleum de lateribus, *Oleum Philosophorum*, *Oyl of Bricks*.
Oleum Laurinum, *Oyl of Bays*.
Oleum ligustrinum, *Oleum cyprinum*, *Oyl of Priver*.
Oleum Liliorum, *Oyl of Lillies*.
Oleum

The third Index.

- Oleum Lini, *Oyl of Lin or Flax.*
 Oleum macis, *oyl of Mace.*
 Oleum mastichinum, *Oyl of Mastick.*
 Oleum matricariæ, *oyl of sweet Marjoram.*
 Oleum melinum, *oyl of Quinces.*
 Oleum de mentha, *Oyl of Mints.*
 Oleum menthaceum, *the same.*
 Oleum Myrtinum, *oyl of Mirtles.*
 Oleum myrtillorum officinarum, Oleum
 Baccarum myrti, *the same.*
 Oleum Narcissinum, *oyl of Narcissus.*
 Oleum nucum juglandium, *oyl of Wal-*
nuts.
 Oleum nucis Indicæ, *Oyl of Indian Nuts.*
 Oleum nucis muscatæ, Oleum nucis myri-
 sticæ, *Oyl of Nutmegs.*
 Oleum Nenupharis, or Oleum Nymphæa,
Oyl of Nenuphar, or White Water Rose.
 Oleum Olivarum, *Oyl of Olives.*
 Oleum Omphacinum, *Oyl of Olives not full*
ripe.
 Oleum Ovorum, *oyl of Eggs.*
 Oleum florum papaveris, *oyl of Poppy.*
 Oleum seminis papaveris, *oyl of the seed of*
Poppy.
 Oleum petræ, Petroleum, *an oyl that natu-*
rally runneth out of the stone.
 Oleum Philosophorum, *oyl of Bricks.*
 Oleum de pipribus, *oyl of Pepper.*
 Oleum Piperinum stillaticium, *oyl that is di-*
stilled out of Pepper.
 Oleum Ricinum, *oyl of Palma Christi.*
 Oleum Rosaceum, *oyl of Roses.*
 Oleum Syocinum, Oleum Cucumeris asini-
 ni, *oyl of wilde Cucumbers.*
 Oleum Sufinum, *oyl of Lillies.*
 Oleum Staphidis, agriæ, *oyl of Stavesa-*
cre.
 Oleum Sesaminum officinarum, *oyl of Cam-*
momil.
 Oleum sulphuris, *oyl of Brimstone.*
 Oleum scorpionum, *oyl of Scorpions.*
 Oleum Sinapis, or Oleum Sinapinum, *oyl of*
Mustard.
 Oleum Stimmios, Oleum Antimonii, *oyl of*
Stibium, a stone so called.
 Oleum viride, Oleum Omphacinum, *oyl of*
unripe or green Olives.
 Oleum Vitrioli, *oyl of Vitriol.*
 Oleum lumbricorum, Oleum vermium terre-
 strium, *oyl of earth-Worms.*
 Oleum cyprinum, Oleum ligustrinum, *oyl*
of Privet.
 Oleum Raphaninum, or Oleum seminis Ra-
 phani, *oyl of Radishes.*
 Oleum Rhabarbari, *oyl of Rubarb.*
 Oleum Sandaracæ, *oyl of Juniper gum.*
 Oleum vermium terrestrium, vide Oleum
 lumbricorum.
 Oleum seminis Raphani, vide Oleum Ra-
 phanium.
 Oleum Absinthii, *oyl of Wormwood.*
 Oleum Leuconium, Oleum cheyrinum, *oyl*
of Violets.
 Oleum Cheyrinum, Oleum leuconium.
 Oleum granorum Juniperi, *oyl of Juniper*
berries.
 Oleum Nardinum, *oyl of Spikenard.*
 Oleum ex immaturis Olivis confectum, *oyl*
of unripe Olives.
 Oleum Spicæ nardi, *oyl of Spikenard.*
 Oleum Tartari, *oyl of Tartar.*
 Oleum resinæ abietis, *oyl of Turpen-*
tine.
 Oleum Therebinthinæ officinarum, *oyl of*
Turpentine.
 Oleum Triticici, *oyl of Wheat.*
 Olibanum officinarum, Opolibanum, white
Frankincense.
 Olibanum testiculatum, a kind of Frankin-
cense.
 Oliva, Olea, an Olive tree.
 Oliva conditanea, Olives.
 Olivum, Oleum olivarum, *oyl of Olives.*
 Olus atrum, Alisander, or Lovage.
 Olus aureum, Atriplex, Orage, Arech, or
 or golden herb.
 Olus rubrum, Blitum rubrum, red Spin-
 age.
 Olus Hispanicum, five Olus Spinacium,
 Spinage.
 Olus agninum Plantago, Plantain, or Wey-
 bry.
 Omentum, vulgo Zirbus, the caul, or suet,
 wherein the bowels are lapt.
 Omphacinum, vulgo Agresta, succus è la-
 brusca, vel uvis acerbis, Verjuyce.
 Omphalecarpos, aparine, Goeshâtr.
 Omphax, tva immatura, uva acerba, an
 unripe Grape.
 Onicidæ, Gallæ asinina, a kind of Gauls.
 Oniscus, Afellus, a kind of fish so called.
 Onitis, Origanum Creticum, bastard Mar-
 joram, Spanish Origan.
 Onocardium, Dipsacus, Fullers Thistle, or
 Teazil.
 Onopretium Herbariorum, Felicula sello-
 rum Adiantum album, Maiden hair.
 Onoriganum Herbariorum, Origanum affi-
 ninum sic dictum, quod folium ejus affi-
 nis pabulo sit gratum, Onitis, ba-
 stard Marjoram, or Spanish Ori-
 gan.
 Onyx, Blattium Bizantium, vide Blacca Bi-
 zantia.
 Ophioctonum, Cerviosellas, a Parsnep.
 M m m 4 Ophio-

The third Index.

- Ophioglossum, *Serpents tongue.*
 Ophiostaphylos; Uva anguina, *a kind of shrub so called.*
 Ophthalmia, Lippitudo, *blearednesse of the eyes.*
 Ophthalmica herba, Eufrasia, *Eyebright.*
 Opisthotonus, *a kind of Cramp.*
 Oppertitus, Iris, *Flower-deluce.*
 Oppilation, *a stopping of the breast.*
 Opion, Opium, Liquor, vel lacryma, è vulneratis, papaveris nigri Capitulis fluens, *a certain dried sap of the black Poppy, which of the Apothecaries is called Opium.*
 Opopanax, lacrima panacis, officinis opopanaxum, *the dried sap or gum which is pressed out of the root of the herb Panax, which as yet is so called of the Apothecaries.*
 Opobalsamum, laquor Balsami, Balsamum, Judaicum, *natural or Jewish Balsamum.*
 Opolibanum, Thus, *Frankincense.*
 Opopyra, *a confection so called.*
 Opos Medicos, and Opos Syriacos, hoc est, Succus medicus, & Syriacus, *a kind of juyce so called.*
 Opulus, *Dog tree.*
 Orbicularis, *Sowes bread.*
 Orchis, Testiculus, *Gandergrasse, Ragwort.*
 Orchis mas major, *the male Gandergrasse or Ragwort, with the broad leaves.*
 Orchis mas minor, *male Gandergrasse with the narrow leaves.*
 Orchis foemina minor, *the female Gandergrasse with the narrow leaves.*
 Orchis Odoratus, *sweet Ragwort.*
 Orchis Serapias, *a kind of Ragwort.*
 Origanum, Origanus, *bastard Marjoram, or Spanish Origane, Organy.*
 Origanum Afininum, Onitis, *vide Origanum.*
 Origanum Hispanicum, *vide Origanus Heracleotica.*
 Origanum Hircinum, Tragoriganum, *vide Origanum.*
 Origanum panaceum, Origanum sylvestre, *wilde or common Origane.*
 Oripelea, Montinhus, Ulmus montana, *an Elme.*
 Orminum officinarum, Gallitricum, *Clary.*
 Orobax, Pæonia, *Piony.*
 Orobelium, *the same.*
 Orobethrom, Hypogistis, *a certain juyce so called.*
 Orobuz, Erum, *a kind of pulse bigger then Vetches, bitter Vetches, Tares.*
 Orneoglossum, Lingua avis, & officinis semen fraxini, *the seed, or keyes of Ash.*
 Ornus, Fraxinus montana, *an Ash.*
 Orthophnæa, *a straightnesse of breath, by stopping of the Lighes, that one cannot breath but holding his neck upright.*
 Ortyx Theophrasti, Herbæ genus, *Plantago, Plantain.*
 Orvala, sive Orballa Herbariorum, *Clary.*
 Oryza, Risum, *Rice.*
 Os Sepiæ, *Cuttlebone.*
 Os de corde cervi, Ossea cartilago cordis cervini, est propago quædam nervia duriuscula, crucis similitudine, *the bone that is in a Stags heart.*
 Ostracium Indicum, Blattum Byzantium, *an Indian shell, vide Blatta Byzantia.*
 Ostracum Galeni, Cothleæ domus, *a Snail shell.*
 Osyris, vel Osyrias, *wilde Flax.*
 Othonium, Chelidonium majus, *Celandine the greater.*
 Oxalis, vulgo Acetosa, *Sorrel.*
 Oxalis arvensis, Oxalis minor, tenuifolia vervecina, *the lesser Sorrel.*
 Oxalis gallica, or Oxalis rotunda, *round Sorrel.*
 Oxalis sativa, *same Sorrel.*
 Oxyacantha Galeni, Officinis Berberis dicitur, *the Berbery tree.*
 Oxyacanthites, *Berbery wine.*
 Oxyarcentis, *the greater Juniper tree.*
 Oxycraton, sive Oxycratum, *water and vinegar together, called Posca in Latine.*
 Oxycroceum, *vide Emplastrum Oxycroceum.*
 Oxygonum, Papaver erraticum, *the red cornrose.*
 Oxydrus Theophrasti, Juniperus minor, *the Gooseberry tree.*
 Oxylapathum Dioscoridis, Lapathum acutum, *Docks.*
 Oxylapathum Galeni, Lapathum acidum, *Sorrel.*
 Oxymalon persicon Laconi, prunum, *a Prune.*
 Oxymel sive Oxymel simplex, *Sirupe made of Vinegar and Hony.*
 Oxymel compositum, Oxymel diureticum.
 Oxymel de radicib. *a kind of compounded sirupe.*
 Oxymel Scillinum, sive Scilliticum, *a sirup of sea Onions, Vinegar and Hony.*
 Oxymel simplex, *vide Oxymel.*
 Oxymyrfive, Ruscus, *Kneeholme.*
 Oxyphœnica, Palmulæ Indicæ Tamarindi, *the fruit of the tree Oxyphœnix.*
 Oxyrrhodinum, Oleum rosaceum aceto dilutum, *Oyl of Roses & Vinegar together.*
 Oxyfaccharum, Officinis Oxyfacchara, *a sirup so called.*

Oxyfac.

The third Index.

Oxyfaccharum compositum, *a compounded
sirupe of Vinegar and Sugar.*
Oxytriphylum, Asphaltum, *wood Sor-
rel.*
Ozæna, five Ozæna, *a sore in the nose cau-
sing a stinking savour.*
Ozilete officinarum, or Ozylete, *perfu-
ming Candles.*
Ozimum, Ocimum, or Ozymum, *Ba-
sil.*
Ozymum aquaticum, *water Basil.*
Ozymum Caryophyllatum, or Ozymum mi-
nus, *the lesser Basil.*
Ozimum crispum, *crisped Basil.*
Ozimum minus, vide Ozimum Cariophylla-
tum.

P.

PAbulum anserinum, *Alsine; Chick-
weed.*
Pabulum camelorum, Scœnanthum, Squi-
nanthum.
Pabulum cervi, Elaphoboscum, *A kinde of
Sage.*
Pæderos, and Pæderotes, Acanthus, *Bears
foot.*
Pæderotes, vide Pæderos.
Pæonia, *Pyony.*
Pæonia alba, *White Pyony.*
Pæonia fœmina, *Pyony the Female.*
Pæonina fœmina altera, *red Pyony.*
Pæonia mascula Plinii, Pæonia promiscua,
the same.
Pæonia mascula Dioscoridis, Pæonia
alba.
Pæonia multiplex, *double Pyony.*
Pæonia promiscua, vide Pæonia mascula,
Plinii.
Pæonium Apuleii, idem quod Pæonia, *Py-
ony.*
Pææde, Pæonia, *the same.*
Pala marina Barbarorum, Balla marina
officinarum, *sea balls.*
Palimpissa, Pix excocta, *Pitch twice sod.*
Palatium leporis.
Palma, Phœnia, *the Date tree.*
Palma Christi, *a tree so called.*
Palma Christi minor, Satyrium Basilicum
minus Herbariorum, *three leaved Gan-
dergrasse. Ragwort, or Dogstones.*
Palma Veneris, Satyrium Basilicum, *the
same.*
Palma virginea herbariorum, Pervinca,
Perwinkle.
Palmos, *the panting of the heart.*
Palmulæ Dactyli, Phœnices, *Dates.*
Palmulæ acidæ, Palmulæ Indicæ, Palmulæ
nigra Tamarindi, *sower Dates.*

Palmulæ Indicæ, vide Palmulæ acidæ.
Palmulæ nigra, vide Palmulæ acidæ.
Palmula Veneris, Satyrium regium minus,
a kinde of Ragwort.
Palpitatio cordis, *the panting of the
heart.*
Palpebra, gena, Blepharon, *an eye lid.*
Paludapium, Eleoselinum, *wilde Parsly, Smal-
lage.*
Pampinula, Pimpinella, *Pimpernel.*
Panaritium Barbarorum Paronychia, *A
disease often breeding in ones fingers.*
Panada, Panatilla Practicorum, *A pap made
with bread.*
Panacca, Ligusticum verum, *Lovage.*
Pancarpus, *Milkehistle.*
Pandionia radix, Chelidonium majus, *Co-
landine the greater.*
Pancranum, Thapsia, *a kinde of Turbitb.*
Panicum, *Panick.*
Panicum Indicum, *Indian Panick.*
Panigo, Panicum, *Panick.*
Panion, Satyrium, *Dog stones.*
Panis alcarit Barbarorum, Cyclaminus,
Sowes bread.
Panis bis coctus, Panis nauticus, *Bis-
ket.*
Panis ciconiæ, Colchichum, *Hermodactyles.*
Panis cuculi, Trifolium acidum, *Cuckoebread,
wood Sorrel.*
Panis fauni Barbarorum, Cyclaminus, *Sowes
bread.*
Panis Divi Johannis, Carrubia, *Sili-
qua.*
Panis nauticus, vide Panis bis coctus.
Panis terræ herbariorum, Cyclaminus, *Sowes
bread.*
Panthiceratos, Pæonia, *Pyony.*
Papaver, Mecon, *Poppy.*
Papaver album, *white Poppy.*
Papaver caninum, Papaver erraticum, *wilde
Poppy.*
Papaver caducum, *red Poppy.*
Papaver erraticum, vide Papaver cani-
num.
Papaver erraticum minus, *the lesser red
Poppy.*
Papaver fluidum Gazæ, Papaver rhœas, *the
same.*
Papaver sativum, *white Poppy.*
Papaver hortense, *the same.*
Papaver palustre, Nymphæa, *the White water
Lilly, or Rose.*
Papaver nigrum, *black Poppy.*
Papaver puniceum, Papaver rubrum, *red
Poppy.*
Papaver rhœas, vide Papaver fluidum.
Papaver rubrum, vide Papaver puniceum.
Papaver sylvestre Dioscoridis papaver ni-
wilde Poppy.

The third Index.

- Papaveralis*, red Poppy.
Papaveris minor, the lesser Poppy.
Papaveris caput Codia, the tops of Poppy.
Paralius, *Tithymalus marinus*, A kinde of Spurge.
Paralyfis, *paraphlegia*, *nervorum resolutio*, a discafe called the Palse.
Paralytica, or *Paralytica herba*, Cowslips.
Paralytica Alpina, Sanicle.
Paralyticus, one that hath the Palsey.
Paraphlegia, vide *Paralyfis*.
Paraphora, *Delirium*, vide *Mentis error*.
Pardalianches, a kinde of Wolfewort.
Parietalia, the Temples of the head.
Parietaria, and *Parietaria minor*, *Perdicium*, Pellitory of the wall.
Paron Itolorum, *Iliaca*, A pain in the guts.
Paronychia, *Panaritium Barbarorum*, A discafe growing in the fingers.
Parotes, *Abscessus secus aures*, An Impostume behinde the ears.
Parthenium, *Cotula foetida*, *Feverfew*, or *Motherwort*.
Paspahan, *Itolorum*, a powder so called.
Pascanthemum Herbariorum, *Bellis minor*, *Daisies*.
Paspale Hippocratis, *Millium*, *Miller*.
Pastinaca, a *Parsenep*.
Pastinaca alba, A white *Parsenep*.
Pastinaca cervina, *Elaphoboscum*, a kinde of *Parsenep*.
Pastinaca erratica, *Pastinaca vera*, wilde or yellow *Parsenep*.
Pastinaca nigra *Theophrasti*, *Pastinaca rubra*, A *Carrot*.
Pastinaca lutea, *Carotis lutea*, yellow *Carrot*.
Pastinaca sylvestris, *Pastinaca vera*, wilde *Parsenep*.
Pastinaca major Athenæi, *Careum*, *Cumin*.
Pastillum, *Isatis*, *Wood*.
Pastus Camelorum, *Scenanthum*, *Squinnanth*.
Passulæ officinarum, *Uvæ passæ*, *Raisons*.
Passulæ Chemesinæ, *Passulæ sine nucleis*, *Carans*.
Passulæ corinthiæ, vide *Passulæ siliciæ*.
Passulæ Damascenæ, *Uvæ Zizibæ*, vel *Zibebæ*, A kinde of *Raisons*.
Passulæ minores, *Currans*.
Patientia, the herb *Patience*.
Paverina Itolorum, *Alsine*, *Chickweed*.
Pavonaria Herbariorum, *Arsesmart*.
Pectis Apuleii, *Sympheicum magnum*, *Comfrey*.
Pedalium Apuleii, *Polygonum*, *Knotgrass*.
Pedicularia.
Pelagum Plinii.
Penidia, *Penidiorum*.
Pentapetes, *quinquefolium*, five leaved *grasse*.
Pentapleuron, *Hownds rib*, or the lesser *Plantain*.
Pentaphyllon, *Cinckfoyl*.
Pentorobon, *Peonia*, *Piony*.
Pentadactylon, *Ricinus*: *Palma Christi*.
Peplion, wilde *Purslain*.
Pepo, *Pepon*, A kinde of *Melons* called *Pompeons*.
Pepo muscatellinus, A kinde of *Pompeons*.
Pepo saccharinus, Another kinde of *Pompeons*.
Pepo saracenicus, A kinde of *Pompeons*.
Pepo Turcicus, the same.
Pera pastoris, *Bursa pastoris*, *Shepherds pouch*.
Perdicium, *Pellitory of the wall*.
Perfoliata, *Thorough wax*.
Perforata officinarum, *S. Johns wort*.
Pericardium, the skin that compasseth the heart.
Periclymenum perfoliatum, vide *Periclymenum Italicum*, sive *Periclymenum perforatum*, *Woodbinde*, or a kinde of *Hony-suckle*.
Perclymenum, *Periclymenus*, *Hony-suckle*.
Peristerion, *Columbaria*, *Vervain*.
Peripneumonia, An inflammation or impostume in the Lungs, with a vehement Fever.
Peristeropodium, *Pes columbinus*, *Storks Bill*.
Perla, *Margarita*, A kinde of pretious stone.
Perficaria Herbariorum, *Arsesmart*.
Perficum, a *Peach*.
Perficus, and *Perfica malus*, a *Peach tree*.
Perfites, *Tithymalus dulcis*, A kinde of *Spurge*.
Personatia, or *Personata*, *Clot*, or great *bnr*.
Pervinca, *Pervinkle*.
Pes Alexandrinus, *Pyrethrum*, *Bartrame*, or *Pellitory*.
Pes columbinus Herbariorum, *Pinckneedle*.
Shepherds bodkin, or *Storks bill*.
Pes gallinaceus, *Hartwort*.
Pes Leporinus, *Hares foot*.
Pes Leonis, *Pedalion*, or *Lions foot*.
Pes vituli, A kinde of *Cuckowpinte*.
Pestilentia, *Pestis*, A *Pestilence* or *Plague*.
Pestis, vide *Pestilentia*.
Petræleon, *Petroleum*, an oyl that naturally runneth out of a stone.
Petroselinum, a kinde of *parsly* growing on stones.
Petroselinum Alexandrinum, *Herbariorum*, *stone parsly*.
Petroselinum Macedonicum, the same.

Peuce,

The third Index.

- Peuce, Abies nigra, *A Firr tree.*
 Peucedanum, *Dog Fennel.*
 Phagadæna, *A running canker, or pock.*
 Pharmacon Suidæ, Petraleon, *An oyl naturally running out of a stone.*
 Phasganum, Gladiolus, *Sedge or Gladen.*
 Phaselus, five Phaseolus, *a kinde of pulse or long pease.*
 Phasiolus, Phaselus, *the same, a Turkish bean or pease.*
 Pheminalis, Pelomus, *a kinde of Primrose.*
 Philanthropus, Aparine, *a kinde of burrs that cleave mens coats.*
 Philonium, five Philonium Romanum, *A Confection so called.*
 Philonium persicum, *A Confection so called.*
 Philomedium, Chelidonium majus, *Celandine the greater.*
 Phlegma, *the humour in the body called Phlegme.*
 Phlegmone, inflammatio, *An Impostume, or bloud inflamed.*
 Phlogion, Viola Trinitatis, *herb Trinity, or Harts ease.*
 Phlomis, Verbasculum, *Cowslips.*
 Phlomos, Melanophyllos, Verbasculum nigrum, *Longwort, Woolblade, or Torch herb.*
 Phlomos agrios, Verbasculum sylvestre, *wilde Woolblade.*
 Phlox, *flower gentle.*
 Phoenix, Palma, *A Date tree.*
 Phoenicites, Lapis Judaicus, *Jewes stone.*
 Phrenitis, *A phrensie.*
 Phrycodes, *vide Febris phrycodes.*
 Phrygius lapis, *Amber.*
 Phehriasis, Morbus pedicularis, *the Louzy evil.*
 Phthirioctonum, Pedicularia, *Licebane.*
 Phthisis, *a kinde of Consumption.*
 Phthisicus, *one that hath a Consumption.*
 Phu, *Valerian.*
 Phu ponticum, *the same.*
 Phyleteria, five Phyleterium, Dictamus alba, *A certain herb so called.*
 Phylira, Tilia, *The Linden, or Fillet tree.*
 Phyllitis, Lingua cervina, *Harts tongue.*
 Phyllon, five Phyllon Indicum, *An Indian leaf, vide Malabathrum.*
 Phyllopharis, Marrubium, *Horehound.*
 Phyltrum, *Loveweed.*
 Phyrania, Fermentum, *sowr dough.*
 Physalis, Halicacabus, *Alkakeug.*
 Pia mater, *A little skin that covereth the brains, vide Meninges.*
 Pica, citra, Malacia, *A disease of longing unnaturally in a woman with childe.*
 Picea, Abies nigra, *a Pitch tree.*
 Picibitumen, Pissaspaltum, *Pitch, and the lime called Bitumen mingled together.*
 Pilula, Catapotium, Barbaris Pillula, *per duplex L. Pills.*
 Pillula cyparissi, Nux cupressi, *A Cypresse unt.*
 Pilulæ Alephanginæ Arabum, Pilulæ aromaticæ, *A kinde of Pills.*
 Pilulæ aromaticæ, *vide Pilulæ Alephanginæ.*
 Pilulæ aureæ, *a kinde of Pills.*
 Pilulæ de Agarico, *pills of Agaricus.*
 Pilulæ Assajereth, *pills so called.*
 Pilulæ de Aleo lota, *pills of washed Aloes, or Sengreen.*
 Pilulæ aggregativæ officinarum, Pilulæ Polychrestæ, *pills so called.*
 Pilulæ de Lapide Armoniaco, *pills of a stone so called.*
 Pilulæ de Bdellio, *pills made of the Gum Bdellium.*
 Pillulæ benedictæ, *certain pills so called.*
 Pilulæ cochix, *pills that purge the head.*
 Pilulæ communes, Pilulæ Ruffi, Pilulæ sine cura, *vide Pilulæ pestilenciales.*
 Pilulæ de Cynoglossa, *pills of Houndstongue.*
 Pilulæ de Euphorbio, *pills of the gum called Euphorbium.*
 Pilulæ Fœtidæ, *pills of Assa fœtida.*
 Pilulæ de Hiera, *pills of Aloes.*
 Pilulæ de Hiera composita, *pills of Aloes, and other things.*
 Pilulæ de fumo terræ, *pills of Pigeons, Cheruil, or Fumitory.*
 Pilulæ de Hermodactylis, *pills of Hermodactiles.*
 Pilulæ iliacæ, *pills for the Colick, or pain in the small guts.*
 Pilulæ Indæ, *pills of Indian Mirobalans.*
 Pilulæ de Hiera cum agarico, *pills so called.*
 Pilulæ de lapide Lazuli officinarum, Pilulæ de lapide Cyaneo.
 Pilulæ mastichinæ, *pills of Mastick.*
 Pilulæ de mezereo officinarum, *pills of Lovel.*
 Pilulæ de Chamelæa, *the same.*
 Pilulæ ophtalmicæ, *pills for the eyes.*
 Pilulæ de quinque generibus Mirobalanorum, *Pills of five kindes of Mirobalans.*
 Pilulæ de Opopanaco, *pills of the Gum Opopanacum.*
 Pilulæ polychrestæ, *vide Pilulæ aggregativæ.*
 Pilulæ pestilenciales, Pilulæ Ruffi, *pills against the plague.*
 Pilulæ ruffi, *vide Pilulæ communes, and Pilulæ Pestilenciales.*

The third Index.

Pilulæ de Sarcocolla, *Pills of a gum called Sarcocollum.*
 Pilulæ sine quibus, five, sine quibus esse nolo, *Pills so called, which some call Pilulæ sine cura, because they may be taken or used without all fear.*
 Pilulæ de Sandaracha, *pills of the Gum of a Juniper tree.*
 Pilulæ de Serapino, *pills of the Gum Serapinum.*
 Pillulæ de succino, *pills of white Amber.*
 Pilulæ de tribus, *Pilulæ pestilenciales.*
 Pilulæ de Rhabbarbaro, *pills of Rhabarb.*
 Pilulæ sine cura, vide Pilulæ Alephanginæ, Pilulæ pestilenciales, Pilulæ communes, Pilulæ sine quibus esse nolo.
 Pilulæ Stomachicæ, *Pills for the stomach.*
 Pimpinella crispa, Pimpinella petræa, Pimpinella minor, *Burnet, or Pimpinel, Pimpinel the lesser.*
 Pimpinella Hircina, *a kinde of Pimpinel.*
 Pimpinella Italarum, Sanguisorba, *Pimpinel.*
 Pimpinella major, *the great Pimpinel.*
 Pimpinella minor, vide Pimpinella crispa.
 Pinaster, Pinus sylvestris, *the wilde Pinetree.*
 Pinestell, Pinestellum, *Dog Fennel.*
 Pineæ officinarum, Nux Pineæ, *the fruit of the Pine tree.*
 Pingue lactis, *Pinguedo lactis, Cream.*
 Pinguitudo succidarum Lanarum, Oesypus, *the oyl that breedeth in the flank, or neck of a sheep.*
 Pinus, *A Pine apple tree.*
 Pinus sylvestris, vide Pinaster.
 Pinus pumila, *A kinde of Pine tree.*
 Pinula, Tricomanes, *Maindenhair.*
 Piper, *Pepper.*
 Piper album, *White Pepper.*
 Piper agreste, Vitex, Agnus Castus.
 Piper Aquaticum, Hydropiper, *water Pepper, Arsnick, Kilridge, or Cntrage.*
 Piper caninum, *the same.*
 Piper Eunuchorum, Piper Monachorum, Agnus castus, vide Agnus castus.
 Piper longum, *long Pepper.*
 Piper monachorum, vide Piper Eunuchorum.
 Piper montanum, *Lorrel.*
 Piper nigrum, *black Pepper.*
 Piperitis, Lepidium, *Indish Pepper, Alecoste.*
 Pira muscatellina, *Musk pears.*
 Piraster, *wilde pear tree.*
 Pirola, five Pirula, or Pirola pratensis, *wilde Beers.*
 Pissahygra, Pix liquida, *Tarr.*
 Pissasphaltum, Picbitumen, *Pitch and the lime called Bitumen mingled together.*

Pissasphaltum Arabum, Mumia officinarum, *the same.*
 Pissasphaltum Græcorum, Pissasphaltum nativum, *the same.*
 Pistaceum, five Pistacium, Pistachium, *A kinde of nuts commonly of the Apothecaries called Fistici.*
 Pistaceus, *A kinde of nut tree.*
 Pistachium, or Pistacium, vide Pistaceum.
 Pisum, *A Pease.*
 Phititis, Papaver nigrum, *Black Poppy.*
 Pituita, Phlegma, *Phlegme.*
 Pityides, Pineæ nuces, *the fruit or nuts of the*
 Pityusa, Esula major officinarum, Esula, *Spurge.*
 Pix, Pissa, *Pitch.*
 Pix arida, Pix concreta, Pix excocta, *hard, or stone Pitch.*
 Pix Brutia, Pix græca, *A kinde of Pitch.*
 Pix Fluida, Pix Liquida, *Tarr.*
 Pix navalis, pix radulana, *ship, or saylers Pitch.*
 Plantago, Plantain, or Waybread.
 Plantago acuta, five Lanceolata, *sharp plantain.*
 Plantago Aquatica, Plantago Palustris, *water Plantain.*
 Plantago lata Apulei, Plantago latifolia, *broad leaved Plantain.*
 Plantago lanceolata, Plantago acuta, *prickle leaved Plantain.*
 Plantago latifolia minor, Plantago trinervia, Plantago sylvatica, *the lesser broad leaved Plantain.*
 Plantago major, *the great Plantain.*
 Plantago media Herbariorum, Plantago minor Dioscoridis, *Waybread, or Ribgrasse.*
 Plantago minor Dioscoridis, vide Plantago media.
 Plantago acuta, vide supra.
 Plantago rubea, Plantago major, *red Plantain.*
 Plantago trinervia, vide Plantago latifolia minor.
 Plantago rosea, *A kinde of Plantain.*
 Planta leonis, Alchimilla, *Ladies mantle.*
 Plantagonium, Folium papaveris, *the leaf of Poppy.*
 Plantanella Spondylium, *Bear's foot.*
 Plantanus, *A Plane tree with broad leaves, growing in Italy, whom some do take for Opulus.*
 Platyophthalmion Plinii, Stimmi, *A kinde of purging glasse called Stibium.*
 Pleuritis, *the Pleurisie.*
 Plectronia, five Pelethronia Apulei, Centaureum magnum, *Centory the greater, vide Rapontica.*
 Plectranthemum, Consolida regia, *Larkspur.*
 Pleuriticus, *one that hath the Pleurisie.*

Plum-

The third Index.

- Plumbago Plinii, Perficaria maculata, *A kinde of Arsmart.*
 Plumbum, *Lead.*
 Plumbum ustum, *burnt Lead.*
 Podagra, *the Gout.*
 Prodagra lini Herbariorum, Cassyta, *Binde-weed.*
 Podex, *an Arsehole.*
 Polemonia, five Polemonium, vide Diptamus.
 Pollen, *Meal dust.*
 Polyanodynos, Cicuta, *Hemlock.*
 Polyanthemum Plinii, Ranunculus multiplex, *A kinde of Butter flower.*
 Polycarpon, Polygonum, *Knotgrasse.*
 Polycraton Hippocratis five Polycriton, *Arsmart.*
 Polygonoides, pervinca, *Perwinkle.*
 Polygonatum, Sigillum Solomonis, *Solomons Seal.*
 Polygonatum angustifolium, Polygonatum minus Herbariorum, *Solomons seal the lesser.*
 Polygonatum latifolium, Polygonatum platyphyllon, *the great Solomons seal.*
 Polygonatum majus, *the same.*
 Polygoatum minus, vide Polygonatum angustifolium.
 Polygonatum platyphyllon, vide Polygonatum latifolium.
 Polygonum, multinodia, *Knotgrasse.*
 Polygonum Heracleum Herbariorum, Polygonum mas, *Knotgrasse the male.*
 Polygonum scemina, Hippurus minor, *Knotgrasse the female, or Horsetail.*
 Polygonum masculum, vide Polygonum Heracleum.
 Polygonum minus, vulgo ruella, *the lesser Knotgrasse.*
 Polyneuron, *broad Knotgrasse.*
 Polyominon, Perdicum, Parietaria.
 Polypodium, Felicula, *Polipody.*
 Polypus, *a certain Impostume in the nose.*
 Polytrichon officinarum, Trichomanes, *Maiden hair.*
 Polytrichum Apuleii, *the same.*
 Polytrichum Dioscoridis, Polytrichum verum, *a kinde of Venus hair.*
 Polytrichum aureum Herbariorum, *the same.*
 Polytrichum verum, vide Polytrichum Dioscoridis.
 Pomada, five Pomata, *a sweet smelling salve made of Apples.*
 Pomata, unguentum Pomatum, vide Pomada.
 Pomelæa Herbariorum, *Lungwort.*
 Pompholyx nigra, *gray Tussy.*
 Pompholyx, *Tussy.*
 Pomum Arangiæ, Pomum Nerantzium, *an Orange.*
 Pomum Lemonium, five Limonium, *A Lemon.*
 Pomum sylvestre, *a Crab or wilde Apple.*
 Poplitis vena, *the vein of a mans ham behinde the leg.*
 Populago, Bechium, Falefoot, Alehoof, or Horse-hoof.
 Populeum officinarum, unguentum populeum, *Poplar salve.*
 Populus, *the Poplar tree.*
 Populus humilis five Populus pumila, *a kinde of Poplar.*
 Porcellana, Herbariorum, Andrachne, *Purflain.*
 Poros, *that matter which consolidateth the broken bones within.*
 Porrum, *a Leek.*
 Porrum aricinum, Porrum Capitatum, *headed Leeks.*
 Porrum sectile, five Porrum sectivum, *Leeks.*
 Porrum Tarentinum, *Leeks.*
 Porrum sylvestre, five Porrum vineale seu Ampelorasum, *wilde Leeks.*
 Portentilla Herbariorum, Argemone altera, *wilde Tansie, or Silver herb.*
 Posca, Oxycraton, *a kinde of small household wine, mixed with water in the presse: vide Oxycraton.*
 Præmorfa Herbariorum, Morsus Diaboli, *Devils bit.*
 Prasitis gemma, *a kinde of Saphyre.*
 Prasilium, Marrubium, *Horsehound.*
 Priapeion, Viola nigra, *a kinde of Violets.*
 Priapicon, Satyrium Erythronium, *a kinde of Gändergrasse.*
 Priapismus, satyriismus, satyriasis, satyriasmus, *a disease whereby the privy member of a man standeth alway, without appetite or lust of generation.*
 Priapus Cervi, *Pisse of a Hart.*
 Primula veriflora Herbariorum, five Primula veris, *Primrose, or Cowslips.*
 Probatium, Plantago, *Plantain.*
 Proetium, Veratrum nigrum, *black neese-wort.*
 Proserpinaca, *Knotgrasse.*
 Prosopium, five Prosopis, *the great Barr.*
 Protopium, *wine new pressed out of the Grape.*
 Protea Apuleii, Nymphæa, *the white water Lilly.*
 Pruneola, Prunia sylvestria, *Sloes.*
 Prunella Herbariorum, *Selfe-heal.*
 Prunidaetyla, *Damask Prunes.*
 Pruna Avenaria, *a kinde of Sloes.*
 Pruna Asinaria, or Pruna Asinina, *great Prunes.*
 Pruna Cereæ, five Cerina, *a kinde of Prune.*
Pruna

The third Index.

Pruna Cerina, five Cerea majora, great Italia Prunes.
 Pruna Damascena, Damask Prunes.
 Pruna Hiberica, Pruna Hispanica, Spanish Prunes.
 Pruna hordearia, White Prunes.
 Pruna equina, Horse Prunes.
 Pruna Syriaca, vel Pruna Syriacusana, Damask Prunes.
 Pruna Nana, harvest Prunes.
 Pruna sylvestria, Sloes.
 Prunum, A Prune.
 Prunum Passum, a dried Prune.
 Prunus, A plumtree.
 Prunus sylvestris, A Sloe tree.
 Prurigo, Prurigus, Itch.
 Pseudoacorus, Gladiolus luteus, sweet Canes.
 Pseudaristolochia, Capnos, Chelidonia, Swallows herb.
 Pseudoligusticum, Lovage.
 Pseudomelantium, Corn rose.
 Pseudonardus, Spica hortulana, & Lavendula, Spike.
 Pseudopastinaca, A Parsenep.
 Pseudomyrtus, vitis Idæa.
 Pseudoparthenium, Motherwort.
 Pseudorhaponticum, Centaureum magnum, great Centaury.
 Pseudofantalum, false Saunders.
 Psidium Herbariorum, Alchimilla, Sinnau.
 Psittachium Nicandri, Pistaceum, A kinde of nuts so called.
 Psilothrum, Vitis alba, Bryony.
 Psora Ætii, Scabiosa, Scabious.
 Psora Plinii, fera scabies, A certain kinde of scurvy Itch so called.
 Psyche, tripolium, A kinde of Turbith.
 Psychotrophon, Betonica, Betony.
 Psychuacos, Perdicium, Parietary.
 Psyllum, Fleawort.
 Psymmithium, Cerussa, White Lead.
 Ptelea, Ulmus, or
 Ptelea, an Elme tree.
 Pteris, Filix, Fern, herb Ofmund, or brake.
 Pterygophoron Dioscoridis, Lincurium, Electrum, Amber.
 Ptisana, Cremor hordei, A decoction of Barly Orgemond.
 Pugio Gaza, Gladiolus, Flower-deluce.
 Pulegium, Pennyroyal, or pudding grasse.
 Pulegium martis, Dictamum Creticum.
 Pulegium agreste, five sylvestre, wilde Pennyroyal.
 Pulicaria, five
 Pulicaris, Fleawort.
 Pulmonaria, Lungwort.
 Pulmonaria arborea, Lichen arboreus, a

kinde of Ludgwort, that groweth on trees like Mosse.
 Pulmonaria maculata, Sage of Jerusalem.
 Pulmonaria Gallica, Auricula muris major, the greater Mouseear.
 Pulmonaria Vegetii, wilde Neezwort.
 Pulvis Montagnanæ contra pestem, a certain powder for the Plague.
 Pulvis nihili officinarum, Tattay.
 Pulvis Senæ præparatus, the powder of Sene prepared.
 Pyon, pingue lactis, Cream.
 Pyra Apiana, or
 Pyra Muscatellina, or
 Pyra hordearia Plinii, A kinde of sweet Pearl.
 Pyrachya, the same.
 Pyrama, Ammoniacum impurum, the foul and impure gum Ammoniack.
 Pyrafter five
 Pyrus sylvestris, A wilde Pear tree.
 Pyrene Plinii, Tecolithus lapis, the stone calpis Lapis Judaicus.
 Pyretum, Pellitory of Spain.
 Pyretos febris, a burning ague.
 Pyrites, Pyrethrum, Pellitory of Spain.
 Pyrites lapis, lapis luminis, Marchasita, the Mine of Brasse.
 Pyrola, five
 Pyrula, wilde Beets, or Winter green.
 Pyrola pratensis, five
 Pyrula pratensis, wilde Beets.
 Pyrum, a Pear.
 Pyrum Cidoneorum, a Quince.
 Pyrus, a Pear tree.
 Pythonium Apuleii, Dracunculus major, Dragons.
 Pythonium Dioscoridis, Hyoscyamus, Henbane.
 Pyxantha, or
 Pyxanthus, Chironius Plinii, the Barberry tree.
 Pyxos, Buxus arbor, the Box tree.

Q

Quassamus barbarorum, Cyclaminus, Soves bread.
 Quartana, a Quartain ague.
 Quercula, Trixago, Chamedrys, German-der.
 Quercus, an Oak or an Acorn tree.
 Quinquefolium, Cinquefoil.
 Quinquenervia, Plantago minor, the lesser Plantain.
 Quotidiana, a Quotidian or daily Ague.

The Third Index.

R:

R Adicula, Raphanus, *A Radish.*
 Radix, Raphanus, *A Radish.*
 Radix barbarica, Rhabarbarum, *Rubarb.*
 Radix concava Herbariorum, *Hartwort.*
 Radix colophonix, *Scammony.*
 Radix consecatrix, Iris, *Flowerdeluce.*
 Radix pandeonia, *Celandine.*
 Radix pontica, Rhaponticum.
 Radix Scammonia, *the root of Scammony.*
 Radix Scythica, Glycyrrhiza, *Licorice.*
 Radix violacea vulgo dicta, *the Flowerdeluce.*
 Ramex varicosus, *A Rupture of swollen veins.*
 Ranunculus, *Crowfoot.*
 Ranunculus multiplex, Polyanthemum, *Bachelours buttons.*
 Ranunculus rotundus, Flamula, *the lesser Golden knap or Butter flower.*
 Rapa five
 Rapum, *the Rape root.*
 Rapaneolus Herbariorum, genus Rapi sylvestris, *A wilde Rape.*
 Raphanus condimentarius, five
 Raphanus obsoniorum, *An Horseradish.*
 Raphanus sylvestris, Armoracia, *A wilde Radish.*
 Rapocaulis Herbariorum, *Rape Coleworts.*
 Raponcellus, five Rapontium.
 Rapontium, vide Raponcellus.
 Raponcellus,
 Rapuntium, seu
 Rapunculum Herbariorum, *the same.*
 Rapuntium sylvaticum, *the wilde.*
 Rapontium Alopecurum Herbariorum, *the same.*
 Rapum porcinum Herbariorum, Cyclaminus, *Sowes bread.*
 Rapum sylvestre, *wilde Rape root.*
 Repulitia Barbarorum, Glycyrrhiza, *Licorice.*
 Repletio, *fulnesse of body.*
 Res non naturales.
 Refina, *Rosin.*
 Refina pinus, five refina pinea, *Gum of the Pine tree, or the Rosin of the Pine.*
 Refina Laricis, five Larigna, *the common Turpentine.*
 Refina Lenticina, Mastiche, Mastix, *Mastic.*
 Refina Therebentina, *Venetian Turpentine.*
 Rha Rheon, Rheum, Rhaponticum.
 Rhabarbarum, Rhebarbara, *Rubarb.*
 Rhabarbarum ponticum Herbariorum, *herb Patience.*

Rhacoma Plinii, five Recoma, *the same.*
 Rhapontica, five Rhaponticum, *the same.*
 Rhaponticum, five Rhaponticum officinarum, *the root of the greater Centory.*
 Rhæa, five Rhoa, *the Pomegranate trees.*
 Rhagadia, five Rhagades, *Chaps and clefts in the hands, and other parts of the body.*
 Rhagoides, *the third rinde or skin that compasseth the eye.*
 Rhaspe Nicolai Myrepsi, Rhaspatitium vinum.
 Rhecoma Plinii, five Rhacoma.
 Rheon, vide Rha.
 Rheon Barbaricon, five Rheon Barbarum, *Rubarb.*
 Rheuma, *A Rheume or distillation of humors.*
 Rheum barbarum Monachorum, Rumex-sativus, *Monkes Rubarb, Patience.*
 Rhododendrum, five Rhododendrum Nerion. *Oleander.*
 Rhodionarcissus, Narcissus Roseus, *red Narcissus.*
 Rhododaphne, Laurus rosea, Nerion, *A kinde of Oleander.*
 Rhodon, Rosa, *A Rose.*
 Rhodium, Oleum rosarum, *oyle of Roses.*
 Rhodosantalum, Santalum rubrum, *Red Saunders.*
 Rhodes, vide Febris Rhodes.
 Rhopalon Apuleii, Nymphæa, *white water Lilly.*
 Rhyte, Ruta, *Rue.*
 Rhyte montana, Ruta montana, *a kinde of Rue.*
 Ribes officinarum, *Raspes.*
 Ricinus, Cici Palma Christi.
 Risum, vel Rizum *Rise.*
 Rob Arabum, est succus medicatus qui solis calore densatur, Latinis sapa dicitur, Anglis, *A certain confection, which the Arabians call in plurali numero, Robub, which is Sapa the juice of any herb or fruit defecate.*
 Rob de agresta, succus medicatus de Omphacio, *Verjuice.*
 Rob de Berberibus officinarum, succus medicatus ex Baccarum Oxycanthæ succis, *a confection of Berberies.*
 Rob Cornorum, five rob de Cornis, *A confection made of Dogtree.*
 Rob de Cydoniis, five rob Cydoniorum, *a confection of the juice of Quinces without Sugar.*
 Rob granatorum, succus medicatus ex succo malorum Punicorum, *A Confection made of the juice of the Pomgranate without Sugar.*

Rob

The Third Index.

Rob mororum officinarum, Diamoron, *the juice of Mulberries.*

Rob nucum officinarum, Diacaryon, *five Diacarydion, A certain Confection made of the juice of a kinde of Nut, with sugar sodden with it till it be a thick Sirupe.*

Rob de ribibus officinarum, *the juice of a certain berry with Sugar sodden together like a sirupe.*

Rob Uvarum, *A Confection of Grapes with Sugar sodden like a sirupe.*

Robertia herba five Robertiana, *a kinde of Crowfoot.*

Robertiana, *vide Robertia herba.*

Robub, Sapa, *vide Rob.*

Robus Columellæ, Triticum, *Wheat.*

Roportiana, *Crowfoot.*

Rorastrum Apuleii, Vitis alba, *Bryony.*

Ros Syriacus, Manna, *Honey dew, or Manna.*

Rosa, Rhodon, *A Rose.*

Rosa Egyptia, *A yellow Rose.*

Rosa Alabandica Plinii, *A kinde of Rose so called.*

Rosa alba, *A white Rose.*

Rosa Africana, *A yellow Rose.*

Rosa Arvensis, five Rosa Avenaria, *a kinde of Corn Rose.*

Rosa Autumnalis, *A winter Rose.*

Rosa Alexandrina, *A kinde of Rose so called.*

Rosa Basilica, *vide Pæonia.*

Rosa benedicta, *vide Pæonia.*

Rosa Asinorum Averrhois, Pæonia, *Pyony.*

Rosa canina, *Brier bush, or Hep tree, or Bryer tree.*

Rosa Campestris, *A wilde or field Rose.*

Rosa Cinamomina vel Cinnamomea, *a kinde of Rose so called.*

Rosa Caroneola, *A Damask Rose.*

Rosa Divæ Mariæ, *Ladies Rose, some there are that take it to be Rose of Jericho, vide Rosam Hierichuntis.*

Rosa Damascena, *A Damask Rose.*

Rosa Sativa, Pæonia, *Pyony.*

Rosa Hierichuntis, five rosa Divæ Mariæ, *Rose of Jericho.*

Rosa Hyemalis, *Winter Rose.*

Rosa incarnata Herbariorum, *Carnation Rose.*

Rosa Junonis, five Rosa Junonia, *A white Lilly.*

Rosa lutea, *A kinde of yellow Rose.*

Rosea milefia Plinii, *purple Rose.*

Rosa muscata five Moscata, *Musk Rose.*

Rosa purpurea officinarum, *purple Rose.*

Rosa palustris, *A water Rose.*

Rosa punicea, *A kinde of Rose.*

Rosa regia, Pæonia, *Pyony.*

Rosa pumila, *A field Rose.*

Rosa rubra, *A red Rose.*

Rosa sancta, Pæonia, *Pyony.*

Rosa Syriaca, *A Musk Rose.*

Rosa Trachinia Plinii, Rosa rubra, *the red Rose.*

Rosa vulpina, *A yellow Rose.*

Rosago, Nerium, *Oleander.*

Rosarum apices, *the yellow seed which is within the Rose.*

Rosata novella, *A Confection of Roses so called.*

Rosea arbor, Rhododendrum, *Oleander.*

Rosella Herbariorum, Papaver erraticum, *wilde Poppy.*

Rosmarinum, five Rosmarinus, seu Rosmarinum Coronarium, *Rosemary.*

Rosmarinum Coronarium, *Rosemary.*

Rosmarinum Mauritanorum, Sticas Arabica, *French Lavender, or Lavender gentle.*

Rostrum Ciconiæ, *Storks bill.*

Rubia, Erythrodarum, *Madder.*

Rubia tinctoria five tinctorum, seu rubia Infectoria, *A kinde of Madder.*

Rubinus, Gemma, *A Ruby, or precious stone.*

Rubrica armenie, Bolus armenius, Bolearmoniack.

Rubrica lemnia, Rubrica sigillata, Terra lemnia, Terra sigillata, *Sealed earth.*

Rubus, *the Bramble, Blackberry, or Bryer-bush.*

Rubus Cervinus, Rubus Idæus, *A kinde of Bramble.*

Ruella, Polygonum minus, *A kinde of Swines grasse.*

Rucula Aquatica, five Rucula marina, *Rocket.*

Ructus, *A belching or breaking of winde upward.*

Rumex, *Sarrel.*

Rumex aquaticus, five palustris, Hydrolapathum, *A kinde of water Sorrel.*

Rumex palustris, *vide Rumex aquaticus.*

Rumex sativus, Rhabarbarum Monachorum, Monks Rubarb, *Patience.*

Rupertiana, Herba Ruperti, *Storks bill.*

Ruscus, *A certain rough and pricking shrub so called, Butchers broom, or Pettigrew.*

Ruta, *Rue.*

Ruta montana, *A kinde of Rue so called.*

Ruta muraria, Adiantum candidum, Venus; *Maiden, or our Lady hair.*

Ruta sylvestris, *wilde Rue.*

Ruta solis, Hypericum, *S. Johns wort.*

Rutinalis,

The third Index.

Rutinalis, Spondylium, Bears foot, or Bears
claw.

S.

Sabina, Savina, the herb called Savine.

Sacchar, Saccharon, vel Saccharum,
Sugar.

Saccharum Cantium, Candum, five Candi-
dum, Sugar candy.

Saccharum Cibale, common kitchen Su-
gar.

Saccharum Canariense, Canary Sugar.

Saccharum Christallinum, white Sugar Can-
dy.

Saccharum finum, seu refinatum, five Sac-
charum Valentinum, fine Sugar.

Saccharum Maltanum, five Melitæum, kitchen
Sugar.

Saccharum Maderiense, five Mederiense, A
kinde of Sugar so called.

Saccharum Miscellaneum, A kinde of Su-
gar.

Saccharum Ponidium, A kinde of Sugar so
called.

Saccharum Tabartzet Arabum, Saccharum
purissimum, & albissimum, Saccharum fi-
num, fine Sugar.

Saccharum Thomasinum, five Thomæum,
Saccharum rubrum officinarum, S. Thomas
Sugar.

Saccharum seu Conserva florum Caryllo-
phyllæ, a conserve of Gillofers.

Saccharum florum Lavendulæ, A conserve of
Lavender flowers.

Saccharum florum Melissæ, a conserve so cal-
led.

Saccharum Buglossatum, A conserve of Bug-
losse.

Saccharum Borriginatum, conserve of Bar-
rage.

Saccharum florum Hyssopi, Conserve of Hy-
sop.

Saccharum florum Nymphææ, conserve of
water Roses.

Saccharum florum Pseudonardi, conserve of
Spike.

Saccharum florum Persici, A conserve so
called.

Saccharum Rosatum, Conserve of Roses.

Saccharum florum Rosemarini, conserve of
Rosemary.

Saccharum Salviatum, Conserve of Sage.

Saccharum Trifolii acidi Conserve of Cuc-
koes bread.

Saccharum florum verbasculi, Conserve of
Comslips.

Saccharum violarum, Josaccharon, conserve
of Violets.

Sacerdotis vitile, Aurum, Cuckepit.

Sacra herba, Venbena, Vervain,

Sagupenum, Serapinum officinarum, a cer-
tain kind of stinking gum growing in Syria,
which the Apothecaries call, Serapinum.

Saggina Italorum, Sorgium, an herb so cal-
led.

Sahafaran Arabum, Crocus, Saffron.

Sal Ammoniacus, five sal Hammoniacus,
a kind of Salt, the which hath heretofore been
digged of the land in Africa, and hath been
brought hither, which as yet is used amongst
us.

Sal Armoniacum officinarum, a certain com-
pounded Salt of the Alchymists, the which of
some men have falsly been taken for the right
Salt of Africa, and is called Sal Armoni-
ack.

Sal Cristallinus, Sal nativus, Sal Fossitivus,
fine and Clear, or Christal salt.

Sal fusilis, melting salt,

Sal gemmæ officinarum, Sal gemmeus, chris-
stal salt.

Sal Indus, a kind of Sugar.

Sal marinus, Sea salt.

Sal popularis, common Salt.

Sal palustris, sea Salt,

Sal saxeus, stone salt.

Sal Absinthites, Wormwood salt.

Salicharia, Lyfimachia Dioscoridis, five fa-
licaria lutea, yellow Water Willow or Loose-
strife.

Salicaria cornuta Herbariorum, a kind of
water willow.

Salicaria punicea, five purpurea, Lyfimachia
Plinii seu salicaria Spicata Herbariorum, a
kind of brown Loosestrife or Water Wil-
low.

Saliva Syderum Plinii, Manna, Honey dew, or
Manna.

Saliunca, Spica, Celtica, vide spica Celtica.

Salix, Itea, the Sallow tree.

Salix Amerina, salix Marina, for Sallow
tree.

Salix marina, vide salix amarina.

Saltus leporis, an herb so called.

Salvatella, the Liver vein.

Salvia, Eleliphacos, Sage.

Salvia auriculata, salvia acuta, salvia minor,
salvia nobilis, salvia cruciata, the lesser or
eared Sage.

Salvia acuta, vide salvia auriculata.

Salvia Boschi, seu Boschi salvia Herbario-
rum, wilde Sage.

Salvia cruciata, vide salvia auriculata.

Salvia major, great Sage.

Salvia sylvestris, wilde Sage.

Salviavita, five salvia vitæ, Adiantum album
Venus, Maiden or our Ladies hair.

N n Sambu-

The Third Index.

- Sambucus, Elder, or Bometree.*
Sambucus Arvensis, sambucus humilis five sambucus pumila, Ebulus, wilde Elder.
Sambucus humilis, vide sambucus arvensis.
Sambucus pumila, wilde Elder.
Sampfucus, Marjorana, Marjoram.
Sanamunda, Avenge.
Sanctonicum officinarum, Santonicum, a kind of Southernwood.
Sandaracha Græcorum, Auripigmentum rubrum, red Arsenick.
Sandaracha Vitruvii, minium secundarium, Sinople, red Lead, or Vermillion.
Sandaracha Arabum, Gummi Juniperi Sandarax, the gum of the Juniper tree.
Sandrax Arabum, vide sandaracha Arabum.
Sandalum, Sandalus, the spice called Saunders.
Sandalum album, white Saunders.
Sandalum Citrinum officinarum, Sandalum flavum, yellow Saunders.
Sandonicum officinarum, fantonicum, a kind of Southernwood.
Sanguinalis mas, Polygonum mas, the male Knotgrasse.
Sanguinalis fœmina, Polygonum fœmina, the female Knotgrasse.
Sanguinalis minor, Ruella, Knotgrasse the lesser.
Sanguinaria, Knotgrasse.
Sanguinaria mascula, the same.
Sanguinaria fœmina, the female Knotgrass, or Horsetail.
Sanguinariu lapis, Hæmatites, the blood-stone.
Sanguis Draconis, Lachryma Draconis, Dragons blood.
Sanguis Draconis herba, an herb so called.
Sanguis Herculis Apuleii, Centaureum magnum, great Centory.
Sanguis Herculis Dioscoridis, Crocus, Saffron.
Sanguis milvi Apuleii, Scordium, a water Leek.
Sanguisorba, the herb Burnet.
Sanguisuga, a Horfleece.
Sanies vini, Wine Lees.
Sanicula, Diapensia, Sanicle.
Sanicula Alpina Herbariorum.
Sanicula cathartica Herbariorum, fanicula fœmina.
Sanicula fœmina, vide sanicula cathartica.
Sanicula quinquefolia, five sanicala vitiginea Herbariorum.
Sanicula major, Alchimilla.
Sanicula vitiginea Herbariorum, vide fanicula quinquefolia.
Sanilum, Scammonium, Scammony.
Santalum, Santalus, Saunders.
Santalum album, white Saunders.
Santalum Aromaticum, santalum flavum, yellow Saunders.
Santalum machosiri, vel mazanari, seu machazari Arabum, santalum flavum the same.
Santalum machazari Arabum, vide santalum machosiri.
Santalum machaziri, vide santalum machosiri.
Santalum odoriferum, santalum flavum.
Santalum rosaceum, santalum rubrum, red Saunders.
Santalum rubrum, vide santalum rosaceum.
Santalum spurium, santalum adulterinum, Pseudosantalum, bastard Saunders.
Santonicum, Ablynthium santonicum, five marinum, sea Wormwood.
Santolina Herbariorum, Abrotonum fœmina, Southernwood the female.
Sapa, new wine boiled to the third part.
Sapana, Anagallis, Chickweed.
Saphea, saphena Barbarorum, the womb vein, or the vein of the Matrix.
Saphena Barbarorum, vide saphea.
Sapphyrus, vide sapphirus.
Sapo, smegma, Sope.
Saponaria, Fullons grasse, Crowsope.
Sapphyrus, sapphyrus, a saphyre stone.
Sapphyrus aureus, Chrysites, a yellow saphyre.
Sapphyrus candidus a white saphyre.
Sapphyrus cæruleus, five sapphyrus cyaneus, A blew Saphire.
Sapphyrus Chrysitis, sapphyrus aureus, A yellow Saphyre.
Sapphyrus prafitis, vel
Sapphyrus viridis, a green Saphire.
Sarcocolla, gluten carnis, Carniglutinum, a kinde of Glem.
Sarcotica, Incarnating salves.
Sarda, vel
Sardius lapis, Cornelius, a hard red Stone.
Sardonias herba Crowfoot.
Sardonix, Sardius onychinus, a stone of the colour of the nail of a mans hand.
Sarmentum, a branch of a vine growing on the tree.
Satyrion, Dogs stones, Gändergrafs, or Ragwort.
Satyrion basilicum, satyrium regium, Ragwort the male.
Satyrion basilicum majus mas, the greater male Ragwort.
Satyrion basilicum majus fœmina, lacryma Mariæ, the greater Ragwort female.
Satyrion basilicum minus, the lesser male Ragwort.
Satyrion Erythron, or
Satyrion Erythronium, red Ragwort.
Satyrion Triphyllon, or
Satyrion Trifolium, Ragwort.
Satyrion odoratum, a kinde of Ragwort,
Satyrion

The Third Index.

- Satyrium regium, vide Satyrium basilicum.
 Satyrium regium minus, Satyrium odoratum
 a kinde of Priestspittle or Ragwort.
 Satyrifmus Apuleii, Satyrium erythronium,
 red Ragwort.
 Satyriscus, a disease whereby the privy mem-
 bers of man standeth alwaies.
 Satureia, five
 Saturegia, Savory.
 Sauchromatum, Dragonium, Dragons.
 Savina, sabina, the Savine tree.
 Saxifraga, five
 Saxifraga, Saxifrage.
 Saxifragia alba, white Saxifrage.
 Saxifraga lutea, yellow Saxifrage.
 Scabies, a scab, or itch.
 Scabies Hispanica, the Pox.
 Seabiosa, Scabiosa, *not found*.
 Scala cœli, sigillum Salomonis, Solomons
 seal.
 Scambonia, radix, Scammony.
 Scammonia, five
 Scammonium, Scammony.
 Scammonia præparata, prepared Scammo-
 ny.
 Scandulaca, Rope Weed, or Windweed.
 Scariola officinarum, Seriola, Endive.
 Scarlea Herbariorum, Gallitricum, Clary.
 Scarlea sylvestris, wilde clary.
 Scebram majus Mesues, Tythimalus major,
 the greater Spurge.
 Scebram minus Mesues, Tythimalus minor,
 the lesser Spurge.
 Sceiles, the veins of the Milt or Spleen.
 Scelerotes barbarorum, *not found*.
 Scelerotes Græcorum, durities, Schyrhus, a
 hard impostume, kernel, or swelling, which
 yieldeth not being pressed, and is commonly
 called Schirrus.
 Schoenanthum, Squinantum.
 Schoenoprasum porrum sectivum, Garlick.
 Schoenostrophon, Cannabis, Hemp.
 Schoenus, schoenanthum, squinantum,
 Scinus, lentiscus, the Mastick tree.
 Scinus Plutarchi, *not found*.
 Scia barbarorum, Ischias, an ach in the Hip.
 Scingus, Ruscus, Kneeholme.
 Scinchus, Crocodilus terrestris, vide Stincus.
 Seincus Herba Ruscus, Kneeholme.
 Scilla, Cepa marina, sea Onion.
 Sciosebina, stechas, Lavender gentle.
 Sclarea Herbariorum, Scarlea, Clary.
 Sclarea sylvestris, wilde Clary.
 Scleros, Durus, in hoc libro pro schyrro in-
 telligitur.
 Sclerotes, schyrus,
 Scolibrocon Apuleii, Trichomanes, Maiden
 hair.
 Scolopendra, five scolopendrium, Harts
 tongue.
 Scolopendria vera, or Scolopendria minor,
 the herb called Ceterach.
 Scolopendrium majus, Lonchitis altera, the
 greater Harts tongue.
 Scolopendrium sylvestre Herbariorum, A
 kinde of Harts tongue.
 Scolymus, Cynara, the Artichoke.
 Scordialtrum herbariorum, Scordotis Plinii,
 Marsh garlick, or water Germander.
 Scordiana Herbariorum, or
 Scordonia, or Scordiana herbariorum, salvia
 sylvestris, wilde Sage.
 Scordilum Apuleii, Scordium, Chamædris
 aquatica, water Germander.
 Scordium, Trixago palustris, marsh Gar-
 lick.
 Scordium alterum Plinii, a kinde of marsh
 Garlick.
 Scordium majus, the same.
 Scordium minus, the lesser marsh Garlick.
 Scordium Plinianum, vide scordium alterum
 Scoria ferri, the refuse of Iron.
 Scordotis, marrubium palustre, marsh Garlick
 Scorodon, Allium, Garlick.
 Scorpinaca Apuleii, Knotgrasse.
 Scorpio, a Scorpion.
 Scorpion, a kinde of Spurge.
 Scotomia, or
 Scotoma, a giddinesse of the head.
 Scrophularia, five scrophularia, &
 Scrophularia major, the greater Celandine, or
 the greater Figwort.
 Scrophularia minor, Chelidonium minus, the
 lesser Figwort, or Pilewort.
 Scrotum, the coe or skin wherein be the stones
 of a man.
 Scrupus humor, the Gout.
 Sebel Arabum, the skin of the ruddy eyes.
 Sebeste, five
 Sebestena Arabum, Myxaria, the fruit also
 called Myxa.
 Secale, Briza, Rye.
 Secundina, the secundine or skin wherein the
 childe is wrapped in the Womb.
 Sedum, sempervivum, Houseleek.
 Sedum minus, Crassula minor, Prickmadam.
 Seditertium genus Dioscoridis, Illecebralis-
 the Thrift or Stone Stonecrop.
 Segatolis, Gladiolus arvensis, Flags.
 Selinastrum Herbariorum, Ranunculus a-
 quaticus, water Crowfoot.
 Selenitis, Corona terræ, Aleboof.
 Selinoide, Brassica crispa, wrinkled Cab-
 bage.
 Selinon, five
 Selinum, Apium, Smallage.
 Selinophyllon Apuleii, Trichomanes Diof-
 coridis, Maidenhair.
 Selinusia, the lesser Cabbage.

The Third Index.

- Semen simplex, Zea monococcus, *Beer-barly or Spelt.*
- Semen Alexandrinum officinarum, alias, semencina, sementina, sive Semenzina, *Wormseed.*
- Semencina officinarum, vide semen Alexandrinum.
- Semen leoninum, milium solis, *Gromel.*
- Semen lumbricorum officinarum, semen Absynthii marini, *Wormwood.*
- Semen de papaga, Averrhoi dicitur Cartami semen, aliis semen papagalli, & semen psittaci, *wilde Saffron seed.*
- Semen sanctum officinarum, *Wormseed.*
- Semen Zedoariae officinarum, semen Absynthii marini, *sea Wormseed.*
- Seminalis Apuleii, Polygonum masculum, *Knotgrasse.*
- Seminalis minor Herbariorum Ruella, *A kinde of Knotgrasse.*
- Sempervivum, Aizoum, *Honfleeke.*
- Semura, Pseudomelanthium, *red Poppy.*
- Sena, senna, *Sene.*
- Senæ infusio, vide infusio Senæ.
- Sena Egyptiaca Syriaca, Alexandrina, Orientalis, *the lesser Sene, or Alexandrian Sene.*
- Sena Florentina, Italica, provincialis, *common or great Sene.*
- Senecta viperæ, Exuvium viperæ, *the skin of a Viper.*
- Senicula, fanicula, *Sanicle.*
- Septinervia, Plantago major, *the greater or broad Plantain.*
- Septifolium, Tormentilla, *Tormentil.*
- Serapion Apuleii, Orchis serapias, *a kinde of Gandergrasse.*
- Serapium, vide Syrupus.
- Serapium officinarum, vide sagapenum.
- Serica, Zizipha, *a kinde of fruit so called.*
- Seriphium, seu Seriphon, Absinthium marinum, *a kinde of Wormwood growing in the sea.*
- Seris, Cichorum, *Cicory, or Endive.*
- Seris lativa angustifolia, *the lesser Endive.*
- Seris sativa minor, *the same.*
- Seris somnifera, sive seris urinaria, *a kinde of Endive.*
- Serpentaria Dioscoridis, Dracontium, *Dragons.*
- Serpentaria officinarum, Bistorta, *Dragons.*
- Serpentaria minor, *the lesser Dragons, of some it is also called Aron, serpentaria minor.*
- Serpentaria rubra Herbariorum, Bistorta, *Dragons.*
- Serpentaria minor, Numularia, *Silvergrasse, or Dragons.*
- Serpillum, sive serpillus, *wilde Thyme.*
- Seratula major Herbariorum, Betonica, *Be tony.*
- Seracula minor, Chamædrys, *Germander.*
- Serta campana Catonis, sertula campana Dioscoridis, Melilotus, *Melilot.*
- Serum, *Whay.*
- Sesamum, sesama, *it is an unknown seed, for the which the Apothecaries use the seed of Camelina.*
- Sesamum officinarum, Camelina.
- Sesamum agreste, sesamum agrion, Ricinus, Palma Christi.
- Seseli, seselium, & seselis, *Silvermountain seed.*
- Seseli Æthiopicum, *black Silvermountain.*
- Seseli Æthiopicum herbaceum, *the same.*
- Seseli cervinum album, seseli Peloponnesiacum, *white Silvermountain.*
- Seselium, seseli, *Silvermountain.*
- Seselium Peloponnesiacum, vide seseli cervinum album.
- Seseli Cyprion, Palma Christi.
- Setanias, sive setanium, *a kinde of wheat.*
- Setialis, viola martia, *a kinde of Violet.*
- Seutlomalache, sive Seutlomalachon, Spina-chea, *Spinage.*
- Seutlon, Beta, *Beets.*
- Sicla officinarum, Beta sicula, *Beets.*
- Sycis, Syeios, Cucumis, *a Cucumber.*
- Sicys agrion, Cucumer sylvestris, Cucumer asininus, *a wilde Cucumber.*
- Sideritis, Magnes, *the Loadstone.*
- Sidia, malus punica, *the Pomgranate tree.*
- Sidion, Malicorium, *the Pomgranate husk.*
- Sief Arabum, Collyrium, vel Collyrium sicum dicitur latinis, Græcis, Xerocollyrium, *a medicine for the eyes.*
- Sief de Fellibus, Collyrium de Fellibus, *A medicine for the eyes made of Galls.*
- Sief de Plumbo, Collyrium de Plumbo, *A medicine for the eyes, made of Lead.*
- Sief de Rosis, Collyrium de Rosis, *a medicine for the eyes, made of Roses.*
- Sief de Thure, Collyrium de Thure, *a medicine for the eyes, made of Frankincense.*
- Sief viride, Collyrium viride, *a medicine for the eyes of a green colour.*
- Sigillum Christi Herbariorum, Herba paris, *a kinde of Liberty or Wolfesbane.*
- Sigillum lemnium, Terra sigillata, *A sealed earth.*
- Sigillum Salamonis, Polygonatum, *Solomons seal.*
- Sigillum Veneris, Herba Paris, *Wolfesbane.*
- Signigialium, *Dragons.*
- Siler, salix pumica, salix aquatica, *a kinde of Willow or wythy Osier.*

The third Index.

Silvermontanum officinarum, fefeli Massiliense, a kinde of Silvermountain.
 Silex, a Flintstone.
 Sili Hippocratis, fili, vel fefelis Plinii, Silvermountain.
 Sili Plinii, Sili Hippocratis.
 Silicia Plinii, Fœnum Græcum, Fenegreek.
 Silicula Varronis, Fœnum græcum, the same.
 Silphanthemum, Amaranthus luteus, Cudweed, or Chaffeweed.
 Sili Cyprion Herodoti, Ricinus, Palma Christi.
 Siliqua arbor, the Sillick tree.
 Siliqua Egyptia, Cassia Fistula, round Cinnamon pipes.
 Sinapi vel sinapis, Mustard.
 Sinapi Persicum, Raphanus marinus, a kinde of Mustard.
 Singultus, vexing or sobbing.
 Spinalus Carbunculus candidus, a kinde of Carbuncle.
 Sifelos officinarum, fefeli, Silvermountain.
 Sifarum, vel sifer, the Skirret, the White Carret, or yellow Parsenep.
 Sifer, vide sifarum.
 Sirupus, vide syrupus.
 Sisybrium, water Mints.
 Sisybrium aquaticum, the same.
 Sitanium, Saint Peters wheat.
 Smilax, Taxus, Bindeweed, or Ivy.
 Smilax levis, Ropeweed, or Weedbinde.
 Smyrna, Myrrha, Myrrhe.
 Smyrnium, Lovage.
 Soda Arabum, capitis dolor, Headach.
 Solanum, Styrchnus, Nightshade, or deatbes herb.
 Solanum sativum, the same.
 Solanum vesicarium, Halicacabus, winter Cherry, or Alkakengy.
 Solanum rubeum, the same.
 Solatrum officinarum, Solanum, Nightshade.
 Solatrum rubrum, Halicacabus, Alkakengy.
 Solbastrella, five Sorbastrella, Pimpernell.
 Soldana, five soldanella officinarum, Volubilis marina, Seacole.
 Solidago, Consolida, Walwort.
 Solidago media, Sengreen.
 Solsequium aureum, a Marigold.
 Solidago sarsenica, a kinde of Walwort.
 Solucia continuitatis, a dissolving of that which necessarily belongeth to another.
 Sonchus, Cicerbica, Sowbistle.
 Sonchus aspera, sonchus sylvestris, wilde Sowbistle.
 um, sperba, the Service tree.

Sorbus, the same.
 Sorgum, five sorghum, Millet of India.
 Sophia, Thalictrum.
 Spanachia, spinacea, Spinage.
 Sparagus officinarum, Asparagas, Sparage.
 Spasmus, Convulsio, the Crampe.
 Spacula odorata, Iris, the Flower-deluce.
 Species Diambra, A powder of Ambergreece.
 Species Dianisi, a powder of Annis seeds.
 Species Dianthus, five Dianthos, a powder of the flowers of Rosemary.
 Species Aromatici Rosati, A powder of Roses.
 Species Aromatici Cariophyllati, a powder of Clowes.
 Species Diacalaminthon, a powder of wilde Mints.
 Species Diacroci, five specis Diacurcumæ, five Diacrocomæ, a powder of Saffron so called.
 Species Diacosti, a powder so called.
 Species Diacymini, a powder of Curmin.
 Species Diatragacanthi frigidi & calidi, A powder so called.
 Species Diacinnamomi, A powder of Cinnamon.
 Species Cordiales, A powder for the heart.
 Species Ducis, a powder so called.
 Species Diagalangæ, A powder of Galangal.
 Species de Gemmis frigidæ, A powder so called.
 Species de gemmis calidæ, A powder so called.
 Species de gemmis temperatæ, A powder of tempered Pearles.
 Species Hieræ simplicis, A powder so called.
 Species Daiiris, five Diaireos, A powder of Flower-deluce.
 Species Justinæ, a powder so called.
 Species Dialaccæ, a powder so called.
 Species Lætificantes, a powder whereby the heart is made glad and joyfull.
 Species lætitia Galeni, the same.
 Species lithontribon, a powder so called.
 Species liberantes, a preservative powder.
 Species Diamargariton frigidæ, a very cooling powder made of Pearls.
 Species Diamargariton calidæ, a warming powder made of Pearls.
 Species Diamenthæ, a powder of Mints.
 Species Diamosci amari, & dulcis, a powder so called.
 Species Neræ, a powder so called.
 Species Diaolibani, A powder of Frankincense.
 Species de Papavere, a powder of Poppy.
 Species Diapendii, a powder so called.

The third Index.

- Species Diapconii, *A powder of Piony roots.*
 Species Diaphoenicon, vide Diaphoenicon.
 Species Philanthropon, *a powder so called.*
 Species pliris Arcoticon officinarum, five species Diaplrifarcoticon, *A powder so called.*
 Species Diaprasii, *a kinde of powder.*
 Species Diarrhodon Abbatis, *a powder of Roses.*
 Species Electuarii de succo Rosarum, *a powder of the sap of Roses.*
 Species rosata novellæ, *a powder of Roses.*
 Species de seminibus, *A powder of certain seeds.*
 Species Diatrionpipereon, *A powder of three kinde of Pepper.*
 Species Triasandalon, *A powder so called.*
 Species Diaturbith, *A powder of Turbith.*
 Species Bartholdi, *A powder so called, which is used to be eaten with Fish, and with cold Hens and Capons.*
 Species Diaxyloaloes, *a powder so called.*
 Spelta, Zea, Spelt.
 Sperma Balenarum, *the spawn of a Whale.*
 Sperma ceti, *the same.*
 Speronella, Aparine, *Gooshart.*
 Sphacelus Theophrasti, *a kinde of Sage.*
 Sphæra marina, sphæra Thalassia, *sea balles.*
 Spharion, Sphæritis, Mux Cyparissi, *A Cyresse nut.*
 Sphagnon, Museus arborum, *Mosse.*
 Specle, lees of wine.
 Sphocle, *the same.*
 Sphondilium, *Bearbreck, or Bears claw.*
 Sphrargis, figillum lemnium, *Sealed earth.*
 Spica Celtica spica Romana, spica Gallica, *the long Spikenard.*
 Spica hortulana, *a kinde of Lavander.*
 Spica Indica Nardus Indica *a kinde of Spikenard*
 Spica Romana, vide spica Celtica.
 Spicantum Herbariorum, Lonchitis altera, *An herb so called.*
 Spinacea, spinaceum, Spinachla, *Spinage.*
 Spina Divæ Mariæ, *A kinde of Rose so called.*
 Spina Buxea, Pyxacantha, *the Berberry tree.*
 Spina murina, spina vespertilionis, *Butchers broom.*
 Spinalus, Carbunculus candidus, *A Carbuncle.*
 Spinus Vergilii, Prunus sylvestris, *a wilde plumtree, or Sloetree.*
 Spiritus vitales, *the lively breath.*
 Splenium, *Harts tongue.*
 Splen, Lien, *the Milt.*
 Splenetica, *the Milt vein.*
 Spodium Græcorum, Pompholix nigra, *a kinde of foot.*
 Spolium viperæ, *the skin of a viper.*
 Spongiola, Rosæ caninæ, spondogos Marcelli, Bedegar, *that groweth on a sweet Bryar or other trees like a sponge.*
 Spondylia, *ridge bones.*
 Spongites, Lapis spongiæ, *Sponge or Jewell stone.*
 Spuma auri, *yellow Lithargy.*
 Spuma argenti, *silver drosse, or white Lithargy.*
 Spuma Batava martialis, Lixivium, *Lee.*
 Spuma Caustica martialis, Lixivium, *Lee.*
 Spuma maris, *sea foam, or froath.*
 Spuma Plumbi, *Lithargy, or white lead.*
 Squinanche, & squinantia Barbarorum, *the inflammation of the muscle of the inner gargil, the squince, alias, Angina.*
 Squilla, and squilla officinarum, *a certain herb so called.*
 Stachyites, Tripodium, *a kinde of Turbith.*
 Staete, styrax liquidus, *the flower of Myrrhe,*
 vide storax liquida.
 Stachas Galeni, stichas Dioscoridis, *French Lavander, or Lavander gentle.*
 Stachas citrina herbariorum, Amarantus luteus, *Mandlenwort, Cudweed, or Chaffe-weed.*
 Stasis agria officinarum, staphys agria, *Stavesacre, or Licebane.*
 Stagonitis, *a certain herb in Syria, from the which the Gum Galbanum cometh, vide Galbanum.*
 Staphylinus, Pastinaca, *a Parsenep.*
 Staphylinus albus, Pastinaca alba, *a white Parsenep.*
 Staphylinus erraticus, Pastinaca vera, *A wilde yellow parsenep.*
 Staphylinus luteus, Pastinaca lutea, *a yellow Parsnep.*
 Staphylinus ruber, Pastinaca rubea, *a kind of red Parsnep.*
 Staphylodendrum, *a kind of Nutt, so called.*
 Staphydes, vuæ passæ, *Raisons.*
 Staphys agria, *Stavesacre or Licebane.*
 Statumaria Apuleii, Polygonum, *Knot-grasse.*
 Stear, viscum, *Mistleto.*
 Stella Attica, Bubonium, *Codwort.*
 Stella Massilolica, Bubonium Massilioticum, *a kinde of the same.*
 Stelladia Italorum, *an Hypocrass drink in Italy called Stelladia.*
 Stellaria Herbariorum, Alchimilla, *Ladies Mantle.*

The Third Index.

Stelephuros Theophrasti, Plantago Augustifolia, narrow leaved Plantain.
 Stemphyla, uvarum expressarum retrimenta, pressed or dried Figs.
 Stercus caninum album, vulgò Album Græcum dicitur, the white dung or ordure of a dog.
 Stercus Diaboli officinarum, Assa foetida, A stinking Gum.
 Stergetron, sedum, Houseleek.
 Sternutatio, Sneezing.
 Stibi, stibium, Antimonium, a kinde of glasse so called.
 Stichas Dioscoridis, stichas Galeni, Lavander gentle.
 Sticas Arabica, Arabian Lavander.
 Stichas citrina Herbariorum, Amarantus luteus, Mandlenwort, Cudweed, or Chaffeweed.
 Stichas Gallica, a kinde of Lavander gentle so called.
 Stichas montana, Italian Lavander gentle.
 Stimmi, five Stimium, A glasse so called.
 Stincus officinarum, Scincus, Crocodilus terrestris, An earth Crocodile. Our doting fools use the water Evet for it, which is as like it, as an Apple is like an Oyster.
 Stiphonia, five Scyphonia, A kinde of Lavander gentle.
 Stomachus, the Stomach.
 Stomoma, Chalybs, Steel.
 Storax officinarum, & storax Calamintha, storax, five styrax Calamitis, A certain odoriferous and well smelling Gum, proceeding of a tree also called Styrax.
 Storax liquida officinarum, styrax liquidus.
 Staete, A sweet smelling juice of Myrrhe.
 Strangulatio, strangling, choaking, or stopping.
 Strangulator Medicorum, vulgò, Angina, the Squince.
 Stranguria, Urinæ stillicidium, the Strangury.
 Stratiotes, Millefolium, Milfoil, Yarrow, or Nosebleed.
 Strobilus, Conus, a Pine Apple tree.
 Strobili, nuclei Pini, A pine Apple.
 Strobilus, Cinara, An Artichock.
 Struthiomelum, Struthium, Burit, herb Philip, Fullons grasse, or Crowsope.
 Struthium, vide Struthiomelum.
 Struthos, Passer, a Sparrow.
 Strichnum, five strichnus, solanum, Nightshade.
 Stupefactiva, a dismayng medicine.
 Stupor, Paraplexia, sudden privation or lack

of sense or feeling.
 Suber, Phellus, Cork.
 Subeth Arabum, Charos, A kinde of sleeping disease.
 Subversio ventriculi, the turning upside down of the maw.
 Succinum, Electrum, Amber.
 Succinum Orientale, Ambarum, Amber.
 Succio Macobii, Persicum, A Peach.
 Succisa, Morfus Diaboli, Divels bit, or Remcope.
 Succotachos, Perditium, Pellitory of the wall.
 Succus Malorum Punicorum, five vinum Malorum Punicorum, the sap or juice of a Pomgranate.
 Succus medicus, succus Syriacus, Assa foetida, A stinking gum.
 Suffusio fellis, suffusio bilis, Icterus, the yellow jaundise.
 Sulphur, Sulfur, Brimstone.
 Sulphur vivum, Sulfur vive.
 Sulphur mortuum, sulphur factitium, Brimstone.
 Sulphur factitium, the same.
 Sumach Arabum, Rhus Græcorum, a kinde of seed which of the Apothecaries is called Sumach.
 Supercilium terræ, Adiantum, Venus, Maiden, or our Lady hair.
 Supercilium Veneris, Millefolium, Milfoil.
 Suppositorium officinarum, & Barbarorum Glans, Balanus, A Suppository.
 Suppressio nocturna, Ephialtes, Incubus, a disease in ones sleep when one is almost stifled, and cannot well fetch his breath nor speak. The Mare.
 Sutura capitis, the seam in the skul.
 Sycaminum, Morum, the Mulberry tree.
 Sycodes, Ficus, the Hemorrhoider.
 Sylva mater Scribonii, Honyuckle.
 Symphytum alterum, Symphytum minus, Walwort, Assc-car, or Comfrey.
 Synciput, the forepart of the head.
 Syncopalis fames, An extreame or cutting hunger.
 Syncope, A swooning for feebleness.
 Syncliopa, Stachas, French Lavander.
 Synochus, An Ague so called.
 Syraeum, Mustum ad tertias coctum, new wine or Must thrice sodden.
 Syreon Plinii, Tortyle, five Tordylum, the seed of the herb Sefelis.
 Syrium, Minium secundarium, Sinople, red Lead or Vermilion.
 Syrtites, Saphyrus lapis, A Saphire.
 Syrupus, sirupus, serapium, and of Nicolaus Mirepsius, it is called Drosatum, a Sirup.

The third Index.

- Syrupus de absinthio, *syrup of Wormwood.*
 Syrupus Acetosæ, syrupus, de succo Oxalidis, *Syrup of sour Decks.*
 Syrupus Acetosus simplex, officinarum, syrupus acetatus simplex, *syrup of Vinegar.*
 Syrupus acetatus simplex, syrupus acetosus simplex.
 Syrupus acetosus compositus officinarum, vel syrupus osetosus de radicibus, syrupus acetatus compositus de radicibus, syrupus acetatus diureticus, *a kind of syrups so called.*
 Syrupus acetosus compositus.
 Syrupus acetosus de Cythoniis. officinarum, syrupus acetatus de Cydoniis.
 Syrupus acetatus de radicibus, vide syrupus acetosus compositus.
 Syrupus acetatus diureticus, vide syrupus acetosus compositus.
 Syrupus acetatus de Cydoniis, vide syrupus acetosus de Cydoniis.
 Syrupus acetatus Diarhodon, vide syrupus acetosus Diarhodon.
 Syrupus acetosus Diarhodon, syrupus acetatus Diarhodon, *syrup of vinegar and Roses.*
 Syrupus adiantinus, vide syrupus de Capillis Veneris.
 Syrupus de Arantiis, five Arantiorum, *syrup of Oranges.*
 Syrupus de Artemisia, *syrup of Mugwort.*
 Syrupus de Berberibus, syrupus de Oxycantha, *syrup of Berberies.*
 Syrupus de Betonica, *syrup of Betony.*
 Syrupus de Byzantiis, syrupus Danarii, syrupus Byzantinus, *a syrup so called.*
 Syrupus de Boragine, *syrup of Burrage.*
 Syrupus de Buglossa, *syrup of Buglosse.*
 Syrupus de Calamintha, *syrup of Calamint.*
 Syrupus de Cichorea, five de Cichoreo, *syrup of wilde Cicory.*
 Syrupus de Cichorio cum Rhubarbaro, *syrup of Cicory and Rubarb.*
 Syrupus Capillorum Veneris, syrupus Adiantinus, *syrup of Venus, Maiden, or our Ladies hair.*
 Syrupus de corticibus Citri, *syrup of the shells of a Citron.*
 Syrupus de Cucurbita, syrupus Cucurbitinus, *syrup of Gourds or Pompions.*
 Syrupus Cydoniorum, Miva Cidoniorum, *syrup of Quinces.*
 Syrupus de Endivia, syrupus de Intybo, *syrup of Endive.*
 Syrupus de Epithymo.
 Syrupus de Eupatorio, syrupus de Agrimonia, *syrup of Agrimony.*
 Syrupus Danarii, vide syrupus de Byzantiis.
 Syrupus de Agrimonio, vide syrupus de Eupatorio.
 Syrupus de Fumuria, syrupus de Fumo terræ, *syrup of Fumitory.*
 Syrupus de fumo terræ vide supra.
 Syrupus de Glycyrrhiza, officinis syrupus de liquiritia dicitur, *syrup of Licorice.*
 Syrupus granatorum, syrupus ex succo Malorum Punicorum, *syrup of Pomegranats.*
 Syrupus de Hyssopo, *syrup of Hyssop.*
 Syrupus de Intybo, *syrup of Endive.*
 Syrupus de Irios officinarum, syrupus de Iride, syrupus Irinus, *syrup of Flower-de-luce.*
 Syrupus de Jujubis, syrupus Jujubinus, syrupus Zzyphorum, or Zzyphinus, *a syrup so called.*
 Syrupus de Lemonibus, five syrupus aciditatis Lemoniorum, *syrup of Lemons.*
 Syrupus de Lupulo, syrupus Lupulorum, *syrup of Hops.*
 Syrupus de Mentha, *syrup of Minis.*
 Syrupus de Myrto, five syrupus Myrtinus, *syrup of Myrtles.*
 Syrupus Malorum Neranziorum, *syrup of Oranges.*
 Syrupus condituræ Mirobalanorum, *syrup of the confectiion of Mirobalans.*
 Syrupus de Nenuphare officinarum, vide syrupus de Nymphæa.
 Syrupus de Nymphæa, syrupus de Nenuphar officinarum, *syrup of Water Lillies.*
 Syrupus de Papavere, five syrupus Papaverinus, *syrup of Poppy.*
 Syrupus de Omphacio, vide syrupus de Agresta.
 Syrupus de Ozyacantha, vide syrupus de Berberies.
 Syrupus de succo Oxalidis, syrupus de succo Acetosæ.
 Syrupus Persicorum, *syrup of Peaches.*
 Syrupus de Plantagine, *syrup of Plantain.*
 Syrupus de Pomis, *syrup of Apples.*
 Syrupus de pomis Saboris Regis.
 Syrupus de Portulaca, *syrup of Purslain.*
 Syrupus de Prassio, *syrup of Horehound.*
 Syrupus de Pyris, *syrup of Pears.*
 Syrupus de radicibus, vide syrupus de quinque radicibus.
 Syrupus de duabus radicibus, *syrup of the two roots.*
 Syrupus Ribium, *syrup of Raspes.*
 Syrupus infusionis Rosarum, syrupus Rosarum, *syrup of Roses.*
 Syrupus Rosarum, vide syrupus infusionis Rosarum.
 Syrupus Rosarum solutinus, five syrupus incar-

The Third Index.

incarnatarum rosarum, *a laxative sirup of Roses.*
 Syrupus de Rosis siccis, *five syrupus Rosarum siccarum, sirup of dried Roses.*
 Syrupus Rosarum albarum, *Sirupe of white Roses.*
 Syrupus Saboris Regis, *five syrupus de pomis Sabonis Regis, a certain kinde of sirup so called.*
 Syrupus senæ, *five syrupus seniticus, a sirup of Sene.*
 Syrupes de liquiritia officinarum, *vide syrupus de Glycirrhiza.*
 Syrupus de Stachade, *sirupe of Lavander gentle.*
 Syrupus de Thymo, *sirupe of Thyme.*
 Syrupus Violarum, *sirupe of Violets.*

T.

TAbes, *Plithisis, a consuming and wasting of the body.*

Talus Leporis,
 Tamarindi, *sowr Dates.*
 Tamariscus officinarum, *a Tamarisk tree.*
 Tamarix, *the same.*
 Tamarus, *Vitis nigra, black Briony.*
 Tamnus, *five tamus, the same.*
 Tanacetum, *Tansie.*
 Tanacetum sylvestre herbariorum, *Anserina, wilde Tansie.*
 Tapins Barbatu, *Woolblade.*
 Tarantula, *Phalangium, a kinde of Spiders.*
 Taraxacon Arabum, *Cichorea, Intybus sylvestris, Cicory.*
 Taraxacon officinarum, *Aphaca Theophrasti, the same.*
 Tarbelodathium Dioscoridis, *Plantago, Plantain.*
 Tarum Plinii, *Agallochum Græcorum, A sweet Wood so called.*
 Tartarus, *the lees of wine.*
 Taxus, *Smilax, A tree like Firre, a kinde of Yew.*
 Tecolithus, *Lapis Judaicus, Jewes stone.*
 Telephium, *an herb so called.*
 Telephium Album, *A kinde of White Orpine.*
 Telephium Purpureum, *a kinde of Orpine.*
 Telis, *Fenegræck.*
 Tembul, *five tembulum Arabum, folium Indum, vide Malabathrum.*
 Tendones, *the cords or sinewes.*
 Tenesmus, *tinesmus, a disease so called.*
 Terbentina officinarum, *resina terebinthina.*
 Terebinthina, *Turpentine.*

Terebinthus, *the Turpentine tree.*
 Terebinthina resina, *Turpentine.*
 Terebinthizusa, *A kinde of yellow Jasper stone.*
 Tereniabin, *five tergebin Arabum, Manna liquida, Hony dew or Manna.*
 Terpentina officinarum, *Resina terebinthina, Turpentine.*
 Terra figularis Columellæ, *Argilla, potters earth.*
 Terra lemnia, *terra sigillata, sealed earth.*
 Terra sigillaria Ciceronis, *Argilla, Potters earth.*
 Terra viridis, *Borasse.*
 Terra Sancti Pauli, *an earth so called.*
 Tertiana, *a Tertian ague.*
 Tertiana exquisita, *A right Tertian Ague.*
 Tertiana extensa, *A tertian Ague of forty hours.*
 Tertiana duplex, *A double tertian Ague, which is also mixed with a quotidian Ague.*
 Tertiana notha, *five tertiana spuria, a bastard tertian ague.*
 Testiculus, *five testiculus Canis, Orchis, Dogstones.*
 Testiculus leporinus, *Satyrium, three leaved Gandergrasse.*
 Testiculus sacerdotis, *Chelidonium minus, the lesser Celandine.*
 Testiculus odoratus, *a kinde of Dogs stones.*
 Testiculus Satyri, *Satyrium erithronium, A kinde of three leaved Gandergrasse.*
 Testiculus vulpis, *Satyrium. A kinde of Ragwort.*
 Testidunaria, *Cyclaminus, Somes bread.*
 Teucrium, *great Germander.*
 Teutlomalache, *Spinacea, Spinage.*
 Teuthalis, *Polygonum, Knotgrasse.*
 Teutlis five Teutlon, *Beets.*
 Tetanus, *a kinde of Crampe.*
 Thalictrum, *Sophia.*
 Thapsia, *a kinde of Turbith.*
 Thaumastos, *Iris, Flower deluce.*
 Thelpede, *vel thalpide, Iris, the same.*
 Theliphonum, *an herb so called.*
 Thelyphtorium, *Abrotonum, a kinde of Southernwood.*
 Theriaca, *Treacle.*
 Theriaca Andromachi, *a kinde of the best Treacle.*
 Theriaca Diatesaron, *common Treacle.*
 Theriaca magna, *another kinde of the best Treacle.*
 Theriacaria, *Phu verum, A kinde of Valerian.*
 Theriophonum Apuleii, *Dragonium, Dragons.*

Theriophonum

The Third Index.

- Theriophonum Dioscoridis, Pardalianches,
Libarbs bane.
- Theriophonum Aconitum, Pardalian-
ches.
- Therium Apuleii, Dragonium, Dra-
gons.
- Therma sulphurea, Brimstone bathes.
- Thermus, Lupinus, Lupines.
- Thesarica, Plantago, Plantain.
- Thion apyron, sulphur fossile, seu ignem
non expertum, a kind of Brimstone.
- Thlaspi Croteva, thlaspi alterum Diosco-
ridis, Raphanus marinus, Rayfort, Trea-
acle, Mustard. boures or dish Mustard.
- Thorax, the Breast.
- Thraustma, five thrauston Plinii, Ammo-
niacum thymiaia, a certain kind of gum
Armoniack, vide Ammoniacum thymia-
ma.
- Thridax Lactuca, Lettice.
- Thridax agratia, Lactuca sylvestris, wilde
Lettice.
- Thronon, Homeri, Rosa, a Rose.
- Thryalles, the leaves of the herb called rose
Champion.
- Thus, Olibanum, Frankincense.
- Thus Corticosum, the refuse of Frankin-
cense.
- Thus adulterinum, bastard Frankin-
cense.
- Thus granulofum, crombed Frankin-
cense.
- Thus masculum, thus testiculatum, white
Frankincense.
- Thus terræ Plinii, Chamæpytis, Heath or
dwarfe Cypress.
- Thylacitis, Papaver album, white Pop-
py.
- Thymiaia, Narcaphtum officinarum, Thy-
miaia, black Frankincense.
- Thymiaia Herbariorum, Thymum,
Thyme.
- Thymum Candidum, Thymum capitatum,
thymum creticum, thymum siccum, thy-
mum Aromaticum, white Thyme, or
Thyme of Creete.
- Tilia, Phillyra, the Teyle tree.
- Tilia foemina, tilia sativa, the Linden
tree.
- Tilia mascula, tilia sylvestris, the wilde Tey-
let tree.
- Tilphantemum, Gold flower.
- Timoron, Cicuta, Hemlock.
- Tithymalus arborescens, wilde Spurge.
- Tithymalus Characias, a kinde of Spurge.
- Tithymalus Caryites, a Spurge so cal-
led.
- Tithymalus Cobius, wilde Spurge.
- Tithymalus Cometes, the same.
- Tithymalus Cupressinus, or Tithymalus Cy-
perissias, pine Spurge.
- Tithymalus Dendroides, five Dendroides,
stone Spurge.
- Tithymalus foemina, the female Spurge.
- Tithymalus leptophyllus, stone Spurge.
- Tithymalus latifolius, broad leaved Spurge.
- Tithymalus myrtifolius, five myrtiphillos,
or Tithymalus myrtaceus, a certain Spurge
so called.
- Tithymalus masculus, wolfs milk.
- Tithymalus petraeus, stone Spurge.
- Tithymalus paryphillos, a certain Spurge so
called.
- Tithymalus solisequius, five solsequius,
Wertgrasse, or Wertwoort.
- Tithymalus tenuifolius, narrow leaved
Spurge.
- Tithymalus vallis, wilde Spurge.
- Tonfillæ, the kernels growing within the
mouth.
- Topiaria, Italian Bearbrech, or Beaves
claw.
- Tordylum, tordylon, Sefeli Creticum,
Silver mountain of Candy.
- Tormentilla.
- Tormina, fretting or wringing in the belly or
guts.
- Torpor, a debilitation or feebleness of the
mind.
- Tota bona Herbariorum, a kind of Spi-
nage.
- Toxicum, a kind of venom or poyson, where
with the heades of arrowes are poyson-
ed.
- Trachea, the weasen or pipe of the lungs, the
windpipe.
- Tragacantha, tragacanthum, a kind of
gum.
- Tragea, tragema.
- Tragoriganum, five tragoriganus.
- Tragonatum, Cariophyllus Arvensis, Corn-
rose.
- Tragonia, Tarragon.
- Tragofelinum Herbariorum, Pimpinella al-
ba, white Pimpernel.
- Tragofelinum minus, Pimpinella major,
the greater Pimpernel.
- Tragofelinum majus, the lesser Pimpernel.
- Tremor, quaking, trembling or great
fear.
- Triapharmacum officinarum, Emplastrum
triapharmacum.
- Trisantal, triasandalon officinarum, Look
Diatrisandalon in the letter D.
- Tribulus aquaticus, tribulos, enydros, water
Chefnut.
- Tribulus marinus officinarum, tribulus aqua-
ticus, the same.

Tricho.

The Third Index.

- Trichomanes, *Maiden hair.*
 Tridactylum, Vitex, *Agnus castus.*
 Tripholium, Triphyllon, *three leaved grasse.*
 Trifolium acidum, five acetosum, *sowr Trifoly, or Woodsowr.*
 Trifolium acutum, Columellæ Asphaltium, *prickled Trifoly.*
 Trifolium album, *white Trifoly.*
 Trifolium felinum, Lagopus, *Hares foot, Hares cammin, Trinity grasse, or herb Trinity.*
 Trifolium græcum, *Fenegreek.*
 Trifolium incarnatum Herbariorum, *a kind of Trifoly.*
 Trifolium odoratum Vergerii, Asphaltium, *garden Claver.*
 Trifolium pratense, *three leaved grasse, or Trifoly the red.*
 Trifolium purpureum, *the same.*
 Trifolium sylvestre *wilde Trifoly.*
 Trifolium Trinitatis, Lagopodium, *Trinity grasse.*
 Trifolium urfinum herbariorum, Lotus sylvestris, *wild Meililot.*
 Trimithos Nicandri, Terebinthus, *the Turpentine tree.*
 Trinitatis herba, *herb Trinity or Harts-cuse.*
 Trionpiperon officinarum, vide Diatrionpiperon.
 Triorchis Aeginetæ, Orchis serapias Dioscoridis, *Gandergrasse.*
 Tripetalon Callimachi, trifolium pratense, *a kind of Trifoly.*
 Trifera magna, *a confectiõ so called.*
 Trifera fœnonis, *a certain confectiõ.*
 Trifera Persica, *a confectiõ so called.*
 Trifera Saracenica, *a certain confectiõ.*
 Tripodium, turpetum Serapionis, *a kind of Turbith.*
 Triflago, Chamedrys, Chamedrios, Triflago aquatica, five palustris, Chamædrys aquatica, vide Teucrium.
 Trifolia, vide Trifolia.
 Trithales, *a kind of Houseleek.*
 Triticum sylvestre, vel triticum terrestre, Chelidonium minus, *the lesser Celandine.*
 Tritum Apuleii, Tythimalus dulcis, *a kind of Spurge.*
 Trixago, Triflago, *Germander.*
 Trixago palustris, vide Teucrium.
 Trixis Plinii, Palma Christi.
 Trocisci pastilli, Gfficinæ nonihil depravata appellatione trociscos nominant sine aspiratione, *a certain kind of round cakes, which are prepared for medicines.*
 Trocisci Adulphi, vide trocisci de sulphure.
 Trocisci de absinthio, *little cakes of Worm-wood.*
 Trocisci de Agarico, *cakes of Agarick.*
 Trocisci de Alhandel, Trocisci de Colocinthide, *little cakes of Coloquintida, or Wilde Gourds.*
 Trocisci de Alkakengi, trocisci de Halicacabo.
 Trocisci de Berberis, five de Berberibus, trocisci de Oxacantha, *little cakes of Berberies.*
 Trocisci de Bolo Armeno, *cakes of fine Bolus.*
 Trocisci de Camphora, *cakes of Camphere.*
 Trocisci de Capparibus, five trocisci Capparum.
 Trocisci de Charabe, five trocisci de succino, *cakes of Amber.*
 Trocisci de Chelidonia, *cakes of Celandine.*
 Trocisci de Colacynthide, vide trocisci de Alhandel.
 Trocisci de Coralliis, *the cakes of Coarl.*
 Trocisci de Crocoma, vide Trocisci de Lacca.
 Trocisci de Eupatorio, *cakes of Agrimony.*
 Trocisci de Lacca, *cakes of Lacca,* five trocisci de Crocoma.
 Trocisci de Halicacabo, vide trocisci de Alkakengi.
 Trocisci de Gallia Moschata.
 Trocisci de Diarrhodon, *Rosescakes which do retain the name Diarrhodon, or cakes of Diarrhodon.*
 Trocisci de Myrrha, *cakes of Myrrhe.*
 Trocisci de Olibano, *cakes of Frankincense.*
 Trocisci de Oxyacantha, vide Trocisci de Berberis.
 Trocisci de Rhabbarbaro.
 Trocisci de Rosis, *Rosescakes.*
 Trocisci de Sandalis, *cakes of Lignum Aloes.*
 Trocisci de sulphure, five trocisci Adulphi.
 Trocisci de spica, *cakes of Spikenard.*
 Trocisci de spodio, *cakes made of a kind of soot so called.*
 Trocisci de terra sigillata.
 Trocisci de Violis, *Violet cakes.*
 Tricophyes Apuleii, Trichomanes, *Maiden hair.*
 Trichnus, Solanum, *Nightshade.*
 Trymphalites, Cyclaminus, *Sowes bread.*
 Turbetum, Turpetum, *the Turbith root.*
 Turbit, *the same.*
 Turpetum Actuarii duplex, nigrum, & album, *white and black Turbith.*
 Turpetum album, Alypum, *white Turbith.*
 Turpetum Alexandrinum, turpetum Orientale.

The Third Index.

tale, the same.
 Turpetum Cineritium, thapsia, a kind of Tur-
 bith.
 Turpetum Serapionis. tripolium Dioscori-
 dis, a certain kind of Turbith so called.
 Tussilago, Bechium, Foles foot.
 Tussis, the Cough.
 Tutia Arabum, Pompholix nigra, gray
 Tutty.
 Tutia officinarum, Cadmia, fornaria, Tut-
 ty.
 Tutia factitia, tutty counterfeited.
 Tuvesca, vocabulum ungaricum, Pruna Pas-
 sa, dried Prunes.
 Tympania, five tympanites, the Tympany.
 Typhodes, a kind of continual ague.
 Typonium Dioscoridis, Apolinaris, Henbane
 or Henquail.
 Typhonium Apuleii, Draguntium, Dra-
 gons.
 Typha Theophrasti, Typha aquatica, Ty-
 phalustris, Cats tail, or Water Torch.
 Tyrus, Vipera, a Viper.

V

Vaccinium, vitis Idæa Theophrasti, a
 Blackberrie.
 Valeriana, Marinella, Valerian.
 Varices, broken veins in the legs, or in any
 other part of a mans body.
 vena, a Vein.
 Vena cava, the great Liver vein.
 Vena Citrina, Cyperus Indicus, a kind of
 Cypresse root.
 Vena communis, the Median Vein.
 Vena corporalis, the same.
 Vena manifesta, the Mother Vein.
 Vena nigra, the Median vein.
 Vena pulsatilis, the pulse vein.
 Vena tinctoria, rubia infectoria, Madder.
 Vena universalis, Mediana, the Median
 vein.
 Venæ quietæ, the blood veins.
 Ventriculus, the stomach.
 Veratrum adulterinum, Pulmonari Vegetii,
 wilde Neesewort.
 Verbena, five verbenaca, Vervein.
 Verbasculum, Cowslips.
 Verbasculum album, white Cowslips.
 Verbasculum odoratum, Cowslips.
 Verbasculum mutiplex, double Cowslips.
 Verbasculum, Phlomis, Longwort, or Wool-
 blade.
 Verbasculum album, verbasculum fœmina, wool-
 blade the female.
 Verbasculum salvisolium, five verbasculum syl-
 vestre, wilde Woolblade.

Vermes terreni, Intestina terræ, a long Worm
 breeding in the earth.
 Vermicularis, crassula, minor, the lesser Hous-
 leek.
 Vernilagium, five vernilago, Chameleon
 niger, the common Thistle with a great long
 stalk.
 Vernix, Sandarica, the gum of the Juniper
 tree.
 Veronica, Pauls Betony.
 Verrucales, Hamorrhoides, the Pyles or He-
 morrhoides.
 Verrucaria quorundam, Marigolds.
 Vertebrae, Spondyla, the joints or Knots of
 the back bone, the Spondiles.
 Vertex, the top or crown of the head.
 Vertigo, a giddinesse of the head.
 Vesicaria, Halicacebus, winter Cherries.
 Veterus, Lethargus, a drowsie disease ran-
 sing a continual sleep.
 Vetonica, five Cetonica, Betony.
 Vicia, a Vetch.
 Victoralis.
 Victoralis longa.
 Victoralis mascula.
 Victoralis fœmina, five victoralis rotun-
 da.
 Vinca pervinea officinarum, Periwinkle.
 Vicetoxicum, Asclepias, Swallowwort.
 Vinciboscum Herbariorum, Periclymenum,
 Woodbind, or Honyfuckle.
 Vineago, Perdicium, Pellitorie of the wall.
 Vini rosa, a kind of wilde Rose or Eglantine
 smelling like Cinnamon, a Cinnamon
 Rose.
 Vinum ex Absynthio, Wormwood wine.
 Vinum aquosum, vinum Oligophorum, a
 small wine.
 Vinum ardens, vinum sublimatum, Aqua-
 vitæ.
 Vinum arvisium, Malmsey.
 Vinum Apianum, Muscadine.
 Vinum atrum, thick red wine Aligant.
 Vinum Buglossatum, vinum ex Buglossa
 Buglosse wine.
 Vinum Cerasorum, Cherry wine.
 Vinum Chium, Malmsey.
 Vinum Claretum, Hippocras.
 Vinum ex floribus. Cariophylleæ, wine of
 Gilloflowers.
 Vinum creticum, Malmsey.
 Vinum coactum, a kind of Must.
 Vinum dilutum, water and wine mixed toge-
 ther.
 Vinum Hippocraticum, Hippocrasse.
 Vinum Juniperinum, Juniper wine.
 Vinum mellicum, Honied wine.
 Vinum malviticum, Malmsey.

Vinum

The third Index

Vinum multiferum, strong wine.
 Vinum Granatorum, Pomgranat wine.
 Vinum Malvasianum, *Malmsey*.
 Vinum mulfum, sweet wine.
 Vinum Malorum punicorum, Pomgranat wine.
 Vinum Muscatellum, seu Muscatellinum, *Muscadine*.
 Vinum Marveffianum, *Malmsey*.
 Vinum Musteum, *Must*.
 Vinum Muriceum, a kind of Wine so called.
 Vinum Monenbafaticum, *Malmsey*.
 Vinum Nenupharinum, Wine of water Lilies.
 Vinum Oenodes, five vinosum, strong wine.
 Vinum Polyphorum, vinum multiferum, the same.
 Vinum pauciferum, Oligophorum, small Wine.
 Vinum ex Pœonia, five Pœonites, *Piony Wine*.
 Vinum ex floribus Pseudonardi, *Spikenard Wine*.
 Vinum ruffum, rubrum, vel rubeum, red Wine.
 Vinum rubellum, reddish Wine.
 Vinum Raspatitium, Wine of whole Grapes.
 Vinum sublimatum, Aqua vitæ.
 Vinum salviatum, Saged Wine.
 Vinum feniticum, vinum ex Sena confectum, *Vine of Sena*.
 Vinum temperatum, five vinum dilutum, *Vine mixed with water*.
 Viola, a Violet.
 Viola alba Dioscoridis, white yellow and brown Violets.
 Viola alba Theophrasti, a kind of Water Gillofer.
 Viola alba multiplex, white double Violets.
 Viola canina, a dog Violet.
 Viola fatua, a wilde Violet.
 Viola martia, a March Violet.
 Viola Martia alba, a white March Violet.
 Viola mortuorum, Perwinca, *Perwinkle*.
 Viola muraria, March Violets.
 Viola nigra, the same.
 Viola purpurea, idem quod Viola nigra.
 Viola purpurea multiplex, double Violets.
 Viola Quadragesimalis, March Violets.
 Viola sylvestris, wilde Violets.
 Violaria, March Violets.
 Vipera, Tyrus, a Viper, or kind of Ad-

der.
 Virga Cervi, Pryapus Cervi, the pisse of a Stag.
 Virga aurea, solidago saracenicæ.
 Virga pastoris, *Tassel*.
 Viride æris, *Ærugo, Verdigrase*.
 Viscago Hispanorum, Gingidium, Spanish Cher oil.
 Viscum, Ixos, Astylis, *Mistleto, or Mistle-den*.
 Viscum quercinum, *Mistleto of the Oaks*.
 Viscum, viscus pro glutine Aucupum, gluten aviarum, *Birdlime*.
 Vitalis, Sedum, Houseleek.
 Vitealis, lesser Hopeweed.
 Vitex, Agnus, Chast tree.
 Vitis, five vitis vinifera, a Vine.
 Vitiligo, Morphea alba Barbarorum, a foulness of the body with spots of divers colours.
 Vitis alba, Bryonia, white Briony.
 Vitis chironia, vitis nigra, a black Vine, or black Briony.
 Vitis Idæa, Vaccinium, a black berry.
 Vitis veneris.
 Vitis sylvestris, a wilde Vine.
 Vitis sylvestris flos, the blossoms of the wilde Vine.
 Vitriola, Parietaria, Pellitory of the Wall.
 Vitriolum, Chalcantum, blew Vitriol.
 Vitriolum Romanum, Romish Vitriol.
 Vitriolum ustum, burned Vitriol.
 Vitulipes, Aurum, Cuckopit.
 Ulcus, an ulcer, or Byle.
 Ulmus, an Elme.
 Ulmus campestris, a wilde Elme.
 Ulmus Montanus, Montiumus, a kinde of Elme.
 Ulophonium, Chameleon niger, a kinde of Thistle.
 Umbilicus Veneris, Cyclaminus, *Saves bread*.
 Undimia Chirurgorum, Oedema, a impostume so called.
 Unefera, five unephra, Centory the great, Rapontica.
 Ungula Alces.
 Ungula caballina, Bechum, *Hoofsfoot, or Coltsfoot*.
 Ungula odorata, Blata byzantia, vide Blaca Byzantia.
 Unguis muris, Polygonum, Knotgrass.
 Unguis Armaricus, the same that ungula odorata is.
 Unicordia, Clematis Daphnoides, *Perwinkle*.
 Unicornum, cornu monocerotis, the Unicorn

Unguent

The third Index.

- Unguentum Egyptiacum, an Egyptian
 salve.
 Unguentum Agrippæ Agrippas salve.
 Unguentum Altheæ, a salve of marsh Mal-
 lows.
 Unguentum album, unguentum de Cerusa, a
 salve of white Lead or Cerusse.
 Unguentum album Camphoratum, a salve of
 white Lead and Camphire.
 Unguentum Anodynum, a salve which easeth
 any pain.
 Unguentum Apostolorum, a salve so cal-
 led.
 Unguentum Aragon, a salve so called.
 Unguentum Aurantiorum, a salve of Oran-
 ges.
 Unguentum Alabastrinum, a salve of Ala-
 baster.
 Unguentum mundificativum de Apio, a
 salve of smallage.
 Unguentum de Arthanita, unguentum de
 Cyclamine, a salve of Sowes bread.
 Unguentum basilicon, a salve of Basil.
 Unguentum de Cerussa, vide unguentum al-
 bum.
 Unguentum de Cerussa Mesues, a salve of
 Cerusse after the description of Mesues.
 Unguentum Citrinum, a salve of Citrons.
 Unguentum Comitissæ, a salve so called.
 Unguentum infrigidans Galeni, a cooling
 salve.
 Unguentum de Gallia, a salve so called.
 Unguentum ex Gammaris, a salve of sea
 Crevise.
 Unguentum fuscum, a salve for wounds being
 yellow.
 Unguentum marciatum, a salve so called.
 Unguentum Mercuriale, a salve for the
 Pox.
 Unguentum nervinum officinarum, a salve
 for the sinewes.
 Unguentum nihili officinarum, a salve so
 called, good for blearing eyes.
 Unguentum de Pompholige, a salve made
 of ashes which the Apothecaries call
 Nyl.
 Unguentum pectorale, a salve for the
 breast.
 Unguentum Populeum, a salve of Poplar.
 Unguentum Rosatum, an oyntment of Ro-
 ses.
 Unguentum Rhodium, the same.
 Unguentum Sandalinum, vel Santalinum, an
 oyntment of Saunders.
 Unguentum sericinum, vel siricinum, a salve
 so called.
 Volubilis, Rapeweed, or Woodbind.
 Volubilis Antiochena, sive volubilis Colo-
 phonia, an herb so called.
 Volubilis magna, Hops.
 Volubilis media, Woodbind.
 Volubilis Mesues, Hops.
 Volubilis Syriaca, an herb so called.
 Volucrum majus, Caprifolium. Woodbind.
 Volvulus, Iliaca passio, a pain in the guts, of
 a Colike in the uppermost gut.
 Urania, Iris, the flower de luce.
 Urceolaris Helxine, Pellitory of the wall.
 Ureteres, the waterpipes, or Conduits by which
 the urine passeth from the reins to the bladder.
 Urinæ profluvium, the overflowing of urine.
 Ursus, a Bear.
 Urtica, a Nettle.
 Urtica foemina, urtica Romana, Italica, the
 Romish Nettle.
 Urtica foetida, a stinking Nettle.
 Urtica Herculana, sive Herculea, a kind of
 dead Nettles.
 Urtica Italica, vide Urtica foemina.
 Urtica iners, urtica labeo, urtica mortua,
 dead Nettles.
 Urtica lactea, Worm nettles.
 Urtica labeo, vide urtica iners.
 Urtica mascula, urtica major, the great
 sharpe and stinking Nettles.
 Urtica minor, the lesser Nettles.
 Urtica mortua, vide, urtica iners.
 Urtica odorata, a kinde of sweet smelling
 Nettle.
 Urtica hortulana, Romane Nettles.
 Urtica Romona, vide, urtica foemina.
 Urtica scarlata, a kind of dead Nettles.
 Urtica sylvatica, wilde Nettles.
 Urtica sylvestris, the same.
 Visnea, Muscus arborum, Mosse.
 Vterus, the Womb of a woman.
 Vulgago, sive Vulvago, Asaraback.
 Vulpes, a Fox.
 Vulva, uterus, the Womb of a woman.
 Vultur, a certain greedy creature so called.
 Uva a Grape.
 Uva acerba, uva immatura, an unripe Grape.
 Uvæ acerbæ conditæ, unripe Grapes comfi-
 ted.
 Uva anguina, uva serpentina, vitis alba,
 Briony.
 Uvarum expressarum retrimenta, the Husks
 of pressed Grapes.
 Uva immatura, vide, uva acerba.
 Uva lupi, uva vulpis, Nightshade.
 Uva serpentina, vide, uva anguina.
 Uva Taminia, vitis nigra, black Briony.
 Uva Vulpis, vide, uva Lupi.
 Vvæ passæ, Raisons.
 Vvæ Damascenæ, Zebeben, great Raisons.
 Uva passæ Ciliciæ, sive Corinthiæ, seu mi-
 nores, Currans.
 Vvæ passæ Corinthiæ, vide uvæ Damascen.
 Vvæ passæ majores, great Raisons.
 Vvæ passæ Massilioticæ, a kind of great Rai-
 sons.

The Third Index.

Uvæ Zibebæ, *great Raisons.*

Uvula, *a little piece of flesh in the roof of the mouth.*

Uvularia, *Horsetongue.*

X.

X Auster Arabum, Tithymalus, *a kinde of Spurge.*

Xerocollyrion, *vide Collyrium.*

Xylon, Gossipium, *Cotton.*

Xyphium, *Flower-deluce.*

Xyphium aquaticum, *the small blew water Flower-deluce.*

Xyphium arvense, *Flower-deluce.*

Xyloaloe, Xyloaloes, Xylumaloes, Lignum Aloes, *a kinde of sweet wood so called.*

Xyloaloes, *vide Xyloaloe.*

Xylobalsamum, *the wood whereof Baulm naturally cometh.*

Xylocassia, *a kinde of flower so called.*

Xylocaracta officinarum, Xylocerata, S. *Johns bread.*

Xylocolla, *a kinde of Lime.*

Xylon, Santalon, *Saunders.*

Xylophyton, *wild Comin.*

Xylum aloes, *vide Xyloaloe.*

Z.

Z Aduar, Zaduar, Zadura, Zadera, *five Zador, a kinde of Zeduary.*

Zadua, *vide Zaduar.*

Zador, *vide Zaduar.*

Finis

FINIS.

26/6/24

name of the Father and of the Son
and of the Holy Ghost

how can I live without
my jewel now with in
your shady bowers how can
I then be so cruel
whom I love her to Deceive
no I had rather lie beside
he on some pleasant
shady place
where she might behold
her favourite lie in
that place
O but that a lovely creature
from my breast
behold

The waking hour

you it by William
Giles from
Flying boat in paper

[Faint, mostly illegible handwritten text and scribbles at the bottom of the page, including some numbers like '20' and '13']
